"Yes, I know," she interrupted, hastily, "I cannot think as you do, but—" And she could not go on for a great lump in her throat. Involuntarily she rose from her seat. The interview was too trying. Father Damon rose also. There was a moment's painful silence as they looked in each other's faces. Neither could trust the voice for speech. He took her hand and pressed it, and said "God bless you!" and went out, closing the door softly.

A moment after he opened it again and stood on the threshold. She was in her chair, her head bowed upon her arms on the table. As he spoke she looked up, and she never forgot the expression of his face.

"I want to say, Ruth"—he had never before called her by her first name, and his accent thrilled her—"that I shall pray for you as I pray for myself, and though I may never see you again in this world, the greatest happiness that can come to me in this life will be to hear that you have learned to say Our Father which art in heaven."

As she looked he was gone, and his last words remained a refrain in her mind that evening and afterwards—"Our Father which art in heaven"—a refrain recurring again and again in all her life, inseparable from the memory of the man she loved.

XXII

Along the Long Island coast lay the haze of early autumn. It was the time of lassitude. In the season of ripening and decay Nature seemed to have lost her spring, and lay in a sort of delicious languor. Sea and shore were in a kind of truce, and the ocean south wind brought cool refreshment but no incentive.

From the sea the old brown farmhouse seemed a snug haven of refuge; from the inland road it appeared, with its spreading, sloping roofs, like an ancient sea-craft come ashore, which had been covered in and then embowered by kindly Nature with foliage. In those days its golden-brown color was in harmony with the ripening orchards and gardens.

Surely, if anywhere in the world, peace was here. But to its owner this very peace and quietness was becoming intolerable. The waiting days were so long, the sleepless nights of uncertainty were so weary. When her work was done, and Edith sat with a book or some sewing under the arbor where the grape clusters hung, growing dark and transparent, and the boy played about near her, she had a view of the blue sea, and about her were the twitter of birds and the hum of the cicada. The very beauty made her heart ache. Seaward there was nothing—nothing but the leaping little waves and the sky. From the land side help might come at any hour, and at every roll of wheels along the road her heart beat faster and hope sprang up anew. But day after day nothing came.

Perhaps there is no greater bravery than this sort of waiting, doing the daily duty and waiting. Endurance is woman's bravery, and Edith was enduring, with an almost broken but still with a courageous heart. It was all so strange. Was it simply shame that kept him away, or had he ceased to love her? If the latter, there was no help for her. She had begged him to come, she had offered to leave the boy with her cousin companion and go to him. Perhaps it was pride only. In one of his short letters he had said, "Thank God, your little fortune is untouched." If it were pride only, how could she overcome it? Of this she thought night and day. She thought, and she was restless, feverish, and growing thin in her abiding anxiety.

It was true that her own fortune was safe and in her control. But with the usual instinct of women who know they have an income not likely to be ever increased, she began to be economical. She thought not of herself; but of the boy. It was the boy's fortune now. She began to look sharply after expenses; she reduced her household; she took upon herself the care of the boy, and other household duties. This was all well for her, for it occupied her time, and to some extent diverted her thoughts.

So the summer passed—a summer of anxiety, longing, and dull pain for Edith. The time came when the uncertainty of it could no longer be endured. If Jack had deserted her, even if he should die, she could order her life and try to adjust her heavy burden. But this uncertainty was quite beyond her power to sustain.

She made up her mind that she would go to the city and seek him. It was what he had written that she must not on any account do, but nothing that could happen to her there could be so bad as this suspense. Perhaps she could bring him back. If he refused, and was angry at her interference, that even would be something definite. And then she had carefully thought out another plan. It might fail, but some action had now become for her a necessity.

Early one morning—it was in September—she prepared for a journey to the city. This little trip, which thousands of people made daily, took on for her the air of an adventure. She had been immured so long that it seemed a great undertaking. And when she bade good-by to the boy for the day she hugged him and kissed him again and again, as if it were to be an eternal farewell. To her cousin were given the most explicit directions for his care, and after she had started for the train she returned to give further injunctions. So she told herself, but it was really for one more look at the boy.

But on the whole there was a certain exhilaration in the preparation and the going, and her spirits rose as they had not done in months before. Arrived in the city, she drove at once to the club Jack most frequented. "He is not in," the porter said; "indeed, Mr. Delancy has not been here lately."

"Is Major Fairfax in?" Edith asked.

Major Fairfax was in, and he came out immediately to her carriage. From him she learned Jack's address, and drove to his lodging-house. The Major was more than civil; he was disposed to be sympathetic, but he had the tact to see that Mrs. Delancy did not wish to be questioned, nor to talk.

"Is Mr. Delancy at home?" she asked the small boy who ran the elevator.

"No'me."

"And he did not say where he was going?"

"No'me."

"Is he not sometimes at home in the daytime?"

"No'me."

"And what time does he usually come home in the evening?"

"Don't know. After I've gone, I guess."

Edith hesitated whether she should leave a card or a note, but she decided not to do either, and ordered the cabman to take her to Pearl Street, to the house of Fletcher & Co.

Mr. Fletcher, the senior partner, was her cousin, the son of her father's elder brother, and a man now past sixty years. Circumstances had carried the families apart socially since the death of her father and his brother, but they were on the most friendly terms, and the ties of blood were not in any way weakened. Indeed, although Edith had seen Gilbert Fletcher only a few times since her marriage, she felt that she could go to him any time if she were in trouble, with the certainty of sympathy and help. He had the reputation of the old-fashioned New York merchants, to whom her father belonged, for integrity and conservatism.

It was to him that she went now. The great shop, or wholesale warehouse rather, into which she entered from the narrow and cart-encumbered street, showed her at once the nature of the business of Fletcher & Co. It was something in the twine and cordage way. There were everywhere great coils of ropes and bales of twine, and the dark rooms had a tarry smell. Mr. Fletcher was in his office, a little space partitioned off in the rear, with half a dozen clerks working by gaslight, and a little sanctum where the senior partner was commonly found at his desk.

Mr. Fletcher was a little, round-headed man, with a shrewd face, vigorous and cheerful, thoroughly a man of business, never speculating, and who had been slowly gaining wealth by careful industry and cautious extension of his trade. Certain hours of the day—from ten to three—he gave to his business. It was a habit, and it was a habit that he enjoyed. He had now come back, as he told Edith, from a little holiday at the sea, where his family were, to get into shape for the fall trade.

Edith was closeted with him for a full hour. When she came out her eyes were brighter and her step more elastic. At sundown she reached home, almost in high spirits. And when she snatched up the boy and hugged him, she whispered in his ear, "Baby, we have done it, and we shall see."

One night when Jack returned from his now almost aimless tramping about the city he found a letter on his table. It seemed from the printing on the envelope to be a business letter; and business, in the condition he was in—and it was the condition in which he usually came home—did not interest him. He was about to toss the letter aside, when the name of Fletcher caught his eye, and he opened it.

It was a brief note, written on an office memorandum, which simply asked Mr. Delancy to call at the office as soon as it was convenient, as the writer wished to talk with him on a matter of business, and it was signed "Gilbert Fletcher."

"Why don't he say what his business is?" said Jack, throwing the letter down impatiently. "I am not going to be hauled over the coals by any of the Fletchers." And he tumbled into bed in an injured and yet independent frame of mind.

But the next morning he reread the formal little letter in a new light. To be sure, it was from Edith's cousin. He knew him very well; he was not a person to go out of his way to interfere with anybody, and more than likely it was in relation to Edith's affairs that he was asked to call. That thought put a new aspect on the matter. Of course if it concerned her interests he ought to go. He dressed with unusual care for him in these days, breakfasted at the cheap restaurant which he frequented, and before noon was in the Fletcher warehouse in Pearl Street.

He had never been there before, and he was somewhat curious to see what sort of a place it was where Gilbert carried on the string business, as he used to call it when speaking to Edith of her cousin's occupation. It was a much more dingy and smelly place than he expected, but the carts about the doors, and the bustle of loading and unloading, of workmen hauling and pulling, and of clerks calling out names and numbers to be registered and checked, gave him the impression that it was not a dull place.

Mr. Fletcher received him in the little dim back office with a cordial shake of the hand, gave him a chair, and reseated himself, pushing back the papers in front of him with the air of a very busy man who was dropping for a moment one thing in order to give his mind promptly to another.

"Our fall trade is just starting up," he said, "and it keeps us all pretty busy."

"Yes," said Jack. "I could drop in any other time—"

"No, no," interrupted Mr. Fletcher; "it is just because I am busy that I wanted to see you. Are you engaged in anything?"

"Nothing in particular," replied Jack, hesitating. "I'd thought of going into some business." And then, after a pause: "It's no use to mince matters. You know—everybody knows, I suppose—that I got hit in that Henderson panic."

"So did lots of others," replied Mr. Fletcher, cheerfully. "Yes, I know about it. And I'm not sure but it was a lucky thing for me." He spoke still more cheerfully, and Jack looked at him inquiringly.

"Are you open to an offer?"

"I'm open to almost anything," Jack answered, with a puzzled look.

"Well," and Mr. Fletcher settled back in his chair, "I can give you the situation in five minutes. I've been in this business over thirty years—yes; over thirty-five years. It has grown, little by little, until it's a pretty big business. I've a partner, a first-rate man—he is in Europe now—who attends to most of the buying. And the business keeps spreading out, and needs more care. I'm not as young as I was I shall be sixty-four in October—and I can't work right along as I used to. I find that I come later and go away earlier. It isn't the 'work exactly, but the oversight, the details; and the fact is that I want somebody near me whom I can trust, whether I'm here or whether I'm away. I've got good, honest, faithful clerks—if there was one I did not trust, I wouldn't have him about. But do you know, Jack," it was the first time in the interview that he had used this name—"there is something in blood."

"Yes," Jack assented.

"Well, I want a confidential clerk. That's it."

"Me?" he asked. He was thinking rapidly while Mr. Fletcher had been speaking; something like a revolution was taking place in his mind, and when he asked this, the suggestion took on a humorous aspect—a humorous view of anything had not occurred to him in months.

"You are just the man."

"I can be confidential," Jack rejoined, with the old smile on his face that had been long a stranger to it, "but I don't know that I can be a clerk."

Mr. Fletcher was good enough to laugh at this pleasantry.

"That's all right. It isn't much of a position. We can make the salary twenty-five hundred dollars for a starter. Will you try it?"

Jack got up and went to the area window, and looked out a moment upon the boxes in the dim court. Then he came back and stood by Mr. Fletcher, and put his hand on the desk.

"Yes, I'll try."

"Good. When will you begin?"

"Now."

"That's good. No time like now. Wait a bit, and I'll show you about the place before we go to lunch. You'll get hold of the ropes directly."

This was Mr. Fletcher's veteran joke.

At three o'clock Mr. Fletcher closed his desk. It was time to take his train. "Tomorrow, then," he said, "we will begin in earnest."

"What are the business hours here?" asked Jack.

"Oh, I am usually here from ten to three, but the business hours are from nine till the business is done. By-the-way, why not run out with me and spend the night, and we can talk the thing over?"

There was no reason why he should not go, and he went. And that was the way John Corlear Delancy was initiated in the string business in the old house of Fletcher & Co.

XXII

Few battles are decisive, and perhaps least of all those that are won by a sudden charge or an accident, and not as the result of long-maturing causes. Doubtless the direction of a character or a career is often turned by a sudden act of the will or a momentary impotence of the will. But the battle is not over then, nor without long and arduous fighting, often a dreary, dragging struggle without the excitement of novelty.

It was comparatively easy for Jack Delancy in Mr. Fletcher's office to face about suddenly and say yes to the proposal made him. There was on him the pressure of necessity, of his own better nature acting under a sense of his wife's approval; and besides, there was a novelty that attracted him in trying something absolutely new to his habits.

But it was one thing to begin, and another, with a man of his temperament, to continue. To have regular hours, to attend to the details of a traffic that was to the last degree prosaic, in short, to settle down to hard work, was a very different thing from the "business" about which Jack and his fellows at the club used to talk so much, and to fancy they were engaged in. When the news came to the Union that Delancy had gone into the house of Fletcher & Co. as a clerk, there was a general smile, and a languid curiosity expressed as to how long he would stick to it.

In the first day or two Jack was sustained not only by the original impulse, but by a real instinct in learning about business ways and details that were new to him. To talk about the business and about the markets, to hear plans unfolded for extension and for taking advantage of fluctuations in prices, was all very well; but the drudgery of details—copying, comparing invoices, and settling into the routine of a clerk's life, even the life of a confidential clerk—was contrary to the habits of his whole life. It was not to be expected that these habits would be overcome without a long struggle and many back-slidings.

The little matter of being at his office desk at nine o'clock in the morning began to seem a hardship after the first three or four days. For Mr. Fletcher not to walk into his shop on the stroke of ten would have been such a reversal of his habits as to cause him as much annoyance as it caused Jack to be bound to a fixed hour. It was only the difference in training. But that is saying everything.

Besides, while the details of his work, the more he got settled in them, were not to his taste, he was daily mortified to find himself ignorant of matters which the stupidest clerk in the office seemed to know by instinct. This acted, however, as a sort of stimulus, and touched his pride. He determined that he would not be humiliated in this way, and during office hours he worked as diligently as Mr. Fletcher could have desired. He had pledged himself to the trial, and he summoned all his intelligence to back his effort.

And it is true that the satisfaction of having a situation, of doing something, the relief to the previous daily anxiety and almost despair, raised his spirits. It was only when he thought of the public opinion of his little world, of some other occupation more befitting his education, of the vast change from his late life of ease and luxury to this of daily labor with a clerk's pay, that he had hours of revolt and cursed his luck.

No, Jack's battle was not won in a day, or a week, or a year. And before it was won he needed more help than his own somewhat irresolute will could give. It is the impression of his biographer that he would have failed in the end if he had been married to a frivolous and selfish woman.

Mr. Fletcher was known as a very strict man of business, and as little else. But he was a good judge of character, and under his notions of discipline and of industry he was a kindly man, as his clerks, who feared his sharp oversight, knew. And besides, he had made a compact with Edith, for whom he had something more than family affection, and he watched Jack's efforts to adjust himself to the new life with sympathy. If it was an experiment for Jack, it was also an experiment for him, the result of which gave him some anxiety. The situation was not a very heroic one, but a life is often decided for good or ill by as insignificant a matter as Jack's ability to persevere in learning about the twine and cordage trade. This was a day of trial, and the element of uncertainty in it kept both Mr. Fletcher and Jack from writing of the new arrangement to Edith, for fear that only disappointment to her would be the ultimate result. Jack's brief notes to her were therefore, as usual, indefinite, but with the hint that he was beginning to see a way out of his embarrassment.

After the passage of a couple of weeks, during which Mr. Fletcher had been quietly studying his new clerk, he suddenly said to him, one Saturday morning, after they had looked over and estimated the orders by the day's mail, "Jack, I think you'd better let up a little, and run down and see Edith."

"Oh!" said Jack, a little startled by the proposal, but recovering himself; "I didn't suppose the business could spare me."

"I didn't mean a vacation, but run down for over Sunday. It must be lovely there, and the change will make you as keen as a brier for business. It always does me. Stay over Monday if the weather is good. I have to be away myself the week after." As Jack hesitated and did not reply, Mr. Fletcher continued:

"I really think you'd better go, Jack. You have hardly had a breath of fresh air this summer. There's plenty of time to go up-town and get your grip and catch the afternoon train."

Jack was still silent. The thought of seeing Edith created a tumult in his mind. It seemed as if he were not quite ready, not exactly settled. He had been procrastinating so long, putting off going, on one pretext or another, that he had fallen into a sort of fear of going. At first, absorbed in his speculations, enthralled by the company of Carmen and the luxurious, easy-going view of life that her society created for him; he had felt Edith and his house as an irritating restraint. Later, when the smash came, he had been still more relieved that she was out of town. And finally he had fallen into a reckless apathy, and had made himself believe that he never would see her again until some stroke of fortune should set him on his feet and restore his self-respect.

But since he had been with Fletcher & Co. his feelings had gradually undergone a change. With a regular occupation and regular hours, and in contact with the sensible mind and business routine of Mr. Fletcher, he began to have saner views of life, and to realize that Edith would approve what he was now attempting to do much more than any effort to relieve himself by speculation.

As soon as he felt himself a little more firmly established, a little more sure of himself, he would go to Edith, and confess everything, and begin life anew. This had been his mood, but he was still irresolute, and it needed some outside suggestion to push him forward to overcome his lingering reluctance to go home.

But this had come suddenly. It seemed to him at first thought that he needed time to prepare for it. Mr. Fletcher pulled out his watch. "There is a later train at four. Take that, and we will get some lunch first."

An hour of postponement was such a relief! Why, of course he could go at four. And instantly his heart leaped up with desire.

"All right," he said, as he rose and closed his desk. "But I think I'd better not stay for lunch. I want to get something for the boy on my way uptown."

"Very good. Tuesday, then. My best regards to Edith."

As Jack came down the stairway from the elevated road at Twenty-third Street he ran against a man who was hurrying up—a man in a pronounced traveling-suit, grip-sack and umbrella in hand, and in haste. It was Mavick. Recognition was instantaneous, and it was impossible for either to avoid the meeting if he had desired to do so.

"You in town!" said Mavick.

"And you!" Jack retorted.

"No, not really. I'm just going to catch the steamer. Short leave. We have all been kept by that confounded Chile business."

"Going for the government?"

"No, not publicly. Of course shall confer with our minister in London. Any news here?"

"Yes; Henderson's dead." And Jack looked Mavick squarely in the face.

"Ah!" And Mavick smiled faintly, and then said, gravely: "It was an awful business. So sudden, you know, that I couldn't do anything." He made a movement to pass on. "I suppose there has been no—no—"

"I suppose not," said Jack, "except that Mrs. Henderson has gone to Europe."

"Ah!" And Mr. Mavick didn't wait for further news, but hurried up, with a "Good-by."

So Mavick was following Carmen to Europe. Well, why not? What an unreal world it all was, that of a few months ago! The gigantic Henderson; Jack's own vision of a great fortune; Carmen and her house of Nero; the astute and diplomatic Mavick, with his patronizing airs! It was like a scene in a play.

He stepped into a shop and selected a toy for the boy. It was a real toy, and it was for a real boy. Jack experienced a genuine pleasure at the thought of pleasing him. Perhaps the little fellow would not know him.

And then he thought of Edith—not of Edith the mother, but of Edith the girl in the days of his wooing. And he went into Maillard's. The pretty girl at the counter knew him. He was an old customer, and she had often filled orders for him. She had despatched many a costly box to addresses he had given her. It was in the recollection of those transactions that he said: "A box of marrons glaces, please. My wife prefers that."

"Shall I send it?" asked the girl, when she had done it up.

"No, thanks; we are not in town."

"Of course," she said, beaming upon him; "nobody is yet."

And this girl also seemed a part of the old life, with her little affectation of familiarity with its ways.

He went to his room—it seemed a very mean little room now—packed his bag, told the janitor he should be absent a few days, and hurried to the ferry and the train as if he feared that some accident would delay him. When he was seated and the train moved off, his thoughts took another turn. He was in for it now.

He began to regret that he had not delayed, to think it all out more thoroughly; perhaps it would have been better to have written.

He bought an evening journal, but he could not read it. What he read between the lines was his own life. What a miserable failure! What a mess he had made of his own affairs, and how unworthy of such a woman as Edith he had been! How indifferent he had been to her happiness in the pursuit of his own pleasure! How would she receive him? He could hardly doubt that; but she must know, she must have felt cruelly his estrangement. What if she met him with a royal forgiveness, as if he were a returned prodigal? He couldn't stand that. If now he were only going back with his fortune recovered, with brilliant prospects to spread before her, and could come into the house in his old playful manner, with the assumed deference of the master, and say: "Well, Edith dear, the storm is over. It's all right now. I am awfully glad to get home. Where's the rascal of an heir?"

Instead of that, he was going with nothing, humiliated, a clerk in a twine-store. And not much of a clerk at that, he reflected, with his ready humorous recognition of the situation.

And yet he was for the first time in his life earning his living. Edith would like that. He had known all along that his idle life had been a constant grief to her. No, she would not reproach him; she never did reproach him. No doubt she would be glad that he was at work. But, oh, the humiliation of the whole thing! At one moment he was eager to see her, and the next the rattling train seemed to move too fast, and he welcomed every wayside stop that delayed his arrival. But even the Long Island trains arrive some time, and all too soon the cars slowed up at the familiar little station, and Jack got out.

"Quite a stranger in these parts, Mr. Delancy," was the easy salutation of the station-keeper.

"Yes. I've been away. All right down here?"

"Right as a trivet. Hot summer, though. Calculate it's goin' to be a warm fall—generally is."

It was near sunset. When the train had moved on, and its pounding on the rails became a distant roar and then was lost altogether, the country silence so impressed Jack, as he walked along the road towards the sea, that he became distinctly conscious of the sound of his own footsteps. He stopped and listened. Yes, there were other sounds—the twitter of birds in the bushes by the roadside, the hum of insects, and the faint rhythmical murmur of lapsing waves on the shore.

And now the house came in view—first the big roof, and then the latticed windows, the balconies, where there were pots of flowers, and then the long veranda with its hammocks and climbing vines. There was a pink tone in the distant water answering to the flush in the sky, and away to the west the sand-dune that made out into the Sound was a point of light.

But the house! Jack's steps were again arrested. The level last rays of the disappearing sun flashed upon the window-panes so that they glowed like painted windows illuminated from within, with a reddish lustre, and the roofs and the brown sides of the building, painted by those great masters in color, the sun and the sea-wind, in that moment were like burnished gold. Involuntarily Jack exclaimed:

"It is the Golden House!"

He made his way through the little fore yard. No one was about. The veranda was deserted. There was Edith's work-basket; there were the baby's playthings. The door stood open, and as he approached it he heard singing—not singing, either, but a fitful sort of recitation, with the occasional notes of an accompaniment struck as if in absence of mind. The tune he knew, and as he passed through the first room towards the sitting-room that looked on the sea he caught a line:

"Wely, wely, but love is bonny, for a little while—when it is new."

It was an old English ballad, the ballad of the "Cockle-shells," that Edith used to sing often in the old days, when its note of melancholy seemed best to express her happiness. It was only that line, and the voice

seemed to break, and there was silence.

He stole along and looked in. There was Edith, seated, her head bowed on her hands, at the piano.

In an instant, before she could turn to the sound of his quick footsteps, he was at her side, kneeling, his head bowed in the folds of her dress.

"Edith! I've been such a fool!"

She turned, slid from her seat, and was kneeling also, with her arms thrown about his neck.

"Oh, Jack! You've come. Thank God! Thank God!"

And presently they stood, and his arms were still around her, and she was looking up into his face, with her hands on his shoulders, and saying "You've come to stay."

"Yes, dear, forever."

XXIV

The whole landscape was golden, the sea was silver, on that October morning. It was the brilliant decline of the year. Edith stood with Jack on the veranda. He had his grip-sack in hand and was equipped for town. Both were silent in the entrancing scene.

The birds, twittering in the fruit-trees and over the vines, had the air of an orchestra, the concerts of the season over, gathering their instruments and about to depart. One could detect in the lapse of the waves along the shore the note of weariness preceding the change into the fretfulness and the tumult of tempests. In the soft ripening of the season there was peace and hope, but it was the hope of another day. The curtain was falling on this.

Was life beginning, then, or ending? If life only could change and renew itself like the seasons, with the perpetually recurring springs! But youth comes only once, and thereafter the man gathers the fruit of it, sweet or bitter.

Jack was not given to moralizing, but perhaps a subtle suggestion of this came to him in the thought that an enterprise, a new enterprise, might have seemed easier in May, when the forces of nature were with him, than in October. There was something, at least, that fell in with his mood, a mood of acquiescence in failure, in this closing season of the year, when he stood empty-handed in the harvest-time.

"Edith," he said, as they paced down the walk which was flaming with scarlet and crimson borders, and turned to look at the peaceful brown house, "I hate to go."

"But you are not going," said Edith, brightly. "I feel all the time as if you were just coming back. Jack, do you know," and she put her hand on his shoulder, "this is the sweetest home in the world now!"

"It is the only one, dear;" and Jack made the statement with a humorous sense of its truth. "Well, there's the train, and I'm off with the other clerks."

"Clerk, indeed!" cried Edith, putting up her face to his; "you are going to be a Merchant Prince, Jack, that is what you are going to be."

On the train there was an atmosphere of business. Jack felt that he was not going to the New York that he knew—not to his New York, but to a city of traffic; down into the streets of commercial enterprise, not at all to the metropolis of leisure, of pleasure, to the world of clubs and drawing-rooms and elegant loiterings and the rivalries of society life. That was all ended. Jack was hurrying to catch the down-town car for the dingy office of Fletcher & Co. at an hour fixed.

It was ended, to be sure, but the struggle with Jack in his new life was not ended, his biographer knows, for months and years.

It was long before he could pass his club windows without a pang of humiliation, or lift his hat to a lady of his acquaintance in her passing carriage without a vivid feeling of separateness from his old life. For the old life—he could see that any day in the Avenue, any evening by the flaming lights—went by in its gilded chariots and entrancing toilets, the fascinating whirl of Vanity Fair crowned with roses and with ennui. Did he regret it? No doubt. Not to regret would have been to change his nature, and that were a feat impossible for his biographer to accomplish. In a way his life was gone, and to build up a new life, serene and enduring, was not the work of a day.

One thing he did not regret in the shock he had received, and that was the absence of Carmen and her world. When he thought of her he had a sense of escape. She was still abroad, and he heard from time to time that Mavick was philandering about from capital to capital in her train. Certainly he would have envied neither of them if he had been aware, as the reader is aware, of the guilty secret that drew them together and must be forever their torment. They knew each other.

But this glittering world, to attain a place in which is the object of most of the struggles and hungry competition of modern life, seemed not so real nor so desirable when he was at home with Edith, and in his gradually growing interest in nobler pursuits. They had decided to take a modest apartment in town for the winter, and almost before the lease was signed, Edith, in her mind, had transformed it into a charming home. Jack used to rally her on her enthusiasm in its simple furnishing; it reminded him, he said, of Carmen's interest in her projected house of Nero. It was a great contrast, to be sure, to their stately house by the Park, but it was to them both what that had never been. To one who knows how life goes astray in the solicitations of the great world, there was something pathetic in Edith's pleasure. Even to Jack it might some day come with the force of keen regret for years wasted, that it is enough to break a body's heart to see how little a thing can make a woman happy.

It was another summer. Major Fairfax had come down with Jack to spend Sunday at the Golden House.

Edith was showing the Major the view from the end of the veranda. Jack was running through the evening paper. "Hi!" he cried; "here's news. Mavick is to have the mission to Rome, and it is rumored that the rich and accomplished Mrs. Henderson, as the wife of the minister, will make the Roman season very gay."

"It's too bad," said Edith. "Nothing is said about the training-school?"

"Nothing." "Poor Henderson!" was the Major's comment. "It was for this that he drudged and schemed and heaped up his colossal fortune! His life must look to him like a burlesque."

THAT FORTUNE

XXVI

I

On a summer day, long gone among the summer days that come but to go, a lad of twelve years was idly and recklessly swinging in the top of a tall hickory, the advance picket of a mountain forest. The tree was on the edge of a steep declivity of rocky pasture-land that fell rapidly down to the stately chestnuts, to the orchard, to the cornfields in the narrow valley, and the maples on the bank of the amber river, whose loud, unceasing murmur came to the lad on his aerial perch like the voice of some tradition of nature that he could not understand.

He had climbed to the topmost branch of the lithe and tough tree in order to take the full swing of this free creature in its sport with the western wind. There was something exhilarating in this elemental battle of the forces that urge and the forces that resist, and the harder the wind blew, and the wider circles he took in the free air, the more stirred the boy was in the spring of his life. Nature was taking him by the hand, and it might be that in that moment ambition was born to achieve for himself, to conquer.

If you had asked him why he was there, he would very likely have said, "To see the world." It was a world worth seeing. The prospect might be limited to a dull eye, but not to this lad, who loved to climb this height, in order to be with himself and indulge the dreams of youth. Any pretense would suffice for taking this hour of freedom: to hunt for the spicy checker-berries and the pungent sassafras; to aggravate the woodchucks, who made their homes in mysterious passages in this gravelly hillside; to get a nosegay of columbine for the girl who spelled against him in school and was his gentle comrade morning and evening along the river road where grew the sweet-flag and the snap-dragon and the barberry bush; to make friends with the elegant gray squirrel and the lively red squirrel and the comical chipmunk, who were not much afraid of this unarmed naturalist. They may have recognized their kinship to him, for he could climb like any squirrel, and not one of them could have clung more securely to this bough where he was swinging, rejoicing in the strength of his lithe, compact little body. When he shouted in pure enjoyment of life, they chattered in reply, and eyed him with a primeval curiosity that had no fear in it. This lad in short trousers, torn shirt, and a frayed straw hat above his mobile and cheerful face, might be only another sort of animal, a lover like themselves of the beech-nut and the hickory-nut.

It was a gay world up here among the tossing branches. Across the river, on the first terrace of the hill, were weather-beaten farmhouses, amid apple orchards and cornfields. Above these rose the wooded dome of Mount Peak, a thousand feet above the river, and beyond that to the left the road wound up, through the scriptural land of Bozrah, to high and lonesome towns on a plateau stretching to unknown regions in the south. There was no bar to the imagination in that direction. What a gracious valley, what graceful slopes, what a mass of color bathing this lovely summer landscape! Down from the west, through hills that crowded on either side to divert it from its course, ran the sparkling Deerfield, from among the springs and trout streams of the Hoosac, merrily going on to the great Connecticut. Along the stream was the ancient highway, or lowway, where in days before the railway came the stage-coach and the big transport-wagons used to sway and rattle along on their adventurous voyage from the gate of the Sea at Boston to the gate of the West at Albany.

Below, where the river spread wide among the rocks in shallows, or eddies in deep, dark pools, was the ancient, long, covered, wooden bridge, striding diagonally from rock to rock on stone columns, a dusky tunnel through the air, a passage of gloom flecked with glints of sunlight, that struggled in crosscurrents through the interstices of the boards, and set dancing the motes and the dust in a golden haze, a stuffy passage with odors a century old—who does not know the pungent smell of an old bridge?—a structure that groaned in all its big timbers when a wagon invaded it. And then below the bridge the lad could see the historic meadow, which was a cornfield in the eighteenth century, where Captain Moses Rice and Phineas Arms came suddenly one summer day to the end of their planting and hoeing. The house at the foot of the hill where the boy was cultivating his imagination had been built by Captain Rice, and in the family burying-ground in the orchard above it lay the body of this mighty militia-man, and beside him that of Phineas Arms, and on the headstone of each the legend familiar at that period of our national life, "Killed by the Indians." Happy Phineas Arms, at the age of seventeen to exchange in a moment the tedium of the cornfield for immortality.

There was a tradition that years after, when the Indians had disappeared through a gradual process of intoxication and pauperism, a red man had been seen skulking along the brow of this very hill and peering down through the bushes where the boy was now perched on a tree, shaking his fist at the hated civilization, and vengefully, some said pathetically, looking down into this valley where his race had been so happy in the natural pursuits of fishing, hunting, and war. On the opposite side of the river was still to be traced an Indian trail, running to the western mountains, which the boy intended some time to follow; for this highway of warlike forays, of messengers of defiance, along which white maidens had been led captive to Canada, appealed greatly to his imagination.

The boy lived in these traditions quite as much as in those of the Revolutionary War into which they invariably glided in his perspective of history, the redskins and the redcoats being both enemies of his ancestors. There was the grave of the envied Phineas Arms—that ancient boy not much older than he—and there were hanging in the kitchen the musket and powder-horn that his great-grandfather had carried at Bunker Hill, and did he not know by heart the story of his great-grandmother, who used to tell his father that she heard when she was a slip of a girl in Plymouth the cannonading on that awful day when Gage met his victorious defeat?

In fact, according to his history-book there had been little but wars in this peaceful nation: the War of 1812, the Mexican War, the incessant frontier wars with the Indians, the Kansas War, the Mormon War, the War for the Union. The echoes of the latter had not yet died away. What a career he might have had if he had not been born so late in the world! Swinging in this tree-top, with a vivid consciousness of life, of his own capacity for action, it seemed a pity that he could not follow the drum and the flag into such contests as he read about so eagerly.

And yet this was only a corner of the boy's imagination. He had many worlds and he lived in each by turn. There was the world of the Old Testament, of David and Samson, and of those dim figures in the dawn of history, called the Patriarchs. There was the world of Julius Caesar and the Latin grammar, though this was scarcely as real to him as the Old Testament, which was brought to his notice every Sunday as a necessity of his life, while Caesar and Aeneas and the fourth declension were made to be a task, for some mysterious reason, a part of his education. He had not been told that they were really a part of the other world which occupied his mind so much of the time, the world of the Arabian Nights and Robinson Crusoe, and Coleridge and Shelley and Longfellow, and Washington Irving and Scott and Thackeray, and Pope's Iliad and Plutarch's Lives. That this was a living world to the boy was scarcely his fault, for it must be confessed that those were very antiquated book-shelves in the old farmhouse to which he had access, and the news had not been apprehended in this remote valley that the classics of literature were all as good as dead and buried, and that the human mind had not really created anything worth modern notice before about the middle of the nineteenth century. It was not exactly an ignorant valley, for the daily newspapers were there, and the monthly magazine, and the fashion-plate of Paris, and the illuminating sunshine of new science, and enough of the uneasy throb of modern life. Yet somehow the books that were still books had not been sent to the garret, to make room for the illustrated papers and the profound physiological studies of sin and suffering that were produced by touching a scientific button. No, the boy was conscious in a way of the mighty pulsation of American life, and he had also a dim notion that his dreams in his various worlds would come to a brilliant fulfillment when he was big enough to go out and win a name and fame. But somehow the old books, and the family life, and the sedate ways of the community he knew, had given him a fundamental and not unarmed faith in the things that were and had been.

Every Sunday the preacher denounced the glitter and frivolity and corruption of what he called Society, until the boy longed to see this splendid panorama of cities and hasting populations, the seekers of pleasure and money and fame, this gay world which was as fascinating as it was wicked. The preacher said the world was wicked and vain. It did not seem so to the boy this summer day, not at least the world he knew. Of course the boy had no experience. He had never heard of Juvenal nor of Max Nordau. He had no philosophy of life. He did not even know that when he became very old the world would seem to him good or bad according to the degree in which he had become a good or a bad man.

In fact, he was not thinking much about being good or being bad, but of trying his powers in a world which seemed to offer to him infinite opportunities. His name—Philip Burnett—with which the world, at least the American world, is now tolerably familiar, and which he liked to write with ornamental flourishes on the fly-leaves of his schoolbooks, did not mean much to him, for he had never seen it in print, nor been confronted with it as something apart from himself. But the Philip that he was he felt sure would do something in the world. What that something should be varied from day to day according to the book, the poem, the history or biography that he was last reading. It would not be difficult to write a poem like "Thanatopsis" if he took time enough, building up a line a day. And yet it would be better to be a soldier, a man who could use the sword as well as the pen, a poet in uniform. This was a pleasing imagination. Surely his aunt and his cousins in the farmhouse would have more respect for him if he wore a uniform, and treat him with more consideration, and perhaps they would be very anxious about him when he was away in battles, and very proud of him when he came home between battles, and went quite modestly with the family into the village church, and felt rather than saw the slight flutter in the pews as he walked down the aisle, and knew that the young ladies, the girl comrades of the district school, were watching him from the organ gallery, curious to see Phil, who had gone into the army. Perhaps the preacher would have a sermon against war, and the preacher should see how soldierlike he would take this attack on him. Alas! is such vanity at the bottom of even a reasonable ambition? Perhaps his town would be proud of him if he were a lawyer, a Representative in Congress, come back to deliver the annual oration at the Agricultural Fair. He could see the audience of familiar faces, and hear the applause at his witty satires and his praise of the nobility of the farmer's life, and it would be sweet indeed to have the country people grasp him by the hand and call him Phil, just as they used to before he was famous. What he would say, he was not thinking of, but the position he would occupy before the audience. There were no misgivings in any of these dreams of youth.

II

The musings of this dreamer in a tree-top were interrupted by the peremptory notes of a tin horn from the farmhouse below. The boy recognized this not only as a signal of declining day and the withdrawal of the sun behind the mountains, but as a personal and urgent notification to him that a certain amount of disenchanting drudgery called chores lay between him and supper and the lamp-illuminated pages of *The Last of the*

Mohicans. It was difficult, even in his own estimation, to continue to be a hero at the summons of a tin horn—a silver clarion and castle walls would have been so different—and Phil slid swiftly down from his perch, envying the squirrels who were under no such bondage of duty.

Recalled to the world that now is, the lad hastily gathered a bouquet of columbine and a bunch of the tender leaves and the red berries of the wintergreen, called to "Turk," who had been all these hours watching a woodchuck hole, and ran down the hill by leaps and circuits as fast as his little legs could carry him, and, with every appearance of a lad who puts duty before pleasure, arrived breathless at the kitchen door, where Alice stood waiting for him. Alice, the somewhat feeble performer on the horn, who had been watching for the boy with her hand shading her eyes, called out upon his approach:

"Why, Phil, what in the world—"

"Oh, Alice!" cried the boy, eagerly, having in a moment changed in his mind the destination of the flowers; "I've found a place where the checker-berries are thick as spatter." And Phil put the flowers and the berries in his cousin's hand. Alice looked very much pleased with this simple tribute, but, as she admired it, unfortunately asked—women always ask such questions:

"And you picked them for me?"

This was a cruel dilemma. Phil was more devoted to his sweet cousin than to any one else in the world, and he didn't want to hurt her feelings, and he hated to tell a lie. So he only looked a lie, out of his affectionate, truthful eyes, and said:

"I love to bring you flowers. Has uncle come home yet?"

"Yes, long ago. He called and looked all around for you to unharness the horse, and he wanted you to go an errand over the river to Gibson's. I guess he was put out."

"Did he say anything?"

"He asked if you had weeded the beets. And he said that you were the master boy to dream and moon around he ever saw." And she added, with a confidential and mischievous smile: "I think you'd better brought a switch along; it would save time."

Phil had a great respect for his uncle Maitland, but he feared him almost more than he feared the remote God of Abraham and Isaac. Mr. Maitland was not only the most prosperous man in all that region, but the man of the finest appearance, and a bearing that was equity itself. He was the first selectman of the town, and a deacon in the church, and however much he prized mercy in the next world he did not intend to have that quality interfere with justice in this world. Phil knew indeed that he was a man of God, that fact was impressed upon him at least twice a day, but he sometimes used to think it must be a severe God to have that sort of man. And he didn't like the curt way he pronounced the holy name—he might as well have called Job "job."

Alice was as unlike her father, except in certain race qualities of integrity and common-sense, as if she were of different blood. She was the youngest of five maiden sisters, and had arrived at the mature age of eighteen. Slender in figure, with a grace that was half shyness, soft brown hair, gray eyes that changed color and could as easily be sad as merry, a face marked with a moving dimple that every one said was lovely, retiring in manner and yet not lacking spirit nor a sly wit of her own. Now and then, yes, very often, out of some paradise, no doubt, strays into New England conditions of reticence and self-denial such a sweet spirit, to diffuse a breath of heaven in its atmosphere, and to wither like a rose ungathered. These are the New England nuns, not taking any vows, not self-consciously virtuous, apparently untouched by the vanities of the world. Marriage? It is not in any girl's nature not to think of that, not to be in a flutter of pleasure or apprehension at the attentions of the other sex. Who has been able truly to read the thoughts of a shrinking maiden in the passing days of her youth and beauty? In this harmonious and unselfish household, each with decided individual character, no one ever intruded upon the inner life of the other. No confidences were given in the deep matters of the heart, no sign except a blush over a sly allusion to some one who had been "attentive." If you had stolen a look into the workbasket or the secret bureau-drawer, you might have found a treasured note, a bit of ribbon, a rosebud, some token of tenderness or of friendship that was growing old with the priestess who cherished it. Did they not love flowers, and pets, and had they not a passion for children? Were there not moonlight evenings when they sat silent and musing on the stone steps, watching the shadows and the dancing gleams on the swift river, when the air was fragrant with the pink and the lilac? Not melancholy this, nor poignantly sad, but having in it nevertheless something of the pathos of life unfulfilled. And was there not sometimes, not yet habitually, coming upon these faces, faces plain and faces attractive, the shade of renunciation?

Phil loved Alice devotedly. She was his confidante, his defender, but he feared more the disapproval of her sweet eyes when he had done wrong than the threatened punishment of his uncle.

"I only meant to be gone just a little while," Phil went on to say.

"And you were away the whole afternoon. It is a pity the days are so short. And you don't know what you lost."

"No great, I guess."

"Celia and her mother were here. They stayed all the afternoon."

"Celia Howard? Did she wonder where I was?"

"I don't know. She didn't say anything about it. What a dear little thing she is!"

"And she can say pretty cutting things."

"Oh, can she? Perhaps you'd better run down to the village before dark and take her these flowers."

"I'm not going. I'd rather you should have the flowers." And Phil spoke the truth this time.

Celia, who was altogether too young to occupy seriously the mind of a lad of twelve, had nevertheless gained an ascendancy over him because of her willful, perverse, and sometimes scornful ways, and because she was different from the other girls of the school. She had read many more books than Phil, for she had access to a library, and she could tell him much of a world that he only heard of through books and

newspapers, which latter he had no habit of reading. He liked, therefore, to be with Celia, notwithstanding her little airs of superiority, and if she patronized him, as she certainly did, probably the simple-minded young gentleman, who was unconsciously bred in the belief that he and his own kin had no superiors anywhere, never noticed it. To be sure they quarreled a good deal, but truth to say Phil was never more fascinated with the little witch, whom he felt himself strong enough to protect, than when she showed a pretty temper. He rather liked to be ordered about by the little tyrant. And sometimes he wished that Murad Ault, the big boy of the school, would be rude to the small damsel, so that he could show her how a knight would act under such circumstances. Murad Ault stood to Phil for the satanic element in his peaceful world. He was not only big and strong of limb and broad of chest, but he was very swarthy, and had closely curled black hair. He feared nothing, not even the teacher, and was always doing some dare-devil thing to frighten the children. And because he was dark, morose, and made no friends, and wished none, but went solitary his own dark way, Phil fancied that he must have Spanish blood in his veins, and would no doubt grow up to be a pirate. No other boy in the winter could skate like Murad Ault, with such strength and grace and recklessness—thin ice and thick ice were all one to him, but he skated along, dashing in and out, and sweeping away up and down the river in a whirl of vigor and daring, like a black marauder. Yet he was best and most awesome in the swimming pond in summer—though it was believed that he dared go in in the bitter winter, either by breaking the ice or through an air-hole, and there was a story that he had ventured under the ice as fearless as a cold fish. No one could dive from such a height as he, or stay so long under water; he liked to stay under long enough to scare the spectators, and then appear at a distance, thrashing about in the water as if he were rescuing himself from drowning, sputtering out at the same time the most diabolical noises—curses, no doubt, for he had been heard to swear. But as he skated alone he swam alone, appearing and disappearing at the swimming-place silently, with never a salutation to any one. And he was as skillful a fisher as he was a swimmer. No one knew much about him. He lived with his mother in a little cabin up among the hills, that had about it scant patches of potatoes and corn and beans, a garden fenced in by stumproots, as ill-cared for as the shanty. Where they came from no one knew. How they lived was a matter of conjecture, though the mother gathered herbs and berries and bartered them at the village store, and Murad occasionally took a hand in some neighbor's hay-field, or got a job of chopping wood in the winter. The mother was old and small and withered, and they said evil-eyed. Probably she was no more evil-eyed than any old woman who had such a hard struggle for existence as she had. An old widow with an only son who looked like a Spaniard and acted like an imp! Here was another sort of exotic in the New England life.

Celia had been brought to Rivervale by her mother about a year before this time, and the two occupied a neat little cottage in the village, distinguished only by its neatness and a plot of syringas, and pinks, and marigolds, and roses, and bachelor's-buttons, and boxes of the tough little exotics, called "hen-and-chickens," in the door-yard, and a vigorous fragrant honeysuckle over the front porch. She only dimly remembered her father, who had been a merchant in a small way in the city, and dying left to his widow and only child a very moderate fortune. The girl showed early an active and ingenious mind, and an equal love for books and for having her own way; but she was delicate, and Mrs. Howard wisely judged that a few years in a country village would improve her health and broaden her view of life beyond that of cockney provincialism. For, though Mrs. Howard had more refinement than strength of mind, and passed generally for a sweet and inoffensive little woman, she did not lack a certain true perception of values, due doubtless to the fact that she had been a New England girl, and, before her marriage and emigration to the great city, had passed her life among unexciting realities, and among people who had leisure to think out things in a slow way. But the girl's energy and self-confidence had no doubt been acquired from her father, who was cut off in mid-career of his struggle for place in the metropolis, or from some remote ancestor. Before she was eleven years old her mother had listened with some wonder and more apprehension to the eager forecast of what this child intended to do when she became a woman, and already shrank from a vision of Celia on a public platform, or the leader of some metempsychosis club. Through her affections only was the child manageable, but in opposition to her spirit her mother was practically powerless. Indeed, this little sprout of the New Age always spoke of her to Philip and to the Maitlands as "little mother."

The epithet seemed peculiarly tender to Philip, who had lost his father before he was six years old, and he was more attracted to the timid and gentle little widow than to his equable but more robust Aunt Eusebia, Mrs. Maitland, his father's elder sister, whom Philip fancied not a bit like his father except in sincerity, a quality common to the Maitlands and Burnetts. Yet there was a family likeness between his aunt and a portrait of his father, painted by a Boston artist of some celebrity, which his mother, who survived her husband only three years, had saved for her boy. His father was a farmer, but a man of considerable cultivation, though not college-bred—his last request on his death-bed was that Phil should be sent to college—a man who made experiments in improving agriculture and the breed of cattle and horses, read papers now and then on topics of social and political reform, and was the only farmer in all the hill towns who had what might be called a library.

It was all scattered at the time of the winding up of the farm estate, and the only jetsam that Philip inherited out of it was an annotated copy of Adam Smith's *Wealth of Nations*, Young's *Travels in France*, a copy of *The Newcomes*, and the first American edition of *Childe Harold*. Probably these odd volumes had not been considered worth any considerable bid at the auction. From his mother, who was fond of books, and had on more than one occasion, of the failure of teachers, taught in the village school in her native town before her marriage, Philip inherited his love of poetry, and he well remembered how she used to try to inspire him with patriotism by reading the orations of Daniel Webster (she was very fond of orations), and telling him war stories about Grant and Sherman and Sheridan and Farragut and Lincoln. He distinctly remembered also standing at her knees and trying, at intervals, to commit to memory the *Rime of the Ancient Mariner*. He had learned it all since, because he thought it would please his mother, and because there was something in it that appealed to his coming sense of the mystery of life. When he repeated it to Celia, who had never heard of it, and remarked that it was all made up, and that she never tried to learn a long thing like that that wasn't so, Philip could see that her respect for him increased a little. He did not know that the child got it out of the library the next day and never rested till she knew it by heart. Philip could repeat also the books of the Bible in order, just as glibly as the multiplication-table, and the little minx, who could not brook that a country boy

should be superior to her in anything, had surprised her mother by rattling them all off to her one Sunday evening, just as if she had been born in New England instead of in New York. As to the other fine things his mother read him, out of Ruskin and the like; Philip chiefly remembered what a pretty glow there was in his mother's face when she read them, and that recollection was a valuable part of the boy's education.

Another valuable part of his education was the gracious influence in his aunt's household, the spirit of candor, of affection, and the sane common-sense with which life was regarded, the simplicity of its faith and the patience with which trials were borne. The lessons he learned in it had more practical influence in his life than all the books he read. Nor were his opportunities for the study of character so meagre as the limit of one family would imply. As often happens in New England households, individualities were very marked, and from his stern uncle and his placid aunt down to the sweet and nimble-witted Alice, the family had developed traits and even eccentricities enough to make it a sort of microcosm of life. There, for instance, was Patience, the maiden aunt, his father's sister, the news-monger of the fireside, whose powers of ratiocination first gave Philip the Greek idea and method of reasoning to a point and arriving at truth by the process of exclusion. It did not excite his wonder at the time, but afterwards it appeared to him as one of the New England eccentricities of which the novelists make so much. Patience was a home-keeping body and rarely left the premises except to go to church on Sunday, although her cheerfulness and social helpfulness were tinged by nothing morbid. The story was—Philip learned it long afterwards—that in her very young and frisky days Patience had one evening remained out at some merry-making very late, and in fact had been escorted home in the moonlight by a young gentleman when the tall, awful-faced clock, whose face her mother was watching, was on the dreadful stroke of eleven. For this delinquency her mother had reproved her, the girl thought unreasonably, and she had quickly replied, "Mother, I will never go out again." And she never did. It was in fact a renunciation of the world, made apparently without rage, and adhered to with cheerful obstinacy.

But although for many years Patience rarely left her home, until the habit of seclusion had become as fixed as that of a nun who had taken the vows, no one knew so well as she the news and gossip of the neighborhood, and her power of learning or divining it seemed to increase with her years. She had a habit of sitting, when her household duties permitted, at a front window, which commanded a long view of the river road, and gathering the news by a process peculiar to herself. From this peep-hole she studied the character and destination of all the passers-by that came within range of her vision, and made her comments and deductions, partly to herself, but for the benefit of those who might be listening.

"Why, there goes Thomas Henry," she would say (she always called people by their first and middle names). "Now, wherever can he be going this morning in the very midst of getting in his hay? He can't be going to the Browns' for vegetables, for they set great store by their own raising this year; and they don't get their provisions up this way either, because Mary Ellen quarreled with Simmons's people last year. No!" she would exclaim, rising to a climax of certainty on this point, "I'll be bound he is not going after anything in the eating line!"

Meantime Thomas Henry's wagon would be disappearing slowly up the sandy road, giving Patience a chance to get all she could out of it, by eliminating all the errands Thomas Henry could not possibly be going to do in order to arrive at the one he must certainly be bound on.

"They do say he's courting Eliza Merritt," she continued, "but Eliza never was a girl to make any man leave his haying. No, he's never going to see Eliza, and if it isn't provisions or love it's nothing short of sickness. Now, whoever is sick down there? It can't be Mary Ellen, because she takes after her father's family and they are all hearty. It must be Mary Ellen's little girls, and the measles are going the rounds. It must be they've all got the measles."

If the listeners suggested that possibly one of the little girls might have escaped, the suggestion was decisively put aside.

"No; if one of them had been well, Mary Ellen would have sent her for the doctor."

Presently Thomas Henry's cart was heard rumbling back, and sure enough he was returning with the doctor, and Patience hailed him from the gate and demanded news of Mary Ellen.

"Why, all her little girls have the measles," replied Thomas Henry, "and I had to leave my haying to fetch the doctor."

"I want to know," said Patience.

Being the eldest born, Patience had appropriated to herself two rooms in the rambling old farmhouse before her brother's marriage, from which later comers had never dislodged her, and with that innate respect for the rights and peculiarities of others which was common in the household, she was left to express her secluded life in her own way. As the habit of retirement grew upon her she created a world of her own, almost as curious and more individually striking than the museum of Cluny. There was not a square foot in her tiny apartment that did not exhibit her handiwork. She was very fond of reading, and had a passion for the little prints and engravings of "foreign views," which she wove into her realm of natural history. There was no flower or leaf or fruit that she had seen that she could not imitate exactly in wax or paper. All over the walls hung the little prints and engravings, framed in wreaths of moss and artificial flowers, or in elaborate square frames made of pasteboard. The pasteboard was cut out to fit the picture, and the margins, daubed with paste, were then strewn with seeds of corn and acorns and hazelnuts, and then the whole was gilded so that the effect was almost as rich as it was novel. All about the rooms, in nooks and on tables, stood baskets and dishes of fruit—apples and plums and peaches and grapes—set in proper foliage of most natural appearance, like enough to deceive a bird or the Sunday-school scholars, when on rare occasions they were admitted into this holy of holies. Out of boxes, apparently filled with earth in the corners of the rooms, grew what seemed to be vines trained to run all about the cornices and to festoon the pictures, but which were really strings, colored in imitation of the real vine, and spreading out into paper foliage. To complete the naturalistic character of these everlasting vines, which no scale-bugs could assail, there were bunches of wonderful grapes depending here and there to excite the cupidity of both bird and child. There was no cruelty in the nature of Patience, and she made prisoners of neither birds nor squirrels, but cunning cages here and

there held most lifelike counterfeits of their willing captives. There was nothing in the room that was alive, except the dainty owner, but it seemed to be a museum of natural history. The rugs on the floor were of her own devising and sewing together, and rivaled in color and ingenuity those of Bokhara.

But Patience was a student of the heavens as well as of the earth, and it was upon the ceiling that her imagination expanded. There one could see in their order the constellations of the heavens, represented by paper-gilt stars, of all magnitudes, most wonderful to behold. This part of her decorations was the most difficult of all. The constellations were not made from any geography of the heavens, but from actual nightly observation of the positions of the heavenly bodies. Patience confessed that the getting exactly right of the Great Dipper had caused her most trouble. On the night that was constructed she sat up till three o'clock in the morning, going out and studying it and coming in and putting up one star at a time. How could she reach the high ceiling? Oh, she took a bean-pole, stuck the gilt star on the end of it, having paste on the reverse side, and fixed it in its place. That was easy, only it was difficult to remember when she came into the house the correct positions of the stars in the heavens. What the astronomer and the botanist and the naturalist would have said of this little kingdom is unknown, but Patience herself lived among the glories of the heavens and the beauties of the earth which she had created. Probably she may have had a humorous conception of this, for she was not lacking in a sense of humor. The stone step that led to her private door she had skillfully painted with faint brown spots, so that when visitors made their exit from this part of the house they would say, "Why, it rains!" but Patience would laugh and say, "I guess it is over by now."

III

"I'm not going to follow you about any more through the brush and brambles, Phil Burnett," and Celia, emerging from the thicket into a clearing, flung herself down on a knoll under a beech-tree.

Celia was cross. They were out for a Saturday holiday on the hillside, where Phil said there were oceans of raspberries and blueberries, beginning to get ripe, and where you could hear the partridges drumming in the woods, and see the squirrels.

"Why, I'm not a bit tired," said Phil; "a boy wouldn't be." And he threw himself down on the green moss, with his heels in the air, much more intent on the chatter of a gray squirrel in the tree above him than on the complaints of his comrade.

"Why don't you go with a boy, then?" asked Celia, in a tone intended to be severe and dignified.

"A boy isn't so nice," said Philip, with the air of stating a general proposition, but not looking at her.

"Oh," said Celia, only half appeased, "I quite agree with you." And she pulled down some beech leaves from a low, hanging limb and began to plait a wreath.

"Who are you making that for?" asked Philip, who began to be aware that a cloud had come over his holiday sky.

"Nobody in particular; it's just a wreath." And then there was silence, till Philip made another attempt.

"Celia, I don't mind staying here if you are tired. Tell me something about New York City. I wish we were there."

"Much you know about it," said Celia, but with some relaxation of her severity, for as she looked at the boy in his country clothes and glanced at her own old frock and abraded shoes, she thought what a funny appearance the pair would make on a fashionable city street.

"Would you rather be there?" asked Philip. "I thought you liked living here."

"Would I rather? What a question! Everybody would. The country is a good place to go to when you are tired, as mamma is. But the city! The big fine houses, and the people all going about in a hurry; the streets all lighted up at night, so that you can see miles and miles of lights; and the horses and carriages, and the lovely dresses, and the churches full of nice people, and such beautiful music! And once mamma took me to the theatre. Oh, Phil, you ought to see a play, and the actors, all be-a-u-ti-fully dressed, and talking just like a party in a house, and dancing, and being funny, and some of it so sad as to make you cry, and some of it so droll that you had to laugh—just such a world as you read of in books and in poetry. I was so excited that I saw the stage all night and could hardly sleep." The girl paused and looked away to the river as if she saw it all again, and then added in a burst of confidence:

"Do you know, I mean to be an actress some day, when mamma will let me."

"Play-actors are wicked," said Phil, in a tone of decision; "our minister says so, and my uncle says so."

"Fudge!" returned Celia. "Much they know about it. Did Alice say so?"

"I never asked her, but she said once that she supposed it was wrong, but she would like to see a play."

"There, everybody would. Mamma says the people from the country go to the theatre always, a good deal more than the people in the city go. I should like to see your aunt Patience in a theatre and hear what she said about it. She's an actress if ever there was one."

Philip opened his eyes in protest.

"Mamma says it is as good as a play to hear her go on about people, and what they are like, and what they are going to do, and then her little rooms are just like a scene on a stage. If they were in New York everybody would go to see them and to hear her talk."

This was such a new view of his home life to Philip that he could neither combat it nor assent to it, further than to say, that his aunt was just like everybody else, though she did have some peculiar ways.

"Well, she acts," Celia insisted, "and most people act. Our minister acts all the time, mamma says." Celia had plenty of opinions of her own, but when she ventured a startling statement she had the habit of going

under the shelter of "little mother," whose casual and unconsidered remarks the girl turned to her own uses. Perhaps she would not have understood that her mother merely meant that the minister's sacerdotal character was not exactly his own character. Just as Philip noticed without being able to explain it that his uncle was one sort of a man in his religious exercises and observances and another sort of man in his dealings with him. Children often have recondite thoughts that do not get expression until their minds are more mature; they even accept contradictory facts in their experience. There was one of the deacons who was as kind as possible, and Philip believed was a good and pious man, who had the reputation of being sharp and even tricky in a horse-trade. And Philip used to think how lucky it was for him that he had been converted and was saved!

"Are you going to stay here always?" asked Philip, pursuing his own train of thought about the city.

"Here? I should think not. If I were a boy I wouldn't stay here, I can tell you. What are you going to do, Phil, what are you going to be?"

"Oh, I don't know," said Philip, turning over on his back and looking up into the blue world through the leaves; "go to college, I suppose." Children are even more reticent than adults about revealing their inner lives, and Philip would not, even to Celia, have confessed the splendid dreams about his career that came to him that day in the hickory-tree, and that occupied him a great deal.

"Of course," said this wise child, "but that's nothing. I mean, what are you going to do? My cousin Jim has been all through college, and he doesn't do a thing except wear nice clothes and hang around and talk. He says I'm a little chatter-box. I hate the sight of him."

"If he doesn't like you, then I don't like him," said Philip, as if he were making a general and not a personal assertion. "Oh, I should like to travel."

"So should I, and see things and find things. Jim says he's going to be an explorer. He never will. He wouldn't find anything. He twits me, and wants to know what is the good of my reading about Africa and such things. Phil, don't you love to read about Africa, and the desert, and the lions and the snakes, and bananas growing, and palm-trees, and the queerest black men and women, real dwarfs some of them? I just love it."

"So do I," said Philip, "as far as I have read. Alice says it's awful dangerous—fevers and wild beasts and savages and all that. But I shouldn't mind."

"Of course you wouldn't. But it costs like everything to go to Africa, or anywhere."

"I'd make a book about it, and give lectures, and make lots of money."

"I guess," said Celia, reflecting upon this proposition, "I'd be an engineer or a railroad man, or something like that, and make a heap of money, and then I could go anywhere I liked. I just hate to be poor. There!"

"Is Jim poor?"

"No; he can do what he pleases. I asked him, then, why he didn't go to Africa, and he wanted to know what was the good of finding Livingstone, anyway. I'll bet Murad Ault would go to Africa."

"I wish he would," said Philip; and then, having moved so that he could see Celia's face, "Do you like Murad Ault?"

"No," replied Celia, promptly; "he's horrid, but he isn't afraid of anything."

"Well, I don't care," said Philip, who was nettled by this implication. And Celia, who had shown her power of irritating, took another tack.

"You don't think I'd be seen going around with him? Aren't we having a good time up here?"

"Bully!" replied Philip. And not seeing the way to expand this topic any further, he suddenly said:

"Celia, the next time I go on our hill I'll get you lots of sassafras."

"Oh, I love sassafras, and sweet-flag!"

"We can get that on the way home. I know a place." And then there was a pause. "Celia, you didn't tell me what you are going to do when you grow up."

"Go to college."

"You? Why, girls do, don't they? I never thought of that."

"Of course they do. I don't know whether I'll write or be a doctor. I know one thing—I won't teach school. It's the hatefulest thing there is! It's nice to be a doctor and have your own horse, and go round like a man. If it wasn't for seeing so many sick people! I guess I'll write stories and things."

"So would I," Philip confessed, "if I knew any."

"Why, you make 'em up. Mamma says they are all made up. I can make 'em in my head any time when I'm alone."

"I don't know," Philip said, reflectively, "but I could make up a story about Murad Ault, and how he got to be a pirate and got in jail and was hanged."

"Oh, that wouldn't be a real story. You have got to have different people in it, and have 'em talk, just as they do in books; and somebody is in love and somebody dies, and the like of that."

"Well, there are such stories in *The Pirate's Own Book*, and it's awful interesting."

"I'd be ashamed, Philip Burnett, to read such a cruel thing, all about robbers and murders."

"I didn't read it through; Alice said she was going to burn it up. I shouldn't wonder if she did."

"Boys make me tired!" exclaimed this little piece of presumption; and this attitude of superiority exasperated Philip more than anything else his mentor had said or done, and he asserted his years of seniority by jumping up and saying, decidedly, "It's time to go home. Shall I carry your wreath?"

"No, I thank you!" replied Celia, with frigid politeness.

"Down in the meadow," said Philip, making one more effort at conciliation, "we can get some tigerlilies, and weave them in and make a beautiful wreath for your mother."

"She doesn't like things fussed up," was the gracious reply. And then the children trudged along homeward,

each with a distinct sense of injury.

IV

Traits that make a child disagreeable are apt to be perpetuated in the adult. The bumptious, impudent, selfish, "hateful" boy may become a man of force, of learning, of decided capacity, even of polish and good manners, and score success, so that those who know him say how remarkable it is that such a "knurly" lad should have turned out so well. But some exigency in his career, it may be extraordinary prosperity or bitter defeat, may at any moment reveal the radical traits of the boy, the original ignoble nature. The world says that it is a "throwing back"; it is probably only a persistence of the original meanness under all the overlaid cultivation and restraint.

Without bothering itself about the recondite problems of heredity or the influence of environment, the world wisely makes great account of "stock." The peasant nature, which may be a very different thing from the peasant condition, persists, and shows itself in business affairs, in literature, even in the artist. No marriage is wisely contracted without consideration of "stock." The admirable qualities which make a union one of mutual respect and enduring affection—the generousities, the magnanimities, the courage of soul, the crystalline truthfulness, the endurance of ill fortune and of prosperity—are commonly the persistence of the character of the stock.

We can get on with surface weaknesses and eccentricities, and even disagreeable peculiarities, if the substratum of character is sound. There is no woman or man so difficult—to get on with, whatever his or her graces or accomplishments, as the one "you don't know where to find," as the phrase is. Indeed, it has come to pass that the highest and final eulogy ever given to a man, either in public or private life, is that he is one "you can tie to." And when you find a woman of that sort you do not need to explain to the cynical the wisdom of the Creator in making the most attractive and fascinating sex.

The traits, good and bad, persist; they may be veneered or restrained, they are seldom eradicated. All the traits that made the great Napoleon worshiped, hated, and feared existed in the little Bonaparte, as perfectly as the pea-pod in the flower. The whole of the First Empire was smirched with Corsican vulgarity. The world always reckons with these radical influences that go to make up a family. One of the first questions asked by an old politician, who knew his world thoroughly, about any man becoming prominent, when there was a discussion of his probable action, was, "Whom did he marry?"

There are exceptions to this general rule, and they are always noticeable when they occur—this deviation from the traits of the earliest years—and offer material for some of the subtlest and most interesting studies of the novelist.

It was impossible for those who met Philip Burnett after he had left college, and taken his degree in the law-school, and spent a year, more or less studiously, in Europe, to really know him if they had not known the dreaming boy in his early home, with all the limitations as well as the vitalizing influences of his start in life. And on the contrary, the error of the neighbors of a lad in forecasting his career comes from the fact that they do not know him. The verdict about Philip would probably have been that he was a very nice sort of a boy, but that he would never "set the North River on fire." There was a headstrong, selfish, pushing sort of boy, one of Philip's older schoolmates, who had become one of the foremost merchants and operators in New York, and was already talked of for mayor. This success was the sort that fulfilled the rural idea of getting on in the world, whereas Philip's accomplishments, seen through the veneer of conceit which they had occasioned him to take on, did not commend themselves as anything worth while. Accomplishments rarely do unless they are translated into visible position or into the currency of the realm. How else can they be judged? Does not the great public involuntarily respect the author rather for the sale of his books than for the books themselves?

The period of Philip's novitiate—those most important years from his acquaintance with Celia Howard to the attainment of his professional degree—was most interesting to him, but the story of it would not detain the reader of exciting fiction. He had elected to use his little patrimony in making himself instead of in making money—if merely following his inclination could be called an election. If he had reasoned about it he would have known that the few thousands of dollars left to him from his father's estate, if judiciously invested in business, would have grown to a good sum when he came of age, and he would by that time have come into business habits, so that all he would need to do would be to go on and make more money. If he had reasoned more deeply he would have seen that by this process he would become a man of comparatively few resources for the enjoyment of life, and a person of very little interest to himself or to anybody else. So perhaps it was just as well that he followed his instincts and postponed the making of money until he had made himself, though he was to have a good many bitter days when the possession of money seemed to him about the one thing desirable.

It was Celia, who had been his constant counselor and tormentor, about the time when she was beginning to feel a little shy and long-legged, in her short skirts, who had, in a romantic sympathy with his tastes, opposed his going into a "store" as a clerk, which seemed to the boy at one time an ideal situation for a young man.

"A store, indeed!" cried the young lady; "pomatum on your hair, and a grin on your face; snip, snip, snip, calico, ribbons, yard-stick; 'It's very becoming, miss, that color; this is only a sample, only a remnant, but I shall have a new stock in by Friday; anything else, ma'am, today?' Sho! Philip, for a man!"

Fortunately for Philip there lived in the village an old waif, a scholarly oddity, uncommunicative, whose coming to dwell there had excited much gossip before the inhabitants got used to his odd ways.

Usually reticent and rough of speech—the children thought he was an old bear—he was nevertheless

discovered to be kindly and even charitable in neighborhood emergencies, and the minister said he was about the most learned man he ever knew. His history does not concern us, but he was doubtless one of the men whose talents have failed to connect with success in anything, who had had his bout with the world, and retired into peaceful seclusion in an indulgence of a mild pessimism about the world generally.

He lived alone, except for the rather neutral presence of Aunt Hepsy, who had formerly been a village tailoress, and whose cottage he had bought with the proviso that the old woman should continue in it as "help." With Aunt Hepsy he was no more communicative than with anybody else. "He was always readin', when he wasn't goin' fishin' or off in the woods with his gun, and never made no trouble, and was about the easiest man to get along with she ever see. You mind your business and he'll mind his'n." That was the sum of Aunt Hepsy's delivery about the recluse, though no doubt her old age was enriched by constant "study" over his probable history and character. But Aunt Hepsy, since she had given up tailoring, was something of a recluse herself.

The house was full of books, mostly queer books, "in languages nobody knows what," as Aunt Hepsy said, which made Philip open his eyes when he went there one day to take to the old man a memorandum-book which he had found on Mill Brook. The recluse took a fancy to the ingenuous lad when he saw he was interested in books, and perhaps had a mind not much more practical than his own; the result was an acquaintance, and finally an intimacy—at which the village wondered until it transpired that Philip was studying with the old fellow, who was no doubt a poor shack of a school-teacher in disguise.

It was from this gruff friend that Philip learned Greek and Latin enough to enable him to enter college, not enough drill and exact training in either to give him a high stand, but an appreciation of the literatures about which the old scholar was always enthusiastic. Philip regretted all his life that he had not been severely drilled in the classics and mathematics, for he never could become a specialist in anything. But perhaps, even in this, fate was dealing with him according to his capacities. And, indeed, he had a greater respect for the scholarship of his wayside tutor than for the pedantic acquirements of many men he came to know afterwards. It was from him that Philip learned about books and how to look for what he wanted to know, and it was he who directed Philip's taste to the best. When he went off to college the lad had not a good preparation, but he knew a great deal that would not count in the entrance examinations.

"You will need all the tools you can get the use of, my boy, in the struggle," was the advice of his mentor, "and the things you will need most may be those you have thought least of. I never go fishing without both fly and bait."

Philip was always grateful that before he entered college he had a fine reading knowledge of French, and that he knew enough German to read and enjoy Heine's poems and prose, and that he had read, or read in, pretty much all the English classics.

He used to recall the remark of a lad about his own age, who was on a vacation visit to Rivervale, and had just been prepared for college at one of the famous schools. The boys liked each other and were much together in the summer, and talked about what interested them during their rambles, carrying the rod or the fowling-piece. Philip naturally had most to say about the world he knew, which was the world of books—that is to say, the stored information that had accumulated in the world. This more and more impressed the trained student, who one day exclaimed:

"By George! I might have known something if I hadn't been kept at school all my life."

Philip's career in college could not have been called notable. He was not one of the dozen stars in the classroom, but he had a reputation of another sort. His classmates had a habit of resorting to him if they wanted to "know anything" outside the text-books, for the range of his information seemed to them encyclopaedic. On the other hand, he escaped the reputation of what is called "a good fellow." He was not so much unpopular as he was unknown in the college generally, but those who did know him were tolerant of the fact that he cared more for reading than for college sports or college politics. It must be confessed that he added little to the reputation of the university, since his name was never once mentioned in the public prints—search has been made since the public came to know him as a writer—as a hero in any crew or team on any game field. Perhaps it was a little selfish that his muscle developed in the gymnasium was not put into advertising use for the university. The excuse was that he had not time to become an athlete, any more than he had time to spend three years in the discipline of the regular army, which was in itself an excellent thing.

Celia, in one of her letters—it was during her first year at a woman's college, when the development of muscle in gymnastics, running, and the vigorous game of ball was largely engaging the attention of this enthusiastic young lady—took him to task for his inactivity. "This is the age of muscle," she wrote; "the brain is useless in a flabby body, and probably the brain itself is nothing but concentrated intelligent muscle. I don't know how men are coming out, but women will never get the position they have the right to occupy until they are physically the equals of men."

Philip had replied, banteringly, that if that were so he had no desire to enter in a physical competition with women, and that men had better look out for another field.

But later on, when Celia had got into the swing of the classics, and was training for a part in the play of "Antigone," she wrote in a different strain, though she would have denied that the change had any relation to the fact that she had strained her back in a rowing-match. She did not apologize for her former advice, but she was all aglow about the Greek drama, and made reference to Aspasia as an intellectual type of what women might become. "I didn't ever tell you how envious I used to be when you were studying Greek with that old codger in Rivervale, and could talk about Athens and all that. Next time we meet, I can tell you, it will be Greek meets Greek. I do hope you have not dropped the classics and gone in for the modern notion of being real and practical. If I ever hear of your writing 'real' poetry—it is supposed to be real if it is in dialect or misspelled! never will write you again, much less speak to you."

Whatever this decided young woman was doing at the time she was sure was the best for everybody to do, and especially for Master Phil.

Now that the days of preparation were over, and Philip found himself in New York, face to face with the fact that he had nowhere to look for money to meet the expense of rent, board, and clothes except to his own daily

labor, and that there was another economy besides that which he had practiced as to luxuries, there were doubtless hours when his faith wavered a little in the wisdom of the decision that had invested all his patrimony in himself. He had been fortunate, to be sure, in securing a clerk's desk in the great law-office of Hunt, Sharp & Tweedle, and he had the kindly encouragement of the firm that, with close application to business, he would make his way. But even in this he had his misgivings, for a great part of his acquirements, and those he most valued, did not seem to be of any use in his office-work. He had a lofty conception of his chosen profession, as the right arm in the administration of justice between man and man. In practice, however, it seemed to him that the object was to win a case rather than to do justice in a case. Unfortunately, also, he had cultivated his imagination to the extent that he could see both sides of a case. To see both sides is indeed the requisite of a great lawyer, but to see the opposite side only in order to win, as in looking over an opponent's hand in a game of cards. It seemed to Philip that this clear perception would paralyze his efforts for one side if he knew it was the wrong side. The argument was that every cause a man's claim or his defense—ought to be presented in its fullness and urged with all the advocate's ingenuity, and that the decision was in the bosom of an immaculate justice on the bench and the unbiased intelligence in the jury-box. This might be so. But Philip wondered what would be the effect on his own character and on his intellect if he indulged much in the habit of making the worse appear the better cause, and taking up indifferently any side that paid. For himself, he was inclined always to advise clients to "settle," and he fancied that if the occupation of the lawyer was to explain the case to people ignorant of it, and to champion only the right side, as it appeared to an unprejudiced, legally trained mind, and to compose instead of encouraging differences, the law would indeed be a noble profession, and the natural misunderstandings, ignorance, and different points of view would make business enough.

"Stuff!" said Mr. Sharp. "If you begin by declining causes you disapprove of, the public will end by letting you alone in your self-conceited squeamishness. It's human nature you've got to deal with, not theories about law and justice. I tell you that men like litigation. They want to have it out with somebody. And it is better than fisticuffs."

From Mr. Hunt, who moved in the serener upper currents of the law, Philip got more satisfaction.

"Of course, Mr. Burnett, there are miserable squabbles in the law practice, and contemptible pettifoggers and knaves, and men who will sell themselves for any dirty work, as there are in most professions and occupations, but the profession could not exist for a day if it was not on the whole on the side of law and order and justice.

"No doubt it needs from time to time criticism and reformation. So does the church. You look at the characters of the really great lawyers! And there is another thing. In dealing with the cases of our complex life, there is no accomplishment, no learning in science, art, or literature, that the successful practitioner will not find it very advantageous to possess. And a lawyer will never be eminent who has not imagination."

Philip thought he had a very good chance of exercising his imagination in the sky chamber where he slept—a capital situation from which to observe the world. There could not have been an uglier view created—a shapeless mass of brick and stone and painted wood, a collected, towering monstrosity of rectangular and inharmonious lines, a realized dream of hideousness—but for the splendid sky, always changing and doing all that was possible in the gleams and shadows and the glowing colors of morning and evening to soften the ambitious work of man; but for the wide horizon, with patches of green shores and verdant flats washed by the kindly tide; but for the Highlands and Staten Island, the gateway to the ocean; but for the great river and the mighty bay shimmering and twinkling and often iridescent, and the animated life of sails and steamers, the leviathans of commerce and the playthings of pleasure, and the beetle-like, monstrous ferry-boats that pushed their noses through all the confusion, like intelligent, business-like saurians that knew how to keep an appointed line by a clumsy courtesy of apparent yielding. Yes, there was life enough in all this, and inspiration, if one only knew what to be inspired about.

When Philip came home from the office at sunset, through the bustling streets, and climbed up to his perch, he insensibly brought with him something of the restless energy and strife of the city, and in this mood the prospect before him took on a certain significance of great things accomplished, of the highest form of human energy and achievement; he was a part of this exuberant, abundant life, to succeed in the struggle seemed easy, and for the moment he possessed what he saw.

The little room had space enough for a cot bed, a toilet-stand, a couple of easy-chairs—an easy-chair is the one article of furniture absolutely necessary to a reflecting student—some well-filled book-shelves, a small writing-desk, and a tiny closet quite large enough for a wardrobe which seemed to have no disposition to grow. Except for the books and the writing-desk, with its heterogeneous manuscripts, unfinished or rejected, there was not much in the room to indicate the taste of its occupant, unless you knew that his taste was exhibited rather by what he excluded from the room than by what it contained. It must be confessed that, when Philip was alone with his books and his manuscripts, his imagination did not expand in the directions that would have seemed profitable to the head of his firm. That life of the town which was roaring in his ears, that panorama of prosperity spread before him, related themselves in his mind not so much as incitements to engage in the quarrels of his profession as something demanding study and interpretation, something much more human than processes and briefs and arguments. And it was a dark omen for his success that the world interested him much more for itself than for what he could make out of it. Make something to be sure he must—so long as he was only a law clerk on a meagre salary—and it was this necessity that had much to do with the production of the manuscripts. It was a joke on Philip in his club—by-the-way, the half-yearly dues were not far off—that he was doing splendidly in the law; he already had an extensive practice in chambers!

The law is said to be a jealous mistress, but literature is a young lady who likes to be loved for herself alone, and thinks permission to adore is sufficient reward for her votary. Common-sense told Philip that the jealous mistress would flout him and land him in failure if he gave her a half-hearted service; but the other young lady, the Helen of the professions, was always beckoning him and alluring him by the most subtle arts, occupying all his hours with meditations on her grace and beauty, till it seemed the world were well lost for her smile. And the fascinating jade never hinted that devotion to her brought more drudgery and harassment and pain than any other service in the world. It would not have mattered if she had been frank, and told him

that her promise of eternal life was illusory and her rewards commonly but a flattering of vanity. There was no resisting her enchantments, and he would rather follow her through a world of sin and suffering, pursuing her radiant form over bog and moor, in penury and heartache, for one sunrise smile and one glimpse of her sunset heaven, than to walk at ease with a commonplace maiden on any illumined and well-trod highway.

V

It is the desire of every ambitious soul to, enter Literature by the front door, and the few who have patience and money enough to live without the aid of the beckoning Helen may enter there. But a side entrance is the destiny of most aspirants, even those with the golden key of genius, and they are a long time in working their way to be seen coming out, of the front entrance. It is true that a man can attract considerable and immediate attention by trying to effect an entrance through the sewer, but he seldom gains the respect of the public whom he interests, any more than an exhibitor of fireworks gains the reputation of an artist that is accorded to the painter of a good picture.

Philip was waiting at the front door, with his essays and his prose symphonies and his satirical novel—the satire of a young man is apt to be very bitter—but it was as tightly shut against him as if a publisher and not the muse of literature kept the door.

There was a fellow-boarder with Philip, whose acquaintance he had made at the common table in the basement, who appeared to be free of the world of letters and art. He was an alert, compact, neatly dressed little fellow, who had apparently improved every one of his twenty-eight years in the study of life, in gaining assurance and confidence in himself, and also presented himself as one who knew the nether world completely but was not of it. He would have said of himself that he knew it profoundly, that he frequented it for “material,” but that his home was in another sphere. The impression was that he belonged among those brilliant guerrillas of both sexes, in the border-land of art and society, who lived daintily and talked about life with unconventional freedom. Slight in figure, with very black hair, and eyes of cloudy gray, an olive complexion, and features trained to an immobility proof against emotion or surprise, the whole poised as we would say in the act of being gentlemanly, it is needless to say that he took himself seriously. His readiness, self-confidence, cocksureness, Philip thought all expressed in his name—Olin Brad.

Mr. Brad was not a Bohemian—that is, not at all a Bohemian of the recognized type. His fashionable dress, closely trimmed hair, and dainty boots took him out of that class. He belonged to the new order, which seems to have come in with modern journalism—that is, Bohemian in principle, but of the manners and apparel of the favored of fortune. Mr. Brad was undoubtedly clever, and was down as a bright young man in the list of those who employed talent which was not dulled by conscientious scruples. He had stood well in college, during three years in Europe he had picked up two or three languages, dissipated his remaining small fortune, acquired expensive tastes, and knowledge, both esoteric and exoteric, that was valuable to him in his present occupation. Returning home fully equipped for a modern literary career, and finding after some bitter experience that his accomplishments were not taken or paid for at their real value by the caterers for intellectual New York, he had dropped into congenial society on the staff of the Daily Spectrum, a mighty engine of public opinion, which scattered about the city and adjacent territory a million of copies, as prodigally as if they had been auctioneers' announcements. Fastidious people who did not read it gave it a bad name, not recognizing the classic and heroic attitude of those engaged in pitchforking up and turning over the muck of the Augean stables under the pretense of cleaning them.

Mr. Brad had a Socratic contempt for this sort of fault-finding. It was answer enough to say, “It pays. The people like it or they wouldn't buy it. It commands the best talent in the market and can afford to pay for it; even clergymen like to appear in its columns—they say it's a providential chance to reach the masses. And look at the 'Morning GooGoo' (this was his nickname for one of the older dailies), it couldn't pay its paper bills if it hadn't such a small circulation.”

Mr. Brad, however, was not one of the editors, though the acceptance of an occasional short editorial, sufficiently piquant and impudent and vivid in language—to suit, had given him hopes. He was salaried, but under orders for special service, and was always in the hope that the execution of each new assignment would bring him into popular notice, which would mean an advance of position and pay.

Philip was impressed with the ready talent, the adaptable talent, and the facility of this accomplished journalist, and as their acquaintance improved he was let into many of the secrets of success in the profession.

“It isn't an easy thing,” said Mr. Brad, “to cater to a public that gets tired of anything in about three days. But it is just as well satisfied with a contradiction as with the original statement. It calls both news. You have to watch out and see what the people want, and give it to 'em. It is something like the purveying of the manufacturers and the dry-goods jobber for the changing trade in fashions; only the newspaper has the advantage that it can turn a somersault every day and not have any useless stock left on hand.

“The public hasn't any memory, or, if it has, this whirligig process destroys it. What it will not submit to is the lack of a daily surprise. Keep that in your mind and you can make a popular newspaper. Only,” continued Mr. Brad, reflectively, “you've got to hit a lot of different tastes.”

“You'd laugh,” this artist in emotions went on, after a little pause, “at some of my assignments. There was a run awhile ago on elopements, and my assignment was to have one every Monday morning. The girl must always be lovely and refined and moving in the best society; elopement with the coachman preferred, varied with a teacher in a Sunday-school. Invented? Not always. It was surprising how many you could find ready made, if you were on the watch. I got into the habit of locating them in the interior of Pennsylvania as the safest place, though Jersey seemed equally probable to the public. Did I never get caught? That made it all

the more lively and interesting. Denials, affidavits, elaborate explanations, two sides to any question; if it was too hot, I could change the name and shift the scene to a still more obscure town. Or it could be laid to the zeal of a local reporter, who could give the most ingenious reasons for his story. Once I worked one of those imaginary reporters up into such prominence for his clever astuteness that my boss was taken in, and asked me to send for him and give him a show on the paper.

"Oh, yes, we have to keep up the domestic side. A paper will not go unless the women like it. One of the assignments I liked was 'Sayings of Our Little Ones.' This was for every Tuesday morning. Not more than half a column. These always got copied by the country press solid. It is really surprising how many bright things you can make children of five and six years say if you give your mind to it. The boss said that I overdid it sometimes and made them too bright instead of 'just cunning.'

"'Psychological Study of Children' had a great run. This is the age of science. Same with animals, astronomy—anything. If the public wants science, the papers will give it science.

"After all, the best hold for a lasting sensation is an attack upon some charity or public institution; show up the abuses, and get all the sentimentalists on your side. The paper gets sympathy for its fearlessness in serving the public interests. It is always easy to find plenty of testimony from ill-used convicts and grumbling pensioners."

Undoubtedly Olin Brad was a clever fellow, uncommonly well read in the surface literatures of foreign origin, and had a keen interest in what he called the metaphysics of his own time. He had many good qualities, among them friendliness towards men and women struggling like himself to get up the ladder, and he laid aside all jealousy when he advised Philip to try his hand at some practical work on the Spectrum. What puzzled Philip was that this fabricator of "stories" for the newspaper should call himself a "realist." The "story," it need hardly be explained, is newspaper slang for any incident, true or invented, that is worked up for dramatic effect. To state the plain facts as they occurred, or might have occurred, and as they could actually be seen by a competent observer, would not make a story. The writer must put in color, and idealize the scene and the people engaged in it, he must invent dramatic circumstances and positions and language, so as to produce a "picture." And this picture, embroidered on a commonplace incident, has got the name of "news." The thread of fact in this glittering web the reader must pick out by his own wits, assisted by his memory of what things usually are. And the public likes these stories much better than the unadorned report of facts. It is accustomed to this view of life, so much so that it fancies it never knew what war was, or what a battle was, until the novelists began to report them.

Mr. Brad was in the story stage of his evolution as a writer. His light facility in it had its attraction for Philip, but down deep in his nature he felt and the impression was deepened by watching the career of several bright young men and women on the press—that indulgence in it would result in such intellectual dishonesty as to destroy the power of producing fiction that should be true to life. He was so impressed by the ability and manifold accomplishments of Mr. Brad that he thought it a pity for him to travel that road, and one day he asked him why he did not go in for literature.

"Literature!" exclaimed Mr. Brad, with some irritation; "I starved on literature for a year. Who does live on it, till he gets beyond the necessity of depending on it? There is a lot of humbug talked about it. You can't do anything till you get your name up. Some day I will make a hit, and everybody will ask, 'Who is this daring, clever Olin Brad?' Then I can get readers for anything I choose to write. Look at Champ Lawson. He can't write correct English, he never will, he uses picturesque words in a connection that makes you doubt if he knows what they mean. But he did a dare-devil thing picturesquely, and now the publishers are at his feet. When I met him the other day he affected to be bored with so much attention, and wished he had stuck to the livery-stable. He began at seventeen by reporting a runaway from the point of view of the hostler."

"Well," said Philip, "isn't it quite in the line of the new movement that we should have an introspective hostler, who perhaps obeys Sir Philip Sidney's advice, 'Look into your heart and write'? I chanced the other night in a company of the unconventional and illuminated, the 'poster' set in literature and art, wild-eyed and anaemic young women and intensely languid, 'nil admirari' young men, the most advanced products of the studios and of journalism. It was a very interesting conclave. Its declared motto was, 'We don't read, we write.' And the members were on a constant strain to say something brilliant, epigrammatic, original. The person who produced the most outre sentiment was called 'strong.' The women especially liked no writing that was not 'strong.' The strongest man in the company, and adored by the women, was the poet-artist Courci Cleves, who always seems to have walked straight out of a fashion-plate, much deferred to in this set, which affects to defer to nothing, and a thing of beauty in the theatre lobbies. Mr. Cleves gained much applause for his well-considered wish that all that has been written in the world, all books and libraries, could be destroyed, so as to give a chance to the new men and the fresh ideas of the new era."

"My dear sir," said Brad, who did not like this caricature of his friends, "you don't make any allowance for the eccentricities of genius."

"You would hit it nearer if you said I didn't make allowance for the eccentricities without genius," retorted Philip.

"Well," replied Mr. Brad, taking his leave, "you don't understand your world. You go your own way and see where you will come out."

And when Philip reflected on it, he wondered if it were not rash to offend those who had the public ear, and did up the personals and minor criticisms for the current prints. He was evidently out of view. No magazine paper of his had gained the slightest notice from these sublimated beings, who discovered a new genius every month.

A few nights after this conversation Mr. Brad was in uncommon spirits at dinner.

"Anything special turned up?" asked Philip.

"Oh, nothing much. I've thrown away the chance of the biggest kind of a novel of American life. Only it wouldn't keep. You look in the Spectrum tomorrow morning. You'll see something interesting."

"Is it a—" and Philip's incredulous expression supplied the word.

"No, not a bit. And the public is going to be deceived this time, sure, expecting a fake. You know Mavick?"

"I've heard of him—the operator, a millionaire."

"A good many times. Used to be minister or consul or something at Rome. A great swell. It's about his daughter, Evelyn, a stunning girl about sixteen or seventeen—not out yet."

"I hope it's no scandal."

"No, no; she's all right. It's the way she's brought up—shows what we've come to. They say she's the biggest heiress in America and a raving beauty, the only child. She has been brought up like the Kohinoor, never out of somebody's sight. She has never been alone one minute since she was born. Had three nurses, and it was the business of one of them, in turn, to keep an eye on her. Just think of that. Never was out of the sight of somebody in her life. Has two maids now—always one in the room, night and day."

"What for?"

"Why, the parents are afraid she'll be kidnapped, and held for a big ransom. No, I never saw her, but I've got the thing down to a dot. Wouldn't I like to interview her, though, get her story, how the world looks to her. Under surveillance for sixteen years! The 'Prisoner of Chillon' is nothing to it for romance."

"Just the facts are enough, I should say."

"Yes, facts make a good basis, sometimes. I've got 'em all in, but of course I've worked the thing up for all it is worth. You'll see. I kept it one day to try and get a photograph. We've got the house and Mavick, but the girl's can't be found, and it isn't safe to wait. We are going to blow it out tomorrow morning."

VI

The Mavick mansion was on Fifth Avenue in the neighborhood of Central Park. It was one of the buildings in the city that strangers were always taken to see. In fact, this was a palace not one kind of a palace, but all kinds of a palace. The clever and ambitious architect of the house had grouped all the styles of architecture he had ever seen, or of which he had seen pictures. Here was not an architectural conception, like a sonnet or a well-constructed novel, but if all the work could have been spread out in line, in all its variety, there would have been produced a panorama. The sight of the mansion always caused wonder and generally ignorant admiration. Its vastness and splendor were felt to be somehow typical of the New World and of the cosmopolitan city.

The cost, in the eyes of the spectators, was a great part of its merits. No doubt this was a fabulous sum. "You can form a little idea of it," said a gentleman to his country friend, "when I tell you that that little bit there, that little corner of carving and decoration, cost two hundred thousand dollars! I had this from the architect himself."

"My!"

The interior was as fully representative of wealth and of the ambition to put under one roof all the notable effects of all the palaces in the world. But it had, what most palaces have not, all the requisites for luxurious living. The variety of styles in the rooms was bewildering. Artists of distinction, both foreign and native, had vied with each other in the decoration of the rooms given over to the display of their genius. All paganism and all Christianity, history, myth, and the beauties of nature were spread upon the walls and ceilings. Rare woods, rare marbles, splendid textures, the product of ancient handiwork and modern looms, added a certain dignity to the more airy creations of the artists. Many of the rooms were named from the nations whose styles of decoration and furnishing were imitated in them, but others had the simple designation of the gold room, the silver room, the lapis-lazuli room, and so on. It was not only the show-rooms, the halls, passages, stairways, and galleries (both of pictures and of curios) that were thus enriched, but the boudoirs, retiring-rooms, and more private apartments as well. It was not simply a house of luxury, but of all the comfort that modern invention can furnish. It was said that the money lavished upon one or two of the noble apartments would have built a State-house (though not at Albany), and that the fireplace in the great hall cost as much as an imitation mediaeval church. These were the things talked about, and yet the portions of this noble edifice, rich as they were, habitually occupied by the family had another character—the attractions and conveniences of what we call a home. Mrs. Mavick used to say that in her apartments she found refuge in a sublimated domesticity. Mavick's own quarters—not the study off the library where he received visitors whom it was necessary to impress—had an executive appearance, and were, in the necessary appliances, more like the interior bureau of a board of trade. In fact, the witty brokers who were admitted to its mysteries called it the bucket-shop.

Mr. Brad's article on "A Prisoned Millionaire" more than equaled Philip's expectations. No such "story" had appeared in the city press in a long time. It was what was called, in the language of the period, a work of art—that is, a sensation, heightened by all the words of color in the language, applied not only to material things, but to states and qualities of mind, such as "purple emotions" and "scarlet intrepidity." It was also exceedingly complimentary. Mavick himself was one of the powers and pillars of American society, and the girl was an exquisite exhibition of woodland bloom in the first flush of spring-time. As he read it over, Philip thought what a fine advertisement it is to every impecunious noble in Europe.

That morning, before going to his office, Philip strolled up Fifth Avenue to look at that now doubly, famous mansion. Many others, it appeared, were moved by the same curiosity. There was already a crowd assembled. A couple of policemen, on special duty, patrolled the sidewalk in front in order to keep a passage open, and perhaps to prevent a too impudent inspection. Opposite the house, on the sidewalk and on door-steps, was a motley throng, largely made up of toughs and roughs from the East Side, good-natured spectators who merely wanted to see this splendid prison, and a moving line of gentlemen and ladies who simply happened to be passing that way at this time. The curbstone was lined with a score of reporters of the city journals, each

with his note-book. Every window and entrance was eagerly watched. It was hoped that one of the family might be seen, or that some servant might appear who could be interviewed. Upon the windows supposed by the reporters to be those from which the heiress looked, a strict watch was kept. The number, form, and location of these windows were accurately noted, the stuff of the curtains described in the phrase of the upholsterer, and much good language was devoted to the view from these windows. The shrewdest of the reporters had already sought information as to the interior from the flower dealers, from upholsterers, from artists who had been employed in the decorations, and had even assailed, in the name of the rights of the public whom they represented, the architects of the building; but their chief reliance was upon the waiters furnished by the leading caterers on occasions of special receptions and great dinners, and milliners and dress-makers, who had penetrated the more domestic apartments. By reason of this extraordinary article in the newspaper, the public had acquired the right to know all about the private life of the Mavick family.

This right was not acknowledged by Mr. Mavick and his family. Of course the object of the excitement was wholly ignorant of the cause of it, as no daily newspaper was ever seen by her that had not been carefully inspected by the trusted and intelligent governess. The crowd in front of the mansion was accounted for by the statement that a picture of it had appeared in one of the low journals, and there was naturally a curiosity to see it. And Evelyn was told that this was one of the penalties a man paid for being popular.

Mrs. Mavick, who seldom lost her head, was thoroughly frightened and upset, and it was a rare occasion that could upset the equanimity of the late widow, Mrs. Carmen Henderson. She gave way to her passion and demanded that the offending editor should be pursued with the utmost rigor of the law. Mr. Mavick was not less annoyed and angry, but he smiled when his wife talked of pursuing the press with the utmost rigor of the law, and said that he would give the matter prompt attention. That day he had an interview with the editor of the Daily Spectrum; which was satisfactory to both parties. The editor would have said that Mavick behaved like a gentleman. The result of the interview appeared in the newspaper of the following morning.

Mr. Mavick had requested that the offending reporter should be cautioned; he was too wise to have further attention called to the matter by demanding his dismissal. Accordingly the reporter was severely reprimanded, and then promoted.

The editorial, which was written by Mr. Olin Brad, and was in his best Macaulay style, began somewhat humorously by alluding to the curious interest of the public in ancient history, citing Mr. Froude and Mr. Carlyle, and the legend of Casper Hauser. It was true, gradually approaching the case in point, that uncommon precautions had been taken in the early years of the American heiress, and it was the romance of the situation that had been laid before the readers of the Spectrum. But there had been really no danger in our chivalrous, free American society, and all these precautions were long a thing of the past (which was not true). In short, with elaboration and great skill, and some humor, the exaggerations of the former article were minimized, and put in an airy and unsubstantial light. And then this friend of the people, this exposé of abuses and champion of virtue, turned and justly scored the sensational press for prying into the present life of one of the first families in the country.

Incidentally, it was mentioned that the ladies of the family had before this incident bespoken their passage for their annual visit to Europe, and that this affair had not disturbed their arrangements (which also was not true). This casual announcement was intended to draw away attention from the Fifth Avenue house, and to notify the roughs that it would be useless to lay any plans.

The country press, which had far and wide printed the interesting story, softened it in accordance with the later development. Possibly no intelligent person was deceived, but in the estimation of the mass of the people the Spectrum increased its reputation for enterprise and smartness and gave also an impression of its fairness. The manager, told Mr. Brad that the increased sales of the two days permitted the establishment to give him a vacation of two weeks on full pay, and during these weeks the manager himself set up a neat and modest brougham.

All of which events, only partially understood, Mr. Philip Burnett revolved in his mind, and wondered if what was called success was worth the price paid for it.

VII

The name of Thomas Mavick has lost the prominence and significance it had at the time the events recorded in this history were taking place. It seems incredible that the public should so soon have lost interest in him. His position in the country was most conspicuous. No name was more frequently in the newspapers. No other person not in official life was so often interviewed. The reporters instinctively turned to him for information in matters financial, concerning deals, and commercial, which were so commonly connected with political, enterprises. No loan was negotiated without consulting him, no operation was considered safe without knowing how he was affected towards it, and to ascertain what Mavick was doing or thinking was a constant anxiety in the Street. Of course the opinion of a man so powerful was very important in politics, and any church or sect would be glad to have his support. The fact that he and his family worshiped regularly at St. Agnes's was a guarantee of the stability of that church, and incidentally marked the success of the Christian religion in the metropolis.

But the condition of the presence in the public mind of the name of a great operator and accumulator of money who is merely that is either that he go on accumulating, so that the magnitude of his wealth has few if any rivals, or that his name become synonymous with some gigantic cleverness, if not rascality, so that it is used as an adjective after he and his wealth have disappeared from the public view. It is different with the reputation of an equally great financier who has used his ability for the service of his country. There is no Valhalla for the mere accumulators of money. They are fortunate if their names are forgotten, and not remembered as illustrations of colossal selfishness.

Mavick may have been the ideal of many a self-made man, but he did not make his fortune—he married it. And it was suspected that the circumstances attending that marriage put him in complete control of it. He came into possession, however, with cultivated shrewdness and tact and large knowledge of the world, the world of diplomacy as well as of business. And under his manipulation the vast fortune so acquired was reported to have been doubled. It was at any rate almost fabulous in the public estimation.

When the charming widow of the late Rodney Henderson, then sojourning in Rome, placed her attractive self and her still more attractive fortune in the hands of Mr. Thomas Mavick, United States Minister to the Court of Italy, she attained a position in the social world which was in accord with her ambition, and Mavick acquired the means of making the mission, in point of comparison with the missions of the other powers at the Italian capital, a credit to the Great Republic. The match was therefore a brilliant one, and had a sort of national importance.

Those who knew Mrs. Mavick in the remote past, when she was the fascinating and not definitely placed Carmen Eschelle, and who also knew Mr. Mavick when he was the confidential agent of Rodney Henderson, knew that their union was a convenient and material alliance, in which the desire of each party to enjoy in freedom all the pleasures of the world could be gratified while retaining the social consideration of the world. Both had always been circumspect. And it may be added, for the information of strangers, that they thoroughly knew each other, and were participants in a knowledge that put each at disadvantage, so that their wedded life was a permanent truce. This bond of union was not ideal, and not the best for the creation of individual character, but it avoided an exhibition of those public antagonisms which so grieve and disturb the even flow of the current of society, and give occasion to so much witty comment on the institution of marriage itself.

When, some two years after Mr. Mavick relinquished the mission to Italy to another statesman who had done some service to the opposite party, an heiress was born to the house of Mavick, her appearance in the world occasioned some disappointment to those who had caused it. Mavick naturally wished a son to inherit his name and enlarge the gold foundation upon which its perpetuity must rest; and Mrs. Mavick as naturally shrank from a responsibility that promised to curtail freedom of action in the life she loved. Carmen—it was an old saying of the danglers in the time of Henderson—was a domestic woman except in her own home.

However, it is one of the privileges of wealth to lighten the cares and duties of maternity, and the enlarged household was arranged upon a basis that did not interfere with the life of fashion and the charitable engagements of the mother. Indeed, this adaptable woman soon found that she had become an object of more than usual interest, by her latest exploit, in the circles in which she moved, and her softened manner and edifying conversation showed that she appreciated her position. Even the McTavishes, who were inclined to be skeptical, said that Carmen was delightful in her new role. This showed that the information Mrs. Mavick got from the women who took care of her baby was of a kind to touch the hearts of mothers and spinsters.

Moreover, the child was very pretty, and early had winning ways. The nurse, before the baby was a year old, discovered in her the cleverness of the father and the grace and fascination of the mother. And it must be said that, if she did not excite passionate affection at first, she enlisted paternal and maternal pride in her career. It dawned upon both parents that a daughter might give less cause for anxiety than a son, and that in an heiress there were possibilities of an alliance that would give great social distinction. Considering, therefore, all that she represented, and the settled conviction of Mrs. Mavick that she would be the sole inheritor of the fortune, her safety and education became objects of the greatest anxiety and precaution.

It happened that about the time Evelyn was christened there was a sort of epidemic of stealing children, and of attempts to rob tombs of occupants who had died rich or distinguished, in the expectation of a ransom. The newspapers often chronicled mysterious disappearances; parents whose names were conspicuous suffered great anxiety, and extraordinary precautions were taken in regard to the tombs of public men. And this was the reason that the heiress of the house of Mavick became the object of a watchful vigilance that was probably never before exercised in a republic, and that could only be paralleled in the case of a sole heir-apparent of royalty.

These circumstances resulted in an interference with the laws of nature which it must be confessed destroyed one of the most interesting studies in heredity that was ever offered to an historian of social life. What sort of a child had we a right to expect from Thomas Mavick, diplomatist and operator, successor to the rights and wrongs of Rodney Henderson, and Carmen Mavick, with the past of Carmen Eschelle and Mrs. Henderson? Those who adhered to the strictest application of heredity, in considering the natural development of Evelyn Mavick, sought refuge in the physiological problem of the influence of Rodney Henderson, and declared that something of his New England sturdiness and fundamental veracity had been imparted to the inheritor of his great fortune.

But the visible interference took the form of Ann McDonald, a Scotch spinster, to whom was intrusted the care of Evelyn as soon as she was christened. It was merely a piece of good fortune that brought a person of the qualifications of Ann McDonald into the family, for it is not to be supposed that Mrs. Mavick had given any thought to the truth that the important education of a child begins in its cradle, or that in selecting a care-taker and companion who should later on be a governess she was consulting her own desire of freedom from the duties of a mother. It was enough for her that the applicant for the position had the highest recommendations, that she was prepossessing in appearance, and it was soon perceived that the guardian was truthful, faithful, vigilant, and of an affectionate disposition and an innate refinement.

Ann McDonald was the only daughter of a clergyman of the Scotch Church, and brought up in the literary atmosphere common in the most cultivated Edinburgh homes. She had been accurately educated, and always with the knowledge that her education might be her capital in life. After the death of her mother, when she was nineteen, she had been her father's housekeeper, and when in her twenty-fourth year her father relinquished his life and his salary, she decided, under the advice of influential friends, to try her fortune in America. And she never doubted that it was a providential guidance that brought her into intimate relations with the infant heiress. It seemed probable that a woman so attractive and so solidly accomplished would not very long remain a governess, but in fact her career was chosen from the moment she became interested in the development of the mind and character of the child intrusted to her care. It is difficult to see how our

modern life would go on as well as it does if there were not in our homes a good many such faithful souls. It sometimes seems, in this shifting world, that about the best any of us can do is to prepare some one else for doing something well.

Miss McDonald had a pretty comprehensive knowledge of English literature and history, and, better perhaps than mere knowledge, a discriminating and cultivated taste. If her religious education had twisted her view of the fine arts, she had nevertheless a natural sympathy for the beautiful, and she would not have been a Scotchwoman if she had not had a love for the romances of her native land and at heart a "ballad" sentiment for the cavaliers. If Evelyn had been educated by her in Edinburgh, she might have been in sentiment a young Jacobite. She had through translations a sufficient knowledge of the classics to give her the necessary literary background, and her study of Latin had led her into the more useful acquisition of French.

If she had been free to indulge her own taste, she would have gone far in natural history, as was evident from her mastery of botany and her interest in birds.

She inspired so much confidence by her good sense, clear-headedness, and discretion, that almost from the first Evelyn was confided to her sole care, with only the direction that the baby was never for an instant, night or day, to be left out of the sight of a trusty attendant. The nurse was absolutely under her orders, she selected the two maids, and no person except the parents and the governess could admit visitors to the nursery. This perfect organization was maintained for many years, and though it came to be relaxed in details, it was literally true that the heiress was never alone, and never out of the sight of some trusted person responsible for her safety. But whatever the changes or relaxation, in holidays, amusements, travel, or education, the person who formed her mind was the one who had taught her to obey, to put words together into language, and to speak the truth, from infancy.

It is not necessary to consider Ann McDonald as a paragon. She was simply an intelligent, disciplined woman, with a strong sense of duty. If she had married and gone about the ordinary duties of life at the age of twenty-four, she would probably have been in no marked way distinguished among women. Her own development was largely due to the responsibility that was put upon her in the training of another person. In this sense it was true that she had learned as much as she had imparted. And in nothing was this more evident than in the range of her literary taste and judgment. Whatever risks, whatever latitude she might have been disposed to take with regard to her own mind, she would not take as to the mind of another, and as a consequence her own standards rose to meet the situation. That is to say, in a conscientious selection of only the best for Evelyn, she became more fastidious as to the food for her own mind. Or, to put it in still another way, in regard to character and culture generally, the growth of Miss McDonald could be measured by that of Evelyn.

When, from the time Evelyn was seven years old, it became necessary in her education to call in special tutors in the languages and in mathematics, and in certain arts that are generally called accomplishments, Miss McDonald was always present when the lessons were given, so that she maintained her ascendancy and her influence in the girl's mind. It was this inseparable companionship, at least in all affairs of the mind, that gave to this educational experiment an exceptional interest to students of psychology. Nothing could be more interesting than to come into contact with a mind that from infancy onward had dwelt only upon what is noblest in literature, and from which had been excluded all that is enervating and degrading. A remarkable illustration of this is the familiar case of Helen Keller, whose acquisitions, by reason of her blindness and deafness, were limited to what was selected for her, and that mainly by one person, and she was therefore for a long time shielded from a knowledge of the evil side of life. Yet all vital literature is so close to life, and so full of its passion and peril, that it supplies all the necessary aliment for the growth of a sound, discriminating mind; and that knowledge of the world, as knowledge of evil is euphemistically called, can be safely left out of a good education. This may be admitted without going into the discussion whether good principles and standards in literature and morals are a sufficient equipment for the perils of life.

This experiment, of course, was limited in Evelyn's case. She came in contact with a great deal of life. Her little world was fairly representative, for it contained her father, her mother, her governess, the maids and the servants, and occasional visitors, whom she saw freely as she grew older. The interesting fact was that she was obliged to judge this world according to the standards of literature, morals, and manners that had been implanted in her mainly by the influence of one person. The important part of this experiment of partial exclusion, in which she was never alone' an experiment undertaken solely for her safety and not for her training-was seen in her when she became conscious of its abnormal character, and perceived that she was always under surveillance. It might have made her exceedingly morbid, aside from its effect of paralyzing her self-confidence and power of initiation, had it not been for the exceptionally strong and cheerful nature of her companion. A position more hateful, even to a person not specially socially inclined, cannot be imagined than that of always being watched, and never having any assured privacy. And under such a tutelage and dependence, how in any event could she be able to take care of herself? What weapons had this heiress of a great fortune with which to defend herself? What sort of a girl had this treatment during seventeen years produced?

VIII

To the private apartment of Mr. Mavick, in the evening of the second eventful day, where, over his after-dinner cigar, he was amusing himself with a French novel, enters, after a little warning tap, the mistress of the house, for, what was a rare occurrence, a little family chat.

"So you didn't horsewhip and you didn't prosecute. You preferred to wriggle out!"

"Yes," said Mavick, too much pleased with the result to be belligerent, "I let the newspaper do the

wriggling."

"Oh, my dear, I can trust you for that. Have you any idea how it got hold of the details?"

"No; you don't think McDonald—"

"McDonald! I'd as soon suspect myself. So would you."

"Well, everybody knew it already, for that matter. I only wonder that some newspaper didn't get on to it before. What did Evelyn say?"

"Nothing more than what you heard at dinner. She thought it amusing that there should be such a crowd to gaze at the house, simply because a picture of it had appeared in a newspaper. She thought her father must be a very important personage. I didn't undeceive her. At times, you know, dear, I think so myself."

"Yes, I've noticed that," said Mavick, with a good-natured laugh, in which Carmen joined, "and those times usually coincide with the times that you want something specially."

"You ought to be ashamed to take me up that way. I just wanted to talk about the coming-out reception. You know I had come over to your opinion that seventeen was perhaps better than eighteen, considering Evelyn's maturity. When I was seventeen I was just as good as I am now."

"I don't doubt it," said Mavick, with another laugh.

"But don't you see this affair upsets all our arrangements? It's very vexatious."

"I don't see it exactly. By-the-way, what do you think of the escape suggested by the Spectrum, in the assertion that you and Evelyn had arranged to go to Europe? The steamer sails tomorrow."

"Think!" exclaimed Carmen. "Do you think I am going to be run, as you call it, by the newspapers? They run everything else. I'm not politics, I'm not an institution, I'm not even a revolution. No, I thank you. It answers my purpose for them to say we have gone."

"I suppose you can keep indoors a few days. As to the reception, I had arranged my business for it. I may be in Mexico or Honolulu the following winter."

"Well, we can't have it now. You see that."

"Carmen, I don't care a rap what the public thinks or says. The child's got to face the world some time, and look out for herself. I fancy she will not like it as much as you did."

"Very likely. Perhaps I liked it because I had to fight it. Evelyn never will do that."

"She hasn't the least idea what the world is like."

"Don't you be too sure of that, my dear; you don't understand yet what a woman feels and knows. You think she only sees and thinks what she is told. The conceit of men is most amusing about this. Evelyn is deeper than you think. The discrimination of that child sometimes positively frightens me—how she sees into things. It wouldn't surprise me a bit if she actually knew her father and mother!"

"Then she beats me," said Mavick, with another laugh, "and I've been at it a long time. Carmen, just for fun, tell me a little about your early life."

"Well"—there was a Madonna-like smile on her lips, and she put out the toe of her slender foot and appeared to study it for a moment—"I was intended to be a nun."

"Spanish or French?"

"Just a plain nun. But mamma would not hear of it. Mamma was just a bit worldly."

"I never should have suspected it," said Mavick, with equal gravity. "But how did you live in those early days, way back there?"

"Oh!" and Carmen looked up with the most innocent, open-eyed expression, "we lived on our income."

"Naturally. We all try to do that." The tone in Mavick's voice showed that he gave it up.

"But, of course," and Carmen was lively again, "it's much nicer to have a big income that's certain than a small one that is uncertain."

"It would seem so."

"Ah, deary me, it's such a world! Don't you think, dear, that we have had enough domestic notoriety for one year?"

"Quite. It would do for several."

"And we will put it off a year?"

"Arrange as you like." And Mavick stretched up his arms, half yawned, and took up another cigar.

"It will be such a relief to McDonald. She insisted it was too soon." And Carmen whirled out of her chair, went behind her husband, lifted with her delicate fingers a lock of grayish hair on his forehead, deposited the lightest kiss there—"Nobody in the world knows how good you are except me," and was gone.

And the rich man, who had gained everything he wanted in life except happiness, lighted his cigar and sought refuge in a tale of modern life, that was, however, too much like his own history to be consoling.

It must not be supposed from what she said that Mrs. Mavick stood in fear of her daughter, but it was only natural that for a woman of the world the daily contact of a pure mind should be at times inconvenient. This pure mind was an awful touchstone of conduct, and there was a fear that Evelyn's ignorance of life would prevent her from making the proper allowances. In her affectionate and trusting nature, which suspected little evil anywhere, there was no doubt that her father and mother had her entire confidence and love. But the likelihood was that she would not be pliant. Under Miss McDonald's influence she had somewhat abstract notions of what is right and wrong, and she saw no reason why these should not be applied in all cases. What her mother would have called policy and reasonable concessions she would have given different names. For getting on in the world, this state of mind has its disadvantages, and in the opinion of practical men, like Mavick, it was necessary to know good and evil. But it was the girl's power of discernment that bothered her mother, who used often to wonder where the child came from.

On the other hand, it must not be supposed that the singular training of Evelyn had absolutely destroyed

her inherited tendencies, or made her as she was growing into womanhood anything but a very real woman, with the reserves, the weaknesses, the coquetries, the defenses which are the charm of her sex. Nor was she so ignorant of life as such a guarded personality might be thought. Her very wide range of reading had liberalized her mind, and given her a much wider outlook upon the struggles and passions and failures and misery of life than many another girl of her age had gained by her limited personal experience. Those who hold the theory that experience is the only guide are right as a matter of fact, since every soul seems determined to try for itself and not to accept the accumulated wisdom of literature or of experienced advisers; but those who come safely out of their experiences are generally sound by principle which has been instilled in youth. But it is useless to moralize. Only the event could show whether such an abnormal training as Evelyn had received was wise.

When Mrs. Mavick went to her daughter's apartments she found Evelyn reading aloud and Miss McDonald at work on an elaborate piece of Bulgarian embroidery.

"How industrious! What a rebuke to me!"

"I don't see, mamma, how we could be doing less; I've only an audience of one, and she is wasting her time."

"Well, carissima, it is settled. It's off for a year."

"The reception? Why so?"

"Your father cannot arrange it. He has too much on hand this season, and may be away."

"There, McDonald, we've got a reprieve," and Evelyn gave a sigh of relief.

The Scotch woman smiled, and only said, "Then I shall have time to finish this."

Evelyn jumped up, threw herself into her mother's lap, and began to smooth her hair and pet her. "I'm awfully glad. I'd ever so much rather stay in than come out. Yes, dear little mother."

"Little?"

"Yes." And the girl pulled her mother from her chair, and made her stand up to measure. "See, McDonald, almost an inch taller than mamma, and when I do my hair on top!"

"And see, mamma"—the girl was pirouetting on the floor—"I can do those steps you do. Isn't it Spanish?"

"Rather Spanish-American, I guess. This is the way."

Evelyn clapped her hands. "Isn't that lovely!"

"You are only a little brownie, after all." Her mother was holding her at arm's-length and studying her critically, wondering if she would ever be handsome.

The girl was slender, but not tall. Her figure had her mother's grace, but not its suggestion of yielding suppleness. She was an undoubted brunette—complexion olive, hair very dark, almost black except in the sunlight, and low on her forehead—chin a little strong, and nose piquant to say the least of it. Certainly features not regular nor classic. The mouth, larger than her mother's, had full lips, the upper one short, and admirable curves, strong in repose, but fascinating when she smiled. A face not handsome, but interesting. And the eyes made you hesitate to say she was not handsome, for they were large, of a dark hazel and changeable, eyes that flashed with merriment, or fell into sadness under the long eyelashes; and it would not be safe to say that they could not blaze with indignation. Not a face to go wild about, but when you felt her character through it, a face very winning in its dark virgin purity.

"I do wonder where she came from?" Mrs. Mavick was saying to herself, as she threw herself upon a couch in her own room and took up the latest Spanish novel.

IX

Celia Howard had been, in a way, Philip's inspiration ever since the days when they quarreled and made up on the banks of the Deer field. And a fortunate thing for him it was that in his callow years there was a woman in whom he could confide. Her sympathy was everything, even if her advice was not always followed. In the years of student life and preparation they had not often met, but they were constant and painstaking correspondents. It was to her that he gave the running chronicle of his life, and poured out his heart and aspirations. Unconsciously he was going to school to a woman, perhaps the most important part of his education. For, though in this way he might never hope to understand woman, he was getting most valuable knowledge of himself.

As a guide, Philip was not long in discovering that Celia was somewhat uncertain. She kept before him a very high ideal; she expected him to be distinguished and successful, but, her means varied from time to time. Now she would have him take one path and now another. And Philip learned to read in this varying advice the changes in her own experience. There was a time when she hoped he would be a great scholar: there was no position so noble as that of a university professor or president. Then she turned short round and extolled the business life: get money, get a position, and then you can study, write books, do anything you like and be independent. Then came a time—this was her last year in college—when science seemed the only thing. That was really a benefit to mankind: create something, push discovery, dispel ignorance.

"Why, Phil, if you could get people to understand about ventilation, the necessity of pure air, you would deserve a monument. And, besides—this is an appeal to your lower nature—science is now the thing that pays." Theology she never considered; that was just now too uncertain in its direction. Law she had finally approved; it was still respectable; it was a very good waiting-ground for many opportunities, and it did not absolutely bar him from literature, for which she perceived he had a sneaking fondness.

Philip wondered if Celia was not thinking of the law for herself. She had tried teaching, she had devoted

herself for a time to work in a College Settlement, she had learned stenography, she had talked of learning telegraphy, she had been interested in women's clubs, in a civic club, in the political education of women, and was now a professor of economics in a girl's college.

It finally dawned upon Philip, who was plodding along, man fashion, in one of the old ruts, feeling his way, like a true American, into the career that best suited him, that Celia might be a type of the awakened American woman, who does not know exactly what she wants. To be sure, she wants everything. She has recently come into an open place, and she is distracted by the many opportunities. She has no sooner taken up one than she sees another that seems better, or more important in the development of her sex, and she flies to that. But nothing, long, seems the best thing. Perhaps men are in the way, monopolizing all the best things. Celia had never made a suggestion of this kind, but Philip thought she was typical of the women who push individualism so far as never to take a dual view of life.

"I have just been," Celia wrote in one of her letters, when she was an active club woman, "out West to a convention of the Federation of Women's Clubs. Such a striking collection of noble, independent women! Handsome, lots of them, and dressed—oh, my friend, dress is still a part of it! So different from a man's convention! Cranks? Yes, a few left over. It was a fine, inspiring meeting. But, honestly, I could not exactly make out what they were federating about, and what they were going to do when they got federated. It sort of came over me, I am such a weak sister, that there is such a lot of work done in this world with no object except the doing of it."

A more recent letter:—"Do you remember Aunt Hepsy, who used to keep the little thread-and-needle and candy shop in Rivervale? Such a dear, sweet, contented old soul! Always a smile and a good word for every customer. I can see her now, picking out the biggest piece of candy in the dish that she could afford to give for a little fellow's cent. It never came over me until lately how much good that old woman did in the world. I remember what a comfort it was to go and talk with her. Well, I am getting into a frame of mind to want to be an Aunt Hepsy. There is so much sawdust in everything—No, I'm not low-spirited. I'm just philosophical—I've a mind to write a life of Aunt Hepsy, and let the world see what a real useful life is."

And here is a passage from the latest:—"What an interesting story your friend—I hope he isn't your friend, for I don't half like him—has made out of that Mavick girl! If I were the girl's mother I should want to roast him over the coals. Is there any truth in it?"

"Of course I read it, as everybody did and read the crawl out, and looked for more. So it is partly our fault, but what a shame it is, the invasion of family life! Do tell me, if you happen to see her—the girl—driving in the Park or anywhere—of course you never will—what she looks like. I should like to see an unsophisticated millionaire-ess! But it is an awfully interesting problem, invented or not I'm pretty deep in psychology these days, and I'd give anything to come in contact with that girl. You would just see a woman, and you wouldn't know. I'd see a soul. Dear me, if I'd only had the chance of that Scotch woman! Don't you see, if we could only get to really know one mind and soul, we should know it all. I mean scientifically. I know what you are thinking, that all women have that chance. What you think is impertinent—to the subject."

Indeed, the story of Evelyn interested everybody. It was taken up seriously in the country regions. It absorbed New York gossip for two days, and then another topic took possession of the mercurial city; but it was the sort of event to take possession of the country mind. New York millionaires get more than their share of attention in the country press at all times, but this romance became the subject of household talk and church and sewing-circle gossip, and all the women were eager for more details, and speculated endlessly about the possible character and career of the girl.

Alice wrote Philip from Rivervale that her aunt Patience was very much excited by it. "'The poor thing,' she said, 'always to have somebody poking round, seeing every blessed thing you do or don't do; it would drive me crazy. There is that comfort in not having anything much—you have yourself. You tell Philip that I hope he doesn't go there often. I've no objection to his being kind to the poor thing when they meet, and doing neighborly things, but I do hope he won't get mixed up with that set.' It is very amusing," Alice continued, "to hear Patience soliloquize about it and construct the whole drama.

"But you cannot say, Philip, that you are not warned (!) and you know that Patience is almost a prophet in the way she has of putting things together. Celia was here recently looking after the little house that has been rented ever since the death of her mother. I never saw her look so well and handsome, and yet there was a sort of air about her as if she had been in public a good deal and was quite capable of taking care of herself. But she was that way when she was little.

"I think she is a good friend of yours. Well, Phil, if you do ever happen to see that Evelyn in the opera, or anywhere, tell me how she looks and what she has on—if you can."

The story had not specially interested Philip, except as it was connected with Brad's newspaper prospects, but letters, like those referred to, received from time to time, began to arouse a personal interest. Of course merely a psychological interest, though the talk here and there at dinner-tables stimulated his desire, at least, to see the subject of them. But in this respect he was to be gratified, in the usual way things desired happen in life—that is, by taking pains to bring them about.

When Mr. Brad came back from his vacation his manner had somewhat changed. He had the air of a person who stands on firm ground. He felt that he was a personage. He betrayed this in a certain deliberation of speech, as if any remark from him now might be important. In a way he felt himself related to public affairs.

In short, he had exchanged the curiosity of the reporter for the omniscience of the editor. And for a time Philip was restrained from intruding the subject of the Mavick sensation. However, one day after dinner he ventured:

"I see, Mr. Brad, that your hit still attracts attention." Mr. Brad looked inquiringly blank.

"I mean about the millionaire heiress. It has excited a wide interest."

"Ah, that! Yes, it gave me a chance," replied Brad, who was thinking only of himself.

"I've had several letters about it from the country."

"Yes? Well, I suppose," said Brad, modestly, "that a little country notoriety doesn't hurt a person."

Philip did not tell his interlocutor that, so far as he knew, nobody in the country had ever heard the name of Olin Brad, or knew there was such a person in existence. But he went on:

"Certainly. And, besides, there is a great curiosity to know about the girl. Did you ever see her?"

"Only in public. I don't know Mavick personally, and for reasons," and Mr. Brad laughed in a superior manner. "It's easy enough to see her."

"How?"

"Watch out for a Wagner night, and go to the opera. You'll see where Mavick's box is in the bill. She is pretty sure to be there, and her mother. There is nothing special about her; but her mother is still a very fascinating woman, I can tell you. You'll find her sure on a 'Carmen' night, but not so sure of the girl."

On this suggestion Philip promptly acted. The extra expense of an orchestra seat he put down to his duty to keep his family informed of anything that interested them in the city. It was a "Siegfried" night, and a full house. To describe it all would be very interesting to Alice. The Mavick box was empty until the overture was half through. Then appeared a gentleman who looked as if he were performing a public duty, a lady who looked as if she were receiving a public welcome, and seated between them a dark, slender girl, who looked as if she did not see the public at all, but only the orchestra.

Behind them, in the shadow, a middle-aged woman in plainer attire. It must be the Scotch governess. Mrs. Mavick had her eyes everywhere about the house, and was graciously bowing to her friends. Mr. Mavick coolly and unsympathetically regarded the house, quite conscious of it, but as if he were a little bored. You could not see him without being aware that he was thinking of other things, probably of far-reaching schemes. People always used to say of Mavick, when he was young and a clerk in a Washington bureau, that he looked omniscient. At least the imagination of spectators invested him with a golden hue, and regarded him through the roseate atmosphere that surrounds a many-millioned man. The girl had her eyes always on the orchestra, and was waiting for the opening of the world that lay behind the drop-curtain. Philip noticed that all the evening Mrs. Mavick paid very little attention to the stage, except when the rest of the house was so dark that she could distinguish little in it.

Fortunately for Philip, in his character of country reporter, the Mavick box was near the stage, and he could very well see what was going on in it, without wholly distracting his attention from Wagner's sometimes very dimly illuminated creation.

There are faces and figures that compel universal attention and admiration. Commonly there is one woman in a theatre at whom all glances are leveled. It is a mystery why one face makes only an individual appeal, and an appeal much stronger than that of one universally admired. The house certainly concerned itself very little about the shy and dark heiress in the Mavick box, having with regard to her only a moment's curiosity. But the face instantly took hold of Philip. He found it more interesting to read the play in her face than on the stage. He seemed instantly to have established a chain of personal sympathy with her. So intense was his regard that it seemed as if she must, if there is anything in the telepathic theory of the interchange of feeling, have been conscious of it. That she was, however, unconscious of any influence reaching her except from the stage was perfectly evident. She was absorbed in the drama, even when the drama was almost lost in darkness, and only an occasional grunting ejaculation gave evidence that there was at least animal life responsive to the continual pleading, suggesting, inspiring strains of the orchestra. In the semi-gloom and groping of the under-world, it would seem that the girl felt that mystery of life which the instruments were trying to interpret.

At any rate, Philip could see that she was rapt away into that other world of the past, to a practical unconsciousness of her immediate surroundings. Was it the music or the poetic idea that held her? Perhaps only the latter, for it is Wagner's gift to reach by his creations those who have little technical knowledge of music. At any rate, she was absorbed, and so perfectly was the progress of the drama repeated in her face that Philip, always with the help of the orchestra, could trace it there.

But presently something more was evident to this sympathetic student of her face. She was not merely discovering the poet's world, she was finding out herself. As the drama unfolded, Philip was more interested in this phase than in the observation of her enjoyment and appreciation. To see her eyes sparkle and her cheeks glow with enthusiasm during the sword-song was one thing, but it was quite another when Siegfried began his idyl, that nature and bird song of the awakening of the whole being to the passion of love. Then it was that Evelyn's face had a look of surprise, of pain, of profound disturbance; it was suffused with blushes, coming and going in passionate emotion; the eyes no longer blazed, but were softened in a melting tenderness of sympathy, and her whole person seemed to be carried into the stream of the great life passion. When it ceased she sank back in her seat, and blushed still more, as if in fear that some one had discovered her secret.

Afterwards, when Philip had an opportunity of knowing Evelyn Mavick, and knowing her very well, and to some extent having her confidence, he used to say to himself that he had little to learn—the soul of the woman was perfectly revealed to him that night of "Siegfried."

As the curtain went down, Mrs. Mavick, whose attention had not been specially given to the artists before, was clapping her hands in a great state of excitement.

"Why don't you applaud, child?"

"Oh, mother," was all the girl could say, with heaving breast and downcast eyes.

X

All winter long that face seemed to get between Philip and his work. It was an inspiration to his pen when it

ran in the way of literature, but a distinct damage to progress in his profession. He had seen Evelyn again, more than once, at the opera, and twice been excited by a passing glimpse of her on a crisp, sunny afternoon in the Mavick carriage in the Park—always the same bright, eager face. So vividly personal was the influence upon him that it seemed impossible that she should not be aware of it—impossible that she could not know there was such a person in the world as Philip Burnett.

Fortunately youth can create its own world. Between the secluded daughter of millions and the law clerk was a great gulf, but this did not prevent Evelyn's face, and, in moments of vanity, Evelyn herself, from belonging to Philip's world. He would have denied—we have a habit of lying to ourselves quite as much as to others—that he ever dreamed of possessing her, but nevertheless she entered into his thoughts and his future in a very curious way. If he saw himself a successful lawyer, her image appeared beside him. If his story should gain the public attention, and his occasional essays come to be talked of, it was Evelyn's interest and approval that he caught himself thinking about. And he had a conviction that she was one to be much more interested in him as a man of letters than as a lawyer. This might be true. In Philip's story, which was very slowly maturing, the heroine fell in love with a young man simply for himself, and regardless of the fact that he was poor and had his career to make. But he knew that if his novel ever got published the critics would call it a romance, and not a transcript of real life. Had not women ceased to be romantic and ceased to indulge in vagaries of affection?

Was it that Philip was too irresolute to cut either law or literature, and go in, single-minded, for a fortune of some kind, and a place? Or was it merely that he had confidence in the winning character of his own qualities and was biding his time? If it was a question of making himself acceptable to a woman—say a woman like Evelyn—was it not belittling to his own nature to plan to win her by what he could make rather than by what he was?

Probably the vision he had of Evelyn counted for very little in his halting decision. "Why don't you put her into a novel?" asked Mr. Brad one evening. The suggestion was a shock. Philip conveyed the idea pretty plainly that he hadn't got so low as that yet. "Ah, you fellows think you must make your own material. You are higher-toned than old Dante." The fact was that Philip was not really halting. Every day he was less and less in love with the law as it was practiced, and, courting reputation, he would much rather be a great author than a great lawyer. But he kept such thoughts to himself. He had inherited a very good stock of common-sense. Apparently he devoted himself to his office work, and about the occupation of his leisure hours no one was in his confidence except Celia, and now and then, when he got something into print, Alice. Professedly Celia was his critic, but really she was the necessary appreciator, for probably most writers would come to a standstill if there was no sympathetic soul to whom they could communicate, while they were fresh, the teeming fancies of their brains.

The winter wore along without any incident worth recording, but still fruitful for the future, as Philip fondly hoped. And one day chance threw in his way another sensation. Late in the afternoon of a spring day he was sent from the office to Mavick's house with a bundle of papers to be examined and signed.

"You will be pretty sure to find him," said Mr. Sharp, "at home about six. Wait till you do see him. The papers must be signed and go to Washington by the night mail."

Mr. Mavick was in his study, and received Philip very civilly, as the messenger of his lawyers, and was soon busy in examining the documents, flinging now and then a short question to Philip, who sat at the table near him.

Suddenly there was a tap at the door, and, not waiting for a summons, a young girl entered, and stopped after a couple of steps.

"Oh, I didn't know—"

"What is it, dear?" said Mr. Mavick, looking up a moment, and then down at the papers.

"Why, about the coachman's baby. I thought perhaps—" She had a paper in her hand, and advanced towards the table, and then stopped, seeing that her father was not alone.

Philip rose involuntarily. Mr. Mavick looked up quickly. "Yes, presently. I've just now got a little business with Mr. Burnett."

It was not an introduction. But for an instant the eyes of the young people met. It seemed to Philip that it was a recognition. Certainly the full, sweet eyes were bent on him for the second she stood there, before turning away and leaving the room. And she looked just as true and sweet as Philip dreamed she would look at home. He sat in a kind of maze for the quarter of an hour while Mavick was affixing his signature and giving some directions. He heard all the directions, and carried away the papers, but he also carried away something else unknown to the broker. After all, he found himself reflecting, as he walked down the avenue, the practice of the law has its good moments!

What was there in this trivial incident that so magnified it in Philip's mind, day after day? Was it that he began to feel that he had established a personal relation with Evelyn because she had seen him? Nothing had really happened. Perhaps she had not heard his name, perhaps she did not carry the faintest image of him out of the room with her. Philip had read in romances of love at first sight, and he had personal experience of it. Commonly, in romances, the woman gives no sign of it, does not admit it to herself, denies it in her words and in her conduct, and never owns it until the final surrender. "When was the first moment you began to love me, dear?" "Why, the first moment, that day; didn't you know it then?" This we are led to believe is common experience with the shy and secretive sex. It is enough, in a thousand reported cases, that he passed her window on horseback, and happened to look her way. But with such a look! The mischief was done. But this foundation was too slight for Philip to build such a hope on.

Looking back, we like to trace great results to insignificant, momentary incidents—a glance, a word, that turned the current of a life. There was a definite moment when the thought came to Alexander that he would conquer the world! Probably there was no such moment. The great Alexander was restless, and at no initial instant did he conceive his scheme of conquest. Nor was it one event that set him in motion. We confound events with causes. It happened on such a day. Yes, but it might have happened on another. But if Philip had not been sent on that errand to Mavick probably Evelyn would never have met him. What nonsense this is,

and what an unheroic character it makes Philip! Is it supposable that, with such a romance as he had developed about the girl, he would not some time have come near her, even if she had been locked up with all the bars and bolts of a safety deposit?

The incident of this momentary meeting was, however, of great consequence. There is no such feeder of love as the imagination. And fortunate it was for Philip that his romance was left to grow in the wonder-working process of his own mind. At first there had been merely a curiosity in regard to a person whose history and education had been peculiar. Then the sight of her had raised a strange tumult in his breast, and his fancy began to play about her image, seen only at a distance and not many times, until his imagination built up a being of surpassing loveliness, and endowed with all the attractions that the poets in all ages have given to the sex that inspires them. But this sort of creation in the mind becomes vague, and related to literature only, unless it is sustained by some reality. Even Petrarch must occasionally see Laura at the church door, and dwell upon the veiled dreamer that passed and perhaps paused a moment to regard him with sad eyes. Philip, no doubt, nursed a genuine passion, which grew into an exquisite ideal in the brooding of a poetic mind, but it might in time have evaporated into thin air, remaining only as an emotional and educational experience. But this moment in Mr. Mavick's library had given a solid body to his imaginations, and a more definite turn to his thought of her.

If, in some ordinary social chance, Philip had encountered the heiress, without this previous wonderworking of his imagination in regard to her, the probability is that he would have seen nothing especially to distinguish her from the other girls of her age and newness in social experience. Certainly the thought that she was the possessor of uncounted millions would have been, on his side, an insuperable barrier to any advance. But the imagination works wonders truly, and Philip saw the woman and not the heiress. She had become now a distinct personality; to be desired above all things on earth, and that he should see her again he had no doubt.

This thought filled his mind, and even when he was not conscious of it gave a sort of color to life, refined his perceptions, and gave him almost sensuous delight in the masterpieces of poetry which had formerly appealed only to his intellectual appreciation of beauty.

He had not yet come to a desire to share his secret with any confidant, but preferred to be much alone and muse on it, creating a world which was without evil, without doubt, undisturbed by criticism. In this so real dream it was the daily office work that seemed unreal, and the company and gossip of his club a kind of vain show. He began to frequent the picture-galleries, where there was at least an attempt to express sentiment, and to take long walks to the confines of the city—confines fringed with all the tender suggestions of the opening spring. Even the monotonous streets which he walked were illumined in his eyes, glorified by the fullness of life and achievement. "Yes," he said again and again, as he stood on the Heights, in view of the river, the green wall of Jersey and the great metropolis spread away to the ocean gate, "it is a beautiful city! And the critics say it is commonplace and vulgar." Dear dreamer, it is a beautiful city, and for one reason and another a million of people who have homes there think so. But take out of it one person, and it would have for you no more interest than any other huge assembly of ugly houses. How, in a lover's eyes, the woman can transfigure a city, a landscape, a country!

Celia had come up to town for the spring exhibitions, and was lodging at the Woman's Club. Naturally Philip saw much of her, indeed gave her all his time that the office did not demand. Her company was always for him a keen delight, an excitement, and in its way a rest. For though she always criticised, she did not nag, and just because she made no demands, nor laid any claims on him, nor ever reproached him for want of devotion, her society was delightful and never dull. They dined together at the Woman's Club, they experimented on the theatres, they visited the galleries and the picture-shops, they took little excursions into the suburbs and came back impressed with the general cheapness and shabbiness, and they talked—talked about all they saw, all they had read, and something of what they thought. What was wanting to make this charming camaraderie perfect? Only one thing.

It may have occurred to Philip that Celia had not sufficient respect for his opinions; she regarded them simply as opinions, not as his.

One afternoon, in the Metropolitan Picture-Gallery, Philip had been expressing enthusiasm for some paintings that Celia thought more sentimental than artistic, and this reminded her that he was getting into a general way of admiring everything.

"You didn't use, Philip, to care so much for pictures."

"Oh, I've been seeing more."

"But you don't say you like that? Look at the drawing."

"Well, it tells the story."

"A story is nothing; it's the way it's told. This is not well told."

"It pleases me. Look at that girl."

"Yes, she is domestic. I admit that. But I'm not sure I do not prefer an impressionistic girl, whom you can't half see, to such a thorough bread-and-butter miss as this."

"Which would you rather live with?"

"I'm not obliged to live with either. In fact, I'd rather live with myself. If it's art, I want art; if it's cooking and sewing, I want cooking and sewing. If the artist knew enough, he'd paint a woman instead of a cook."

"Then you don't care for real life?"

"Real life! There is no such thing. You are demonstrating that. You transform this uninteresting piece of domesticity into an ideal woman, ennobling her surroundings. She doesn't do it. She is level with them."

"It would be a dreary world if we didn't idealize things."

"So it would. And that is what I complain of in such 'art' as this. I don't know what has got into you, Phil. I never saw you so exuberant. You are pleased with everything. Have you had a rise in the office? Have you finished your novel?"

"Neither. No rise. No novel. But Tweedle is getting friendly. Threw an extra job in my way the other day. Do you think I'd better offer my novel, when it is done, to Tweedle?"

"Tweedle, indeed!"

"Well, one of our clients is one of the great publishing firms, and Tweedle often dines with the publisher."

"For shame, Phil!"

Philip laughed. "At any rate, that is no meaner than a suggestion of Brad's. He says if I will just weave into it a lot of line scenery, and set my people traveling on the great trunk, stopping off now and then at an attractive branch, the interested railroads would gladly print it and scatter it all over the country."

"No doubt," said Celia, sinking down upon a convenient seat. "I begin to feel as if there were no protection for anything. And, Phil, that great monster of a Mavick, who is eating up the country, isn't he a client also?"

"Occasionally only. A man like Mavick has his own lawyers and judges."

"Did you ever see him?"

"Just glimpses."

"And that daughter of his, about whom such a fuss was made, I suppose you never met her?"

"Oh, as I wrote you, at the opera; saw her in her box."

"And—?"

"Oh, she's rather a little thing; rather dark, I told you that; seems devoted to music."

"And you didn't tell what she wore."

"Why, what they all wear. Something light and rather fluffy."

"Just like a man. Is she pretty?"

"Ye-e-s; has that effect. You'd notice her eyes." If Philip had been frank he would have answered,

"I don't know. She's simply adorable," and Celia would have understood all about it.

"And probably doesn't know anything. Yes, highly educated? I heard that. But I'm getting tired of 'highly educated'; I see so many of them. I've been making them now for years. Perhaps I'm one of them. And where am I? Don't interrupt. I tell you it is a relief to come across a sweet, womanly ignoramus. What church does she go to?"

"Who?"

"That Mavick girl."

"St. Thomas', I believe."

"That's good—that's devotional. I suppose you go there too, being brought up a Congregationalist?"

"At vespers, sometimes. But, Celia, what is the matter with you? I thought you didn't care—didn't care to belong to anything?"

"I? I belong to everything. Didn't I write you reams about my studies in psychology? I've come to one conclusion. There are only two persons in the world who stand on a solid foundation, the Roman Catholic and the Agnostic. The Roman Catholic knows everything, the Agnostic doesn't know anything."

Philip was never certain when the girl was bantering him; nor, when she was in earnest, how long she would remain in that mind and mood. So he ventured, humorously:

"The truth is, Celia, that you know too much to be either. You are what they call emancipated."

"Emancipated!" And Celia sat up energetically, as if she were now really interested in the conversation. "Become the slave of myself instead of the slave of somebody else! That's the most hateful thing to be, emancipated. I never knew a woman who said she was emancipated who wasn't in some ridiculous folly or another. Now, Phil, I'm going to tell you something. I can tell you. You know I've been striving to have a career, to get out of myself somehow, and have a career for myself. Well, today—mind, I don't say tomorrow"—(and there was a queer little smile on her lips)—"I think I will just try to be good to people and things in general, in a human way."

"And give up education?"

"No, no. I get my living by education, just as you do, or hope to do, by law or by letters; it's all the same. But wait. I haven't finished what I was going to say. The more I go into psychology, trying to find out about my mind and mind generally, the more mysterious everything is. Do you know, Phil, that I'm getting into the supernatural? You can't help running into it. For me, I am not side-tracked by any of the nonsense about magnetism and telepathy and mind-reading and other psychic imponderabilities. Isn't it queer that the further we go into science the deeper we go into mystery?"

"Now, don't be shocked, I mean it reverently, just as an illustration. Do you think any one knows really anything more about the operation in the world of electricity than he does about the operation of the Holy Ghost? And yet people talk about science as if it were something they had made themselves."

"But, Celia—"

"No, I've talked enough. We are in this world and not in some other, and I have to make my living. Let's go into the other room and see the old masters. They, at least, knew how to paint—to paint passion and character; some of them could paint soul. And then, Phil, I shall be hungry. Talking about the mind always makes me hungry."

XI

Philip was always welcome at his uncle's house in Rivervale. It was, of course, his home during his college

life, and since then he was always expected for his yearly holiday. The women of the house made much of him, waited on him, deferred to him, petted him, with a flattering mingling of tenderness to a little boy and the respect due to a man who had gone into the world. Even Mr. Maitland condescended to a sort of equality in engaging Philip in conversation about the state of the country and the prospects of business in New York.

It was July. When Philip went to sleep at night—he was in the front chamber reserved for guests—the loud murmur of the Deerfield was in his ears, like a current bearing him away into sweet sleep and dreams in a land of pleasant adventures. Only in youth come such dreams. Later on the sophisticated mind, left to its own guidance in the night, wanders amid the complexities of life, calling up in confusion scenes long forgotten or repented of, images only registered by a sub-conscious process, dreams to perplex, irritate, and excite.

In the morning the same continuous murmur seemed to awake him into a peaceful world. Through the open window came in the scents of summer, the freshness of a new day. How sweet and light was the air! It was indeed the height of summer. The corn, not yet tasseled, stood in green flexible ranks, moved by the early breeze. In the river-meadows haying had just begun. Fields of timothy and clover, yellowing to ripeness, took on a fresh bloom from the dew, and there was an odor of new-mown grass from the sections where the scythes had been. He heard the call of the crow from the hill, the melody of the bobolink along the meadow-brook; indeed, the birds of all sorts were astir, skimming along the ground or rising to the sky, keeping watch especially over the garden and the fruit-trees, carrying food to their nests, or teaching their young broods to fly and to chirp the songs of summer. And from the woodshed the shrill note of the scythe under the action of the grindstone. No such vivid realization of summer as that.

Philip stole out the unused front door without disturbing the family. Whither? Where would a boy be likely to go the first thing? To the barn, the great cavernous barn, its huge doors now wide open, the stalls vacant, the mows empty, the sunlight sifting in through the high shadowy spaces. How much his life had been in that barn! How he had stifled and scrambled mowing hay in those lofts! On the floor he had hulled heaps of corn, thrashed oats with a flail—a noble occupation—and many a rainy day had played there with girls and boys who could not now exactly describe the games or well recall what exciting fun they were. There were the racks where he put the fodder for cattle and horses, and there was the cutting-machine for the hay and straw and for slicing the frozen turnips on cold winter mornings.

In the barn-yard were the hens, just as usual, walking with measured step, scratching and picking in the muck, darting suddenly to one side with an elevated wing, clucking, chattering, jabbering endlessly about nothing. They did not seem to mind him as he stood in the open door. But the rooster, in his oriental iridescent plumage, jumped upon a fence-post and crowed defiantly, in warning that this was his preserve. They seemed like the same hens, yet Philip knew they were all strangers; all the hens and flaunting roosters he knew had long ago gone to Thanksgiving. The hen is, or should be, an annual. It is never made a pet. It forms no attachments. Man is no better acquainted with the hen, as a being, than he was when the first chicken was hatched. Its business is to live a brief chicken life, lay, and be eaten. And this reminded Philip that his real occupation was hunting hens' eggs. And this he did, in the mows, in the stalls, under the floor-planks, in every hidden nook. The hen's instinct is to be orderly, and have a secluded nest of her own, and bring up a family. But in such a communistic body it is a wise hen who knows her own chicken. Nobody denies to the hen maternal instincts or domestic proclivities, but what an ill example is a hen community!

And then Philip climbed up the hill, through the old grass-plot and the orchard, to the rocks and the forest edge, and the great view. It had more meaning to him than when he was a boy, and it was more beautiful. In a certain peaceful charm, he had seen nothing anywhere in the world like it. Partly this was because his boyish impressions, the first fresh impressions of the visible world, came back to him; but surely it was very beautiful. More experienced travelers than Philip felt its unique charm.

When he descended, Alice was waiting to breakfast with him. Mrs. Maitland declared, with an approving smile on her placid, aging face, that he was the same good-for-nothing boy. But Alice said, as she sat down to the little table with Philip, "It is different, mother, with us city folks." They were in the middle room, and the windows opened to the west upon the river-meadows and the wooded hills beyond, and through one a tall rose-bush was trying to thrust its fragrant bloom.

What a dainty breakfast! Alice flushed with pleasure. It was so good of him to come to them. Had he slept well? Did it seem like home at all? Philip's face showed that it was home without the need of saying so. Such coffee—yes, a real aroma of the berry! Just a little more, would he have? And as Alice raised the silver pitcher, there was a deep dimple in her sweet cheek. How happy she was! And then the butter, so fresh and cool, and the delicious eggs—by the way, he had left a hatful in the kitchen as he came in. Alice explained that she did not make the eggs. And then there was the journey, the heat in the city, the grateful sight of the Deerfield, the splendid morning, the old barn, the watering-trough, the view from the hill everything just as it used to be.

"Dear Phil, it is so nice to have you here," and there were tears in Alice's eyes, she was so happy.

After breakfast Philip strolled down the country road through the village. How familiar was every step of the way!—the old houses jutting out at the turns in the road; the glimpse of the river beyond the little meadow where Captain Rice was killed; the spring under the ledge over which the snap-dragon grew; the dilapidated ranks of fence smothered in vines and fireweeds; the cottages, with flower-pots in front; the stores, with low verandas ornamented with boxes and barrels; the academy in its green on the hill; the old bridge over which the circus elephant dared not walk; the new and the old churches, with rival steeples; and, not familiar, the new inn.

And he knew everybody, young and old, at doorways, in the fields or gardens, and had for every one a hail and a greeting. How he enjoyed it all, and his self-consciousness added to his pleasure, as he swung along in his well-fitting city clothes, broad-shouldered and erect—it is astonishing how much a tailor can do for a man who responds to his efforts. It is a pleasure to come across such a hero as this in real life, and not have to invent him, as the saying is, out of the whole cloth. Philip enjoyed the world, and he enjoyed himself, because it was not quite his old self, the farmer's boy going on an errand. There must be knowledge all along the street that he was in the great law office of Hunt, Sharp & Tweedle. And, besides, Philip's name must be

known to all the readers of magazines in the town as a writer, a name in more than one list of "contributors." That was fame. Translated, however, into country comprehension it was something like this, if he could have heard the comments after he had passed by:

"Yes, that's Phil Burnett, sure enough; but I'd hardly know him; spruced up mightily. I wonder what he's at?"

"I heard he was down in New York trying to law it. I heard he's been writin' some for newspapers. Accordin' to his looks, must pay a durn sight better'n farmin'."

"Well, I always said that boy wa'n't no skeezics."

Almost the first question Philip asked Alice on his return was about the new inn, the Peacock Inn.

"There seemed a good deal of stir about it as I passed."

"Why, I forgot to tell you about it. It's the great excitement. Rivervale is getting known. The Mavicks are there. I hear they've taken pretty much the whole of it."

"The Mavicks?"

"Yes, the New York Mavicks, that you wrote us about, that were in the paper."

"How long have they been there?"

"A week. There is Mrs. Mavick and her daughter, and the governess, and two maids, and a young fellow in uniform—yes, livery—and a coachman in the same, and a stableful of horses and carriages. It upset the village like a circus. And they say there's a French chef in white cap and apron, who comes to the side-door and jabbars to the small boys like fireworks."

"How did it come about?"

"Naturally, I guess; a city family wanting a quiet place for summer in the country. But you will laugh. Patience first discovered it. One day, sitting at the window, she saw a two-horse buggy driven by the landlord of the Peacock, and a gentleman by his side. 'Well, I wonder who that is-city man certainly. And wherever is he going? May be a railroad man. But there is nothing the matter with the railroad. Shouldn't wonder if he is going to see the tunnel. If it was just that, the landlord wouldn't drive him; he'd send a man. And they keep stopping and pointing and looking round. No, it isn't the railroad, it's scenery. And what can a man like that want with scenery?"

"He does look like a railroad man. It may be tunnel, but it isn't all tunnel. When the team came back in the afternoon, Patience was again at the window; she had heard meantime from Jabez that a city man was stopping at the Peacock. There he goes, and looking round more than ever. They've stopped by the bridge and the landlord is pointing out. It's not tunnel, it's scenery. I tell you, he is a city boarder. Not that he cares about scenery; it's for his family. City families are always trying to find a grand new place, and he has heard of Rivervale and the Peacock Inn. Maybe the tunnel had something to do with it."

"Why, it's like second sight."

"No, Patience says it's just judgment. And she generally hits it. At any rate, the family is here."

The explanation of their being there—it seemed to Philip providential—was very simple. Mr. Mavick had plans about the Hoosac Tunnel that required him to look at it. Mrs. Mavick took advantage of this to commission him to look at a little inn in a retired village of which she had heard, and to report on scenery and climate. Warm days and cool nights and simplicity was her idea. Mavick reported that the place seemed made for the family.

Evelyn was not yet out, but she was very nearly out, and after the late notoriety Mrs. Mavick dreaded the regular Newport season. And, in the mood of the moment, she was tired of the Newport palace. She always said that she liked simplicity—a common failing among people who are not compelled to observe it. Perhaps she thought she was really fond of rural life and country ways. As she herself said,

"If you have a summer cottage at Newport or Lenox, it is necessary to go off somewhere and rest." And then it would be good for Evelyn to live out-of-doors and see the real country, and, as for herself, as she looked in the mirror, "I shall drink milk and go to bed early. Henderson used to say that a month in New Hampshire made another woman of me."

Oh, to find a spot where we could be undisturbed, alone and unknown. That was the program. But Carmen simply could not be anywhere content if she were unnoticed. It was not so easy to give up daily luxury, and habits of ease at the expense of attendants, or the ostentation which had become a second nature. Therefore the "establishment" went along with her to Rivervale, and the shy, modest little woman, who had dropped down into the country simplicity that she so dearly loved, greatly enjoyed the sensation that her coming produced. It needed no effort on her part to produce the sensation. The carriage, and coachman and footman in livery, would have been sufficient; and then the idea of one family being rich enough to take the whole hotel!

The liveries, the foreign cook in his queer cap and apron, and all the goings-on at the Peacock were the inexhaustible topic of talk in every farmhouse for ten miles around. Rivervale was a self-respecting town, and principled against luxury and self-indulgence, and judged with a just and severe judgment the world of fashion and of the grasping, wicked millionaires. And now this world with all its vain show had plumped down in the midst of them. Those who had traveled and seen the ostentation of cities smiled a superior smile at the curiosity and wonder exhibited, but even those who had never seen the like were cautious about letting their surprise appear. Especially in the presence of fashion and wealth would the independent American citizen straighten his backbone, reassuring himself that he was as good as anybody. To be sure, people flew to windows when the elegant equipage dashed by, and everybody found frequent occasion to drive or walk past the Peacock Inn. It was only the novelty of it, in a place that rather lacked novelties.

And yet there prevailed in the community a vague sense that millions were there, and a curious expectation of some individual benefit from them. All the young berry-pickers were unusually active, and poured berries into the kitchen door of the inn. There was not a housewife who was not a little more anxious about the product of her churning; not a farmer who did not think that perhaps cord-wood would rise, that there would

be a better demand for garden "sass," and more market for chickens, and who did not regard with more interest his promising colt. When he drove to the village his rig was less shabby and slovenly in appearance. The young fellows who prided themselves upon a neat buggy and a fast horse made their turnouts shine, and dashed past the inn with a self-conscious air. Even the stores began to "slick up" and arrange their miscellaneous notions more attractively, and one of them boldly put in a window a placard, "Latest New York Style." When the family went to the Congregational church on Sunday not the slightest notice was taken of them—though every woman could have told to the last detail what the ladies wore—but some of the worshipers were for the first time a little nervous about the performance of the choir, and the deacons heard the sermon chiefly with reference to what a city visitor would think of it.

Mrs. Mavick was quite equal to the situation. In the church she was devout, in the village she was affable and friendly. She made acquaintances right and left, and took a simple interest in everybody and everything. She was on easy terms with the landlord, who declared, "There is a woman with no nonsense in her." She chatted with the farmers who stopped at the inn door, she bought things at the stores that she did not want, and she speedily discovered Aunt Hepsy, and loved to sit with her in the little shop and pick up the traditions and the gossip of the neighborhood. And she did not confine her angelic visits to the village. On one pretense and another she made her way into every farmhouse that took her fancy, penetrated the kitchens and dairies, and got, as she told McDonald, into the inner life of the people.

She must see the grave of Captain Moses Rice. And on this legitimate errand she one day carried her fluttering attractiveness and patchouly into the Maitland house. Mrs. Maitland was civil, but no more. Alice was civil but reserved—a great many people, she said, came to see the graves in the old orchard. But Mrs. Mavick was not a bit abashed. She expressed herself delighted with everything. It was such a rest, such a perfectly lovely country, and everybody was so hospitable! And Aunt Hepsy had so interested her in the history of the region! But it was difficult to get her talk responded to.

However, when Miss Patience came in she made better headway. She had heard so much of Miss Maitland's apartments. She herself was interested in decorations. She had tried to do something in her New York home. But there were so many ideas and theories, and it was so hard to be natural and artificial at the same time. She had no doubt she could get some new ideas from Miss Maitland. Would it be asking too much to see her apartments? She really felt like a stranger nowhere in Rivervale. Patience was only too delighted, and took her into her museum of natural history, art, religion, and vegetation.

"She might have gone to the grave-yard without coming into the house," Alice remarked.

"Oh, well," said her mother, "I think she is very amusing. You shouldn't be so exclusive, Alice."

"Mother, I do believe she paints."

With Patience, Mrs. Mavick felt on surer ground.

"How curious, how very curious and delightful it is! Such knowledge of nature, such art in arrangement."

"Oh, I just put them up," said Patience, "as I thought they ought by rights to be put up."

"That's it. And you have combined everything here. You have given me an idea. In our house we have a Japan room, and an Indian room, and a Chinese room, and an Otaheite, and I don't know what—Egyptian, Greek, and not one American, not a really American. That is, according to American ideas, for you have everything in these two rooms. I shall write to Mr. Mavick." (Mr. Mavick never received the letter.)

When she came away it was with a profusion of thanks, and repeated invitations to drop in at the inn. Alice accompanied her to the first stone that marked the threshold of the side door, and was bowing her away, when Mr. Philip swung over the fence by the wood-shed, with a shot-gun on his shoulder, and swinging in his left hand a gray squirrel by its bushy tail, and was immediately in front of the group.

"Ah!" involuntarily from Mrs. Mavick. An introduction was inevitable.

"My cousin, Mr. Burnett, Mrs. Mavick." Philip raised his cap and bowed.

"A hunter, I see."

"Hardly, madam. In vacations I like to walk in the woods with a gun."

"Then you are not—"

"No," said Philip, smiling, "unfortunately I cannot do this all the time."

"You are of the city, then?"

"With the firm of Hunt, Sharp & Tweedle."

"Ah, my husband knows them, I believe."

"I have seen Mr. Mavick," and Philip bowed again.

"How lucky!"

Mrs. Mavick had an eye for a fine young fellow—she never denied that—and Philip's manly figure and easy air were not lost on her. Presently she said:

"We are here for a good part of the summer. Mr. Mavick's business keeps him in the city and we have to poke about a good deal alone. Now, Miss Alice, I am so glad I have met your cousin. Perhaps he will show us some of the interesting places and the beauties of the country he knows so well." And she looked sideways at Philip.

"Yes, he knows the country," said Alice, without committing herself.

"I am sure I shall be delighted to do what I can for you whenever you need my services," said Philip, who had reasons for wishing to know the Mavicks which Alice did not share.

"That's so good of you! Excursions, picnics oh, we will arrange. You must come and help me arrange. And I hope," with a smile to Alice, "you can persuade your cousin to join us sometimes."

Alice bowed, they all bowed, and Mrs. Mavick said au revoir, and went swinging her parasol down the driveway. Then she turned and called back, "This is the first long walk I have taken." And then she said to herself, "Rather stiff, except the young man and the queer old maid. But what a pretty girl the younger must have been ten years ago! These country flowers!"

XII

Mrs. Mavick thought herself fortunate in finding, in the social wilderness of Rivervale, such a presentable young gentleman as Philip. She had persuaded herself that she greatly enjoyed her simple intercourse with the inhabitants, and she would have said that she was in deep sympathy with their lives. No doubt in New York she would relate her summer adventures as something very amusing, but for the moment this adaptable woman seemed to herself in a very ingenuous, receptive, and sympathetic state of mind. Still, there was a limit to the entertaining power of Aunt Hepsy, which was perceived when she began to repeat her annals of the neighborhood, and to bring forward again and again the little nuggets of wisdom which she had evolved in the small circle of her experience. And similarly Mrs. Mavick became aware that there was a monotony in the ideas brought forward by the farmers and the farmers' wives, whether in the kitchen or the best room, which she lighted up by her gracious presence, that it was possible to be tired of the most interesting "peculiarities" when once their novelty was exhausted, and that so-called "characters" in the country fail to satisfy the requirements of intimate or long companionship. Their world is too narrowly circumscribed.

The fact that Philip was a native of the place, and so belonged to a world that was remote from her own, made her free to seek his aid in making the summer pass agreeably without incurring any risk of social obligations. Besides, when she had seen more of him, she experienced a good deal of pleasure in his company. His foreign travel, his reading, his life in the city, offered many points of mutual interest, and it was a relief to her to get out of the narrow range of topics in the provincial thought, and to have her allusions understood. Philip, on his part, was not slow to see this, or to perceive that in the higher intellectual ranges, the serious topics which occupied the attention of the few cultivated people in the neighborhood, Mrs. Mavick had little interest or understanding, though there was nothing she did not profess an interest in when occasion required. Philip was not of a suspicious nature, and it may not have occurred to him that Mrs. Mavick was simply amusing herself, as she would do with any agreeable man, young or old, who fell in her way, and would continue to do so if she reached the age of ninety.

On the contrary, it never seemed to occur to Mrs. Mavick, who was generally suspicious, that Philip was making himself agreeable to the mother of Evelyn. In her thought Evelyn was still a child, in leading-strings, and would be till she was formally launched, and the social gulf between the great heiress and the law clerk and poor writer was simply impassable. All of which goes to show that the most astute women are not always the wisest.

To one person in Rivervale the coming of Mrs. Mavick and her train of worldliness was unwelcome. It disturbed the peaceful simplicity of the village, and it was likely to cloud her pleasure in Philip's visit. She felt that Mrs. Mavick was taking him away from the sweet serenity of their life, and that in everything she said or did there was an element of unrest and excitement. She was careful, however, not to show any of this apprehension to Philip; she showed it only by an increased affectionate interest in him and his concerns, and in trying to make the old home more dear to him. Mrs. Mavick was loud in her praise of Alice to her cousin, and sought to win her confidence, but she was, after all, a little shy of her, and probably would have characterized her to a city friend as a sort of virgin in the Bible.

It so happened that day after day went by without giving Philip anything more than passing glimpses of Evelyn, when she was driving with her mother or her governess. Yet Rivervale never seemed so ravishingly beautiful to all his senses. Surely it was possessed by a spirit of romance and poetry, which he had never perceived before, and he wasted a good deal of time in gazing on the river, on the gracious meadows, on the graceful contours of the hills. When he was a lad, in the tree-top, there had been something stimulating and almost heroic in the scene, which awakened his ambition. Now it was the idyllic beauty that took possession of him, transformed as it was by the presence of a woman, that supreme interpreter of nature to a youth. And yet scarcely a woman—rather a vision of a girl, impressible still to all the influences of such a scene and to the most delicate suggestions of unfolding life. Probably he did not analyze this feeling, but it was Evelyn he was thinking of when he admired the landscape, breathed with exhilaration the fresh air, and watched the white clouds sail along the blue vault; and he knew that if she were suddenly to leave the valley all the light would go out of it and the scene would be flat to his eyes and torturing to his memory.

Mrs. Mavick he encountered continually in the village. He had taken many little strolls with her to this or that pretty point of view, they had exchanged reminiscences of foreign travel, and had dipped a little into current popular books, so that they had come to be on easy, friendly terms. Philip's courtesy and deference, and a certain wit and humor of suggestion applied to ordinary things, put him more and more on a good footing with her, so much so that she declared to McDonald that really young Burnett was a genuine "find" in the country.

It seems a pity that the important events in our lives are so commonplace. Philip's meeting with Evelyn, so long thought of and dramatized in his mind, was not in the least as he had imagined it. When one morning he went to the Peacock Inn at the summons of Mrs. Mavick, in order to lay out a plan of campaign, he found Evelyn and her governess seated on the veranda, with their books. It was Evelyn who rose first and came forward, without, so far as Philip could see, the least embarrassment of recognition.

"Mr. Burnett? Mamma will be here in a moment. This is our friend, Miss McDonald."

The girl's morning costume was very simple, and in her short walking-skirt she seemed younger even than in the city. She spoke and moved—Philip noticed that—without the least self-consciousness, and she had a way of looking her interlocutor frankly in the eyes, or, as Philip expressed it, "flashing" upon him.

Philip bowed to the governess, and, still standing and waving his hand towards the river, hoped they liked Rivervale, and then added:

"I see you can read in the country."

"We pretend to," said Evelyn, who had resumed her seat and indicated a chair for Philip, "but the singing of that river, and the bobolinks in the meadow, and the light on the hills are almost too much for us. Don't you think, McDonald, it is like Scotland?"

"It would be," the governess replied, "if it rained when it didn't mist, and there were moors and heather, and—"

"Oh, I didn't mean all that, but a feeling like that, sweet and retired and sort of lonesome?"

"Perhaps Miss McDonald means," said Philip, "that there isn't much to feel here except what you see."

Miss McDonald looked sharply around at Philip and remarked: "Yes, that's just it. It is very lovely, like almost any outdoors, if you will give yourself up to it. You remember, Evelyn, how fascinating the Arizona desert was? But there was a romantic addition to the colored desolation because the Spaniards and the Jesuits had been there. Now this place lacks traditions, legends, romance. You have to bring your romance with you."

"And that is the reason you read here?"

"One reason. Especially romances. This charming scenery and the summer sounds of running water and birds make a nice accompaniment to the romance."

"But mamma says," Evelyn interrupted, "there is plenty of legend here, and tradition and flavor, Indians and early settlers, and even Aunt Hepsy."

"Well, I confess they don't appeal to me. And as for Indians, Parkman's descriptions of those savages made me squirm. And I don't believe there was much more romance about the early settlers than about their descendants. Isn't it true, Mr. Burnett, that you must have a human element to make any country interesting?"

Philip glanced at Evelyn, whose bright face was kindled with interest in the discussion, and thought, "Good heavens! if there is not human interest here, I don't know where to look for it," but he only said:

"Doubtless."

"And why don't you writers do something about it? It is literature that does it, either in Scotland or Judea."

"Well," said Philip, stoutly, "they are doing something. I could name half a dozen localities, even sections of country, that travelers visit with curiosity just because authors have thrown that glamour over them. But it is hard to create something out of nothing. It needs time."

"And genius," Miss McDonald interjected.

"Of course, but it took time to transform a Highland sheep-stealer into a romantic personage."

Miss McDonald laughed. "That is true. Take a modern instance. Suppose Evangeline had lived in this valley! Or some simple Gretchen about whose simple story all the world is in sympathy!"

"Or," thought Philip, "some Evelyn." But he replied, looking at Evelyn, "I believe that any American community usually resents being made the scene of a romance, especially if it is localized by any approach to reality."

"Isn't that the fault mostly of the writer, who vulgarizes his material?"

"The realists say no. They say that people dislike to see themselves as they are."

"Very likely," said Miss McDonald; "no one sees himself as others see him, and probably the poet who expressed the desire to do so was simply attitudinizing.—[Robert Burns: 'O wha gift the Giftie gie us; to see o'rselves as others see us.' Ed.]—By the way, Mr. Burnett, you know there is one place of sentiment, religious to be sure, not far from here. I hope we can go some day to see the home of the 'Mountain Miller.'"

"Yes, I know the place. It is beyond the river, up that steep road running into the sky, in the next adjoining hill town. I doubt if you find any one there who lays it much to heart. But you can see the mill."

"What is the Mountain Miller?" asked Evelyn.

"A tract that, when I was a girl," answered Miss McDonald, "used to be bound up with 'The Dairyman's Daughter' and 'The Shepherd of Salisbury Plain.' It was the first thing that interested me in New England."

"Well," said Philip, "it isn't much. Just a tract. But it was written by Parson Halleck, a great minister and a sort of Pope in this region for fifty years. It is, so far as I know, the only thing of his that remains."

This tractarian movement was interrupted by the arrival of Mrs. Mavick.

"Good-morning, Mr. Burnett. I've been down to see Jenkins about his picnic wagon. Carries six, besides the driver and my man, and the hampers. So, you see, Miss Alice will have to go. We couldn't go rattling along half empty. I'll go up and see her this afternoon. So, that's settled. Now about the time and place. You are the director. Let's sit down and plan it out. It looks like good weather for a week."

"Miss McDonald says she wants to see the Mountain Miller," said Philip, with a smile.

"What's that? A monument like your Pulpit Rock?"

"No, a tract about a miller."

"Ah, something religious. I never heard of it. Well, perhaps we had better begin with something secular, and work round to that."

So an excursion was arranged for the next day. And as Philip walked home, thinking how brilliant Evelyn had been in their little talk, he began to dramatize the excursion.

All excursions are much alike, exhilarating in the outset, rarely up to expectation in the object, wearisome in the return; but, nevertheless, delightful in the memory, especially if attended with some hardship or slight disaster. To be free, in the open air, and for a day unconventional and irresponsible, is the sufficient justification of a country picnic; but its common attraction is in the opportunity for bringing young persons of the opposite sex into natural and unrestrained relations. To Philip it was the first time in his life that a picnic had ever seemed a defensible means of getting rid of a day.

The two persons to whom this excursion was most novel and exciting were Evelyn and the elder maiden,

Alice, who sat together and speedily developed a sympathy with each other in the enjoyment of the country, and in a similar poetic temperament, very shy on the part of Alice and very frank on the part of Evelyn. The whole wild scene along the river was quite as novel to Alice as to the city girl, because, although she was familiar with every mile of it and had driven through it a hundred times, she had never in all her life before, of purpose, gone to see it. No doubt she had felt its wildness and beauty, but now for the first time she looked at it as scenery, as she might have looked at a picture in a gallery. And in the contagion of Evelyn's outspoken enthusiasm she was no longer afraid to give timid expression to the latent poetry in her own soul. And daring to express this, she seemed to herself for the first time to realize vividly the nobility and grace of the landscape. And yet there was a difference in the appreciation of the two. More widely read and traveled, Evelyn's imagination took a wider range of comparison and of admiration, she was appealed to by the large features and the grandiose effects; while Alice noted more the tenderer aspects, the wayside flowers and bushes, the exotic-looking plants, which she longed to domesticate in what might be called the Sunday garden on the terraces in front of her house. For it is in these little cultivated places by the door-step, places of dreaming in the summer hours after meeting and at sunset, that the New England maiden experiences something of that tender religious sentiment which was not much fed in the barrenness of the Congregational meeting-house.

The Pulpit Rock, in the rough pasture land of Zoar, was reached by a somewhat tedious climb from the lonely farmhouse, in a sheltered nook, through straggling woods and gray pastures. It was a vast exposed surface rising at a slight angle out of the grass and undergrowth. Along the upper side was a thin line of bushes, and, pushing these aside, the observer was always startled at the unexpected scene—as it were the raising of a curtain upon another world. He stood upon the edge of a sheer precipice of a thousand feet, and looked down upon a green amphitheatre through the bottom of which the brawling river, an amber thread in the summer foliage, seemed trying to get an outlet from this wilderness cul de sac. From the edge of this precipice the first impulse was to start back in surprise and dread, but presently the observer became reassured of its stability, and became fascinated by the lonesome wildness of the scene.

"Why is it called Pulpit Rock?" asked Mrs. Mavick; "I see no pulpit."

"I suppose," said Philip, "the name was naturally suggested to a religious community, whose poetic images are mainly Biblical, and who thought it an advantageous place for a preacher to stand, looking down upon a vast congregation in the amphitheatre."

"So it is," exclaimed Evelyn. "I can see John the Baptist standing here now, and hear his voice crying in the wilderness."

"Very likely," said Mrs. Mavick, persisting in her doubt, "of course in Zoar. Anywhere else in the world it would be called the Lover's Leap."

"That is odd," said Alice; "there was a party of college girls came here two years ago and made up a story about it which was printed, how an Indian maiden pursued by a white man ran up this hill as if she had been a deer, disappeared from his sight through these bushes, and took the fatal leap. They called it the Indian Maiden's Rock. But it didn't take. It will always be Pulpit Rock."

"So you see, Miss McDonald," said Philip, "that writers cannot graft legends on the old stock."

"That depends upon the writer," returned the Scotch woman, shortly. "I didn't see the schoolgirl's essay."

When the luncheon was disposed of, with the usual adaptation to nomadic conditions, and the usual merriment and freedom of personal comment, and the wit that seems so brilliant in the open air and so flat in print, Mrs. Mavick declared that she was tired by the long climb and the unusual excitement.

"Perhaps it is the Pulpit," she said, "but I am sleepy; and if you young people will amuse yourselves, I will take a nap under that tree."

Presently, also, Alice and the governess withdrew to the edge of the precipice, and Evelyn and Philip were left to the burden of entertaining each other. It might have been an embarrassing situation but for the fact that all the rest of the party were in sight, that the girl had not the least self-consciousness, having had no experience to teach her that there was anything to be timid about in one situation more than in another, and that Philip was so absolutely content to be near Evelyn and hear her voice that there was room for nothing else in his thought. But rather to his surprise, Evelyn made no talk about the situation or the day, but began at once with something in her mind, a directness of mental operation that he found was characteristic of her.

"It seems to me, Mr. Burnett, that there is something of what Miss McDonald regards as the lack of legend and romance in this region in our life generally."

"I fancy everybody feels that who travels much elsewhere. You mean life seems a little thin, as the critics say?"

"Yes, lacks color and background. But, you see, I have no experience. Perhaps it's owing to Miss McDonald. I cannot get the plaids and tartans and Jacobins and castles and what-not out of my head. Our landscapes are just landscapes."

"But don't you think we are putting history and association into them pretty fast?"

"Yes, I know, but that takes a long time. I mean now. Take this lovely valley and region, how easily it could be made romantic."

"Not so very easy, I fancy."

"Well, I was thinking about it last night." And then, as if she saw a clear connection between this and what she was going to say, "Miss McDonald says, Mr. Burnett, that you are a writer."

"I? Why, I'm... I'm—a lawyer."

"Of course, that's business. That reminds me of what papa said once: 'It's lucky there is so much law, or half the world, including the lawyers, wouldn't have anything to do, trying to get around it and evade it.' And you won't mind my repeating it—I was a mite of a girl—I said, 'Isn't that rather sophisticated, papa?' And mamma put me down'—It seems to me, child, you are using pretty big words."

They both laughed. But suddenly Evelyn added:

"Why don't you do it?"

"Do what?"

"Write a story about it—what Miss McDonald calls 'invest the region with romance.'"

The appeal was very direct, and it was enforced by those wonderful eyes that seemed to Philip to discern his powers, as he felt them, and his ambitions, and to express absolute confidence in him. His vanity was touched in its most susceptible spot. Here seemed to be a woman, nay, a soul, who understood him, understood him even better than Celia, the lifelong confidante. It is a fatal moment for men and women, that in which they feel the subtle flattery of being understood by one of the opposite sex. Philip's estimation of himself rose 'pari passu' with his recognition of the discernment and intellectual quality of the frank and fascinating girl who seemed to believe in him. But he restrained himself and only asked, after a moment of apparent reflection upon the general proposition:

"Well, Miss Mavick, you have been here some time. Have you discovered any material for such use?"

"Why, perhaps not, and I might not know what to do with it if I had. But perhaps you don't mean what I mean. I mean something fitting the setting. Not the domestic novel. Miss McDonald says we are vulgarized in all our ideals by so much domesticity. She says that Jennie Deans would have been just an ordinary, commonplace girl but for Walter Scott."

"Then you want a romance?"

"No. I don't know exactly what I do want. But I know it when I see it." And Evelyn looked down and appeared to be studying her delicate little hands, interlacing her taper, ivory fingers—but Philip knew she did not see them—and then looked up in his face again and said:

"I'll tell you. This morning as we came up I was talking all the way with your cousin. It took some time to break the ice, but gradually she began to say things, half stories, half poetic, not out of books; things that, if said with assurance, in the city would be called wit. And then I began to see her emotional side, her pure imagination, such a refinement of appreciation and justice—I think there is an immovable basis of justice in her nature—and charity, and I think she'd be heroic, with all her gentleness, if occasion offered."

"I see," said Philip, rather lightly, "that you improved your time in finding out what a rare creature Alice is. But," and this more gravely, "it would surprise her that you have found it out."

"I believe you. I fancy she has not the least idea what her qualities are, or her capacities of doing or of suffering, and the world will never know—that is the point—unless some genius comes along and reveals them."

"How?"

"Why, through a tragedy, a drama, a story, in which she acts out her whole self. Some act it out in society. She never will. Such sweetness and strength and passion—yes, I have no doubt, passion under all the reserve! I feel it but I cannot describe it; I haven't imagination to make you see what I feel."

"You come very near it," said Philip, with a smile. And after a moment the girl broke out again:

"Materials! You writers go searching all round for materials, just as painters do, fit for your genius."

"But don't you know that the hardest thing to do is the obvious, the thing close to you?"

"I dare say. But you won't mind? It is just an illustration. I went the other day with mother to Alice's house. She was so sort of distant and reserved that I couldn't know her in the least as I know her now. And there was the rigid Puritan, her father, representing the Old Testament; and her placid mother, with all the spirit of the New Testament; and then that dear old maiden aunt, representing I don't know what, maybe a blind attempt through nature and art to escape out of Puritanism; and the typical old frame farmhouse—why, here is material for the sweetest, most pathetic idyl. Yes, the Story of Alice. In another generation people would come long distances to see the valley where Alice lived, and her spirit would pervade it."

There could be but one end to such a burst of enthusiasm, and both laughed and felt a relief in a merriment that was, after all, sympathetic. But Evelyn was a persistent creature, and presently she turned to Philip, again with those appealing eyes.

"Now, why don't you do it?"

Philip hesitated a moment and betrayed some embarrassment under the questioning of the truthful eyes.

"I've a good mind to tell you. I have—I am writing something."

"Yes?"

"Not that exactly. I couldn't, don't you see, betray and use my own relatives in that way."

"Yes, I see that."

"It isn't much. I cannot tell how it will come out. I tell you—I don't mean that I have any right to ask you to keep it as a secret of mine, but it is this way: If a writer gives away his imagination, his idea, before it is fixed in form on paper, he seems to let the air of all the world upon it and it disappears, and isn't quite his as it was before to grow in his own mind."

"I can understand that," Evelyn replied.

"Well—" and Philip found himself launched. It is so easy to talk about one's self to a sympathetic listener. He told Evelyn a little about his life, and how the valley used to seem to him as a boy, and how it seemed now that he had had experience of other places and people, and how his studies and reading had enabled him to see things in their proper relations, and how, finally, gradually the idea for a story in this setting had developed in his mind. And then he sketched in outline the story as he had developed it, and left the misty outlines of its possibilities to the imagination.

The girl listened with absorbing interest, and looked the approval which she did not put in words. Perhaps she knew that a bud will never come to flower if you pull it in pieces. When Philip had finished he had a momentary regret for this burst of confidence, which he had never given to any one else. But in the light of Evelyn's quick approval and understanding, it was only momentary. Perhaps neither of them thought what a dangerous game this is, for two young souls to thus unbosom themselves to each other.

A call from Mrs. Mavick brought them to their feet. It was time to go. Evelyn simply said:

"I think the valley, Mr. Burnett, looks a little different already."

As they drove home along the murmuring river through the golden sunset, the party were mostly silent. Only Mrs. Mavick and Philip, who sat together, kept up a lively chatter, lively because Philip was elated with the event of the day, and because the nap under the beech-tree in the open air had brightened the wits of one of the cleverest women Philip had ever met.

If the valley did seem different to Evelyn, probably she did not think so far as to own to herself whether this was owing to the outline of the story, which ran in her mind, or to the presence of the young author.

Alice and Philip were set down at the farmhouse, and the company parted with mutual enthusiasm over the success of the excursion.

"She is a much more interesting girl than I thought," Alice admitted. "Not a bit fashionable."

"And she likes you."

"Me?"

"Yes, your ears would have burned."

"Well, I am glad, for I think she is sincere."

"And I can tell you another thing. I had a long talk while you were taking your siesta. She takes an abstract view of things, judging the right and wrong of them, without reference to conventionalities or the practical obstacles to carrying out her ideas, as if she had been educated by reading and not by society. It is very interesting."

"Philip," and Alice laid her hand on his shoulder, "don't let it be too interesting."

XIII

When Philip said that Evelyn was educated in the world of literature and not in the conflicts of life he had hit the key-note of her condition at the moment she was coming into the world and would have to act for herself. The more he saw of her the more was he impressed with the fact that her discrimination, it might almost be called divination, and her judgment were based upon the best and most vital products of the human mind. A selection had evidently been made for her, until she had acquired the taste, or the habit rather, of choosing only the best for herself. Very little of the trash of literature, or the ignoble—that is to say, the ignoble view of life—had come into her mind. Consequently she judged the world as she came to know it by high standards. And her mind was singularly pure and free from vulgar images.

It might be supposed that this sort of education would have its disadvantages. The word is firmly fixed in the idea that both for its pleasure and profit it is necessary to know good and evil. Ignorance of the evil in the world is, however, not to be predicated of those who are familiar only with the great masterpieces of literature, for if they are masterpieces, little or great, they exhibit human nature in all its aspects. And, further than this, it ought to be demonstrable, a priori, that a mind fed on the best and not confused by the weak and diluted, or corrupted by images of the essentially vulgar and vile, would be morally healthy and best fitted to cope with the social problems of life. The Testaments reveal about everything that is known about human nature, but such is their clear, high spirit, and their quality, that no one ever traced mental degeneration or low taste in literature, or want of virility in judgment, to familiarity with them. On the contrary, the most vigorous intellects have acknowledged their supreme indebtedness to them.

It is not likely that Philip made any such elaborate analysis of the girl with whom he was in love, or attempted, except by a general reference to the method of her training, to account for the purity of her mind and her vigorous discernment. He was in love with her more subtle and hidden personality, with the girl just becoming a woman, with the mysterious sex that is the inspiration of most of the poetry and a good part of the heroism in the world. And he would have been in love with her, let her education have been what it might. He was in love before he heard her speak. And whatever she would say was bound to have a quality of interest and attraction that could be exercised by no other lips. It might be argued—a priori again, for the world is bound to go on in its own way—that there would be fewer marriages if the illusion of the sex did not suffice for the time to hide intellectual poverty, and, what is worse, ignobleness of disposition.

It was doubtless fortunate for this particular lovemaking, though it did not seem so to Philip, that it was very much obstructed by lack of opportunities, and that it was not impaired in its lustre by too much familiarity. In truth, Philip would have said that he saw very little of Evelyn, because he never saw her absolutely alone. To be sure he was much in her presence, a welcome member of the group that liked to idle on the veranda of the inn, and in the frequent excursions, in which Philip seemed to be the companion of Mrs. Mavick rather than of her daughter. But she was never absent from his thought, his imagination was wholly captive to her image, and the passion grew in these hours of absence until she became an indispensable associate in all that he was or could ever hope to be. Alice, who discerned very clearly Mrs. Mavick and her ambition, was troubled by Philip's absorption and the cruel disappointment in store for him. To her he was still the little boy, and all her tenderness for him was stirred to shield him from the suffering she feared.

But what could she do? Philip liked to talk about Evelyn, to dwell upon her peculiarities and qualities, to hear her praised; to this extent he was confidential with his cousin, but never in regard to his own feeling. That was a secret concerning which he was at once too humble and too confident to share with any other. None knew better than he the absurd presumption of aspiring to the hand of such a great heiress, and yet he nursed the vanity that no other man could ever appreciate and love her as he did.

Alice was still more distracted and in sympathy with Philip's evident aspirations by her own love for Evelyn and her growing admiration for the girl's character. It so happened that mutual sympathy—who can say how

it was related to Philip?—had drawn them much together, and chance had given them many opportunities for knowing each other. Alice had so far come out of her shell, and broken the reserve of her life, as to make frequent visits at the inn, and Mrs. Mavick and Evelyn found it the most natural and agreeable stroll by the river-side to the farmhouse, where naturally, while the mother amused herself with the original eccentricities of Patience, her daughter grew into an intimacy with Alice.

As for the feelings of Evelyn in these days—her first experience of something like freedom in the world—the historian has only universal experience to guide him. In her heart was working the consciousness that she had been singled out as worthy to share the confidence of a man in his most secret ambitions and aspirations, in the dreams of youth which seemed to her so noble. For these aspirations and dreams concerned the world in which she had lived most and felt most.

If Philip had talked to her as he had to Celia about his plans for success in life she would have been less interested. But there was nothing to warn her personally in these unworldly confessions. Nor did Philip ever seem to ask anything of her except sympathy in his ideas. And then there was the friendship of Alice, which could not but influence the girl. In the shelter of that the intercourse of the summer took on natural relations. For some natures there is no nurture of love like the security of family protection, under cover of which there is so little to excite the alarm of a timid maiden.

It was fortunate for Philip that Miss McDonald took a liking to him. They were thrown much together. They were both good walkers, and liked to climb the hills and explore the wild mountain streams. Philip would have confessed that he was fond of nature, and fancied there was a sort of superiority in his attitude towards it to that of his companion, who was merely interested in plants—just a botanist. This attitude, which she perceived, amused Miss McDonald.

"If you American students," she said one day when they were seated on a fallen tree in the forest, and she was expatiating on a rare plant she had found, "paid no more attention to the classics than to the world you live in, few of you would get a degree."

"Oh, some fellows go in for that sort of thing," Philip replied. "But I have noticed that all English women have some sort of fad—plants, shells, birds, something special."

"Fad!" exclaimed the Scotchwoman. "Yes, I suppose it is, if reading is a fad. It is one way of finding out about things. You admire what the Americans call scenery; we, since you provoke me to say it, love nature—I mean its individual, almost personal manifestations. Every plant has a distinct character of its own. I saw the other day an American landscape picture with a wild, uncultivated foreground. There was not a botanical thing in it. The man who painted it didn't know a sweetbrier from a thistle.

"Just a confused mass of rubbish. It was as if an animal painter should compose a group and you could not tell whether it was made up of sheep or rabbits or dogs or foxes or griffins."

"So you want things picked out like a photograph?"

"I beg your pardon, I want nature. You cannot give character to a bit of ground in a landscape unless you know the characters of its details. A man is no more fit to paint a landscape than a cage of monkeys, unless he knows the language of the nature he is dealing with down to the alphabet. The Japanese know it so well that they are not bothered with minutia, but give you character."

"And you think that science is an aid to art?"

"Yes, if there is genius to transform it into art. You must know the intimate habits of anything you paint or write about. You cannot even caricature without that. They talk now about Dickens being just a caricaturist. He couldn't have been that if he hadn't known the things he caricatured. That is the reason there is so little good caricature."

"Isn't your idea of painting rather anatomical?" Philip ventured to ask.

"Do you think that if Raphael had known nothing of anatomy the world would have accepted his Sistine Madonna for the woman she is?" was the retort.

"I see it is interesting," said Philip, shifting his ground again, "but what is the real good of all these botanical names and classifications?"

Miss McDonald gave a weary sigh. "Well, you must put things in order. You studied philology in Germany? The chief end of that is to trace the development, migration, civilization of the human race. To trace the distribution of plants is another way to find out about the race. But let that go. Don't you think that I get more pleasure in looking at all the growing things we see, as we sit here, than you do in seeing them and knowing as little about them as you pretend to?"

Philip said that he could not analyze the degree of pleasure in such things, but he seemed to take his ignorance very lightly. What interested him in all this talk was that, in discovering the mind of the governess, he was getting nearer to the mind of her pupil. And finally he asked (and Miss McDonald smiled, for she knew what this conversation, like all others with him, must ultimately come to):

"Does the Mavick family also take to botany?"

"Oh yes. Mrs. Mavick is intimate with all the florists in New York. And Miss Evelyn, when I take home these specimens, will analyze them and tell all about them. She is very sharp about such things. You must have noticed that she likes to be accurate?"

"But she is fond of poetry."

"Yes, of poetry that she understands. She has not much of the emotional vagueness of many young girls."

All this was very delightful for Philip, and for a long time, on one pretext or another, he kept the conversation revolving about this point. He fancied he was very deep in doing this. To his interlocutor he was, however, very transparent. And the young man would have been surprised and flattered if he had known how much her indulgence of him in this talk was due to her genuine liking for him.

When they returned to the inn, Mrs. Mavick began to rally Philip about his feminine taste in woody things. He would gladly have thrown botany or anything else overboard to win the good opinion of Evelyn's mother, but botany now had a real significance and a new meaning for him. Therefore he put in a defense, by saying:

"Botany, in the hands of Miss McDonald, cannot be called very feminine; it is a good deal more difficult to understand and master than law."

"Maybe that's the reason," said Mrs. Mavick, "why so many more girls are eager to study law now than botany."

"Law?" cried Evelyn; "and to practice?"

"Certainly. Don't you think that a bright, clever woman, especially if she were pretty, would have an advantage with judge and jury?"

"Not if judge and jury were women," Miss McDonald interposed.

"And you remember Portia?" Mrs. Mavick continued.

"Portia," said Evelyn; "yes, but that is poetry; and, McDonald, wasn't it a kind of catch? How beautifully she talked about mercy, but she turned the sharp edge of it towards the Jew. I didn't like that."

"Yes," Miss McDonald replied, "it was a kind of trick, a poet's law. What do you say, Mr. Burnett?"

"Why," said Philip, hesitating, "usually it is understood when a man buys or wins anything that the appurtenances necessary to give him full possession go with it. Only in this case another law against the Jew was understood. It was very clever, nothing short of woman's wit."

"Are there any women in your firm, Mr. Burnett?" asked Mrs. Mavick.

"Not yet, but I think there are plenty of lawyers who would be willing to take Portia for a partner."

"Make her what you call a consulting partner. That is just the way with you men—as soon as you see women succeeding in doing anything independently, you head them off by matrimony."

"Not against their wills," said the governess, with some decision.

"Oh, the poor things are easily hypnotized. And I'm glad they are. The funniest thing is to hear the Woman's Rights women talk of it as a state of subjection," and Mrs. Mavick laughed out of her deep experience.

"Rights, what's that?" asked Evelyn.

"Well, child, your education has been neglected. Thank McDonald for that."

"Don't you know, Evelyn," the governess explained, "that we have always said that women had a right to have any employment, or do anything they were fitted to do?"

"Oh, that, of course; I thought everybody said that. That is natural. But I mean all this fuss. I guess I don't understand what you all are talking about." And her bright face broke out of its look of perplexity into a smile.

"Why, poor thing," said her mother, "you belong to the down-trodden sex. Only you haven't found it out."

"But, mamma," and the girl seemed to be turning the thing over in her mind, as was her wont with any new proposition, "there seem to be in history a good many women who never found it out either."

"It is not so now. I tell you we are all in a wretched condition."

"You look it, mamma," replied Evelyn, who perfectly understood when her mother was chaffing.

"But I think I don't care so much for the lawyers," Mrs. Mavick continued, with more air of conviction; "what I can't stand are the doctors, the female doctors. I'd rather have a female priest about me than a female doctor."

This was not altogether banter, for there had been times in Carmen's career when the externals of the Roman Church attracted her, and she wished she had an impersonal confidant, to whom she could confess—well, not everything—and get absolution. And she could make a kind of confidant of a sympathetic doctor. But she went on:

"To have a sharp woman prying into all my conditions and affairs! No, I thank you. Don't you think so, McDonald?"

"They do say," the governess admitted, "that women doctors haven't as much consideration for women's whims as men." And, after a moment, she continued:

"But, for all that, women ought to understand about women better than men can, and be the best doctors for them."

"So it seems to me," said Evelyn, appealing to her mother. "Don't you remember that day you took me down to the infirmary in which you are interested, and how nice it was, nobody but women for doctors and nurses and all that? Would you put that in charge of men?"

"Oh, you child!" cried Mrs. Mavick, turning to her daughter and patting her on the head. "Of course there are exceptions. But I'm not going to be one of the exceptions. Ah, well, I suppose I am quite behind the age; but the conduct of my own sex does get on my nerves sometimes."

Evelyn was silent. She was often so when discussions arose. They were apt to plunge her into deep thought. To those who knew her history, guarded from close contact with anything but the world of ideas, it was very interesting to watch her mental attitude as she was day by day emerging into a knowledge of the actual world and encountering its crosscurrents. To Philip, who was getting a good idea of what her education had been, an understanding promoted by his knowledge of the character and attainments of her governess, her mental processes, it may be safely said, opened a new world of thought. Not that mental processes made much difference to a man in his condition, still, they had the effect of setting her personality still further apart from that of other women. One day when they happened to be *tete-a-tete* in one of their frequent excursions—a rare occasion—Evelyn had said:

"How strange it is that so many things that are self-evident nobody seems to see, and that there are so many things that are right that can't be done."

"That is the way the world is made," Philip had replied. She was frequently coming out with the sort of ideas and questions that are often proposed by bright children, whose thinking processes are not only fresh but undisturbed by the sophistries or concessions that experience has woven into the thinking of our race. "Perhaps it hasn't your faith in the abstract."

"Faith? I wonder. Do you mean that people do not dare go ahead and do things?"

"Well, partly. You see, everybody is hedged in by circumstances."

"Yes. I do begin to see circumstances. I suppose I'm a sort of a goose—in the abstract, as you say." And Evelyn laughed. It was the spontaneous, contagious laugh of a child. "You know that Miss McDonald says I'm nothing but a little idealist."

"Did you deny it?"

"Oh, no. I said, so were the Apostles, all save one—he was a realist."

It was Philip's turn to laugh at this new definition, and upon this the talk had drifted into the commonplaces of the summer situation and about Rivervale and its people. Philip regretted that his vacation would so soon be over, and that he must say good-by to all this repose and beauty, and to the intercourse that had been so delightful to him.

"But you will write," Evelyn exclaimed.

Philip was startled.

"Write?"

"Yes, your novel."

"Oh, I suppose so," without any enthusiasm.

"You must. I keep thinking of it. What a pleasure it must be to create a real drama of life."

So this day on the veranda of the inn when Philip spoke of his hateful departure next day, and there was a little chorus of protest, Evelyn was silent; but her silence was of more significance to him than the protests, for he knew her thoughts were on the work he had promised to go on with.

"It is too bad," Mrs. Mavick exclaimed; "we shall be like a lot of sheep without a shepherd."

"That we shall," the governess joined in. "At any rate, you must make us out a memorandum of what is to be seen and done and how to do it."

"Yes," said Philip, gayly, "I'll write tonight a complete guide to Rivervale."

"We are awfully obliged to you for what you have done." Mrs. Mavick was no doubt sincere in this. And she added, "Well, we shall all be back in the city before long."

It was a natural thing to say, and Philip understood that there was no invitation in it, more than that of the most conventional acquaintance. For Mrs. Mavick the chapter was closed.

There were the most cordial hand-shakings and good-bys, and Philip said good-by as lightly as anybody. But as he walked along the road he knew, or thought he was sure, that the thoughts of one of the party were going along with him into his future, and the peaceful scene, the murmuring river, the cat-birds and the blackbirds calling in the meadow, and the spirit of self-confident youth in him said not good-by, but *au revoir*.

XIV

Of course Philip wrote to Celia about his vacation intimacy with the Mavicks. It was no news to her that the Mavicks were spending the summer there; all the world knew that, and society wondered what whim of Carmen's had taken her out of the regular summer occupations and immured her in the country. Not that it gave much thought to her, but, when her name was mentioned, society resented the closing of the Newport house and the loss of her vivacity in the autumn at Lenox. She is such a hand to set things going, don't you know? Mr. Mavick never made a flying visit to his family—and he was in Rivervale twice during the season—that the newspapers did not chronicle his every movement, and attribute other motives than family affection to these excursions into New England. Was the Central system or the Pennsylvania system contemplating another raid? It could not be denied that the big operator's connection with any great interest raised suspicion and often caused anxiety.

Naturally, thought Celia, in such a little village, Philip would fall in with the only strangers there, so that he was giving her no news in saying so. But there was a new tone in his letters; she detected an unusual reserve that was in itself suspicious. Why did he say so much about Mrs. Mavick and the governess, and so little about the girl?

"You don't tell me," she wrote, "anything about the Infant Phenomenon. And you know I am dying to know."

This Philip resented. Phenomenon! The little brown girl, with eyes that saw so much and were so impenetrably deep, and the mobile face, so alert and responsive. If ever there was a natural person, it was Evelyn. So he wrote:

"There is nothing to tell; she is not an infant and she is not a phenomenon. Only this: she has less rubbish in her mind than any person you ever saw. And I guess the things she does not know about life are not worth knowing."

"I see," replied Celia; "poor boy! it's the moth and the star. [That's just like her, muttered Philip, she always assumed to be the older.] But don't mind. I've come to the conclusion that I am a moth myself, and some of the lights I used to think stars have fallen. And, seriously, dear friend, I am glad there is a person who does not know the things not worth knowing. It is a step in the right direction. I have been this summer up in the hills, meditating. And I am not so sure of things as I was. I used to think that all women needed was what is called education—science, history, literature—and you could safely turn them loose on the world. It certainly is not safe to turn them loose without education—but I begin to wonder what we are all coming to. I don't mind telling you that I have got into a pretty psychological muddle, and I don't see much to hold on to.

"I suppose that Scotch governess is pious; I mean she has a backbone of what they call dogma; things are right or wrong in her mind—no haziness. Now, I am going to make a confession. I've been thinking of religion. Don't mock. You know I was brought up religious, and I am religious. I go to church—well, you know

how I feel and especially the things I don't believe. I go to church to be entertained. I read the other day that Cardinal Manning said: 'The three greatest evils in the world today are French devotional books, theatrical music, and the pulpit orator. And the last is the worst.' I wonder. I often feel as if I had been to a performance. No. It is not about sin that I am especially thinking, but the sinner. One ought to do something. Sometimes I think I ought to go to the city. You know I was in a College Settlement for a while. Now I mean something permanent, devoted to the poor as a life occupation, like a nun or something of that sort. You think this is a mood? Perhaps. There have always been so many things before me to do, and I wanted to do them all. And I do not stick to anything? You must not presume to say that, because I confide to you all my errant thoughts. You have not confided in me—I don't insinuate that you have anything to confide but I cannot help saying that if you have found a pure and clear-minded girl—Heaven knows what she will be when she is a woman—I am sorry she is not poor."

But if Philip did not pour out his heart to his old friend, he did open a lively and frequent correspondence with Alice. Not about the person who was always in his thoughts—oh, no—but about himself, and all he was doing, in the not unreasonable expectation that the news would go where he could not send it directly—so many ingenious ways has love of attaining its object. And if Alice, no doubt, understood all this, she was nevertheless delighted, and took great pleasure in chronicling the news of the village and giving all the details that came in her way about the millionaire family. This connection with the world, if only by correspondence, was an outlet to her reserved and secluded life. And her letters recorded more of her character, of her feeling, than he had known in all his boyhood. When Alice mentioned, as it were by chance, that Evelyn had asked, more than once, when she had spoken of receiving letters, if her cousin was going on with his story, Philip felt that the connection was not broken.

Going on with his story he was, and with good heart. The thought that "she" might some day read it was inspiration enough. Any real creation, by pen or brush or chisel, must express the artist and be made in independence of the demands of a vague public. Art is vitiated when the commercial demand, which may be a needed stimulus, presides at the creation. But it is doubtful if any artist in letters, or in form or color, ever did anything well without having in mind some special person, whose approval was desired or whose criticism was feared. Such is the universal need of human sympathy. It is, at any rate, true that Philip's story, recast and reinspired, was thenceforth written under the spell of the pure divining eyes of Evelyn Mavick. Unconsciously this was so. For at this time Philip had not come to know that the reason why so many degraded and degrading stories and sketches are written is because the writers' standard is the approval of one or two or a group of persons of vitiated tastes and low ideals.

The Mavicks did not return to town till late in the autumn. By this time Philip's novel had been submitted to a publisher, or, rather, to state the exact truth, it had begun to go the rounds of the publishers. Mr. Brad, to whose nineteenth-century and newspaper eye Philip had shrunk from confiding his modest creation, but who was consulted in the business, consoled him with the suggestion that this was a sure way of getting his production read. There was already in the city a considerable body of professional "readers," mostly young men and women, to whom manuscripts were submitted by the publishers, so that the author could be sure, if he kept at it long enough, to get a pretty fair circulation for his story. They were selected because they were good judges of literature and because they had a keen appreciation of what the public wanted at the moment. Many of them are overworked, naturally so, in the mass of manuscripts turned over to their inspection day after day, and are compelled often to adopt the method of tea-tasters, who sip but do not swallow, for to drink a cup or two of the decoction would spoil their taste and impair their judgment, especially on new brands. Philip liked to imagine, as the weeks passed away—the story is old and need not be retold here—that at any given hour somebody was reading him. He did not, however, dwell with much delight upon this process, for the idea that some unknown Rhadamanthus was sitting in judgment upon him much more wounded his 'amour propre', and seemed much more like an invading of his inner, secret life and feeling, than would be an instant appeal to the general public. Why, he thought, it is just as if I had shown it to Brad himself—apiece of confidence that he could not bring himself to. He did not know that Brad himself was a reader for a well-known house—which had employed him on the strength of his newspaper notoriety—and that very likely he had already praised the quality of the work and damned it as lacking "snap."

It was, however, weary waiting, and would have been intolerable if his duties in the law office had not excluded other thoughts from his mind a good part of the time. There were days when he almost resolved to confine himself to the solid and remunerative business of law, and give up the vague aspirations of authorship. But those vague aspirations were in the end more enticing than the courts. Common-sense is not an antidote to the virus of the literary infection when once a young soul has taken it. In his long walks it was not on the law that Philip was ruminating, nor was the fame of success in it occupying his mind. Suppose he could write one book that should touch the heart of the world. Would he exchange the sweetness of that for the fleeting reputation of the most brilliant lawyer? In short, he magnified beyond all reason the career and reputation of the author, and mistook the consideration he occupies in the great world. And what a world it would be if there had not been a continuous line of such mistaken fools as he!

That it was not literature alone that inflated his dreams was evidenced by the direction his walks took. Whatever their original destination or purpose, he was sure to pass through upper Fifth Avenue, and walk by the Mavick mansion. And never without a lift in his spirits. What comfort there is to a lover in gazing at the blank and empty house once occupied by his mistress has never been explained; but Philip would have counted the day lost in which he did not see it.

After he heard from Alice that the Mavicks had returned, the house had still stronger attractions for him, for there was added the chance of a glimpse of Evelyn or one of the family. Many a day passed, however, before he mustered up courage to mount the steps and touch the button.

"Yes, sir," said the servant, "the family is returned, but they is h'out."

Philip left his card. But nothing came of it, and he did not try again. In fact, he was a little depressed as the days went by. How much doubt and anxiety, even suffering, might have been spared him if the historian at that moment could have informed him of a little shopping incident at Tiffany's a few days after the Mavicks' return.

A middle-aged lady and a young girl were inspecting some antiques. The girl, indeed, had been asking for ancient coins, and they were shown two superb gold staters with the heads of Alexander and Philip.

"Aren't they beautiful?" said the younger. "How lovely one would be for a brooch!"

"Yes, indeed," replied the elder, "and quite in the line of our Greek reading."

The girl held them in her hand and looked at one and the other with a student's discrimination.

"Which would you choose?"

"Oh, both are fine. Philip of Macedon has a certain youthful freshness, in the curling hair and uncovered head. But, of course, Alexander the Great is more important, and then there is the classic casque. I should take the Alexander." The girl still hesitated, weighing the choice in her mind from the classic point of view.

"Doubtless you are right. But"—and she held up the lovely head—"this is not quite so common, and—and—I think I'll take the Macedon one. Yes, you may set that for me," turning to the salesman.

"Diamonds or pearls?" asked the jeweler.

"Oh, dear, no!" exclaimed the girl; "just the head."

Evelyn's education was advancing. For the first time in her life she had something to conceal. The privilege of this sort of secret is, however, an inheritance of Eve. The first morning she wore it at breakfast Mrs. Mavick asked her what it was.

"It's a coin, antique Greek," Evelyn replied, passing it across the table.

"How pretty it is; it is very pretty. Ought to have pearls around it. Seems to be an inscription on it."

"Yes, it is real old. McDonald says it is a stater, about the same as a Persian daric—something like the value of a sovereign."

"Oh, indeed; very interesting."

To give Evelyn her due, it must be confessed that she blushed at this equivocation about the inscription, and she got quite hot with shame thinking what would become of her if Philip should ever know that she was regarding him as a stater and wearing his name on her breast.

One can fancy what philosophical deductions as to the education of women Celia Howard would have drawn out of this coin incident; one of them doubtless being that a classical education is no protection against love.

But for Philip's connection with the thriving firm of Hunt, Sharp & Tweedle, it is safe to say that he would have known little of the world of affairs in Wall Street, and might never have gained entrance into that other world, for which Wall Street exists, that society where its wealth and ambitious vulgarity are displayed. Thomas Mavick was a client of the firm. At first they had been only associated with his lawyer, and consulted occasionally. But as time went on Mr. Mavick opened to them his affairs more and more, as he found the advantage of being represented to the public by a firm that combined the highest social and professional standing with all the acumen and adroitness that his complicated affairs required.

It was a time of great financial feverishness and uncertainty, and of opportunity for the most reckless adventurers. Houses the most solid were shaken and crippled, and those which were much extended in a variety of adventures were put to their wits' ends to escape shipwreck. Financial operations are perpetual war. It is easy to calculate about the regular forces, but the danger is from the unexpected "raids" and the bushwhackers and guerrillas. And since politics has become inextricably involved in financial speculations (as it has in real war), the excitement and danger of business on a large scale increase.

Philip as a trusted clerk, without being admitted into interior secrets, came to know a good deal about Mavick's affairs, and to be more than ever impressed with his enormous wealth and the magnitude of his operations. From time to time he was sent on errands to Mavick's office, and gradually, as Mavick became accustomed to him as a representative of the firm, they came on a somewhat familiar footing, and talked of other things than business. And Mavick, who was not a bad judge of the capacities of men, conceived a high idea of Philip's single-mindedness, of his integrity and general culture, and, as well, of his agreeableness (for Philip had a certain charm where he felt at ease), while at the same time he discovered that his mind was more upon something else than law, and that, if his success in his profession depended upon his adoption of the business methods of the Street, he could not go very far. Consequently he did not venture upon the same confidences with him that he habitually did with Mr. Sharp. Yet, business aside, he had an intellectual pleasure in exchanging views with Philip which Mr. Sharp's conversation did not offer him.

When, therefore, Mrs. Mavick came to consult her husband about the list for the coming-out reception of Evelyn, Philip found a friend at court.

"It is all plain enough," said Carmen, as she sat down with book and pencil in hand, "till you come to the young men, the unattached young men. Here is my visiting-list, that of course. But for the young ladies we must have more young men. Can't you suggest any?"

"Perhaps. I know a lot of young fellows."

"But I mean available young men, those that count socially. I don't want a broker's board or a Chamber of Commerce here."

Mr. Mavick named half a dozen, and Carmen looked for their names in the social register. "Any more?"

"Why, you forgot young Burnett, who was with you last summer at Rivervale. I thought you liked him."

"So I did in Rivervale. Plain farmer people. Yes, he was very nice to us. I've been thinking if I couldn't send him something Christmas and pay off the debt."

"He'd think a great deal more of an invitation to your reception."

"But you don't understand. You never think of Evelyn's future. We are asking people that we think she ought to know."

"Well, Burnett is a very agreeable fellow."

"Fiddlesticks! He is nothing but a law clerk. Worse than that, he is a magazine writer."

"I thought you liked his essays and stories."

"So I do. But you don't want to associate with everybody you like that way. I am talking about society. You must draw the line somewhere. Oh, I forgot Fogg—Dr. LeRoy Fogg, from Pittsburg." And down went the name of Fogg.

"You mean that young swell whose business it is to drive a four-in-hand to Yonkers and back, and toot on a horn?"

"Well, what of that? Everybody who is anybody, I mean all the girls, want to go on his coach."

"Oh, Lord! I'd rather go on the Elevated." And Mavick laughed very heartily, for him. "Well, I'll make a compromise. You take Fogg and I'll take Burnett. He is in a good firm, he belongs to a first-rate club, he goes to the Hunts' and the Scammels', I hear of him in good places. Come."

"Well, if you make a point of it. I've nothing against him. But if you knew the feelings of a mother about her only daughter you would know, that you cannot be too careful."

When, several days after this conversation, Philip received his big invitation, gorgeously engraved on what he took to be a sublimated sort of wrapping-paper, he felt ashamed that he had doubted the sincere friendship and the goodness of heart of Mrs. Mavick.

XV

One morning in December, Philip was sent down to Mr. Mavick's office with some important papers. He was kept waiting a considerable time in the outer room where the clerks were at work. A couple of clerks at desks near the chair he occupied were evidently discussing some one and he overheard fragments of sentences—"Yes, that's he." "Well, I guess the old man's got his match this time."

When he was admitted to the private office, he encountered coming out in the anteroom a man of striking appearance. For an instant they were face to face, and then bowed and passed on. The instant seemed to awaken some memory in Philip which greatly puzzled him.

The man had closely cropped black hair, black whiskers, a little curling, but also closely trimmed, piercing black eyes, and the complexion of a Spaniard. The nose was large but regular, the mouth square-cut and firm, and the powerful jaw emphasized the decision of the mouth. The frame corresponded with the head. It was Herculean, and yet with no exaggerated developments. The man was over six feet in height, the shoulders were square, the chest deep, the hips and legs modeled for strength, and with no superfluous flesh. Philip noticed, as they fronted each other for an instant and the stranger raised his hat, that his hands and feet were smaller than usually accompany such a large frame. The impression was that of great physical energy, self-confidence, and determined will. The face was not bad, certainly not in detail, and even the penetrating eyes seemed at the moment capable of a humorous expression, but it was that of a man whom you would not like to have your enemy. He wore a business suit of rough material and fashionable cut, but he wore it like a man who did not give much thought to his clothes.

"What a striking-looking man," said Philip, motioning with his hand towards the anteroom as he greeted Mr. Mavick.

"Who, Ault?" answered Mavick, indifferently.

"Ault! What, Murad Ault?"

"Nobody else."

"Is it possible? I thought I saw a resemblance. Several times I have wondered, but I fancied it only a coincidence of names. It seemed absurd. Why, I used to know Murad Ault when we were boys. And to think that he should be the great Murad Ault."

"He hasn't been that for more than a couple of years," Mavick answered, with a smile at the other's astonishment, and then, with more interest, "What do you know about him?"

"If this is the same person, he used to live at Rivervale. Came there, no one knew where from, and lived with his mother, a little withered old woman, on a little cleared patch up in the hills, in a comfortable sort of shanty. She used to come to the village with herbs and roots to sell. Nobody knew whether she was a gypsy or a decayed lady, she had such an air, and the children were half afraid of her, as a sort of witch. Murad went to school, and occasionally worked for some farmer, but nobody knew him; he rarely spoke to any one, and he had the reputation of being a perfect devil; his only delight seemed to be in doing some dare-devil feat to frighten the children. We used to say that Murad Ault would become either a pirate or—"

"Broker," suggested Mr. Mavick, with a smile.

"I didn't know much about brokers at that time," Philip hastened to say, and then laughed himself at his escape from actual rudeness.

"What became of him?"

"Oh, he just disappeared. After I went away to school I heard that his mother had died, and Murad had gone off—gone West it was said. Nothing was ever heard of him."

The advent and rise of Murad Ault in New York was the sort of phenomenon to which the metropolis, which picks up its great men as Napoleon did his marshals, is accustomed. The mystery of his origin, which was at first against him, became at length an element of his strength and of the fear he inspired, as a sort of elemental force of unknown power. Newspaper biographies of him constantly appeared, but he had evaded every attempt to include him and his portrait in the Lives of Successful Men. The publishers of these useful volumes for stimulating speculation and ambition did not dare to take the least liberties with Murad Ault.

The man was like the boy whom Philip remembered. Doubtless he appreciated now as then the value of the

mystery that surrounded his name and origin; and he very soon had a humorous conception of the situation that made him decline to be pilloried with others in one of those volumes, which won from a reviewer the confession that "lives of great men all remind us we may make our lives sublime." One of the legends current about him was that he first appeared in New York as a "hand" on a canal-boat, that he got employment as a check-clerk on the dock, that he made the acquaintance of politicians in his ward, and went into politics far enough to get a city contract, which paid him very well and showed him how easily a resolute man could get money and use it in the city. He was first heard of in Wall Street as a curbstome broker, taking enormous risks and always lucky. Very soon he set up an office, with one clerk or errand-boy, and his growing reputation for sagacity and boldness began to attract customers; his ventures soon engaged the attention of guerrillas like himself, who were wont to consult him. They found that his advice was generally sound, and that he had not only sensitiveness but prescience about the state of the market. His office was presently enlarged, and displayed a modest sign of "Murad Ault, Banker and Broker."

Mr. Ault's operations constantly enlarged, his schemes went beyond the business of registering other people's bets and taking a commission on them; he was known as a daring but successful promoter, and he had a visible ownership in steamships and railways, and projected such vast operations as draining the Jersey marshes. If he had been a citizen of Italy he would have attacked the Roman Campagna with the same confidence. At any rate, he made himself so much felt and seemed to command so many resources that it was not long before he forced his way into the Stock Exchange and had a seat in the Board of Brokers. He was at first an odd figure there. There was something flash about his appearance, and his heavy double watch-chain and diamond shirt-studs gave him the look of an ephemeral adventurer. But he soon took his cue, the diamonds disappeared, and the dress was toned down. There seemed to be two models in the Board, the smart and neat, and the hayseed style adopted by some of the most wily old operators, who posed as honest dealers who retained their rural simplicity. Mr. Ault adopted a middle course, and took the respectable yet fashionable, solid dress of a man of affairs.

There is no other place in the world where merit is so quickly recognized as in the Stock Exchange, especially if it is backed by brass and a good head. Ault's audacity made him feared; he was believed to be as unscrupulous as he was reckless, but this did not much injure his reputation when it was seen that he was marvelously successful. That Ault would wreck the market, if he could and it was to his advantage, no one doubted; but still he had a quality that begot confidence. He kept his word. Though men might be shy of entering into a contract with Ault, they learned that what he said he would do he would do literally. He was not a man of many words, but he was always decided and apparently open, and, as whatever he touched seemed to thrive, his associates got the habit of saying, "What Ault says goes."

Murad Ault had married, so it was said, the daughter of a boarding-house keeper on the dock. She was a pretty girl, had been educated in a convent (perhaps by his aid after he was engaged to marry her), and was a sweet mother to a little brood of charming children, and a devout member of her parish church. Those who had seen Mrs. Ault when her carriage took her occasionally to Ault's office in the city were much impressed by her graceful manner and sweet face, and her appearance gave Ault a sort of anchorage in the region of respectability. No one would have accused Ault of being devoted to any special kind of religious worship; but he was equally tolerant of all religions, and report said was liberal in his wife's church charities. Besides the fact that he owned a somewhat pretentious house in Sixtieth Street, society had very little knowledge of him.

It was, however, undeniable that he was a power in the Street. No other man's name was oftener mentioned in the daily journals in connection with some bold and successful operation. He seemed to thrive on panics, and to grow strong and rich with every turn of the wheel. There is only one stock expression in America for a man who is very able and unscrupulous, and carries things successfully with a high hand—he is Napoleonic. It needed only a few brilliant operations, madly reckless in appearance but successful, to give Ault the newspaper sobriquet of the Young Napoleon.

"Papa, what does he mean?" asked the eldest boy. "Jim Dustin says the papers call you Napoleon."

"It means, my boy," said Ault, with a grim smile, "that I am devoted to your mother, St. Helena."

"Don't say that, Murad," exclaimed his wife; "I'm far enough from a saint, and your destiny isn't the Island."

"What's the Island, mamma?"

"It's a place people are sent to for their health."

"In a boat? Can I go?"

"You ask too many questions, Sinclair," said Mr. Ault; "it's time you were off to school."

There seems to have been not the least suspicion in this household that the head of it was a pirate.

It must be said that Mavick still looked upon Ault as an adventurer, one of those erratic beings who appear from time to time in the Street, upset everything, and then disappear. They had been associated occasionally in small deals, and Ault had more than once appealed to Mavick, as a great capitalist, with some promising scheme. They had, indeed, co-operated in reorganizing a Western railway, but seemed to have come out of the operation without increased confidence in each other. What had occurred nobody knew, but thereafter there developed a slight antagonism between the two operators. Ault went no more to consult the elder man, and they had two or three little bouts, in which Mavick did not get the best of it. This was not an unusual thing in the Street. Mr. Ault never expressed his opinion of Mr. Mavick, but it became more and more apparent that their interests were opposed. Some one who knew both men, and said that the one was as cold and selfish as a pike, and the other was a most unscrupulous dare-devil, believed that Mavick had attempted some sort of a trick on Ault, and that it was the kind of thing that the Spaniard (his complexion had given him this nickname) never forgot.

It is not intended to enter into a defense of the local pool known as the New York Stock Exchange. It needs none. Some regard it as a necessary standpipe to promote and equalize distribution, others consult it as a sort of Nilometer, to note the rise and fall of the waters and the probabilities of drought or flood. Everybody knows that it is full of the most gamy and beautiful fish in the world—namely, the speckled trout, whose honest occupation it is to devour whatever is thrown into the pool—a body governed by the strictest laws of political economy in guarding against over-population, by carrying out the Malthusian idea, in the habit the

big ones have of eating the little ones. But occasionally this harmonious family, which is animated by one of the most conspicuous traits of human nature—to which we owe very much of our progress—namely, the desire to get hold of everything within reach, and is such a useful object-lesson of the universal law of upward struggle that results in the survival of the fittest, this harmonious family is disturbed by the advent of a pickerel, which makes a raid, introduces confusion into all the calculations of the pool, roils the water, and drives the trout into their holes.

The presence in the pool of a slimy eel or a blundering bullhead or a lethargic sucker is bad enough, but the rush in of the pickerel is the advent of the devil himself. Until he is got rid of, all the delicate machinery for the calculation of chances is hopelessly disturbed; and no one could tell what would become of the business of the country if there were not a considerable number of devoted men engaged in registering its fluctuations and the change of values, and willing to back their opinions by investing their own capital or, more often, the capital of others.

This somewhat mixed figure cannot be pursued further without losing its analogy, becoming fantastic, and violating natural law. For it is matter of observation that in this arena the pickerel, if he succeeds in clearing out the pool, suddenly becomes a trout, and is respected as the biggest and most useful fish in the pond.

What is meant is simply that Murad Ault was fighting for position, and that for some reason, known to himself, Thomas Mavick stood in his way. Mr. Mavick had never been under the necessity of making such a contest. He stepped into a commanding position as the manager if not the owner of the great fortune of Rodney Henderson. His position was undisputed, for the Street believed with the world in the magnitude of that fortune, though there were shrewd operators who said that Mavick had more chicane but not a tenth part of the ability of Rodney Henderson. Mr. Ault had made the fortune the object of keen scrutiny, when his antagonism was aroused, and none knew better than he its assailable points. Henderson had died suddenly in the midst of vast schemes which needed his genius to perfect. Apparently the Mavick estate was second to only a few fortunes in the country. Mr. Ault had set himself to find out whether this vast structure stood upon rock foundations. The knowledge he acquired about it and his intentions he communicated to no one. But the drift of his mind might be gathered from a remark he made to his wife one day, when some social allusion was made to Mavick: "I'll bring down that snob."

The use of such men as Ault in the social structure is very doubtful, as doubtful as that of a summer tempest or local cyclone, which it is said clears the air and removes rubbish, but is a scourge that involves the innocent as often as the guilty. It is popularly supposed that the disintegration and distribution of a great fortune, especially if it has been accumulated by doubtful methods, is a benefit to mankind. Mr. Ault may have shared this impression, but it is unlikely that he philosophized on the subject. No one, except perhaps his own family, had ever discovered that he had any sensibilities that could be appealed to, and, if he had known the ideas beginning to take shape in the mind of the millionaire heiress in regard to this fortune, he would have approved or comprehended them as little as did her mother.

Evelyn had lived hitherto with little comprehension of her peculiar position. That the world went well with her, and that no obstacle was opposed to the gratification of her reasonable desires, or to her impulses of charity and pity, was about all she knew of her power. But she was now eighteen and about to appear in the world. Her mother, therefore, had been enlightening her in regard to her expectations and the career that lay open to her. And Carmen thought the girl a little perverse, in that this prospect, instead of exciting her worldly ambition, seemed to affect her only seriously as a matter of responsibility.

In their talks Mrs. Mavick was in fact becoming acquainted with the mind of her daughter, and learning, somewhat to her chagrin, the limitations of her education produced by the policy of isolation.

To her dismay, she found that the girl did not care much for the things that she herself cared most for. The whole world of society, its strifes, ambitions, triumphs, defeats, rewards, did not seem to Evelyn so real or so important as that world in which she had lived with her governess and her tutors. And, worse than this, the estimate she placed upon the values of material things was shockingly inadequate to her position.

That her father was a very great man was one of the earliest things Evelyn began to know, exterior to herself. This was impressed upon her by the deference paid to him not only at home but wherever they went, and by the deference shown to her as his daughter. And she was proud of this. He was not one of the great men whose careers she was familiar with in literature, not a general or a statesman or an orator or a scientist or a poet or a philanthropist she never thought of him in connection with these heroes of her imagination—but he was certainly a great power in the world. And she had for him a profound admiration, which might have become affection if Mavick had ever taken the pains to interest himself in the child's affairs. Her mother she loved, and believed there could be no one in the world more sweet and graceful and attractive, and as she grew up she yearned for more of the motherly companionship, for something more than the odd moments of petting that were given to her in the whirl of the life of a woman of the world. What that life was, however, she had only the dimmest comprehension, and it was only in the last two years, since she was sixteen, that she began to understand it, and that mainly in contrast to her own guarded life. And she was now able to see that her own secluded life had been unusual.

Not till long after this did she speak to any one of her experience as a child, of the time when she became conscious that she was never alone, and that she was only free to act within certain limits.

To McDonald, indeed, she had often shown her irritation, and it was only the strong good sense of the governess that kept her from revolt. It was not until very recently that it could be explained to her, without putting her in terror hourly, why she must always be watched and guarded.

It had required all the tact and sophistry of her governess to make her acquiesce in a system of education—so it was called—that had been devised in order to give her the highest and purest development. That the education was mainly left to McDonald, and that her parents were simply anxious about her safety, she did not learn till long afterwards. In the first years Mrs. Mavick had been greatly relieved to be spared all the care of the baby, and as the years went on, the arrangement seemed more and more convenient, and she gave little thought to the character that was being formed. To Mr. Mavick, indeed, as to his wife, it was enough to see that she was uncommonly intelligent, and that she had a certain charm that made her

attractive. Mrs. Mavick took it for granted that when it came time to introduce her into the world she would be like other girls, eager for its pleasures and susceptible to all its allurements. Of the direction of the undercurrents of the girl's life she had no conception, until she began to unfold to her the views of the world that prevailed in her circle, and what (in the Carmen scheme of life) ought to be a woman's ambition.

That she was to be an heiress Evelyn had long known, that she would one day have a great fortune at her disposal had indeed come into her serious thought, but the brilliant use of it in relation to herself, at which her mother was always lately hinting, came to her as a disagreeable shock. For the moment the fortune seemed to her rather a fetter than an opportunity, if she was to fulfill her mother's expectations. These hints were conveyed with all the tact of which her mother was master, but the girl was nevertheless somewhat alarmed, and she began to regard the "coming out" as an entrance into servitude rather than an enlargement of liberty. One day she surprised Miss McDonald by asking her if she didn't think that rich people were the only ones not free to do as they pleased?

"Why, my dear, it is not generally so considered. Most people fancy that if they had money enough they could do anything."

"Yes, of course," said the girl, putting down her stitching and looking up; "that is not exactly what I mean. They can go in the current, they can do what they like with their money, but I mean with themselves. Aren't they in a condition that binds them half the time to do what they don't wish to do?"

"It's a condition that all the world is trying to get into."

"I know. I've been talking with mamma about the world and about society, and what is expected and what you must live up to."

"But you have always known that you must one day go into the world and take your share in life."

"That, yes. But I would rather live up to myself. Mamma seems to think that society will do a great deal for me, that I will get a wider view of life, that I can do so much for society, and, with my position, mamma says, have such a career. McDonald, what is society for?"

That was such a poser that the governess threw up her hands, and then laughed aloud, and then shook her head. "Wiser people than you have asked that question."

"I asked mamma that, for she is in it all the time. She didn't like it much, and asked, 'What is anything for?' You see, McDonald, I've been with mamma many a time when her friends came to see her, and they never have anything to say, never—what I call anything. I wonder if in society they go about saying that? What do they do it for?"

Miss McDonald had her own opinion about what is called society and its occupations and functions, but she did not propose to encourage this girl, who would soon take her place in it, in such odd notions.

"Don't you know, child, that there is society and society? That it is all sorts of a world, that it gets into groups and circles about, and that is the way the world is stirred up and kept from stagnation. And, my dear, you have just to do your duty where you are placed, and that is all there is about it."

"Don't be cross, McDonald. I suppose I can think my thoughts?"

"Yes, you can think, and you can learn to keep a good deal that you think to yourself. Now, Evelyn, haven't you any curiosity to see what this world we are talking about is like?"

"Indeed I have," said Evelyn, coming out of her reflective mood into a girlish enthusiasm. "And I want to see what I shall be like in it. Only—well, how is that?" And she held out the handkerchief she had been plying her needle on.

Miss McDonald looked at the stitches critically, at the letters T.M. enclosed in an oval.

"That is very good, not too mechanical. It will please your father. The oval makes a pretty effect; but what are those signs between the letters?"

"Don't you see? It is a cartouche, and those are hieroglyphics—his name in Egyptian. I got it out of Petrie's book."

"It certainly is odd."

"And every one of the twelve is going to be different. It is so interesting to hunt up the signs for qualities. If papa can read it he will find out a good deal that I think about him."

The governess only smiled for reply. It was so like Evelyn, so different from others even in the commonplace task of marking handkerchiefs, to work a little archaeology into her expression of family affection.

Mrs. Mavick's talks with her daughter in which she attempted to give Evelyn some conception of her importance as the heiress of a great fortune, of her position in society, what would be expected of her, and of the brilliant social career her mother imagined for her, had an effect opposite to that intended. There had been nothing in her shielded life, provided for at every step without effort, that had given her any idea of the value and importance of money.

To a girl in her position, educated in the ordinary way and mingling with school companions, one of the earliest lessons would be a comprehension of the power that wealth gave her; and by the time that she was of Evelyn's age her opinion of men would begin to be colored by the notion that they were polite or attentive to her on account of her fortune and not for any charm of hers, and so a cruel suspicion of selfishness would have entered her mind to poison the very thought of love.

No such idea had entered Evelyn's mind. She would not readily have understood that love could have any sort of relation to riches or poverty. And if, deep down in her heart, not acknowledged, scarcely recognized, by herself, there had begun to grow an image about which she had sweet and tender thoughts, it certainly did not occur to her that her father's wealth could make any difference in the relations of friendship or even of affection. And as for the fortune, if she was, as her mother said, some day to be mistress of it, she began to turn over in her mind objects quite different from the display and the career suggested by her mother, and to think how she could use it.

In her ignorance of practical life and of what the world generally values, of course the scheme that was

rather hazy in her mind was simply Quixotic, as appeared in a conversation with her father one evening while he smoked his cigar. He had called Evelyn to the library, on the suggestion of Carmen that he should "have a little talk with the girl."

Mr. Mavick began, when Evelyn was seated beside him, and he had drawn her close to him and she had taken possession of his big hand with both her little hands, about the reception and about balls to come, and the opera, and what was going on in New York generally in the season, and suddenly asked:

"My dear, if you had a lot of money, what would you do with it?"

"What would you?" said the girl, looking up into his face. "What do people generally do?"

"Why," and Mavick hesitated, "they use it to add more to it."

"And then?" pursued the girl.

"I suppose they leave it to somebody. Suppose it was left to you?"

"Don't think me silly, papa; I've thought a lot about it, and I shall do something quite different."

"Different from what?"

"You know mamma is in the Orthopedic Hospital, and in the Ragged Schools, and in the Infirmary, and I don't know what all."

"And wouldn't you help them?"

"Of course, I would help. But everybody does those things, the practical things, the charities; I mean to do things for the higher life."

Mr. Mavick took his cigar from his mouth and looked puzzled. "You want to build a cathedral?"

"No, I don't mean that sort of higher life, I mean civilization, the things at the top. I read an essay the other day that said it was easy to raise money for anything mechanical and practical in a school, but nobody wanted to give for anything ideal."

"Quite right," said her father; "the world is full of cranks. You seem as vague as your essayist."

"Don't you remember, papa, when we were in Oxford how amused you were with the master, or professor, who grumbled because the college was full of students, and there wasn't a single college for research?"

"I asked McDonald afterwards what he meant; that is how I first got my idea, but I didn't see exactly what it was until recently. You've got to cultivate the high things—that essay says—the abstract, that which does not seem practically useful, or society will become low and material."

"By George!" cried Mavick, with a burst of laughter, "you've got the lingo. Go on, I want to see where you are going to light."

"Well, I'll tell you some more. You know my tutor is English. McDonald says she believes he is the most learned man in eighteenth-century literature living, and his dream is to write a history of it. He is poor, and engaged all the time teaching, and McDonald says he will die, no doubt, and leave nothing of his investigations to the world."

"And you want to endow him?"

"He is only one. There is the tutor of history. Teach, teach, teach, and no time or strength left for investigation. You ought to hear him tell of the things just to be found out in American history. You see what I mean? It is plainer in the sciences. The scholars who could really make investigations, and do something for the world, have to earn their living and have no time or means for experiments. It seems foolish as I say it, but I do think, papa, there is something in it."

"And what would you do?"

Evelyn saw that she was making no headway, and her ideas, exposed to so practical a man as her father, did seem rather ridiculous. But she struck out boldly with the scheme that she had been evolving.

"I'd found Institutions of Research, where there should be no teaching, and students who had demonstrated that they had anything promising in them, in science, literature, languages, history, anything, should have the means and the opportunity to make investigations and do work. See what a hard time inventors and men of genius have; it is pitiful."

"And how much money do you want for this modest scheme of yours?"

"I hadn't thought," said Evelyn, patting her father's hand. And then, at a venture, "I guess about ten millions."

"Whew! Have you any idea how much ten millions are, or how much one million is?"

"Why, ten millions, if you have a hundred, is no more than one million if you have only ten. Doesn't it depend?"

"If it depends upon you, child, I don't think money has any value for you whatever. You are a born financier for getting rid of a surplus. You ought to be Secretary of the Treasury."

Mavick rose, lifted up his daughter, and, kissing her with more than usual tenderness, said, "You'll learn about the world in time," and bade her goodnight.

XVI

Law and love go very well together as occupations, but, when literature is added, the trio is not harmonious. Either of the two might pull together, but the combination of the three is certainly disastrous.

It would be difficult to conceive of a person more obviously up in the air than Philip at this moment. He went through his office duties intelligently and perfunctorily, but his heart was not in the work, and reason as

he would his career did not seem to be that way. He was lured too strongly by that siren, the ever-alluring woman who sits upon the rocks and sings so deliciously to youth of the sweets of authorship. He who listens once to that song hears it always in his ears, through disappointment and success—and the success is often the greatest disappointment—through poverty and hope deferred and heart-sickness for recognition, through the hot time of youth and the creeping incapacity of old age. The song never ceases. Were the longing and the hunger it arouses ever satisfied with anything, money for instance, any more than with fame?

And if the law had a feeble hold on him, how much more uncertain was his grasp on literature. He had thrown his line, he had been encouraged by nibbles, but publishers were too wary to take hold. It seemed to him that he had literally cast his bread upon the waters, and apparently at an ebb tide, and his venture had gone to the fathomless sea. He had put his heart into the story, and, more than that, his hope of something dearer than any public favor. As he went over the story in his mind, scene after scene, and dwelt upon the theme that held the whole in unity, he felt that Evelyn would be touched by the recognition of her part in the inspiration, and that the great public must give some heed to it. Perhaps not the great public—for its liking now ran in quite another direction, but a considerable number of people like Celia, who were struggling with problems of life, and the Alices in country homes who still preserved in their souls a belief in the power of a noble life, and perhaps some critics who had not rid themselves of the old traditions. If the publishers would only give him a chance!

But if law and literature were to him little more than unsubstantial dreams, the love he cherished was, in the cool examination of reason, preposterous. What! the heiress of so many millions, brought up doubtless in the expectation of the most brilliant worldly alliance, the heiress with the world presently at her feet, would she look at a lawyer's clerk and an unsuccessful scribbler? Oh, the vanity of youth and the conceit of intellect!

Down in his heart Philip thought that she might. And he went on nursing this vain passion, knowing as well as any one can know the social code, that Mr. Mavick and Mrs. Mavick would simply laugh in his face at such a preposterous idea. And yet he knew that he had her sympathy in his ambition, that to a certain extent she was interested in him. The girl was too guileless to conceal that. And then suppose he should become famous—well, not exactly famous, but an author who was talked about, and becoming known, and said to be promising? And then he could fancy Mavick weighing this sort of reputation in his office scales against money, and Mrs. Mavick weighing it in her boudoir against social position. He was a fool to think of it. And yet, suppose, suppose the girl should come to love him. It would not be lightly. He knew that, by looking into her deep, clear, beautiful eyes. There were in them determination and tenacity of purpose as well as the capability of passion. Heavens and earth, if that girl once loved, there was a force that no opposition could subdue! That was true. But what had he to offer to evoke such a love?

In those days Philip saw much of Celia, who at length had given up teaching, and had come to the city to try her experiment, into which she was willing to embark her small income. She had taken a room in the midst of poverty and misery on the East Side, and was studying the situation.

"I am not certain," she said, "whether I or any one else can do anything, or whether any organization down there can effect much. But I will find out."

"Aren't you lonesome—and disgusted?" asked Philip.

"Disgusted? You might as well be disgusted with one thing as another. I am generally disgusted with the way things go. But, lonely? No, there is too much to do and to learn. And do you know, Philip, that people are more interesting over there, more individual, have more queer sorts of character. I begin to believe, with a lovely philanthropist I know, who had charge of female criminals, that 'wicked women are more interesting than good women.'"

"You have struck a rich mine of interest in New York, then."

"Don't be cynical, Phil. There are different kinds of interest. Stuff! But I won't explain." And then, abruptly changing the subject, "Seems to me you have something on your mind lately. Is it the novel?"

"Perhaps."

"The publishers haven't decided?"

"I am afraid they have."

"Well, Philip, do you know that I think the best thing that could happen to you would be to have the story rejected."

"It has been rejected several times," said Philip. "That didn't seem to do me any good."

"But finally, so that you would stop thinking about it, stop expecting anything that way, and take up your profession in earnest."

"You are a nice comforter!" retorted Philip, with a sort of smirking grin and a look of keen inspection, as if he saw something new in the character of his adviser. "What has come over you? Suppose I should give you that sort of sympathy in the projects you set your heart on?"

"It does seem hard and mean, doesn't it? I knew you wouldn't like it. That is, not now. But it is for your lifetime. As for me, I've wanted so many things and I've tried so many things. And do you know, Phil, that I have about come to the conclusion that the best things for us in this world are the things we don't get."

"You are always coming to some new conclusion."

"Yes, I know. But just look at it rationally. Suppose your story is published, cast into the sea of new books, and has a very fair sale. What will you get out of it? You can reckon how many copies at ten cents a copy it will need to make as much as some writers get for a trivial magazine paper. Recognition? Yes, from a very few people. Notoriety? You would soon find what that is. Suppose you make what is called a 'hit.' If you did not better that with the next book, you would be called a failure. And you must keep at it, keep giving the public something new all the time, or you will drop out of sight. And then the anxiety and the strain of it, and the temptation, because you must live, to lower your ideal, and go down to what you conceive to be the buying public. And if your story does not take the popular fancy, where will you be then?"

"Celia, you have become a perfect materialist. You don't allow anything for the joy of creation, for the

impulse of a man's mind, for the delight in fighting for a place in the world of letters."

"So it seems to you now. If you have anything that must be said, of course you ought to say it, no matter what comes after. If you are looking round for something you can say in order to get the position you covet, that is another thing. People so deceive themselves about this. I know literary workers who lead a dog's life and are slaves to their pursuit, simply because they have deceived themselves in this. I want you to be free and independent, to live your own life and do what work you can in the world. There, I've said it, and of course you will go right on. I know you. And maybe I am all wrong. When I see the story I may take the other side and urge you to go on, even if you are as poor as a church-mouse, and have to be under the harrow of poverty for years."

"Then you have some curiosity to see the story?"

"You know I have. And I know I shall like it. It isn't that, Phil; it is what is the happiest career for you."

"Well, I will send it to you when it comes back."

But the unexpected happened. It did not come back. One morning Philip received a letter from the publishers that set his head in a whirl. The story was accepted. The publisher wrote that the verdict of the readers was favorable, and he would venture on it, though he cautioned Mr. Burnett not to expect a great commercial success. And he added, as to terms, it being a new name, though he hoped one that would become famous, that the copyright of ten per cent. would not begin until after the sale of the first thousand copies.

The latter part of the letter made no impression on Philip. So long as the book was published, and by a respectable firm, he was indifferent as a lord to the ignoble details of royalty. The publisher had recognized the value of the book, and it was accepted on its merits. That was enough. The first thing he did was to enclose the letter to Celia, with the simple remark that he would try to sympathize with her in her disappointment.

Philip would have been a little less jubilant if he had known how the decision of the publishing house was arrived at. It was true that the readers had reported favorably, but had refused to express any opinion on the market value. The manuscript had therefore been put in the graveyard of manuscripts, from which there is commonly no resurrection except in the funeral progress of the manuscript back to the author. But the head of the house happened to dine at the house of Mr. Hunt, the senior of Philip's law firm. Some chance allusion was made by a lady to an article in a recent magazine which had pleased her more than anything she had seen lately. Mr. Hunt also had seen it, for his wife had insisted on reading it to him, and he was proud to say that the author was a clerk in his office—a fine fellow, who, he always fancied, had more taste for literature than for law, but he had the stuff in him to succeed in anything. The publisher pricked up his ears and asked some questions. He found that Mr. Burnett stood well in the most prominent law firm in the city, that ladies of social position recognized his talent, that he dined here and there in a good set, and that he belonged to one of the best clubs. When he went to his office the next morning he sent for the manuscript, looked it over critically, and then announced to his partners that he thought the thing was worth trying.

In a day or two it was announced in the advertising lists as forthcoming. There it stared Philip in the face and seemed to be the only conspicuous thing in the journal. He had not paid much attention before to the advertisements, but now this department seemed the most interesting part of the paper, and he read every announcement, and then came back and read his over and over. There it stood:—"On Saturday, *The Puritan Nun*. An Idyl. By Philip Burnett."

The naming of the book had been almost as difficult as the creation. His first choice had been "*The Lily of the Valley*," but Balzac had pre-empted that. And then he had thought of "*The Enclosed Garden*" (*Hortus Clausus*), the title of a lovely picture he had seen. That was Biblical, but in the present ignorance of the old scriptures it would be thought either agricultural or sentimental. It is not uncommon that a book owes its notoriety and sale to its title, and it is not easy to find a title that will attract attention without being too sensational. The title chosen was paradoxical, for while a nun might be a puritan, it was unthinkable that a Puritan should be a nun.

Mr. Brad said he liked it, because it looked well and did not mean anything; he liked all such titles, the "*Pious Pirate*," the "*Lucid Lunatic*," the "*Sympathetic Siren*," the "*Guileless Girl*," and so on.

The announcement of publication had the effect of putting Philip in high spirits for the Mavick reception-spirits tempered, however, by the embarrassment natural to a modest man that he would be painfully conspicuous. This first placarding of one's name is a peculiar and mixed sensation. The letters seem shamefully naked, and the owner seems exposed and to have parted with a considerable portion of his innate privacy. His first fancy is that everybody will see it. But this fancy only comes once. With experience he comes to doubt if anybody except himself will see it.

To those most concerned the Mavick reception was the event of a lifetime. To the town—that is, to a thousand or two persons occupying in their own eyes an exclusive position it was one of the events of the season, and, indeed, it was the sensation for a couple of days. The historian of social life formerly had put upon him the task of painfully describing all that went to make such an occasion brilliant—the house itself, the decorations, the notable company, men distinguished in the State or the Street, women as remarkable for their beauty as for their courage in its exhibition, the whole world of fashion and of splendid extravagance upon which the modiste and the tailor could look with as much pride as the gardener does upon a show of flowers which his genius has brought to perfection.

The historian has no longer this responsibility. It is transferred to a kind of trust. A race of skillful artists has arisen, who, in combination with the caterers, the decorators, and the milliners, produce a composite piece of literature in which all details are woven into a splendid whole—a composition rhetorical, humorous, lyrical, a noble apotheosis of wealth and beauty which carefully satisfies individual vanity and raises in the mind a noble picture of modern civilization. The pen and the pencil contribute to this splendid result in the daily chronicle of our life. Those who are not present are really witnesses of the scene, and this pictorial and literary triumph is justified in the fact that no other effort of the genius of reproduction is so eagerly studied by the general public. Not only in the city, but in the remote villages, these accounts are perused with

interest, and it must be taken as an evidence of the new conception of the duties of the favored of fortune to the public pleasure that the participants in these fetes overcome, though reluctantly, their objection to notoriety.

No other people in the world are so hospitable as the Americans, and so willing to incur discomfort in showing hospitality. No greater proof of this can be needed than the effort to give princely entertainments in un-princely houses, where opposing streams of guests fight for progress in scant passages and on narrow stairways, and pack themselves in stifling rooms. The Mavick house, it should be said, was perfectly adapted to the throng that seemed to fill but did not crowd it. The spacious halls, the noble stairways, the ample drawing-rooms, the ballroom, the music-room, the library, the picture-gallery, the dining-room, the conservatory—into these the crowd flowed or lingered without confusion or annoyance and in a continual pleasure of surprise. "The best point of view," said an artist of Philip's acquaintance, "is just here." They were standing in the great hall looking up at that noble gallery from which flowed down on either hand a broad stairway.

"I didn't know there was so much beauty in New York. It never before had such an opportunity to display itself. There is room for the exhibition of the most elaborate toilets, and the costumes really look regal in such a setting."

When Philip was shown to the dressing-room, conscious that the servant was weighing him lightly in the social scale on account of his early arrival, he found a few men who were waiting to make their appearance more seasonable. They were young men, who had the air of being bored by this sort of thing, and greeted each other with a look of courteous surprise, as much as to say, "Hello! you here?" One of them, whom Philip knew slightly, who had the reputation of being the distributor if not the fountain of social information, and had the power of attracting gossip as a magnet does iron filings, gave Philip much valuable information concerning the function.

"Mrs. Mavick has done it this time. Everybody has tumbled in. Washington is drained of its foreign diplomats, the heavy part of the cabinet is moved over to represent the President, who sent a gracious letter, the select from Boston, the most ancient from Philadelphia, and I know that Chicago comes in a special train. Oh, it's the thing. I assure you there was a scramble for invitations in the city. Lots of visiting nobility—Count de l'Auney, I know, and that little snob, Lord Montague."

"Who is he?"

"Lord Crewe Monmouth Fitzwilliam, the Marquis of Montague, eldest son of the Duke of Tewkesbury. He's a daisy."

"They say he is over here looking for capital to carry on his peer business when he comes into it. Don't know who put up the money for the trip. These foreigners keep a sharp eye on our market, I can tell you. They say she is a nice little girl, rather a blue-stocking, face rather intelligent than pretty, but Montague won't care for that—excuse the old joke, but it is the figure Monte is after. He hasn't any manners, but he's not a bad sort of a fellow, generally good-natured, immensely pleased with New York, and an enthusiastic connoisseur in club drinks."

At the proper hour—the hour, it came into, his mind, when the dear ones at Rivervale had been long in sleep, lulled by the musical flow of the Deerfield—Philip made his way to the reception room, where there actually was some press of a crowd, in lines, to approach the attraction of the evening, and as he waited his turn he had leisure to observe the brilliant scene. There was scarcely a person in the room he knew. One or two ladies gave him a preoccupied nod, a plain little woman whom he had talked with about books at a recent dinner smiled upon him encouragingly. But what specially impressed him at the moment was the seriousness of the function, the intentness upon the presentation, and the look of worry on the faces of the women in arranging trains and avoiding catastrophes.

As he approached he fancied that Mr. Mavick looked weary and bored, and that a shade of abstraction occasionally came over his face as if it were difficult to keep his thoughts on the changing line.

But his face lighted up a little when he took Philip's hand and exchanged with him the commonplaces of the evening. But before this he had to wait a moment, for he was preceded by an important personage. A dapper little figure, trim, neat, at the moment drew himself up before Mrs. Mavick, brought his heels together with a click, and made a low bow. Doubtless this was the French count. Mrs. Mavick was radiant. Philip had never seen her in such spirits or so fascinating in manner.

"It is a great honor, count."

"It ees to me," said the count, with a marked accent; "I assure you it is like Paris in ze time of ze monarchy. Ah, ze Great Republic, madame—so it was in France in ze ancien regime. Ah, mademoiselle! Permit me," and he raised her hand to his lips; "I salute—is it not" (turning to Mrs. Mavick)—"ze princess of ze house?"

The next man who shook hands with the host, and then stood in an easy attitude before the hostess, attracted Philip's attention strongly, for he fancied from the deference shown him it must be the lord of whom he had heard. He was a short, little man, with heavy limbs and a clumsy figure, reddish hair, very thin on the crown, small eyes that were not improved in expression by white eyebrows, a red face, smooth shaven and freckled. It might have been the face of a hostler or a billiard-marker.

"I am delighted, my lord, that you could make room in your engagements to come."

"Ah, Mrs. Mavick, I wouldn't have missed it," said my lord, with easy assurance; "I'd have thrown over anything to have come. And, do you know" (looking about him coolly), "it's quite English, 'pon my honor, quite English—St. James and that sort of thing."

"You flatter me, my lord," replied the lady of the house, with a winning smile.

"No, I do assure you, it's bang-up. Ah, Miss Mavick, delighted, delighted. Most charming. Lucky for me, wasn't it? I'm just in time."

"You've only recently come over, Lord Montague?" asked Evelyn.

"Been here before—Rockies, shooting, all that. Just arrived now—beastly trip, beastly."

"And so you were glad to land?"

"Glad to land anywhere. But New York suits me down to the ground. It goes, as you say over here. You know Paris?"

"We have been in Paris. You prefer it?"

"For some thing. Paris as it was in the Empire. For sport, no. For horses, no. And" (looking boldly into her face) "when you speak of American women, Paris ain't in it, as you say over here."

And the noble lord, instead of passing on, wheeled about and took a position near Evelyn, so that he could drop his valuable observations into her ear as occasion offered.

To Philip Mrs. Mavick was civil, but she did not beam upon him, and she did not detain him longer than to say, "Glad to see you." But Evelyn—could Philip be deceived?—she gave him her hand cordially and looked into his eyes trustfully, as she had the habit of doing in the country, and as if it were a momentary relief to her to encounter in all this parade a friend.

"I need not say that I am glad you could come. And oh" (there was time only for a word), "I saw the announcement. Later, if you can, you will tell me more about it."

Lord Montague stared at him as if to say, "Who the deuce are you?" and as Philip met his gaze he thought, "No, he hasn't the manner of a stable boy; no one but a born nobleman could be so confident with women and so supercilious to men."

But my lord, was little in his thought. It was the face of Evelyn that he saw, and the dainty little figure; the warmth of the little hand still thrilled him. So simple, and only a bunch of violets in her corsage for all ornament! The clear, dark complexion, the sweet mouth, the wonderful eyes! What could Jenks mean by intimating that she was plain?

Philip drifted along with the crowd. He was very much alone. And he enjoyed his solitude. A word and a smile now and then from an acquaintance did not tempt him to come out of his seclusion. The gay scene pleased him. He looked for a moment into the ballroom. At another time he would have tried his fortune in the whirl. But now he looked on as at a spectacle from which he was detached. He had had his moment and he waited for another. The voluptuous music, the fascinating toilets, the beautiful faces, the graceful forms that were woven together in this shifting kaleidoscope, were, indeed, a part of his beautiful dream. But how unreal they all were! There was no doubt that Evelyn's eyes had kindled for him as for no one else whom she had greeted. She singled him out in all this crush, her look, the cordial pressure of her hand, conveyed the feeling of comradeship and understanding. This was enough to fill his thought with foolish anticipations. Is there any being quite so happy, quite so stupid, as a lover? A lover, who hopes everything and fears everything, who goes in an instant from the heights of bliss to the depths of despair.

When the "reception" was over and the company was breaking up into groups and moving about, Philip again sought Evelyn. But she was the centre of a somewhat noisy group, and it was not easy to join it.

Yet it was something that he could feast his eyes on her and was rewarded by a look now and then that told him she was conscious of his presence. Encouraged by this, he was making his way to her, when there was a movement towards the supper-room, and Mrs. Mavick had taken the arm of the Count de l'Auney, and the little lord was jauntily leading away Evelyn. Philip had a pang of disgust and jealousy. Evelyn was actually chatting with him and seemed amused. Lord Montague was evidently laying himself out to please and exerting all the powers of his subtle humor and exploiting his newly acquired slang. That Philip could hear as they moved past him. "The brute!" Philip said to himself, with the injustice which always clouds the estimate of a lover of a rival whose accomplishments differ from his own.

In the supper-room, however, in the confusion and crowding of it, Philip at length found his opportunity to get to the side of Evelyn, whose smile showed him that he was welcome. It was in that fortunate interval when Lord Montague was showing that devotion to women was not incompatible with careful attention to terrapin and champagne. Philip was at once inspired to say:

"How lovely it is! Aren't you tired?"

"Not at all. Everybody is very kind, and some are very amusing. I am learning a great deal," and there was a quizzical look in her eyes, "about the world."

"Well," said Philip, "t's all here."

"I suppose so. But do you know," and there was quite an ingenuous blush in her cheeks as she said it, "it isn't half so nice, Mr. Burnett, as a picnic in Zoar."

"So you remember that?" Philip had not command of himself enough not to attempt the sentimental.

"You must think I have a weak memory," she replied, with a laugh. "And the story? When shall we have it?"

"Soon, I hope. And, Miss Mavick, I owe so much of it to you that I hope you will let me send you the very first copy from the press."

"Will you? And do you Of course I shall be pleased and" (making him a little curtsy) "honored, as one ought to say in this company."

Lord Montague was evidently getting uneasy, for his attention was distracted from the occupation of feeding.

"No, don't go Lord Montague, an old friend, Mr. Burnett."

"Much pleased," said his lordship, looking round rather inquiringly at the intruder. "I can't say much for the champagne—ah, not bad, you know—but I always said that your terrapin isn't half so nasty as it looks." And his lordship laughed most good-humoredly, as if he were paying the American nation a deserved compliment.

"Yes," said Philip, "we have to depend upon France for the champagne, but the terrapin is native."

"Quite so, and devilish good! That ain't bad, 'depend upon France for the champagne!' There is nothing like your American humor, Miss Mavick."

"It needs an Englishman to appreciate it," replied Evelyn, with a twinkle in her eyes which was lost upon her guest.

In the midst of these courtesies Philip bowed himself away. The party was over for him, though he wandered about for a while, was attracted again by the music to the ballroom, and did find there a dinner acquaintance with whom he took a turn. The lady must have thought him a very uninteresting or a very absent-minded companion.

As for Lord Montague, after he had what he called a "go" in the dancing-room, he found his way back to the buffet in the supper-room, and the historian says that he greatly enjoyed himself, and was very amusing, and that he cultivated the friendship of an obliging waiter early in the morning, who conducted his lordship to his cab.

XVII

The morning after *The Puritan Nun* was out, as Philip sat at his office desk, conscious that the eyes of the world were on him, Mr. Mavick entered, bowed to him absent-mindedly, and was shown into Mr. Hunt's room.

Philip had dreaded to come to the office that morning and encounter the inquisition and perhaps the compliments of his fellow-clerks. He had seen his name in staring capitals in the book-seller's window as he came down, and he felt that it was shamefully exposed to the public gaze, and that everybody had seen it. The clerks, however, gave no sign that the event had disturbed them. He had encountered many people he knew on the street, but there had been no recognition of his leap into notoriety. Not a fellow in the club, where he had stopped a moment, had treated him with any increased interest or deference. In the office only one person seemed aware of his extraordinary good fortune. Mr. Tweedle had come to the desk and offered his hand in his usual conciliatory and unctuous manner.

"I see by the paper, Mr. Burnett, that we are an author. Let me congratulate you. Mrs. Tweedle told me not to come home without bringing your story. Who publishes it?"

"I shall be much honored," said Philip, blushing, "if Mrs. Tweedle will accept a copy from me."

"I didn't mean that, Mr. Burnett; but, of course, gift of the author—Mrs. Tweedle will be very much pleased."

In half an hour Mr. Mavick came out, passed him without recognition, and hurried from the office, and Philip was summoned to Mr. Hunt's room.

"I want you to go to Washington immediately, Mr. Burnett. Return by the night train. You can do without your grip? Take these papers to Buckston Higgins—you see the address—who represents the British Argentine syndicate. Wait till he reads them and get his reply. Here is the money for the trip. Oh, after Mr. Higgins writes his answer, ask him if you can telegraph me 'yes' or 'no.' Good-morning."

While Philip was speeding to Washington, an important conference was taking place in Murad Ault's office. He was seated at his desk, and before him lay two despatches, one from Chicago and a cable from London. Opposite him, leaning forward in his chair, was a lean, hatchet-faced man, with keen eyes and aquiline nose, who watched his old curbstome confidant like a cat.

"I tell you, Wheatstone," said Mr. Ault, with an unmoved face, bringing his fist down on the table, "now is the time to sell these three stocks."

"Why," said Mr. Wheatstone, with a look of wonder, "they are about the strongest on the list. Mavick controls them."

"Does he?" said Ault. "Then he can take care of them."

"Have you any news, Mr. Ault?"

"Nothing to speak of," replied Ault, grimly. "It just looks so to me. All you've got to do is to sell. Make a break this afternoon, about two or three points off."

"They are too strong," protested Mr. Wheatstone.

"That is just the reason. Everybody will think something must be the matter, or nobody would be fool enough to sell. You keep your eye on the Spectrum this afternoon and tomorrow morning. About Organization and one or two other matters."

"Ah, they do say that Mavick is in Argentine up to his neck," said the broker, beginning to be enlightened.

"Is he? Then you think he would rather sell than buy?"

Mr. Wheatstone laughed and looked admiringly at his leader. "He may have to."

Mr. Ault took up the cable cipher and read it to himself again. If Mr. Hunt had known its contents he need not have waited for Philip to telegraph "no" from Washington.

"It's all right, Wheatstone. It's the biggest thing you ever struck. Pitch 'em overboard in the morning. The Street is shaky about Argentine. There'll be h—to pay before half past twelve. I guess you can safely go ten points. Lower yet, if Mavick's brokers begin to unload. I guess he will have to unless he can borrow. Rumor is a big thing, especially in a panic, eh? Keep your eye peeled. And, oh, won't you ask Babcock to step round here?"

Mr. Babcock came round, and had his instructions when to buy. He had the reputation of being a reckless broker, and not a safe man to follow.

The panic next day, both in London and New York, was long remembered. In the unreasoning scare the best stocks were sacrificed. Small country "investors" lost their stakes. Some operators were ruined. Many men were poorer at the end of the scrimmage, and a few were richer. Murad Ault was one of the latter. Mavick pulled through, though at an enormous cost, and with some diminution of the notion of his solidity. The wise ones suspected that his resources had been overestimated, or that they were not so well at his

command as had been supposed.

When he went home that night he looked five years older, and was too worn and jaded to be civil to his family. The dinner passed mostly in silence. Carmen saw that something serious had happened. Lord Montague had called.

"Eh, what did he want?" said Mavick, surlily.

Carmen looked up surprised. "What does anybody after a reception call for?"

"The Lord only knows."

"He is the funniest little man," Evelyn ventured to say.

"That is no way, child, to speak of the son of a duke," said Mavick, relaxing a little.

Carmen did not like the tone in which this was said, but she prudently kept silent. And presently Evelyn continued:

"He asked for you, papa, and said he wanted to pay his respects."

"I am glad he wants to pay anything," was the ungracious answer. Still Evelyn was not to be put down.

"It was such a bright day in the Park. What were you doing all day, papa?"

"Why, my dear, I was engaged in Research; you will be pleased to know. Looking after those ten millions."

When the dinner was over, Carmen followed Mr. Mavick to his study.

"What is the matter, Tom?"

"Nothing uncommon. It's a beastly hole down there. The Board used to be made up of gentlemen. Now there are such fellows as Ault, a black-hearted scoundrel."

"But he has no influence. He is nothing socially," said Carmen.

"Neither is a wolf or a cyclone. But I don't care to talk about him. Don't you see, I don't want to be bothered?"

While these great events were taking place Philip was enjoying all the tremors and delights of expectation which attend callow authorship. He did not expect much, he said to himself, but deep down in his heart there was that sweet hope, which fortunately always attends young writers, that his would be an exceptional experience in the shoal of candidates for fame, and he was secretly preparing himself not to be surprised if he should "awake one morning and find himself famous."

The first response was from Celia. She wrote warm-heartedly. She wrote at length, analyzing the characters, recalling the striking scenes, and praising without stint the conception and the working out of the character of the heroine. She pointed out the little faults of construction and of language, and then minimized them in comparison with the noble motive and the unity and beauty of the whole. She told Philip that she was proud of him, and then insisted that, when his biography, life, and letters was published, it would appear, she hoped, that his dear friend had just a little to do with inspiring him. It was exactly the sort of letter an author likes to receive, critical, perfectly impartial, and with entire understanding of his purpose. All the author wants is to be understood.

The letter from Alice was quite of another sort, a little shy in speaking of the story, but full of affection. "Perhaps, dear Phil," she wrote, "I ought not to tell you how much I like it, how it quite makes me blush in its revelation of the secrets of a New England girl's heart. I read it through fast, and then I read it again slowly. It seemed better even the second time. I do think, Phil, it is a dear little book. Patience says she hopes it will not become common; it is too fine to be nosed about by the ordinary. I suppose you had to make it pathetic. Dear me! that is just the truth of it. Forgive me for writing so freely. I hope it will not be long before we see you. To think it is done by little Phil!"

The most eagerly expected acknowledgment was, however, a disappointment. Philip knew Mrs. Mavick too well by this time to expect a letter from her daughter, but there might have been a line. But Mrs. Mavick wrote herself. Her daughter, she said, had asked her to acknowledge the receipt of his very charming story. When he had so many friends it was very thoughtful in him to remember the acquaintances of last summer. She hoped the book would have the success it deserved.

This polite note was felt to be a slap in the face, but the effect of it was softened a little later by a cordial and appreciative letter from Miss McDonald, telling the author what great delight and satisfaction they had had in reading it, and thanking him for a prose idyl that showed in the old-fashioned way that common life was not necessarily vulgar.

The critics seemed to Philip very slow in letting the public know of the birth of the book. Presently, however, the little notices, all very much alike, began to drop along, longer or shorter paragraphs, commonly in indiscriminating praise of the beauty of the story, the majority of them evidently written by reviewers who sat down to a pile of volumes to be turned off, and who had not more than five or ten minutes to be lost. Rarely, however, did any one condemn it, and that showed that it was harmless. Mr. Brad had given it quite a lift in the Spectrum. The notice was mainly personal—the first work of a brilliant young man at the bar who was destined to go high in his profession, unless literature should, fortunately for the public, have stronger attractions for him. That such a country idyl should be born amid law-books was sufficiently remarkable. It was an open secret that the scene of the story was the birthplace of the author—a lovely village that was brought into notice a summer ago as the chosen residence of Thomas Mavick and his family.

Eagerly looked for at first, the newspaper notices soon palled upon Philip, the uniform tone of good-natured praise, unanimous in the extravagance of unmeaning adjectives. Now and then he welcomed one that was ill-natured and cruelly censorious. That was a relief. And yet there were some reviews of a different sort, half a dozen in all, and half of them from Western journals, which took the book seriously, saw its pathos, its artistic merit, its failure of construction through inexperience. A few commended it warmly to readers who loved ideal purity and could recognize the noble in common life. And some, whom Philip regarded as authorities, welcomed a writer who avoided sensationalism, and predicted for him an honorable career in letters, if he did not become self-conscious and remained true to his ideals. The book clearly had not made a hit, the publishers had sold one edition and ordered half another, and no longer regarded the author as a risk. But,

better than this, the book had attracted the attention of many lovers of literature. Philip was surprised day after day by meeting people who had read it. His name began to be known in a small circle who are interested in the business, and it was not long before he had offers from editors, who were always on the lookout for new writers of promise, to send something for their magazines. And, perhaps more flattering than all, he began to have society invitations to dine, and professional invitations to those little breakfasts that publishers give to old writers and to young whose names are beginning to be spoken of. All this was very exhilarating and encouraging. And yet Philip was not allowed to be unduly elated by the attention of his fellow-craftsmen, for he soon found that a man's consequence in this circle, as well as with the great public, depended largely upon the amount of the sale of his book. How else should it be rated, when a very popular author, by whom Philip sat one day at luncheon, confessed that he never read books?

"So," said Mr. Sharp, one morning, "I see you have gone into literature, Mr. Burnett."

"Not very deep," replied Philip with a smile, as he rose from his desk.

"Going to drop law, eh?"

"I haven't had occasion to drop much of anything yet," said Philip, still smiling.

"Oh well, two masters, you know," and Mr. Sharp passed on to his room.

It was not, however, Mr. Sharp's opinion that Philip was concerned about. The polite note from Mrs. Mavick stuck in his mind. It was a civil way of telling him that all summer debts were now paid, and that his relations with the house of Mavick were at an end. This conclusion was forced upon him when he left his card, a few days after the reception, and had the ill luck not to find the ladies at home. The situation had no element of tragedy in it, but Philip was powerless. He could not storm the house. He had no visible grievance. There was nothing to fight. He had simply run against one of the invisible social barriers that neither offer resistance nor yield. No one had shown him any discourtesy that society would recognize as a matter of offense. Nay, more than that, it could have no sympathy with him. It was only the case of a presumptuous and poor young man who was after a rich girl. The position itself was ignoble, if it were disclosed.

Yet fortune, which sometimes likes to play the mischief with the best social arrangements, did give Philip an unlooked-for chance. At a dinner given by the lady who had been Philip's only partner at the Mavick reception, and who had read his story and had written to "her partner" a most kind little note regretting that she had not known she was dancing with an author, and saying that she and her husband would be delighted to make his acquaintance, Philip was surprised by the presence of the Mavicks in the drawing-room. Neither Mr. nor Mrs. Mavick seemed especially pleased when they encountered him, and in fact his sole welcome from the family was in the eyes of Evelyn.

The hostess had supposed that the Mavicks would be pleased to meet the rising author, and in still further carrying out her benevolent purpose, and with, no doubt, a sympathy in the feelings of the young, Mrs. Van Cortlandt had assigned Miss Mavick to Mr. Burnett. It was certainly a natural arrangement, and yet it called a blank look to Mrs. Mavick's face, that Philip saw, and put her in a bad humor which needed an effort for her to conceal it from Mr. Van Cortlandt. The dinner-party was large, and her ill-temper was not assuaged by the fact that the young people were seated at a distance from her and on the same side of the table.

"How charming your daughter is looking, Mrs. Mavick!" Mr. Van Cortlandt began, by way of being agreeable. Mrs. Mavick inclined her head. "That young Burnett seems to be a nice sort of chap; Mrs. Van Cortlandt says he is very clever."

"Yes?"

"I haven't read his book. They say he is a lawyer."

"Lawyer's clerk, I believe," said Mrs. Mavick, indifferently.

"Authors are pretty plenty nowadays."

"That's a fact. Everybody writes. I don't see how all the poor devils live." Mr. Van Cortlandt had now caught the proper tone, and the conversation drifted away from personalities.

It was a very brilliant dinner, but Philip could not have given much account of it. He made an effort to be civil to his left-hand neighbor, and he affected an ease in replying to cross-table remarks. He fancied that he carried himself very well, and so he did for a man unexpectedly elevated to the seventh heaven, seated for two hours beside the girl whose near presence filled him with indescribable happiness. Every look, every tone of her voice thrilled him. How dear she was! how adorable she was! How radiantly happy she seemed to be whenever she turned her face towards him to ask a question or to make a reply!

At moments his passion seemed so overmastering that he could hardly restrain himself from whispering, "Evelyn, I love you." In a hundred ways he was telling her so. And she must understand. She must know that this was not an affair of the moment, but that there was condensed in it all the constant devotion of months and months.

A woman, even any girl with the least social experience, would have seen this. Was Evelyn's sympathetic attention, her evident enjoyment in talking with him, any evidence of a personal interest, or only a young girl's enjoyment of her new position in the world? That she liked him he was sure. Did she, was she beginning in any degree to return his passion? He could not tell, for guilelessness in a woman is as impenetrable as coquetry.

Of what did they talk? A stenographer would have made a meagre report of it, for the most significant part of this conversation of two fresh, honest natures was not in words. One thing, however, Philip could bring away with him that was not a mere haze of delicious impressions. She had been longing, she said, to talk to him about his story. She told him how eagerly she had read it, and in talking about its meaning she revealed to him her inner thought more completely than she could have done in any other way, her sympathy with his mind, her interest in his work.

"Have you begun another?" she asked, at last.

"No, not on paper."

"But you must. It must be such a world to you. I can't imagine anything so fine as that. There is so much

about life to be said. To make people see it as it is; yes, and as it ought to be. Will you?"

"You forget that I am a lawyer."

"And you prefer to be that, a lawyer, rather than an author?"

"It is not exactly what I prefer, Miss Mavick."

"Why not? Does anybody do anything well if his heart is not in it?"

"But circumstances sometimes compel a man."

"I like better for men to compel circumstances," the girl exclaimed, with that disposition to look at things in the abstract that Philip so well remembered.

"Perhaps I do not make myself understood. One must have a career."

"A career?" And Evelyn looked puzzled for a moment. "You mean for himself, for his own self?" There is a lawyer who comes to see papa. I've been in the room sometimes, when they don't mind. Such talk about schemes, and how to do this and that, and twisting about. And not a word about anything any of the time. And one day when he was waiting for papa I talked with him. You would have been surprised.

"I told papa that I could not find anything to interest him. Papa laughed and said it was my fault, he was one of the sharpest lawyers in the city. Would you rather be that than to write?"

"Oh, all lawyers are not like that. And, don't you know, literature doesn't pay."

"Yes, I have heard that." And then she thought a minute and with a quizzical look continued: "That is such a queer word, 'pay.' McDonald says that it pays to be good. Do you think, Mr. Burnett, that law would pay you?"

Evidently the girl had a standard of judging people that was not much in use.

Before they rose from the table, Philip asked, speaking low, "Miss Mavick, won't you give me a violet from your bunch in memory of this evening?"

Evelyn hesitated an instant, and then, without looking up, disengaged three, and shyly laid them at her left hand. "I like the number three better."

Philip covered the flowers with his hand, and said, "I will keep them always."

"That is a long time," Evelyn answered, but still without looking up. But when they rose the color mounted to her cheeks, and Philip thought that the glorious eyes turned upon him were full of trust.

"It is all your doing," said Carmen, snappishly, when Mavick joined her in the drawing-room.

"What is?"

"You insisted upon having him at the reception."

"Burnett? Oh, stuff, he isn't a fool!"

There was not much said as the three drove home. Evelyn, flushed with pleasure and absorbed in her own thoughts, saw that something had gone wrong with her mother and kept silent. Mr. Mavick at length broke the silence with:

"Did you have a good time, child?"

"Oh, yes," replied Evelyn, cheerfully, "and Mrs. Van Cortlandt was very sweet to me. Don't you think she is very hospitable, mamma?"

"Tries to be," Mrs. Mavick replied, in no cordial tone. "Good-natured and eccentric. She picks up the queerest lot of people. You can never know whom you will not meet at her house. Just now she goes in for being literary."

Evelyn was not so reticent with McDonald. While she was undressing she disclosed that she had had a beautiful evening, that she was taken out by Mr. Burnett, and talked about his story.

"And, do you know, I think I almost persuaded him to write another."

"It's an awful responsibility," dryly said the shrewd Scotch woman, "advising young men what to do."

XVIII

Upon the recollection of this dinner Philip maintained his hope and courage for a long time. The day after it, New York seemed more brilliant to him than it had ever been. In the afternoon he rode down to the Battery. It was a mild winter day, with a haze in the atmosphere that softened all outlines and gave an enchanting appearance to the harbor shores. The water was silvery, and he watched a long time the craft plying on it—the businesslike ferry-boats, the spiteful tugs, the great ocean steamers, boldly pushing out upon the Atlantic through the Narrows or cautiously drawing in as if weary with the buffeting of the waves. The scene kindled in him a vigorous sense of life, of prosperity, of longing for the activity of the great world.

Clearly he must do something and not be moping in indecision. Uncertainty is harder to bear than disaster itself. When he thought of Evelyn, and he always thought of her, it seemed cowardly to hesitate. Celia, after her first outburst of enthusiasm, had returned to her cautious advice. The law was much surer. Literature was a mere chance. Why not be content with his little success and buckle down to his profession? Perhaps by-and-by he would have leisure to indulge his inclination. The advice seemed sound.

But there was Evelyn, with her innocent question.

"Would the law pay you?" Evelyn? Would he be more likely to win her by obeying the advice of Celia, or by trusting to Evelyn's inexperienced discernment? Indeed, what chance was there to win her at all? What had he to offer her?

His spirits invariably fell when he thought of submitting his pretensions to the great man of Wall Street or to his worldly wife. Already it was the gossip of the clubs that Lord Montague was a frequent visitor at the

Mavicks', that he was often seen in their box at the opera, and that Mrs. Mavick had said to Bob Shafter that it was a scandal to talk of Lord Montague as a fortune-hunter. He was a most kind-hearted, domestic man. She should not join in the newspaper talk about him. He belonged to an old English family, and she should be civil to him. Generally she did not fancy Englishmen, and this one she liked neither better nor worse because he had a title. And when you came to that, why shouldn't any American girl marry her equal?

As to Montague, he was her friend, and she knew that he had not the least intention at present of marrying anybody. And then the uncharitable gossip went on, that there was the Count de l'Auney, and that Mrs. Mavick was playing the one off against the other.

As the days went on and spring began to appear in the light, fleeting clouds in the blue sky and in the greening foliage in the city squares, Philip became more and more restless. The situation was intolerable. Evelyn he could never see. Perhaps she wondered that he made no effort to see her. Perhaps she never thought of him at all, and simply, like an obedient child, accepted her mother's leading, and was getting to like that society life which was recorded in the daily journals. What did it matter to him whether he stuck to the law or launched himself into the Bohemia of literature, so long as doubt about Evelyn haunted him day and night? If she was indifferent to him, he would know the worst, and go about his business like a man. Who were the Mavicks, anyway?

Alice had written him once that Evelyn was a dear girl, no one could help loving her; but she did not like the blood of father and mother. "And remember, Phil—you must let me say this—there is not a drop of mean blood in your ancestors."

Philip smiled at this. He was not in love with Mrs. Mavick nor with her husband. They were for him simply guardians of a treasure he very much coveted, and yet they were to a certain extent ennobled in his mind as the authors of the being he worshiped. If it should be true that his love for her was returned, it would not be possible even for them to insist upon a course that would make their daughter unhappy for life. They might reject him—no doubt he was a wholly unequal match for the heiress—but could they, to the very end, be cruel to her?

Thus the ingenuous young man argued with himself, until it seemed plain to him that if Evelyn loved him, and the conviction grew that she did, all obstacles must give way to this overmastering passion of his life. If he were living in a fool's paradise he would know it, and he ventured to put his fortune to the test of experiment. The only manly course was to gain the consent of the parents to ask their daughter to marry him; if not that, then to be permitted to see her. He was nobly resolved to pledge himself to make no proposals to her without their approval.

This seemed a very easy thing to do until he attempted it. He would simply happen into Mr. Mavick's office, and, as Mr. Mavick frequently talked familiarly with him, he would contrive to lead the conversation to Evelyn, and make his confession. He mapped out the whole conversation, and even to the manner in which he would represent his own prospects and ambitions and his hopes of happiness. Of course Mr. Mavick would evade, and say that it would be a long time before they should think of disposing of their daughter's hand, and that—well, he must see himself that he was in no position to support a wife accustomed to luxury; in short, that one could not create situations in real life as he could in novels, that personally he could give him no encouragement, but that he would consult his wife.

This dream got no further than a private rehearsal. When he called at Mr. Mavick's office he learned that Mr. Mavick had gone to the Pacific coast, and that he would probably be absent several weeks. But Philip could not wait. He resolved to end his torture by a bold stroke. He wrote to Mrs. Mavick, saying that he had called at Mr. Mavick's office, and, not finding him at home, he begged that she would give him an interview concerning a matter of the deepest personal interest to himself.

Mrs. Mavick understood in an instant what this meant. She had feared it. Her first impulse was to write him a curt note of a character that would end at once all intercourse. On second thought she determined to see him, to discover how far the affair had gone, and to have it out with him once for all. She accordingly wrote that she would have a few minutes at half past five the next day.

As Philip went up the steps of the Mavick house at the appointed hour, he met coming out of the door—and it seemed a bad omen—Lord Montague, who seemed in high spirits, stared at Philip without recognition, whistled for his cab, and drove away.

Mrs. Mavick received him politely, and, without offering her hand, asked him to be seated. Philip was horribly embarrassed. The woman was so cool, so civil, so perfectly indifferent. He stammered out something about the weather and the coming spring, and made an allusion to the dinner at Mrs. Van Cortlandt's. Mrs. Mavick was not in the mood to help him with any general conversation, and presently said, looking at her watch:

"You wrote me that you wanted to consult me. Is there anything I can do for you?"

"It was a personal matter," said Philip, getting control of himself.

"So you wrote. Mr. Mavick is away, and if it is in regard to anything in your office, any promotion, you know, I don't understand anything about business." And Mrs. Mavick smiled graciously.

"No, it is not about the office. I should not think of troubling my friends in that way. It is just that—"

"Oh, I see," Mrs. Mavick interrupted, with good-humor, "it's about the novel. I hear that it has sold very well. And you are not certain whether its success will warrant your giving up your clerkship. Now as for me," and she leaned back in her chair, with the air of weighing the chances in her mind, "it doesn't seem to me that a writer—"

"No, it is not that," said Philip, leaning forward and looking her full in the face with all the courage he could summon, "it is your daughter."

"What!" cried Mrs. Mavick, in a tone of incredulous surprise.

"I was afraid you would think me very presumptuous."

"Presumptuous! Why, she is a child. Do you know what you are talking about?"

"My mother married at eighteen," said Philip, gently.

"That is an interesting piece of information, but I don't see its bearing. Will you tell me, Mr. Burnett, what nonsense you have got into your head?"

"I want," and Philip spoke very gently—"I want, Mrs. Mavick, permission to see your daughter."

"Ah! I thought in Rivervale, Mr. Burnett, that you were a gentleman. You presume upon my invitation to this house, in an underhand way, to—What right have you?"

Mrs. Mavick was so beside herself that she could hardly speak. The lines in her face deepened into wrinkles and scowls. There was something malevolent and mean in it. Philip was astonished at the transformation. And she looked old and ugly in her passion.

"You!" she repeated.

"It is only this, Mrs. Mavick," and Philip spoke calmly, though his blood was boiling at her insulting manner—"it is only this—I love your daughter."

"And you have told her this?"

"No, never, never a word."

"Does she know anything of this absurd, this silly attempt?"

"I am afraid not."

"Ah! Then you have spared yourself one humiliation. My daughter's affections are not likely to be placed where her parents do not approve. Her mother is her only confidante. I can tell you, Mr. Burnett, and when you are over this delusion you will thank me for being so plain with you, my daughter would laugh at the idea of such a proposal. But I will not have her annoyed by impecunious aspirants."

"Madam!" cried Philip, rising, with a flushed face, and then he remembered that he was talking to Evelyn's mother, and uttered no other word.

"This is ended." And then, with a slight change of manner, she went on: "You must see how impossible it is. You are a man of honor.

"I should like to think well of you. I shall trust to your honor that you will never try, by letter or otherwise, to hold any communication with her."

"I shall obey you," said Philip, quite stiffly, "because you are her mother. But I love her, and I shall always love her."

Mrs. Mavick did not condescend to any reply to this, but she made a cold bow of dismissal and turned away from him. He left the house and walked away, scarcely knowing in which direction he went, anger for a time being uppermost in his mind, chagrin and defeat following, and with it the confused feeling of a man who has passed through a cyclone and been landed somewhere amid the scattered remnants of his possessions.

As he strode away he was intensely humiliated. He had been treated like an inferior. He had voluntarily put himself in a position to be insulted. Contempt had been poured upon him, his feelings had been outraged, and there was no way in which he could show his resentment. Presently, as his anger subsided, he began to look at the matter more sanely. What had happened? He had made an honorable proposal. But what right had he to expect that it would be favorably considered? He knew all along that it was most unlikely that Mrs. Mavick would entertain for a moment idea of such a match. He knew what would be the unanimous opinion of society about it. In the case of any other young man aspiring to the hand of a rich girl, he knew very well what he should have thought.

Well, he had done nothing dishonorable. And as he reviewed the bitter interview he began to console himself with the thought that he had not lost his temper, that he had said nothing to be regretted, nothing that he should not have said to the mother of the girl he loved. There was an inner comfort in this, even if his life were ruined.

Mrs. Mavick, on the contrary, had not so good reason to be satisfied with herself. It was a principle of her well-ordered life never to get into a passion, never to let herself go, never to reveal herself by intemperate speech, never to any one, except occasionally to her husband when his cold sarcasm became intolerable. She felt, as soon as the door closed on Philip, that she had made a blunder, and yet in her irritation she committed a worse one. She went at once to Evelyn's room, resolved to make it perfectly sure that the Philip episode was ended. She had had suspicions about her daughter ever since the Van Cortlandt dinner. She would find out if they were justified, and she would act decidedly before any further mischief was done. Evelyn was alone, and her mother kissed her fondly several times and then threw herself into an easy-chair and declared she was tired.

"My dear, I have had such an unpleasant interview."

"I am sorry," said Evelyn, seating herself on the arm of the chair and putting her arm round her mother's neck. "With whom, mamma?"

"Oh, with that Mr. Burnett." Mrs. Mavick felt a nervous start in the arm that caressed her.

"Here?"

"Yes, he came to see your father, I fancy, about some business. I think he is not getting on very well."

"Why, his book—"

"I know, but that amounts to nothing. There is not much chance for a lawyer's clerk who gets bitten with the idea that he can write."

"If he was in trouble, mamma," said Evelyn, softly, "then you were good to him."

"I tried to be," Mrs. Mavick half sighed, "but you can't do anything with such people" (by 'such people' Mrs. Mavick meant those who have no money) "when they don't get on. They are never reasonable. And he was in such an awful bad temper. You cannot show any kindness to such people without exposing yourself. I think he presumes upon his acquaintance with your father. It was most disagreeable, and he was so rude" (a little thrill in the arm again)—"well, not exactly rude, but he was not a bit nice to me, and I am afraid I showed by my looks that I was irritated. He was just as disagreeable as he could be."

"He met Lord Montague on the steps, and he had something spiteful to say about him. I had to tell him he was presuming a good deal on his acquaintance, and that I considered his manner insulting. He flung out of the house very high and mighty."

"That was not a bit like him, mamma."

"We didn't know him. That is all. Now we do, and I am thankful we do. He will never come here again."

Evelyn was very still for a moment, and then she said: "I'm very sorry for it all. It must be some misunderstanding."

"Of course, it is dreadful to be so disappointed in people. But we have to learn. I don't know anything about his misunderstanding, but I did not misunderstand what he said. At any rate, after such an exposition we can have no further intercourse with him. You will not care to see any one who treated your mother in this way? If you love me, you cannot be friendly with him. I know you would not like to be."

Evelyn did not reply for a moment. Her silence revealed the fact to the shrewd woman that she had not intervened a day too soon.

"You promise me, dear, that you will put the whole thing out of your mind?" and she drew her daughter closer to her and kissed her.

And then Evelyn said slowly: "I shall not have any friends whom you do not approve, but, mamma, I cannot be unjust in my mind."

And Mrs. Mavick had the good sense not to press the question further. She still regarded Evelyn as a child. Her naivete, her simplicity, her ignorance of social conventions and of the worldly wisdom which to Mrs. Mavick was the sum of all knowledge misled her mother as to her power of discernment and her strength of character. Indeed, Mrs. Mavick had only the slightest conception of that range of thought and feeling in which the girl habitually lived, and of the training which at the age of eighteen had given her discipline, and great maturity of judgment as well. She would be obedient, but she was incapable of duplicity, and therefore she had said as plainly as possible that whatever the trouble might be she would not be unjust to Philip.

The interview with her mother left her in a very distressed state of mind. It is a horrible disillusion when a girl begins to suspect that her mother is not sincere, and that her ideals of life are mean. This knowledge may exist with the deepest affection—indeed, in a noble mind, with an inward tenderness and an almost divine pity. How many times have we seen a daughter loyal to a frivolous, worldly-minded, insincere mother, shielding her and exhibiting to the censorious world the utmost love and trust!

Evelyn was far from suspecting the extent of her mother's duplicity, but her heart told her that an attempt had been made to mislead her, and that there must be some explanation of Philip's conduct that would be consistent with her knowledge of his character. And, as she endeavored to pierce this mystery, it dawned upon her that there had been a method in throwing her so much into the society of Lord Montague, and that it was unnatural that such a friend as Philip should be seen so seldom—only twice since the days in Rivervale. Naturally the very reverse of suspicious, she had been dreaming on things to come in the seclusion of her awakening womanhood, without the least notion that the freedom of her own soul was to be interfered with by any merely worldly demands. But now things that had occurred, and that her mother had said, came back to her with a new meaning, and her trustful spirit was overwhelmed. And there, in the silence of her chamber, began the fierce struggle between desire and what she called her duty—a duty imposed from without.

She began to perceive that she was not free, that she was a part of a social machine, the power of which she had not at all apprehended, and that she was powerless in its clutch. She might resist, but peace was gone. She had heretofore found peace in obedience, but when she consulted her own heart she knew that she could not find peace in obedience now. To a girl differently reared, perhaps, subterfuge, or some manoeuvring justified by the situation, might have been resorted to. But such a thing never occurred to Evelyn. Everything looked dark before her, as she more clearly understood her mother's attitude, and for the first time in years she could do nothing but give way to emotions.

"Why, Evelyn, you have been crying!" exclaimed the governess, who came to seek her. "What is the matter?"

Evelyn arose and threw herself on her friend's neck for a moment, and then, brushing away the tears, said, with an attempt to smile, "Oh, nothing; I got thinking, thinking, thinking, and Don't you ever get blue, McDonald?"

"Not often," said the Scotchwoman, gravely. "But, dear, you have nothing in the world to make you so."

"No, no, nothing;" and then she broke down again, and threw herself upon McDonald's bosom in a passion of sobbing. "I can't help it. Mamma says Phil—Mr. Burnett—is never to come to this house again. What have I done? And he will think—he will think that I hate him."

McDonald drew the girl into her lap, and with uncommon gentleness comforted her with caresses.

"Dear child," she said, "crosses must come into our lives; we cannot help that. Your mother is no doubt doing what she thinks best for your own happiness. Nothing can really hurt us for long, you know that well, except what we do to ourselves. I never told you why I came to this country—I didn't want to sadden you with my troubles—but now I want you to understand me better. It is a long story."

But it was not very long in the telling, for the narrator found that what seemed to her so long in the suffering could be conveyed to another in only a few words. And the story was not in any of its features new, except to the auditor. There had been a long attachment, passionate love and perfect trust, long engagement, marriage postponed because both were poor, and the lover struggling into his profession, and then, it seemed sudden and unaccountable, his marriage with some one else. "It was not like him," said the governess in conclusion; "it was his ambition to get on that blinded him."

"And he, was he happy?" asked Evelyn.

"I heard that he was not" (and she spoke reluctantly); "I fear not. How could he be?" And the governess seemed overwhelmed in a flood of tender and painful memories. "That was over twenty years ago. And I have

been happy, my darling, I have had such a happy life with you.

"I never dreamed I could have such a blessing. And you, child, will be happy too; I know it."

And the two women, locked in each other's arms, found that consolation in sympathy which steals away half the grief of the world. Ah! who knows a woman's heart?

For Philip there was in these days no such consolation. It was a man's way not to seek any, to roll himself up in his trouble like a hibernating bear. And yet there were times when he had an intolerable longing for a confidant, for some one to whom he could relieve himself of part of his burden by talking. To Celia he could say nothing. Instinct told him that he should not go to her. Of the sympathy of Alice he was sure, but why inflict his selfish grief on her tender heart? But he was writing to her often, he was talking to her freely about his perplexities, about leaving the office and trusting himself to the pursuit of literature in some way. And, in answer to direct questions, he told her that he had seen Evelyn only a few times, and, the fact was, that Mrs. Mavick had cut him dead. He could not give to his correspondent a very humorous turn to this situation, for Alice knew—had she not seen them often together, and did she not know the depths of Philip's passion? And she read between the lines the real state of the case. Alice was indignant, but she did not think it wise to make too much of the incident. Of Evelyn she wrote affectionately—she knew she was a noble and high-minded girl. As to her mother, she dismissed her with a country estimate. "You know, Phil, that I never thought she was a lady."

But the lover was not to be wholly without comfort. He met by chance one day on the Avenue Miss McDonald, and her greeting was so cordial that he knew that he had at least one friend in the house of Mavick.

It was a warm spring day, a stray day sent in advance, as it were, to warn the nomads of the city that it was time to move on. The tramps in Washington Square felt the genial impulse, and, seeking the shaded benches, began to dream of the open country, the hospitable farmhouses, the nooning by wayside springs, and the charm of wandering at will among a tolerant and not too watchful people. Having the same abundant leisure, the dwellers up-town—also nomads—were casting in their minds how best to employ it, and the fortunate ones were already gathering together their flocks and herds and preparing to move on to their camps at Newport or among the feeding-hills of the New-England coast.

The foliage of Central Park, already heavy, still preserved the freshness of its new birth, and invited the stroller on the Avenue to its protecting shade. At Miss McDonald's suggestion they turned in and found a secluded seat.

"I often come here," she said to Philip; "it is almost as peaceful as the wilderness itself."

To Philip also it seemed peaceful, but the soothing influence he found in it was that he was sitting with the woman who saw Evelyn hourly, who had been with her only an hour ago.

"Yes," she said, in reply to a question, "everybody is well. We are going to leave town earlier than usual this summer, as soon as Mr. Mavick returns. Mrs. Mavick is going to open her Newport house; she says she has had enough of the country. It is still very amusing to me to see how you Americans move about with the seasons, just like the barbarians of Turkestan, half the year in summer camps and half the year in winter camps."

"Perhaps," said Philip, "it is because the social pasturage gets poor."

"Maybe," replied the governess, continuing the conceit, "only the horde keeps pretty well together, wherever it is. I know we are to have a very gay season. Lots of distinguished foreigners and all that."

"But," said Philip, "don't England and the Continent long for the presence of Americans in the season in the same way?"

"Not exactly. It is the shop-keepers and hotels that sigh for the Americans. I don't think that American shop-keepers expect much of foreigners."

"And you are going soon? I suppose Miss Mavick is eager to go also," said Philip, trying to speak indifferently.

Miss McDonald turned towards him with a look of perfect understanding, and then replied, "No, not eager; she hasn't been in her usual spirits lately—no, not ill—and probably the change will be good for her. It is her first season, you know, and that is always exciting to a girl. Perhaps it is only the spring weather."

It was some moments before either of them spoke again, and then Miss McDonald looked up—"Oh, Mr. Burnett, I have wanted to see you and have a talk with you about your novel. I could say so little in my note. We read it first together and then I read it alone, rather to sit in judgment on it, you know. I liked it better the second time, but I could see the faults of construction, and I could see, too, why it will be more popular with a few people than with the general public. You don't mind my saying—"

"Go on, the words of a friend."

"Yes, I know, are sometimes hardest to bear. Well, it is lovely, ideal, but it seems to me you are still a little too afraid of human nature. You are afraid to say things that are common. And the deep things of life are pretty much all common. No, don't interrupt me. I love the story just as it is. I am glad you wrote it as you did. It was natural, in your state of experience, that you should do it. But in your next, having got rid of what was on top of your mind, so to speak, you will take a firmer, more confident hold of life. You are not offended?"

"No, indeed," cried Philip. "I am very grateful. No doubt you are right. It seems to me, now that I am detached from it, as if it were only a sort of prelude to something else."

"Well, you must not let my single opinion influence you too much, for I must in honesty tell you another thing. Evelyn will not have a word of criticism of it. She says it is like a piece of music, and the impudent thing declares that she does not expect a Scotchwoman to understand anything but ballad music."

Philip laughed at this, such a laugh as he had not indulged in for many days. "I hope you don't quarrel about such a little thing."

"Not seriously. She says I may pick away at the story—and I like to see her bristle up—but that she looks at

the spirit.”

“God bless her,” said Philip under his breath.

Miss McDonald rose, and they walked out into the Avenue again. How delightful was the genial air, the light, the blue sky of spring! How the brilliant Avenue, now filling up with afternoon equipages, sparkled in the sunshine!

When they parted, Miss McDonald gave him her hand and held his a moment, looking into his eyes. “Mr. Burnett, authors need some encouragement. When I left Evelyn she was going to her room with your book in her hand.”

XIX

Why should not Philip trust the future? He was a free man. He had given no hostages to fortune. Even if he did not succeed, no one else would be involved in his failure. Why not follow his inclination, the dream of his boyhood?

He was at liberty to choose for himself. Everybody in America is; this is the proclamation of its blessed independence. Are we any better off for the privilege of following first one inclination and then another, which is called making a choice? Are they not as well off, and on the whole as likely to find their right place, who inherit their callings in life, whose careers are mapped out from the cradle by circumstance and convention? How much time do we waste in futile experiment? Freedom to try everything, which is before the young man, is commonly freedom to excel in nothing.

There are, of course, exceptions. The blacksmith climbs into a city pulpit. The popular preacher becomes an excellent insurance agent. The saloon-keeper develops into the legislator, and wears the broadcloth and high hat of the politician. The brakeman becomes the railway magnate, and the college graduate a grocer's clerk, and the messenger-boy, picking up by chance one day the pen, and finding it run easier than his legs, becomes a power on a city journal, and advises society how to conduct itself and the government how to make war and peace. All this adds to the excitement and interest of life. On the whole, we say that people get shaken into their right places, and the predetermined vocation is often a mistake. There is the anecdote of a well-known clergyman who, being in a company with his father, an aged and distinguished doctor of divinity, raised his monitory finger and exclaimed, “Ah, you spoiled a first-rate carpenter when you made a poor minister of me.”

Philip thought he was calmly arguing the matter with himself. How often do we deliberately weigh such a choice as we would that of another person, testing our inclination by solid reason? Perhaps no one could have told Philip what he ought to do, but every one who knew him, and the circumstances, knew what he would do. He was, in fact, already doing it while he was paltering with his ostensible profession. But he never would have confessed, probably he would then have been ashamed to confess, how much his decision to break with the pretense of law was influenced by the thought of what a certain dark little maiden, whose image was always in his mind, would wish him to do, and by the very remarkable fact that she was seen going to her room with his well-read story in her hand. Perhaps it was under her pillow at night!

Good-luck seemed to follow his decision—as it often does when a man makes a questionable choice, as if the devil had taken an interest in his downward road to prosperity. But Philip really gained a permanent advantage. The novel had given him a limited reputation and very little money. Yet it was his stepping-stone, and when he applied to his publishers and told them of his decision, they gave him some work as a reader for the house. At first this was fitful and intermittent, but as he showed both literary discrimination and tact in judging of the market, his services were more in request, and slowly he acquired confidential relations with the house. Whatever he knew, his knowledge of languages and his experience abroad, came into play, and he began to have more confidence in himself, as he saw that his somewhat desultory education had, after all, a market value.

The rather long period of his struggle, which is a common struggle, and often disheartening, need not be dwelt on here. We can anticipate by saying that he obtained in the house a permanent and responsible situation, with an income sufficient for a bachelor without habits of self-indulgence. It was not the crowning of a noble ambition, it was not in the least the career he had dreamed of, but it gave him support and a recognized position, and, above all, did not divert him from such creative work as he was competent to do. Nay, he found very soon that the feeling of security, without any sordid worry, gave freedom to his imagination. There was something stimulating in the atmosphere of books and manuscripts and in that world of letters which seems so large to those who live in it. Fortunately, also, having a support, he was not tempted to debase his talent by sensational ventures. What he wrote for this or that magazine he wrote to please himself, and, although he saw no fortune that way, the little he received was an encouragement as well as an appreciable addition to his income.

There are two sorts of success in letters as in life generally. The one is achieved suddenly, by a dash, and it lasts as long as the author can keep the attention of the spectators upon his scintillating novelties. When the sparks fade there is darkness. How many such glittering spectacles this century has witnessed!

There is another sort of success which does not startlingly or at once declare itself. Sometimes it comes with little observation. The reputation is slowly built up, as by a patient process of nature. It is curious, as Philip wrote once in an essay, to see this unfolding in Lowell's life. There was no one moment when he launched into great popularity—nay, in detail, he seemed to himself not to have made the strike that ambition is always expecting. But lo! the time came when, by universal public consent, which was in the nature of a surprise to him, he had a high and permanent place in the world of letters.

In anticipating Philip's career, however, it must not be understood that he had attained any wide public

recognition. He was simply enrolled in the great army of readers and was serving his apprenticeship. He was recognized as a capable man by those who purvey in letters to the entertainment of the world. Even this little foothold was not easily gained in a day, as the historian discovered in reading some bundles of old letters which Philip wrote in this time of his novitiate to Celia and to his cousin Alice.

It was against Celia's most strenuous advice that he had trusted himself to a literary career. "I see, my dear friend," she wrote, in reply to his announcement that he was going that day to Mr. Hunt to resign his position, "that you are not happy, but whatever your disappointment or disillusion, you will not better yourself by surrendering a regular occupation. You live too much in the imagination already."

Philip fancied, with that fatuity common to his sex, that he had worn an impenetrable mask in regard to his wild passion for Evelyn, and did not dream that, all along, Celia had read him like an open book. She judged Philip quite accurately. It was herself that she did not know, and she would have repelled as nonsense the suggestion that her own restlessness and her own changing experiments in occupation were due to the unsatisfied longings of a woman's heart.

"You must not think," the letter went on, "that I want to dictate, but I have noticed that men—it may be different with women—only succeed by taking one path and diligently walking in it. And literature is not a career, it is just a toss up, a lottery, and woe to you if you once draw a lucky number—you will always be expecting another... You say that I am a pretty one to give advice, for I am always chopping and changing myself. Well, from the time you were a little boy, did I ever give you but one sort of advice? I have been constant in that. And as to myself, you are unjust. I have always had one distinct object in life, and that I have pursued. I wanted to find out about life, to have experience, and then do what I could do best, and what needed most to be done. Why did I not stick to teaching in that woman's college? Well, I began to have doubts, I began to experiment on my pupils. You will laugh, but I will give you a specimen. One day I put a question to my literature class, and I found out that not one of them knew how to boil potatoes. They were all getting an education, and hardly one of them knew how much the happiness of a home depends upon having the potatoes mealy and not soggy. It was so in everything. How are we going to live when we are all educated, without knowing how to live? Then I found that the masses here in New York did not know any better than the classes how to live. Don't think it is just a matter of cooking. It is knowing how, generally, to make the most of yourself and of your opportunities, and have a nice world to live in, a thrifty, self-helpful, disciplined world. Is education giving us this? And then we think that organization will do it, organization instead of self-development. We think we can organize life, as they are trying to organize art. They have organized art as they have the production of cotton.

"Did I tell you I was in that? No? I used to draw in school, and after I had worked in the Settlement here in New York, and while I was working down on the East Side, it came over me that maybe I had one talent wrapped in a napkin; and I have been taking lessons in Fifty-seventh Street with the thousand or two young women who do not know how to boil potatoes, but are pursuing the higher life of art. I did not tell you this because I knew you would say that I am just as inconsistent as you are. But I am not. I have demonstrated the fact that neither I nor one in a hundred of those charming devotees to art could ever earn a living by art, or do anything except to add to the mediocrity of the amazing art product of this free country.

"And you will ask, what now? I am going on in the same way. I am going to be a doctor. In college I was very well up in physiology and anatomy, and I went quite a way in biology. So you see I have a good start. I am going to attend lectures and go into a hospital, as soon as there is an opening, and then I mean to practice. One essential for a young doctor I have in advance. That is patients. I can get all I want on the East Side, and I have already studied many of them. Law and medicine are what I call real professions."

However Celia might undervalue the calling that Philip had now entered on, he had about this time evidence of the growing appreciation of literature by practical business men. He was surprised one day by a brief note from Murad Ault, asking him to call at his office as soon as convenient.

Mr. Ault received him in his private office at exactly the hour named. Evidently Mr. Ault's affairs were prospering. His establishment presented every appearance of a high-pressure business perfectly organized. The outer rooms were full of industrious clerks, messengers were constantly entering and departing in a feverish rapidity, servants moved silently about, conducting visitors to this or that waiting-room and answering questions, excited speculators in groups were gesticulating and vociferating, and in the anteroom were impatient clients awaiting their turn. In the inner chamber, however, was perfect calm. There at his table sat the dark, impenetrable operator, whose time was exactly apportioned, serene, saturnine, or genial, as the case might be, listening attentively, speaking deliberately, despatching the affair in hand without haste or the waste of a moment.

Mr. Ault arose and shook hands cordially, and then went on, without delay for any conventional talk.

"I sent for you, Mr. Burnett, because I wanted your help, and because I thought I might do you a good turn. You see" (with a grim smile) "I have not forgotten Rivervale days. My wife has been reading your story. I don't have much time for such things myself, but her constant talk about it has given me an idea. I want to suggest to you the scene of a novel, one that would be bound to be a good seller.

"I could guarantee a big circulation. I have just become interested in one of the great transcontinental lines." He named the most picturesque of them—one that he, in fact, absolutely controlled. "Well, I want a story, yes, I guess a good love-story—a romance of reality you might call it—strung on that line. You take the idea?"

"Why," said Philip, half amused at the conceit and yet complimented by the recognition of his talent, "I don't know anything about railroads—how they are run, cost of building, prospect of traffic, engineering difficulties, all that—nothing whatever."

"So much the better. It is a literary work I want, not a brag about the road or a description of its enterprise. You just take the line as your scene. Let the story run on that. The company, don't you see, must not in any way be suspected with having anything to do with it, no mention of its name as a company, no advertisement of the road on a fly-leaf or cover. Just your own story, pure and simple."

"But," said Philip, more and more astonished at this unlooked-for expansion of the literary field, "I could not

embark on an enterprise of such magnitude."

"Oh," said Mr. Ault, complacently, "that will be all arranged. Just a pleasure trip, as far as that goes. You will have a private car, well stocked, a photographer will go along, and I think—don't you? a water-color artist. You can take your own time, stop when and where you choose—at the more stations the better. It ought to be profusely illustrated with scenes on the line—yes, have colored plates, all that would give life and character to your story. Love on a Special, some such title as that. It would run like oil. I will arrange to have it as a serial in one of the big magazines, and then the book would be bound to go. The company, of course, can have nothing to do with it, but I can tell you privately that it would rather distribute a hundred thousand copies of a book of good literature through the country than to encourage the railway truck that is going now.

"I shouldn't wonder, Mr. Burnett, if the public would be interested in having the Puritan Nun take that kind of a trip." And Mr. Ault ended his explanation with an interrogatory smile.

Philip hesitated a moment, trying to grasp the conception of this business use of literature. Mr. Ault resumed:

"It isn't anything in the nature of an advertisement. Literature is a power. Why, do you know—of course you did not intend it—your story has encouraged the Peacock Inn to double its accommodations, and half the farmhouses in Rivervale are expecting summer boarders. The landlord of the Peacock came to see me the other day, and he says everything is stirred up there, and he has already to enlarge or refuse application."

"It is very kind in you, Mr. Ault, to think of me in that connection, but I fear you have over-estimated my capacity. I could name half a dozen men who could do it much better than I could. They know how to do it, they have that kind of touch. I have been surprised at the literary ability engaged by the great corporations."

Mr. Ault made a gesture of impatience. "I wouldn't give a damn for that sort of thing. It is money thrown away. If I should get one of the popular writers you refer to, the public would know he was hired. If you lay your story out there, nobody will suspect anything of the sort. It will be a clean literary novel. Not travel, you understand, but a story, and the more love in it the better. It will be a novelty. You can run your car sixty miles an hour in exciting passages, everything will work into it. When people travel on the road the pictures will show them the scenes of the story. It is a big thing," said Mr. Ault in conclusion.

"I see it is," said Philip, rising at the hint that his time had expired. "I am very much obliged to you, Mr. Ault, for your confidence in me. But it is a new idea. I will have to think it over."

"Well, think it over. There is money in it. You would not start till about midsummer. Good-day."

A private car! Travel like a prince! Certainly literature was looking up in the commercial world. Philip walked back to his publishers with a certain elasticity of step, a new sense of power. Yes, the power of the pen. And why not? No doubt it would bring him money and spread his name very widely. There was nothing that a friendly corporation could not do for a favorite. He would then really be a part of the great, active, enterprising world. Was there anything illegitimate in taking advantage of such an opportunity? Surely, he should remain his own master, and write nothing except what his own conscience approved. But would he not feel, even if no one else knew it, that he was the poet-laureate of a corporation?

And suddenly, as he thought how the clear vision of Evelyn would plunge to the bottom of such a temptation, he felt humiliated that such a proposition should have been made to him. Was there nothing, nobody, that commercialism did not think for sale and to be trafficked in?

Nevertheless, he wrote to Alice about it, describing the proposal as it was made to him, without making any comment on it.

Alice replied speedily. "Isn't it funny," she wrote, "and isn't it preposterous? I wonder what such people think? And that horrid young pirate, Ault, a patron of literature! My dear, I cannot conceive of you as the Pirate's Own. Dear Phil, I want you to succeed. I do want you to make money, a lot of it. I like to think you are wanted and appreciated, and that you can get paid better and better for what you do. Sell your manuscripts for as good a price as you can get. Yes, dear, sell your manuscripts, but don't sell your soul."

XX

Did Miss McDonald tell Evelyn of her meeting with Philip in Central Park? The Scotch loyalty to her service would throw a doubt upon this. At the same time, the Scotch affection, the Scotch sympathy with a true and romantic passion, and, above all, the Scotch shrewdness, could be trusted to do what was best under the circumstances. That she gave the least hint of what she said to Mr. Burnett concerning Evelyn is not to be supposed for a moment. Certainly she did not tell Mrs. Mavick. Was she a person to run about with idle gossip? But it is certain that Evelyn knew that Philip had given up his situation in the office, that he had become a reader for a publishing house, that he had definitely decided to take up a literary career. And somehow it came into her mind that Philip knew that this decision would be pleasing to her.

According to the analogy of other things in nature, it would seem that love must have something to feed on to sustain it. But it is remarkable upon how little it can exist, can even thrive and become strong, and develop a power of resistance to hostile influences. Once it gets a lodgment in a woman's heart, it is an exclusive force that transforms her into a heroine of courage and endurance. No arguments, no reason, no considerations of family, of position, of worldly fortune, no prospect of immortal life, nothing but doubt of faith in the object can dislodge it. The woman may yield to overwhelming circumstances, she may even by her own consent be false to herself, but the love lives, however hidden and smothered, so long as the vital force is capable of responding to a true emotion. Perhaps nothing in human life is so pathetic as this survival in old age of a youthful, unsatisfied love. It may cease to be a passion, it may cease to be a misery, it may have become only a placid sentiment, yet the heart must be quite cold before this sentiment can cease to stir it on occasion—for the faded flower is still in the memory the bloom of young love.

They say that in the New Education for women love is not taken into account in the regular course; it is an elective study. But the immortal principle of life does not care much for organization, and says, as of old, they reckon ill who leave me out.

In the early season at Newport there was little to distract the attention and much to calm the spirit. Mrs. Mavick was busy in her preparation for the coming campaign, and Evelyn and her governess were left much alone, to drive along the softly lapping sea, to search among the dells of the rocky promontory for wild flowers, or to sit on the cliffs in front of the gardens of bloom and watch the idle play of the waves, that chased each other to the foaming beach and in good-nature tossed about the cat-boats and schooners and set the white sails shimmering and dipping in the changing lights. And Evelyn, drinking in the beauty and the peace of it, no doubt, was more pensive than joyous. Within the last few months life had opened to her with a suddenness that half frightened her.

It was a woman who sat on the cliffs now, watching the ocean of life, no longer a girl into whose fresh soul the sea and the waves and the air, and the whole beauty of the world, were simply responsive to her own gayety and enjoyment of living. It was not the charming scene that held her thought, but the city with its human struggle, and in that struggle one figure was conspicuous. In such moments this one figure of youth outweighed for her all that the world held besides. It was strange. Would she have admitted this? Not in the least, not even to herself, in her virgin musings; nevertheless, the world was changed for her, it was more serious, more doubtful, richer, and more to be feared.

It was not too much to say that one season had much transformed her. She had been so ignorant of the world a year ago. She had taken for granted all that was abstractly right. Now she saw that the conventions of life were like sand-dunes and barriers in the path she was expected to walk. She had learned for one thing what money was. Wealth had been such an accepted part of her life, since she could remember, that she had attached no importance to it, and had only just come to see what distinctions it made, and how it built a barrier round about her. She had come to know what it was that gave her father position and distinction; and the knowledge had been forced upon her by all the obsequious flattery of society that she was, as a great heiress, something apart from others. This position, so much envied, may be to a sensitive soul an awful isolation.

It was only recently that Evelyn had begun to be keenly aware of the circumstances that hedged her in. They were speaking one day as they sat upon the cliffs of the season about to begin. In it Evelyn had always had unalloyed, childish delight. Now it seemed to her something to be borne.

"McDonald," the girl said, abruptly, but evidently continuing her line of thought, "mamma says that Lord Montague is coming next week."

"To be with us?"

"Oh, no. He is to stay with the Danforth-Sibbs. Mamma says that as he is a stranger here we must be very polite to him, and that his being here will give distinction to the season. Do you like him?" There was in Evelyn still, with the penetration of the woman, the naivete of the child.

"I cannot say that he is personally very fascinating, but then I have never talked with him."

"Mamma says he is very interesting about his family, and their place in England, and about his travels. He has been in the South Sea Islands. I asked him about them. He said that the natives were awfully jolly, and that the climate was jolly hot. Do you know, McDonald, that you can't get anything out of him but exclamations and slang. I suppose he talks to other people differently. I tried him. At the reception I asked him who was going to take Tennyson's place. He looked blank, and then said, 'Er—I must have missed that. What place? Is he out?'"

Miss McDonald laughed, and then said, "You don't understand the classes in English life. Poetry is not in his line. You see, dear, you couldn't talk to him about politics. He is a born legislator, and when he is in the House of Lords he will know right well who is in and who is out. You mustn't be unjust because he seems odd to you and of limited intelligence. Just that sort of youth is liable to turn up some day in India or somewhere and do a mighty plucky thing, and become a hero. I dare say he is a great sportsman."

"Yes, he quite warmed up about shooting. He told me about going for yak in the snow mountains south of Thibet. Bloody cold it was. Nasty beast, if you didn't bring him down first shot. No, I don't doubt his courage nor his impudence. He looks at me so, that I can't help blushing. I wish mamma wouldn't ask him."

"But, my dear, we must live in the world as it is. You are not responsible for Lord Montague."

"And I know he will come," the girl persisted in her line of thought.

"When he called the day before we came away, he asked a lot of questions about Newport, about horses and polo and golf, and all that, and were the roads good. And then, 'Do you bike, Miss Mavick?'"

"I pretended not to understand, and said I was still studying with my governess and I hadn't got all the irregular verbs yet. For once, he looked quite blank, and after a minute he said, 'That's very good, you know!' McDonald, I just hate him. He makes me so uneasy."

"But don't you know, child," said Miss McDonald, laughing, "that we are required to love our enemies?"

"So I would," replied the girl, quickly, "if he were an enemy and would keep away. Ah, me! McDonald, I want to ask you something. Do you suppose he would hang around a girl who was poor, such a sweet, pretty, dear creature as Alice Maitland, who is a hundred times nicer than I am?"

"He might," said Miss McDonald, still quizzically. "They say that like goes to like, and it is reported that the Duke of Tewkesbury is as good as ruined."

"Do be serious, McDonald." The girl nestled up closer to her and took her hand. "I want to ask you one question more. Do you think—no, don't look at me, look away off at that sail do you think that, if I had been poor, Mr. Burnett would have seen me only twice, just twice, all last season?"

Miss McDonald put her arm around Evelyn and clasped the little figure tight. "You must not give way to fancies. We cannot, as life is arranged, be perfectly happy, but we can be true to ourselves, and there is scarcely anything that resolution and patience cannot overcome. I ought not to talk to you about this, Evelyn."

But I must say one thing: I think I can read Philip Burnett. Oh, he has plenty of self-esteem, but, unless I mistake him, nothing could so mortify him as to have it said that he was pursuing a girl for the sake of her fortune."

"And he wouldn't!" cried the girl, looking up and speaking in an unsteady voice.

"Let me finish. He is, so I think, the sort of man that would not let any fortune, or anything else, stand in the way when his heart was concerned. I somehow feel that he could not change—faithfulness, that is his notion. If he only knew—"

"He never shall! he never shall!" cried the girl in alarm—"never!"

"And you think, child, that he doesn't know? Come! That sail has been coming straight towards us ever since we sat here, never tacked once. That is omen enough for one day. See how the light strikes it. Come!"

The Newport season was not, after all, very gay. Society has become so complex that it takes more than one Englishman to make a season. Were it the business of the chronicler to study the evolution of this lovely watering-place from its simple, unconventional, animated days of natural hospitality and enjoyment, to its present splendid and palatial isolation of a society—during the season—which finds its chief satisfaction in the rivalry of costly luxury and in an atmosphere of what is deemed aristocratic exclusiveness, he would have a theme attractive to the sociologist. But such a noble study is not for him. His is the humble task of following the fortunes of certain individuals, more or less conspicuous in this astonishing flowering of a democratic society, who have become dear to him by long acquaintance.

It was not the fault of Mrs. Mavick that the season was so frigid, its glacial stateliness only now and then breaking out in an illuminating burst of festivity, like the lighting-up of a Montreal ice-palace. Her spacious house was always open, and her efforts, in charity enterprises and novel entertainments, were untiring to stimulate a circulation in the languid body of society.

This clever woman never showed more courage or more tact than in this campaign, and was never more agreeable and fascinating. She was even popular. If she was not accepted as a leader, she had a certain standing with the leaders, as a person of vivacity and social influence. Any company was eager for her presence. Her activity, spirit, and affability quite won the regard of the society reporters, and those who know Newport only through the newspapers would have concluded that the Mavicks were on the top of the wave. She, however, perfectly understood her position, and knew that the sweet friends, who exchanged with her, whenever they met, the conventional phrases of affection commented sarcastically upon her ambitions for her daughter. It was, at the same time, an ambition that they perfectly understood, and did not condemn on any ethical grounds. Evelyn was certainly a sweet girl, rather queerly educated, and never likely to make much of a dash, but she was an heiress, and why should not her money be put to the patriotic use of increasing the growing Anglo-American cordiality?

Lord Montague was, of course, a favorite, in demand for all functions, and in request for the private and intimate entertainments. He was an authority in the stables and the kennels, and an eager comrade in all the sports of the island. His easy manner, his self-possession everywhere, even his slangy talk, were accepted as evidence that he was above conventionalities. "The little man isn't a beauty," said Sally McTabb, "but he shows 'race.'" He might be eccentric, but when you came to know him you couldn't help liking the embryo duke in him.

In fact, things were going very well with Mrs. Mavick, except in her own household. There was something there that did not yield, that did not flow with her plans. With Lord Montague she was on the most intimate and confidential relations. He was almost daily at the house. Often she drove with him; frequently Evelyn was with them. Indeed, the three came to be associated in the public mind. There could be no doubt of the intentions of the young nobleman. That he could meet any opposition was not conceived.

The noble lord, since they had been in Newport, had freely opened his mind to Mrs. Mavick, and on a fit occasion had formally requested her daughter's hand. Needless to say that he was accepted. Nay, more, he felt that he was trusted like a son. He was given every opportunity to press his suit. Somewhat to his surprise, he did not appear to make much headway. He was rarely able to see her alone, even for a moment. Such evasiveness in a young girl to a man of his rank astonished him. There could be no reason for it in himself; there must be some influence at work unknown to his social experience.

He did not reproach Mrs. Mavick with this, but he let her see that he was very much annoyed.

"If I had not your assurance to the contrary, Mrs. Mavick," he said one day in a pet, "I should think she shunned me."

"Oh, no, Lord Montague, that could not be. I told you that she had had a peculiar education; she is perfectly ignorant of the world, she is shy, and—well, for a girl in her position, she is unconventional. She is so young that she does not yet understand what life is."

"You mean she does not know what I offer her?"

"Why, my dear Lord Montague, did you ever offer her anything?"

"Not flat, no," said my lord, hesitating. "Every time I approach her she shies off like a young filly. There is something I don't understand."

"Evelyn," and Mrs. Mavick spoke with feeling, "is an affectionate and dutiful child. She has never thought of marriage. The prospect is all new to her. But I am sure she would learn to love you if she knew you and her mind were once turned upon such a union. My lord, why not say to her what you feel, and make the offer you intend? You cannot expect a young girl to show her inclination before she is asked." And Mrs. Mavick laughed a little to dispel the seriousness.

"By Jove! that's so, good enough. I'll do it straight out. I'll tell her to take it or leave it. No, I don't mean that, of course. I'll tell her that I can't live without her—that sort of thing, you know. And I can't, that's just the fact."

"You can leave it confidently to her good judgment and to the friendship of the family for you."

Lord Montague was silent for a moment, and seemed to be looking at a problem in his shrewd mind. For he

had a shrewd mind, which took in the whole situation, Mrs. Mavick and all, with a perspicacity that would have astonished that woman of the world.

"There is one thing, perhaps I ought not to say it, but I have seen it, and it is in my head that it is that—I beg your pardon, madam—that damned governess."

The shot went home. The suggestion, put into language that could be more easily comprehended than defended, illuminated Mrs. Mavick's mind in a flash, seeming to disclose the source of an opposition to her purposes which secretly irritated her. Doubtless it was the governess. It was her influence that made Evelyn less pliable and amenable to reason than a young girl with such social prospects as she had would naturally be. Besides, how absurd it was that a young lady in society should still have a governess. A companion? The proper companion for a girl on the edge of matrimony was her mother!

XXI

This idea, once implanted in Mrs. Mavick's mind, bore speedy fruit. No one would have accused her of being one of those uncomfortable persons who are always guided by an inflexible sense of justice, nor could it be said that she was unintelligently unjust. Facile as she was, in all her successful life she had never acted upon impulse, but from a conscience keenly alive to what was just to herself. Miss McDonald was in the way. And Mrs. Mavick had one quality of good generalship—she acted promptly on her convictions.

When Mr. Mavick came over next day to spend Sunday in what was called in print the bosom of his family, he looked very much worn and haggard and was in an irritated mood. He had been very little in Newport that summer, the disturbed state of business confining him to the city. And to a man of his age, New York in midsummer in a panicky season is not a recreation.

The moment Mrs. Mavick got her husband alone she showed a lively solicitude about his health.

"I suppose it has been dreadfully hot in the city?"

"Hot enough. Everything makes it hot."

"Has anything gone wrong? Has that odious Ault turned up again?"

"Turned up is the word. Half the time that man is a mole, half the time a bull in a china-shop. He sails up to you bearing your own flag, and when he gets aboard he shows the skull and cross-bones."

"Is it so bad as that?"

"As bad as what? He is a bad lot, but he is just an adventurer—a Napoleon who will get his Waterloo before fall. Don't bother about things you don't understand. How are things down here?"

"Going swimmingly." "So I judged by the bills. How is the lord?"

"Now don't be vulgar, Tom. You must keep up your end. Lord Montague is very nice; he is a great favorite here."

"Does Evelyn like him?"

"Yes, she likes him; she likes him very much."

"She didn't show it to me."

"No, she is awfully shy. And she is rather afraid of him, the big title and all that. And then she has never been accustomed to act for herself. She is old enough to be independent and to take her place in the world. At her age I was not in leading-strings."

"I should say not," said Mavick.

"Except in obedience to my mother," continued Carmen, not deigning to notice the sarcasm. "And I've been thinking that McDonald—"

"So you want to get rid of her?"

"What a brutal way of putting it! No. But if Evelyn is ever to be self-reliant it is time she should depend more on herself. You know I am devoted to McDonald. And, what is more, I am used to her. I wasn't thinking of her. You don't realize that Evelyn is a young lady in society, and it has become ridiculous for her to still have a governess. Everybody would say so."

"Well, call her a companion."

"Ah, don't you see it would be the same? She would still be under her influence and not able to act for herself."

"What are you going to do? Turn her adrift after eighteen—what is it, seventeen?—years of faithful service?"

"How brutally you put it. I'm going to tell McDonald just how it is. She is a sensible woman, and she will see that it is for Evelyn's good. And then it happens very luckily. Mrs. Van Cortlandt asked me last winter if I wouldn't let her have McDonald for her little girl when we were through with her. She knew, of course, that we couldn't keep a governess much longer for Evelyn. I am going to write to her. She will jump at the chance."

"And McDonald?"

"Oh, she likes Mrs. Van Cortlandt. It will just suit her."

"And Evelyn? That will be another wrench." Men are so foolishly tender-hearted about women.

"Of course, I know it seems hard, and will be for a little. But it is for Evelyn's good, I am perfectly sure."

Mr. Mavick was meditating. It was a mighty unpleasant business. But he was getting tired of conflict. There was an undercurrent in the lives of both that made him shrink from going deep into any domestic difference.

It was best to yield.

"Well, Carmen, I couldn't have the heart to do it. She has been Evelyn's constant companion all the child's life. Ah, well, it's your own affair. Only don't stir it up till after I am gone. I must go to the city early Monday morning."

Because Mavick, amid all the demands of business and society, and his ambitions for power in the world of finance and politics, had not had much time to devote to his daughter, it must not be supposed that he did not love her. In the odd moments at her service she had always been a delight to him; and, in truth, many of his ambitions had centred in the intelligent, affectionate, responsive child. But there had been no time for much real comradeship.

This Sunday, however, and it was partly because of pity for the shock he felt was in store for her, he devoted himself to her. They had a long walk on the cliff, and he talked to her of his life, of his travels, and his political experience. She was a most appreciative listener, and in the warmth of his confidence she opened her mind to him, and rather surprised him by her range of intelligence and the singular uprightness of her opinions, and more still by her ready wit and playfulness. It was the first time she had felt really free with her father, and he for the first time seemed to know her as she was in her inner life. When they returned to the house, and she was thanking him with a glow of enthusiasm for such a lovely day, he lifted her up and kissed her, with an emotion of affection that brought tears to her eyes.

A couple of days elapsed before Mrs. Mavick was ready for action. During this time she had satisfied herself, by apparently casual conversation with her daughter and Miss McDonald, that the latter would be wholly out of sympathy with her intentions in regard to Evelyn. Left to herself she judged that her daughter would look with more favor upon the brilliant career offered to her by Lord Montague. When, therefore, one morning the governess was summoned to her room, her course was decided on. She received Miss McDonald with more than usual cordiality. She had in her hand a telegram, and beamed upon her as the bearer of good news.

"I have an excellent offer for you, Miss McDonald."

"An offer for me?"

"Yes, from Mrs. Van Cortlandt, to be the governess of her daughter, a sweet little girl of six. She has often spoken about it, and now I have an urgent despatch from her. She is in need of some one at once, and she greatly prefers you."

"Do you mean, Mrs. Mavick, that—you—want—that I am to leave Evelyn, and you?" The room seemed to whirl around her.

"It is not what we want, McDonald," said Mrs. Mavick calmly and still beaming, "but what is best. Your service as governess has continued much longer than could have been anticipated, and of course it must come to an end some time. You understand how hard this separation is for all of us. Mr. Mavick wanted me to express to you his infinite obligation, and I am sure he will take a substantial way of showing it. Evelyn is now a young lady in society, and of course it is absurd for her to continue under pupilage. It will be best for her, for her character, to be independent and learn to act for herself in the world."

"Did she—has Evelyn—"

"No, I have said nothing to her of this offer, which is a most advantageous one. Of course she will feel as we do, at first."

"Why, all these years, all her life, since she was a baby, not a day, not a night, Evelyn, and now—so sweet, so dear—why Mrs. Mavick!" And the Scotch woman, dazed, with a piteous appeal in her eyes, trying in vain to control her face, looked at her mistress.

"My dear McDonald, you must not take it that way. It is only a change. You are not going away really, we shall all be in the same city. I am sure you will—like your new home. Shall I tell Mrs. Van Cortlandt?"

"Tell Mrs. Van Cortlandt? Yes, tell her, thanks. I will go—soon—at once. In a little time, to get-ready. Thanks." The governess rose and stood a moment to steady herself. All her life was in ruins. The blow crushed her. And she had been so happy. In such great peace. It seemed impossible. To leave Evelyn! She put out her hand as if to speak. Did Mrs. Mavick understand what she was doing? That it was the same as dragging a mother away from her child? But she said nothing. Words would not come. Everything seemed confused and blank. She sank into her chair.

"Excuse me, Mrs. Mavick, I think I am not very strong this morning." And presently she stood on her feet again and steadied herself. "You will please tell Evelyn before—before I see her." And she walked out of the room as one in a trance.

The news was communicated to Evelyn, quite incidentally, in the manner that all who knew Mrs. Mavick admired in her. Evelyn had just been in and out of her mother's room, on one errand and another, and was going out again, when her mother said:

"Oh, by-the-way, Evelyn, at last we have got a splendid place for McDonald."

Evelyn turned, not exactly comprehending. "A place for McDonald? For what?"

"As governess, of course. With Mrs. Van Cortlandt."

"What! to leave us?" The girl walked back to her mother's chair and stood before her in an attitude of wonder and doubt. "You don't mean, mamma, that she is going away for good?"

"It is a great chance for her. I have been anxious for some time about employment for her, now that you do not need a governess—haven't really for a year or two."

"But, mamma, it can't be. She is part of us. She belongs to the family; she has been in it almost as long as I have. Why, I have been with her every day of my life. To go away? To give her up? Does she know?"

"Does she know? What a child! She has accepted Mrs. Van Cortlandt's offer. I telegraphed for her this morning. Tomorrow she goes to town to get her belongings together. Mrs. Van Cortlandt needs her at once. I am sorry to see, my dear, that you are thinking only of yourself."

"Of myself?" The girl had been at first confused, and, as the idea forced itself upon her mind, she felt weak,

and trembled, and was deadly pale. But when the certainty came, the enormity and cruelty of the dismissal aroused her indignation. "Myself!" she exclaimed again. Her eyes blazed with a wrath new to their tenderness, and, stepping back and stamping her foot; she cried out: "She shall not go! It is unjust! It is cruel!"

Her mother had never seen her child like that. She was revealing a spirit of resistance, a temper, an independence quite unexpected. And yet it was not altogether displeasing. Mrs. Mavick's respect for her involuntarily rose. And after an instant, instead of responding with severity, as was her first impulse, she said, very calmly:

"Naturally, Evelyn, you do not like to part with her. None of us do. But go to your room and think it over reasonably. The relations of childhood cannot last forever."

Evelyn stood for a moment undecided. Her mother's calm self-control had not deceived her. She was no longer a child. It was a woman reading a woman. All her lifetime came back to her to interpret this moment. In the reaction of the second, the deepest pain was no longer for herself, nor even for Miss McDonald, but for a woman who showed herself so insensible to noble feeling. Protest was useless. But why was the separation desired? She did not fully see, but her instinct told her that it had a relation to her mother's plans for her; and as life rose before her in the society, in the world, into which she was newly launched, she felt that she was alone, absolutely alone. She tried to speak, but before she could collect her thoughts her mother said:

"There, go now. It is useless to discuss the matter. We all have to learn to bear things."

Evelyn went away, in a tumult of passion and of shame, and obeyed her impulse to go where she had always found comfort.

Miss McDonald was in her own room. Her trunk was opened. She had taken her clothes from the closet. She was opening the drawers and laying one article here and another there. She was going from closet to bureau, opening this door and shutting that in her sitting-room and bedroom, in an aimless, distracted way. Out of her efforts nothing had so far come but confusion. It seemed an impossible dream that she was actually packing up to go away forever.

Evelyn entered in a haste that could not wait for permission.

"Is it true?" she cried.

McDonald turned. She could not speak. Her faithful face was gray with suffering. Her eyes were swollen with weeping. For an instant she seemed not to comprehend, and then a flood of motherly feeling overcame her. She stretched out her arms and caught the girl to her breast in a passionate embrace, burying her face in her neck in a vain effort to subdue her sobbing.

What was there to say? Evelyn had come to her refuge for comfort, and to Evelyn the comforter it was she herself who must be the comforter. Presently she disengaged herself and forced the governess into an easy chair. She sat down on the arm of the chair and smoothed her hair and kissed her again and again.

"There. I'm going to help you. You'll see you have not taught me for nothing." She jumped up and began to bustle about. "You don't know what a packer I am."

"I knew it must come some time," she was saying, with a weary air, as she followed with her eyes the light step of the graceful girl, who was beginning to sort things and to bring order out of the confusion, holding up one article after another and asking questions with an enforced cheerfulness that was more pathetic than any burst of grief.

"Yes, I know. There, that is laid in smooth." She pretended to be thinking what to put in next, and suddenly she threw herself into McDonald's lap and began to talk gayly. "It is all my fault, dear; I should have stayed little. And it doesn't make any difference. I know you love me, and oh, McDonald, I love you more, a hundred times more, than ever. If you did not love me! Think how dreadful that would be. And we shall not be separated-only by streets, don't you know. They can't separate us. I know you want me to be brave. And some day, perhaps" (and she whispered in her ear—how many hundred times had she told her girl secrets in that way!), "if I do have a home of my own, then—"

It was not very cheerful talk, however it seemed to be, but it was better than silence, and in the midst of it, with many interruptions, the packing was over, and some sort of serenity was attained even by Miss McDonald. "Yes, dear heart, we have love and trust and hope." But when the preparations were all made, and Evelyn went to her own room, there did not seem to be so much hope, nor any brightness in the midst of this first great catastrophe of her life.

XXII

The great Mavick ball at Newport, in the summer long remembered for its financial disasters, was very much talked about at the time. Long after, in any city club, a man was sure to have attentive listeners if he, began his story or his gossip with the remark that he was at the Mavick ball.

It attracted great attention, both on account of the circumstances that preceded it and the events which speedily followed, and threw a light upon it that gave it a spectacular importance. The city journals made a feature of it. They summoned their best artists to illustrate it, and illuminate it in pen-and-ink, half-tones, startling colors, and photographic reproductions, sketches theatrical, humorous, and poetic, caricatures, pictures of tropical luxury and aristocratic pretension; in short, all the bewildering affluence of modern art which is brought to bear upon the aesthetic cultivation of the lowest popular taste. They summoned their best novelists to throw themselves recklessly upon the English language, and extort from it its highest expression in color and lyrical beauty, the novelists whose mission it is, in the newspaper campaign against realism, to adorn and dramatize the commonest events of life, creating in place of the old-fashioned "news" the highly

spiced "story," which is the ideal aspiration of the reporter.

Whatever may be said about the power of the press, it is undeniable that it can set the entire public thinking and talking about any topic, however insignificant in itself, that it may elect to make the sensation of the day—a wedding, a murder, a political scandal, a divorce, a social event, a defalcation, a lost child, an unidentified victim of accident or crime, an election, or—that undefined quickener of patriotism called a *casus belli*. It can impose any topic it pleases upon the public mind. In case there is no topic, it is necessary to make one, for it is an indefeasible right of the public to have news.

These reports of the Mavick ball had a peculiar interest for at least two people in New York. Murad Ault read them with a sardonic smile and an enjoyment that would not have been called altruistic. Philip searched them with the feverish eagerness of a maiden who scans the report of a battle in which her lover has been engaged.

All summer long he had lived upon stray bits of news in the society columns of the newspapers. To see Evelyn's name mentioned, and only rarely, as a guest at some entertainment, and often in connection with that of Lord Montague, did not convey much information, nor was that little encouraging. Was she well? Was she absorbed in the life of the season? Did she think of him in surroundings so brilliant? Was she, perhaps, unhappy and persecuted? No tidings came that could tell him the things that he ached to know.

Only recently intelligence had come to him that at the same time wrung his heart with pity and buoyed him up with hope. He had not seen Miss McDonald since her dismissal, for she had been only one night in the city, but she had written to him. Relieved by her discharge of all obligations of silence, she had written him frankly about the whole affair, and, indeed, put him in possession of unrecorded details and indications that filled him with anxiety, to be sure, but raised his courage and strengthened his determination. If Evelyn loved him, he had faith that no manoeuvres or compulsion could shake her loyalty. And yet she was but a girl; she was now practically alone, and could she resist the family and the social pressure? Few women could, few women do, effectively resist under such circumstances. With one of a tender heart, duty often takes the most specious and deceiving forms. In yielding to the impulses of her heart, which in her inexperience may be mistaken, has a girl the right—from a purely rational point of view—to set herself against, nay, to destroy, the long-cherished ambitions of her parents for a brilliant social career for her, founded upon social traditions of success? For what had Mr. Mavick toiled? For what had Mrs. Mavick schemed all these years? Could the girl throw herself away? Such disobedience, such disregard for social law, would seem impossible to her mother.

Some of the events that preceded the Mavick ball throw light upon that interesting function. After the departure of Miss McDonald, Mrs. Mavick, in one of her confidential talks with her proposed son-in-law, confessed that she experienced much relief. An obstacle seemed to be removed.

In fact, Evelyn rather surprised her mother by what seemed a calm acceptance of the situation. There was no further outburst. If the girl was often preoccupied and seemed listless, that was to be expected, on the sudden removal of the companion of her lifetime.

But she did not complain. She ceased after a while to speak of McDonald. If she showed little enthusiasm in what was going on around her, she was compliant, she fell in at once with her mother's suggestions, and went and came in an attitude of entire obedience.

"It isn't best for you to keep up a correspondence, my dear, now that you know that McDonald is nicely settled—all reminiscent correspondence is very wearing—and, really, I am more than delighted to see that you are quite capable of walking alone. Do you know, Evelyn, that I am more and more proud of you every day, as my daughter. I don't dare to tell you half the nice things that are said of you. It would make you vain." And the proud mother kissed her affectionately. The letters ceased. If the governess wrote, Evelyn did not see the letters.

As the days went by, Lord Montague, in high and confident spirits, became more and more a familiar inmate of the house. Daily he sent flowers to Evelyn; he contrived little excursions and suppers; he was marked in his attentions wherever they went. "He is such a dear fellow," said Mrs. Mavick to one of her friends; "I don't know how we should get on without him."

Only, in the house, owing to some unnatural perversity of circumstances, he did not see much of Evelyn, never alone for more than a moment. It is wonderful what efficient, though invisible, defenses most women, when they will, can throw about themselves.

That the affair was "arranged" Lord Montague had no doubt. It was not conceivable that the daughter of an American stock-broker would refuse the offer of a position so transcendent and so evidently coveted in a democratic society. Not that the single-minded young man reasoned about it this way. He was born with a most comfortable belief in himself and the knowledge that when he decided to become a domestic man he had simply, as the phrase is, to throw his handkerchief.

At home, where such qualities as distinguished him from the common were appreciated without the need of personal exertion, this might be true; but in America it did seem to be somehow different. American women, at least some of them, did need to be personally wooed; and many of them had a sort of independence in the bestowal of their affections or, what they understood to be the same thing, themselves that must be taken into account. And it gradually dawned upon the mind of this inheritor of privilege that in this case the approval of the family, even the pressure of the mother, was not sufficient; he must have also Evelyn's consent. If she were a mature woman who knew and appreciated the world, she would perceive the advantages offered to her without argument. But a girl, just released from the care of her governess, unaccustomed to society, might have notions, or, in the vernacular of the scion, might be skittish.

And then, again, to do the wooer entire justice, the dark little girl, so much mistress of herself, so evidently spirited, with such an air of distinction, began to separate herself in his mind as a good goer against the field, and he had a real desire to win her affection. The more indifferent she was to him, the keener was his desire to possess her. His unsuccessful wooing had passed through several stages, first astonishment, then pique, and finally something very like passion, or a fair semblance of devotion, backed, of course, since all natures are more or less mixed, by the fact that this attractive figure of the woman was thrown into high relief by the colossal fortune behind her.

And Evelyn herself? Neither her mother nor her suitor appreciated the uncommon circumstances that her education, her whole training in familiarity with pure and lofty ideals, had rendered her measurably insensible to the social considerations that seemed paramount to them, or that there could be any real obstacle to the bestowal of her person. where her heart was not engaged. Yet she perfectly understood her situation, and, at times, deprived of her lifelong support, she felt powerless in it, and she suffered as only the pure and the noble can suffer. Day after day she fought her battle alone, now and then, as the situation confronted her, assailed by a shudder of fear, as of one awakening in the night from a dream of peril, the clutch of an assassin, or the walking on an icy precipice. If McDonald were only with her! If she could only hear from Philip! Perhaps he had lost hope and was submitting to the inevitable.

The opportunity which Lord Montague had long sought came one day unexpectedly, or perhaps it was contrived. They were waiting in the drawing-room for an afternoon drive. The carriage was delayed, and Mrs. Mavick excused herself to ascertain the cause of the delay. Evelyn and her suitor were left alone. She was standing by a window looking out, and he was standing by the fireplace watching the swing of the figure on the pendulum of the tall mantelpiece clock. He was the first to break the silence.

"Your clock, Miss Mavick, is a little fast." No reply. "Or else I am slow." Still no reply. "They say, you know, that I am a little slow, over here." No reply. "I am not, really, you know. I know my mind. And there was something, Miss Mavick, something particular, that I wanted to say to you."

"Yes?" without turning round. "The carriage will be here in a minute."

"Never mind that," and Lord Montague moved away from the fireplace and approached the girl; "take care of the minutes and the hours will take care of themselves, as the saying is." At this unexpected stroke of brilliancy Evelyn did turn round, and stood in an expectant attitude. The moment had evidently come, and she would not meet it like a coward.

"We have been friends a long time; not so very long, but it seems to me the best part of my life," he was looking down and speaking slowly, with the modest deference of a gentleman, "and you must have seen, that is, I wanted you to see, you know well, that is—er—what I was staying on here for."

"Because you like America, I suppose," said Evelyn, coolly.

"Because I like some things in America—that is just the fact," continued the little lord, with more confidence. "And that is why I stayed. You see I couldn't go away and leave what was best in the world to me."

There was an air of simplicity and sincerity about this that was unexpected, and could not but be respected by any woman. But Evelyn waited, still immovable.

"It wasn't reasonable that you should like a stranger right off," he went on, "just at first, and I waited till you got to know me better. Ways are different here and over there, I know that, but if you came to know me, Miss Mavick, you would see that I am not such a bad sort of a fellow." And a deprecatory smile lighted up his face that was almost pathetic. To Evelyn this humility seemed genuine, and perhaps it was, for the moment. Certainly the eyes she bent on, the odd little figure were less severe.

"All this is painful to me, Lord Montague."

"I'm sorry," he continued, in the same tone. "I cannot help it. I must say it. I—you must know that I love you." And then, not heeding the nervous start the girl gave in stepping backward, "And—and, will you be my wife?"

"You do me too much honor, Lord Montague," said Evelyn, summoning up all her courage.

"No, no, not a bit of it."

"I am obliged to you for your good opinion, but you know I am almost a school-girl. My governess has just left me. I have never thought of such a thing. And, Lord Montague, I cannot return your feeling. That is all. You must see how painful this is to me."

"I wouldn't give you pain, Miss Mavick, not for the world. Perhaps when you think it over it will seem different to you. I am sure it will. Don't answer now, for good."

"No, no, it cannot be," said Evelyn, with something of alarm in her tone, for the full meaning of it all came over her as she thought of her mother.

"You are not offended?"

"No," said Evelyn.

"I couldn't bear to offend you. You cannot think I would. And you will not be hard-hearted. You know me, Miss Mavick, just where I am. I'm just as I said."

"The carriage is coming," said Mrs. Mavick, who returned at this moment.

The group for an instant was silent, and then Evelyn said:

"We have waited so long; mamma, that I am a little tired, and you will excuse me from the drive this afternoon?"

"Certainly, my dear."

When the two were seated in the carriage, Mrs. Mavick turned to Lord Montague:

"Well?"

"No go," replied my lord, as sententiously, and in evident bad humor.

"What? And you made a direct proposal?"

"Showed her my whole hand. Made a square offer. Damme, I am not used to this sort of thing."

"You don't mean that she refused you?"

"Don't know what you call it. Wouldn't start."

"She couldn't have understood you. What did she say?"

"Said it was too much honor, and that rot. By Jove, she didn't look it. I rather liked her pluck. She didn't flinch."

"Oh, is that all?" And Mrs. Mavick spoke as if her mind were relieved. "What could you expect from such a sudden proposal to a young girl, almost a child, wholly unused to the world? I should have done the same thing at her age. It will look different to her when she reflects, and understands what the position is that is offered her. Leave that to me."

Lord Montague shook his head and screwed up his keen little eyes. His mind was in full play. "I know women, Mrs. Mavick, and I tell you there is something behind this. Somebody has been in the stable." The noble lord usually dropped into slang when he was excited.

"I don't understand your language," said Mrs. Mavick, straightening herself up in her seat.

"I beg pardon. It is just a way of speaking on the turf. When a favorite goes lame the morning of the race, we know some one has been tampering with him. I tell you there is some one else. She has some one else in her mind. That's the reason of it."

"Nonsense," cried Mrs. Mavick, with the energy of conviction. "It's impossible. There is nobody, couldn't be anybody. She has led a secluded life till this hour. She hasn't a fancy, I know."

"I hope you are right," he replied, in the tone of a man wishing to take a cheerful view. "Perhaps I don't understand American girls."

"I think I do," she said, smiling. "They are generally amenable to reason. Evelyn now has something definite before her. I am glad you proposed."

And this was the truth. Mrs. Mavick was elated. So far her scheme was completely successful. As to Evelyn, she trusted to various influences she could bring to bear. Ultimate disobedience of her own wishes she did not admit as a possible thing.

A part of her tactics was the pressure of public opinion, so far as society represents it—that is, what society expects. And therefore it happened in a few days that a strong suspicion got about that Lord Montague had proposed formally to the heiress. The suspicion was strengthened by appearances. Mrs. Mavick did not deny the rumor. That there was an engagement was not affirmed, but that the honor had been or would be declined was hardly supposable.

In the painful interview between mother and daughter concerning this proposal, Evelyn had no reason to give for her opposition, except that she did not love him. This point Mrs. Mavick skillfully evaded and minimized. Of course she would love him in time. The happiest marriages were founded on social fitness and the judgment of parents, and not on the inexperienced fancies of young girls. And in this case things had gone too far to retreat. Lord Montague's attentions had been too open and undisguised. He had been treated almost as a son by the house. Society looked upon the affair as already settled. Had Evelyn reflected on the mortification that would fall upon her mother if she persisted in her unreasonable attitude? And Mrs. Mavick shed actual tears in thinking upon her own humiliation.

The ball which followed these private events was also a part of Mrs. Mavick's superb tactics. It would be in a way a verification of the public rumors and a definite form of pressure which public expectation would exercise upon the lonely girl.

The splendor of this function is still remembered. There were, however, features in the glowing descriptions of it which need to be mentioned. It was assumed that it was for a purpose, that it was in fact, if not a proclamation, at least an intimation of a new and brilliant Anglo-Saxon alliance. No one asserted that an engagement existed. But the prominent figures in the spectacle were the English lord and the young and beautiful American heiress. There were portraits of both in half-tone. The full names and titles expectant of Lord Montague were given, a history of the dukedom of Tewkesbury and its ancient glory, with the long line of noble names allied to the young lord, who was a social star of the first magnitude, a great traveler, a sportsman of the stalwart race that has the world for its field. ("Poor little Monte," said the managing editor as he passed along these embellishments with his approval.)

On the other hand, the proposed alliance was no fall in dignity or family to the English house. The heiress was the direct descendant of the Eschelles, an old French family, distinguished in camp and court in the glorious days of the Grand Monarch.

XXIII

Probably no man ever wrote and published a book, a magazine story, or a bit of verse without an instant decision to repeat the experiment. The inclination once indulged becomes insatiable. It is not altogether the gratified vanity of seeing one's self in print, for, before printing was, the composers and reciters of romances and songs were driven along the same path of unrest and anxiety, when once they had the least recognition of their individual distinction. The impulse is more subtle than the desire for wealth or the craving for political place. In some cases it is in simple obedience to the longing to create; in others it is a lower ambition for notoriety, for praise.

In any case the experiment of authorship, in however humble, a way, has an analogy to that other tempting occupation of making "investments" in the stock-market: the first trial is certain to lead to another. If the author succeeds in any degree, his spirit rises to another attempt in the hope of a wider recognition. If he fails, that is a reason why he should convince his fellows that the failure was not inherent in himself, but in ill-luck or a misdirection of his powers. And the experiment has another analogy to the noble occupation of levying toll upon the change of values—a first brilliant success is often a misfortune, inducing an overestimate of capacity, while a very moderate success, recognized indeed only as a trial, steadies a man, and sets him upon that serious diligence upon which alone, either in art or business, any solid fortune is built.

Philip was fortunate in that his first novel won him a few friends and a little recognition, but no popularity.

It excited neither envy nor hostility. In the perfunctory and somewhat commercial good words it received, he recognized the good-nature of the world. In the few short reviews that dealt seriously with his work, he was able, when the excitement of seeing himself discussed had subsided, to read between the lines why *The Puritan Nun* had failed to make a larger appeal. It was idyllic and poetic, but it lacked virility; it lacked also simplicity in dealing with the simple and profound facts of life. He had been too solicitous to express himself, to write beautifully, instead of letting the human emotions with which he had to deal show themselves. One notice had said that it was too "literary"; by which, of course, the critic meant that he did not follow the solid traditions, the essential elements in all the great masterpieces of literature that have been created. And yet he had shown a quality, a facility, a promise, that had gained him a foothold and a support in the world of books and of the making of books. And though he had declined Mr. Ault's tempting offer to illuminate his transcontinental road with a literary torch, he none the less was pleased with this recognition of his capacity and the value of his name.

To say that Philip lived on hope during this summer of heat, suspensions, and business derangement would be to allow him a too substantial subsistence. Evelyn, indeed, seemed, at the distance of Newport, more unattainable than ever, and the scant news he had of the drama enacted there was a perpetual notice to him of the social gulf that lay between them. And yet his dream was sustained by occasional assurances from Miss McDonald of her confidence in Evelyn's belief in him, nay, of her trust, and she even went so far as to say affection. So he went on building castles in the air, which melted and were renewed day after day, like the transient but unfailing splendor of the sunset.

There was a certain exaltation in this indulgence of his passion that stimulated his creative faculties, and, while his daily tasks kept him from being morbid, his imagination was free to play with the construction of a new story, to which his recent experience would give a certain solidity and a knowledge of the human struggle as it is.

He found himself observing character more closely than before, looking for it not so much in books as in the people he met. There was Murad Ault, for instance. How he would like to put him into a book! Of course it would not do to copy a model, raw, like that, but he fell to studying his traits, trying to see the common humanity exhibited in him. Was he a type or was he a freak? This was, however, too dangerous ground until he knew more of life.

The week's vacation allowed him by his house was passed in Rivervale. There, in the calmness of country life, and in the domestic atmosphere of affection which believed in him, he was far enough removed from the scene of the spectres of his imagination to see them in proper perspective, and there the lines of his new venture were laid down, to be worked out later on, he well knew, in the anxiety and the toil which should endue the skeleton with life. Rivervale, to be sure, was haunted by the remembrance of Evelyn; very often the familiar scenes filled him with an intolerable longing to see again the eyes that had inspired him, to hear the voice that was like no other in the world, to take the little hand that had often been so frankly placed in his, and to draw to him the form in which was embodied all the grace and tender witchery of womanhood. But the knowledge of what she expected of him was an inspiration, always present in his visions of her.

Something of his hopes and fears Alice divined, and he felt her sympathy, although she did not intrude upon his reticence by any questions. They talked about Evelyn, but it was Evelyn in Rivervale, not in Newport. In fact, the sensible girl could regard her cousin's passion as nothing more than a romance in a young author's life, and to her it was a sign of his security that he had projected a new story.

With instinctive perception of his need, she was ever turning his thoughts upon his literary career. Of course she and all the household seemed in a conspiracy to flatter and encourage the vanity of authorship. Was not all the village talking about the reputation he had conferred on it? Was it not proud of him? Indeed, it did imagine that the world outside of Rivervale was very much interested in him, and that he was already an author of distinction. The county Gazette had announced, as an important piece of news, that the author of *The Puritan Nun* was on a visit to his relatives, the Maitlands. This paragraph seemed to stand out in the paper as an almost immodest exposure of family life, read furtively at first, and not talked of, and yet every member of the family was conscious of an increase in the family importance. Aunt Patience discovered, from her outlook on the road, that summer visitors had a habit of driving or walking past the house and then turning back to look at it again.

So Philip was not only distinguished, but he had the power of conferring distinction. No one can envy a young author this first taste of fame, this home recognition. Whatever he may do hereafter, how much more substantial rewards he may attain, this first sweetness of incense to his ambition will never come to him again.

When Philip returned to town, the city was still a social desert, and he plunged into the work piled up on his desk, the never-ceasing accumulation of manuscripts, most of them shells which the workers have dredged up from the mud of the literary ocean, in which the eager publisher is always expecting to find pearls. Even Celia was still in the country, and Philip's hours spared from drudgery were given to the new story. His days, therefore, passed without incident, but not without pleasure. For whatever annoyances the great city may have usually, it is in the dull season—that is, the season of its summer out-of-doors animation—a most attractive and, even stimulating place for the man who has an absorbing pursuit, say a work in creative fiction. Undisturbed by social claims or public interests, the very noise and whirl of the gay metropolis seem to hem him in and protect the world of his own imagination.

The first disturbing event in this serenity was the report of the Mavick ball, already referred to, and the interpretation put upon it by the newspapers. In this light his plans seemed the merest moonshine. What became of his fallacious hope of waiting when events were driving on at this rate? What chance had he in such a social current? Would Evelyn be strong enough to stem it and to wait also? And to wait for what? For the indefinite and improbable event of a poor author, hardly yet recognized as an author, coming into position, into an income (for that was the weak point in his aspirations) that would not be laughed at by the millionaire. When he coolly considered it, was it reasonable to expect that Mr. and Mrs. Mavick would ever permit Evelyn to throw away the brilliant opportunity for their daughter which was to be the crowning end of their social ambition? The mere statement of the proposition was enough to overwhelm him.

That this would be the opinion of the world he could not doubt. He felt very much alone. It was not, however, in any resolve to make a confidante of Celia, but in an absolute need of companionship, that he went to see if she had returned. That he had any personal interest in this ball he did not intend to let Celia know, but talk with somebody he must. Of his deep affection for this friend of his boyhood, there was no doubt, nor of his knowledge of her devotion to his interests. Why, then, was he reserved with her upon the absorbing interest of his life?

Celia had returned, before the opening of the medical college, full of a new idea. This was nothing new in her restless nature; but if Philip had not been blinded by the common selfishness of his sex, he might have seen in the gladness of her welcome of him something more than mere sisterly affection.

"Are you real glad to see me, Phil? I thought you might be lonesome by this time in the deserted city."

"I was, horribly." He was still holding her hand. "Without a chance to talk with you or Alice, I am quite an orphan."

"Ah! You or Alice!" A shade of disappointment came over her face as she dropped his hand. But she rallied in a moment.

"Poor boy! You ought to have a guardian. What heroine of romance are you running after now?"

"In my new story?"

"Of course."

"She isn't very well defined in my mind yet. But a lovely girl, without anything peculiar, no education to speak of, or career, fascinating in her womanhood, such as might walk out of the Bible. Don't you think that would be a novelty? But it is the most difficult to do."

"Negative. That sort has gone out. Philip, why don't you take the heroine of the Mavick ball? There is a theme." She was watching him shrewdly, and saw the flush in his face as he hurriedly asked,

"Did you ever see her?"

"Only at a distance. But you must know her well enough for a literary purpose. The reports of the ball give you the setting of the drama."

"Did you read them?"

"I should say I did. Most amusing."

"Celia, don't you think it would be an ungentlemanly thing to take a social event like that?"

"Why, you must take life as it is. Of course you would change the details. You could lay the scene in Philadelphia. Nobody would suspect you then."

Philip shook his head. The conversation was not taking the turn that was congenial to him. The ball seemed to him a kind of maelstrom in which all his hopes were likely to be wrecked. And here was his old friend, the keenest-sighted woman he knew, looking upon it simply as literary material—a ridiculous social event. He had better change the subject.

"So the college is not open yet?"

"No, I came back because I had a new idea, and wanted time to look around. We haven't got quite the right idea in our city missions. They have another side. We need country missions."

"Aren't they that now?"

"No, I mean for the country. I've been about a good deal all this vacation, and my ideas are confirmed. The country towns and villages are full of young hoodlums and toughs, and all sorts of wickedness. They could be improved by sending city boys up there—yes, and girls of tender age. I don't mean the worst ones, not altogether. The young of a certain low class growing up in the country are even worse than the same class in the city, and they lack a civility of manner which is pretty sure to exist in a city-bred person."

"If the country is so bad, why send any more unregenerates into it?"

"How do you know that anybody is always to be unregenerate? But I wouldn't send thieves and imbeciles. I would select children of some capacity, whose circumstances are against them where they are, and I am sure they would make better material than a good deal of the young generation in country villages now. This is what I mean by a mission for the country. We have been bending all our efforts to the reformation of the cities. What we need to go at now is the reforming of the country."

"You have taken a big contract," said Philip, smiling at her enthusiasm. "Don't you intend to go on with medicine?"

"Certainly. At least far enough to be of some use in breaking up people's ignorance about their own bodies. Half the physical as well as moral misery comes from ignorance. Didn't I always tell you that I want to know? A good many of my associates pretend to be agnostics, neither believe or disbelieve in anything. The further I go the more I am convinced that there is a positive basis for things. They talk about the religion of humanity. I tell you, Philip, that humanity is pretty poor stuff to build a religion on."

The talk was wandering far away from what was in Philip's mind, and presently Celia perceived his want of interest.

"There, that is enough about myself. I want to know all about you, your visit to Rivervale, how the publishing house suits you, how the story is growing."

And Philip talked about himself, and the rumors in Wall Street, and Mr. Ault and his offer, and at last about the Mavicks—he could not help that—until he felt that Celia was what she had always been to him, and when he went away he held her hand and said what a dear, sweet friend she was.

And when he had gone, Celia sat a long time by the window, not seeing much of the hot street into which she looked, until there were tears in her eyes.

There was one man in New York who thoroughly enjoyed the summer. Murad Ault was, as we say of a man who is free to indulge his natural powers, in his element. There are ingenious people who think that if the ordering of nature had been left to them, they could maintain moral conditions, or at least restore a disturbed equilibrium, without violence, without calling in the aid of cyclones and of uncontrollable electric displays, in order to clear the air. There are people also who hold that the moral atmosphere of the world does not require the occasional intervention of Murad Ault.

The conceit is flattering to human nature, but it is not borne out by the performance of human nature in what is called the business world, which is in such intimate alliance with the social world in such great centres of conflict as London, New York, or Chicago. Mr. Ault is everywhere an integral and necessary part of the prevailing system—that is, the system by which the moral law is applied to business. The system, perhaps, cannot be defended, but it cannot be explained without Mr. Ault. We may argue that such a man is a disturber of trade, of legitimate operations, of the fairest speculations, but when we see how uniform he is as a phenomenon, we begin to be convinced that he is somehow indispensable to the system itself. We cannot exactly understand why a cyclone should pick up a peaceful village in Nebraska and deposit it in Kansas, where there, is already enough of that sort, but we cannot conceive of Wall Street continuing to be Wall Street unless it were now and then visited by a powerful adjuster like Mr. Ault.

The advent, then, of Murad Ault in New York was not a novelty, but a continuation of like phenomena in the Street, ever since the day when ingenious men discovered that the ability to guess correctly which of two sparrows, sold for a farthing, lighting on the spire of Trinity Church, will fly first, is an element in a successful and distinguished career. There was nothing peculiar in kind in his career, only in the force exhibited which lifted him among the few whose destructive energy the world condones and admires as Napoleonic. He may have been an instrument of Providence. When we do not know exactly what to do with an exceptional man who is disagreeable, we call him an Instrument of Providence.

It is not, then, in anything exceptional that we are interested in the operations of Murad Ault, but simply on account of his fortuitous connection with a great fortune which had its origin in very much the same cyclonic conditions that Mr. Ault reveled in. Those who know Wall Street best, by reason of sad experience, say that the presiding deity there is not the Chinese god, Luck, but the awful pagan deity, Nemesis. Alas! how many innocent persons suffer in order to get justice done in this world.

Those who have unimpaired memories may recollect the fortune amassed, many years previous to this history, by one Rodney Henderson, gathered and enlarged by means not indictable, but which illustrate the wide divergence between the criminal code and the moral law. This fortune, upon the sudden death of its creator, had been largely diverted from its charitable destination by fraud, by a crime that would have fallen within the code if it had been known. This fortune had been enjoyed by those who seized it for many years of great social success, rising into acknowledged respectability and distinction; and had become the basis of the chance of social elevation, which is dear to the hearts of so many excellent people, who are compelled to wander about in a chaotic society that has no hereditary titles. It was this fortune, the stake in such an ambition, or perhaps destined in a new possessor to a nobler one, that came in the way of Mr. Ault's extensive schemes.

It is not necessary to infer that Mr. Ault was originally actuated by any greed as to this special accumulation of property, or that he had any malevolence towards Mr. Mavick; but the eagerness of his personal pursuit led him into collisions. There were certain possessions of Mr. Mavick that were desirable for the rounding-out of his plans—these graspings were many of them understood by the public as necessary to the "development of a system"—and in this collision of interests and fierce strength a vindictive feeling was engendered, a feeling born, as has been hinted, by Mr. Mavick's attempt to trick his temporary ally in a certain operation, so that Mr. Ault's main purpose was to "down Mavick." This was no doubt an exaggeration concerning a man with so many domestic virtues as Mr. Ault, meaning by domestic virtues indulgence of his family; but a fight for place or property in politics or in the Street is pretty certain to take on a personal character.

We can understand now why Mr. Ault read the accounts of the Mavick ball with a grim smile. In speaking of it he used the vulgar term "splurge," a word especially offensive to the refined society in which the Mavicks had gained a foothold. And yet the word was on the lips of a great many men on the Street. The shifting application of sympathy is a very queer thing in this world. Mr. Ault was not a snob. Whatever else he was, he made few pretensions. In his first advent he had been resisted as an intruder and shunned as a vulgarian; but in time respect for his force and luck mingled with fear of his reckless talent, and in the course of events it began to be admitted that the rough diamond was being polished into one of the corner-stones of the great business edifice. At the time of this writing he did not altogether lack the sympathy of the Street, and an increasing number of people were not sorry to see Mr. Mavick get the worst of it in repeated trials of strength. And in each of these trials it became increasingly difficult for Mr. Mavick to obtain the assistance and the credit which are often indispensable to the strongest men in a panic.

The truth was that there were many men in the Street who were not sorry to see Mr. Mavick worried. They remembered perfectly well the omniscient snobbishness of Thomas Mavick when he held a position in the State Department at Washington and was at the same time a secret agent of Rodney Henderson. They did not change their opinion of him when, by his alliance with Mrs. Henderson, he stepped into control of Mr. Henderson's property and obtained the mission to Rome; but later on he had been accepted as one of the powers in the financial world. There were a few of the old stagers who never trusted him. Uncle Jerry Hollowell, for instance, used to say, "Mavick is smart, smart as lightnin'; I guess he'll make ducks and drakes of the Henderson property." They are very superficial observers of Wall Street who think that character does not tell there. Mr. Mavick may have realized that when in his straits he looked around for assistance.

The history of this panic summer in New York would not be worthy the reader's attention were not the fortunes of some of his acquaintances involved in it. It was not more intense than the usual panics, but it

lasted longer on account of the complications with uncertain government policy, and it produced stagnation in social as well as business circles. So quiet a place as Rivervale felt it in the diminution of city visitors, and the great resorts showed it in increased civility to the small number of guests.

The summer at Newport, which had not been distinguished by many great events, was drawing to a close—that is, it was in the period when those who really loved the charming promenade which is so loved of the sea began to enjoy themselves, and those who indulge in the pleasures of hope, based upon a comfortable matrimonial establishment, are reckoning up the results of the campaign.

Mrs. Mavick, according to her own assertion, was one of those who enjoy nature. "Nature and a few friends, not too many, only those whom one trusts and who are companionable," she had said to Lord Montague.

This young gentleman had found the pursuit of courtship in America attended by a good many incidental social luxuries. It had been a wise policy to impress him with the charm of a society which has unlimited millions to make it attractive. Even to an impecunious noble there is a charm in this, although the society itself has some of the lingering conditions of its money origin. But since the great display of the ball, and the legitimate inferences drawn from it by the press and the fashionable world, Mrs. Mavick had endeavored to surround her intended son-in-law with the toils of domestic peace.

He must be made to feel at home. And this she did. Mrs. Mavick was as admirable in the role of a domestic woman as of a woman of the world. The simple pleasures, the confidences, the intimacies of home life surrounded him. His own mother, the aged duchess, could not have looked upon him with more affection, and possibly not have pampered him with so many luxuries. There was only one thing wanting to make this home complete. In conventional Europe the contracting parties are not the signers of the marriage contract. In the United States the parties most interested take the initiative in making the contract.

Here lay the difficulty of the situation, a situation that puzzled Lord Montague and enraged Mrs. Mavick. Evelyn maintained as much indifference to the domestic as to the worldly situation. Her mother thought her lifeless and insensible; she even went so far as to call her unwomanly in her indifference to what any other woman would regard as an opportunity for a brilliant career.

Lifeless indeed she was, poor child; physically languid and scarcely able to drag herself through the daily demands upon her strength. Her mother made it a reproach that she was so pale and unresponsive. Apparently she did not resist, she did everything she was told to do. She passed, indeed, hours with Lord Montague, occasions contrived when she was left alone in the house with him, and she made heroic efforts to be interested, to find something in his mind that was in sympathy with her own thoughts. With a woman's ready instinct she avoided committing herself to his renewed proposals, sometimes covert, sometimes direct, but the struggle tired her. At the end of all such interviews she had to meet her mother, who, with a smile of hope and encouragement, always said, "Well, I suppose you and Lord Montague have made it up," and then to encounter the contempt expressed for her as a "goose."

She was helpless in such toils. At times she felt actually abandoned of any human aid, and in moods of despondency almost resolved to give up the struggle. In the eyes of the world it was a good match, it would make her mother happy, no doubt her father also; and was it not her duty to put aside her repugnance, and go with the current of the social and family forces that seemed irresistible?

Few people can resist doing what is universally expected of them. This invisible pressure is more difficult to stand against than individual tyranny. There are no tragedies in our modern life so pathetic as the ossification of women's hearts when love is crushed under the compulsion of social and caste requirements. Everybody expected that Evelyn would accept Lord Montague. It could be said that for her own reputation the situation required this consummation of the intimacy of the season. And the mother did not hesitate to put this interpretation upon the events which were her own creation.

But with such a character as Evelyn, who was a constant puzzle to her mother, this argument had very little weight compared with her own sense of duty to her parents. Her somewhat ideal education made worldly advantages of little force in her mind, and love the one priceless possession of a woman's heart which could not be bartered. And yet might there not be an element of selfishness in this—might not its sacrifice be a family duty? Mrs. Mavick having found this weak spot in her daughter's armor, played upon it with all her sweet persuasive skill and show of tenderness.

"Of course, dear," she said, "you know what would make me happy. But I do not want you to yield to my selfishness or even to your father's ambition to see his only child in an exalted position in life. I can bear the disappointment. I have had to bear many. But it is your own happiness I am thinking of. And I think also of the cruel blow your refusal will inflict upon a man whose heart is bound up in you."

"But I don't love him." The girl was very pale, and she spoke with an air of weariness, but still with a sort of dogged persistence.

"You will in time. A young girl never knows her own heart, any more than she knows the world."

"Mother, that isn't all. It would be a sin to him to pretend to give him a heart that was not his. I can't; I can't."

"My dear child, that is his affair. He is willing to trust you, and to win your love. When we act from a sense of duty the way is apt to open to us. I have never told you of my own earlier experience. I was not so young as you are when I married Mr. Henderson, but I had not been without the fancies and experiences of a young girl. I might have yielded to one of them but for family reasons. My father had lost his fortune and had died, disappointed and broken down. My mother, a lovely woman, was not strong, was not capable of fighting the world alone, and she depended upon me, for in those days I had plenty of courage and spirit. Mr. Henderson was a widower whom we had known as a friend before the death of his accomplished wife. In his lonesomeness he turned to me. In our friendlessness I turned to him. Did I love him? I esteemed him, I respected him, I trusted him, that was all. He did not ask more than that. And what a happy life we had! I shared in all his great plans. And when in the midst of his career, with such large ideas of public service and philanthropy, he was stricken down, he left to me, in the confidence of his love, all that fortune which is some day to be yours." Mrs. Mavick put her handkerchief to her eyes. "Ah, well, our destiny is not in our hands.

Heaven raised up for me another protector, another friend. Perhaps some of my youthful illusions have vanished, but should I have been happier if I had indulged them? I know your dear father does not think so."

"Mother," cried Evelyn, deeply moved by this unprecedented confidence, "I cannot bear to see you suffer on my account. But must not every one decide for herself what is right before God?"

At this inopportune appeal to a higher power Mrs. Mavick had some difficulty in restraining her surprise and indignation at what she considered her child's stubbornness. But she conquered the inclination, and simply looked sad and appealing when she said:

"Yes, yes, you must decide for yourself. You must not consider your mother as I did mine."

This cruel remark cut the girl to the heart. The world seemed to whirl around her, right and wrong and duty in a confused maze. Was she, then, such a monster of ingratitude? She half rose to throw herself at her mother's feet, upon her mother's mercy. And at the moment it was not her reason but her heart that saved her. In the moral confusion rose the image of Philip. Suppose she should gain the whole world and lose him! And it was love, simple, trusting love, that put courage into her sinking heart.

"Mother, it is very hard. I love you; I could die for you. I am so forlorn. But I cannot, I dare not, do such a thing, such a dreadful thing!"

She spoke brokenly, excitedly, she shuddered as she said the last words, and her eyes were full of tears as she bent down and kissed her mother.

When she had gone, Mrs. Mavick sat long in her chair, motionless between bewilderment and rage. In her heart she was saying, "The obstinate, foolish girl must be brought to reason!"

A servant entered with a telegram. Mrs. Mavick took it, and held it listlessly while the servant waited. "You can sign." After the door closed—she was still thinking of Evelyn—she waited a moment before she tore the envelope, and with no eagerness unfolded the official yellow paper. And then she read:

"I have made an assignment. T. M."

A half-hour afterwards when a maid entered the room she found Mrs. Mavick still seated in the armchair, her hands powerless at her side, her eyes staring into space, her face haggard and old.

XXV

The action of Thomas Mavick in giving up the fight was as unexpected in New York as it was in Newport. It was a shock even to those familiar with the Street. It was known that he was in trouble, but he had been in trouble before. It was known that there had been sacrifices, efforts at extension, efforts at compromise, but the general public fancied that the Mavick fortune had a core too solid to be washed away by any storm. Only a very few people knew—such old hands as Uncle Jerry Hollowell, and such inquisitive bandits as Murad Ault—that the house of Mavick was a house of cards, and that it might go down when the belief was destroyed that it was of granite.

The failure was not an ordinary sensation, and, according to the excellent practices and differing humors of the daily newspapers, it was made the most of, until the time came for the heavy weeklies to handle it in its moral aspects as an illustration of modern civilization. On the first morning there was substantial unanimity in assuming the totality of the disaster, and the most ingenious artists in headlines vied with each other in startling effects: "Crash in Wall Street." "Mavick Runs Up the White Flag." "King of Wall Street Called Down." "Ault Takes the Pot." "Dangerous to Dukes." "Mavick Bankrupt." "The House of Mavick a Ruin." "Dukes and Drakes." "The Sea Goes Over Him."

This, however, was only the beginning. The sensation must be prolonged. The next day there were attenuating circumstances.

It might be only a temporary embarrassment. The assets were vastly greater than the liabilities. There was talk in financial circles of an adjustment. With time the house could go on. The next day it was made a reproach to the house that such deceptive hopes were put upon the public. Journalistic enterprise had discovered that the extent of the liabilities had been concealed. This attempt to deceive the public, these defenders of the public interest would expose. The next day the wind blew from another direction. The alarmists were rebuked. The creditors were disposed to be lenient. Doubtful securities were likely to realize more than was expected. The assignees were sharply scored for not taking the newspapers into their confidence.

And so for ten days the failure went on in the newspapers, backward and forward, now hopeless, now relieved, now sunk in endless complications, and fallen into the hands of the lawyers who could be trusted with the most equitable distribution of the property involved, until the reading public were glad to turn, with the same eager zest, to the case of the actress who was found dead in a hotel in Jersey City. She was attended only by her pet poodle, in whose collar was embedded a jewel of great price. This jewel was traced to a New York establishment, whence it had disappeared under circumstances that pointed to the criminality of a scion of a well-known family—an exposure which would shake society to its foundations.

Meantime affairs took their usual course. The downfall of Mavick is too well known in the Street to need explanation here. For a time it was hoped that sacrifices of great interests would leave a modest little fortune, but under the pressure of liquidation these hopes melted away. If anything could be saved it would be only comparatively valueless securities and embarrassed bits of property that usually are only a delusion and a source of infinite worry to a bankrupt. It seemed incredible that such a vast fortune should so disappear; but there were wise men who, so they declared, had always predicted this disaster. For some years after Henderson's death the fortune had appeared to expand marvelously. It was, however, expanded,

and not solidified. It had been risked in many gigantic speculations (such as the Argentine), and it had been liable to collapse at any time if its central credit was doubted. Mavick's combinations were splendidly conceived, but he lacked the power of coordination. And great as were his admitted abilities, he had never inspired confidence.

"And, besides," said Uncle Jerry, philosophizing about it in his homely way, "there's that little devil of a Carmen, the most fascinating woman I ever knew—it would take the Bank of England to run her. Why, when I see that Golden House going up, I said I'd give 'em five years to balloon in it. I was mistaken. They've floated it about eighteen. Some folks are lucky—up to a certain point."

Grave history gives but a paragraph to a personal celebrity of this sort. When a ship goes down in a tempest off the New England coast, there is a brief period of public shock and sympathy, and then the world passes on to other accidents and pleasures; but for months relics of the great vessel float ashore on lonely headlands or are cast up on sandy beaches, and for years, in many a home made forlorn by the shipwreck, are aching hearts and an ever-present calamity.

The disaster of the house of Mavick was not accepted without a struggle, lasting long after the public interest in the spectacle had abated—a struggle to save the ship and then to pick up some debris from the great wreck. The most pathetic sight in the business world is that of a bankrupt, old and broken, pursuing with always deluded expectations the remnants of his fortune, striving to make new combinations, involved in lawsuits, alternately despairing, alternately hopeful in the chaos of his affairs. This was the fate of Thomas Mavick.

The news was all over Newport in a few hours after it had stricken down Mrs. Mavick. The newspaper details the morning after were read with that eager interest that the misfortunes of neighbors always excite. After her first stupor, Mrs. Mavick refused to believe it. It could not be, and her spirit of resistance rose with the frantic messages she sent to her husband. Alas, the cold fact of the assignment remained. Still her courage was not quite beaten down. The suspension could only be temporary. She would not have it otherwise. Two days she showed herself as usual in Newport, and carried herself bravely. The sympathy looked or expressed was wormwood to her, but she met it with a reassuring smile. To be sure it was very hard to bear such a blow, the result of a stock intrigue, but it would soon pass over—it was a temporary embarrassment—that she said everywhere.

She had not, however, told the news to Evelyn with any such smiling confidence. There was still rage in her heart against her daughter, as if her obstinacy had some connection with this blow of fate, and she did not soften the announcement. She expected to sting her, and she did astonish and she did grieve her, for the breaking-up of her world could not do otherwise; but it was for her mother and not for herself that Evelyn showed emotion. If their fortune was gone, then the obstacle was removed that separated her from Philip. The world well lost! This flashed through her mind before she had fairly grasped the extent of the fatality, and it blunted her appreciation of it as an unmixed ruin.

"Poor mamma!" was what she said.

"Poor me!" cried Mrs. Mavick, looking with amazement at her daughter, "don't you understand that our life is all ruined?"

"Yes, that part of it, but we are left. It might have been so much worse."

"Worse? You have no more feeling than a chip. You are a beggar! That is all. What do you mean by worse?"

"If father had done anything dishonorable!" suggested the girl, timidly, a little scared by her mother's outburst.

"Evelyn, you are a fool!"

And perhaps she was, with such preposterous notions of what is really valuable in life. There could be no doubt of it from Mrs. Mavick's point of view.

If Evelyn's conduct exasperated her, the non-appearance of Lord Montague after the publication of the news seriously alarmed her. No doubt he was shocked, but she could explain it to him, and perhaps he was too much interested in Evelyn to be thrown off by this misfortune. The third day she wrote him a note, a familiar, almost affectionate note, chiding him for deserting them in their trouble. She assured him that the news was greatly exaggerated, the embarrassment was only temporary, such things were always happening in the Street. "You know," she said, playfully, "it is our American way to be up in a minute when we seem to be down." She asked him to call, for she had something that was important to tell him, and, besides, she needed his counsel as a friend of the house. The note was despatched by a messenger.

In an hour it was returned, unopened, with a verbal message from his host, saying that Lord Montague had received important news from London, and that he had left town the day before.

"Coward!" muttered the enraged woman, with closed teeth. "Men are all cowards, put them to the test."

The energetic woman judged from a too narrow basis. Because Mavick was weak—and she had always secretly despised him for yielding to her—weak as compared with her own indomitable spirit, she generalized wildly. Her opinion of men would have been modified if she had come in contact with Murad Ault.

To one man in New York besides Mr. Ault the failure did not seem a personal calamity. When Philip saw in the steamer departures the name of Lord Montague, his spirits rose in spite of the thought that the heiress was no longer an heiress. The sky lifted, there was a promise of fair weather, the storm, for him, had indeed cleared the air.

"Dear Philip," wrote Miss McDonald, "it is really dreadful news, but I cannot be so very downhearted. It is the least of calamities that could happen to my dear child. Didn't I tell you that it is always darkest just before the dawn?"

And Philip needed the hope of the dawn. Trial is good for any one, but hopeless suffering for none. Philip had not been without hope, but it was a visionary indulgence, against all evidence. It was the hope of youth, not of reason. He stuck to his business doggedly, he stuck to his writing doggedly, but over all his mind was a cloud, an oppression not favorable to creative effort—that is, creative effort sweet and not cynical, sunny and not morbid.

And yet, who shall say that this very experience, this oppression of circumstance, was not the thing needed for the development of the best that was in him? Thrown back upon himself and denied an airy soaring in the heights of a prosperous fancy, he had come to know himself and his limitations. And in the year he had learned a great deal about his art. For one thing he had come to the ground. He was looking more at life as it is. His experience at the publishers had taught him one important truth, and that is that a big subject does not make a big writer, that all that any mind can contribute to the general thought of the world in literature is what is in itself, and if there is nothing in himself it is vain for the writer to go far afield for a theme. He had seen the young artists, fretting for want of subjects, wandering the world over in search of an object fitted to their genius, setting up their easels in front of the marvels of nature and of art, in the expectation that genius would descend upon them.

If they could find something big enough to paint! And he had seen, in exhibition after exhibition, that the artist who cannot paint a rail-fence cannot paint a pyramid. A man does not become a good rider by mounting an elephant; ten to one a donkey would suit him better. Philip had begun to see that the life around him had elements enough of the comic and the tragic to give full play to all his powers.

He began to observe human beings as he had never done before. There were only two questions, and they are at the bottom of all creative literature—could he see them, could he make others see them?

This was all as true before the Mavick failure as after; but, before, what was the use of effort? Now there was every inducement to effort. Ambition to succeed had taken on him the hold of necessity. And with a free mind as to the obstacles that lay between him and the realization of the great dream of his life, the winning of the one woman who could make his life complete, Philip set to work with an earnestness and a clearness of vision that had never been given him before.

In the wreck of the Mavick estate, in its distribution, there are one or two things of interest to the general reader. One of these was the fate of the Golden House, as it was called. Mrs. Mavick had hurried back to her town house, determined to save it at all hazard. The impossibility of this was, however, soon apparent even to her intrepid spirit. She would either sacrifice all else to save it, or—dark thoughts of ending it in a conflagration entered her mind. This was only her first temper. But to keep the house without a vast fortune to sustain it was an impossibility, and, as it was the most conspicuous of Mavick's visible possessions, perhaps the surrender of it, which she could not prevent, would save certain odds and ends here and there. Whether she liked it or not, the woman learned for once that her will had little to do with the course of events.

Its destination was gall and wormwood both to Carmen and her husband. For it fell into the hands of Murad Ault. He coveted it as the most striking symbol of the position he had conquered in the metropolis. Its semi-barbaric splendor appealed also to his passion for display. And it was notable that the taste of the rude lad of poverty—this uncultivated offspring of a wandering gypsy and herb-collector—perhaps she had ancient and noble blood in her veins—should be the same for material ostentation and luxury as that of the cultivated, fastidious Mavick and his worldly-minded wife. So persistent is the instinct of barbarism in our modern civilization.

When Ault told his wife what he had done, that sweet, domestic, and sensible woman was very far from being elated.

"I am almost sorry," she said.

"Sorry for what?" asked Mr. Ault, gently, but greatly surprised.

"For the Mavicks. I don't mean for Mrs. Mavick—I hear she is a worldly and revengeful woman—but for the girl. It must be dreadful to turn her out of all the surroundings of her happy life. And I hear she is as good as she is lovely. Think what it would be for our own girls."

"But it can't be helped," said Ault, persuasively. "The house had to be sold, and it makes no difference who has it, so far as the girl is concerned."

"And don't you fear a little for our own girls, launching out that way?"

"You are afraid they will get lost in that big house?" And Mr. Ault laughed. "It isn't a bit too big or too good for them. At any rate, my dear, in they go, and you must get ready to move. The house will be empty in a week."

"Murad," and Mrs. Ault spoke as if she were not thinking of the change for herself, "there is one thing I wish you would do for me, dear."

"What is that?"

"Go to Mr. Mavick, or to Mrs. Mavick, or the assignees or whoever, and have the daughter—yes, and her mother—free to take away anything they want, anything dear to them by long association. Will you?"

"I don't see how. Mavick wouldn't do it for us, and I guess he is too proud to accept anything from me. I don't owe him anything. And then the property is in the assignment. Whatever is there I bought with the house."

"I should be so much happier if you could do something about it."

"Well, it don't matter much. I guess the assignees can make Mrs. Mavick believe easy enough that certain things belong to her. But I would not do it for any other living being but you."

"By-the-way," he added, "there is another bit of property that I didn't take, the Newport palace."

"I should have dreaded that more than the other."

"So I thought. And I have another plan. It's long been in my mind, and we will carry it out next summer. There is a little plateau on the side of the East Mountain in Rivervale, where there used to stand a shack of a cabin, with a wild sort of garden-patch about it, a tumble-down root fence, all in the midst of brush and briars. Lord, what a habitation it was! But such a view—rivers, mountains, meadows, and orchards in the distance! That is where I lived with my mother. What a life! I hated everything, everybody but her."

Mr. Ault paused, his strong, dark face working with passion, as the memory of his outlawed boyhood revived. Is it possible that this pirate of the Street had a bit of sentiment at the bottom of his heart? After a

moment he continued:

"That was the spot to which my mother took me when I was knee-high. I've bought it, bought the whole hillside. Next summer we will put up a house there, not a very big house, just a long, low sort of a Moorish pavilion, the architect calls it. I wish she could see it."

Mrs. Ault rose, with tears in her gentle eyes, stood by her husband's chair a moment, ran her fingers through his heavy black locks, bent down and kissed him, and went away without a word.

There was another bit of property that was not included in the wreck. It belonged to Mrs. Mavick. This was a little house in Irving Place, in which Carmen Eschelle lived with her mother, in the days before the death of Henderson's first wife, not very happy days for that wife. Carmen had a fancy for keeping it after her marriage. Not from any sentiment, she told Mr. Mavick on the occasion of her second marriage, oh, no, but somehow it seemed to her, in all her vast possessions left to her by Henderson, the only real estate she had. It was the only thing that had not passed into the absolute possession and control of Mavick. The great town house, with all the rest, stood in Mavick's name. What secret influence had he over her that made her submit to such a foolish surrender?

It was in this little house that the reduced family stowed itself after the downfall. The little house, had it been sentient, would have been astonished at the entrance into it of the furniture and the remnants of luxurious living that Mrs. Mavick was persuaded belonged to her personally. These reminders of former days were, after all, a mockery in the narrow quarters and the pinched economy of the bankrupt. Yet they were, for a time useful in preserving to Mrs. Mavick a measure of self-respect, her self-respect having always been based upon what she had and not what she was. In truth, the change of lot was harder for Mrs. Mavick than for Evelyn, since the world in which the latter lived had not been destroyed. She still had her books, she still had a great love in her heart, and hope, almost now a sure hope, that her love would blossom into a great happiness.

But where was Philip? In all this time why did he make no sign? At moments a great fear came over her. She was so ignorant of life. Could he know what misery she was in, the daily witness of her father's broken condition, of her mother's uncertain temper?

XXVI

Is justice done in this world only by a succession of injustices? Is there any law that a wrong must right a wrong? Did it rebuke the means by which the vast fortune of Henderson was accumulated, that it was defeated of any good use by the fraud of his wife? Was her action punished by the same unscrupulous tactics of the Street that originally made the fortune? And Ault? Would a stronger pirate arise in time to despoil him, and so act as the Nemesis of all violation of the law of honest relations between men?

The comfort is, in all this struggle of the evil powers, masked as justice, that the Almighty Ruler of the world does not forget his own, and shows them a smiling face in the midst of disaster. There is no mystery in this. For the noble part in man cannot be touched in its integrity by such vulgar disasters as we are considering. In those days when Evelyn saw dissolving about her the material splendors of her old life, while the Golden House was being dismantled, and she was taking sad leave of the scenes of her girlhood, so vivid with memory of affection and of intellectual activity, they seemed only the shell, the casting-off of which gave her freedom. The sun never shone brighter, there was never such singing in her heart, as on the morning when she was free to go to Mrs. Van Cortlandt's and throw herself into the arms of her dear governess and talk of Philip.

Why not? Perhaps she had not that kind of maidenly shyness, sometimes called conventional propriety, sometimes described as 'mauvaise honte' which a woman of the world would have shown. The impulses of her heart followed as direct lines as the reasoning of her brain. Was it due to her peculiar education, education only in the noblest ideas of the race, that she should be a sort of reversion, in our complicated life, to the type of woman in the old societies (we like to believe there was such a type as the poets love, the Nausicaas), who were single-minded, as frank to avow affection as opinion?

"Have you seen him?" she asked.

"No, but he has written."

"And you think he—" the girl had her arms around her friend's neck again, and concealed her blushing face, "don't make me say it, McDonald."

"Yes, dear, I am sure—I know he does."

There was a little quiver in her form, but it was not of agony; then she put her hands on the shoulders of her governess, and, looking in her eyes, said:

"When you did see him, how did he look—how did he look?—pretty sad?"

"How could he help it?"

"The dear! But was he well?"

"Splendidly, so he said. Like his old self."

"Tell me," said the girl.

And Miss McDonald went into delightful details, how he looked, how he walked, how his voice sounded, how he talked, how melancholy he was, and how full of determination he was, his eyes were so kindly, and his smile was never so sweet as now when there was sadness in it.

"It is very long since," drearily murmured the girl. And then she continued, partly to herself, partly to Miss McDonald: "He will come now, can't he? Not to that house. Never would I wish him to set foot in it. But he is

not forbidden to come to the place where we are going. Soon, you think? Perhaps you might hint—oh no, not from me—just your idea. Wouldn't it be natural, after our misfortune? Perhaps mamma would feel differently after what has happened. Oh, that Montague! that horrid little man! I think—I think I shall receive him coolly at first, just to see."

But it was not immediately that the chance for a guileless woman to show her coolness to her lover was to occur. This postponement was not due to the coolness or to the good sense of Philip. When the catastrophe came, his first impulse was that of a fireman who plunges into a burning building to rescue the imperiled inmates. He pictured in his mind a certain nobility of action in going forward to the unfortunate family with his sympathy, and appearing to them in the heroic attitude of a man whose love has no alloy of self-interest. They should speedily understand that it was not the heiress, but the woman, with whom he was in love.

But Miss McDonald understood human nature better than that, at least the nature of Mrs. Mavick. People of her temperament, humiliated and enraged, are best left alone. The fierceness with which she would have turned upon any of her society friends who should have presumed to offer her condolence, however sweetly the condescension were concealed, would have been vented without mercy upon the man whose presence would have reminded her of her foolish rudeness to him, and of the bitter failure of her schemes for her daughter. "Wait, wait," said the good counselor, "until the turmoil has subsided, and the hard pressure of circumstances compels her to look at things in their natural relations. She is too sore now in—the wreck of all her hopes."

But, indeed, her hopes were not all surrendered in a moment. She had more spirit than her husband in their calamity. She was, in fact, a born gambler; she had the qualities of her temperament, and would not believe that courage and luck could not retrieve, at least partially, their fortune. It seemed incredible in the Street that the widow of Henderson should have given over her property so completely to her second husband, and it was a surprise to find that there was very little of value that the assignment of Mavick did not carry with it. The Street did not know the guilty secret between Mavick and his wife that made them cowards to each other. Nor did it understand that Carmen was the more venturesome gambler of the two, and that gradually, for the success of promising schemes, she had thrown one thing after another into the common speculation, until practically all the property stood in Mavick's name. Was she a fool in this, as so many women are about their separate property, or was she cheated?

The palace on Fifth Avenue was not even in her name. When she realized that, there was a scene—but this is not a history of the quarrels of Carmen and her husband after the break-down.

The reader would not be interested—the public of the time were not—in the adjustment of Mavick and his wife to their new conditions. The broken-down, defeated bankrupt is no novelty in Wall Street, the man struggling to keep his foothold in the business of the Street, and descending lower and lower in the scale. The shrewd curbstone broker may climb to a seat in the Stock Exchange; quite as often a lord of the Board, a commander of millions, may be reduced to the seedy watcher of the bulletin-board in a bucket-shop.

At first, in the excitement and the confusion, amid the debris of so much possible wealth, Mavick kept a sort of position, and did not immediately feel the pinch of vulgar poverty. But the day came when all illusion vanished, and it was a question of providing from day to day for the small requirements of the house in Irving Place.

It was not a cheerful household; reproaches are hard to bear when physical energy is wanting to resist them. Mavick had visibly aged during the year. It was only in his office that he maintained anything of the spruce appearance and 'sang froid' which had distinguished the diplomatist and the young adventurer. At home he had fallen into the slovenliness that marks a disappointed old age. Was Mrs. Mavick peevish and unreasonable? Very likely. And had she not reason to be? Was she, as a woman, any more likely to be reconciled to her fate when her mirror told her, with pitiless reflection, that she was an old woman?

Philip waited. Under the circumstances would not both Philip and Evelyn have been justified in disregarding the prohibition that forbade their meeting or even writing to each other? It may be a nice question, but it did not seem so to these two, who did not juggle with their consciences. Philip had given his word. Evelyn would tolerate no concealments; she was just that simple-minded in her filial notions.

The girl, however, had one comfort, and that was the knowledge of Philip through Miss McDonald, whom she saw frequently, and to whom even Mrs. Mavick was in a manner reconciled. She was often in the little house in Irving Place. There was nothing in her manner to remind Mrs. Mavick that she had done her a great wrong, and her cheerfulness and good sense made her presence and talk a relief from the monotony of the defeated woman's life.

It came about, therefore, that one day Philip made his way down into the city to seek an interview with Mr. Mavick. He found him, after some inquiry, in a barren little office, occupying one of the rented desks with three or four habitues of the Street, one of them an old man like himself, the others mere lads who did not intend to remain long in such cramped quarters.

Mr. Mavick arose when his visitor stood at his desk, buttoned up his frock-coat, and extended his hand with a show of business cordiality, and motioned him to a chair. Philip was greatly shocked at the change in Mr. Mavick's appearance.

"I beg your pardon," he said, "for disturbing you in business hours."

"No disturbance," he answered, with something of the old cynical smile on his lips.

"Long ago I called to see you on the errand I have now, but you were not in town. It was, Mr. Mavick," and Philip hesitated and looked down, "in regard to your daughter."

"Ah, I did not hear of it."

"No? Well, Mr. Mavick, I was pretty presumptuous, for I had no foothold in the city, except a law clerkship."

"I remember—Hunt, Sharp & Tweedle; why didn't you keep it?"

"I wasn't fitted for the law."

"Oh, literature? Does literature pay?"

"Not in itself, not for many," and Philip forced a laugh. "But it led to a situation in a first-rate publishing house—an apprenticeship that has now given me a position that seems to be permanent, with prospects beyond, and a very fair salary. It would not seem much to you, Mr. Mavick," and Philip tried to laugh again.

"I don't know," replied Mr. Mavick. "If a fellow has any sort of salary these times, I should advise him to hold on to it. By-the-way, Mr. Burnett, Hunt's a Republican, isn't he?"

"He was," replied Philip, "the last I knew."

"Do you happen to know whether he knows Bilbrick, the present Collector?"

"Mr. Bilbrick used to be a client of his."

"Just so. I think I'll see Hunt. A salary isn't a bad thing for a—for a man who has retired pretty much from business. But you were saying, Mr. Burnett?"

"I was going to say, Mr. Mavick, that there was a little something more than my salary that I can count on pretty regularly now from the magazines, and I have had another story, a novel, accepted, and—you won't think me vain—the publisher says it will go; if it doesn't have a big sale he will—"

"Make it up to you?"

"Not exactly," and Philip laughed; "he will be greatly mistaken."

"I suppose it is a kind of lottery, like most things. The publishers have to take risks. The only harm I wish them is that they were compelled to read all the stuff they try to make us read. Ah, well. Mr. Burnett, I hope you have made a hit. It is pretty much the same thing in our business. The publisher bulls his own book and bears the other fellow's. Is it a New York story?"

"Partly; things come to a focus here, you know."

"I could give you points. It's a devil of a place. I guess the novelists are too near to see the romance of it. When I was in Rome I amused myself by diving into the mediaeval records. Steel and poison were the weapons then. We have a different method now, but it comes to the same thing, and we say we are more civilized. I think our way is more devilishly dramatic than the old brute fashion. Yes, I could give you points."

"I should be greatly obliged," said Philip, seeing the way to bring the conversation back to its starting point; "your wide experience of life—if you had leisure at home some time."

"Oh," replied Mavick, with more good-humor in his laugh than he had shown before, "you needn't beat about the bush. Have you seen Evelyn?"

"No, not since that dinner at the Van Cortlandts'."

"Huh! for myself, I should be pleased to see you any time, Mr. Burnett. Mrs. Mavick hasn't felt like seeing anybody lately. But I'll see, I'll see."

The two men rose and shook hands, as men shake hands when they have an understanding.

"I'm glad you are doing well," Mr. Mavick added; "your life is before you, mine is behind me; that makes a heap of difference."

Within a few days Philip received a note from Mrs. Mavick—not an effusive note, not an explanatory note, not an apologetic note, simply a note as if nothing unusual had happened—if Mr. Burnett had leisure, would he drop in at five o'clock in Irving Place for a cup of tea?

Not one minute by his watch after the hour named, Philip rang the bell and was shown into a little parlor at the front. There was only one person in the room, a lady in exquisite toilet, who rose rather languidly to meet him, exactly as if the visitor were accustomed to drop in to tea at that hour.

Philip hesitated a moment near the door, embarrassed by a mortifying recollection of his last interview with Mrs. Mavick, and in that moment he saw her face. Heavens, what a change! And yet it was a smiling face.

There is a portrait of Carmen by a foreign artist, who was years ago the temporary fashion in New York, painted the year after her second marriage and her return from Rome, which excited much comment at the time. Philip had seen it in more than one portrait exhibition.

Its technical excellence was considerable. The artist had evidently intended to represent a woman piquant and fascinating, if not strictly beautiful. Many persons said it was lovely. Other critics said that, whether the artist intended it or not, he had revealed the real character of the subject. There was something sinister in its beauty. One artist, who was out of fashion as an idealist, said, of course privately, that the more he looked at it the more hideous it became to him—like one of Blake's objective portraits of a "soul"—the naked soul of an evil woman showing through the mask of all her feminine fascinations—the possible hell, so he put it, under a woman's charm.

It was this in the portrait that Philip saw in the face smiling a welcome—like an old, sweetly smiling Lalage—from which had passed away youth and the sustaining consciousness of wealth and of a place in the great world. The smile was no longer sweet, though the words from the lips were honeyed.

"It is very good of you to drop in in this way, Mr. Burnett," she said, as she gave him her hand. "It is very quiet down here."

"It is to me the pleasantest part of the city."

"You think so now. I thought so once," and there was a note of sadness in her voice. "But it isn't New York. It is a place for the people who are left."

"But it has associations."

"Yes, I know. We pretend that it is more aristocratic. That means the rents are lower. It is a place for youth to begin and for age to end. We seem to go round in a circle. Mr. Mavick began in the service of the government, now he has entered it again—ah, you did not know?—a place in the Custom-House. He says it is easier to collect other people's revenues than your own. Do you know, Mr. Burnett, I do not see much use in collecting revenues anyway—so far as New York is concerned the people get little good of them. Look out there at that cloud of dust in the street."

Mrs. Mavick rambled on in the whimsical, cynical fashion of old ladies when they cease to have any active

responsibility in life and become spectators of it. Their remaining enjoyment is the indulgence of frank speech.

"But I thought," Philip interrupted, "that this part of the town was specially New York."

"New York!" cried Carmen, with animation. "The New York of the newspapers, of the country imagination; the New York as it is known in Paris is in Wall Street and in the palaces up-town. Who are the kings of Wall Street, and who build the palaces up-town? They say that there are no Athenians in Athens, and no Romans in Rome. How many New-Yorkers are there in New York? Do New-Yorkers control the capital, rule the politics, build the palaces, direct the newspapers, furnish the entertainment, manufacture the literature, set the pace in society? Even the socialists and mobocrats are not native. Successive invaders, as in Rome, overrun and occupy the town.

"No, Mr. Burnett, I have left the existing New York. How queer it is to think about it. My first husband was from New Hampshire. My second husband was from Illinois. And there is your Murad Ault. The Lord knows where he came from.

"Talk about the barbarians occupying Rome! Look at that Ault in a palace! Who was that emperor—Caligula?—I am like the young lady from a finishing-school who said she never could remember which came first in history, Greece or Rome—who stabled his horses with stalls and mangers of gold? The Aults stable themselves that way. Ah, me! Let me give you a cup of tea. Even that is English."

"It's an innocent pastime," she continued, as Philip stirred his tea, in perplexity as to how he should begin to say what he had to say—"you won't object if I light a cigarette? One ought to retain at least one bad habit to keep from spiritual pride. Tea is an excuse for this. I don't think it a bad habit, though some people say that civilization is only exchanging one bad habit for another. Everything changes."

"I don't think I have changed, Mrs. Mavick," said Philip, with earnestness.

"No? But you will. I have known lots of people who said they never would change. They all did. No, you need not protest. I believe in you now, or I should not be drinking tea with you. But you must be tired of an old woman's gossip. Evelyn has gone out for a walk; she didn't know. I expect her any minute. Ah, I think that is her ring. I will let her in. There is nothing so hateful as a surprise."

She turned and gave Philip her hand, and perhaps she was sincere—she had a habit of being so when it suited her interests—when she said, "There are no by-gones, my friend."

Philip waited, his heart beating a hundred to the minute. He heard greetings and whisperings in the passage-way, and then—time seemed to stand still—the door opened and Evelyn stood on the threshold, radiant from her walk, her face flushed, the dainty little figure poised in timid expectation, in maidenly hesitation, and then she stepped forward to meet his advance, with welcome in her great eyes, and gave him her hand in the old-fashioned frankness.

"I am so glad to see you."

Philip murmured something in reply and they were seated.

That was all. It was so different from the meeting as Philip had a hundred times imagined it.

"It has been very long," said Philip, who was devouring the girl with his eyes, "very long to me."

"I thought you had been very busy," she replied, demurely. Her composure was very irritating.

"If you thought about it at all, Miss Mavick."

"That is not like you, Mr. Burnett," Evelyn replied, looking up suddenly with troubled eyes.

"I didn't mean that," said Philip, moving uneasily in his chair, "I—so many things have happened. You know a person can be busy and not happy."

"I know that. I was not always happy," said the girl, with the air of making a confession. "But I liked to hear from time to time of the success of my friends," she added, ingenuously. And then, quite inconsequently, "I suppose you have news from Rivervale?"

Yes, Philip heard often from Alice, and he told the news as well as he could, and the talk drifted along—how strange it seemed!—about things in which neither of them felt any interest at the moment. Was there no way to break the barrier that the little brown girl had thrown around herself? Were all women, then, alike in parrying and fencing? The talk went on, friendly enough at last, about a thousand things. It might have been any afternoon call on a dear friend. And at length Philip rose to go.

"I hope I may see you again, soon."

"Of course," said Evelyn, cheerfully. "I am sure father will be delighted to see you. He enjoys so little now."

He had taken both her hands to say good-by, and was looking hungrily into her eyes.

"I can't go so. Evelyn, you know, you must know, I love you."

And before the girl comprehended him he had drawn her to him and pressed his lips upon hers.

The girl started back as if stung, and looked at him with flashing eyes.

"What have you done, what have you done to me?"

Her eyes were clouded, and she put her hands to her face, trembling, and then with a cry, as of a soul born into the world, threw herself upon him, her arms around his neck—"Philip, Philip, my Philip!"

XXVII

Perhaps Philip's announcement of his good-fortune to Alice and to Celia was not very coherent, but his meaning was plain. Perhaps he was conscious that the tidings would not increase the cheerfulness of Celia's single-handed struggle for the ideal life; at least, he would rather write than tell her face to face.

However he put the matter to her, with what protestations of affectionate friendship and trust he wrapped up the statement that he made as matter of fact as possible, he could not conceal the ecstatic state of his mind.

Nothing like it certainly had happened to anybody in the world before. All the dream of his boyhood, romantic and rose-colored, all the aspirations of his manhood, for recognition, honor, a place in the life of his

time, were mere illusions compared to this wonderful crown of life—a woman's love. Where did it come from into this miserable world, this heavenly ray, this pure gift out of the divine beneficence, this spotless flower in a humanity so astray, this sure prophecy of the final redemption of the world? The immeasurable love of a good woman! And to him! Philip felt humble in his exaltation, charitable in his selfish appropriation. He wanted to write to Celia—but he did not—that he loved her more than ever. But to Alice he could pour out his wealth of affection, quickened to all the world by this great love, for he knew that her happiness would be in his happiness.

The response from Alice was what he expected, tender, sweet, domestic, and it was full of praise of Evelyn, of love for her. "Perhaps, dear Phil," she wrote, "I shall love her more than I do you. I almost think—did I not remember what a bad boy you could be sometimes—that each one of you is too good for the other. But, Phil, if you should ever come to think that she is not too good for you, you will not be good enough for her. I can't think she is perfect, any more than you are perfect—you will find that she is just a woman—but there is nothing in all life so precious as such a heart as hers. You will come here, of course, and at once, whenever it is. You know that big, square, old-fashioned corner chamber, with the high-poster. That is yours. Evelyn never saw it. The morning and the evening sun shoot across it, and the front windows look on the great green crown of Mount Peak. You know it. There is not such a place in the world to hear the low and peaceful murmur of the river, all night long, rushing, tumbling, crooning, I used to think when I was a little girl and dreamed of things unseen, and still going on when the birds begin to sing in the dawn. And with Evelyn! Dear Phil!"

It was in another strain, but not less full of real affection, that Celia wrote:

"I am not going to congratulate you. You are long past the need of that. But you know that I am happy in having you happy. You thought I never saw anything? I wonder if men are as blind as they seem to be? And I had fears. Do you know a man ought to build his own monument. If he goes into a monument built for him, that is the end of him. Now you can work, and you will. I am so glad she isn't an heiress any more. I guess there was a curse on that fortune. But she has eluded it. I believe all you tell me about her. Perhaps there are more such women in the world than you think. Some day I shall know her, and soon. I do long to see her. Love her I feel sure I shall.

"You ask about myself. I am the same, but things change. When I get my medical diploma I shall decide what to do. My little property just suffices, with economy, and I enjoy economy. I doubt if I do any general practice for pay. There are so many young doctors that need the money for practice more than I do. And perhaps taking it up as a living would make me sort of hard and perfunctory. And there is so much to do in this great New York among the unfortunate that a woman who knows medicine can do better than any one else.

"Ah, me, I am happy in a way, or I expect to be. Everybody—it isn't because I am a woman I say this—needs something to lean on now and then. There isn't much to lean on in the college, nor in many of my zealous and ambitious companions there. There is more faith in the poor people down in the wards where I go. They are kind to each other, and most of them, not all, believe in something. They, have that, at any rate, in all their trials and poverty. Philip, don't despise the invisible. I have got into the habit of going into a Catholic church down there, when I am tired and discouraged, and getting the peace of it. It is a sort of open door! You need not jump to the conclusion that I am 'going over.' Maybe I am going back. I don't know. I have always you know, been looking for something.

"I like to sit there in that dim quiet and think of things I can't think of elsewhere. Do you think I am queer? Philip, all women are queer. They haven't yet been explained. That is the reason why the novelists find it next to impossible, with all the materials at hand, to make a good woman—that is a woman. Do you know what it is to want what you don't want? Longing is one thing and reason another.

"Perhaps I have depended too much on my reason. If you long to go to a place where you will have peace, why should you let what you call your reason stand in the way? Perhaps your reason is foolishness. You will laugh a little at this, and say that I am tired. No. Only I am not so sure of things as I used to be. Do you remember when we children used to sit under that tree by the Deerfield, how confident I was that I understood all about life, and my airs of superiority?

"Well, I don't know as much now. But there is one thing that has survived and grown with the years, and that, Philip, is your dear friendship."

What was it in this unassuming, but no doubt sufficiently conceited and ambitious, young fellow that he should have the affection, the love, of three such women?

Is affection as whimsically, as blindly distributed as wealth? It is the experience of life that it is rare to keep either to the end, but as a man is judged not so much by his ability to make money as to keep it, so it is fair to estimate his qualities by his power to retain friendship. New York is full of failures, bankrupts in fortune and bankrupts in affection, but this melancholy aspect of the town is on the surface, and is not to be considered in comparison with the great body of moderately contented, moderately successful, and on the whole happy households. In this it is a microcosm of the world.

To Evelyn and Philip, judging the world a good deal by each other, in those months before their marriage, when surprising perfection and new tenderness were daily developed, the gay and busy city seemed a sort of paradise.

Mysterious things were going on in the weeks immediately preceding the wedding. There was a conspiracy between Miss McDonald and Philip in the furnishing and setting in order a tiny apartment on the Heights, overlooking the city, the lordly Hudson, and its romantic hills. And when, after the ceremony, on a radiant afternoon in early June, the wedded lovers went to their new home, it was the housekeeper, the old governess, who opened the door and took into her arms the child she had loved and lost awhile.

This fragment of history leaves Philip Burnett on the threshold of his career. Those who know him only by his books may have been interested in his experiences, in the merciful interposition of disaster, before he came into the great fortune of the love of Evelyn Mavick.

ROSE AND CHRYSANTHEMUM

The Drawer will still bet on the rose. This is not a wager, but only a strong expression of opinion. The rose will win. It does not look so now. To all appearances, this is the age of the chrysanthemum. What this gaudy flower will be, daily expanding and varying to suit the whim of fashion, no one can tell. It may be made to bloom like the cabbage; it may spread out like an umbrella—it can never be large enough nor showy enough to suit us. Undeniably it is very effective, especially in masses of gorgeous color. In its innumerable shades and enlarging proportions, it is a triumph of the gardener. It is a rival to the analine dyes and to the marabout feathers. It goes along with all the conceits and fantastic unrest of the decorative art. Indeed, but for the discovery of the capacities of the chrysanthemum, modern life would have experienced a fatal hitch in its development. It helps out our age of plush with a flame of color. There is nothing shamefaced or retiring about it, and it already takes all provinces for its own. One would be only half-married—civilly, and not fashionably—without a chrysanthemum wedding; and it lights the way to the tomb. The maiden wears a bunch of it in her corsage in token of her blooming expectations, and the young man flaunts it on his coat lapel in an effort to be at once effective and in the mode. Young love that used to express its timid desire with the violet, or, in its ardor, with the carnation, now seeks to bring its emotions to light by the help of the

chrysanthemum. And it can express every shade of feeling, from the rich yellow of prosperous wooing to the brick-colored weariness of life that is hardly distinguishable from the liver complaint. It is a little stringy for a boutonniere, but it fills the modern-trained eye as no other flower can fill it. We used to say that a girl was as sweet as a rose; we have forgotten that language. We used to call those tender additions to society, on the eve of their event into that world which is always so eager to receive fresh young life, "rose-buds"; we say now simply "buds," but we mean chrysanthemum buds. They are as beautiful as ever; they excite the same exquisite interest; perhaps in their maiden hearts they are one or another variety of that flower which bears such a sweet perfume in all literature; but can it make no difference in character whether a young girl comes out into the garish world as a rose or as a chrysanthemum? Is her life set to the note of display, of color and show, with little sweetness, or to that retiring modesty which needs a little encouragement before it fully reveals its beauty and its perfume? If one were to pass his life in moving in a palace car from one plush hotel to another, a bunch of chrysanthemums in his hand would seem to be a good symbol of his life. There are aged people who can remember that they used to choose various roses, as to their color, odor, and degree of unfolding, to express the delicate shades of advancing passion and of devotion. What can one do with this new favorite? Is not a bunch of chrysanthemums a sort of take-it-or-leave-it declaration, boldly and showily made, an offer without discrimination, a tender without romance? A young man will catch the whole family with this flaming message, but where is that sentiment that once set the maiden heart in a flutter? Will she press a chrysanthemum, and keep it till the faint perfume reminds her of the sweetest moment of her life?

Are we exaggerating this astonishing rise, development, and spread of the chrysanthemum? As a fashion it is not so extraordinary as the hoop-skirt, or as the neck ruff, which is again rising as a background to the lovely head. But the remarkable thing about it is that heretofore in all nations and times, and in all changes of fashion in dress, the rose has held its own as the queen of flowers and as the finest expression of sentiment. But here comes a flaunting thing with no desirable perfume, looking as if it were cut with scissors out of tissue-paper, but capable of taking infinite varieties of color, and growing as big as a curtain tassel, that literally captures the world, and spreads all over the globe, like the Canada thistle. The florists have no eye for anything else, and the biggest floral prizes are awarded for the production of its eccentricities. Is the rage for this flower typical of this fast and flaring age?

The Drawer is not an enemy to the chrysanthemum, nor to the sunflower, nor to any other gorgeous production of nature. But it has an old-fashioned love for the modest and unobtrusive virtues, and an abiding faith that they will win over the strained and strident displays of life. There is the violet: all efforts of cultivation fail to make it as big as the peony, and it would be no more dear to the heart if it were quadrupled in size. We do, indeed, know that satisfying beauty and refinement are apt to escape us when we strive too much and force nature into extraordinary display, and we know how difficult it is to get mere bigness and show without vulgarity. Cultivation has its limits. After we have produced it, we find that the biggest rose even is not the most precious; and lovely as woman is, we instinctively in our admiration put a limit to her size. There being, then, certain laws that ultimately fetch us all up standing, so to speak, it does seem probable that the chrysanthemum rage will end in a gorgeous sunset of its splendor; that fashion will tire of it, and that the rose, with its secret heart of love; the rose, with its exquisite form; the rose, with its capacity of shyly and reluctantly unfolding its beauty; the rose, with that odor—of the first garden exhaled and yet kept down through all the ages of sin—will become again the fashion, and be more passionately admired for its temporary banishment. Perhaps the poet will then come back again and sing. What poet could now sing of the "awful chrysanthemum of dawn"?

THE RED BONNET

The Drawer has no wish to make Lent easier for anybody, or rather to diminish the benefit of the penitential season. But in this period of human anxiety and repentance it must be said that not enough account is made of the moral responsibility of Things. The doctrine is sound; the only difficulty is in applying it. It can, however, be illustrated by a little story, which is here confided to the reader in the same trust in which it was received. There was once a lady, sober in mind and sedate in manner, whose plain dress exactly represented her desire to be inconspicuous, to do good, to improve every day of her life in actions that should benefit her kind. She was a serious person, inclined to improving conversation, to the reading of bound books that cost at least a dollar and a half (fifteen cents of which she gladly contributed to the author), and she had a distaste for the gay society which was mainly a flutter of ribbons and talk and pretty faces; and when she meditated, as she did in her spare moments, her heart was sore over the frivolity of life and the emptiness of fashion. She longed to make the world better, and without any priggishness she set it an example of simplicity and sobriety, of cheerful acquiescence in plainness and inconspicuousness.

One day—it was in the autumn—this lady had occasion to buy a new hat. From a great number offered to her she selected a red one with a dull red plume. It did not agree with the rest of her apparel; it did not fit her apparent character. What impulse led to this selection she could not explain. She was not tired of being good, but something in the jauntiness of the hat and the color pleased her. If it were a temptation, she did not intend to yield to it, but she thought she would take the hat home and try it. Perhaps her nature felt the need of a little warmth. The hat pleased her still more when she got it home and put it on and surveyed herself in the mirror. Indeed, there was a new expression in her face that corresponded to the hat. She put it off and looked at it. There was something almost humanly winning and temptatious in it. In short, she kept it, and when she wore it abroad she was not conscious of its incongruity to herself or to her dress, but of the incongruity of the rest of her apparel to the hat, which seemed to have a sort of intelligence of its own, at least a power of changing and conforming things to itself. By degrees one article after another in the lady's wardrobe was laid aside, and another substituted for it that answered to the demanding spirit of the hat. In a little while this plain lady was not plain any more, but most gorgeously dressed, and possessed with the

desire to be in the height of the fashion. It came to this, that she had a tea-gown made out of a window-curtain with a flamboyant pattern. Solomon in all his glory would have been ashamed of himself in her presence.

But this was not all. Her disposition, her ideas, her whole life, was changed. She did not any more think of going about doing good, but of amusing herself. She read nothing but stories in paper covers. In place of being sedate and sober-minded, she was frivolous to excess; she spent most of her time with women who liked to "frivol." She kept Lent in the most expensive way, so as to make the impression upon everybody that she was better than the extremest kind of Lent. From liking the sedatest company she passed to liking the gayest society and the most fashionable method of getting rid of her time. Nothing whatever had happened to her, and she is now an ornament to society.

This story is not an invention; it is a leaf out of life. If this lady that autumn day had bought a plain bonnet she would have continued on in her humble, sensible way of living. Clearly it was the hat that made the woman, and not the woman the hat. She had no preconception of it; it simply happened to her, like any accident—as if she had fallen and sprained her ankle. Some people may say that she had in her a concealed propensity for frivolity; but the hat cannot escape the moral responsibility of calling it out if it really existed. The power of things to change and create character is well attested. Men live up to or live down to their clothes, which have a great moral influence on manner, and even on conduct. There was a man run down almost to vagabondage, owing to his increasingly shabby clothing, and he was only saved from becoming a moral and physical wreck by a remnant of good-breeding in him that kept his worn boots well polished. In time his boots brought up the rest of his apparel and set him on his feet again. Then there is the well-known example of the honest clerk on a small salary who was ruined by the gift of a repeating watch—an expensive timepiece that required at least ten thousand a year to sustain it: he is now in Canada.

Sometimes the influence of Things is good and sometimes it is bad. We need a philosophy that shall tell us why it is one or the other, and fix the responsibility where it belongs. It does no good, as people always find out by reflex action, to kick an inanimate thing that has offended, to smash a perverse watch with a hammer, to break a rocking-chair that has a habit of tipping over backward. If Things are not actually malicious, they seem to have a power of revenging themselves. We ought to try to understand them better, and to be more aware of what they can do to us. If the lady who bought the red hat could have known the hidden nature of it, could have had a vision of herself as she was transformed by it, she would as soon have taken a viper into her bosom as have placed the red tempter on her head. Her whole previous life, her feeling of the moment, show that it was not vanity that changed her, but the inconsiderate association with a Thing that happened to strike her fancy, and which seemed innocent. But no Thing is really powerless for good or evil.

THE LOSS IN CIVILIZATION

Have we yet hit upon the right idea of civilization? The process which has been going on ever since the world began seems to have a defect in it; strength, vital power, somehow escapes. When you've got a man thoroughly civilized you cannot do anything more with him. And it is worth reflection what we should do, what could we spend our energies on, and what would evoke them, we who are both civilized and enlightened, if all nations were civilized and the earth were entirely subdued. That is to say, are not barbarism and vast regions of uncultivated land a necessity of healthful life on this globe? We do not like to admit that this process has its cycles, that nations and men, like trees and fruit, grow, ripen, and then decay. The world has always had a conceit that the globe could be made entirely habitable, and all over the home of a society constantly growing better. In order to accomplish this we have striven to eliminate barbarism in man and in nature:

Is there anything more unsatisfactory than a perfect house, perfect grounds, perfect gardens, art and nature brought into the most absolute harmony of taste and culture? What more can a man do with it? What satisfaction has a man in it if he really gets to the end of his power to improve it? There have been such nearly ideal places, and how strong nature, always working against man and in the interest of untamed wildness, likes to riot in them and reduce them to picturesque destruction! And what sweet sadness, pathos, romantic suggestion, the human mind finds in such a ruin! And a society that has attained its end in all possible culture, entire refinement in manners, in tastes, in the art of elegant intellectual and luxurious living—is there nothing pathetic in that? Where is the primeval, heroic force that made the joy of living in the rough old uncivilized days? Even throw in goodness, a certain amount of altruism, gentleness, warm interest in unfortunate humanity—is the situation much improved? London is probably the most civilized centre the world has ever seen; there are gathered more of the elements of that which we reckon the best. Where in history, unless some one puts in a claim for the Frenchman, shall we find a Man so nearly approaching the standard we have set up of civilization as the Englishman, refined by inheritance and tradition, educated almost beyond the disturbance of enthusiasm, and cultivated beyond the chance of surprise? We are speaking of the highest type in manner, information, training, in the acquisition of what the world has to give. Could these men have conquered the world? Is it possible that our highest civilization has lost something of the rough and admirable element that we admire in the heroes of Homer and of Elizabeth? What is this London, the most civilized city ever known? Why, a considerable part of its population is more barbarous, more hopelessly barbarous, than any wild race we know, because they are the barbarians of civilization, the refuse and slag of it, if we dare say that of any humanity. More hopeless, because the virility of savagery has measurably gone out of it. We can do something with a degraded race of savages, if it has any stamina in it. What can be done with those who are described as "East-Londoners"?

Every great city has enough of the same element. Is this an accident, or is it a necessity of the refinement that we insist on calling civilization? We are always sending out missionaries to savage or perverted nations,

we are always sending out emigrants to occupy and reduce to order neglected territory. This is our main business. How would it be if this business were really accomplished, and there were no more peoples to teach our way of life to, and no more territory to bring under productive cultivation? Without the necessity of putting forth this energy, a survival of the original force in man, how long would our civilization last? In a word, if the world were actually all civilized, wouldn't it be too weak even to ripen? And now, in the great centres, where is accumulated most of that we value as the product of man's best efforts, is there strength enough to elevate the degraded humanity that attends our highest cultivation? We have a gay confidence that we can do something for Africa. Can we reform London and Paris and New York, which our own hands have made?

If we cannot, where is the difficulty? Is this a hopeless world? Must it always go on by spurts and relapses, alternate civilization and barbarism, and the barbarism being necessary to keep us employed and growing? Or is there some mistake about our ideal of civilization? Does our process too much eliminate the rough vigor, courage, stamina of the race? After a time do we just live, or try to live, on literature warmed over, on pretty coloring and drawing instead of painting that stirs the soul to the heroic facts and tragedies of life? Where did this virile, blood-full, throbbing Russian literature come from; this Russian painting of Verestchagin, that smites us like a sword with the consciousness of the tremendous meaning of existence? Is there a barbaric force left in the world that we have been daintily trying to cover and apologize for and refine into gentle agreeableness?

These questions are too deep for these pages. Let us make the world pleasant, and throw a cover over the refuse. We are doing very well, on the whole, considering what we are and the materials we have to work on. And we must not leave the world so perfectly civilized that the inhabitants, two or three centuries ahead, will have nothing to do.

SOCIAL SCREAMING

Of all the contrivances for amusement in this agreeable world the "Reception" is the most ingenious, and would probably most excite the wonder of an angel sent down to inspect our social life. If he should pause at the entrance of the house where one is in progress, he would be puzzled. The noise that would greet his ears is different from the deep continuous roar in the streets, it is unlike the hum of millions of seventeen-year locusts, it wants the musical quality of the spring conventions of the blackbirds in the chestnuts, and he could not compare it to the vociferation in a lunatic asylum, for that is really subdued and infrequent. He might be incapable of analyzing this, but when he caught sight of the company he would be compelled to recognize it as the noise of our highest civilization. It may not be perfect, for there are limits to human powers of endurance, but it is the best we can do. It is not a chance affair. Here are selected, picked out by special invitation, the best that society can show, the most intelligent, the most accomplished, the most beautiful, the best dressed persons in the community—all receptions have this character. The angel would notice this at once, and he would be astonished at the number of such persons, for the rooms would be so crowded that he would see the hopelessness of attempting to edge or wedge his way through the throng without tearing off his wings. An angel, in short, would stand no chance in one of these brilliant assemblies on account of his wings, and he probably could not be heard, on account of the low, heavenly pitch of his voice. His inference would be that these people had been selected to come together by reason of their superior power of screaming. He would be wrong.

—They are selected on account of their intelligence, agreeableness, and power of entertaining each other. They come together, not for exercise, but pleasure, and the more they crowd and jam and struggle, and the louder they scream, the greater the pleasure. It is a kind of contest, full of good-humor and excitement. The one that has the shrillest voice and can scream the loudest is most successful. It would seem at first that they are under a singular hallucination, imagining that the more noise there is in the room the better each one can be heard, and so each one continues to raise his or her voice in order to drown the other voices. The secret of the game is to pitch the voice one or two octaves above the ordinary tone. Some throats cannot stand this strain long; they become rasped and sore, and the voices break; but this adds to the excitement and enjoyment of those who can scream with less inconvenience. The angel would notice that if at any time silence was called, in order that an announcement of music could be made, in the awful hush that followed people spoke to each other in their natural voices, and everybody could be heard without effort. But this was not the object of the Reception, and in a moment more the screaming would begin again, the voices growing higher and higher, until, if the roof were taken off, one vast shriek would go up to heaven.

This is not only a fashion, it is an art. People have to train for it, and as it is a unique amusement, it is worth some trouble to be able to succeed in it. Men, by reason of their stolidity and deeper voices, can never be proficient in it; and they do not have so much practice—unless they are stock-brokers. Ladies keep themselves in training in their ordinary calls. If three or four meet in a drawing-room they all begin to scream, not that they may be heard—for the higher they go the less they understand each other—but simply to acquire the art of screaming at receptions. If half a dozen ladies meeting by chance in a parlor should converse quietly in their sweet, ordinary home tones, it might be in a certain sense agreeable, but it would not be fashionable, and it would not strike the prevailing note of our civilization. If it were true that a group of women all like to talk at the same time when they meet (which is a slander invented by men, who may be just as loquacious, but not so limber-tongued and quick-witted), and raise their voices to a shriek in order to dominate each other, it could be demonstrated that they would be more readily heard if they all spoke in low tones. But the object is not conversation; it is the social exhilaration that comes from the wild exercise of the voice in working off a nervous energy; it is so seldom that in her own house a lady gets a chance to scream.

The dinner-party, where there are ten or twelve at table, is a favorite chance for this exercise. At a recent

dinner, where there were a dozen uncommonly intelligent people, all capable of the most entertaining conversation, by some chance, or owing to some nervous condition, they all began to speak in a high voice as soon as they were seated, and the effect was that of a dynamite explosion. It was a cheerful babel of indistinguishable noise, so loud and shrill and continuous that it was absolutely impossible for two people seated on the opposite sides of the table, and both shouting at each other, to catch an intelligible sentence. This made a lively dinner. Everybody was animated, and if there was no conversation, even between persons seated side by side, there was a glorious clatter and roar; and when it was over, everybody was hoarse and exhausted, and conscious that he had done his best in a high social function.

This topic is not the selection of the Drawer, the province of which is to note, but not to criticise, the higher civilization. But the inquiry has come from many cities, from many women, "Cannot something be done to stop social screaming?" The question is referred to the scientific branch of the Social Science Association. If it is a mere fashion, the association can do nothing. But it might institute some practical experiments. It might get together in a small room fifty people all let loose in the ordinary screaming contest, measure the total volume of noise and divide it by fifty, and ascertain how much throat power was needed in one person to be audible to another three feet from the latter's ear. This would sift out the persons fit for such a contest. The investigator might then call a dead silence in the assembly, and request each person to talk in a natural voice, then divide the total noise as before, and see what chance of being heard an ordinary individual had in it. If it turned out in these circumstances that every person present could speak with ease and hear perfectly what was said, then the order might be given for the talk to go on in that tone, and that every person who raised the voice and began to scream should be gagged and removed to another room. In this room could be collected all the screamers to enjoy their own powers. The same experiment might be tried at a dinner-party, namely, to ascertain if the total hum of low voices in the natural key would not be less for the individual voice to overcome than the total scream of all the voices raised to a shriek. If scientific research demonstrated the feasibility of speaking in an ordinary voice at receptions, dinner-parties, and in "calls," then the Drawer is of opinion that intelligible and enjoyable conversation would be possible on these occasions, if it becomes fashionable not to scream.

DOES REFINEMENT KILL INDIVIDUALITY?

Is it true that cultivation, what we call refinement, kills individuality? Or, worse than that even, that one loses his taste by over-cultivation? Those persons are uninteresting, certainly, who have gone so far in culture that they accept conventional standards supposed to be correct, to which they refer everything, and by which they measure everybody. Taste usually implies a sort of selection; the cultivated taste of which we speak is merely a comparison, no longer an individual preference or appreciation, but only a reference to the conventional and accepted standard. When a man or woman has reached this stage of propriety we are never curious any more concerning their opinions on any subject. We know that the opinions expressed will not be theirs, evolved out of their own feeling, but that they will be the cut-and-dried results of conventionality.

It is doubtless a great comfort to a person to know exactly how to feel and what to say in every new contingency, but whether the zest of life is not dulled by this ability is a grave question, for it leaves no room for surprise and little for emotion. O ye belles of Newport and of Bar Harbor, in your correct and conventional agreement of what is proper and agreeable, are you wasting your sweet lives by rule? Is your compact, graceful, orderly society liable to be monotonous in its gay repetition of the same thing week after week? Is there nothing outside of that envied circle which you make so brilliant? Is the Atlantic shore the only coast where beauty may lounge and spread its net of enchantment? The Atlantic shore and Europe? Perhaps on the Pacific you might come back to your original selves, and find again that freedom and that charm of individuality that are so attractive. Some sparkling summer morning, if you chanced to drive four-in-hand along the broad beach at Santa Barbara, inhaling, the spicy breeze from the Sandwich Islands, along the curved shore where the blue of the sea and the purple of the mountains remind you of the Sorrentine promontory, and then dashed away into the canon of Montecito, among the vineyards and orange orchards and live-oaks and palms, in vales and hills all ablaze with roses and flowers of the garden and the hothouse, which bloom the year round in the gracious sea-air, would you not, we wonder, come to yourselves in the sense of a new life where it is good form to be enthusiastic and not disgraceful to be surprised? It is a far cry from Newport to Santa Barbara, and a whole world of new sensations lies on the way, experiences for which you will have no formula of experience. To take the journey is perhaps too heroic treatment for the disease of conformity—the sort of malaria of our exclusive civilization.

The Drawer is not urging this journey, nor any break-up of the social order, for it knows how painful a return to individuality may be. It is easier to go on in the subordination of one's personality to the strictly conventional life. It expects rather to record a continually perfected machinery, a life in which not only speech but ideas are brought into rule. We have had something to say occasionally of the art of conversation, which is in danger of being lost in the confused babel of the reception and the chatter of the dinner-party—the art of listening and the art of talking both being lost. Society is taking alarm at this, and the women as usual are leaders in a reform. Already, by reason of clubs-literary, scientific, economic—woman is the well-informed part of our society. In the "Conversation Lunch" this information is now brought into use. The lunch, and perhaps the dinner, will no longer be the occasion of satisfying the appetite or of gossip, but of improving talk. The giver of the lunch will furnish the topic of conversation. Two persons may not speak at once; two persons may not talk with each other; all talk is to be general and on the topic assigned, and while one is speaking, the others must listen. Perhaps each lady on taking her seat may find in her napkin a written slip of paper which shall be the guide to her remarks. Thus no time is to be wasted on frivolous topics. The ordinary natural flow of rejoinder and repartee, the swirling of talk around one obstacle and another, its winding and rippling here and there as individual whim suggests, will not be allowed, but all will be improving, and tend

to that general culture of which we have been speaking. The ladies' lunch is not to be exactly a debating society, but an open occasion for the delivery of matured thought and the acquisition of information.

The object is not to talk each other down, but to improve the mind, which, unguided, is apt to get frivolous at the convivial board. It is notorious that men by themselves at lunch or dinner usually shun grave topics and indulge in persiflage, and even descend to talk about wine and the made dishes. The women's lunch of this summer takes higher ground. It will give Mr. Browning his final estimate; it will settle Mr. Ibsen; it will determine the suffrage question; it will adjudicate between the total abstainers and the halfway covenant of high license; it will not hesitate to cut down the tariff.

The Drawer anticipates a period of repose in all our feverish social life. We shall live more by rule and less by impulse. When we meet we shall talk on set topics, determined beforehand. By this concentration we shall be able as one man or one woman to reach the human limit of cultivation, and get rid of all the aberrations of individual assertion and feeling. By studying together in clubs, by conversing in monotone and by rule, by thinking the same things and exchanging ideas until we have none left, we shall come into that social placidity which is one dream of the nationalists—one long step towards what may be called a prairie mental condition—the slope of Kansas, where those who are five thousand feet above the sea-level seem to be no higher than those who dwell in the Missouri Valley.

THE DIRECTOIRE GOWN

We are all more or less devoted to 'liberte', 'egalite', and considerable 'fraternite', and we have various ways of showing it. It is the opinion of many that women do not care much about politics, and that if they are interested at all in them, they are by nature aristocrats. It is said, indeed, that they care much more about their dress than they do about the laws or the form of government. This notion arises from a misapprehension both of the nature of woman and of the significance of dress.

Men have an idea that fashions are haphazard, and are dictated and guided by no fixed principles of action, and represent no great currents in politics or movements of the human mind. Women, who are exceedingly subtle in all their operations, feel that it is otherwise. They have a prescience of changes in the drift of public affairs, and a delicate sensitiveness that causes them to adjust their raiment to express these changes. Men have written a great deal in their bungling way about the philosophy of clothes. Women exhibit it, and if we should study them more and try to understand them instead of ridiculing their fashions as whims bred of an inconstant mind and mere desire for change, we would have a better apprehension of the great currents of modern political life and society.

Many observers are puzzled by the gradual and insidious return recently to the mode of the Directoire, and can see in it no significance other than weariness of some other mode. We need to recall the fact of the influence of the centenary period upon the human mind. It is nearly a century since the fashion of the Directoire. What more natural, considering the evidence that we move in spirals, if not in circles, that the signs of the anniversary of one of the most marked periods in history should be shown in feminine apparel? It is woman's way of hinting what is in the air, the spirit that is abroad in the world. It will be remembered that women took a prominent part in the destruction of the Bastille, helping, indeed, to tear down that odious structure with their own hands, the fall of which, it is well known, brought in the classic Greek and republican simplicity, the subtle meaning of the change being expressed in French gowns. Naturally there was a reaction from all this towards aristocratic privileges and exclusiveness, which went on for many years, until in France monarchy and empire followed the significant leadership of the French modistes. So strong was this that it passed to other countries, and in England the impulse outlasted even the Reform Bill, and skirts grew more and more bulbous, until it did not need more than three or four women to make a good-sized assembly. This was not the result of, a whim about clothes, but a subtle recognition of a spirit of exclusiveness and defense abroad in the world. Each woman became her own Bastille. Men surrounded it and thundered against it without the least effect. It seemed as permanent as the Pyramids. At every male attack it expanded, and became more aggressive and took up more room. Women have such an exquisite sense of things—just as they have now in regard to big obstructive hats in the theatres. They know that most of the plays are inferior and some of them are immoral, and they attend the theatres with head-dresses that will prevent as many people as possible from seeing the stage and being corrupted by anything that takes place on it. They object to the men seeing some of the women who are now on the stage. It happened, as to the private Bastilles, that the women at last recognized a change in the sociological and political atmosphere of the world, and without consulting any men of affairs or caring for their opinion, down went the Bastilles. When women attacked them, in obedience to their political instincts, they collapsed like punctured balloons. Natural woman was measurably (that is, a capacity of being measured) restored to the world. And we all remember the great political revolutionary movements of 1848.

Now France is still the arbiter of the modes. Say what we may about Berlin, copy their fashion plates as we will, or about London, or New York, or Tokio, it is indisputable that the woman in any company who has on a Paris gown—the expression is odious, but there is no other that in these days would be comprehended—"takes the cake." It is not that the women care for this as a mere matter of apparel. But they are sensitive to the political atmosphere, to the philosophical significance that it has to great impending changes. We are approaching the centenary of the fall of the Bastille. The French have no Bastille to lay low, nor, indeed, any Tuileries to burn up; but perhaps they might get a good way ahead by demolishing Notre Dame and reducing most of Paris to ashes. Apparently they are on the eve of doing something. The women of the world may not know what it is, but they feel the approaching recurrence of a period. Their movements are not yet decisive. It is as yet only tentatively that they adopt the mode of the Directoire. It is yet uncertain—a sort of Boulangerism in dress. But if we watch it carefully we shall be able to predict with some assurance the drift

in Paris. The Directoire dress points to another period of republican simplicity, anarchy, and the rule of a popular despot.

It is a great pity, in view of this valuable instinct in women and the prophetic significance of dress, that women in the United States do not exercise their gifts with regard to their own country. We should then know at any given time whether we are drifting into Blaineism, or Clevelandism, or centralization, or free-trade, or extreme protection, or rule by corporations. We boast greatly of our smartness. It is time we were up and dressed to prove it.

THE MYSTERY OF THE SEX

There appears to be a great quantity of conceit around, especially concerning women. The statement was recently set afloat that a well-known lady had admitted that George Meredith understands women better than any writer who has preceded him. This may be true, and it may be a wily statement to again throw men off the track; at any rate it contains the old assumption of a mystery, practically insoluble, about the gentler sex. Women generally encourage this notion, and men by their gingerly treatment of it seemed to accept it. But is it well-founded, is there any more mystery about women—than about men? Is the feminine nature any more difficult to understand than the masculine nature? Have women, conscious of inferior strength, woven this notion of mystery about themselves as a defense, or have men simply idealized them for fictitious purposes? To recur to the case cited, is there any evidence that Mr. Meredith understands human nature—as exhibited in women any better than human nature—in men, or is more consistent in the production of one than of the other? Historically it would be interesting to trace the rise of this notion of woman as an enigma. The savage races do not appear to have it. A woman to the North American Indian is a simple affair, dealt with without circumlocution. In the Bible records there is not much mystery about her; there are many tributes to her noble qualities, and some pretty severe and uncomplimentary things are said about her, but there is little affectation of not understanding her. She may be a prophetess, or a consoler, or a snare, but she is no more “deceitful and desperately wicked” than anybody else. There is nothing mysterious about her first recorded performance. Eve trusted the serpent, and Adam trusted Eve. The mystery was in the serpent. There is no evidence that the ancient Egyptian woman was more difficult to comprehend than the Egyptian man. They were both doubtless wily as highly civilized people are apt to be; the “serpent of old Nile” was in them both. Is it in fact till we come to mediaeval times, and the chivalric age, that women are set up as being more incomprehensible than men? That is, less logical, more whimsical, more uncertain in their mental processes? The play-writers and essayists of the seventeenth and eighteenth centuries “worked” this notion continually. They always took an investigating and speculating attitude towards women, that fostered the conceit of their separateness and veiled personality. Every woman was supposed to be playing a part behind a mask. Montaigne is always investigating woman as a mystery. It is, for instance, a mystery he does not relish that, as he says, women commonly reserve the publication of their vehement affections for their husbands till they have lost them; then the woful countenance “looks not so much back as forward, and is intended rather to get a new husband than to lament the old.” And he tells this story:

“When I was a boy, a very beautiful and virtuous lady who is yet living, and the widow of a prince, had, I know not what, more ornament in her dress than our laws of widowhood will well allow, which being reproached with as a great indecency, she made answer ‘that it was because she was not cultivating more friendships, and would never marry again.’” This cynical view of woman, as well as the extravagantly complimentary one sometimes taken by the poets, was based upon the notion that woman was an unexplainable being. When she herself adopted the idea is uncertain. Of course all this has a very practical bearing upon modern life, the position of women in it, and the so-called reforms. If woman is so different from man, to the extent of being an unexplainable mystery, science ought to determine the exact state of the case, and ascertain if there is any remedy for it. If it is only a literary creation, we ought to know it. Science could tell, for instance, whether there is a peculiarity in the nervous system, any complications in the nervous centres, by which the telegraphic action of the will gets crossed, so that, for example, in reply to a proposal of marriage, the intended “Yes” gets delivered as “No.” Is it true that the mental process in one sex is intuitive, and in the other logical, with every link necessary and visible? Is it true, as the romancers teach, that the mind in one sex acts indirectly and in the other directly, or is this indirect process only characteristic of exceptions in both sexes? Investigation ought to find this out, so that we can adjust the fit occupations for both sexes on a scientific basis. We are floundering about now in a sea of doubt. As society becomes more complicated, women will become a greater and greater mystery, or rather will be regarded so by themselves and be treated so by men.

Who can tell how much this notion of mystery in the sex stands in the way of its free advancement all along the line? Suppose the proposal were made to women to exchange being mysterious for the ballot? Would they do it? Or have they a sense of power in the possession of this conceded incomprehensibility that they would not lay down for any visible insignia of that power? And if the novelists and essayists have raised a mist about the sex, which it willingly masquerades in, is it not time that the scientists should determine whether the mystery exists in nature or only in the imagination?

THE CLOTHES OF FICTION

The Drawer has never undervalued clothes. Whatever other heresies it may have had, however it may have

insisted that the more a woman learns, the more she knows of books, the higher her education is carried in all the knowledges, the more interesting she will be, not only for an hour, but as a companion for life, it has never said that she is less attractive when dressed with taste and according to the season. Love itself could scarcely be expected to survive a winter hat worn after Easter. And the philosophy of this is not on the surface, nor applicable to women only. In this the highest of created things are under a law having a much wider application. Take as an item novels, the works of fiction, which have become an absolute necessity in the modern world, as necessary to divert the mind loaded with care and under actual strain as to fill the vacancy in otherwise idle brains. They have commonly a summer and a winter apparel. The publishers understand this. As certainly as the birds appear, comes the crop of summer novels, fluttering down upon the stalls, in procession through the railway trains, littering the drawing-room tables, in light paper, covers, ornamental, attractive in colors and fanciful designs, as welcome and grateful as the girls in muslin. When the thermometer is in the eighties, anything heavy and formidable is distasteful. The housekeeper knows we want few solid dishes, but salads and cooling drinks. The publisher knows that we want our literature (or what passes for that) in light array. In the winter we prefer the boards and the rich heavy binding, however light the tale may be; but in the summer, though the fiction be as grave and tragic as wandering love and bankruptcy, we would have it come to us lightly clad—out of stays, as it were.

It would hardly be worth while to refer to this taste in the apparel of our fiction did it not have deep and esoteric suggestions, and could not the novelists themselves get a hint from it. Is it realized how much depends upon the clothes that are worn by the characters in the novels—clothes put on not only to exhibit the inner life of the characters, but to please the readers who are to associate with them? It is true that there are novels that almost do away with the necessity of fashion magazines and fashion plates in the family, so faithful are they in the latest millinery details, and so fully do they satisfy the longing of all of us to know what is chic for the moment. It is pretty well understood, also, that women, and even men, are made to exhibit the deepest passions and the tenderest emotions in the crises of their lives by the clothes they put on. How the woman in such a crisis hesitates before her wardrobe, and at last chooses just what will express her innermost feeling! Does she dress for her lover as she dresses to receive her lawyer who has come to inform her that she is living beyond her income? Would not the lover be spared time and pain if he knew, as the novelist knows, whether the young lady is dressing for a rejection or an acceptance? Why does the lady intending suicide always throw on a waterproof when she steals out of the house to drown herself? The novelist knows the deep significance of every article of toilet, and nature teaches him to array his characters for the summer novel in the airy draperies suitable to the season. It is only good art that the cover of the novel and the covers of the characters shall be in harmony. He knows, also, that the characters in the winter novel must be adequately protected. We speak, of course, of the season stories. Novels that are to run through a year, or maybe many years, and are to set forth the passions and trials of changing age and varying circumstance, require different treatment and wider millinery knowledge. They are naturally more expensive. The wardrobe required in an all-round novel would bankrupt most of us.

But to confine ourselves to the season novel, it is strange that some one has not invented the patent adjustable story that with a slight change would do for summer or winter, following the broad hint of the publishers, who hasten in May to throw whatever fiction they have on hand into summer clothes. The winter novel, by this invention, could be easily fitted for summer wear. All the novelist need do would be to change the clothes of his characters. And in the autumn, if the novel proved popular, he could change again, with the advantage of being in the latest fashion. It would only be necessary to alter a few sentences in a few of the stereotype pages. Of course this would make necessary other slight alterations, for no kind-hearted writer would be cruel to his own creations, and expose them to the vicissitudes of the seasons. He could insert "rain" for "snow," and "green leaves" for "skeleton branches," make a few verbal changes of that sort, and regulate the thermometer. It would cost very little to adjust the novel in this way to any season. It is worth thinking of.

And this leads to a remark upon the shocking indifference of some novelists to the ordinary comfort of their characters. In practical life we cannot, but in his realm the novelist can, control the weather. He can make it generally pleasant. We do not object to a terrific thunder-shower now and then, as the sign of despair and a lost soul, but perpetual drizzle and grayness and inclemency are tedious to the reader, who has enough bad weather in his private experience. The English are greater sinners in this respect than we are. They seem to take a brutal delight in making it as unpleasant as possible for their fictitious people. There is R—b—rt 'lsm—r', for example. External trouble is piled on to the internal. The characters are in a perpetual soak. There is not a dry rag on any of them, from the beginning of the book to the end. They are sent out in all weathers, and are drenched every day. Often their wet clothes are frozen on them; they are exposed to cutting winds and sleet in their faces, bedrabbled in damp grass, stood against slippery fences, with hail and frost lowering their vitality, and expected under these circumstances to make love and be good Christians. Drenched and wind-blown for years, that is what they are. It may be that this treatment has excited the sympathy of the world, but is it legitimate? Has a novelist the right to subject his creations to tortures that he would not dare to inflict upon his friends? It is no excuse to say that this is normal English weather; it is not the office of fiction to intensify and rub in the unavoidable evils of life. The modern spirit of consideration for fictitious characters that prevails with regard to dress ought to extend in a reasonable degree to their weather. This is not a strained corollary to the demand for an appropriately costumed novel.

THE BROAD A

It cannot for a moment be supposed that the Drawer would discourage self-culture and refinement of manner and of speech. But it would not hesitate to give a note of warning if it believed that the present devotion to literature and the pursuits of the mind were likely, by the highest authorities, to be considered

bad form. In an intellectually inclined city (not in the northeast) a club of ladies has been formed for the cultivation of the broad 'a' in speech. Sporadic efforts have hitherto been made for the proper treatment of this letter of the alphabet with individual success, especially with those who have been in England, or have known English men and women of the broad-gauge variety. Discerning travelers have made the American pronunciation of the letter a reproach to the republic, that is to say, a means of distinguishing a native of this country. The true American aspires to be cosmopolitan, and does not want to be "spotted"—if that word may be used—in society by any peculiarity of speech, that is, by any American peculiarity. Why, at the bottom of the matter, a narrow 'a' should be a disgrace it is not easy to see, but it needs no reason if fashion or authority condemns it. This country is so spread out, without any social or literary centre universally recognized as such, and the narrow 'a' has become so prevalent, that even fashion finds it difficult to reform it. The best people, who are determined to broaden all their 'a' 's, will forget in moments of excitement, and fall back into old habits. It requires constant vigilance to keep the letter 'a' flattened out. It is in vain that scholars have pointed out that in the use of this letter lies the main difference between the English and the American speech; either Americans generally do not care if this is the fact, or fashion can only work a reform in a limited number of people. It seems, therefore, necessary that there should be an organized effort to deal with this pronunciation, and clubs will no doubt be formed all over the country, in imitation of the one mentioned, until the broad a will become as common as flies in summer. When this result is attained it will be time to attack the sound of 'u' with clubs, and make universal the French sound. In time the American pronunciation will become as superior to all others as are the American sewing-machines and reapers. In the Broad A Club every member who misbehaves—that is, mispronounces—is fined a nickel for each offense. Of course in the beginning there is a good deal of revenue from this source, but the revenue diminishes as the club improves, so that we have the anomaly of its failure to be self-supporting in proportion to its excellence. Just now if these clubs could suddenly become universal, and the penalty be enforced, we could have the means of paying off the national debt in a year.

We do not wish to attach too much importance to this movement, but rather to suggest to a continent yearning for culture in letters and in speech whether it may not be carried too far. The reader will remember that there came a time in Athens when culture could mock at itself, and the rest of the country may be warned in time of a possible departure from good form in devotion to language and literature by the present attitude of modern Athens. Probably there is no esoteric depth in literature or religion, no refinement in intellectual luxury, that this favored city has not sounded. It is certainly significant, therefore, when the priestesses and devotees of mental superiority there turn upon it and rend it, when they are heartily tired of the whole literary business. There is always this danger when anything is passionately pursued as a fashion, that it will one day cease to be the fashion. Plato and Buddha and even Emerson become in time like a last season's fashion plate. Even a "friend of the spirit" will have to go. Culture is certain to mock itself in time.

The clubs for the improvement of the mind—the female mind—and of speech, which no doubt had their origin in modern Athens, should know, then, that it is the highest mark of female culture now in that beautiful town to despise culture, to affect the gayest and most joyous ignorance —ignorance of books, of all forms of so-called intellectual development, and all literary men, women, and productions whatsoever! This genuine movement of freedom may be a real emancipation. If it should reach the metropolis, what a relief it might bring to thousands who are, under a high sense of duty, struggling to advance the intellectual life. There is this to be said, however, that it is only the very brightest people, those who have no need of culture, who have in fact passed beyond all culture, who can take this position in regard to it, and actually revel in the delights of ignorance. One must pass into a calm place when he is beyond the desire to know anything or to do anything.

It is a chilling thought, unless one can rise to the highest philosophy of life, that even the broad 'a', when it is attained, may not be a permanence. Let it be common, and what distinction will there be in it? When devotion to study, to the reading of books, to conversation on improving topics, becomes a universal fashion, is it not evident that one can only keep a leadership in fashion by throwing the whole thing overboard, and going forward into the natural gayety of life, which cares for none of these things? We suppose the Constitution of the United States will stand if the day comes—nay, now is—when the women of Chicago call the women of Boston frivolous, and the women of Boston know their immense superiority and advancement in being so, but it would be a blank surprise to the country generally to know that it was on the wrong track. The fact is that culture in this country is full of surprises, and so doubles and feints and comes back upon itself that the most diligent recorder can scarcely note its changes. The Drawer can only warn; it cannot advise.

CHewing GUM

No language that is unfortunately understood by the greater portion of the people who speak English, thousands are saying on the first of January—in 1890, a far-off date that it is wonderful any one has lived to see—"Let us have a new deal!" It is a natural exclamation, and does not necessarily mean any change of purpose. It always seems to a man that if he could shuffle the cards he could increase his advantages in the game of life, and, to continue the figure which needs so little explanation, it usually appears to him that he could play anybody else's hand better than his own. In all the good resolutions of the new year, then, it happens that perhaps the most sincere is the determination to get a better hand. Many mistake this for repentance and an intention to reform, when generally it is only the desire for a new shuffle of the cards. Let us have a fresh pack and a new deal, and start fair. It seems idle, therefore, for the moralist to indulge in a homily about annual good intentions, and habits that ought to be dropped or acquired, on the first of January. He can do little more than comment on the passing show.

It will be admitted that if the world at this date is not socially reformed it is not the fault of the Drawer, and

for the reason that it has been not so much a critic as an explainer and encourager. It is in the latter character that it undertakes to defend and justify a national industry that has become very important within the past ten years. A great deal of capital is invested in it, and millions of people are actively employed in it. The varieties of chewing gum that are manufactured would be a matter of surprise to those who have paid no attention to the subject, and who may suppose that the millions of mouths they see engaged in its mastication have a common and vulgar taste. From the fact that it can be obtained at the apothecary's, an impression has got abroad that it is medicinal. This is not true. The medical profession do not use it, and what distinguishes it from drugs—that they also do not use—is the fact that they do not prescribe it. It is neither a narcotic nor a stimulant. It cannot strictly be said to soothe or to excite. The habit of using it differs totally from that of the chewing of tobacco or the dipping of snuff. It might, by a purely mechanical operation, keep a person awake, but no one could go to sleep chewing gum. It is in itself neither tonic nor sedative. It is to be noticed also that the gum habit differs from the tobacco habit in that the aromatic and elastic substance is masticated, while the tobacco never is, and that the mastication leads to nothing except more mastication. The task is one that can never be finished. The amount of energy expended in this process if capitalized or conserved would produce great results. Of course the individual does little, but if the power evolved by the practice in a district school could be utilized, it would suffice to run the kindergarten department. The writer has seen a railway car—say in the West—filled with young women, nearly every one of whose jaws and pretty mouths was engaged in this pleasing occupation; and so much power was generated that it would, if applied, have kept the car in motion if the steam had been shut off—at least it would have furnished the motive for illuminating the car by electricity.

This national industry is the subject of constant detraction, satire, and ridicule by the newspaper press. This is because it is not understood, and it may be because it is mainly a female accomplishment: the few men who chew gum may be supposed to do so by reason of gallantry. There might be no more sympathy with it in the press if the real reason for the practice were understood, but it would be treated more respectfully. Some have said that the practice arises from nervousness—the idle desire to be busy without doing anything—and because it fills up the pauses of vacuity in conversation. But this would not fully account for the practice of it in solitude. Some have regarded it as in obedience to the feminine instinct for the cultivation of patience and self-denial—patience in a fruitless activity, and self-denial in the eternal act of mastication without swallowing. It is no more related to these virtues than it is to the habit of the reflective cow in chewing her cud. The cow would never chew gum. The explanation is a more philosophical one, and relates to a great modern social movement. It is to strengthen and develop and make more masculine the lower jaw. The critic who says that this is needless, that the inclination in women to talk would adequately develop this, misses the point altogether. Even if it could be proved that women are greater chatterers than men, the critic would gain nothing. Women have talked freely since creation, but it remains true that a heavy, strong lower jaw is a distinctively masculine characteristic. It is remarked that if a woman has a strong lower jaw she is like a man. Conversation does not create this difference, nor remove it; for the development of a lower jaw in women constant mechanical exercise of the muscles is needed. Now, a spirit of emancipation, of emulation, is abroad, as it ought to be, for the regeneration of the world. It is sometimes called the coming to the front of woman in every act and occupation that used to belong almost exclusively to man. It is not necessary to say a word to justify this. But it is often accompanied by a misconception, namely, that it is necessary for woman to be like man, not only in habits, but in certain physical characteristics. No woman desires a beard, because a beard means care and trouble, and would detract from feminine beauty, but to have a strong and, in appearance, a resolute under-jaw may be considered a desirable note of masculinity, and of masculine power and privilege, in the good time coming. Hence the cultivation of it by the chewing of gum is a recognizable and reasonable instinct, and the practice can be defended as neither a whim nor a vain waste of energy and nervous force. In a generation or two it may be laid aside as no longer necessary, or men may be compelled to resort to it to preserve their supremacy.

WOMEN IN CONGRESS

It does not seem to be decided yet whether women are to take the Senate or the House at Washington in the new development of what is called the dual government. There are disadvantages in both. The members of the Senate are so few that the women of the country would not be adequately represented in it; and the Chamber in which the House meets is too large for women to make speeches in with any pleasure to themselves or their hearers. This last objection is, however, frivolous, for the speeches will be printed in the Record; and it is as easy to count women on a vote as men. There is nothing in the objection, either, that the Chamber would need to be remodeled, and the smoking-rooms be turned into Day Nurseries. The coming woman will not smoke, to be sure; neither will she, in coming forward to take charge of the government, plead the Baby Act. Only those women, we are told, would be elected to Congress whose age and position enable them to devote themselves exclusively to politics. The question, therefore, of taking to themselves the Senate or the House will be decided by the women themselves upon other grounds—as to whether they wish to take the initiative in legislation and hold the power of the purse, or whether they prefer to act as a check, to exercise the high treaty-making power, and to have a voice in selecting the women who shall be sent to represent us abroad. Other things being equal, women will naturally select the Upper House, and especially as that will give them an opportunity to reject any but the most competent women for the Supreme Bench. The irreverent scoffers at our Supreme Court have in the past complained (though none do now) that there were “old women” in gowns on the bench. There would be no complaint of the kind in the future. The judges would be as pretty as those who assisted in the judgment of Paris, with changed functions; there would be no monotony in the dress, and the Supreme Bench would be one of the most attractive spectacles in Washington. When the judges as well as the advocates are Portias, the law will be an agreeable occupation.

This is, however, mere speculation. We do not understand that it is the immediate purpose of women to take the whole government, though some extravagant expectations are raised by the admission of new States that are ruled by women. They may wish to divide—and conquer. One plan is, instead of dual Chambers of opposite sexes, to mingle in both the Senate and the House. And this is more likely to be the plan adopted, because the revolution is not to be violent, and, indeed, cannot take place without some readjustment of the home life. We have at present what Charles Reade would have called only a right-handed civilization. To speak metaphorically, men cannot use their left hands, or, to drop the metaphor, before the government can be fully reorganized men must learn to do women's work. It may be a fair inference from this movement that women intend to abandon the sacred principle of Home Rule. This abandonment is foreshadowed in a recent election in a small Western city, where the female voters made a clean sweep, elected an entire city council of women and most of the other officers, including the police judge and the mayor. The latter lady, by one of those intrusions of nature which reform is not yet able to control, became a mother and a mayor the same week. Her husband had been city clerk, and held over; but fortunately an arrangement was made with him to stay at home and take care of the baby, unofficially, while the mayor attends to her public duties. Thus the city clerk will gradually be initiated into the duties of home rule, and when the mayor is elected to Congress he will be ready to accompany her to Washington and keep house. The imagination likes to dwell upon this, for the new order is capable of infinite extension. When the State takes care of all the children in government nurseries, and the mayor has taken her place in the United States Senate, her husband, if he has become sufficiently reformed and feminized, may go to the House, and the reunited family of two, clubbing their salaries, can live in great comfort.

All this can be easily arranged, whether we are to have a dual government of sexes or a mixed House and Senate. The real difficulty is about a single Executive. Neither sex will be willing to yield to the other this vast power. We might elect a man and wife President and Vice-President, but the Vice-President, of whatever sex, could not well preside over the Senate and in the White House at the same time. It is true that the Constitution provides that the President and Vice-President shall not be of the same State, but residence can be acquired to get over this as easily as to obtain a divorce; and a Constitution that insists upon speaking of the President as “he” is too antiquated to be respected. When the President is a woman, it can matter little whether her husband or some other woman presides in the Senate. Even the reformers will hardly insist upon two Presidents in order to carry out the equality idea, so that we are probably anticipating difficulties that will not occur in practice.

The Drawer has only one more practical suggestion. As the right of voting carries with it the right to hold any elective office, a great change must take place in Washington life. Now for some years the divergence of society and politics has been increasing at the capital. With women in both Houses, and on the Supreme Bench, and at the heads of the departments, social and political life will become one and the same thing; receptions and afternoon teas will be held in the Senate and House, and political caucuses in all the drawing-rooms. And then life will begin to be interesting.

SHALL WOMEN PROPOSE?

The shyness of man—meaning the “other sex” referred to in the woman's journals—has often been noticed in novels, and sometimes in real life. This shyness is, however, so exceptional as to be suspicious. The shy young man may provoke curiosity, but he does not always inspire respect. Roughly estimated, shyness is not considered a manly quality, while it is one of the most pleasing and attractive of the feminine traits, and there is something pathetic in the expression “He is as shy as a girl;” it may appeal for sympathy and the exercise of the protective instinct in women. Unfortunately it is a little discredited, so many of the old plays turning upon its assumption by young blades who are no better than they should be.

What would be the effect upon the masculine character and comfort if this shyness should become general, as it may in a contingency that is already on the horizon? We refer, of course, to the suggestion, coming from various quarters, that women should propose. The reasonableness of this suggestion may not lie on the surface; it may not be deduced from the uniform practice, beginning with the primitive men and women; it may not be inferred from the open nature of the two sexes (for the sake of argument two sexes must still be insisted on); but it is found in the advanced civilization with which we are struggling. Why should not women propose? Why should they be at a disadvantage in an affair which concerns the happiness of the whole life? They have as much right to a choice as men, and to an opportunity to exercise it. Why should they occupy a negative position, and be restricted, in making the most important part of their career, wholly to the choice implied in refusals? In fact, marriage really concerns them more than it does men; they have to bear the chief of its burdens. A wide and free choice for them would, then, seem to be only fair. Undeniably a great many men are inattentive, unobserving, immersed in some absorbing pursuit, undecided, and at times bashful, and liable to fall into union with women who happen to be near them, rather than with those who are conscious that they would make them the better wives. Men, unaided by the finer feminine instincts of choice, are so apt to be deceived. In fact, man's inability to “match” anything is notorious. If he cannot be trusted in the matter of worsted-work, why should he have such distinctive liberty in the most important matter of his life? Besides, there are many men—and some of the best who get into a habit of not marrying at all, simply because the right woman has not presented herself at the right time. Perhaps, if women had the open privilege of selection, many a good fellow would be rescued from miserable isolation, and perhaps also many a noble woman whom chance, or a stationary position, or the inertia of the other sex, has left to bloom alone, and waste her sweetness on relations, would be the centre of a charming home, furnishing the finest spectacle seen in this uphill world—a woman exercising gracious hospitality, and radiating to a circle far beyond her home the influence of her civilizing personality. For, notwithstanding all the centrifugal forces of this age, it is probable that the home will continue to be the fulcrum on which women will move the world.

It may be objected that it would be unfair to add this opportunity to the already, overpowering attractions of woman, and that man would be put at an immense disadvantage, since he might have too much gallantry, or not enough presence of mind, to refuse a proposal squarely and fascinatingly made, although his judgment scarcely consented, and his ability to support a wife were more than doubtful. Women would need to exercise a great deal of prudence and discretion, or there would be something like a panic, and a cry along the male line of 'Sauve qui peut'; for it is matter of record that the bravest men will sometimes run away from danger on a sudden impulse.

This prospective social revolution suggests many inquiries. What would be the effect upon the female character and disposition of a possible, though not probable, refusal, or of several refusals? Would she become embittered and desperate, and act as foolishly as men often do? Would her own sex be considerate, and give her a fair field if they saw she was paying attention to a young man, or an old one? And what effect would this change in relations have upon men? Would it not render that sporadic shyness of which we have spoken epidemic? Would it frighten men, rendering their position less stable in their own eyes, or would it feminize them—that is, make them retiring, blushing, self-conscious beings? And would this change be of any injury to them in their necessary fight for existence in this pushing world? What would be the effect upon courtship if both the men and the women approached each other as wooers? In ordinary transactions one is a buyer and one is a seller—to put it coarsely. If seller met seller and buyer met buyer, trade would languish. But this figure cannot be continued, for there is no romance in a bargain of any sort; and what we should most fear in a scientific age is the loss of romance.

This is, however, mere speculation. The serious aspect of the proposed change is the effect it will have upon the character of men, who are not enough considered in any of these discussions. The revolution will be a radical one in one respect. We may admit that in the future woman can take care of herself, but how will it be with man, who has had little disciplinary experience of adversity, simply because he has been permitted to have his own way? Heretofore his life has had a stimulus. When he proposes to a woman, he in fact says: "I am able to support you; I am able to protect you from the rough usage of the world; I am strong and ambitious, and eager to take upon myself the lovely bondage of this responsibility. I offer you this love because I feel the courage and responsibility of my position." That is the manly part of it. What effect will it have upon his character to be waiting round, unselected and undecided, until some woman comes to him, and fixes her fascinating eyes upon him, and says, in effect: "I can support you; I can defend you. Have no fear of the future; I will be at once your shield and your backbone. I take the responsibility of my choice." There are a great many men now, who have sneaked into their positions by a show of courage, who are supported one way and another by women. It might be humiliating to know just how many men live by the labors of their wives. And what would be the effect upon the character of man if the choice, and the responsibility of it, and the support implied by it in marriage, were generally transferred to woman?

FROCKS AND THE STAGE

The condescension to literature and to the stage is one of the notable characteristics of this agreeable time. We have to admit that literature is rather the fashion, without the violent presumption that the author and the writer have the same social position that is conferred by money, or by the mysterious virtue there is in pedigree. A person does not lose caste by using the pen, or even by taking the not-needed pay for using it. To publish a book or to have an article accepted by a magazine may give a sort of social distinction, either as an exhibition of a certain unexpected capacity or a social eccentricity. It is hardly too much to say that it has become the fashion to write, as it used to be to dance the minuet well, or to use the broadsword, or to stand a gentlemanly mill with a renowned bruiser. Of course one ought not to do this professionally exactly, ought not to prepare for doing it by study and severe discipline, by training for it as for a trade, but simply to toss it off easily, as one makes a call, or pays a compliment, or drives four-in-hand. One does not need to have that interior impulse which drives a poor devil of an author to express himself, that something to say which torments the poet into extreme irritability unless he can be rid of it, that noble hunger for fame which comes from a consciousness of the possession of vital thought and emotion.

The beauty of this condescension to literature of which we speak is that it has that quality of spontaneity that does not presuppose either a capacity or a call. There is no mystery about the craft. One resolves to write a book, as he might to take a journey or to practice on the piano, and the thing is done. Everybody can write, at least everybody does write. It is a wonderful time for literature. The Queen of England writes for it, the Queen of Roumania writes for it, the Shah of Persia writes for it, Lady Brassey, the yachtswoman, wrote for it, Congressmen write for it, peers write for it. The novel is the common recreation of ladies of rank, and where is the young woman in this country who has not tried her hand at a romance or made a cast at a popular magazine? The effect of all this upon literature is expansive and joyous. Superstition about any mystery in the art has nearly disappeared. It is a common observation that if persons fail in everything else, if they are fit for nothing else, they can at least write. It is such an easy occupation, and the remuneration is in such disproportion to the expenditure! Isn't it indeed the golden era of letters? If only the letters were gold!

If there is any such thing remaining as a guild of authors, somewhere on the back seats, witnessing this marvelous Kingdom Come of Literature, there must also be a little bunch of actors, born for the stage, who see with mixed feelings their arena taken possession of by fairer if not more competent players. These players are not to be confounded with the play-actors whom the Puritans denounced, nor with those trained to the profession in the French capital.

In the United States and in England we are born to enter upon any avocation, thank Heaven! without training for it. We have not in this country any such obstacle to universal success as the Theatre Francais, but Providence has given us, for wise purposes no doubt, Private Theatricals (not always so private as they should

be), which domesticate the drama, and supply the stage with some of the most beautiful and best dressed performers the world has ever seen. Whatever they may say of it, it is a gallant and a susceptible age, and all men bow to loveliness, and all women recognize a talent for clothes. We do not say that there is not such a thing as dramatic art, and that there are not persons who need as severe training before they attempt to personate nature in art as the painter must undergo who attempts to transfer its features to his canvas. But the taste of the age must be taken into account. The public does not demand that an actor shall come in at a private door and climb a steep staircase to get to the stage. When a Star from the Private Theatricals descends upon the boards, with the arms of Venus and the throat of Juno, and a wardrobe got out of Paris and through our stingy Custom-house in forty trunks, the plodding actor, who has depended upon art, finds out, what he has been all the time telling us, that all the world's a stage, and men and women merely players. Art is good in its way; but what about a perfect figure? and is not dressing an art? Can training give one an elegant form, and study command the services of a man milliner? The stage is broadened out and re-enforced by a new element. What went you out for to see?

A person clad in fine raiment, to be sure. Some of the critics may growl a little, and hint at the invasion of art by fashionable life, but the editor, whose motto is that the newspaper is made for man, not man for the newspaper, understands what is required in this inspiring histrionic movement, and when a lovely woman condescends to step from the drawing-room to the stage he confines his descriptions to her person, and does not bother about her capacity; and instead of wearying us with a list of her plays and performances, he gives us a column about her dresses in beautiful language that shows us how closely allied poetry is to tailoring. Can the lady act? Why, simpleminded, she has nearly a hundred frocks, each one a dream, a conception of genius, a vaporous idea, one might say, which will reveal more beauty than it hides, and teach the spectator that art is simply nature adorned. Rachel in all her glory was not adorned like one of these. We have changed all that. The actress used to have a rehearsal. She now has an "opening." Does it require nowadays, then, no special talent or gift to go on the stage? No more, we can assure our readers, than it does to write a book. But homely people and poor people can write books. As yet they cannot act.

ALTRUISM

Christmas is supposed to be an altruistic festival. Then, if ever, we allow ourselves to go out to others in sympathy expressed by gifts and good wishes. Then self-forgetfulness in the happiness of others becomes a temporary fashion. And we find—do we not?—the indulgence of the feeling so remunerative that we wish there were other days set apart to it. We can even understand those people who get a private satisfaction in being good on other days besides Sunday. There is a common notion that this Christmas altruistic sentiment is particularly shown towards the unfortunate and the dependent by those more prosperous, and in what is called a better social position. We are exhorted on this day to remember the poor. We need to be reminded rather to remember the rich, the lonely, not-easy-to-be-satisfied rich, whom we do not always have with us. The Drawer never sees a very rich person that it does not long to give him something, some token, the value of which is not estimated by its cost, that should be a consoling evidence to him that he has not lost sympathetic touch with ordinary humanity. There is a great deal of sympathy afloat in the world, but it is especially shown downward in the social scale. We treat our servants—supposing that we are society—better than we treat each other. If we did not, they would leave us. We are kinder to the unfortunate or the dependent than to each other, and we have more charity for them.

The Drawer is not indulging in any indiscriminate railing at society. There is society and society. There is that undefined something, more like a machine than an aggregate of human sensibilities, which is set going in a "season," or at a watering-place, or permanently selects itself for certain social manifestations. It is this that needs a missionary to infuse into it sympathy and charity. If it were indeed a machine and not made up of sensitive personalities, it would not be to its members so selfish and cruel. It would be less an ambitious scramble for place and favor, less remorseless towards the unsuccessful, not so harsh and hard and supercilious. In short, it would be much more agreeable if it extended to its own members something of the consideration and sympathy that it gives to those it regards as its inferiors. It seems to think that good-breeding and good form are separable from kindness and sympathy and helpfulness. Tender-hearted and charitable enough all the individuals of this "society" are to persons below them in fortune or position, let us allow, but how are they to each other? Nothing can be ruder or less considerate of the feelings of others than much of that which is called good society, and this is why the Drawer desires to turn the altruistic sentiment of the world upon it in this season, set apart by common consent for usefulness. Unfortunate are the fortunate if they are lifted into a sphere which is sapless of delicacy of feeling for its own. Is this an intangible matter? Take hospitality, for instance. Does it consist in astonishing the invited, in overwhelming him with a sense of your own wealth, or felicity, or family, or cleverness even; in trying to absorb him in your concerns, your successes, your possessions, in simply what interests you? However delightful all these may be, it is an offense to his individuality to insist that he shall admire at the point of the social bayonet. How do you treat the stranger? Do you adapt yourself and your surroundings to him, or insist that he shall adapt himself to you? How often does the stranger, the guest, sit in helpless agony in your circle (all of whom know each other) at table or in the drawing-room, isolated and separate, because all the talk is local and personal, about your little world, and the affairs of your clique, and your petty interests, in which he or she cannot possibly join? Ah! the Sioux Indian would not be so cruel as that to a guest. There is no more refined torture to a sensitive person than that. Is it only thoughtlessness? It is more than that. It is a want of sympathy of the heart, or it is a lack of intelligence and broad-minded interest in affairs of the world and in other people. It is this trait—absorption in self—pervading society more or less, that makes it so unsatisfactory to most people in it. Just a want of human interest; people do not come in contact.

Avid pursuit of wealth, or what is called pleasure, perhaps makes people hard to each other, and infuses

into the higher social life, which should be the most unselfish and enjoyable life, a certain vulgarity, similar to that noticed in well-bred tourists scrambling for the seats on top of a mountain coach. A person of refinement and sensibility and intelligence, cast into the company of the select, the country-house, the radiant, twelve-button society, has been struck with infinite pity for it, and asks the Drawer to do something about it. The Drawer cannot do anything about it. It can only ask the prayers of all good people on Christmas Day for the rich. As we said, we do not have them with us always—they are here today, they are gone to Canada tomorrow. But this is, of course, current facetiousness. The rich are as good as anybody else, according to their lights, and if what is called society were as good and as kind to itself as it is to the poor, it would be altogether enviable. We are not of those who say that in this case, charity would cover a multitude of sins, but a diffusion in society of the Christmas sentiment of goodwill and kindness to itself would tend to make universal the joy on the return of this season.

SOCIAL CLEARING-HOUSE

The Drawer would like to emphasize the noble, self-sacrificing spirit of American women. There are none like them in the world. They take up all the burdens of artificial foreign usage, where social caste prevails, and bear them with a heroism worthy of a worse cause. They indeed represent these usages to be a burden almost intolerable, and yet they submit to them with a grace and endurance all their own. Probably there is no harder-worked person than a lady in the season, let us say in Washington, where the etiquette of visiting is carried to a perfection that it does not reach even in New York, Boston, or Philadelphia, and where woman's effort to keep the social fabric together requires more expenditure of intellect and of physical force than was needed to protect the capital in its peril a quarter of a century ago. When this cruel war is over, the monument to the women who perished in it will need to be higher than that to the Father of his Country. Merely in the item of keeping an account of the visits paid and due, a woman needs a bookkeeper. Only to know the etiquette of how and when and to whom and in what order the visits are to be paid is to be well educated in a matter that assumes the first importance in her life. This is, however, only a detail of bookkeeping and of memory; to pay and receive, or evade, these visits of ceremony is a work which men can admire without the power to imitate; even on the supposition that a woman has nothing else to do, it calls for our humble gratitude and a recognition of the largeness of nature that can put aside any duties to husband or children in devotion to the public welfare. The futile round of society life while it lasts admits of no rival. It seems as important as the affairs of the government. The Drawer is far from saying that it is not. Perhaps no one can tell what confusion would fall into all the political relations if the social relations of the capital were not kept oiled by the system of exchange of fictitious courtesies among the women; and it may be true that society at large—men are so apt, when left alone, to relapse—would fall into barbarism if our pasteboard conventions were neglected. All honor to the self-sacrifice of woman!

What a beautiful civilization ours is, supposed to be growing in intelligence and simplicity, and yet voluntarily taking upon itself this artificial burden in an already overtaxed life! The angels in heaven must admire and wonder. The cynic wants to know what is gained for any rational being when a city-full of women undertake to make and receive formal visits with persons whom for the most part they do not wish to see. What is gained, he asks, by leaving cards with all these people and receiving their cards? When a woman makes her tedious rounds, why is she always relieved to find people not in? When she can count upon her ten fingers the people she wants to see, why should she pretend to want to see the others? Is any one deceived by it? Does anybody regard it as anything but a sham and a burden? Much the cynic knows about it! Is it not necessary to keep up what is called society? Is it not necessary to have an authentic list of pasteboard acquaintances to invite to the receptions? And what would become of us without Receptions? Everybody likes to give them. Everybody flocks to them with much alacrity. When society calls the roll, we all know the penalty of being left out. Is there any intellectual or physical pleasure equal to that of jamming so many people into a house that they can hardly move, and treating them to a Babel of noises in which no one can make herself heard without screaming? There is nothing like a reception in any uncivilized country. It is so exhilarating! When a dozen or a hundred people are gathered together in a room, they all begin to raise their voices and to shout like pool-sellers in the noble rivalry of "various langwidges," rasping their throats into bronchitis in the bidding of the conversational ring. If they spoke low, or even in the ordinary tone, conversation would be possible. But then it would not be a reception, as we understand it. We cannot neglect anywhere any of the pleasures of our social life. We train for it in lower assemblies. Half a dozen women in a "call" are obliged to shout, just for practice, so that they can be heard by everybody in the neighborhood except themselves. Do not men do the same? If they do, it only shows that men also are capable of the higher civilization.

But does society—that is, the intercourse of congenial people—depend upon the elaborate system of exchanging calls with hundreds of people who are not congenial? Such thoughts will sometimes come by a winter fireside of rational-talking friends, or at a dinner-party not too large for talk without a telephone, or in the summer-time by the sea, or in the cottage in the hills, when the fever of social life has got down to a normal temperature. We fancy that sometimes people will give way to a real enjoyment of life and that human intercourse will throw off this artificial and wearisome parade, and that if women look back with pride, as they may, upon their personal achievements and labors, they will also regard them with astonishment. Women, we read every day, long for the rights and privileges of men, and the education and serious purpose in life of men. And yet, such is the sweet self-sacrifice of their nature, they voluntarily take on burdens which men have never assumed, and which they would speedily cast off if they had. What should we say of men if they consumed half their time in paying formal calls upon each other merely for the sake of paying calls, and were low-spirited if they did not receive as many cards as they had dealt out to society? Have they not the time? Have women more time? and if they have, why should they spend it in this Sisyphus task? Would the

social machine go to pieces—the inquiry is made in good faith, and solely for information—if they made rational business for themselves to be attended to, or even if they gave the time now given to calls they hate to reading and study, and to making their household civilizing centres of intercourse and enjoyment, and paid visits from some other motive than “clearing off their list”? If all the artificial round of calls and cards should tumble down, what valuable thing would be lost out of anybody's life?

The question is too vast for the Drawer, but as an experiment in sociology it would like to see the system in abeyance for one season. If at the end of it there had not been just as much social enjoyment as before, and there were not fewer women than usual down with nervous prostration, it would agree to start at its own expense a new experiment, to wit, a kind of Social Clearing-House, in which all cards should be delivered and exchanged, and all social debts of this kind be balanced by experienced bookkeepers, so that the reputation of everybody for propriety and conventionality should be just as good as it is now.

DINNER-TABLE TALK

Many people suppose that it is the easiest thing in the world to dine if you can get plenty to eat. This error is the foundation of much social misery. The world that never dines, and fancies it has a grievance justifying anarchy on that account, does not know how much misery it escapes. A great deal has been written about the art of dining. From time to time geniuses have appeared who knew how to compose a dinner; indeed, the art of doing it can be learned, as well as the art of cooking and serving it. It is often possible, also, under extraordinarily favorable conditions, to select a company congenial and varied and harmonious enough to dine together successfully. The tact for getting the right people together is perhaps rarer than the art of composing the dinner. But it exists. And an elegant table with a handsome and brilliant company about it is a common conjunction in this country. Instructions are not wanting as to the shape of the table and the size of the party; it is universally admitted that the number must be small. The big dinner-parties which are commonly made to pay off social debts are generally of the sort that one would rather contribute to in money than in personal attendance. When the dinner is treated as a means of discharging obligations, it loses all character, and becomes one of the social inflictions. While there is nothing in social intercourse so agreeable and inspiring as a dinner of the right sort, society has invented no infliction equal to a large dinner that does not “go,” as the phrase is. Why it does not go when the viands are good and the company is bright is one of the acknowledged mysteries.

There need be no mystery about it. The social instinct and the social habit are wanting to a great many people of uncommon intelligence and cultivation—that sort of flexibility or adaptability that makes agreeable society. But this even does not account for the failure of so many promising dinners. The secret of this failure always is that the conversation is not general. The sole object of the dinner is talk—at least in the United States, where “good eating” is pretty common, however it may be in England, whence come rumors occasionally of accomplished men who decline to be interrupted by the frivolity of talk upon the appearance of favorite dishes. And private talk at a table is not the sort that saves a dinner; however good it is, it always kills it. The chance of arrangement is that the people who would like to talk together are not neighbors; and if they are, they exhaust each other to weariness in an hour, at least of topics which can be talked about with the risk of being overheard. A duet to be agreeable must be to a certain extent confidential, and the dinner-table admits of little except generalities, and generalities between two have their limits of entertainment. Then there is the awful possibility that the neighbors at table may have nothing to say to each other; and in the best-selected company one may sit beside a stupid man—that is, stupid for the purpose of a 'tete-a-tete'. But this is not the worst of it. No one can talk well without an audience; no one is stimulated to say bright things except by the attention and questioning and interest of other minds. There is little inspiration in side talk to one or two. Nobody ought to go to a dinner who is not a good listener, and, if possible, an intelligent one. To listen with a show of intelligence is a great accomplishment. It is not absolutely essential that there should be a great talker or a number of good talkers at a dinner if all are good listeners, and able to “chip in” a little to the general talk that springs up. For the success of the dinner does not necessarily depend upon the talk being brilliant, but it does depend upon its being general, upon keeping the ball rolling round the table; the old-fashioned game becomes flat when the balls all disappear into private pockets. There are dinners where the object seems to be to pocket all the balls as speedily as possible. We have learned that that is not the best game; the best game is when you not only depend on the carom, but in going to the cushion before you carom; that is to say, including the whole table, and making things lively. The hostess succeeds who is able to excite this general play of all the forces at the table, even using the silent but not non-elastic material as cushions, if one may continue the figure. Is not this, O brothers and sisters, an evil under the sun, this dinner as it is apt to be conducted? Think of the weary hours you have given to a rite that should be the highest social pleasure! How often when a topic is started that promises well, and might come to something in a general exchange of wit and fancy, and some one begins to speak on it, and speak very well, too, have you not had a lady at your side cut in and give you her views on it—views that might be amusing if thrown out into the discussion, but which are simply impertinent as an interruption! How often when you have tried to get a “rise” out of somebody opposite have you not had your neighbor cut in across you with some private depressing observation to your next neighbor! Private talk at a dinner-table is like private chat at a parlor musicale, only it is more fatal to the general enjoyment. There is a notion that the art of conversation, the ability to talk well, has gone out. That is a great mistake. Opportunity is all that is needed. There must be the inspiration of the clash of minds and the encouragement of good listening. In an evening round the fire, when couples begin, to whisper or talk low to each other, it is time to put out the lights. Inspiring interest is gone. The most brilliant talker in the world is dumb. People whose idea of a dinner is private talk between seat-neighbors should limit the company to two. They have no right to spoil what can be the most agreeable social institution that civilization has evolved.

NATURALIZATION

Is it possible for a person to be entirely naturalized?—that is, to be denationalized, to cast off the prejudice and traditions of one country and take up those of another; to give up what may be called the instinctive tendencies of one race and take up those of another. It is easy enough to swear off allegiance to a sovereign or a government, and to take on in intention new political obligations, but to separate one's self from the sympathies into which he was born is quite another affair. One is likely to remain in the inmost recesses of his heart an alien, and as a final expression of his feeling to hoist the green flag, or the dragon, or the cross of St. George. Probably no other sentiment is, so strong in a man as that of attachment to his own soil and people, a sub-sentiment always remaining, whatever new and unbreakable attachments he may form. One can be very proud of his adopted country, and brag for it, and fight for it; but lying deep in a man's nature is something, no doubt, that no oath nor material interest can change, and that is never naturalized. We see this experiment in America more than anywhere else, because here meet more different races than anywhere else with the serious intention of changing their nationality. And we have a notion that there is something in our atmosphere, or opportunities, or our government, that makes this change more natural and reasonable than it has been anywhere else in history. It is always a surprise to us when a born citizen of the United States changes his allegiance, but it seems a thing of course that a person of any other country should, by an oath, become a good American, and we expect that the act will work a sudden change in him equal to that wrought in a man by what used to be called a conviction of sin. We expect that he will not only come into our family, but that he will at once assume all its traditions and dislikes, that whatever may have been his institutions or his race quarrels, the moving influence of his life hereafter will be the "Spirit of '76."

What is this naturalization, however, but a sort of parable of human life? Are we not always trying to adjust ourselves to new relations, to get naturalized into a new family? Does one ever do it entirely? And how much of the lonesomeness of life comes from the failure to do it! It is a tremendous experiment, we all admit, to separate a person from his race, from his country, from his climate, and the habits of his part of the country, by marriage; it is only an experiment differing in degree to introduce him by marriage into a new circle of kinsfolk. Is he ever anything but a sort of tolerated, criticised, or admired alien? Does the time ever come when the distinction ceases between his family and hers? They say love is stronger than death. It may also be stronger than family—while it lasts; but was there ever a woman yet whose most ineradicable feeling was not the sentiment of family and blood, a sort of base-line in life upon which trouble and disaster always throw her back? Does she ever lose the instinct of it? We used to say in jest that a patriotic man was always willing to sacrifice his wife's relations in war; but his wife took a different view of it; and when it becomes a question of office, is it not the wife's relations who get them? To be sure, Ruth said, thy people shall be my people, and where thou goest I will go, and all that, and this beautiful sentiment has touched all time, and man has got the historic notion that he is the head of things. But is it true that a woman is ever really naturalized? Is it in her nature to be? Love will carry her a great way, and to far countries, and to many endurances, and her capacity of self-sacrifice is greater than man's; but would she ever be entirely happy torn from her kindred, transplanted from the associations and interlacings of her family life? Does anything really take the place of that entire ease and confidence that one has in kin, or the inborn longing for their sympathy and society? There are two theories about life, as about naturalization: one is that love is enough, that intention is enough; the other is that the whole circle of human relations and attachments is to be considered in a marriage, and that in the long-run the question of family is a preponderating one. Does the gate of divorce open more frequently from following the one theory than the other? If we were to adopt the notion that marriage is really a tremendous act of naturalization, of absolute surrender on one side or the other of the deepest sentiments and hereditary tendencies, would there be so many hasty marriages—slip-knots tied by one justice to be undone by another? The Drawer did not intend to start such a deep question as this. Hosts of people are yearly naturalized in this country, not from any love of its institutions, but because they can more easily get a living here, and they really surrender none of their hereditary ideas, and it is only human nature that marriages should be made with like purpose and like reservations. These reservations do not, however, make the best citizens or the most happy marriages. Would it be any better if country lines were obliterated, and the great brotherhood of peoples were established, and there was no such thing as patriotism or family, and marriage were as free to make and unmake as some people think it should be? Very likely, if we could radically change human nature. But human nature is the most obstinate thing that the International Conventions have to deal with.

ART OF GOVERNING

He was saying, when he awoke one morning, "I wish I were governor of a small island, and had nothing to do but to get up and govern." It was an observation quite worthy of him, and one of general application, for there are many men who find it very difficult to get a living on their own resources, to whom it would be comparatively easy to be a very fair sort of governor. Everybody who has no official position or routine duty on a salary knows that the most trying moment in the twenty-four hours is that in which he emerges from the oblivion of sleep and faces life. Everything perplexing tumbles in upon him, all the possible vexations of the day rise up before him, and he is little less than a hero if he gets up cheerful.

It is not to be wondered at that people crave office, some salaried position, in order to escape the anxieties,

the personal responsibilities, of a single-handed struggle with the world. It must be much easier to govern an island than to carry on almost any retail business. When the governor wakes in the morning he thinks first of his salary; he has not the least anxiety about his daily bread or the support of his family. His business is all laid out for him; he has not to create it. Business comes to him; he does not have to drum for it. His day is agreeably, even if sympathetically, occupied with the troubles of other people, and nothing is so easy to bear as the troubles of other people. After he has had his breakfast, and read over the "Constitution," he has nothing to do but to "govern" for a few hours, that is, to decide about things on general principles, and with little personal application, and perhaps about large concerns which nobody knows anything about, and which are much easier to dispose of than the perplexing details of private life. He has to vote several times a day; for giving a decision is really casting a vote; but that is much easier than to scratch around in all the anxieties of a retail business. Many men who would make very respectable Presidents of the United States could not successfully run a retail grocery store. The anxieties of the grocery would wear them out. For consider the varied ability that the grocery requires—the foresight about the markets, to take advantage of an eighth per cent. off or on here and there; the vigilance required to keep a "full line" and not overstock, to dispose of goods before they spoil or the popular taste changes; the suavity and integrity and duplicity and fairness and adaptability needed to get customers and keep them; the power to bear the daily and hourly worry; the courage to face the ever-present spectre of "failure," which is said to come upon ninety merchants in a hundred; the tact needed to meet the whims and the complaints of patrons, and the difficulty of getting the patrons who grumble most to pay in order to satisfy the creditors. When the retail grocer wakens in the morning he feels that his business is not going to come to him spontaneously; he thinks of his rivals, of his perilous stock, of his debts and delinquent customers. He has no "Constitution" to go by, nothing but his wits and energy to set against the world that day, and every day the struggle and the anxiety are the same. What a number of details he has to carry in his head (consider, for instance, how many different kinds of cheese there are, and how different people hate and love the same kind), and how keen must be his appreciation of the popular taste. The complexities and annoyances of his business are excessive, and he cannot afford to make many mistakes; if he does he will lose his business, and when a man fails in business (honestly), he loses his nerve, and his career is ended. It is simply amazing, when you consider it, the amount of talent shown in what are called the ordinary businesses of life.

It has been often remarked with how little wisdom the world is governed. That is the reason it is so easy to govern. "Uneasy lies the head that wears a crown" does not refer to the discomfort of wearing it, but to the danger of losing it, and of being put back upon one's native resources, having to run a grocery or to keep school. Nobody is in such a pitiable plight as a monarch or politician out of business. It is very difficult for either to get a living. A man who has once enjoyed the blessed feeling of awaking every morning with the thought that he has a certain salary despises the idea of having to drum up a business by his own talents. It does not disturb the waking hour at all to think that a deputation is waiting in the next room about a post-office in Indiana or about the codfish in Newfoundland waters—the man can take a second nap on any such affair; but if he knows that the living of himself and family that day depends upon his activity and intelligence, uneasy lies his head. There is something so restful and easy about public business! It is so simple! Take the average Congressman. The Secretary of the Treasury sends in an elaborate report—a budget, in fact—involving a complete and harmonious scheme of revenue and expenditure. Must the Congressman read it? No; it is not necessary to do that; he only cares for practical measures. Or a financial bill is brought in. Does he study that bill? He hears it read, at least by title. Does he take pains to inform himself by reading and conversation with experts upon its probable effect? Or an international copyright law is proposed, a measure that will relieve the people of the United States from the world-wide reputation of sneaking meanness towards foreign authors. Does he examine the subject, and try to understand it? That is not necessary. Or it is a question of tariff. He is to vote "yes" or "no" on these proposals. It is not necessary for him to master these subjects, but it is necessary for him to know how to vote. And how does he find out that? In the first place, by inquiring what effect the measure will have upon the chance of election of the man he thinks will be nominated for President, and in the second place, what effect his vote will have on his own reelection. Thus the principles of legislation become very much simplified, and thus it happens that it is comparatively so much easier to govern than it is to run a grocery store.

LOVE OF DISPLAY

It is fortunate that a passion for display is implanted in human nature; and if we owe a debt of gratitude to anybody, it is to those who make the display for us. It would be such a dull, colorless world without it! We try in vain to imagine a city without brass bands, and military marchings, and processions of societies in regalia and banners and resplendent uniforms, and gayly caparisoned horses, and men clad in red and yellow and blue and gray and gold and silver and feathers, moving in beautiful lines, proudly wheeling with step elate upon some responsive human being as axis, deploying, opening, and closing ranks in exquisite precision to the strains of martial music, to the thump of the drum and the scream of the fife, going away down the street with nodding plumes, heads erect, the very port of heroism. There is scarcely anything in the world so inspiring as that. And the self-sacrifice of it! What will not men do and endure to gratify their fellows! And in the heat of summer, too, when most we need something to cheer us! The Drawer saw, with feelings that cannot be explained, a noble company of men, the pride of their city, all large men, all fat men, all dressed alike, but each one as beautiful as anything that can be seen on the stage, perspiring through the gala streets of another distant city, the admiration of crowds of huzzaing men and women and boys, following another company as resplendent as itself, every man bearing himself like a hero, despising the heat and the dust, conscious only of doing his duty. We make a great mistake if we suppose it is a feeling of ferocity that sets these men tramping about in gorgeous uniform, in mud or dust, in rain or under a broiling sun. They have no

desire to kill anybody. Out of these resplendent clothes they are much like other people; only they have a nobler spirit, that which leads them to endure hardships for the sake of pleasing others. They differ in degree, though not in kind, from those orders, for keeping secrets, or for encouraging a distaste for strong drink, which also wear bright and attractive regalia, and go about in processions, with banners and music, and a pomp that cannot be distinguished at a distance from real war. It is very fortunate that men do like to march about in ranks and lines, even without any distinguishing apparel. The Drawer has seen hundreds of citizens in a body, going about the country on an excursion, parading through town after town, with no other distinction of dress than a uniform high white hat, who carried joy and delight wherever they went. The good of this display cannot be reckoned in figures. Even a funeral is comparatively dull without the military band and the four-and-four processions, and the cities where these resplendent corteges of woes are of daily occurrence are cheerful cities. The brass band itself, when we consider it philosophically, is one of the most striking things in our civilization. We admire its commonly splendid clothes, its drums and cymbals and braying brass, but it is the impartial spirit with which it lends itself to our varying wants that distinguishes it. It will not do to say that it has no principles, for nobody has so many, or is so impartial in exercising them. It is equally ready to play at a festival or a funeral, a picnic or an encampment, for the sons of war or the sons of temperance, and it is equally willing to express the feeling of a Democratic meeting or a Republican gathering, and impartially blows out "Dixie" or "Marching through Georgia," "The Girl I Left Behind Me" or "My Country, 'tis of Thee." It is equally piercing and exciting for St. Patrick or the Fourth of July.

There are cynics who think it strange that men are willing to dress up in fantastic uniform and regalia and march about in sun and rain to make a holiday for their countrymen, but the cynics are ungrateful, and fail to credit human nature with its trait of self-sacrifice, and they do not at all comprehend our civilization. It was doubted at one time whether the freedman and the colored man generally in the republic was capable of the higher civilization. This doubt has all been removed. No other race takes more kindly to martial and civic display than it. No one has a greater passion for societies and uniforms and regalias and banners, and the pomp of marchings and processions and peaceful war. The negro naturally inclines to the picturesque, to the flamboyant, to vivid colors and the trappings of office that give a man distinction. He delights in the drum and the trumpet, and so willing is he to add to what is spectacular and pleasing in life that he would spend half his time in parading. His capacity for a holiday is practically unlimited. He has not yet the means to indulge his taste, and perhaps his taste is not yet equal to his means, but there is no question of his adaptability to the sort of display which is so pleasing to the greater part of the human race, and which contributes so much to the brightness and cheerfulness of this world. We cannot all have decorations, and cannot all wear uniforms, or even regalia, and some of us have little time for going about in military or civic processions, but we all like to have our streets put on a holiday appearance; and we cannot express in words our gratitude to those who so cheerfully spend their time and money in glittering apparel and in parades for our entertainment.

VALUE OF THE COMMONPLACE

The vitality of a fallacy is incalculable. Although the Drawer has been going many years, there are still remaining people who believe that "things which are equal to the same thing are equal to each other." This mathematical axiom, which is well enough in its place, has been extended into the field of morals and social life, confused the perception of human relations, and raised "hob," as the saying is, in political economy. We theorize and legislate as if people were things. Most of the schemes of social reorganization are based on this fallacy. It always breaks down in experience. A has two friends, B and C—to state it mathematically. A is equal to B, and A is equal to C. A has for B and also for C the most cordial admiration and affection, and B and C have reciprocally the same feeling for A. Such is the harmony that A cannot tell which he is more fond of, B or C. And B and C are sure that A is the best friend of each. This harmony, however, is not triangular. A makes the mistake of supposing that it is—having a notion that things which are equal to the same thing are equal to each other—and he brings B and C together. The result is disastrous. B and C cannot get on with each other. Regard for A restrains their animosity, and they hypocritically pretend to like each other, but both wonder what A finds so congenial in the other. The truth is that this personal equation, as we call it, in each cannot be made the subject of mathematical calculation. Human relations will not bend to it. And yet we keep blundering along as if they would. We are always sure, in our letter of introduction, that this friend will be congenial to the other, because we are fond of both. Sometimes this happens, but half the time we should be more successful in bringing people into accord if we gave a letter of introduction to a person we do not know, to be delivered to one we have never seen. On the face of it this is as absurd as it is for a politician to indorse the application of a person he does not know for an office the duties of which he is unacquainted with; but it is scarcely less absurd than the expectation that men and women can be treated like mathematical units and equivalents. Upon the theory that they can, rest the present grotesque schemes of Nationalism.

In saying all this the Drawer is well aware that it subjects itself to the charge of being commonplace, but it is precisely the commonplace that this essay seeks to defend. Great is the power of the commonplace. "My friends," says the preacher, in an impressive manner, "Alexander died; Napoleon died; you will all die!" This profound remark, so true, so thoughtful, creates a deep sensation. It is deepened by the statement that "man is a moral being." The profundity of such startling assertions crows the spirit; they appeal to the universal consciousness, and we bow to the genius that delivers them. "How true!" we exclaim, and go away with an enlarged sense of our own capacity for the comprehension of deep thought. Our conceit is flattered. Do we not like the books that raise us to the great level of the commonplace, whereon we move with a sense of power? Did not Mr. Tupper, that sweet, melodious shepherd of the undisputed, lead about vast flocks of sheep over the satisfying plain of mediocrity? Was there ever a greater exhibition of power, while it lasted? How long did "The Country Parson" feed an eager world with rhetorical statements of that which it already

knew? The thinner this sort of thing is spread out, the more surface it covers, of course. What is so captivating and popular as a book of essays which gathers together and arranges a lot of facts out of histories and cyclopaedias, set forth in the form of conversations that any one could have taken part in? Is not this book pleasing because it is commonplace? And is this because we do not like to be insulted with originality, or because in our experience it is only the commonly accepted which is true? The statesman or the poet who launches out unmindful of these conditions will be likely to come to grief in her generation. Will not the wise novelist seek to encounter the least intellectual resistance?

Should one take a cynical view of mankind because he perceives this great power of the commonplace? Not at all. He should recognize and respect this power. He may even say that it is this power that makes the world go on as smoothly and contentedly as it does, on the whole. Woe to us, is the thought of Carlyle, when a thinker is let loose in this world! He becomes a cause of uneasiness, and a source of rage very often. But his power is limited. He filters through a few minds, until gradually his ideas become commonplace enough to be powerful. We draw our supply of water from reservoirs, not from torrents. Probably the man who first said that the line of rectitude corresponds with the line of enjoyment was disliked as well as disbelieved. But how impressive now is the idea that virtue and happiness are twins!

Perhaps it is true that the commonplace needs no defense, since everybody takes it in as naturally as milk, and thrives on it. Beloved and read and followed is the writer or the preacher of commonplace. But is not the sunshine common, and the bloom of May? Why struggle with these things in literature and in life? Why not settle down upon the formula that to be platitudinous is to be happy?

THE BURDEN OF CHRISTMAS

It would be the pity of the world to destroy it, because it would be next to impossible to make another holiday as good as Christmas. Perhaps there is no danger, but the American people have developed an unexpected capacity for destroying things; they can destroy anything. They have even invented a phrase for it—running a thing into the ground. They have perfected the art of making so much of a thing as to kill it; they can magnify a man or a recreation or an institution to death. And they do it with such a hearty good-will and enjoyment. Their motto is that you cannot have too much of a good thing. They have almost made funerals unpopular by over-elaboration and display, especially what are called public funerals, in which an effort is made to confer great distinction on the dead. So far has it been carried often that there has been a reaction of popular sentiment and people have wished the man were alive. We prosecute everything so vigorously that we speedily either wear it out or wear ourselves out on it, whether it is a game, or a festival, or a holiday. We can use up any sport or game ever invented quicker than any other people. We can practice anything, like a vegetable diet, for instance, to an absurd conclusion with more vim than any other nation. This trait has its advantages; nowhere else will a delusion run so fast, and so soon run up a tree—another of our happy phrases. There is a largeness and exuberance about us which run even into our ordinary phraseology. The sympathetic clergyman, coming from the bedside of a parishioner dying of dropsy, says, with a heavy sigh, "The poor fellow is just swelling away."

Is Christmas swelling away? If it is not, it is scarcely our fault. Since the American nation fairly got hold of the holiday—in some parts of the country, as in New England, it has been universal only about fifty years—we have made it hum, as we like to say. We have appropriated the English conviviality, the German simplicity, the Roman pomp, and we have added to it an element of expense in keeping with our own greatness. Is anybody beginning to feel it a burden, this sweet festival of charity and good-will, and to look forward to it with apprehension? Is the time approaching when we shall want to get somebody to play it for us, like baseball? Anything that interrupts the ordinary flow of life, introduces into it, in short, a social cyclone that upsets everything for a fortnight, may in time be as hard to bear as that festival of housewives called housecleaning, that riot of cleanliness which men fear as they do a panic in business. Taking into account the present preparations for Christmas, and the time it takes to recover from it, we are beginning—are we not?—to consider it one of the most serious events of modern life.

The Drawer is led into these observations out of its love for Christmas. It is impossible to conceive of any holiday that could take its place, nor indeed would it seem that human wit could invent another so adapted to humanity. The obvious intention of it is to bring together, for a season at least, all men in the exercise of a common charity and a feeling of good-will, the poor and the rich, the successful and the unfortunate, that all the world may feel that in the time called the Truce of God the thing common to all men is the best thing in life. How will it suit this intention, then, if in our way of exaggerated ostentation of charity the distinction between rich and poor is made to appear more marked than on ordinary days? Blessed are those that expect nothing. But are there not an increasing multitude of persons in the United States who have the most exaggerated expectations of personal profit on Christmas Day? Perhaps it is not quite so bad as this, but it is safe to say that what the children alone expect to receive, in money value would absorb the national surplus, about which so much fuss is made. There is really no objection to this—the terror of the surplus is a sort of nightmare in the country—except that it destroys the simplicity of the festival, and belittles small offerings that have their chief value in affection. And it points inevitably to the creation of a sort of Christmas "Trust"—the modern escape out of ruinous competition. When the expense of our annual charity becomes so great that the poor are discouraged from sharing in it, and the rich even feel it a burden, there would seem to be no way but the establishment of neighborhood "Trusts" in order to equalize both cost and distribution. Each family could buy a share according to its means, and the division on Christmas Day would create a universal satisfaction in profit sharing—that is, the rich would get as much as the poor, and the rivalry of ostentation would be quieted. Perhaps with the money question a little subdued, and the female anxieties of the festival allayed, there would be more room for the development of that sweet spirit of brotherly kindness, or all-embracing charity, which we know underlies this best festival of all the ages. Is this an old sermon? The

Drawer trusts that it is, for there can be nothing new in the preaching of simplicity.

THE RESPONSIBILITY OF WRITERS

It is difficult enough to keep the world straight without the interposition of fiction. But the conduct of the novelists and the painters makes the task of the conservators of society doubly perplexing. Neither the writers nor the artists have a due sense of the responsibilities of their creations. The trouble appears to arise from the imitativeness of the race. Nature herself seems readily to fall into imitation. It was noticed by the friends of nature that when the peculiar coal-tar colors were discovered, the same faded, aesthetic, and sometimes sickly colors began to appear in the ornamental flower-beds and masses of foliage plants. It was hardly fancy that the flowers took the colors of the ribbons and stuffs of the looms, and that the same instant nature and art were sicklied o'er with the same pale hues of fashion. If this relation of nature and art is too subtle for comprehension, there is nothing fanciful in the influence of the characters in fiction upon social manners and morals. To convince ourselves of this, we do not need to recall the effect of Werther, of Childe Harold, and of Don Juan, and the imitation of their sentimentality, misanthropy, and adventure, down to the copying of the rakishness of the loosely-knotted necktie and the broad turn-over collar. In our own generation the heroes and heroines of fiction begin to appear in real life, in dress and manner, while they are still warm from the press. The popular heroine appears on the street in a hundred imitations as soon as the popular mind apprehends her traits in the story. We did not know the type of woman in the poems of the aesthetic school and on the canvas of Rossetti—the red-haired, wide-eyed child of passion and emotion, in lank clothes, enmeshed in spider-webs—but so quickly was she multiplied in real life that she seemed to have stepped from the book and the frame, ready-made, into the street and the drawing-room. And there is nothing wonderful about this. It is a truism to say that the genuine creations in fiction take their places in general apprehension with historical characters, and sometimes they live more vividly on the printed page and on canvas than the others in their pale, contradictory, and incomplete lives. The characters of history we seldom agree about, and are always reconstructing on new information; but the characters of fiction are subject to no such vicissitudes.

The importance of this matter is hardly yet perceived. Indeed, it is unreasonable that it should be, when parents, as a rule, have so slight a feeling of responsibility for the sort of children they bring into the world. In the coming scientific age this may be changed, and society may visit upon a grandmother the sins of her grandchildren, recognizing her responsibility to the very end of the line. But it is not strange that in the apathy on this subject the novelists should be careless and inconsiderate as to the characters they produce, either as ideals or examples. They know that the bad example is more likely to be copied than to be shunned, and that the low ideal, being easy to follow, is more likely to be imitated than the high ideal. But the novelists have too little sense of responsibility in this respect, probably from an inadequate conception of their power. Perhaps the most harmful sinners are not those who send into the world of fiction the positively wicked and immoral, but those who make current the dull, the commonplace, and the socially vulgar. For most readers the wicked character is repellant; but the commonplace raises less protest, and is soon deemed harmless, while it is most demoralizing. An underbred book—that is, a book in which the underbred characters are the natural outcome of the author's own mind and apprehension of life—is worse than any possible epidemic; for while the epidemic may kill a number of useless or vulgar people, the book will make a great number. The keen observer must have noticed the increasing number of commonplace, indiscriminating people of low intellectual taste in the United States. These are to a degree the result of the feeble, underbred literature (so called) that is most hawked about, and most accessible, by cost and exposure, to the greater number of people. It is easy to distinguish the young ladies—many of them beautifully dressed, and handsome on first acquaintance—who have been bred on this kind of book. They are betrayed by their speech, their taste, their manners. Yet there is a marked public insensibility about this. We all admit that the scrawny young woman, anaemic and physically undeveloped, has not had proper nourishing food: But we seldom think that the mentally-vulgar girl, poverty-stricken in ideas, has been starved by a thin course of diet on anaemic books. The girls are not to blame if they are as vapid and uninteresting as the ideal girls they have been associating with in the books they have read. The responsibility is with the novelist and the writer of stories, the chief characteristic of which is vulgar commonplace.

Probably when the Great Assize is held one of the questions asked will be, "Did you, in America, ever write stories for children?" What a quaking of knees there will be! For there will stand the victims of this sort of literature, who began in their tender years to enfeeble their minds with the wishy-washy flood of commonplace prepared for them by dull writers and commercial publishers, and continued on in those so-called domestic stories (as if domestic meant idiotic) until their minds were diluted to that degree that they could not act upon anything that offered the least resistance. Beginning with the pepsinized books, they must continue with them, and the dull appetite by-and-by must be stimulated with a spice of vulgarity or a little pepper of impropriety. And fortunately for their nourishment in this kind, the dullest writers can be indecent.

Unfortunately the world is so ordered that the person of the feeblest constitution can communicate a contagious disease. And these people, bred on this pabulum, in turn make books. If one, it is now admitted, can do nothing else in this world, he can write, and so the evil widens and widens. No art is required, nor any selection, nor any ideality, only capacity for increasing the vacuous commonplace in life. A princess born may have this, or the leader of cotillons. Yet in the judgment the responsibility will rest upon the writers who set the copy.

THE CAP AND GOWN

One of the burning questions now in the colleges for the higher education of women is whether the undergraduates shall wear the cap and gown. The subject is a delicate one, and should not be confused with the broader one, what is the purpose of the higher education? Some hold that the purpose is to enable a woman to dispense with marriage, while others maintain that it is to fit a woman for the higher duties of the married life. The latter opinion will probably prevail, for it has nature on its side, and the course of history, and the imagination. But meantime the point of education is conceded, and whether a girl is to educate herself into single or double blessedness need not interfere with the consideration of the habit she is to wear during her college life. That is to be determined by weighing a variety of reasons.

Not the least of these is the consideration whether the cap-and-gown habit is becoming. If it is not becoming, it will not go, not even by an amendment to the Constitution of the United States; for woman's dress obeys always the higher law. Masculine opinion is of no value on this point, and the Drawer is aware of the fact that if it thinks the cap and gown becoming, it may imperil the cap-and-gown cause to say so; but the cold truth is that the habit gives a plain girl distinction, and a handsome girl gives the habit distinction. So that, aside from the mysterious working of feminine motive, which makes woman a law unto herself, there should be practical unanimity in regard to this habit. There is in the cap and gown a subtle suggestion of the union of learning with womanly charm that is very captivating to the imagination. On the other hand, all this may go for nothing with the girl herself, who is conscious of the possession of quite other powers and attractions in a varied and constantly changing toilet, which can reflect her moods from hour to hour. So that if it is admitted that this habit is almost universally becoming today, it might, in the inscrutable depths of the feminine nature—the something that education never can and never should change—be irksome tomorrow, and we can hardly imagine what a blight to a young spirit there might be in three hundred and sixty-five days of uniformity.

The devotees of the higher education will perhaps need to approach the subject from another point of view—namely, what they are willing to surrender in order to come into a distinctly scholastic influence. The cap and gown are scholastic emblems. Primarily they marked the student, and not alliance with any creed or vows to any religious order. They belong to the universities of learning, and today they have no more ecclesiastic meaning than do the gorgeous robes of the Oxford chancellor and vice-chancellor and the scarlet hood. From the scholarly side, then, if not from the dress side, there is much to be said for the cap and gown. They are badges of devotion, for the time being, to an intellectual life.

They help the mind in its effort to set itself apart to unworldly pursuits; they are indications of separateness from the prevailing fashions and frivolities. The girl who puts on the cap and gown devotes herself to the society which is avowedly in pursuit of a larger intellectual sympathy and a wider intellectual life. The enduring of this habit will have a confirming influence on her purposes, and help to keep her up to them. It is like the uniform to the soldier or the veil to the nun—a sign of separation and devotion. It is difficult in this age to keep any historic consciousness, any proper relations to the past. In the cap and gown the girl will at least feel that she is in the line of the traditions of pure learning. And there is also something of order and discipline in the uniforming of a community set apart for an unworldly purpose. Is it believed that three or four years of the kind of separateness marked by this habit in the life of a girl will rob her of any desirable womanly quality?

The cap and gown are only an emphasis of the purpose to devote a certain period to the higher life, and if they cannot be defended, then we may begin to be skeptical about the seriousness of the intention of a higher education. If the school is merely a method of passing the time until a certain event in the girl's life, she had better dress as if that event were the only one worth considering. But if she wishes to fit herself for the best married life, she may not disdain the help of the cap and gown in devoting herself to the highest culture. Of course education has its dangers, and the regalia of scholarship may increase them. While our cap-and-gown divinity is walking in the groves of Academia, apart from the ways of men, her sisters outside may be dancing and dressing into the affections of the marriageable men. But this is not the worst of it. The university girl may be educating herself out of sympathy with the ordinary possible husband. But this will carry its own cure. The educated girl will be so much more attractive in the long-run, will have so many more resources for making a life companionship agreeable, that she will be more and more in demand. And the young men, even those not expecting to take up a learned profession, will see the advantage of educating themselves up to the cap-and-gown level. We know that it is the office of the university to raise the standard of the college, and of the college to raise the standard of the high school. It will be the inevitable result that these young ladies, setting themselves apart for a period to the intellectual life, will raise the standard of the young men, and of married life generally. And there is nothing supercilious in the invitation of the cap-and-gown brigade to the young men to come up higher.

There is one humiliating objection made to the cap and gown—made by members of the gentle sex themselves—which cannot be passed by. It is of such a delicate nature, and involves such a disparagement of the sex in a vital point, that the Drawer hesitates to put it in words. It is said that the cap and gown will be used to cover untidiness, to conceal the makeshift of a disorderly and unsightly toilet. Undoubtedly the cap and gown are democratic, adopted probably to equalize the appearance of rich and poor in the same institution, where all are on an intellectual level. Perhaps the sex is not perfect; it may be that there are slovens (it is a brutal word) in that sex which is our poetic image of purity. But a neat and self-respecting girl will no more be slovenly under a scholastic gown than under any outward finery. If it is true that the sex would take cover in this way, and is liable to run down at the heel when it has a chance, then to the "examination" will have to be added a periodic "inspection," such as the West-Pointers submit to in regard to their uniforms. For the real idea of the cap and gown is to encourage discipline, order, and neatness. We fancy that it is the mission of woman in this generation to show the world that the tendency of woman to an intellectual life is not, as it used to be said it was, to untidy habits.

A TENDENCY OF THE AGE

This ingenious age, when studied, seems not less remarkable for its division of labor than for the disposition of people to shift labor on to others' shoulders. Perhaps it is only another aspect of the spirit of altruism, a sort of backhanded vicariousness. In taking an inventory of tendencies, this demands some attention.

The notion appears to be spreading that there must be some way by which one can get a good intellectual outfit without much personal effort. There are many schemes of education which encourage this idea. If one could only hit upon the right "electives," he could become a scholar with very little study, and without grappling with any of the real difficulties in the way of an education. It is no more a short-cut we desire, but a road of easy grades, with a locomotive that will pull our train along while we sit in a palace-car at ease. The discipline to be obtained by tackling an obstacle and overcoming it we think of small value. There must be some way of attaining the end of cultivation without much labor. We take readily to proprietary medicines. It is easier to dose with these than to exercise ordinary prudence about our health. And we readily believe the doctors of learning when they assure us that we can acquire a new language by the same method by which we can restore bodily vigor: take one small patent-right volume in six easy lessons, without even the necessity of "shaking," and without a regular doctor, and we shall know the language. Some one else has done all the work for us, and we only need to absorb. It is pleasing to see how this theory is getting to be universally applied. All knowledge can be put into a kind of pemican, so that we can have it condensed. Everything must be chopped up, epitomized, put in short sentences, and italicized. And we have primers for science, for history, so that we can acquire all the information we need in this world in a few hasty bites. It is an admirable saving of time-saving of time being more important in this generation than the saving of ourselves.

And the age is so intellectually active, so eager to know! If we wish to know anything, instead of digging for it ourselves, it is much easier to flock all together to some lecturer who has put all the results into an hour, and perhaps can throw them all upon a screen, so that we can acquire all we want by merely using the eyes, and bothering ourselves little about what is said. Reading itself is almost too much of an effort. We hire people to read for us—to interpret, as we call it—Browning and Ibsen, even Wagner. Every one is familiar with the pleasure and profit of "recitations," of "conversations" which are monologues. There is something fascinating in the scheme of getting others to do our intellectual labor for us, to attempt to fill up our minds as if they were jars. The need of the mind for nutriment is like the need of the body, but our theory is that it can be satisfied in a different way. There was an old belief that in order that we should enjoy food, and that it should perform its function of assimilation, we must work for it, and that the exertion needed to earn it brought the appetite that made it profitable to the system. We still have the idea that we must eat for ourselves, and that we cannot delegate this performance, as we do the filling of the mind, to some one else. We may have ceased to relish the act of eating, as we have ceased to relish the act of studying, but we cannot yet delegate it, even although our power of digesting food for the body has become almost as feeble as the power of acquiring and digesting food for the mind.

It is beautiful to witness our reliance upon others. The house may be full of books, the libraries may be as free and as unstrained of impurities as city water; but if we wish to read anything or study anything we resort to a club. We gather together a number of persons of like capacity with ourselves. A subject which we might grapple with and run down by a few hours of vigorous, absorbed attention in a library, gaining strength of mind by resolute encountering of difficulties, by personal effort, we sit around for a month or a season in a club, expecting somehow to take the information by effortless contiguity with it. A book which we could master and possess in an evening we can have read to us in a month in the club, without the least intellectual effort. Is there nothing, then, in the exchange of ideas? Oh yes, when there are ideas to exchange. Is there nothing stimulating in the conflict of mind with mind? Oh yes, when there is any mind for a conflict. But the mind does not grow without personal effort and conflict and struggle with itself. It is a living organism, and not at all like a jar or other receptacle for fluids. The physiologists say that what we eat will not do us much good unless we chew it. By analogy we may presume that the mind is not greatly benefited by what it gets without considerable exercise of the mind.

Still, it is a beautiful theory that we can get others to do our reading and thinking, and stuff our minds for us. It may be that psychology will yet show us how a congregate education by clubs may be the way. But just now the method is a little crude, and lays us open to the charge—which every intelligent person of this scientific age will repudiate—of being content with the superficial; for instance, of trusting wholly to others for our immortal furnishing, as many are satisfied with the review of a book for the book itself, or—a refinement on that—with a review of the reviews. The method is still crude. Perhaps we may expect a further development of the "slot" machine. By dropping a cent in the slot one can get his weight, his age, a piece of chewing-gum, a bit of candy, or a shock that will energize his nervous system. Why not get from a similar machine a "good business education," or an "interpretation" of Browning, or a new language, or a knowledge of English literature? But even this would be crude. We have hopes of something from electricity. There ought to be somewhere a reservoir of knowledge, connected by wires with every house, and a professional switch-tender, who, upon the pressure of a button in any house, could turn on the intellectual stream desired.—[Prophecy of the Internet of the year 2000 from 110 years ago. D.W.]—There must be discovered in time a method by which not only information but intellectual life can be infused into the system by an electric current. It would save a world of trouble and expense. For some clubs even are a weariness, and it costs money to hire other people to read and think for us.

Either we have been indulging in an expensive mistake, or a great foreign novelist who preaches the gospel of despair is locoed.

This word, which may be new to most of our readers, has long been current in the Far West, and is likely to be adopted into the language, and become as indispensable as the typical words taboo and tabooed, which Herman Melville gave us some forty years ago. There grows upon the deserts and the cattle ranges of the Rockies a plant of the leguminosae family, with a purple blossom, which is called the 'loco'. It is sweet to the taste; horses and cattle are fond of it, and when they have once eaten it they prefer it to anything else, and often refuse other food. But the plant is poisonous, or, rather, to speak exactly, it is a weed of insanity. Its effect upon the horse seems to be mental quite as much as physical. He behaves queerly, he is full of whims; one would say he was "possessed." He takes freaks, he trembles, he will not go in certain places, he will not pull straight, his mind is evidently affected, he is mildly insane. In point of fact, he is ruined; that is to say, he is 'locoed'. Further indulgence in the plant results in death, but rarely does an animal recover from even one eating of the insane weed.

The shepherd on the great sheep ranges leads an absolutely isolated life. For weeks, sometimes for months together, he does not see a human being. His only companions are his dogs and the three or four thousand sheep he is herding. All day long, under the burning sun, he follows the herd over the rainless prairie, as it nibbles here and there the short grass and slowly gathers its food. At night he drives the sheep back to the corral, and lies down alone in his hut. He speaks to no one; he almost forgets how to speak. Day and night he hears no sound except the melancholy, monotonous bleat, bleat of the sheep. It becomes intolerable. The animal stupidity of the herd enters into him. Gradually he loses his mind. They say that he is locoed. The insane asylums of California contain many shepherds.

But the word locoed has come to have a wider application than to the poor shepherds or the horses and cattle that have eaten the loco. Any one who acts queerly, talks strangely, is visionary without being actually a lunatic, who is what would be called elsewhere a "crank," is said to be locoed. It is a term describing a shade of mental obliquity and queerness something short of irresponsible madness, and something more than temporarily "rattled" or bewildered for the moment. It is a good word, and needed to apply to many people who have gone off into strange ways, and behave as if they had eaten some insane plant—the insane plant being probably a theory in the mazes of which they have wandered until they are lost.

Perhaps the loco does not grow in Russia, and the Prophet of Discouragement may never have eaten of it; perhaps he is only like the shepherd, mainly withdrawn from human intercourse and sympathy in a morbid mental isolation, hearing only the bleat, bleat, bleat of the 'muxhiks' in the dullness of the steppes, wandering round in his own sated mind until he has lost all clew to life. Whatever the cause may be, clearly he is 'locoed'. All his theories have worked out to the conclusion that the world is a gigantic mistake, love is nothing but animality, marriage is immorality; according to astronomical calculations this teeming globe and all its life must end some time; and why not now? There shall be no more marriage, no more children; the present population shall wind up its affairs with decent haste, and one by one quit the scene of their failure, and avoid all the worry of a useless struggle.

This gospel of the blessedness of extinction has come too late to enable us to profit by it in our decennial enumeration. How different the census would have been if taken in the spirit of this new light! How much bitterness, how much hateful rivalry would have been spared! We should then have desired a reduction of the population, not an increase of it. There would have been a pious rivalry among all the towns and cities on the way to the millennium of extinction to show the least number of inhabitants; and those towns would have been happiest which could exhibit not only a marked decline in numbers, but the greater number of old people. Beautiful St. Paul would have held a thanksgiving service, and invited the Minneapolis enumerators to the feast, Kansas City and St. Louis and San Francisco, and a hundred other places, would not have desired a recount, except, perhaps, for overestimate; they would not have said that thousands were away at the sea or in the mountains, but, on the contrary, that thousands who did not belong there, attracted by the salubrity of the climate, and the desire to injure the town's reputation, had crowded in there in census time. The newspapers, instead of calling on people to send in the names of the unenumerated, would have rejoiced at the small returns, as they would have done if the census had been for the purpose of levying the federal tax upon each place according to its population. Chicago—well, perhaps the Prophet of the Steppes would have made an exception of Chicago, and been cynically delighted to push it on its way of increase, aggregation, and ruin.

But instead of this, the strain of anxiety was universal and heart-rending. So much depended upon swelling the figures. The tension would have been relieved if our faces were all set towards extinction, and the speedy evacuation of this unsatisfactory globe. The writer met recently, in the Colorado desert of Arizona, a forlorn census-taker who had been six weeks in the saddle, roaming over the alkali plains in order to gratify the vanity of Uncle Sam. He had lost his reckoning, and did not know the day of the week or of the month. In all the vast territory, away up to the Utah line, over which he had wandered, he met human beings (excluding "Indians and others not taxed") so rarely that he was in danger of being locoed. He was almost in despair when, two days before, he had a windfall, which raised his general average in the form of a woman with twenty-six children, and he was rejoicing that he should be able to turn in one hundred and fifty people. Alas, the revenue the government will derive from these half-nomads will never pay the cost of enumerating them.

And, alas again, whatever good showing we may make, we shall wish it were larger; the more people we have the more we shall want. In this direction there is no end, any more than there is to life. If extinction, and not life and growth, is the better rule, what a costly mistake we have been making!

OUR PRESIDENT

We are so much accustomed to kings and queens and other privileged persons of that sort in this world that it is only on reflection that we wonder how they became so. The mystery is not their continuance, but how did they get a start? We take little help from studying the bees—originally no one could have been born a queen. There must have been not only a selection, but an election, not by ballot, but by consent some way expressed, and the privileged persons got their positions because they were the strongest, or the wisest, or the most cunning. But the descendants of these privileged persons hold the same positions when they are neither strong, nor wise, nor very cunning. This also is a mystery. The persistence of privilege is an unexplained thing in human affairs, and the consent of mankind to be led in government and in fashion by those to whom none of the original conditions of leadership attach is a philosophical anomaly. How many of the living occupants of thrones, dukedoms, earldoms, and such high places are in position on their own merits, or would be put there by common consent? Referring their origin to some sort of an election, their continuance seems to rest simply on forbearance. Here in America we are trying a new experiment; we have adopted the principle of election, but we have supplemented it with the equally authoritative right of deposition. And it is interesting to see how it has worked for a hundred years, for it is human nature to like to be set up, but not to like to be set down. If in our elections we do not always get the best—perhaps few elections ever did—we at least do not perpetuate forever in privilege our mistakes or our good hits.

The celebration in New York, in 1889, of the inauguration of Washington was an instructive spectacle. How much of privilege had been gathered and perpetuated in a century? Was it not an occasion that emphasized our republican democracy? Two things were conspicuous. One was that we did not honor a family, or a dynasty, or a title, but a character; and the other was that we did not exalt any living man, but simply the office of President. It was a demonstration of the power of the people to create their own royalty, and then to put it aside when they have done with it. It was difficult to see how greater honors could have been paid to any man than were given to the President when he embarked at Elizabethport and advanced, through a harbor crowded with decorated vessels, to the great city, the wharves and roofs of which were black with human beings—a holiday city which shook with the tumult of the popular welcome. Wherever he went he drew the swarms in the streets as the moon draws the tide. Republican simplicity need not fear comparison with any royal pageant when the President was received at the Metropolitan, and, in a scene of beauty and opulence that might be the flowering of a thousand years instead of a century, stood upon the steps of the "dais" to greet the devoted Centennial Quadrille, which passed before him with the courageous five, 'Imperator, morituri te salutamus'. We had done it—we, the people; that was our royalty. Nobody had imposed it on us. It was not even selected out of four hundred. We had taken one of the common people and set him up there, creating for the moment also a sort of royal family and a court for a background, in a splendor just as imposing for the passing hour as an imperial spectacle. We like to show that we can do it, and we like to show also that we can undo it. For at the banquet, where the Elected ate his dinner, not only in the presence of, but with, representatives of all the people of all the States, looked down on by the acknowledged higher power in American life, there sat also with him two men who had lately been in his great position, the centre only a little while ago, as he was at the moment, of every eye in the republic, now only common citizens without a title, without any insignia of rank, able to transmit to posterity no family privilege. If our hearts swelled with pride that we could create something just as good as royalty, that the republic had as many men of distinguished appearance, as much beauty, and as much brilliance of display as any traditional government, we also felicitated ourselves that we could sweep it all away by a vote and reproduce it with new actors next day.

It must be confessed that it was a people's affair. If at any time there was any idea that it could be controlled only by those who represented names honored for a hundred years, or conspicuous by any social privilege, the idea was swamped in popular feeling. The names that had been elected a hundred years ago did not stay elected unless the present owners were able to distinguish themselves. There is nothing so to be coveted in a country as the perpetuity of honorable names, and the "centennial" showed that we are rich in those that have been honorably borne, but it also showed that the century has gathered no privilege that can count upon permanence.

But there is another aspect of the situation that is quite as serious and satisfactory. Now that the ladies of the present are coming to dress as ladies dressed a hundred years ago, we can make an adequate comparison of beauty. Heaven forbid that we should disparage the women of the Revolutionary period! They looked as well as they could under all the circumstances of a new country and the hardships of an early settlement. Some of them looked exceedingly well—there were beauties in those days as there were giants in Old Testament times. The portraits that have come down to us of some of them excite our admiration, and indeed we have a sort of tradition of the loveliness of the women of that remote period. The gallant men of the time exalted them. Yet it must be admitted by any one who witnessed the public and private gatherings of April, 1889, in New York, contributed to as they were by women from every State, and who is unprejudiced by family associations, that the women of America seem vastly improved in personal appearance since the days when George Washington was a lover: that is to say, the number of beautiful women is greater in proportion to the population, and their beauty and charm are not inferior to those which have been so much extolled in

the Revolutionary time. There is no doubt that if George Washington could have been at the Metropolitan ball he would have acknowledged this, and that while he might have had misgivings about some of our political methods, he would have been more proud than ever to be still acknowledged the Father of his Country.

THE NEWSPAPER-MADE MAN

A fair correspondent—has the phrase an old-time sound?—thinks we should pay more attention to men. In a revolutionary time, when great questions are in issue, minor matters, which may nevertheless be very important, are apt to escape the consideration they deserve. We share our correspondent's interest in men, but must plead the pressure of circumstances. When there are so many Woman's Journals devoted to the wants and aspirations of women alone, it is perhaps time to think of having a Man's journal, which should try to keep his head above-water in the struggle for social supremacy. When almost every number of the leading periodicals has a paper about Woman—written probably by a woman—Woman Today, Woman Yesterday, Woman Tomorrow; when the inquiry is daily made in the press as to what is expected of woman, and the new requirements laid upon her by reason of her opportunities, her entrance into various occupations, her education—the impartial observer is likely to be confused, if he is not swept away by the rising tide of femininity in modern life.

But this very superiority of interest in the future of women is a warning to man to look about him, and see where in this tide he is going to land, if he will float or go ashore, and what will be his character and his position in the new social order. It will not do for him to sit on the stump of one of his prerogatives that woman has felled, and say with Brahma, "They reckon ill who leave me out," for in the day of the Subjection of Man it may be little consolation that he is left in.

It must be confessed that man has had a long inning. Perhaps it is true that he owed this to his physical strength, and that he will only keep it hereafter by intellectual superiority, by the dominance of mind. And how in this generation is he equipping himself for the future? He is the money-making animal. That is beyond dispute. Never before were there such business men as this generation can show—Napoleons of finance, Alexanders of adventure, Shakespeares of speculation, Porsons of accumulation. He is great in his field, but is he leaving the intellectual province to woman? Does he read as much as she does? Is he becoming anything but a newspaper-made person? Is his mind getting to be like the newspaper? Speaking generally of the mass of business men—and the mass are business men in this country—have they any habit of reading books? They have clubs, to be sure, but of what sort? With the exception of a conversation club here and there, and a literary club, more or less perfunctory, are they not mostly social clubs for comfort and idle lounging, many of them known, as other workmen are, by their "chips"? What sort of a book would a member make out of "Chips from my Workshop"? Do the young men, to any extent, join in Browning clubs and Shakespeare clubs and Dante clubs? Do they meet for the study of history, of authors, of literary periods, for reading, and discussing what they read? Do they in concert dig in the encyclopaedias, and write papers about the correlation of forces, and about Savonarola, and about the Three Kings? In fact, what sort of a hand would the Three Kings suggest to them? In the large cities the women's clubs, pursuing literature, art, languages, botany, history, geography, geology, mythology, are innumerable. And there is hardly a village in the land that has not from one to six clubs of young girls who meet once a week for some intellectual purpose. What are the young men of the villages and the cities doing meantime? How are they preparing to meet socially these young ladies who are cultivating their minds? Are they adapting themselves to the new conditions? Or are they counting, as they always have done, on the adaptability of women, on the facility with which the members of the bright sex can interest themselves in base-ball and the speed of horses and the chances of the "street"? Is it comfortable for the young man, when the talk is about the last notable book, or the philosophy of the popular poet or novelist, to feel that laughing eyes are sounding his ignorance?

Man is a noble creation, and he has fine and sturdy qualities which command the admiration of the other sex, but how will it be when that sex, by reason of superior acquirements, is able to look down on him intellectually? It used to be said that women are what men wish to have them, that they endeavored to be the kind of women who would win masculine admiration. How will it be if women have determined to make themselves what it pleases them to be, and to cultivate their powers in the expectation of pleasing men, if they indulge any such expectation, by their higher qualities only? This is not a fanciful possibility. It is one that young men will do well to ponder. It is easy to ridicule the literary and economic and historical societies, and the naive courage with which young women in them attack the gravest problems, and to say that they are only a passing fashion, like decorative art and a mode of dress. But a fashion is not to be underestimated; and when a fashion continues and spreads like this one, it is significant of a great change going on in society. And it is to be noticed that this fashion is accompanied by other phenomena as interesting. There is scarcely an occupation, once confined almost exclusively to men, in which women are not now conspicuous. Never before were there so many women who are superior musicians, performers themselves and organizers of musical societies; never before so many women who can draw well; never so many who are successful in literature, who write stories, translate, compile, and are acceptable workers in magazines and in publishing houses; and never before were so many women reading good books, and thinking about them, and talking about them, and trying to apply the lessons in them to the problems of their own lives, which are seen not to end with marriage. A great deal of this activity, crude much of it, is on the intellectual side, and must tell strongly by-and-by in the position of women. And the young men will take notice that it is the intellectual force that must dominate in life.

INTERESTING GIRLS

It seems hardly worth while to say that this would be a more interesting country if there were more interesting people in it. But the remark is worth consideration in a land where things are so much estimated by what they cost. It is a very expensive country, especially so in the matter of education, and one cannot but reflect whether the result is in proportion to the outlay. It costs a great many thousands of dollars and over four years of time to produce a really good base-ball player, and the time and money invested in the production of a society young woman are not less. No complaint is made of the cost of these schools of the higher education; the point is whether they produce interesting people. Of course all women are interesting. It has got pretty well noised about the world that American women are, on the whole, more interesting than any others. This statement is not made boastfully, but simply as a market quotation, as one might say. They are sought for; they rule high. They have a "way"; they know how to be fascinating, to be agreeable; they unite freedom of manner with modesty of behavior; they are apt to have beauty, and if they have not, they know how to make others think they have. Probably the Greek girls in their highest development under Phidias were never so attractive as the American girls of this period; and if we had a Phidias who could put their charms in marble, all the antique galleries would close up and go out of business.

But it must be understood that in regard to them, as to the dictionaries, it is necessary to "get the best." Not all women are equally interesting, and some of those on whom most educational money is lavished are the least so. It can be said broadly that everybody is interesting up to a certain point. There is no human being from whom the inquiring mind cannot learn something. It is so with women. Some are interesting for five minutes, some for ten, some for an hour; some are not exhausted in a whole day; and some (and this shows the signal leniency of Providence) are perennially entertaining, even in the presence of masculine stupidity. Of course the radical trouble of this world is that there are not more people who are interesting comrades, day in and day out, for a lifetime. It is greatly to the credit of American women that so many of them have this quality, and have developed it, unprotected, in free competition with all countries which have been pouring in women without the least duty laid upon their grace or beauty. We, have a tariff upon knowledge—we try to shut out all of that by a duty on books; we have a tariff on piety and intelligence in a duty on clergymen; we try to exclude art by a levy on it; but we have never excluded the raw material of beauty, and the result is that we can successfully compete in the markets of the world.

This, however, is a digression. The reader wants to know what this quality of being interesting has to do with girls' schools. It is admitted that if one goes into a new place he estimates the agreeableness of it according to the number of people it contains with whom it is a pleasure to converse, who have either the ability to talk well or the intelligence to listen appreciatively even if deceptively, whose society has the beguiling charm that makes even natural scenery satisfactory. It is admitted also that in our day the burden of this end of life, making it agreeable, is mainly thrown upon women. Men make their business an excuse for not being entertaining, or the few who cultivate the mind (aside from the politicians, who always try to be winning) scarcely think it worth while to contribute anything to make society bright and engaging. Now if the girls' schools and colleges, technical and other, merely add to the number of people who have practical training and knowledge without personal charm, what becomes of social life? We are impressed with the excellence of the schools and colleges for women —impressed also with the co-educating institutions. There is no sight more inspiring than an assemblage of four or five hundred young women attacking literature, science, and all the arts. The grace and courage of the attack alone are worth all it costs. All the arts and science and literature are benefited, but one of the chief purposes that should be in view is unattained if the young women are not made more interesting, both to themselves and to others. Ability to earn an independent living may be conceded to be important, health is indispensable, and beauty of face and form are desirable; knowledge is priceless, and unselfish amiability is above the price of rubies; but how shall we set a value, so far as the pleasure of living is concerned, upon the power to be interesting? We hear a good deal about the highly educated young woman with reverence, about the emancipated young woman with fear and trembling, but what can take the place of the interesting woman? Anxiety is this moment agitating the minds of tens of thousands of mothers about the education of their daughters. Suppose their education should be directed to the purpose of making them interesting women, what a fascinating country this would be about the year 1900.

GIVE THE MEN A CHANCE

Give the men a chance. Upon the young women of America lies a great responsibility. The next generation will be pretty much what they choose to make it; and what are they doing for the elevation of young men? It is true that there are the colleges for men, which still perform a good work—though some of them run a good deal more to a top-dressing of accomplishments than to a sub-soiling of discipline—but these colleges reach comparatively few. There remain the great mass who are devoted to business and pleasure, and only get such intellectual cultivation as society gives them or they chance to pick up in current publications. The young women are the leisure class, consequently—so we hear—the cultivated class. Taking a certain large proportion of our society, the women in it toil not, neither do they spin; they do little or no domestic work; they engage in no productive occupation. They are set apart for a high and ennobling service—the cultivation of the mind and the rescue of society from materialism. They are the influence that keeps life elevated and sweet—are they not? For what other purpose are they set apart in elegant leisure? And nobly do they climb up to the duties of their position. They associate together in esoteric, intellectual societies. Every one is a part of many clubs, the object of which is knowledge and the broadening of the intellectual horizon. Science, languages, literature, are their daily food. They can speak in tongues; they can talk about the solar spectrum;

they can interpret Chaucer, criticise Shakespeare, understand Browning. There is no literature, ancient or modern, that they do not dig up by the roots and turn over, no history that they do not drag before the club for final judgment. In every little village there is this intellectual stir and excitement; why, even in New York, readings interfere with the german;—['Dances', likely referring to the productions of the Straus family in Vienna. D.W.]—and Boston! Boston is no longer divided into wards, but into Browning "sections."

All this is mainly the work of women. The men are sometimes admitted, are even hired to perform and be encouraged and criticised; that is, men who are already highly cultivated, or who are in sympathy with the noble feminization of the age. It is a glorious movement. Its professed object is to give an intellectual lift to society. And no doubt, unless all reports are exaggerated, it is making our great leisure class of women highly intellectual beings. But, encouraging as this prospect is, it gives us pause. Who are these young women to associate with? with whom are they to hold high converse? For life is a two-fold affair. And meantime what is being done for the young men who are expected to share in the high society of the future? Will not the young women by-and-by find themselves in a lonesome place, cultivated away beyond their natural comrades? Where will they spend their evenings? This sobering thought suggests a duty that the young women are neglecting. We refer to the education of the young men. It is all very well for them to form clubs for their own advancement, and they ought not to incur the charge of selfishness in so doing; but how much better would they fulfill their mission if they would form special societies for the cultivation of young men!—sort of intellectual mission bands. Bring them into the literary circle. Make it attractive for them. Women with their attractions, not to speak of their wiles, can do anything they set out to do. They can elevate the entire present generation of young men, if they give their minds to it, to care for the intellectual pursuits they care for. Give the men a chance, and—

Musing along in this way we are suddenly pulled up by the reflection that it is impossible to make an unqualified statement that is wholly true about anything. What chance have I, anyway? inquires the young man who thinks sometimes and occasionally wants to read. What sort of leading-strings are these that I am getting into? Look at the drift of things. Is the feminization of the world a desirable thing for a vigorous future? Are the women, or are they not, taking all the virility out of literature? Answer me that. All the novels are written by, for, or about women—brought to their standard. Even Henry James, who studies the sex untiringly, speaks about the "feminization of literature." They write most of the newspaper correspondence—and write it for women. They are even trying to feminize the colleges. Granted that woman is the superior being; all the more, what chance is there for man if this sort of thing goes on? Are you going to make a race of men on feminine fodder? And here is the still more perplexing part of it. Unless all analysis of the female heart is a delusion, and all history false, what women like most of all things in this world is a Man, virile, forceful, compelling, a solid rock of dependence, a substantial unfeminine being, whom it is some satisfaction and glory and interest to govern and rule in the right way, and twist round the feminine finger. If women should succeed in reducing or raising—of course raising—men to the feminine standard, by feminizing society, literature, the colleges, and all that, would they not turn on their creations—for even the Bible intimates that women are uncertain and go in search of a Man? It is this sort of blind instinct of the young man for preserving himself in the world that makes him so inaccessible to the good he might get from the prevailing culture of the leisure class.

THE ADVENT OF CANDOR

Those who are anxious about the fate of Christmas, whether it is not becoming too worldly and too expensive a holiday to be indulged in except by the very poor, mark with pleasure any indications that the true spirit of the day—brotherhood and self-abnegation and charity—is infusing itself into modern society. The sentimental Christmas of thirty years ago could not last; in time the manufactured jollity got to be more tedious and a greater strain on the feelings than any misfortune happening to one's neighbor. Even for a day it was very difficult to buzz about in the cheery manner prescribed, and the reaction put human nature in a bad light. Nor was it much better when gradually the day became one of Great Expectations, and the sweet spirit of it was quenched in worry or soured in disappointment. It began to take on the aspect of a great lottery, in which one class expected to draw in reverse proportion to what it put in, and another class knew that it would only reap as it had sowed. The day, blessed in its origin, and meaningless if there is a grain of selfishness in it, was thus likely to become a sort of Clearing-house of all obligations and assume a commercial aspect that took the heart out of it—like the enormous receptions for paying social debts which take the place of the old-fashioned hospitality. Everybody knew, meantime, that the spirit of good-will, the grace of universal sympathy, was really growing in the world, and that it was only our awkwardness that, by striving to cram it all for a year into twenty-four hours, made it seem a little farcical. And everybody knows that when goodness becomes fashionable, goodness is likely to suffer a little. A virtue overdone falls on t'other side. And a holiday that takes on such proportions that the Express companies and the Post-office cannot handle it is in danger of a collapse. In consideration of these things, and because, as has been pointed out year after year, Christmas is becoming a burden, the load of which is looked forward to with apprehension—and back on with nervous prostration—fear has been expressed that the dearest of all holidays in Christian lands would have to go again under a sort of Puritan protest, or into a retreat for rest and purification. We are enabled to announce for the encouragement of the single-minded in this best of all days, at the close of a year which it is best not to characterize, that those who stand upon the social watch-towers in Europe and America begin to see a light—or, it would be better to say, to perceive a spirit—in society which is likely to change many things, and; among others, to work a return of Christian simplicity. As might be expected in these days, the spirit is exhibited in the sex which is first at the wedding and last in the hospital ward. And as might have been expected, also, this spirit is shown by the young woman of the period, in whose hands are the issues of the future. If she preserve her present mind long enough, Christmas will

become a day that will satisfy every human being, for the purpose of the young woman will pervade it. The tendency of the young woman generally to simplicity, of the American young woman to a certain restraint (at least when abroad), to a deference to her elders, and to tradition, has been noted. The present phenomenon is quite beyond this, and more radical. It is, one may venture to say, an attempt to conform the inner being to the outward simplicity. If one could suspect the young woman of taking up any line not original, it might be guessed that the present fashion (which is bewildering the most worldly men with a new and irresistible fascination) was set by the self-revelations of Marie Bashkirtseff. Very likely, however, it was a new spirit in the world, of which Marie was the first publishing example. Its note is self-analysis, searching, unsparing, leaving no room for the deception of self or of the world. Its leading feature is extreme candor. It is not enough to tell the truth (that has been told before); but one must act and tell the whole truth. One does not put on the shirt front and the standing collar and the knotted cravat of the other sex as a mere form; it is an act of consecration, of rigid, simple come-out-ness into the light of truth. This noble candor will suffer no concealments. She would not have her lover even, still more the general world of men, think she is better, or rather other, than she is. Not that she would like to appear a man among men, far from that; but she wishes to talk with candor and be talked to candidly, without taking advantage of that false shelter of sex behind which women have been accused of dodging. If she is nothing else, she is sincere, one might say wantonly sincere. And this lucid, candid inner life is reflected in her dress. This is not only simple in its form, in its lines; it is severe. To go into the shop of a European modiste is almost to put one's self into a truthful and candid frame of mind. Those leave frivolous ideas behind who enter here. The 'modiste' will tell the philosopher that it is now the fashion to be severe; in a word, it is 'fesch'. Nothing can go beyond that. And it symbolizes the whole life, its self-examination, earnestness, utmost candor in speech and conduct.

The statesman who is busy about his tariff and his reciprocity, and his endeavor to raise money like potatoes, may little heed and much undervalue this advent of candor into the world as a social force. But the philosopher will make no such mistake. He knows that they who build without woman build in vain, and that she is the great regenerator, as she is the great destroyer. He knows too much to disregard the gravity of any fashionable movement. He knows that there is no power on earth that can prevent the return of the long skirt. And that if the young woman has decided to be severe and candid and frank with herself and in her intercourse with others, we must submit and thank God.

And what a gift to the world is this for the Christmas season! The clear-eyed young woman of the future, always dear and often an anxiety, will this year be an object of enthusiasm.

THE AMERICAN MAN

The American man only develops himself and spreads himself and grows "for all he is worth" in the Great West. He is more free and limber there, and unfolds those generous peculiarities and largenesses of humanity which never blossomed before. The "environment" has much to do with it. The great spaces over which he roams contribute to the enlargement of his mental horizon. There have been races before who roamed the illimitable desert, but they traveled on foot or on camelback, and were limited in their range. There was nothing continental about them, as there is about our railway desert travelers, who swing along through thousands of miles of sand and sage-bush with a growing contempt for time and space. But expansive and great as these people have become under the new conditions, we have a fancy that the development of the race has only just begun, and that the future will show us in perfection a kind of man new to the world. Out somewhere on the Santa Fe route, where the desert of one day was like the desert of the day before, and the Pullman car rolls and swings over the wide waste beneath the blue sky day after day, under its black flag of smoke, in the early gray of morning, when the men were waiting their turns at the ablution bowls, a slip of a boy, perhaps aged seven, stood balancing himself on his little legs, clad in knicker-bockers, biding his time, with all the nonchalance of an old campaigner. "How did you sleep, cap?" asked a well-meaning elderly gentleman. "Well, thank you," was the dignified response; "as I always do on a sleeping-car." Always does? Great horrors! Hardly out of his swaddling-clothes, and yet he always sleeps well in a sleeper! Was he born on the wheels? was he cradled in a Pullman? He has always been in motion, probably; he was started at thirty miles an hour, no doubt, this marvelous boy of our new era. He was not born in a house at rest, but the locomotive snatched him along with a shriek and a roar before his eyes were fairly open, and he was rocked in a "section," and his first sensation of life was that of moving rapidly over vast arid spaces, through cattle ranges and along canons. The effect of quick and easy locomotion on character may have been noted before, but it seems that here is the production of a new sort of man, the direct product of our railway era. It is not simply that this boy is mature, but he must be a different and a nobler sort of boy than one born, say, at home or on a canal-boat; for, whether he was born on the rail or not, he belongs to the railway system of civilization. Before he gets into trousers he is old in experience, and he has discounted many of the novelties that usually break gradually on the pilgrim in this world. He belongs to the new expansive race that must live in motion, whose proper home is the Pullman (which will probably be improved in time into a dustless, sweet-smelling, well-aired bedroom), and whose domestic life will be on the wing, so to speak. The Inter-State Commerce Bill will pass him along without friction from end to end of the Union, and perhaps a uniform divorce law will enable him to change his marital relations at any place where he happens to dine. This promising lad is only a faint intimation of what we are all coming to when we fully acquire the freedom of the continent, and come into that expansiveness of feeling and of language which characterizes the Great West. It is a burst of joyous exuberance that comes from the sense of an illimitable horizon. It shows itself in the tender words of a local newspaper at Bowie, Arizona, on the death of a beloved citizen: "'Death loves a shining mark,' and she hit a dandy when she turned loose on Jim." And also in the closing words of a New Mexico obituary, which the Kansas Magazine quotes: "Her tired spirit was released from the pain-racking body and soared aloft to eternal glory at 4.30 Denver time." We die, as it were, in motion, as we sleep, and

there is nowhere any boundary to our expansion. Perhaps we shall never again know any rest as we now understand the term—rest being only change of motion—and we shall not be able to sleep except on the cars, and whether we die by Denver time or by the 90th meridian, we shall only change our time. Blessed be this slip of a boy who is a man before he is an infant, and teaches us what rapid transit can do for our race! The only thing that can possibly hinder us in our progress will be second childhood; we have abolished first.

THE ELECTRIC WAY

We are quite in the electric way. We boast that we have made electricity our slave, but the slave whom we do not understand is our master. And before we know him we shall be transformed. Mr. Edison proposes to send us over the country at the rate of one hundred miles an hour. This pleases us, because we fancy we shall save time, and because we are taught that the chief object in life is to “get there” quickly. We really have an idea that it is a gain to annihilate distance, forgetting that as a matter of personal experience we are already too near most people. But this speed by rail will enable us to live in Philadelphia and do business in New York. It will make the city of Chicago two hundred miles square. And the bigger Chicago is, the more important this world becomes. This pleasing anticipation—that of traveling by lightning, and all being huddled together—is nothing to the promised universal illumination by a diffused light that shall make midnight as bright as noonday. We shall then save all the time there is, and at the age of thirty-five have lived the allotted seventy years, and long, if not for 'Gotterdammerung', at least for some world where, by touching a button, we can discharge our limbs of electricity and take a little repose. The most restless and ambitious of us can hardly conceive of Chicago as a desirable future state of existence.

This, however, is only the external or superficial view of the subject; at the best it is only symbolical. Mr. Edison is wasting his time in objective experiments, while we are in the deepest ignorance as to our electric personality or our personal electricity. We begin to apprehend that we are electric beings, that these outward manifestations of a subtle form are only hints of our internal state. Mr. Edison should turn his attention from physics to humanity electrically considered in its social condition. We have heard a great deal about affinities. We are told that one person is positive and another negative, and that representing socially opposite poles they should come together and make an electric harmony, that two positives or two negatives repel each other, and if conventionally united end in divorce, and so on. We read that such a man is magnetic, meaning that he can poll a great many votes; or that such a woman thrilled her audience, meaning probably that they were in an electric condition to be shocked by her. Now this is what we want to find out—to know if persons are really magnetic or sympathetic, and how to tell whether a person is positive or negative. In politics we are quite at sea. What is the good of sending a man to Washington at the rate of a hundred miles an hour if we are uncertain of his electric state? The ideal House of Representatives ought to be pretty nearly balanced—half positive, half negative. Some Congresses seem to be made up pretty much of negatives. The time for the electrician to test the candidate is before he is put in nomination, not dump him into Congress as we do now, utterly ignorant of whether his currents run from his heels to his head or from his head to his heels, uncertain, indeed, as to whether he has magnetism to run in at all. Nothing could be more unscientific than the process and the result.

In social life it is infinitely worse. You, an electric unmarried man, enter a room full of attractive women. How are you to know who is positive and who is negative, or who is a maiden lady in equilibrium, if it be true, as scientists affirm, that the genus old maid is one in whom the positive currents neutralize the negative currents? Your affinity is perhaps the plainest woman in the room. But beauty is a juggling sprite, entirely uncontrolled by electricity, and you are quite likely to make a mistake. It is absurd the way we blunder on in a scientific age. We touch a button, and are married. The judge touches another button, and we are divorced. If when we touched the first button it revealed us both negatives, we should start back in horror, for it is only before engagement that two negatives make an affirmative. That is the reason that some clergymen refuse to marry a divorced woman; they see that she has made one electric mistake, and fear she will make another. It is all very well for the officiating clergyman to ask the two intending to commit matrimony if they have a license from the town clerk, if they are of age or have the consent of parents, and have a million; but the vital point is omitted. Are they electric affinities? It should be the duty of the town-clerk, by a battery, or by some means to be discovered by electricians, to find out the galvanic habit of the parties, their prevailing electric condition. Temporarily they may seem to be in harmony, and may deceive themselves into the belief that they are at opposite poles equidistant from the equator, and certain to meet on that imaginary line in matrimonial bliss. Dreadful will be the awakening to an insipid life, if they find they both have the same sort of currents. It is said that women change their minds and their dispositions, that men are fickle, and that both give way after marriage to natural inclinations that were suppressed while they were on the good behavior that the supposed necessity of getting married imposes. This is so notoriously true that it ought to create a public panic. But there is hope in the new light. If we understand it, persons are born in a certain electrical condition, and substantially continue in it, however much they may apparently wobble about under the influence of infirm minds and acquired wickedness. There are, of course, variations of the compass to be reckoned with, and the magnet may occasionally be bewitched by near and powerful attracting objects. But, on the whole, the magnet remains the same, and it is probable that a person's normal electric condition is the thing in him least liable to dangerous variation. If this be true, the best basis for matrimony is the electric, and our social life would have fewer disappointments if men and women went about labeled with their scientifically ascertained electric qualities.

CAN A HUSBAND OPEN HIS WIFE'S LETTERS?

Can a husband open his wife's letters? That would depend, many would say, upon what kind of a husband he is. But it cannot be put aside in that flippant manner, for it is a legal right that is in question, and it has recently been decided in a Paris tribunal that the husband has the right to open the letters addressed to his wife. Of course in America an appeal would instantly be taken from this decision, and perhaps by husbands themselves; for in this world rights are becoming so impartially distributed that this privilege granted to the husband might at once be extended to the wife, and she would read all his business correspondence, and his business is sometimes various and complicated. The Paris decision must be based upon the familiar formula that man and wife are one, and that that one is the husband. If a man has the right to read all the letters written to his wife, being his property by reason of his ownership of her, why may he not have a legal right to know all that is said to her? The question is not whether a wife ought to receive letters that her husband may not read, or listen to talk that he may not hear, but whether he has a sort of lordship that gives him privileges which she does not enjoy. In our modern notion of marriage, which is getting itself expressed in statute law, marriage is supposed to rest on mutual trust and mutual rights. In theory the husband and wife are still one, and there can nothing come into the life of one that is not shared by the other; in fact, if the marriage is perfect and the trust absolute, the personality of each is respected by the other, and each is freely the judge of what shall be contributed to the common confidence; and if there are any concealments, it is well believed that they are for the mutual good. If every one were as perfect in the marriage relation as those who are reading these lines, the question of the wife's letters would never arise. The man, trusting his wife, would not care to pry into any little secrets his wife might have, or bother himself about her correspondence; he would know, indeed, that if he had lost her real affection, a surveillance of her letters could not restore it.

Perhaps it is a modern notion that marriage is a union of trust and not of suspicion, of expectation of faithfulness the more there is freedom. At any rate, the tendency, notwithstanding the French decision, is away from the common-law suspicion and tyranny towards a higher trust in an enlarged freedom. And it is certain that the rights cannot all be on one side and the duties on the other. If the husband legally may compel his wife to show him her letters, the courts will before long grant the same privilege to the wife. But, without pressing this point, we hold strongly to the sacredness of correspondence. The letters one receives are in one sense not his own. They contain the confessions of another soul, the confidences of another mind, that would be rudely treated if given any sort of publicity. And while husband and wife are one to each other, they are two in the eyes of other people, and it may well happen that a friend will desire to impart something to a discreet woman which she would not intrust to the babbling husband of that woman. Every life must have its own privacy and its own place of retirement. The letter is of all things the most personal and intimate thing. Its bloom is gone when another eye sees it before the one for which it was intended. Its aroma all escapes when it is first opened by another person. One might as well wear second-hand clothing as get a second-hand letter. Here, then, is a sacred right that ought to be respected, and can be respected without any injury to domestic life. The habit in some families for the members of it to show each other's letters is a most disenchanting one. It is just in the family, between persons most intimate, that these delicacies of consideration for the privacy of each ought to be most respected. No one can estimate probably how much of the refinement, of the delicacy of feeling, has been lost to the world by the introduction of the postal-card. Anything written on a postal-card has no personality; it is banal, and has as little power of charming any one who receives it as an advertisement in the newspaper. It is not simply the cheapness of the communication that is vulgar, but the publicity of it. One may have perhaps only a cent's worth of affection to send, but it seems worth much more when enclosed in an envelope. We have no doubt, then, that on general principles the French decision is a mistake, and that it tends rather to vulgarize than to retain the purity and delicacy of the marriage relation. And the judges, so long even as men only occupy the bench, will no doubt reverse it when the logical march of events forces upon them the question whether the wife may open her husband's letters.

A LEISURE CLASS

Foreign critics have apologized for real or imagined social and literary shortcomings in this country on the ground that the American people have little leisure. It is supposed that when we have a leisure class we shall not only make a better showing in these respects, but we shall be as agreeable—having time to devote to the art of being agreeable—as the English are. But we already have a considerable and increasing number of people who can command their own time if we have not a leisure class, and the sociologist might begin to study the effect of this leisureliness upon society. Are the people who, by reason of a competence or other accidents of good-fortune, have most leisure, becoming more agreeable? and are they devoting themselves to the elevation of the social tone, or to the improvement of our literature? However this question is answered, a strong appeal might be made to the people of leisure to do not only what is expected of them by foreign observers, but to take advantage of their immense opportunities. In a republic there is no room for a leisure class that is not useful. Those who use their time merely to kill it, in imitation of those born to idleness and to no necessity of making an exertion, may be ornamental, but having no root in any established privilege to sustain them, they will soon wither away in this atmosphere, as a flower would which should set up to be an orchid when it does not belong to the orchid family. It is required here that those who are emancipated from the daily grind should vindicate their right to their position not only by setting an example of self-culture, but by contributing something to the general welfare. It is thought by many that if society here were established and settled as it is elsewhere, the rich would be less dominated by their money and less conscious of it, and

having leisure, could devote themselves even more than they do now to intellectual and spiritual pursuits.

Whether these anticipations will ever be realized, and whether increased leisure will make us all happy, is a subject of importance; but it is secondary, and in a manner incidental, to another and deeper matter, which may be defined as the responsibility of attractiveness. And this responsibility takes two forms the duty of every one to be attractive, and the danger of being too attractive. To be winning and agreeable is sometimes reckoned a gift, but it is a disposition that can be cultivated; and, in a world so given to grippe and misapprehension as this is, personal attractiveness becomes a duty, if it is not an art, that might be taught in the public schools. It used to be charged against New Englanders that they regarded this gift as of little value, and were inclined to hide it under a bushel, and it was said of some of their neighbors in the Union that they exaggerated its importance, and neglected the weightier things of the law. Indeed, disputes have arisen as to what attractiveness consisted in—some holding that beauty or charm of manner (which is almost as good) and sweetness and gayety were sufficient, while others held that a little intelligence sprinkled in was essential. But one thing is clear, that while women were held to strict responsibility in this matter, not stress enough was laid upon the equal duty of men to be attractive in order to make the world agreeable. Hence it is, probably, that while no question has been raised as to the effect of the higher education upon the attractiveness of men, the colleges for girls have been jealously watched as to the effect they were likely to have upon the attractiveness of women. Whether the college years of a young man, during which he knows more than he will ever know again, are his most attractive period is not considered, for he is expected to develop what is in him later on; but it is gravely questioned whether girls who give their minds to the highest studies are not dropping those graces of personal attractiveness which they will find it difficult to pick up again. Of course such a question as this could never arise except in just such a world as this is. For in an ideal world it could be shown that the highest intelligence and the highest personal charm are twins. If, therefore, it should turn out, which seems absurd, that college-educated girls are not as attractive as other women with less advantages, it will have to be admitted that something is the matter with the young ladies, which is preposterous, or that the system is still defective. For the postulate that everybody ought to be attractive cannot be abandoned for the sake of any system. Decision on this system cannot be reached without long experience, for it is always to be remembered that the man's point of view of attractiveness may shift, and he may come to regard the intellectual graces as supremely attractive; while, on the other hand, the woman student may find that a winning smile is just as effective in bringing a man to her feet, where he belongs, as a logarithm.

The danger of being too attractive, though it has historic illustration, is thought by many to be more apparent than real. Merely being too attractive has often been confounded with a love of flirtation and conquest, unbecoming always in a man, and excused in a woman on the ground of her helplessness. It could easily be shown that to use personal attractiveness recklessly to the extent of hopeless beguilement is cruel, and it may be admitted that woman ought to be held to strict responsibility for her attractiveness. The lines are indeed hard for her. The duty is upon her in this poor world of being as attractive as she can, and yet she is held responsible for all the mischief her attractiveness produces. As if the blazing sun should be called to account by people with weak eyes.

WEATHER AND CHARACTER

The month of February in all latitudes in the United States is uncertain. The birth of George Washington in it has not raised it in public esteem. In the North, it is a month to flee from; in the South, at best it is a waiting month—a month of rain and fickle skies. A good deal has been done for it. It is the month of St. Valentine, it is distinguished by the leap-year addition of a day, and ought to be a favorite of the gentle sex; but it remains a sort of off period in the year. Its brevity recommends it, but no one would take any notice of it were it not for its effect upon character. A month of rigid weather is supposed to brace up the moral nature, and a month of gentleness is supposed to soften the asperities of the disposition, but February contributes to neither of these ends. It is neither a tonic nor a soother; that is, in most parts of our inexplicable land. We make no complaint of this. It is probably well to have a period in the year that tests character to the utmost, and the person who can enter spring through the gate of February a better man or woman is likely to adorn society the rest of the year.

February, however, is merely an illustration of the effect of weather upon the disposition. Persons differ in regard to their sensitiveness to cloudy, rainy, and gloomy days. We recognize this in a general way, but the relation of temper and disposition to the weather has never been scientifically studied. Our observation of the influence of climate is mostly with regard to physical infirmities. We know the effect of damp weather upon rheumatics, and of the east wind upon gouty subjects, but too little allowance is made for the influence of weather upon the spirits and the conduct of men. We know that a long period of gloomy weather leads to suicides, and we observe that long-continued clouds and rain beget "crossness" and ill-temper, and we are all familiar with the universal exhilaration of sunshine and clear air upon any company of men and women. But the point we wish to make is that neither society nor the law makes any allowance for the aberrations of human nature caused by dull and unpleasant weather. And this is very singular in this humanitarian age, when excuse is found for nearly every moral delinquency in heredity or environment, that the greatest factor of discontent and crookedness, the weather, should be left out of consideration altogether. The relation of crime to the temperature and the humidity of the atmosphere is not taken into account. Yet crime and eccentricity of conduct are very much the result of atmospheric conditions, since they depend upon the temper and the spirit of the community. Many people are habitually blue and down-hearted in sour weather; a long spell of cloudy, damp, cold weather depresses everybody, lowers hope, tends to melancholy; and people when they are not cheerful are more apt to fall into evil ways, as a rule, than when they are in a normal state of good-humor. And aside from crimes, the vexation, the friction, the domestic discontent in life,

are provoked by bad weather. We should like to have some statistics as to incompatibility between married couples produced by damp and raw days, and to know whether divorces are more numerous in the States that suffer from a fickle climate than in those where the climate is more equable. It is true that in the Sandwich Islands and in Egypt there is greater mental serenity, less perturbation of spirit, less worry, than in the changeable United States. Something of this placidity and resignation to the ills inevitable in human life is due to an even climate, to the constant sun and the dry air. We cannot hope to prevent crime and suffering by statistics, any more than we have been able to improve our climate (which is rather worse now than before the scientists took it in charge) by observations and telegraphic reports; but we can, by careful tabulation of the effects of bad weather upon the spirits of a community, learn what places in the Union are favorable to the production of cheerfulness and an equal mind. And we should lift a load of reprobation from some places which now have a reputation for surliness and unamiability. We find the people of one place hospitable, lighthearted, and agreeable; the people of another place cold, and morose, and unpleasant. It would be a satisfaction to know that the weather is responsible for the difference. Observation of this sort would also teach us doubtless what places are most conducive to literary production, what to happy homes and agreeing wives and husbands. All our territory is mapped out as to its sanitary conditions; why not have it colored as to its effect upon the spirits and the enjoyment of life? The suggestion opens a vast field of investigation.

BORN WITH AN "EGO"

There used to be a notion going round that it would be a good thing for people if they were more "self-centred." Perhaps there was talk of adding a course to the college curriculum, in addition to that for training the all-competent "journalist," for the self-centring of the young. To apply the term to a man or woman was considered highly complimentary. The advisers of this state of mind probably meant to suggest a desirable equilibrium and mental balance; but the actual effect of the self-centred training is illustrated by a story told of Thomas H. Benton, who had been described as an egotist by some of the newspapers. Meeting Colonel Frank Blair one day, he said: "Colonel Blair, I see that the newspapers call me an egotist. I wish you would tell me frankly, as a friend, if you think the charge is true." "It is a very direct question, Mr. Benton," replied Colonel Blair, "but if you want my honest opinion, I am compelled to say that I think there is some foundation for the charge." "Well, sir," said Mr. Benton, throwing his head back and his chest forward, "the difference between me and these little fellows is that I have an EGO!" Mr. Benton was an interesting man, and it is a fair consideration if a certain amount of egotism does not add to the interest of any character, but at the same time the self-centred conditions shut a person off from one of the chief enjoyments to be got out of this world, namely, a recognition of what is admirable in others in a toleration of peculiarities. It is odd, almost amusing, to note how in this country people of one section apply their local standards to the judgment of people in other sections, very much as an Englishman uses his insular yardstick to measure all the rest of the world. It never seems to occur to people in one locality that the manners and speech of those of another may be just as admirable as their own, and they get a good deal of discomfort out of their intercourse with strangers by reason of their inability to adapt themselves to any ways not their own. It helps greatly to make this country interesting that nearly every State has its peculiarities, and that the inhabitants of different sections differ in manner and speech. But next to an interesting person in social value, is an agreeable one, and it would add vastly to the agreeableness of life if our widely spread provinces were not so self-centred in their notion that their own way is the best, to the degree that they criticise any deviation from it as an eccentricity. It would be a very nice world in these United States if we could all devote ourselves to finding out in communities what is likable rather than what is opposed to our experience; that is, in trying to adapt ourselves to others rather than insisting that our own standard should measure our opinion and our enjoyment of them.

When the Kentuckian describes a man as a "high-toned gentleman" he means exactly the same that a Bostonian means when, he says that a man is a "very good fellow," only the men described have a different culture, a different personal flavor; and it is fortunate that the Kentuckian is not like the Bostonian, for each has a quality that makes intercourse with him pleasant. In the South many people think they have said a severe thing when they say that a person or manner is thoroughly Yankee; and many New Englanders intend to express a considerable lack in what is essential when they say of men and women that they are very Southern. When the Yankee is produced he may turn out a cosmopolitan person of the most interesting and agreeable sort; and the Southerner may have traits and peculiarities, growing out of climate and social life unlike the New England, which are altogether charming. We talked once with a Western man of considerable age and experience who had the placid mind that is sometimes, and may more and more become, the characteristic of those who live in flat countries of illimitable horizons, who said that New Yorkers, State and city, all had an assertive sort of smartness that was very disagreeable to him. And a lady of New York (a city whose dialect the novelists are beginning to satirize) was much disturbed by the flatness of speech prevailing in Chicago, and thought something should be done in the public schools to correct the pronunciation of English. There doubtless should be a common standard of distinct, rounded, melodious pronunciation, as there is of good breeding, and it is quite as important to cultivate the voice in speaking as in singing, but the people of the United States let themselves be immensely irritated by local differences and want of toleration of sectional peculiarities. The truth is that the agreeable people are pretty evenly distributed over the country, and one's enjoyment of them is heightened not only by their differences of manner, but by the different ways in which they look at life, unless he insists upon applying everywhere the yardstick of his own locality. If the Boston woman sets her eyeglasses at a critical angle towards the 'laissez faire' flow of social amenity in New Orleans, and the New Orleans woman seeks out only the prim and conventional in Boston, each may miss the opportunity to supplement her life by something wanting and desirable in it, to be gained by the exercise of more openness of mind and toleration. To some people Yankee thrift is disagreeable; to others, Southern shiftlessness is intolerable. To some travelers the negro of the South, with his tropical

nature, his capacity for picturesque attitudes, his abundant trust in Providence, is an element of restfulness; and if the chief object of life is happiness, the traveler may take a useful hint from the race whose utmost desire, in a fit climate, would be fully satisfied by a shirt and a banana-tree. But to another traveler the dusky, careless race is a continual affront.

If a person is born with an "Ego," and gets the most enjoyment out of the world by trying to make it revolve about himself, and cannot make allowances for differences, we have nothing to say except to express pity for such a self-centred condition; which shuts him out of the never-failing pleasure there is in entering into and understanding with sympathy the almost infinite variety in American life.

JUVENTUS MUNDI

Sometimes the world seems very old. It appeared so to Bernard of Cluny in the twelfth century, when he wrote:

*"The world is very evil,
The times are waning late."*

There was a general impression among the Christians of the first century of our era that the end was near. The world must have seemed very ancient to the Egyptians fifteen hundred years before Christ, when the Pyramid of Cheops was a relic of antiquity, when almost the whole circle of arts, sciences, and literature had been run through, when every nation within reach had been conquered, when woman had been developed into one of the most fascinating of beings, and even reigned more absolutely than Elizabeth or Victoria has reigned since: it was a pretty tired old world at that time. One might almost say that the further we go back the older and more "played out" the world appears, notwithstanding that the poets, who were generally pessimists of the present, kept harping about the youth of the world and the joyous spontaneity of human life in some golden age before their time. In fact, the world is old in spots—in Memphis and Boston and Damascus and Salem and Ephesus. Some of these places are venerable in traditions, and some of them are actually worn out and taking a rest from too much civilization—lying fallow, as the saying is. But age is so entirely relative that to many persons the landing of the Mayflower seems more remote than the voyage of Jason, and a Mayflower chest a more antique piece of furniture than the timbers of the Ark, which some believe can still be seen on top of Mount Ararat. But, speaking generally, the world is still young and growing, and a considerable portion of it unfinished. The oldest part, indeed, the Laurentian Hills, which were first out of water, is still only sparsely settled; and no one pretends that Florida is anything like finished, or that the delta of the Mississippi is in anything more than the process of formation. Men are so young and lively in these days that they cannot wait for the slow processes of nature, but they fill up and bank up places, like Holland, where they can live; and they keep on exploring and discovering incongruous regions, like Alaska, where they can go and exercise their juvenile exuberance.

In many respects the world has been growing younger ever since the Christian era. A new spirit came into it then which makes youth perpetual, a spirit of living in others, which got the name of universal brotherhood, a spirit that has had a good many discouragements and set-backs, but which, on the whole, gains ground, and generally works in harmony with the scientific spirit, breaking down the exclusive character of the conquests of nature. What used to be the mystery and occultism of the few is now general knowledge, so that all the playing at occultism by conceited people now seems jejune and foolish. A little machine called the instantaneous photograph takes pictures as quickly and accurately as the human eye does, and besides makes them permanent. Instead of fooling credulous multitudes with responses from Delphi, we have a Congress which can enact tariff regulations susceptible of interpretations enough to satisfy the love of mystery of the entire nation. Instead of loafing round Memnon at sunrise to catch some supernatural tones, we talk words into a little contrivance which will repeat our words and tones to the remotest generation of those who shall be curious to know whether we said those words in jest or earnest. All these mysteries made common and diffused certainly increase the feeling of the equality of opportunity in the world. And day by day such wonderful things are discovered and scattered abroad that we are warranted in believing that we are only on the threshold of turning to account the hidden forces of nature. There would be great danger of human presumption and conceit in this progress if the conceit were not so widely diffused, and where we are all conceited there is no one to whom it will appear unpleasant. If there was only one person who knew about the telephone he would be unbearable. Probably the Eiffel Tower would be stricken down as a monumental presumption, like that of Babel, if it had not been raised with the full knowledge and consent of all the world.

This new spirit, with its multiform manifestations, which came into the world nearly nineteen hundred years ago, is sometimes called the spirit of Christmas. And good reasons can be given for supposing that it is. At any rate, those nations that have the most of it are the most prosperous, and those people who have the most of it are the most agreeable to associate with. Know all men by these Presents, is an old legal form which has come to have a new meaning in this dispensation. It is by the spirit of brotherhood exhibited in giving presents that we know the Christmas proper, only we are apt to take it in too narrow a way. The real spirit of Christmas is the general diffusion of helpfulness and good-will. If somebody were to discover an elixir which would make every one truthful, he would not, in this age of the world, patent it. Indeed, the Patent Office would not let him make a corner on virtue as he does in wheat; and it is not respectable any more among the real children of Christmas to make a corner in wheat. The world, to be sure, tolerates still a great many things that it does not approve of, and, on the whole, Christmas, as an ameliorating and good-fellowship institution, gains a little year by year. There is still one hitch about it, and a bad one just now, namely, that many people think they can buy its spirit by jerks of liberality, by costly gifts. Whereas the fact is that a great many of the costliest gifts in this season do not count at all. Crumbs from the rich man's table don't avail any

more to open the pearly gates even of popular esteem in this world. Let us say, in fine, that a loving, sympathetic heart is better than a nickel-plated service in this world, which is surely growing young and sympathetic.

A BEAUTIFUL OLD AGE

In Autumn the thoughts lightly turn to Age. If the writer has seemed to be interested, sometimes to the neglect of other topics, in the American young woman, it was not because she is interested in herself, but because she is on the way to be one of the most agreeable objects in this lovely world. She may struggle against it; she may resist it by all the legitimate arts of the coquette and the chemist; she may be convinced that youth and beauty are inseparable allies; but she would have more patience if she reflected that the sunset is often finer than the sunrise, commonly finer than noon, especially after a stormy day. The secret of a beautiful old age is as well worth seeking as that of a charming young maidenhood. For it is one of the compensations for the rest of us, in the decay of this mortal life, that women, whose mission it is to allure in youth and to tinge the beginning of the world with romance, also make the end of the world more serenely satisfactory and beautiful than the outset. And this has been done without any amendment to the Constitution of the United States; in fact, it is possible that the Sixteenth Amendment would rather hinder than help this gracious process. We are not speaking now of what is called growing old gracefully and regretfully, as something to be endured, but as a season to be desired for itself, at least by those whose privilege it is to be ennobled and cheered by it. And we are not speaking of wicked old women. There is a unique fascination—all the novelists recognize it—in a wicked old woman; not very wicked, but a woman of abundant experience, who is perfectly frank and a little cynical, and delights in probing human nature and flashing her wit on its weaknesses, and who knows as much about life as a club man is credited with knowing. She may not be a good comrade for the young, but she is immensely more fascinating than a semi-wicked old man. Why, we do not know; that is one of the unfathomable mysteries of womanhood. No; we have in mind quite another sort of woman, of which America has so many that they are a very noticeable element in all cultivated society. And the world has nothing more lovely. For there is a loveliness or fascination sometimes in women between the ages of sixty and eighty that is unlike any other—a charm that woos us to regard autumn as beautiful as spring.

Perhaps these women were great beauties in their day, but scarcely so serenely beautiful as now when age has refined all that was most attractive. Perhaps they were plain; but it does not matter, for the subtle influence of spiritualized-intelligence has the power of transforming plainness into the beauty of old age. Physical beauty is doubtless a great advantage, and it is never lost if mind shines through it (there is nothing so unlovely as a frivolous old woman fighting to keep the skin-deep beauty of her youth); the eyes, if the life has not been one of physical suffering, usually retain their power of moving appeal; the lines of the face, if changed, may be refined by a certain spirituality; the gray hair gives dignity and softness and the charm of contrast; the low sweet voice vibrates to the same note of femininity, and the graceful and gracious are graceful and gracious still. Even into the face and bearing of the plain woman whose mind has grown, whose thoughts have been pure, whose heart has been expanded by good deeds or by constant affection, comes a beauty winning and satisfactory in the highest degree.

It is not that the charm of the women of whom we speak is mainly this physical beauty; that is only incidental, as it were. The delight in their society has a variety of sources. Their interest in life is broader than it once was, more sympathetically unselfish; they have a certain philosophical serenity that is not inconsistent with great liveliness of mind; they have got rid of so much nonsense; they can afford to be truthful—and how much there is to be learned from a woman who is truthful! they have a most delicious courage of opinion, about men, say, and in politics, and social topics, and creeds even. They have very little any longer to conceal; that is, in regard to things that should be thought about and talked about at all. They are not afraid to be gay, and to have enthusiasms. At sixty and eighty a refined and well-bred woman is emancipated in the best way, and in the enjoyment of the full play of the richest qualities of her womanhood. She is as far from prudery as from the least note of vulgarity. Passion, perhaps, is replaced by a great capacity for friendliness, and she was never more a real woman than in these mellow and reflective days. And how interesting she is—adding so much knowledge of life to the complex interest that inheres in her sex! Knowledge of life, yes, and of affairs; for it must be said of these ladies we have in mind that they keep up with the current thought, that they are readers of books, even of newspapers—for even the newspaper can be helpful and not harmful in the alembic of their minds.

Let not the purpose of this paper be misunderstood. It is not to urge young women to become old or to act like old women. The independence and frankness of age might not be becoming to them. They must stumble along as best they can, alternately attracting and repelling, until by right of years they join that serene company which is altogether beautiful. There is a natural unfolding and maturing to the beauty of old age. The mission of woman, about which we are pretty weary of hearing, is not accomplished by any means in her years of vernal bloom and loveliness; she has equal power to bless and sweeten life in the autumn of her pilgrimage. But here is an apologue: The peach, from blossom to maturity, is the most attractive of fruits. Yet the demands of the market, competition, and fashion often cause it to be plucked and shipped while green. It never matures, though it may take a deceptive richness of color; it decays without ripening. And the last end of that peach is worse than the first.

THE ATTRACTION OF THE REPULSIVE

On one of the most charming of the many wonderfully picturesque little beaches on the Pacific coast, near Monterey, is the idlest if not the most disagreeable social group in the world. Just off the shore, farther than a stone's-throw, lies a mass of broken rocks. The surf comes leaping and laughing in, sending up, above the curving green breakers and crests of foam, jets and spirals of water which flash like silver fountains in the sunlight. These islets of rocks are the homes of the sea-lion. This loafer of the coast congregates here by the thousand. Sometimes the rocks are quite covered, the smooth rounded surface of the larger one presenting the appearance at a distance of a knoll dotted with dirty sheep. There is generally a select knot of a dozen floating about in the still water under the lee of the rock, bobbing up their tails and flippers very much as black driftwood might heave about in the tide. During certain parts of the day members of this community are off fishing in deep water; but what they like best to do is to crawl up on the rocks and grunt and bellow, or go to sleep in the sun. Some of them lie half in water, their tails floating and their ungainly heads wagging. These uneasy ones are always wriggling out or plunging in. Some crawl to the tops of the rocks and lie like gunny bags stuffed with meal, or they repose on the broken surfaces like masses of jelly. When they are all at home the rocks have not room for them, and they crawl on and over each other, and lie like piles of undressed pork. In the water they are black, but when they are dry in the sun the skin becomes a dirty light brown. Many of them are huge fellows, with a body as big as an ox. In the water they are repulsively graceful; on the rocks they are as ungainly as boneless cows, or hogs that have lost their shape in prosperity. Summer and winter (and it is almost always summer on this coast) these beasts, which are well fitted neither for land nor water, spend their time in absolute indolence, except when they are compelled to cruise around in the deep water for food. They are of no use to anybody, either for their skin or their flesh. Nothing could be more thoroughly disgusting and uncanny than they are, and yet nothing more fascinating. One can watch them—the irresponsible, formless lumps of intelligent flesh—for hours without tiring. I scarcely know what the fascination is. A small seal playing by himself near the shore, floating on and diving under the breakers, is not so very disagreeable, especially if he comes so near that you can see his pathetic eyes; but these brutes in this perpetual summer resort are disgustingly attractive. Nearly everything about them, including their voice, is repulsive. Perhaps it is the absolute idleness of the community that makes it so interesting. To fish, to swim, to snooze on the rocks, that is all, for ever and ever. No past, no future. A society that lives for the laziest sort of pleasure. If they were rich, what more could they have? Is not this the ideal of a watering-place life?

The spectacle of this happy community ought to teach us humility and charity in judgment. Perhaps the philosophy of its attractiveness lies deeper than its 'dolce far niente' existence. We may never have considered the attraction for us of the disagreeable, the positive fascination of the uncommonly ugly. The repulsive fascination of the loathly serpent or dragon for women can hardly be explained on theological grounds. Some cranks have maintained that the theory of gravitation alone does not explain the universe, that repulsion is as necessary as attraction in our economy. This may apply to society. We are all charmed with the luxuriance of a semi-tropical landscape, so violently charmed that we become in time tired of its overpowering bloom and color. But what is the charm of the wide, treeless desert, the leagues of sand and burnt-up chaparral, the distant savage, fantastic mountains, the dry desolation as of a world burnt out? It is not contrast altogether. For this illimitable waste has its own charm; and again and again, when we come to a world of vegetation, where the vision is shut in by beauty, we shall have an irrepressible longing for these wind-swept plains as wide as the sea, with the ashy and pink horizons. We shall long to be weary of it all again—its vast nakedness, its shimmering heat, its cold, star-studded nights. It seems paradoxical, but it is probably true, that a society composed altogether of agreeable people would become a terrible bore. We are a "kittle" lot, and hard to please for long. We know how it is in the matter of climate. Why is it that the masses of the human race live in the most disagreeable climates to be found on the globe, subject to extremes of heat and cold, sudden and unprovoked changes, frosts, fogs, malarias? In such regions they congregate, and seem to like the vicissitudes, to like the excitement of the struggle with the weather and the patent medicines to keep alive. They hate the agreeable monotony of one genial day following another the year through. They praise this monotony, all literature is full of it; people always say they are in search of the equable climate; but they continue to live, nevertheless, or try to live, in the least equable; and if they can find one spot more disagreeable than another there they build a big city. If man could make his ideal climate he would probably be dissatisfied with it in a month. The effect of climate upon disposition and upon manners needs to be considered some day; but we are now only trying to understand the attractiveness of the disagreeable. There must be some reason for it; and that would explain a social phenomenon, why there are so many unattractive people, and why the attractive readers of these essays could not get on without them.

The writer of this once traveled for days with an intelligent curmudgeon, who made himself at all points as prickly as the porcupine. There was no getting on with him. And yet when he dropped out of the party he was sorely missed. He was more attractively repulsive than the sea-lion. It was such a luxury to hate him. He was such a counter-irritant, such a stimulant; such a flavor he gave to life. We are always on the lookout for the odd, the eccentric, the whimsical. We pretend that we like the orderly, the beautiful, the pleasant. We can find them anywhere—the little bits of scenery that please the eye, the pleasant households, the group of delightful people. Why travel, then? We want the abnormal, the strong, the ugly, the unusual at least. We wish to be startled and stirred up and repelled. And we ought to be more thankful than we are that there are so many desolate and wearisome and fantastic places, and so many tiresome and unattractive people in this lovely world.

GIVING AS A LUXURY

There must be something very good in human nature, or people would not experience so much pleasure in giving; there must be something very bad in human nature, or more people would try the experiment of giving. Those who do try it become enamored of it, and get their chief pleasure in life out of it; and so evident is this that there is some basis for the idea that it is ignorance rather than badness which keeps so many people from being generous. Of course it may become a sort of dissipation, or more than that, a devastation, as many men who have what are called "good wives" have reason to know, in the gradual disappearance of their wardrobe if they chance to lay aside any of it temporarily. The amount that a good woman can give away is only measured by her opportunity. Her mind becomes so trained in the mystery of this pleasure that she experiences no thrill of delight in giving away only the things her husband does not want. Her office in life is to teach him the joy of self-sacrifice. She and all other habitual and irreclaimable givers soon find out that there is next to no pleasure in a gift unless it involves some self-denial.

Let one consider seriously whether he ever gets as much satisfaction out of a gift received as out of one given. It pleases him for the moment, and if it is useful, for a long time; he turns it over, and admires it; he may value it as a token of affection, and it flatters his self-esteem that he is the object of it. But it is a transient feeling compared with that he has when he has made a gift. That substantially ministers to his self-esteem. He follows the gift; he dwells upon the delight of the receiver; his imagination plays about it; it will never wear out or become stale; having parted with it, it is for him a lasting possession. It is an investment as lasting as that in the debt of England. Like a good deed, it grows, and is continually satisfactory. It is something to think of when he first wakes in the morning—a time when most people are badly put to it for want of something pleasant to think of. This fact about giving is so incontestably true that it is a wonder that enlightened people do not more freely indulge in giving for their own comfort. It is, above all else, amazing that so many imagine they are going to get any satisfaction out of what they leave by will. They may be in a state where they will enjoy it, if the will is not fought over; but it is shocking how little gratitude there is accorded to a departed giver compared to a living giver. He couldn't take the property with him, it is said; he was obliged to leave it to somebody. By this thought his generosity is always reduced to a minimum. He may build a monument to himself in some institution, but we do not know enough of the world to which he has gone to know whether a tiny monument on this earth is any satisfaction to a person who is free of the universe. Whereas every giving or deed of real humanity done while he was living would have entered into his character, and would be of lasting service to him—that is, in any future which we can conceive.

Of course we are not confining our remarks to what are called Christmas gifts—commercially so called—nor would we undertake to estimate the pleasure there is in either receiving or giving these. The shrewd manufacturers of the world have taken notice of the periodic generosity of the race, and ingeniously produce articles to serve it, that is, to anticipate the taste and to thwart all individuality or spontaneity in it. There is, in short, what is called a "line of holiday goods," fitting, it may be supposed, the periodic line of charity. When a person receives some of these things in the blessed season of such, he is apt to be puzzled. He wants to know what they are for, what he is to do with them. If there are no "directions" on the articles, his gratitude is somewhat tempered. He has seen these nondescripts of ingenuity and expense in the shop windows, but he never expected to come into personal relations to them. He is puzzled, and he cannot escape the unpleasant feeling that commerce has put its profit-making fingers into Christmas. Such a lot of things seem to be manufactured on purpose that people may perform a duty that is expected of them in the holidays. The house is full of these impossible things; they occupy the mantelpieces, they stand about on the tottering little tables, they are ingenious, they are made for wants yet undiscovered, they tarnish, they break, they will not "work," and pretty soon they look "second-hand." Yet there must be more satisfaction in giving these articles than in receiving them, and maybe a spice of malice—not that of course, for in the holidays nearly every gift expresses at least kindly remembrance—but if you give them you do not have to live with them. But consider how full the world is of holiday goods—costly goods too—that are of no earthly use, and are not even artistic, and how short life is, and how many people actually need books and other indispensable articles, and how starved are many fine drawing-rooms, not for holiday goods, but for objects of beauty.

Christmas stands for much, and for more and more in a world that is breaking down its barriers of race and religious intolerance, and one of its chief offices has been supposed to be the teaching of men the pleasure there is in getting rid of some of their possessions for the benefit of others. But this frittering away a good instinct and tendency in conventional giving of manufactures made to suit an artificial condition is hardly in the line of developing the spirit that shares the last crust or gives to the thirsty companion in the desert the first pull at the canteen. Of course Christmas feeling is the life of trade and all that, and we will be the last to discourage any sort of giving, for one can scarcely disencumber himself of anything in his passage through this world and not be benefited; but the hint may not be thrown away that one will personally get more satisfaction out of his periodic or continual benevolence if he gives during his life the things which he wants and other people need, and reserves for a fine show in his will a collected but not selected mass of holiday goods.

CLIMATE AND HAPPINESS

The idea of the relation of climate to happiness is modern. It is probably born of the telegraph and of the possibility of rapid travel, and it is more disturbing to serenity of mind than any other. Providence had so ordered it that if we sat still in almost any region of the globe except the tropics we would have, in course of the year, almost all the kinds of climate that exist. The ancient societies did not trouble themselves about the matter; they froze or thawed, were hot or cold, as it pleased the gods. They did not think of fleeing from winter any more than from the summer solstice, and consequently they enjoyed a certain contentment of mind that is absent from modern life. We are more intelligent, and therefore more discontented and unhappy. We are always trying to escape winter when we are not trying to escape summer. We are half the time 'in

transitu', flying hither and thither, craving that exact adaptation of the weather to our whimsical bodies promised only to the saints who seek a "better country." There are places, to be sure, where nature is in a sort of equilibrium, but usually those are places where we can neither make money nor spend it to our satisfaction. They lack either any stimulus to ambition or a historic association, and we soon find that the mind insists upon being cared for quite as much as the body.

How many wanderers in the past winter left comfortable homes in the United States to seek a mild climate! Did they find it in the sleet and bone-piercing cold of Paris, or anywhere in France, where the wolves were forced to come into the villages in the hope of picking up a tender child? If they traveled farther, were the railway carriages anything but refrigerators tempered by cans of cooling water? Was there a place in Europe from Spain to Greece, where the American could once be warm—really warm without effort—in or out of doors? Was it any better in divine Florence than on the chill Riviera? Northern Italy was blanketed with snow, the Apennines were white, and through the clean streets of the beautiful town a raw wind searched every nook and corner, penetrating through the thickest of English wraps, and harder to endure than ingratitude, while a frosty mist enveloped all. The traveler forgot to bring with him the contented mind of the Italian. Could he go about in a long cloak and a slouch hat, curl up in doorways out of the blast, and be content in a feeling of his own picturesqueness? Could he sit all day on the stone pavement and hold out his chilblained hand for soldi? Could he even deceive himself, in a palatial apartment with a frescoed ceiling, by an appearance of warmth in two sticks ignited by a pine cone set in an aperture in one end of the vast room, and giving out scarcely heat enough to drive the swallows from the chimney? One must be born to this sort of thing in order to enjoy it. He needs the poetic temperament which can feel in January the breath of June. The pampered American is not adapted to this kind of pleasure. He is very crude, not to say barbarous, yet in many of his tastes, but he has reached one of the desirable things in civilization, and that is a thorough appreciation of physical comfort. He has had the ingenuity to protect himself in his own climate, but when he travels he is at the mercy of customs and traditions in which the idea of physical comfort is still rudimentary. He cannot warm himself before a group of statuary, or extract heat from a canvas by Raphael, nor keep his teeth from chattering by the exquisite view from the Boboli Gardens. The cold American is insensible to art, and shivers in the presence of the warmest historical associations. It is doubtful if there is a spot in Europe where he can be ordinarily warm in winter. The world, indeed, does not care whether he is warm or not, but it is a matter of great importance to him. As he wanders from palace to palace—and he cannot escape the impression that nothing is good enough for him except a palace—he cannot think of any cottage in any hamlet in America that is not more comfortable in winter than any palace he can find. And so he is driven on in cold and weary stretches of travel to dwell among the French in Algeria, or with the Jews in Tunis, or the Moslems in Cairo. He longs for warmth as the Crusader longed for Jerusalem, but not short of Africa shall he find it. The glacial period is coming back on Europe.

The citizens of the great republic have a reputation for inordinate self-appreciation, but we are thinking that they undervalue many of the advantages their ingenuity has won. It is admitted that they are restless, and must always be seeking something that they have not at home. But aside from their ability to be warm in any part of their own country at any time of the year, where else can they travel three thousand miles on a stretch in a well-heated—too much heated—car, without change of car, without revision of tickets, without encountering a customhouse, without the necessity of stepping outdoors either for food or drink, for a library, for a bath—for any item, in short, that goes to the comfort of a civilized being? And yet we are always prating of the superior civilization of Europe. Nay, more, the traveler steps into a car—which is as comfortable as a house—in Boston, and alights from it only in the City of Mexico. In what other part of the world can that achievement in comfort and convenience be approached?

But this is not all as to climate and comfort. We have climates of all sorts within easy reach, and in quantity, both good and bad, enough to export more in fact than we need of all sorts. If heat is all we want, there are only three or four days between the zero of Maine and the 80 deg. of Florida. If New England is inhospitable and New York freezing, it is only a matter of four days to the sun and the exhilarating air of New Mexico and Arizona, and only five to the oranges and roses of that semi-tropical kingdom by the sea, Southern California. And if this does not content us, a day or two more lands us, without sea-sickness, in the land of the Aztecs, where we can live in the temperate or the tropic zone, eat strange fruits, and be reminded of Egypt and Spain and Italy, and see all the colors that the ingenuity of man has been able to give his skin. Fruits and flowers and sun in the winter-time, a climate to lounge and be happy in—all this is within easy reach, with the minimum of disturbance to our daily habits. We started out, when we turned our backs on the Old World, with the declaration that all men are free, and entitled to life, liberty, and the pursuit of an agreeable climate. We have yet to learn, it seems, that we can indulge in that pursuit best on our own continent. There is no winter climate elsewhere to compare with that found in our extreme Southwest or in Mexico, and the sooner we put this fact into poetry and literature, and begin to make a tradition of it, the better will it be for our peace of mind and for our children. And if the continent does not satisfy us, there lie the West Indies within a few hours' sail, with all the luxuriance and geniality of the tropics. We are only half emancipated yet. We are still apt to see the world through the imagination of England, whose literature we adopted, or of Germany. To these bleak lands Italy was a paradise, and was so sung by poets who had no conception of a winter without frost. We have a winter climate of another sort from any in Europe; we have easy and comfortable access to it. The only thing we need to do now is to correct our imagination, which has been led astray. Our poets can at least do this for us by the help of a quasi-international copyright.

THE NEW FEMININE RESERVE

In times past there have been expressed desire and fear that there should be an American aristocracy, and the materials for its formation have been a good deal canvassed. In a political point of view it is of course

impossible, but it has been hoped by many, and feared by more, that a social state might be created conforming somewhat to the social order in European countries. The problem has been exceedingly difficult. An aristocracy of derived rank and inherited privilege being out of the question, and an aristocracy of talent never having succeeded anywhere, because enlightenment of mind tends to liberalism and democracy, there was only left the experiment of an aristocracy of wealth. This does very well for a time, but it tends always to disintegration, and it is impossible to keep it exclusive. It was found, to use the slang of the dry-goods shops, that it would not wash, for there were liable to crowd into it at any moment those who had in fact washed for a living. An aristocracy has a slim tenure that cannot protect itself from this sort of intrusion. We have to contrive, therefore, another basis for a class (to use an un-American expression), in a sort of culture or training, which can be perpetual, and which cannot be ordered for money, like a ball costume or a livery.

Perhaps the "American Girl" may be the agency to bring this about. This charming product of the Western world has come into great prominence of late years in literature and in foreign life, and has attained a notoriety flattering or otherwise to the national pride. No institution has been better known or more marked on the Continent and in England, not excepting the tramway and the Pullman cars. Her enterprise, her daring, her freedom from conventionality, have been the theme of the novelists and the horror of the dowagers having marriageable daughters. Considered as "stock," the American Girl has been quoted high, and the alliances that she has formed with families impecunious but noble have given her eclat as belonging to a new and conquering race in the world. But the American Girl has not simply a slender figure and a fine eye and a ready tongue, she is not simply an engaging and companionable person, she has excellent common-sense, tact, and adaptability. She has at length seen in her varied European experience that it is more profitable to have social good form according to local standards than a reputation for dash and brilliancy. Consequently the American Girl of a decade ago has effaced herself. She is no longer the dazzling courageous figure. In England, in France, in Germany, in Italy, she takes, as one may say, the color of the land. She has retired behind her mother. She who formerly marched in the van of the family procession, leading them—including the panting mother—a whimsical dance, is now the timid and retiring girl, needing the protection of a chaperon on every occasion. The satirist will find no more abroad the American Girl of the old type whom he continues to describe. The knowing and fascinating creature has changed her tactics altogether. And the change has reacted on American society. The mother has come once more to the front, and even if she is obliged to own to forty-five years to the census-taker, she has again the position and the privileges of the blooming woman of thirty. Her daughters walk meekly and with downcast (if still expectant) eyes, and wait for a sign.

That this change is the deliberate work of the American Girl, no one who knows her grace and talent will deny. In foreign travel and residence she has been quick to learn her lesson. Dazzled at first by her own capacity and the opportunities of the foreign field, she took the situation by storm. But she found too often that she had a barren conquest, and that the social traditions survived her success and became a lifelong annoyance; that is to say, it was possible to subdue foreign men, but the foreign women were impregnable in their social order. The American Girl abroad is now, therefore, with rare exceptions, as carefully chaperoned and secluded as her foreign sisters.

It is not necessary to lay too much stress upon this phase of American life abroad, but the careful observer must notice its reflex action at home. The American freedom and unconventionality in the intercourse of the young of both sexes, which has been so much commented on as characteristic of American life, may not disappear, but that small section which calls itself "society" may attain a sort of aristocratic distinction by the adoption of this foreign conventionality. It is sufficient now to note this tendency, and to claim the credit of it for the wise and intelligent American Girl. It would be a pity if it were to become nationally universal, for then it would not be the aristocratic distinction of a few, and the American woman who longs for some sort of caste would be driven to some other device.

It is impossible to tell yet what form this feminine reserve and retirement will take. It is not at all likely to go so far as the Oriental seclusion of women. The American Girl would never even seemingly give up her right of initiative. If she is to stay in the background and pretend to surrender her choice to her parents, and with it all the delights of a matrimonial campaign, she will still maintain a position of observation. If she seems to be influenced at present by the French and Italian examples, we may be sure that she is too intelligent and too fond of freedom to long tolerate any system of chaperonage that she cannot control. She will find a way to modify the traditional conventionalities so as not to fetter her own free spirit. It may be her mission to show the world a social order free from the forward independence and smartness of which she has been accused, and yet relieved of the dull stiffness of the older forms. It is enough now to notice that a change is going on, due to the effect of foreign society upon American women, and to express the patriotic belief that whatever forms of etiquette she may bow to, the American Girl will still be on earth the last and best gift of God to man.

REPOSE IN ACTIVITY

What we want is repose. We take infinite trouble and go to the ends of the world to get it. That is what makes us all so restless. If we could only find a spot where we could sit down, content to let the world go by, away from the Sunday newspapers and the chronicles of an uneasy society, we think we should be happy. Perhaps such a place is Coronado Beach—that semi-tropical flower-garden by the sea. Perhaps another is the Timeo Terrace at Taormina. There, without moving, one has the most exquisite sea and shore far below him, so far that he has the feeling of domination without effort; the most picturesque crags and castle peaks; he has all classic legend under his eye without the trouble of reading, and mediaeval romance as well; ruins from the time of Theocritus to Freeman, with no responsibility of describing them; and one of the loveliest and most majestic of snow mountains, never twice the same in light and shade, entirely revealed and

satisfactory from base to summit, with no self or otherwise imposed duty of climbing it. Here are most of the elements of peace and calm spirit. And the town itself is quite dead, utterly exhausted after a turbulent struggle of twenty-five hundred years, its poor inhabitants living along only from habit. The only new things in it—the two caravansaries of the traveler—are a hotel and a cemetery. One might end his days here in serene retrospection, and more cheaply than in other places of fewer attractions, for it is all Past and no Future. Probably, therefore, it would not suit the American, whose imagination does not work so easily backward as forward, and who prefers to build his own nest rather than settle in anybody else's rookery. Perhaps the American deceives himself when he says he wants repose; what he wants is perpetual activity and change; his peace of mind is postponed until he can get it in his own way. It is in feeling that he is a part of growth and not of decay. Foreigners are fond of writing essays upon American traits and characteristics. They touch mostly on surface indications. What really distinguishes the American from all others—for all peoples like more or less to roam, and the English of all others are globe-trotters—is not so much his restlessness as his entire accord with the spirit of “go-ahead,” the result of his absolute breaking with the Past. He can repose only in the midst of intense activity. He can sit down quietly in a town that is growing rapidly; but if it stands still, he is impelled to move his rocking-chair to one more lively. He wants the world to move, and to move unencumbered; and Europe seems to him to carry too much baggage. The American is simply the most modern of men, one who has thrown away the impedimenta of tradition. The world never saw such a spectacle before, so vast a territory informed with one uniform spirit of energy and progress, and people tumbling into it from all the world, eager for the fair field and free opportunity. The American delights in it; in Europe he misses the swing and “go” of the new life.

This large explanation may not account for the summer restlessness that overtakes nearly everybody. We are the annual victims of the delusion that there exists somewhere the ideal spot where manners are simple, and milk is pure, and lodging is cheap, where we shall fall at once into content. We never do. For content consists not in having all we want, nor, in not wanting everything, nor in being unable to get what we want, but in not wanting that we can get. In our summer flittings we carry our wants with us to places where they cannot be gratified. A few people have discovered that repose can be had at home, but this discovery is too unfashionable to find favor; we have no rest except in moving about. Looked at superficially, it seems curious that the American is, as a rule, the only person who does not emigrate. The fact is that he can go nowhere else where life is so uneasy, and where, consequently, he would have so little of his sort of repose. To put him in another country would be like putting a nineteenth-century man back into the eighteenth century. The American wants to be at the head of the procession (as he fancies he is), where he can hear the band play, and be the first to see the fireworks of the new era. He thinks that he occupies an advanced station of observation, from which his telescope can sweep the horizon for anything new. And with some reason he thinks so; for not seldom he takes up a foreign idea and tires of it before it is current elsewhere. More than one great writer of England had his first popular recognition in America. Even this season the Saturday Review is struggling with Ibsen, while Boston, having had that disease, has probably gone on to some other fad.

Far be it from us to praise the American for his lack of repose; it is enough to attempt to account for it. But from the social, or rather society, point of view, the subject has a disquieting aspect. If the American young man and young woman get it into their heads that repose, especially of manner, is the correct thing, they will go in for it in a way to astonish the world. The late cultivation of idiocy by the American dude was unique. He carried it to an extreme impossible to the youth of any nation less “gifted.” And if the American girl goes in seriously for “repose,” she will be able to give odds to any modern languidity or to any ancient marble. If what is wanted in society is cold hauteur and languid superciliousness or lofty immobility, we are confident that with a little practice she can sit stiller, and look more impassive, and move with less motion, than any other created woman. We have that confidence in her ability and adaptability. It is a question whether it is worth while to do this; to sacrifice the vivacity and charm native to her, and the natural impulsiveness and generous gift of herself which belong to a new race in a new land, which is walking always towards the sunrise.

In fine, although so much is said of the American lack of repose, is it not best for the American to be content to be himself, and let the critics adapt themselves or not, as they choose, to a new phenomenon?

Let us stick a philosophic name to it, and call it repose in activity. The American might take the candid advice given by one friend to another, who complained that it was so difficult to get into the right frame of mind. “The best thing you can do,” he said, “is to frame your mind and hang it up.”

WOMEN—IDEAL AND REAL

We have not by any means got to the bottom of Realism. It matters very little what the novelists and critics say about it—what it is and what it is not; the attitude of society towards it is the important thing. Even if the critic could prove that nature and art are the same thing, and that the fiction which is Real is only a copy of nature, or if another should prove that Reality is only to be found in the Ideal, little would be gained. Literature is well enough in its place, art is an agreeable pastime, and it is right that society should take up either in seasons when lawn-tennis and polo are impracticable and afternoon teas become flavorless; but the question that society is or should be interested in is whether the young woman of the future—upon whose formation all our social hopes depend—is going to shape herself by a Realistic or an Ideal standard. It should be said in parenthesis that the young woman of the passing period has inclined towards Realism in manner and speech, if not in dress, affecting a sort of frank return to the easy-going ways of nature itself, even to the adoption of the language of the stock exchange, the race-course, and the clubs—an offering of herself on the altar of good-fellowship, with the view, no doubt, of making life more agreeable to the opposite sex, forgetting the fact that men fall in love always, or used to in the days when they could afford that luxury, with an ideal

woman, or if not with an ideal woman, with one whom they idealize. And at this same time the world is full of doubts and questionings as to whether marriage is a failure. Have these questionings anything to do with the increasing Realism of women, and a consequent loss of ideals?

Of course the reader sees that the difficulty in considering this subject is whether woman is to be estimated as a work of nature or of art. And here comes in the everlasting question of what is the highest beauty, and what is most to be desired. The Greek artists, it seems to be well established, never used a model, as our artists almost invariably do, in their plastic and pictorial creations. The antique Greek statues, or their copies, which give us the highest conceptions of feminine charm and manly beauty, were made after no woman, or man born of woman, but were creations of the ideal raised to the highest conception by the passionate love and long study of nature, but never by faithful copying of it. The Romans copied the Greek art. The Greek in his best days created the ideal figure, which we love to accept as nature. Generation after generation the Greek learned to draw and learned to observe, until he was able to transmute his knowledge into the forms of grace and beauty which satisfy us as nature at her best; just as the novelist trains all his powers by the observation of life until he is able to transmute all the raw material into a creation of fiction which satisfies us. We may be sure that if the Greek artist had employed the service of models in his studio, his art would have been merely a passing phase in human history. But as it is, the world has ever since been in love with his ideal woman, and still believes in her possibility.

Now the young woman of today should not be deceived into the notion of a preferable Realistic development because the novelist of today gets her to sit to him as his model. This may be no certain indication that she is either good art or good nature. Indeed she may be quite drifting away from the ideal that a woman ought to aim at if we are to have a society that is not always tending into a realistic vulgarity and commonplace. It is perfectly true that a woman is her own excuse for being, and in a way she is doing enough for the world by simply being a woman. It is difficult to rouse her to any sense of her duty as a standard of aspiration. And it is difficult to explain exactly what it is that she is to do. If she asks if she is expected to be a model woman, the reply must be that the world does not much hanker after what—is called the “model woman.” It seems to be more a matter of tendency than anything else. Is she sagging towards Realism or rising towards Idealism? Is she content to be the woman that some of the novelists, and some of the painters also, say she is, or would she prefer to approach that ideal which all the world loves? It is a question of standards.

It is natural that in these days, when the approved gospel is that it is better to be dead than not to be Real, society should try to approach nature by the way of the materialistically ignoble, and even go such a pace of Realism as literature finds it difficult to keep up with; but it is doubtful if the young woman will get around to any desirable state of nature by this route. We may not be able to explain why servile imitation of nature degrades art and degrades woman, but both deteriorate without an ideal so high that there is no earthly model for it. Would you like to marry, perhaps, a Greek statue? says the justly contemptuous critic.

Not at all, at least not a Roman copy of one. But it would be better to marry a woman who would rather be like a Greek statue than like some of these figures, without even an idea for clothing, which are lying about on green banks in our spring exhibitions.

THE ART OF IDLENESS

Idleness seems to be the last accomplishment of civilization. To be idle gracefully and contentedly and picturesquely is an art. It is one in which the Americans, who do so many things well, do not excel. They have made the excuse that they have not time, or, if they have leisure, that their temperament and nervous organization do not permit it. This excuse will pass for a while, for we are a new people, and probably we are more highly and sensitively organized than any other nation—at least the physiologists say so; but the excuse seems more and more inadequate as we accumulate wealth, and consequently have leisure. We shall criticise the American colonies in Paris and Rome and Florence, and in other Continental places where they congregate. They know whether they are restless or contented, and what examples they set to the peoples who get their ideas of republican simplicity and virtue from the Americans who sojourn among them. They know whether with all their leisure they get placidity of mind and the real rest which the older nations have learned to enjoy. It may not be the most desirable thing for a human being to be idle, but if he will be, he should be so in a creditable manner, and with some enjoyment to himself. It is no slander to say that we in America have not yet found out the secret of this. Perhaps we shall not until our energies are spent and we are in a state of decay. At present we put as much energy into our pleasure as into our work, for it is inbred in us that laziness is a sin. This is the Puritan idea, and it must be said for it that in our experience virtue and idleness are not commonly companions. But this does not go to the bottom of the matter.

The Italians are industrious; they are compelled to be in order to pay their taxes for the army and navy and get macaroni enough to live on. But see what a long civilization has done for them. They have the manner of laziness, they have the air of leisure, they have worn off the angular corners of existence, and unconsciously their life is picturesque and enjoyable. Those among them who have money take their pleasure simply and with the least expense of physical energy. Those who have not money do the same thing. This basis of existence is calm and unexaggerated; life is reckoned by centimes, not by dollars. What an ideal place is Venice! It is not only the most picturesque city in the world, rich in all that art can invent to please the eye, but how calm it is! The vivacity which entertains the traveler is all on the surface. The nobleman in his palace if there be any palace that is not turned into a hotel, or a magazine of curiosities, or a municipal office—can live on a diet that would make an American workman strike, simply because he has learned to float through life; and the laborer is equally happy on little because he has learned to wait without much labor. The gliding, easy motion of the gondola expresses the whole situation; and the gondolier who with consummate skill urges

his dreamy bark amid the throng and in the tortuous canals for an hour or two, and then sleeps in the sun, is a type of that rest in labor which we do not attain. What happiness there is in a dish of polenta, or of a few fried fish, in a cup of coffee, and in one of those apologies for cigars which the government furnishes, dear at a cent—the cigar with a straw in it, as if it were a julep, which it needs five minutes to ignite, and then will furnish occupation for a whole evening! Is it a hard lot, that of the fishermen and the mariners of the Adriatic? The lights are burning all night long in a cafe on the Riva del Schiavoni, and the sailors and idlers of the shore sit there jabbering and singing and trying their voices in lusty hallooing till the morning light begins to make the lagoon opalescent. The traveler who lodges near cannot sleep, but no more can the sailors, who steal away in the dawn, wafted by painted sails. In the heat of the day, when the fish will not bite, comes the siesta. Why should the royal night be wasted in slumber? The shore of the Riva, the Grand Canal, the islands, gleam with twinkling lamps; the dark boats glide along with a star in the prow, bearing youth and beauty and sin and ugliness, all alike softened by the shadows; the electric lights from the shores and the huge steamers shoot gleams on towers and facades; the moon wades among the fleecy clouds; here and there a barge with colored globes of light carries a band of singing men and women and players on the mandolin and the fiddle, and from every side the songs of Italy, pathetic in their worn gayety, float to the entranced ears of those who lean from balconies, or lounge in gondolas and listen with hearts made a little heavy and wistful with so much beauty.

Can any one float in such scenes and be so contentedly idle anywhere in our happy land? Have we learned yet the simple art of easy enjoyment? Can we buy it with money quickly, or is it a grace that comes only with long civilization? Italy, for instance, is full of accumulated wealth, of art, even of ostentation and display, and the new generation probably have lost the power to conceive, if not the skill to execute, the great works which excite our admiration. Nothing can be much more meretricious than its modern art, when anything is produced that is not an exact copy of something created when there was genius there. But in one respect the Italians have entered into the fruits of the ages of trial and of failure, and that, is the capacity of being idle with much money or with none, and getting day by day their pay for the bother of living in this world. It seems a difficult lesson for us to learn in country or city. Alas! when we have learned it shall we not want to emigrate, as so many of the Italians do? Some philosophers say that men were not created to be happy. Perhaps they were not intended to be idle.

IS THERE ANY CONVERSATION

Is there any such thing as conversation? It is a delicate subject to touch, because many people understand conversation to be talk; not the exchange of ideas, but of words; and we would not like to say anything to increase the flow of the latter. We read of times and salons in which real conversation existed, held by men and women. Are they altogether in the past? We believe that men do sometimes converse. Do women ever? Perhaps so. In those hours sacred to the relaxation of undress and the back hair, in the upper penetralia of the household, where two or three or six are gathered together on and about the cushioned frame intended for repose, do they converse, or indulge in that sort of chat from which not one idea is carried away? No one reports, fortunately, and we do not know. But do all the women like this method of spending hour after hour, day after day—indeed, a lifetime? Is it invigorating, even restful? Think of the talk this past summer, the rivers and oceans of it, on piazzas and galleries in the warm evenings or the fresher mornings, in private houses, on hotel verandas, in the shade of thousands of cottages by the sea and in the hills! As you recall it, what was it all about? Was the mind in a vapid condition after an evening of it? And there is so much to read, and so much to think about, and the world is so interesting, if you do think about it, and nearly every person has some peculiarity of mind that would be worth study if you could only get at it! It is really, we repeat, such an interesting world, and most people get so little out of it. Now there is the conversation of hens, when the hens are busy and not self-conscious; there is something fascinating about it, because the imagination may invest it with a recondite and spicy meaning; but the common talk of people! We infer sometimes that the hens are not saying anything, because they do not read, and consequently their minds are empty. And perhaps we are right. As to conversation, there is no use in sending the bucket into the well when the well is dry—it only makes a rattling of windlass and chain. We do not wish to be understood to be an enemy of the light traffic of human speech. Deliver us from the didactic and the everlastingly improving style of thing! Conversation, in order to be good, and intellectually inspiring, and spiritually restful, need not always be serious. It must be alert and intelligent, and mean more by its suggestions and allusions than is said. There is the light touch-and-go play about topics more or less profound that is as agreeable as heat-lightning in a sultry evening. Why may not a person express the whims and vagaries of a lambent mind (if he can get a lambent mind) without being hauled up short for it, and plunged into a heated dispute? In the freedom of real conversation the mind throws out half-thoughts, paradoxes, for which a man is not to be held strictly responsible to the very roots of his being, and which need to be caught up and played with in the same tentative spirit. The dispute and the hot argument are usually the bane of conversation and the death of originality. We like to express a notion, a fancy, without being called upon to defend it, then and there, in all its possible consequences, as if it were to be an article in a creed or a plank in a platform. Must we be always either vapid or serious?

We have been obliged to take notice of the extraordinary tendency of American women to cultivation, to the improvement of the mind, by means of reading, clubs, and other intellectual exercises, and to acknowledge that they are leaving the men behind; that is, the men not in the so-called professions. Is this intellectualization beginning to show in the conversation of women when they are together, say in the hours of relaxation in the penetralia spoken of, or in general society? Is there less talk about the fashion of dress, and the dearness or cheapness of materials, and about servants, and the ways of the inchoate citizen called the baby, and the infinitely little details of the private life of other people? Is it true that if a group of men are talking, say about politics, or robust business, or literature, and they are joined by women (whose company is

always welcome), the conversation is pretty sure to take a lower mental plane, to become more personal, more frivolous, accommodating itself to quite a different range? Do the well-read, thoughtful women, however beautiful and brilliant and capable of the gayest persiflage, prefer to talk with men, to listen to the conversation of men, rather than to converse with or listen to their own sex? If this is true, why is it? Women, as a rule, in "society" at any rate, have more leisure than men. In the facilities and felicities of speech they commonly excel men, and usually they have more of that vivacious dramatic power which is called "setting out a thing to the life." With all these advantages, and all the world open to them in newspapers and in books, they ought to be the leaders and stimulators of the best conversation. With them it should never drop down to the too-common flatness and banality. Women have made this world one of the most beautiful places of residence to be conceived. They might make it one of the most interesting.

THE TALL GIRL

It is the fashion for girls to be tall. This is much more than saying that tall girls are the fashion. It means not only that the tall girl has come in, but that girls are tall, and are becoming tall, because it is the fashion, and because there is a demand for that sort of girl. There is no hint of stoutness, indeed the willowy pattern is preferred, but neither is leanness suggested; the women of the period have got hold of the poet's idea, "tall and most divinely fair," and are living up to it. Perhaps this change in fashion is more noticeable in England and on the Continent than in America, but that may be because there is less room for change in America, our girls being always of an aspiring turn. Very marked the phenomenon is in England; on the street, at any concert or reception, the number of tall girls is so large as to occasion remark, especially among the young girls just coming into the conspicuousness of womanhood. The tendency of the new generation is towards unusual height and gracious slimness. The situation would be embarrassing to thousands of men who have been too busy to think about growing upward, were it not for the fact that the tall girl, who must be looked up to, is almost invariably benignant, and bears her height with a sweet timidity that disarms fear. Besides, the tall girl has now come on in such force that confidence is infused into the growing army, and there is a sense of support in this survival of the tallest that is very encouraging to the young.

Many theories have been put forward to account for this phenomenon. It is known that delicate plants in dark places struggle up towards the light in a frail slenderness, and it is said that in England, which seems to have increasing cloudiness, and in the capital more and more months of deeper darkness and blackness, it is natural that the British girl should grow towards the light. But this is a fanciful view of the case, for it cannot be proved that English men have proportionally increased their stature. The English man has always seemed big to the Continental peoples, partly because objects generally take on gigantic dimensions when seen through a fog. Another theory, which has much more to commend it, is that the increased height of women is due to the aesthetic movement, which has now spent its force, but has left certain results, especially in the change of the taste in colors. The woman of the aesthetic artist was nearly always tall, usually willowy, not to say undulating and serpentine. These forms of feminine loveliness and commanding height have been for many years before the eyes of the women of England in paintings and drawings, and it is unavoidable that this pattern should not have its effect upon the new and plastic generation. Never has there been another generation so open to new ideas; and if the ideal of womanhood held up was that of length and gracious slenderness, it would be very odd if women should not aspire to it. We know very well the influence that the heroines of the novelists have had from time to time upon the women of a given period. The heroine of Scott was, no doubt, once common in society—the delicate creature who promptly fainted on the reminiscence of the scent of a rose, but could stand any amount of dragging by the hair through underground passages, and midnight rides on lonely moors behind mailed and black-mantled knights, and a run or two of hair-removing typhoid fever, and come out at the end of the story as fresh as a daisy. She could not be found now, so changed are the requirements of fiction. We may assume, too, that the full-blown aesthetic girl of that recent period—the girl all soul and faded harmonies—would be hard to find, but the fascination of the height and slenderness of that girl remains something more than a tradition, and is, no doubt, to some extent copied by the maiden just coming into her kingdom.

Those who would belittle this matter may say that the appearance of which we speak is due largely to the fashion of dress—the long unbroken lines which add to the height and encourage the appearance of slenderness. But this argument gives away the case. Why do women wear the present fascinating gowns, in which the lithe figure is suggested in all its womanly dignity? In order that they may appear to be tall. That is to say, because it is the fashion to be tall; women born in the mode are tall, and those caught in a hereditary shortness endeavor to conform to the stature of the come and coming woman.

There is another theory, that must be put forward with some hesitation, for the so-called emancipation of woman is a delicate subject to deal with, for while all the sex doubtless feel the impulse of the new time, there are still many who indignantly reject the implication in the struggle for the rights of women. To say, therefore, that women are becoming tall as a part of their outfit for taking the place of men in this world would be to many an affront, so that this theory can only be suggested. Yet probably physiology would bear us out in saying that the truly emancipated woman, taking at last the place in affairs which men have flown in the face of Providence by denying her, would be likely to expand physically as well as mentally, and that as she is beginning to look down upon man intellectually, she is likely to have a corresponding physical standard.

Seriously, however, none of these theories are altogether satisfactory, and we are inclined to seek, as is best in all cases, the simplest explanation. Women are tall and becoming tall simply because it is the fashion, and that statement never needs nor is capable of any explanation. Awhile ago it was the fashion to be petite and arch; it is now the fashion to be tall and gracious, and nothing more can be said about it. Of course the reader, who is usually inclined to find the facetious side of any grave topic, has already thought of the

application of the self-denying hymn, that man wants but little here below, and wants that little long; but this may be only a passing sigh of the period. We are far from expressing any preference for tall women over short women. There are creative moods of the fancy when each seems the better. We can only chronicle, but never create.

THE DEADLY DIARY

Many people regard the keeping of a diary as a meritorious occupation. The young are urged to take up this cross; it is supposed to benefit girls especially. Whether women should do it is to some minds not an open question, although there is on record the case of the Frenchman who tried to shoot himself when he heard that his wife was keeping a diary. This intention of suicide may have arisen from the fear that his wife was keeping a record of his own peccadilloes rather than of her own thoughts and emotions. Or it may have been from the fear that she was putting down those little conjugal remarks which the husband always dislikes to have thrown up to him, and which a woman can usually quote accurately, it may be for years, it may be forever, without the help of a diary. So we can appreciate without approving the terror of the Frenchman at living on and on in the same house with a growing diary. For it is not simply that this little book of judgment is there in black and white, but that the maker of it is increasing her power of minute observation and analytic expression. In discussing the question whether a woman should keep a diary it is understood that it is not a mere memorandum of events and engagements, such as both men and women of business and affairs necessarily keep, but the daily record which sets down feelings, emotions, and impressions, and criticises people and records opinions. But this is a question that applies to men as well as to women.

It has been assumed that the diary serves two good purposes: it is a disciplinary exercise for the keeper of it, and perhaps a moral guide; and it has great historical value. As to the first, it may be helpful to order, method, discipline, and it may be an indulgence of spleen, whims, and unwholesome criticism and conceit. The habit of saying right out what you think of everybody is not a good one, and the record of such opinions and impressions, while it is not so mischievous to the public as talking may be, is harmful to the recorder. And when we come to the historical value of the diary, we confess to a growing suspicion of it. It is such a deadly weapon when it comes to light after the passage of years. It has an authority which the spoken words of its keeper never had. It is 'ex parte', and it cannot be cross-examined. The supposition is that being contemporaneous with the events spoken of, it must be true, and that it is an honest record. Now, as a matter of fact, we doubt if people are any more honest as to themselves or others in a diary than out of it; and rumors, reported facts, and impressions set down daily in the heat and haste of the prejudicial hour are about as likely to be wrong as right. Two diaries of the same events rarely agree. And in turning over an old diary we never know what to allow for the personal equation. The diary is greatly relied on by the writers of history, but it is doubtful if there is any such liar in the world, even when the keeper of it is honest. It is certain to be partisan, and more liable to be misinformed than a newspaper, which exercises some care in view of immediate publicity. The writer happens to know of two diaries which record, on the testimony of eye-witnesses, the circumstances of the last hours of Garfield, and they differ utterly in essential particulars. One of these may turn up fifty years from now, and be accepted as true. An infinite amount of gossip goes into diaries about men and women that would not stand the test of a moment's contemporary publication. But by-and-by it may all be used to smirch or brighten unjustly some one's character. Suppose a man in the Army of the Potomac had recorded daily all his opinions of men and events. Reading it over now, with more light and a juster knowledge of character and of measures, is it not probable that he would find it a tissue of misconceptions? Few things are actually what they seem today; they are colored both by misapprehensions and by moods. If a man writes a letter or makes report of an occurrence for immediate publication, subject to universal criticism, there is some restraint on him. In his private letter, or diary especially, he is apt to set down what comes into his head at the moment, often without much effort at verification.

We have been led to this disquisition into the fundamental nature of this private record by the question put to us, whether it is a good plan for a woman to keep a diary. Speaking generally, the diary has become a sort of fetich, the authority of which ought to be overthrown. It is fearful to think how our characters are probably being lied away by innumerable pen scratches in secret repositories, which may some day come to light as unimpeachable witnesses. The reader knows that he is not the sort of man which the diarist jotted him down to be in a single interview. The diary may be a good thing for self-education, if the keeper could insure its destruction. The mental habit of diarizing may have some value, even when it sets undue importance upon trifles. We confess that, never having seen a woman's private diary (except those that have been published), we do not share the popular impression as to their tenuity implied in the question put to us. Taking it for granted that they are full of noble thoughts and beautiful imaginings, we doubt whether the time spent on them could not be better employed in acquiring knowledge or taking exercise. For the diary forgotten and left to the next generation may be as dangerous as dynamite.

THE WHISTLING GIRL

The wisdom of our ancestors packed away in proverbial sayings may always be a little suspected. We have a vague respect for a popular proverb, as embodying folk-experience, and expressing not the wit of one, but the common thought of a race. We accept the saying unquestioning, as a sort of inspiration out of the air, true because nobody has challenged it for ages, and probably for the same reason that we try to see the new moon

over our left shoulder. Very likely the musty saying was the product of the average ignorance of an unenlightened time, and ought not to have the respect of a scientific and traveled people. In fact it will be found that a large proportion of the proverbial sayings which we glibly use are fallacies based on a very limited experience of the world, and probably were set afloat by the idiocy or prejudice of one person. To examine one of them is enough for our present purpose.

*"Whistling girls and crowing hens
Always come to some bad ends."*

It would be interesting to know the origin of this proverb, because it is still much relied on as evincing a deep knowledge of human nature, and as an argument against change, that is to say, in this case, against progress. It would seem to have been made by a man, conservative, perhaps malevolent, who had no appreciation of a hen, and a conservatively poor opinion of woman. His idea was to keep woman in her place—a good idea when not carried too far—but he did not know what her place is, and he wanted to put a sort of restraint upon her emancipation by coupling her with an emancipated hen. He therefore launched this shaft of ridicule, and got it to pass as an arrow of wisdom shot out of a popular experience in remote ages.

In the first place, it is not true, and probably never was true even when hens were at their lowest. We doubt its Sanscrit antiquity. It is perhaps of Puritan origin, and rhymed in New England. It is false as to the hen. A crowing hen was always an object of interest and distinction; she was pointed out to visitors; the owner was proud of her accomplishment, he was naturally likely to preserve her life, and especially if she could lay. A hen that can lay and crow is a 'rara avis'. And it should be parenthetically said here that the hen who can crow and cannot lay is not a good example for woman. The crowing hen was of more value than the silent hen, provided she crowed with discretion; and she was likely to be a favorite, and not at all to come to some bad end. Except, indeed, where the proverb tended to work its own fulfillment. And this is the regrettable side of most proverbs of an ill-nature, that they do help to work the evil they predict. Some foolish boy, who had heard this proverb, and was sent out to the hen-coop in the evening to slay for the Thanksgiving feast, thought he was a justifiable little providence in wringing the neck of the crowing hen, because it was proper (according to the saying) that she should come to some bad end. And as years went on, and that kind of boy increased and got to be a man, it became a fixed idea to kill the amusing, interesting, spirited, emancipated hen, and naturally the barn-yard became tamer and tamer, the production of crowing hens was discouraged (the wise old hens laid no eggs with a crow in them, according to the well-known principle of heredity), and the man who had in his youth exterminated the hen of progress actually went about quoting that false couplet as an argument against the higher education of woman.

As a matter of fact, also, the couplet is not true about woman; whether it ought to be true is an ethical question that will not be considered here. The whistling girl does not commonly come to a bad end. Quite as often as any other girl she learns to whistle a cradle song, low and sweet and charming, to the young voter in the cradle. She is a girl of spirit, of independence of character, of dash and flavor; and as to lips, why, you must have some sort of presentable lips to whistle; thin ones will not. The whistling girl does not come to a bad end at all (if marriage is still considered a good occupation), except a cloud may be thrown upon her exuberant young life by this rascally proverb. Even if she walks the lonely road of life, she has this advantage, that she can whistle to keep her courage up. But in a larger sense, one that this practical age can understand, it is not true that the whistling girl comes to a bad end. Whistling pays. It has brought her money; it has blown her name about the listening world. Scarcely has a non-whistling woman been more famous. She has set aside the adage. She has done so much towards the emancipation of her sex from the prejudice created by an ill-natured proverb which never had root in fact.

But has the whistling woman come to stay? Is it well for woman to whistle? Are the majority of women likely to be whistlers? These are serious questions, not to be taken up in a light manner at the end of a grave paper. Will woman ever learn to throw a stone? There it is. The future is inscrutable. We only know that whereas they did not whistle with approval, now they do; the prejudice of generations gradually melts away. And woman's destiny is not linked with that of the hen, nor to be controlled by a proverb—perhaps not by anything.

BORN OLD AND RICH

We have been remiss in not proposing a remedy for our present social and economic condition. Looking backward, we see this. The scheme may not be practical, any more than the Utopian plans that have been put forward, but it is radical and interesting, and requires, as the other schemes do, a total change in human nature (which may be a good thing to bring about), and a general recasting of the conditions of life. This is and should be no objection to a socialistic scheme. Surface measures will not avail. The suggestion for a minor alleviation of inequality, which seems to have been acted on, namely, that women should propose, has not had the desired effect if it is true, as reported, that the eligible young men are taking to the woods. The workings of such a measure are as impossible to predict in advance as the operation of the McKinley tariff. It might be well to legislate that people should be born equal (including equal privileges of the sexes), but the practical difficulty is to keep them equal. Life is wrong somehow. Some are born rich and some are born poor, and this inequality makes misery, and then some lose their possessions, which others get hold of, and that makes more misery. We can put our fingers on the two great evils of life as it now is: the first is poverty; and the second is infirmity, which is the accompaniment of increasing years. Poverty, which is only the unequal distribution of things desired, makes strife, and is the opportunity of lawyers; and infirmity is the excuse for doctors. Think what the world would be without lawyers and doctors!

We are all born young, and most of us are born poor. Youth is delightful, but we are always getting away

from it. How different it would be if we were always going towards it! Poverty is unpleasant, and the great struggle of life is to get rid of it; but it is the common fortune that in proportion as wealth is attained the capacity of enjoying it departs. It seems, therefore, that our life is wrong end first. The remedy suggested is that men should be born rich and old. Instead of the necessity of making a fortune, which is of less and less value as death approaches, we should have only the privilege of spending it, and it would have its natural end in the cradle, in which we should be rocked into eternal sleep. Born old, one would, of course, inherit experience, so that wealth could be made to contribute to happiness, and each day, instead of lessening the natural powers and increasing infirmities, would bring new vigor and capacity of enjoyment. It would be going from winter to autumn, from autumn to summer, from summer to spring. The joy of a life without care as to ways and means, and every morning refitted with the pulsations of increasing youth, it is almost impossible to imagine. Of course this scheme has difficulties on the face of it. The allotting of the measure of wealth would not be difficult to the socialists, because they would insist that every person should be born with an equal amount of property. What this should be would depend upon the length of life; and how should this be arrived at? The insurance companies might agree, but no one else would admit that he belongs in the average. Naturally the Biblical limit of threescore and ten suggests itself; but human nature is very queer. With the plain fact before them that the average life of man is less than thirty-four years, few would be willing, if the choice were offered, to compromise on seventy. Everybody has a hope of going beyond that, so that if seventy were proposed as the year at birth, there would no doubt be as much dissatisfaction as there is at the present loose arrangement. Science would step in, and demonstrate that there is no reason why, with proper care of the system, it should not run a hundred years. It is improbable, then, that the majority could be induced to vote for the limit of seventy years, or to exchange the exciting uncertainty of adding a little to the period which must be accompanied by the weight of the grasshopper, for the certainty of only seventy years in this much-abused world.

But suppose a limit to be agreed on, and the rich old man and the rich old woman (never now too old to marry) to start on their career towards youth and poverty. The imagination kindles at the idea. The money would hold out just as long as life lasted, and though it would all be going downhill, as it were, what a charming descent, without struggle, and with only the lessening infirmities that belong to decreasing age! There would be no second childhood, only the innocence and elasticity of the first. It all seems very fair, but we must not forget that this is a mortal world, and that it is liable to various accidents. Who, for instance, could be sure that he would grow young gracefully? There would be the constant need of fighting the hot tempers and impulses of youth, growing more and more instead of less and less unreasonable. And then, how many would reach youth? More than half, of course, would be cut off in their prime, and be more and more liable to go as they fell back into the pitfalls and errors of childhood. Would people grow young together even as harmoniously as they grow old together? It would be a pretty sight, that of the few who descended into the cradle together, but this inversion of life would not escape the woes of mortality. And there are other considerations, unless it should turn out that a universal tax on land should absolutely change human nature. There are some who would be as idle and spendthrift going towards youth as they now are going away from it, and perhaps more, so that half the race on coming to immaturity would be in child asylums. And then others who would be stingy and greedy and avaricious, and not properly spend their allotted fortune. And we should have the anomaly, which is so distasteful to the reformer now, of rich babies. A few babies inordinately rich, and the rest in asylums.

Still, the plan has more to recommend it than most others for removing poverty and equalizing conditions. We should all start rich, and the dying off of those who would never attain youth would amply provide fortunes for those born old. Crime would be less also; for while there would, doubtless, be some old sinners, the criminal class, which is very largely under thirty, would be much smaller than it is now. Juvenile depravity would proportionally disappear, as not more people would reach non-age than now reach over-age. And the great advantage of the scheme, one that would indeed transform the world, is that women would always be growing younger.

THE "OLD SOLDIER"

The "old soldier" is beginning to outline himself upon the public mind as a distant character in American life. Literature has not yet got hold of him, and perhaps his evolution is not far enough advanced to make him as serviceable as the soldier of the Republic and the Empire, the relic of the Old Guard, was to Hugo and Balzac, the trooper of Italy and Egypt, the maimed hero of Borodino and Waterloo, who expected again the coming of the Little Corporal. It takes time to develop a character, and to throw the glamour of romance over what may be essentially commonplace. A quarter of a century has not sufficed to separate the great body of the surviving volunteers in the war for the Union from the body of American citizens, notwithstanding the organization of the Grand Army of the Republic, the encampments, the annual reunions, and the distinction of pensions, and the segregation in Soldiers' Homes. The "old soldier" slowly eliminates himself from the mass, and begins to take, and to make us take, a romantic view of his career. There was one event in his life, and his personality in it looms larger and larger as he recedes from it. The heroic sacrifice of it does not diminish, as it should not, in our estimation, and he helps us to keep glowing a lively sense of it. The past centres about him and his great achievement, and the whole of life is seen in the light of it. In his retreat in the Home, and in his wandering from one Home to another, he ruminates on it, he talks of it; he separates himself from the rest of mankind by a broad distinction, and his point of view of life becomes as original as it is interesting. In the Homes the battered veterans speak mainly of one thing; and in the monotony of their spent lives develop whimsies and rights and wrongs, patriotic ardors and criticisms on their singular fate, which are original in their character in our society. It is in human nature to like rest but not restriction, bounty but not charity, and the tired heroes of the war grow restless, though every physical want is supplied. They have a fancy that they

would like to see again the homes of their youth, the farmhouse in the hills, the cottage in the river valley, the lonesome house on the wide prairie, the street that ran down to the wharf where the fishing-smacks lay, to see again the friends whom they left there, and perhaps to take up the occupations that were laid down when they seized the musket in 1861. Alas! it is not their home anymore; the friends are no longer there; and what chance is there of occupation for a man who is now feeble in body and who has the habit of campaigning? This generation has passed on to other things. It looks upon the hero as an illustration in the story of the war, which it reads like history. The veteran starts out from the shelter of the Home. One evening, towards sunset, the comfortable citizen, taking the mild air on his piazza, sees an interesting figure approach. Its dress is half military, half that of the wanderer whose attention to his personal appearance is only spasmodic.

The veteran gives the military salute, he holds himself erect, almost too erect, and his speech is voluble and florid. It is a delightful evening; it seems to be a good growing-time; the country looks prosperous. He is sorry to be any trouble or interruption, but the fact is—yes, he is on his way to his old home in Vermont; it seems like he would like to taste some home cooking again, and sit in the old orchard, and perhaps lay his bones, what is left of them, in the burying-ground on the hill. He pulls out his well-worn papers as he talks; there is the honorable discharge, the permit of the Home, and the pension. Yes, Uncle Sam is generous; it is the most generous government God ever made, and he would willingly fight for it again. Thirty dollars a month, that is what he has; he is not a beggar; he wants for nothing. But the pension is not payable till the end of the month. It is entirely his own obligation, his own fault; he can fight, but he cannot lie, and nobody is to blame but himself; but last night he fell in with some old comrades at Southdown, and, well, you know how it is. He had plenty of money when he left the Home, and he is not asking for anything now, but if he had a few dollars for his railroad fare to the next city, he could walk the rest of the way. Wounded? Well, if I stood out here against the light you could just see through me, that's all. Bullets? It's no use to try to get 'em out. But, sir, I'm not complaining. It had to be done; the country had to be saved; and I'd do it again if it were necessary. Had any hot fights? Sir, I was at Gettysburg! The veteran straightens up, and his eyes flash as if he saw again that sanguinary field. Off goes the citizen's hat. Children, come out here; here is one of the soldiers of Gettysburg! Yes, sir; and this knee—you see I can't bend it much—got stiffened at Chickamauga; and this scratch here in the neck was from a bullet at Gaines Mill; and this here, sir—thumping his chest—you notice I don't dare to cough much—after the explosion of a shell at Petersburg I found myself lying on my-back, and the only one of my squad who was not killed outright. Was it the imagination of the citizen or of the soldier that gave the impression that the hero had been in the forefront of every important action of the war? Well, it doesn't matter much. The citizen was sitting there under his own vine, the comfortable citizen of a free republic, because of the wounds in this cheerful and imaginative old wanderer. There, that is enough, sir, quite enough. I am no beggar. I thought perhaps you had heard of the Ninth Vermont. Woods is my name—Sergeant Woods. I trust some time, sir, I shall be in a position to return the compliment. Good-evening, sir; God bless your honor! and accept the blessing of an old soldier. And the dear old hero goes down the darkening avenue, not so steady of bearing as when he withstood the charge of Pickett on Cemetery Hill, and with the independence of the American citizen who deserves well of his country, makes his way to the nearest hospitable tavern.

THE ISLAND OF BIMINI

To the northward of Hispaniola lies the island of Bimini. It may not be one of the spice islands, but it grows the best ginger to be found in the world. In it is a fair city, and beside the city a lofty mountain, at the foot of which is a noble spring called the 'Fons Juventutis'. This fountain has a sweet savor, as of all manner of spicery, and every hour of the day the water changes its savor and its smell. Whoever drinks of this well will be healed of whatever malady he has, and will seem always young. It is not reported that women and men who drink of this fountain will be always young, but that they will seem so, and probably to themselves, which simply means, in our modern accuracy of language, that they will feel young. This island has never been found. Many voyages have been made in search of it in ships and in the imagination, and Liars have said they have landed on it and drunk of the water, but they never could guide any one else thither. In the credulous centuries when these voyages were made, other islands were discovered, and a continent much more important than Bimini; but these discoveries were a disappointment, because they were not what the adventurers wanted. They did not understand that they had found a new land in which the world should renew its youth and begin a new career. In time the quest was given up, and men regarded it as one of the delusions which came to an end in the sixteenth century. In our day no one has tried to reach Bimini except Heine. Our scientific period has a proper contempt for all such superstitions. We now know that the 'Fons Juventutis' is in every man, and that if actually juvenility cannot be renewed, the advance of age can be arrested and the waste of tissues be prevented, and an uncalculated length of earthly existence be secured, by the injection of some sort of fluid into the system. The right fluid has not yet been discovered by science, but millions of people thought that it had the other day, and now confidently expect it. This credulity has a scientific basis, and has no relation to the old absurd belief in Bimini. We thank goodness that we do not live in a credulous age.

The world would be in a poor case indeed if it had not always before it some ideal or millennial condition, some panacea, some transmutation of base metals into gold, some philosopher's stone, some fountain of youth, some process of turning charcoal into diamonds, some scheme for eliminating evil. But it is worth mentioning that in the historical evolution we have always got better things than we sought or imagined, developments on a much grander scale. History is strewn with the wreck of popular delusions, but always in place of them have come realizations more astonishing than the wildest fancies of the dreamers. Florida was a disappointment as a Bimini, so were the land of the Ohio, the land of the Mississippi, the Dorado of the Pacific coast. But as the illusions, pushed always westward, vanished in the light of common day, lo! a

continent gradually emerged, with millions of people animated by conquering ambition of progress in freedom; an industrial continent, covered with a network of steel, heated by steam, and lighted by electricity. What a spectacle of youth on a grand scale is this! Christopher Columbus had not the slightest conception of what he was doing when he touched the button. But we are not satisfied. Quite as far from being so as ever. The popular imagination runs a hard race with any possible natural development. Being in possession of so much, we now expect to travel in the air, to read news in the sending mind before it is sent, to create force without cost, to be transported without time, and to make everybody equal in fortune and happiness to everybody else by act of Congress. Such confidence have we in the power of a "resolution" of the people and by the people that it seems feasible to make women into men, oblivious of the more important and imperative task that will then arise of making men into women. Some of these expectations are only Biminis of the present, but when they have vanished there will be a social and industrial world quite beyond our present conceptions, no doubt. In the article of woman, for instance, she may not become the being that the convention expects, but there may appear a Woman of whom all the Aspasia's and Helens were only the faintest types. And although no progress will take the conceit out of men, there may appear a Man so amenable to ordinary reason that he will give up the notion that he can lift himself up by his bootstraps, or make one grain of wheat two by calling it two.

One of the Biminis that have always been looked for is an American Literature. There was an impression that there must be such a thing somewhere on a continent that has everything else. We gave the world tobacco and the potato, perhaps the most important contributions to the content and the fatness of the world made by any new country, and it was a noble ambition to give it new styles of art and literature also. There seems to have been an impression that a literature was something indigenous or ready-made, like any other purely native product, not needing any special period of cultivation or development, and that a nation would be in a mortifying position without one, even before it staked out its cities or built any roads. Captain John Smith, if he had ever settled here and spread himself over the continent, as he was capable of doing, might have taken the contract to furnish one, and we may be sure that he would have left us nothing to desire in that direction. But the vein of romance he opened was not followed up. Other prospectings were made. Holes, so to speak, were dug in New England, and in the middle South, and along the frontier, and such leads were found that again and again the certainty arose that at last the real American ore had been discovered. Meantime a certain process called civilization went on, and certain ideas of breadth entered into our conceptions, and ideas also of the historical development of the expression of thought in the world, and with these a comprehension of what American really is, and the difficulty of putting the contents of a bushel measure into a pint cup. So, while we have been expecting the American Literature to come out from some locality, neat and clean, like a nugget, or, to change the figure, to bloom any day like a century-plant, in one striking, fragrant expression of American life, behold something else has been preparing and maturing, larger and more promising than our early anticipations. In history, in biography, in science, in the essay, in the novel and story, there are coming forth a hundred expressions of the hundred aspects of American life; and they are also sung by the poets in notes as varied as the migrating birds. The birds perhaps have the best of it thus far, but the bird is limited to a small range of performances while he shifts his singing-boughs through the climates of the continent, whereas the poet, though a little inclined to mistake aspiration for inspiration, and vagueness of longing for subtlety, is experimenting in a most hopeful manner. And all these writers, while perhaps not consciously American or consciously seeking to do more than their best in their several ways, are animated by the free spirit of inquiry and expression that belongs to an independent nation, and so our literature is coming to have a stamp of its own that is unlike any other national stamp. And it will have this stamp more authentically and be clearer and stronger as we drop the self-consciousness of the necessity of being American.

JUNE

Here is June again! It never was more welcome in these Northern latitudes. It seems a pity that such a month cannot be twice as long. It has been the pet of the poets, but it is not spoiled, and is just as full of enchantment as ever. The secret of this is that it is the month of both hope and fruition. It is the girl of eighteen, standing with all her charms on the eve of womanhood, in the dress and temperament of spring. And the beauty of it is that almost every woman is young, if ever she were young, in June. For her the roses bloom, and the red clover. It is a pity the month is so short. It is as full of vigor as of beauty. The energy of the year is not yet spent; indeed, the world is opening on all sides; the school-girl is about to graduate into liberty; and the young man is panting to kick or row his way into female adoration and general notoriety. The young men have made no mistake about the kind of education that is popular with women. The women like prowess and the manly virtues of pluck and endurance. The world has not changed in this respect. It was so with the Greeks; it was so when youth rode in tournaments and unhorsed each other for the love of a lady. June is the knightly month. On many a field of gold and green the heroes will kick their way into fame; and bands of young women, in white, with their diplomas in their hands, star-eyed mathematicians and linguists, will come out to smile upon the victors in that exhibition of strength that women most admire. No, the world is not decaying or losing its juvenility. The motto still is, "Love, and may the best man win!" How jocund and immortal is woman! Now, in a hundred schools and colleges, will stand up the solemn, well-intentioned man before a row of pretty girls, and tell them about Womanhood and its Duties, and they will listen just as shyly as if they were getting news, and needed to be instructed by a man on a subject which has engaged their entire attention since they were five years old. In the light of science and experience the conceit of men is something curious. And in June! the most blossoming, riant, feminine time of the year. The month itself is a liberal education to him who is not insensible to beauty and the strong sweet promise of life. The streams run clear then, as they do not in April; the sky is high and transparent; the world seems so large and fresh and

inviting. Our houses, which six months in the year in these latitudes are fortifications of defense, are open now, and the breath of life flows through them. Even over the city the sky is benign, and all the country is a heavenly exhibition. May was sweet and capricious. This is the maidenhood deliciousness of the year. If you were to bisect the heart of a true poet, you would find written therein JUNE.

NINE SHORT ESSAYS

By Charles Dudley Warner

A NIGHT IN THE GARDEN OF THE TUILERIES

It was in the time of the Second Empire. To be exact, it was the night of the 18th of June, 1868; I remember the date, because, contrary to the astronomical theory of short nights at this season, this was the longest night I ever saw. It was the loveliest time of the year in Paris, when one was tempted to lounge all day in the gardens and to give to sleep none of the balmy nights in this gay capital, where the night was illuminated like the day, and some new pleasure or delight always led along the sparkling hours. Any day the Garden of the Tuileries was a microcosm repaying study. There idle Paris sunned itself; through it the promenaders flowed from the Rue de Rivoli gate by the palace to the entrance on the Place de la Concorde, out to the Champs-Elysees and back again; here in the north grove gathered thousands to hear the regimental band in the afternoon; children chased butterflies about the flower-beds and amid the tubs of orange-trees; travelers, guide-book in hand, stood resolutely and incredulously before the groups of statuary, wondering what that Infant was doing with, the snakes and why the recumbent figure of the Nile should have so many children climbing over him; or watched the long facade of the palace hour after hour, in the hope of catching at some window the flutter of a royal robe; and swarthy, turbaned Zouaves, erect, lithe, insouciant, with the firm, springy step of the tiger, lounged along the allees.

Napoleon was at home—a fact attested by a reversal of the hospitable rule of democracy, no visitors being admitted to the palace when he was at home. The private garden, close to the imperial residence, was also closed to the public, who in vain looked across the sunken fence to the parterres, fountains, and statues, in the hope that the mysterious man would come out there and publicly enjoy himself. But he never came, though I have no doubt that he looked out of the windows upon the beautiful garden and his happy Parisians, upon the groves of horse-chestnuts, the needle-like fountain beyond, the Column of Luxor, up the famous and shining vista terminated by the Arch of the Star, and reflected with Christian complacency upon the greatness of a monarch who was the lord of such splendors and the goodness of a ruler who opened them all to his children. Especially when the western sunshine streamed down over it all, turning even the dust of the atmosphere into gold and emblazoning the windows of the Tuileries with a sort of historic glory, his heart must have swelled within him in throbs of imperial exaltation. It is the fashion nowadays not to consider him a great man, but no one pretends to measure his goodness.

The public garden of the Tuileries was closed at dusk, no one being permitted to remain in it after dark. I suppose it was not safe to trust the Parisians in the covert of its shades after nightfall, and no one could tell what foreign fanatics and assassins might do if they were permitted to pass the night so near the imperial residence. At any rate, everybody was drummed out before the twilight fairly began, and at the most fascinating hour for dreaming in the ancient garden. After sundown the great door of the Pavilion de l'Horloge swung open and there issued from it a drum-corps, which marched across the private garden and down the broad allee of the public garden, drumming as if the judgment-day were at hand, straight to the great gate of the Place de la Concorde, and returning by a side allee, beating up every covert and filling all the air with clamor until it disappeared, still thumping, into the court of the palace; and all the square seemed to ache with the sound. Never was there such pounding since Thackeray's old Pierre, who, "just to keep up his drumming, one day drummed down the Bastile":

*At midnight I beat the tattoo,
And woke up the Pikemen of Paris
To follow the bold Barbaroux.*

On the waves of this drumming the people poured out from every gate of the garden, until the last loiterer passed and the gendarmes closed the portals for the night. Before the lamps were lighted along the Rue de Rivoli and in the great square of the Revolution, the garden was left to the silence of its statues and its thousand memories. I often used to wonder, as I looked through the iron railing at nightfall, what might go on there and whether historic shades might not flit about in the ghostly walks.

Late in the afternoon of the 18th of June, after a long walk through the galleries of the Louvre, and excessively weary, I sat down to rest on a secluded bench in the southern grove of the garden; hidden from view by the tree-trunks. Where I sat I could see the old men and children in that sunny flower-garden, La

Petite Provence, and I could see the great fountain-basin facing the Porte du Pont-Tournant. I must have heard the evening drumming, which was the signal for me to quit the garden; for I suppose even the dead in Paris hear that and are sensitive to the throb of the glory-calling drum. But if I did hear it,—it was only like an echo of the past, and I did not heed it any more than Napoleon in his tomb at the Invalides heeds, through the drawn curtain, the chanting of the daily mass. Overcome with fatigue, I must have slept soundly.

When I awoke it was dark under the trees. I started up and went into the broad promenade. The garden was deserted; I could hear the splash of the fountains, but no other sound therein. Lights were gleaming from the windows of the Tuileries, lights blazed along the Rue de Rivoli, dotted the great Square, and glowed for miles up the Champs Elysees. There were the steady roar of wheels and the tramping of feet without, but within was the stillness of death.

What should I do? I am not naturally nervous, but to be caught lurking in the Tuileries Garden in the night would involve me in the gravest peril. The simple way would have been to have gone to the gate nearest the Pavillon de Marsan, and said to the policeman on duty there that I had inadvertently fallen asleep, that I was usually a wide-awake citizen of the land that Lafayette went to save, that I wanted my dinner, and would like to get out. I walked down near enough to the gate to see the policeman, but my courage failed. Before I could stammer out half that explanation to him in his trifling language (which foreigners are mockingly told is the best in the world for conversation), he would either have slipped his hateful rapier through my body, or have raised an alarm and called out the guards of the palace to hunt me down like a rabbit.

A man in the Tuileries Garden at night! an assassin! a conspirator! one of the Carbonari, perhaps a dozen of them—who knows?—Orsini bombs, gunpowder, Greek-fire, Polish refugees, murder, emeutes, REVOLUTION!

No, I'm not going to speak to that person in the cocked hat and dress-coat under these circumstances. Conversation with him out of the best phrase-books would be uninteresting. Diplomatic row between the two countries would be the least dreaded result of it. A suspected conspirator against the life of Napoleon, without a chance for explanation, I saw myself clubbed, gagged, bound, searched (my minute notes of the Tuileries confiscated), and trundled off to the Conciergerie, and hung up to the ceiling in an iron cage there, like Ravallac.

I drew back into the shade and rapidly walked to the western gate. It was closed, of course. On the gate-piers stand the winged steeds of Marly, never less admired than by me at that moment. They interested me less than a group of the Corps d'Afrique, who lounged outside, guarding the entrance from the square, and unsuspecting that any assassin was trying to get out. I could see the gleam of the lamps on their bayonets and hear their soft tread. Ask them to let me out? How nimbly they would have scaled the fence and transfixed me! They like to do such things. No, no—whatever I do, I must keep away from the clutches of these cats of Africa.

And enough there was to do, if I had been in a mind to do it. All the seats to sit in, all the statuary to inspect, all the flowers to smell. The southern terrace overlooking the Seine was closed, or I might have amused myself with the toy railway of the Prince Imperial that ran nearly the whole length of it, with its switches and turnouts and houses; or I might have passed delightful hours there watching the lights along the river and the blazing illumination on the amusement halls. But I ascended the familiar northern terrace and wandered amid its bowers, in company with Hercules, Meleager, and other worthies I knew only by sight, smelling the orange-blossoms, and trying to fix the site of the old riding-school where the National Assembly sat in 1789.

It must have been eleven o'clock when I found myself down by the private garden next the palace. Many of the lights in the offices of the household had been extinguished, but the private apartments of the Emperor in the wing south of the central pavilion were still illuminated. The Emperor evidently had not so much desire to go to bed as I had. I knew the windows of his petits appartements—as what good American did not?—and I wondered if he was just then taking a little supper, if he had bidden good-night to Eugenie, if he was alone in his room, reflecting upon his grandeur and thinking what suit he should wear on the morrow in his ride to the Bois. Perhaps he was dictating an editorial for the official journal; perhaps he was according an interview to the correspondent of the London Glorifier; perhaps one of the Abbots was with him. Or was he composing one of those important love-letters of state to Madame Blank which have since delighted the lovers of literature? I am not a spy, and I scorn to look into people's windows late at night, but I was lonesome and hungry, and all that square round about swarmed with imperial guards, policemen, keen-scented Zouaves, and nobody knows what other suspicious folk. If Napoleon had known that there was a

MAN IN THE GARDEN!

I suppose he would have called up his family, waked the drum-corps, sent for the Prefect of Police, put on the alert the 'sergents de ville,' ordered under arms a regiment of the Imperial Guards, and made it unpleasant for the Man.

All these thoughts passed through my mind, not with the rapidity of lightning, as is usual in such cases, but with the slowness of conviction. If I should be discovered, death would only stare me in the face about a minute. If he waited five minutes, who would believe my story of going to sleep and not hearing the drums? And if it were true, why didn't I go at once to the gate, and not lurk round there all night like another Clement? And then I wondered if it was not the disagreeable habit of some night-patrol or other to beat round the garden before the Sire went to bed for good, to find just such characters as I was gradually getting to feel myself to be.

But nobody came. Twelve o'clock, one o'clock sounded from the tower of the church of St. Germain l'Auxerrois, from whose belfry the signal was given for the beginning of the Massacre of St. Bartholomew—the same bells that tolled all that dreadful night while the slaughter went on, while the effeminate Charles IX fired from the windows of the Louvre upon stray fugitives on the quay—bells the reminiscent sound of which, a legend (which I fear is not true) says, at length drove Catharine de Medici from the Tuileries.

One o'clock! The lights were going out in the Tuileries, had nearly all gone out. I wondered if the suspicious

and timid and wasteful Emperor would keep the gas burning all night in his room. The night-roar of Paris still went on, sounding always to foreign ears like the beginning of a revolution. As I stood there, looking at the window that interested me most, the curtains were drawn, the window was opened, and a form appeared in a white robe. I had never seen the Emperor before in a night-gown, but I should have known him among a thousand. The Man of Destiny had on a white cotton night-cap, with a peaked top and no tassel. It was the most natural thing in the land; he was taking a last look over his restless Paris before he turned in. What if he should see me! I respected that last look and withdrew into the shadow. Tired and hungry, I sat down to reflect upon the pleasures of the gay capital.

One o'clock and a half! I had presence of mind enough to wind my watch; indeed, I was not likely to forget that, for time hung heavily on my hands. It was a gay capital. Would it never put out its lights, and cease its uproar, and leave me to my reflections? In less than an hour the country legions would invade the city, the market-wagons would rumble down the streets, the vegetable-man and the strawberry-woman, the fishmongers and the greens-venders would begin their melodious cries, and there would be no repose for a man even in a public garden. It is secluded enough, with the gates locked, and there is plenty of room to turn over and change position; but it is a wakeful situation at the best, a haunting sort of place, and I was not sure it was not haunted.

I had often wondered as I strolled about the place in the daytime or peered through the iron fence at dusk, if strange things did not go on here at night, with this crowd of effigies of persons historical and more or less mythological, in this garden peopled with the representatives of the dead, and no doubt by the shades of kings and queens and courtiers, 'intrigantes' and panders, priests and soldiers, who live once in this old pile—real shades, which are always invisible in the sunlight. They have local attachments, I suppose. Can science tell when they depart forever from the scenes of their objective intrusion into the affairs of this world, or how long they are permitted to revisit them? Is it true that in certain spiritual states, say of isolation or intense nervous alertness, we can see them as they can see each other? There was I—the I catalogued in the police description—present in that garden, yet so earnestly longing to be somewhere else that would it be wonderful if my 'eidolon' was somewhere else and could be seen?—though not by a policeman, for policemen have no spiritual vision.

There were no policemen in the garden, that I was certain of; but a little after half-past one I saw a Man, not a man I had ever seen before, clad in doublet and hose, with a short cloak and a felt cap with a white plume, come out of the Pavillon de Flore and turn down the quay towards the house I had seen that afternoon where it stood—of the beautiful Gabrielle d'Estrees. I might have been mistaken but for the fact that, just at this moment, a window opened in the wing of the same pavilion, and an effeminate, boyish face, weak and cruel, with a crown on its head, appeared and looked down into the shadow of the building as if its owner saw what I had seen. And there was nothing remarkable in this, except that nowadays kings do not wear crowns at night. It occurred to me that there was a masquerade going on in the Tuileries, though I heard no music, except the tinkle of, it might be, a harp, or "the lascivious pleasing of a lute," and I walked along down towards the central pavilion. I was just in time to see two ladies emerge from it and disappear, whispering together, in the shrubbery; the one old, tall, and dark, with the Italian complexion, in a black robe, and the other young, petite, extraordinarily handsome, and clad in light and bridal stuffs, yet both with the same wily look that set me thinking on poisons, and with a grace and a subtle carriage of deceit that could be common only to mother and daughter. I didn't choose to walk any farther in the part of the garden they had chosen for a night promenade, and turned off abruptly.

What?

There, on the bench of the marble hemicycle in the north grove, sat a row of graybeards, old men in the costume of the first Revolution, a sort of serene and benignant Areopagus. In the cleared space before them were a crowd of youths and maidens, spectators and participants in the Floral Games which were about to commence; behind the old men stood attendants who bore chaplets of flowers, the prizes in the games. The young men wore short red tunics with copper belts, formerly worn by Roman lads at the ludi, and the girls tunics of white with loosened girdles, leaving their limbs unrestrained for dancing, leaping, or running; their hair was confined only by a fillet about the head. The pipers began to play and the dancers to move in rhythmic measures, with the slow and languid grace of those full of sweet wine and the new joy of the Spring, according to the habits of the Golden Age, which had come again by decree in Paris. This was the beginning of the classic sports, but it is not possible for a modern pen to describe particularly the Floral Games. I remember that the Convention ordered the placing of these hemicycles in the garden, and they were executed from Robespierre's designs; but I suppose I am the only person who ever saw the games played that were expected to be played before them. It was a curious coincidence that the little livid-green man was also there, leaning against a tree and looking on with a half sneer. It seemed to me an odd classic revival, but then Paris has spasms of that, at the old Theatre Francais and elsewhere.

Pipes in the garden, lutes in the palace, paganism, Revolution—the situation was becoming mixed, and I should not have been surprised at a ghostly procession from the Place de la Concorde, through the western gates, of the thousands of headless nobility, victims of the axe and the basket; but, thank Heaven, nothing of that sort appeared to add to the wonders of the night; yet, as I turned a moment from the dancers, I thought I saw something move in the shrubbery. The Laocoon? It could not be. The arms moving? Yes. As I drew nearer the arms distinctly moved, putting away at length the coiling serpent, and pushing from the pedestal the old-men boys, his comrades in agony. Laocoon shut his mouth, which had been stretched open for about eighteen centuries, untwisted the last coil of the snake, and stepped down, a free man. After this it did not surprise me to see Spartacus also step down and approach him, and the two ancients square off for fisticuffs, as if they had done it often before, enjoying at night the release from the everlasting pillory of art. It was the hour of releases, and I found myself in a moment in the midst of a "classic revival," whimsical beyond description. Aeneas hastened to deposit his aged father in a heap on the gravel and ran after the Sylvan Nymphs; Theseus gave the Minotaur a respite; Themistocles was bending over the dying Spartan, who was coming to life; Venus Pudica was waltzing about the diagonal basin with Antinous; Ascanius was playing marbles with the infant Hercules. In this unreal phantasmagoria it was a relief to me to see walking in the area of the private

garden two men: the one a stately person with a kingly air, a handsome face, his head covered with a huge wig that fell upon his shoulders; the other a farmer-like man, stout and ungracious, the counterpart of the pictures of the intendant Colbert. He was pointing up to the palace, and seemed to be speaking of some alterations, to which talk the other listened impatiently. I wondered what Napoleon, who by this time was probably dreaming of Mexico, would have said if he had looked out and seen, not one man in the garden, but dozens of men, and all the stir that I saw; if he had known, indeed, that the Great Monarch was walking under his windows.

I said it was a relief to me to see two real men, but I had no reason to complain of solitude thereafter till daybreak. That any one saw or noticed me I doubt, and I soon became so reassured that I had more delight than fear in watching the coming and going of personages I had supposed dead a hundred years and more; the appearance at windows of faces lovely, faces sad, faces terror-stricken; the opening of casements and the dropping of billets into the garden; the flutter of disappearing robes; the faint sounds of revels from the interior of the palace; the hurrying of feet, the flashing of lights, the clink of steel, that told of partings and sudden armings, and the presence of a king that will be denied at no doors. I saw through the windows of the long Galerie de Diane the robes of the Regency at supper, and at table with them a dark, semi-barbarian little man in a coat of Russian sable, the coolest head in Europe at a drinking-bout. I saw enter the south pavilion a tall lady in black, with the air of a royal procuress; and presently crossed the garden and disappeared in the pavilion a young Parisian girl, and then another and another, a flock of innocents, and I thought instantly of the dreadful Parc aux Cerfs at Versailles.

So wrought upon was I by the sight of this infamy that I scarcely noticed the incoming of a royal train at the southern end of the palace, and notably in it a lady with light hair and noble mien, and the look in her face of a hunted lioness at bay. I say scarcely, for hardly had the royal cortege passed within, when there arose a great clamor in the inner court, like the roar of an angry multitude, a scuffling of many feet, firing of guns, thrusting of pikes, followed by yells of defiance in mingled French and German, the pitching of Swiss Guards from doorways and windows, and the flashing of flambeaux that ran hither and thither. "Oh!" I said, "Paris has come to call upon its sovereign; the pikemen of Paris, led by the bold Barbaroux."

The tumult subsided as suddenly as it had risen, hushed, I imagined, by the jarring of cannon from the direction of St. Roch; and in the quiet I saw a little soldier alight at the Rue de Rivoli gate—a little man whom you might mistake for a corporal of the guard—with a wild, coarse-featured Corsican (say, rather, Basque) face, his disordered chestnut hair darkened to black locks by the use of pomatum—a face selfish and false, but determined as fate. So this was the beginning of the Napoleon "legend"; and by-and-by this coarse head will be idealized into the Roman Emperor type, in which I myself might have believed but for the revelations of the night of strange adventure.

What is history? What is this drama and spectacle, that has been put forth as history, but a cover for petty intrigue, and deceit, and selfishness, and cruelty? A man shut into the Tuileries Garden begins to think that it is all an illusion, the trick of a disordered fancy. Who was Grand, who was Well-Beloved, who was Desired, who was the Idol of the French, who was worthy to be called a King of the Citizens? Oh, for the light of day!

And it came, faint and tremulous, touching the terraces of the palace and the Column of Luxor. But what procession was that moving along the southern terrace? A squad of the National Guard on horseback, a score or so of King's officers, a King on foot, walking with uncertain step, a Queen leaning on his arm, both habited in black, moved out of the western gate. The King and the Queen paused a moment on the very spot where Louis XVI. was beheaded, and then got into a carriage drawn by one horse and were driven rapidly along the quays in the direction of St. Cloud. And again Revolution, on the heels of the fugitives, poured into the old palace and filled it with its tatterdemalions.

Enough for me that daylight began to broaden. "Sleep on," I said, "O real President, real Emperor (by the grace of coup d'etat) at last, in the midst of the most virtuous court in Europe, loved of good Americans, eternally established in the hearts of your devoted Parisians! Peace to the palace and peace to its lovely garden, of both of which I have had quite enough for one night!"

The sun came up, and, as I looked about, all the shades and concourse of the night had vanished. Day had begun in the vast city, with all its roar and tumult; but the garden gates would not open till seven, and I must not be seen before the early stragglers should enter and give me a chance of escape. In my circumstances I would rather be the first to enter than the first to go out in the morning, past those lynx-eyed gendarmes. From my covert I eagerly watched for my coming deliverers. The first to appear was a 'chiffonnier,' who threw his sack and pick down by the basin, bathed his face, and drank from his hand. It seemed to me almost like an act of worship, and I would have embraced that rag-picker as a brother. But I knew that such a proceeding, in the name even of egalite and fraternite would have been misinterpreted; and I waited till two and three and a dozen entered by this gate and that, and I was at full liberty to stretch my limbs and walk out upon the quay as nonchalant as if I had been taking a morning stroll.

I have reason to believe that the police of Paris never knew where I spent the night of the 18th of June. It must have mystified them.

TRUTHFULNESS

Truthfulness is as essential in literature as it is in conduct, in fiction as it is in the report of an actual occurrence. Falsehood vitiates a poem, a painting, exactly as it does a life. Truthfulness is a quality like simplicity. Simplicity in literature is mainly a matter of clear vision and lucid expression, however complex the subject-matter may be; exactly as in life, simplicity does not so much depend upon external conditions as upon the spirit in which one lives. It may be more difficult to maintain simplicity of living with a great fortune than in poverty, but simplicity of spirit—that is, superiority of soul to circumstance—is possible in any

condition. Unfortunately the common expression that a certain person has wealth is not so true as it would be to say that wealth has him. The life of one with great possessions and corresponding responsibilities may be full of complexity; the subject of literary art may be exceedingly complex; but we do not set complexity over against simplicity. For simplicity is a quality essential to true life as it is to literature of the first class; it is opposed to parade, to artificiality, to obscurity.

The quality of truthfulness is not so easily defined. It also is a matter of spirit and intuition. We have no difficulty in applying the rules of common morality to certain functions of writers for the public, for instance, the duties of the newspaper reporter, or the newspaper correspondent, or the narrator of any event in life the relation of which owes its value to its being absolutely true. The same may be said of hoaxes, literary or scientific, however clear they may be. The person indulging in them not only discredits his office in the eyes of the public, but he injures his own moral fibre, and he contracts such a habit of untruthfulness that he never can hope for genuine literary success. For there never was yet any genuine success in letters without integrity. The clever hoax is no better than the trick of imitation, that is, conscious imitation of another, which has untruthfulness to one's self at the bottom of it. Burlesque is not the highest order of intellectual performance, but it is legitimate, and if cleverly done it may be both useful and amusing, but it is not to be confounded with forgery, that is, with a composition which the author attempts to pass off as the production of somebody else. The forgery may be amazingly smart, and be even popular, and get the author, when he is discovered, notoriety, but it is pretty certain that with his ingrained lack of integrity he will never accomplish any original work of value, and he will be always personally suspected. There is nothing so dangerous to a young writer as to begin with hoaxing; or to begin with the invention, either as reporter or correspondent, of statements put forward as facts, which are untrue. This sort of facility and smartness may get a writer employment, unfortunately for him and the public, but there is no satisfaction in it to one who desires an honorable career. It is easy to recall the names of brilliant men whose fine talents have been eaten away by this habit of untruthfulness. This habit is the greatest danger of the newspaper press of the United States.

It is easy to define this sort of untruthfulness, and to study the moral deterioration it works in personal character, and in the quality of literary work. It was illustrated in the forgeries of the marvelous boy Chatterton. The talent he expended in deception might have made him an enviable reputation,—the deception vitiated whatever good there was in his work. Fraud in literature is no better than fraud in archaeology, — Chatterton deserves no more credit than Shapiro who forged the Moabite pottery with its inscriptions. The reporter who invents an incident, or heightens the horror of a calamity by fictions is in the case of Shapiro. The habit of this sort of invention is certain to destroy the writer's quality, and if he attempts a legitimate work of the imagination, he will carry the same untruthfulness into that. The quality of truthfulness cannot be juggled with. Akin to this is the trick which has put under proper suspicion some very clever writers of our day, and cost them all public confidence in whatever they do,—the trick of posing for what they are not. We do not mean only that the reader does not believe their stories of personal adventure, and regards them personally as "frauds," but that this quality of deception vitiates all their work, as seen from a literary point of view. We mean that the writer who hoaxes the public, by inventions which he publishes as facts, or in regard to his own personality, not only will lose the confidence of the public but he will lose the power of doing genuine work, even in the field of fiction. Good work is always characterized by integrity.

These illustrations help us to understand what is meant by literary integrity. For the deception in the case of the correspondent who invents "news" is of the same quality as the lack of sincerity in a poem or in a prose fiction; there is a moral and probably a mental defect in both. The story of Robinson Crusoe is a very good illustration of veracity in fiction. It is effective because it has the simple air of truth; it is an illusion that satisfies; it is possible; it is good art: but it has no moral deception in it. In fact, looked at as literature, we can see that it is sincere and wholesome.

What is this quality of truthfulness which we all recognize when it exists in fiction? There is much fiction, and some of it, for various reasons, that we like and find interesting which is nevertheless insincere if not artificial. We see that the writer has not been honest with himself or with us in his views of human life. There may be just as much lying in novels as anywhere else. The novelist who offers us what he declares to be a figment of his own brain may be just as untrue as the reporter who sets forth a figment of his own brain which he declares to be a real occurrence. That is, just as much faithfulness to life is required of the novelist as of the reporter, and in a much higher degree. The novelist must not only tell the truth about life as he sees it, material and spiritual, but he must be faithful to his own conceptions. If fortunately he has genius enough to create a character that has reality to himself and to others, he must be faithful to that character. He must have conscience about it, and not misrepresent it, any more than he would misrepresent the sayings and doings of a person in real life. Of course if his own conception is not clear, he will be as unjust as in writing about a person in real life whose character he knew only by rumor. The novelist may be mistaken about his own creations and in his views of life, but if he have truthfulness in himself, sincerity will show in his work.

Truthfulness is a quality that needs to be as strongly insisted on in literature as simplicity. But when we carry the matter a step further, we see that there cannot be truthfulness about life without knowledge. The world is full of novels, and their number daily increases, written without any sense of responsibility, and with very little experience, which are full of false views of human nature and of society. We can almost always tell in a fiction when the writer passes the boundary of his own experience and observation—he becomes unreal, which is another name for untruthful. And there is an absence of sincerity in such work. There seems to be a prevailing impression that any one can write a story. But it scarcely need be said that literature is an art, like painting and music, and that one may have knowledge of life and perfect sincerity, and yet be unable to produce a good, truthful piece of literature, or to compose a piece of music, or to paint a picture.

Truthfulness is in no way opposed to invention or to the exercise of the imagination. When we say that the writer needs experience, we do not mean to intimate that his invention of character or plot should be literally limited to a person he has known, or to an incident that has occurred, but that they should be true to his experience. The writer may create an ideally perfect character, or an ideally bad character, and he may try him by a set of circumstances and events never before combined, and this creation may be so romantic as to go beyond the experience of any reader, that is to say, wholly imaginary (like a composed landscape which

has no counterpart in any one view of a natural landscape), and yet it may be so consistent in itself, so true to an idea or an aspiration or a hope, that it will have the element of truthfulness and subserve a very high purpose. It may actually be truer to our sense of verity to life than an array of undeniable, naked facts set down without art and without imagination.

The difficulty of telling the truth in literature is about as great as it is in real life. We know how nearly impossible it is for one person to convey to another a correct impression of a third person. He may describe the features, the manner, mention certain traits and sayings, all literally true, but absolutely misleading as to the total impression. And this is the reason why extreme, unrelieved realism is apt to give a false impression of persons and scenes. One can hardly help having a whimsical notion occasionally, seeing the miscarriages even in our own attempts at truthfulness, that it absolutely exists only in the imagination.

In a piece of fiction, especially romantic fiction, an author is absolutely free to be truthful, and he will be if he has personal and literary integrity. He moves freely amid his own creations and conceptions, and is not subject to the peril of the writer who admittedly uses facts, but uses them so clumsily or with so little conscience, so out of their real relations, as to convey a false impression and an untrue view of life. This quality of truthfulness is equally evident in "The Three Guardsmen" and in "Midsummer Night's Dream." Dumas is as conscientious about his world of adventure as Shakespeare is in his semi-supernatural region. If Shakespeare did not respect the laws of his imaginary country, and the creatures of his fancy, if Dumas were not true to the characters he conceived, and the achievements possible to them, such works would fall into confusion. A recent story called "The Refugees" set out with a certain promise of veracity, although the reader understood of course that it was to be a purely romantic invention. But very soon the author recklessly violated his own conception, and when he got his "real" characters upon an iceberg, the fantastic position became ludicrous without being funny, and the performances of the same characters in the wilderness of the New World showed such lack of knowledge in the writer that the story became an insult to the intelligence of the reader. Whereas such a romance as that of "The MS. Found in a Copper Cylinder," although it is humanly impossible and visibly a figment of the imagination, is satisfactory to the reader because the author is true to his conception, and it is interesting as a curious allegorical and humorous illustration of the ruinous character in human affairs of extreme unselfishness. There is the same sort of truthfulness in Hawthorne's allegory of "The Celestial Railway," in Froude's "On a Siding at a Railway Station," and in Bunyan's "Pilgrim's Progress."

The habit of lying carried into fiction vitiates the best work, and perhaps it is easier to avoid it in pure romance than in the so-called novels of "every-day life." And this is probably the reason why so many of the novels of "real life" are so much more offensively untruthful to us than the wildest romances. In the former the author could perhaps "prove" every incident he narrates, and produce living every character he has attempted to describe. But the effect is that of a lie, either because he is not a master of his art, or because he has no literary conscience. He is like an artist who is more anxious to produce a meretricious effect than he is to be true to himself or to nature. An author who creates a character assumes a great responsibility, and if he has not integrity or knowledge enough to respect his own creation, no one else will respect it, and, worse than this, he will tell a falsehood to hosts of indiscriminating readers.

THE PURSUIT OF HAPPINESS

Perhaps the most curious and interesting phrase ever put into a public document is "the pursuit of happiness." It is declared to be an inalienable right. It cannot be sold. It cannot be given away. It is doubtful if it could be left by will.

The right of every man to be six feet high, and of every woman to be five feet four, was regarded as self-evident until women asserted their undoubted right to be six feet high also, when some confusion was introduced into the interpretation of this rhetorical fragment of the eighteenth century.

But the inalienable right to the pursuit of happiness has never been questioned since it was proclaimed as a new gospel for the New World. The American people accepted it with enthusiasm, as if it had been the discovery of a gold-pro prospector, and started out in the pursuit as if the devil were after them.

If the proclamation had been that happiness is a common right of the race, alienable or otherwise, that all men are or may be happy, history and tradition might have interfered to raise a doubt whether even the new form of government could so change the ethical condition. But the right to make a pursuit of happiness, given in a fundamental bill of rights, had quite a different aspect. Men had been engaged in many pursuits, most of them disastrous, some of them highly commendable. A sect in Galilee had set up the pursuit of righteousness as the only or the highest object of man's immortal powers. The rewards of it, however, were not always immediate. Here was a political sanction of a pursuit that everybody acknowledged to be of a good thing.

Given a heart-aching longing in every human being for happiness, here was high warrant for going in pursuit of it. And the curious effect of this 'mot d'ordre' was that the pursuit arrested the attention as the most essential, and the happiness was postponed, almost invariably, to some future season, when leisure or plethora, that is, relaxation or gorged desire, should induce that physical and moral glow which is commonly accepted as happiness. This glow of well-being is sometimes called contentment, but contentment was not in the programme. If it came at all, it was only to come after strenuous pursuit, that being the inalienable right.

People, to be sure, have different conceptions of happiness, but whatever they are, it is the custom, almost universal, to postpone the thing itself. This, of course, is specially true in our American system, where we have a chartered right to the thing itself. Other nations who have no such right may take it out in occasional driblets, odd moments that come, no doubt, to men and races who have no privilege of voting, or to such favored places as New York city, whose government is always the same, however they vote.

We are all authorized to pursue happiness, and we do as a general thing make a pursuit of it. Instead of

simply being happy in the condition where we are, getting the sweets of life in human intercourse, hour by hour, as the bees take honey from every flower that opens in the summer air, finding happiness in the well-filled and orderly mind, in the sane and enlightened spirit, in the self that has become what the self should be, we say that tomorrow, next year, in ten or twenty or thirty years, when we have arrived at certain coveted possessions or situation, we will be happy. Some philosophers dignify this postponement with the name of hope.

Sometimes wandering in a primeval forest, in all the witchery of the woods, besought by the kindest solicitations of nature, wild flowers in the trail, the call of the squirrel, the flutter of birds, the great world-music of the wind in the pine-tops, the flecks of sunlight on the brown carpet and on the rough bark of immemorial trees, I find myself unconsciously postponing my enjoyment until I shall reach a hoped-for open place of full sun and boundless prospect.

The analogy cannot be pushed, for it is the common experience that these open spots in life, where leisure and space and contentment await us, are usually grown up with thickets, fuller of obstacles, to say nothing of labors and duties and difficulties, than any part of the weary path we have trod.

Why add the pursuit of happiness to our other inalienable worries? Perhaps there is something wrong in ourselves when we hear the complaint so often that men are pursued by disaster instead of being pursued by happiness.

We all believe in happiness as something desirable and attainable, and I take it that this is the underlying desire when we speak of the pursuit of wealth, the pursuit of learning, the pursuit of power in office or in influence, that is, that we shall come into happiness when the objects last named are attained. No amount of failure seems to lessen this belief. It is matter of experience that wealth and learning and power are as likely to bring unhappiness as happiness, and yet this constant lesson of experience makes not the least impression upon human conduct. I suppose that the reason of this unheeding of experience is that every person born into the world is the only one exactly of that kind that ever was or ever will be created, so that he thinks he may be exempt from the general rules. At any rate, he goes at the pursuit of happiness in exactly the old way, as if it were an original undertaking. Perhaps the most melancholy spectacle offered to us in our short sojourn in this pilgrimage, where the roads are so dusty and the caravansaries so ill provided, is the credulity of this pursuit. Mind, I am not objecting to the pursuit of wealth, or of learning, or of power, they are all explainable, if not justifiable,—but to the blindness that does not perceive their futility as a means of attaining the end sought, which is happiness, an end that can only be compassed by the right adjustment of each soul to this and to any coming state of existence. For whether the great scholar who is stuffed with knowledge is happier than the great money-getter who is gorged with riches, or the wily politician who is a Warwick in his realm, depends entirely upon what sort of a man this pursuit has made him. There is a kind of fallacy current nowadays that a very rich man, no matter by what unscrupulous means he has gathered an undue proportion of the world into his possession, can be happy if he can turn round and make a generous and lavish distribution of it for worthy purposes. If he has preserved a remnant of conscience, this distribution may give him much satisfaction, and justly increase his good opinion of his own deserts; but the fallacy is in leaving out of account the sort of man he has become in this sort of pursuit. Has he escaped that hardening of the nature, that drying up of the sweet springs of sympathy, which usually attend a long-continued selfish undertaking? Has either he or the great politician or the great scholar cultivated the real sources of enjoyment?

The pursuit of happiness! It is not strange that men call it an illusion. But I am well satisfied that it is not the thing itself, but the pursuit, that is an illusion. Instead of thinking of the pursuit, why not fix our thoughts upon the moments, the hours, perhaps the days, of this divine peace, this merriment of body and mind, that can be repeated and perhaps indefinitely extended by the simplest of all means, namely, a disposition to make the best of whatever comes to us? Perhaps the Latin poet was right in saying that no man can count himself happy while in this life, that is, in a continuous state of happiness; but as there is for the soul no time save the conscious moment called “now,” it is quite possible to make that “now” a happy state of existence. The point I make is that we should not habitually postpone that season of happiness to the future.

No one, I trust, wishes to cloud the dreams of youth, or to dispel by excess of light what are called the illusions of hope. But why should the boy be nurtured in the current notion that he is to be really happy only when he has finished school, when he has got a business or profession by which money can be made, when he has come to manhood? The girl also dreams that for her happiness lies ahead, in that springtime when she is crossing the line of womanhood,—all the poets make much of this,—when she is married and learns the supreme lesson how to rule by obeying. It is only when the girl and the boy look back upon the years of adolescence that they realize how happy they might have been then if they had only known they were happy, and did not need to go in pursuit of happiness.

The pitiful part of this inalienable right to the pursuit of happiness is, however, that most men interpret it to mean the pursuit of wealth, and strive for that always, postponing being happy until they get a fortune, and if they are lucky in that, find at the end that the happiness has somehow eluded them, that; in short, they have not cultivated that in themselves that alone can bring happiness. More than that, they have lost the power of the enjoyment of the essential pleasures of life. I think that the woman in the Scriptures who out of her poverty put her mite into the contribution-box got more happiness out of that dribble of generosity and self-sacrifice than some men in our day have experienced in founding a university.

And how fares it with the intellectual man? To be a selfish miner of learning, for self-gratification only, is no nobler in reality than to be a miser of money. And even when the scholar is lavish of his knowledge in helping an ignorant world, he may find that if he has made his studies as a pursuit of happiness he has missed his object. Much knowledge increases the possibility of enjoyment, but also the possibility of sorrow. If intellectual pursuits contribute to an enlightened and altogether admirable character, then indeed has the student found the inner springs of happiness. Otherwise one cannot say that the wise man is happier than the ignorant man.

In fine, and in spite of the political injunction, we need to consider that happiness is an inner condition, not to be raced after. And what an advance in our situation it would be if we could get it into our heads here in this land of inalienable rights that the world would turn round just the same if we stood still and waited for

LITERATURE AND THE STAGE

Is the divorce of Literature and the Stage complete, or is it still only partial? As the lawyers say, is it a 'vinculo', or only a 'mensa et thoro?' And if this divorce is permanent, is it a good thing for literature or the stage? Is the present condition of the stage a degeneration, as some say, or is it a natural evolution of an art independent of literature?

How long is it since a play has been written and accepted and played which has in it any so-called literary quality or is an addition to literature? And what is dramatic art as at present understood and practiced by the purveyors of plays for the public? If any one can answer these questions, he will contribute something to the discussion about the tendency of the modern stage.

Every one recognizes in the "good old plays" which are occasionally "revived" both a quality and an intention different from anything in most contemporary productions. They are real dramas, the interest of which depends upon sentiment, upon an exhibition of human nature, upon the interaction of varied character, and upon plot, and we recognize in them a certain literary art. They can be read with pleasure. Scenery and mechanical contrivance may heighten the effects, but they are not absolute essentials.

In the contemporary play instead of character we have "characters," usually exaggerations of some trait, so pushed forward as to become caricatures. Consistency to human nature is not insisted on in plot, but there must be startling and unexpected incidents, mechanical devices, and a great deal of what is called "business," which clearly has as much relation to literature as have the steps of a farceur in a clog-dance. The composition of such plays demands literary ability in the least degree, but ingenuity in inventing situations and surprises; the text is nothing, the action is everything; but the text is considerably improved if it have brightness of repartee and a lively apprehension of contemporary events, including the slang of the hour. These plays appear to be made up by the writer, the manager, the carpenter, the costumer. If they are successful with the modern audiences, their success is probably due to other things than any literary quality they may have, or any truth to life or to human nature.

We see how this is in the great number of plays adapted from popular novels. In the "dramatization" of these stories, pretty much everything is left out of the higher sort that the reader has valued in the story. The romance of "Monte Cristo" is an illustration of this. The play is vulgar melodrama, out of which has escaped altogether the refinement and the romantic idealism of the stirring romance of Dumas. Now and then, to be sure, we get a different result, as in "Olivia," where all the pathos and character of the "Vicar of Wakefield" are preserved, and the effect of the play depends upon passion and sentiment. But as a rule, we get only the more obvious salencies, the bones of the novel, fitted in or clothed with stage "business."

Of course it is true that literary men, even dramatic authors, may write and always have written dramas not suited to actors, that could not well be put upon the stage. But it remains true that the greatest dramas, those that have endured from the Greek times down, have been (for the audiences of their times) both good reading and good acting plays.

I am not competent to criticise the stage or its tendency. But I am interested in noticing the increasing non-literary character of modern plays. It may be explained as a necessary and justifiable evolution of the stage. The managers may know what the audience wants, just as the editors of some of the most sensational newspapers say that they make a newspaper to suit the public. The newspaper need not be well written, but it must startle with incident and surprise, found or invented. An observer must notice that the usual theatre-audience in New York or Boston today laughs at and applauds costumes, situations, innuendoes, doubtful suggestions, that it would have blushed at a few years ago. Has the audience been creating a theatre to suit its taste, or have the managers been educating an audience? Has the divorce of literary art from the mimic art of the stage anything to do with this condition?

The stage can be amusing, but can it show life as it is without the aid of idealizing literary art? And if the stage goes on in this materialistic way, how long will it be before it ceases to amuse intelligent, not to say intellectual people?

THE LIFE-SAVING AND LIFE PROLONGING ART

In the minds of the public there is a mystery about the practice of medicine. It deals more or less with the unknown, with the occult, it appeals to the imagination. Doubtless confidence in its practitioners is still somewhat due to the belief that they are familiar with the secret processes of nature, if they are not in actual alliance with the supernatural. Investigation of the ground of the popular faith in the doctor would lead us into metaphysics. And yet our physical condition has much to do with this faith. It is apt to be weak when one is in perfect health; but when one is sick it grows strong. Saint and sinner both warm up to the doctor when the judgment Day heaves in view.

In the popular apprehension the doctor is still the Medicine Man. We smile when we hear about his antics in barbarous tribes; he dresses fantastically, he puts horns on his head, he draws circles on the ground, he dances about the patient, shaking his rattle and uttering incantations. There is nothing to laugh at. He is

making an appeal to the imagination. And sometimes he cures, and sometimes he kills; in either case he gets his fee. What right have we to laugh? We live in an enlightened age, and yet a great proportion of the people, perhaps not a majority, still believe in incantations, have faith in ignorant practitioners who advertise a "natural gift," or a secret process or remedy, and prefer the charlatan who is exactly on the level of the Indian Medicine Man, to the regular practitioner, and to the scientific student of mind and body and of the properties of the *materia medica*. Why, even here in Connecticut, it is impossible to get a law to protect the community from the imposition of knavish or ignorant quacks, and to require of a man some evidence of capacity and training and skill, before he is let loose to experiment upon suffering humanity. Our teachers must pass an examination—though the examiner sometimes does not know as much as the candidate,—for misguiding the youthful mind; the lawyer cannot practice without study and a formal admission to the bar; and even the clergyman is not accepted in any responsible charge until he has given evidence of some moral and intellectual fitness. But the profession affecting directly the health and life of every human body, which needs to avail itself of the accumulated experience, knowledge, and science of all the ages, is open to every ignorant and stupid practitioner on the credulity of the public. Why cannot we get a law regulating the profession which is of most vital interest to all of us, excluding ignorance and quackery? Because the majority of our legislature, representing, I suppose, the majority of the public, believe in the "natural bone-setter," the herb doctor, the root doctor, the old woman who brews a decoction of swamp medicine, the "natural gift" of some dabbler in diseases, the magnetic healer, the faith cure, the mind cure, the Christian Science cure, the efficacy of a prescription rapped out on a table by some hysterical medium,—in anything but sound knowledge, education in scientific methods, steadied by a sense of public responsibility. Not long ago, on a cross-country road, I came across a woman in a farmhouse, where I am sure the barn-yard drained into the well, who was sick; she had taken a shop-full of patent medicines. I advised her to send for a doctor. She had no confidence in doctors, but said she reckoned she would get along now, for she had sent for the seventh son of a seventh son, and didn't I think he could certainly cure her? I said that combination ought to fetch any disease except agnosticism. That woman probably influenced a vote in the legislature. The legislature believes in incantations; it ought to have in attendance an Indian Medicine Man.

We think the world is progressing in enlightenment; I suppose it is—inch by inch. But it is not easy to name an age that has cherished more delusions than ours, or been more superstitious, or more credulous, more eager to run after quackery. Especially is this true in regard to remedies for diseases, and the faith in healers and quacks outside of the regular, educated professors of the medical art. Is this an exaggeration? Consider the quantity of proprietary medicines taken in this country, some of them harmless, some of them good in some cases, some of them injurious, but generally taken without advice and in absolute ignorance of the nature of the disease or the specific action of the remedy. The drug-shops are full of them, especially in country towns; and in the far West and on the Pacific coast I have been astonished at the quantity and variety displayed. They are found in almost every house; the country is literally dosed to death with these manufactured nostrums and panaceas—and that is the most popular medicine which can be used for the greatest number of internal and external diseases and injuries. Many newspapers are half supported by advertising them, and millions and millions of dollars are invested in this popular industry. Needless to say that the patented remedies most in request are those that profess a secret and unscientific origin. Those most "purely vegetable" seem most suitable to the wooden-heads who believe in them, but if one were sufficiently advertised as not containing a single trace of vegetable matter, avoiding thus all possible conflict of one organic life with another organic life, it would be just as popular. The favorites are those that have been secretly used by an East Indian fakir, or accidentally discovered as the natural remedy, dug out of the ground by an American Indian tribe, or steeped in a kettle by an ancient colored person in a southern plantation, or washed ashore on the person of a sailor from the South Seas, or invented by a very aged man in New Jersey, who could not read, but had spent his life roaming in the woods, and whose capacity for discovering a "universal panacea," besides his ignorance and isolation, lay in the fact that his sands of life had nearly run. It is the supposed secrecy or low origin of the remedy that is its attraction. The basis of the vast proprietary medicine business is popular ignorance and credulity. And it needs to be pretty broad to support a traffic of such enormous proportions.

During this generation certain branches of the life-saving and life-prolonging art have made great advances out of empiricism onto the solid ground of scientific knowledge. Of course I refer to surgery, and to the discovery of the causes and improvement in the treatment of contagious and epidemic diseases. The general practice has shared in this scientific advance, but it is limited and always will be limited within experimental bounds, by the infinite variations in individual constitutions, and the almost incalculable element of the interference of mental with physical conditions. When we get an exact science of man, we may expect an exact science of medicine. How far we are from this, we see when we attempt to make criminal anthropology the basis of criminal legislation. Man is so complex that if we were to eliminate one of his apparently worse qualities, we might develop others still worse, or throw the whole machine into inefficiency. By taking away what the phrenologists call combativeness, we could doubtless stop prize-fight, but we might have a springless society. The only safe way is that taught by horticulture, to feed a fruit-tree generously, so that it has vigor enough to throw off its degenerate tendencies and its enemies, or, as the doctors say in medical practice, bring up the general system. That is to say, there is more hope for humanity in stimulating the good, than in directly suppressing the evil. It is on something like this line that the greatest advance has been made in medical practice; I mean in the direction of prevention. This involves, of course, the exclusion of the evil, that is, of suppressing the causes that produce disease, as well as in cultivating the resistant power of the human system. In sanitation, diet, and exercise are the great fields of medical enterprise and advance. I need not say that the physician who, in the case of those under his charge, or who may possibly require his aid, contents himself with waiting for developed disease, is like the soldier in a besieged city who opens the gates and then attempts to repel the invader who has effected a lodgment. I hope the time will come when the chief practice of the physician will be, first, in oversight of the sanitary condition of his neighborhood, and, next, in preventive attendance on people who think they are well, and are all unconscious of the insidious approach of some concealed malady.

Another great change in modern practice is specialization. Perhaps it has not yet reached the delicate

particularity of the practice in ancient Egypt, where every minute part of the human economy had its exclusive doctor. This is inevitable in a scientific age, and the result has been on the whole an advance of knowledge, and improved treatment of specific ailments. The danger is apparent. It is that of the moral specialist, who has only one hobby and traces every human ill to strong liquor or tobacco, or the corset, or taxation of personal property, or denial of universal suffrage, or the eating of meat, or the want of the centralization of nearly all initiative and interest and property in the state. The tendency of the accomplished specialist in medicine is to refer all physical trouble to the ill conduct of the organ he presides over. He can often trace every disease to want of width in the nostrils, to a defective eye, to a sensitive throat, to shut-up pores, to an irritated stomach, to auricular defect. I suppose he is generally right, but I have a perhaps natural fear that if I happened to consult an amputationist about catarrh he would want to cut off my leg. I confess to an affection for the old-fashioned, all-round country doctor, who took a general view of his patient, knew his family, his constitution, all the gossip about his mental or business troubles, his affairs of the heart, disappointments in love, incompatibilities of temper, and treated the patient, as the phrase is, for all he was worth, and gave him visible medicine out of good old saddle-bags—how much faith we used to have in those saddle-bags—and not a prescription in a dead language to be put up by a dead-head clerk who occasionally mistakes arsenic for carbonate of soda. I do not mean, however, to say there is no sense in the retention of the hieroglyphics which the doctors use to communicate their ideas to a druggist, for I had a prescription made in Hartford put up in Naples, and that could not have happened if it had been written in English. And I am not sure but the mysterious symbols have some effect on the patient.

The mention of the intimate knowledge of family and constitutional conditions possessed by the old-fashioned country doctor, whose main strength lay in this and in his common-sense, reminds me of another great advance in the modern practice, in the attempt to understand nature better by the scientific study of psychology and the occult relations of mind and body. It is in the study of temper, temperament, hereditary predispositions, that we may expect the most brilliant results in preventive medicine.

As a layman, I cannot but notice another great advance in the medical profession. It is not alone in it. It is rather expected that the lawyers will divide the oyster between them and leave the shell to the contestants. I suppose that doctors, almost without exception, give more of their time and skill in the way of charity than almost any other profession. But somebody must pay, and fees have increased with the general cost of living and dying. If fees continue to increase as they have done in the past ten years in the great cities, like New York, nobody not a millionaire can afford to be sick. The fees will soon be a prohibitive tax. I cannot say that this will be altogether an evil, for the cost of calling medical aid may force people to take better care of themselves. Still, the excessive charges are rather hard on people in moderate circumstances who are compelled to seek surgical aid. And here we touch one of the regrettable symptoms of the times, which is not by any means most conspicuous in the medical profession. I mean the tendency to subordinate the old notion of professional duty to the greed for money. The lawyers are almost universally accused of it; even the clergymen are often suspected of being influenced by it. The young man is apt to choose a profession on calculation of its profit. It will be a bad day for science and for the progress of the usefulness of the medical profession when the love of money in its practice becomes stronger than professional enthusiasm, than the noble ambition of distinction for advancing the science, and the devotion to human welfare.

I do not prophesy it. Rather I expect interest in humanity, love of science for itself, sympathy with suffering, self-sacrifice for others, to increase in the world, and be stronger in the end than sordid love of gain and the low ambition of rivalry in materialistic display. To this higher life the physician is called. I often wonder that there are so many men, brilliant men, able men, with so many talents for success in any calling, willing to devote their lives to a profession which demands so much self-sacrifice, so much hardship, so much contact with suffering, subject to the call of all the world at any hour of the day or night, involving so much personal risk, carrying so much heart-breaking responsibility, responded to by so much constant heroism, a heroism requiring the risk of life in a service the only glory of which is a good name and the approval of one's conscience.

To the members of such a profession, in spite of their human infirmities and limitations and unworthy hangers-on, I bow with admiration and the respect which we feel for that which is best in this world.

“H.H.” IN SOUTHERN CALIFORNIA

It seems somehow more nearly an irreparable loss to us than to “H. H.” that she did not live to taste her very substantial fame in Southern California. We should have had such delight in her unaffected pleasure in it, and it would have been one of those satisfactions somewhat adequate to our sense of fitness that are so seldom experienced. It was my good fortune to see Mrs. Jackson frequently in the days in New York when she was writing “Ramona,” which was begun and perhaps finished in the Berkeley House. The theme had complete possession of her, and chapter after chapter flowed from her pen as easily as one would write a letter to a friend; and she had an ever fresh and vigorous delight in it. I have often thought that no one enjoyed the sensation of living more than Mrs. Jackson, or was more alive to all the influences of nature and the contact of mind with mind, more responsive to all that was exquisite and noble either in nature or in society, or more sensitive to the disagreeable. This is merely saying that she was a poet; but when she became interested in the Indians, and especially in the harsh fate of the Mission Indians in California, all her nature was fused for the time in a lofty enthusiasm of pity and indignation, and all her powers seemed to be consecrated to one purpose. Enthusiasm and sympathy will not make a novel, but all the same they are necessary to the production of a work that has in it real vital quality, and in this case all previous experience and artistic training became the unconscious servants of Mrs. Jackson's heart. I know she had very little conceit about her performance, but she had a simple consciousness that she was doing her best work, and that if the world should care much for anything she had done, after she was gone, it would be for “Ramona.”

She had put herself into it.

And yet I am certain that she could have had no idea what the novel would be to the people of Southern California, or how it would identify her name with all that region, and make so many scenes in it places of pilgrimage and romantic interest for her sake. I do not mean to say that the people in California knew personally Ramona and Alessandro, or altogether believe in them, but that in their idealizations they recognize a verity and the ultimate truth of human nature, while in the scenery, in the fading sentiment of the old Spanish life, and the romance and faith of the Missions, the author has done for the region very much what Scott did for the Highlands. I hope she knows now, I presume she does, that more than one Indian school in the Territories is called the Ramona School; that at least two villages in California are contending for the priority of using the name Ramona; that all the travelers and tourists (at least in the time they can spare from real-estate speculations) go about under her guidance, are pilgrims to the shrines she has described, and eager searchers for the scenes she has made famous in her novel; that more than one city and more than one town claims the honor of connection with the story; that the tourist has pointed out to him in more than one village the very house where Ramona lived, where she was married—indeed, that a little crop of legends has already grown up about the story itself. I was myself shown the house in Los Angeles where the story was written, and so strong is the local impression that I confess to looking at the rose-embowered cottage with a good deal of interest, though I had seen the romance growing day by day in the Berkeley in New York.

The undoubted scene of the loves of Ramona and Alessandro is the Comulos rancho, on the railway from Newhall to Santa Paula, the route that one takes now (unless he wants to have a lifelong remembrance of the ground swells of the Pacific in an uneasy little steamer) to go from Los Angeles to Santa Barbara. It is almost the only one remaining of the old-fashioned Spanish haciendas, where the old administration prevails. The new railway passes it now, and the hospitable owners have been obliged to yield to the public curiosity and provide entertainment for a continual stream of visitors. The place is so perfectly described in "Ramona" that I do not need to draw it over again, and I violate no confidence and only certify to the extraordinary powers of delineation of the novelist, when I say that she only spent a few hours there,—not a quarter of the time we spent in identifying her picture. We knew the situation before the train stopped by the crosses erected on the conspicuous peaks of the serrated ash—or shall I say purple—hills that enfold the fertile valley. It is a great domain, watered by a swift river, and sheltered by wonderfully picturesque mountains. The house is strictly in the old Spanish style, of one story about a large court, with flowers and a fountain, in which are the most noisy if not musical frogs in the world, and all the interior rooms opening upon a gallery. The real front is towards the garden, and here at the end of the gallery is the elevated room where Father Salvierderra slept when he passed a night at the hacienda,—a pretty room which has a case of Spanish books, mostly religious and legal, and some quaint and cheap holy pictures. We had a letter to Signora Del Valle, the mistress, and were welcomed with a sort of formal extension of hospitality that put us back into the courtly manners of a hundred years ago. The Signora, who is in no sense the original of the mistress whom "H. H." describes, is a widow now for seven years, and is the vigilant administrator of all her large domain, of the stock, the grazing lands, the vineyard, the sheep ranch, and all the people. Rising very early in the morning, she visits every department, and no detail is too minute to escape her inspection, and no one in the great household but feels her authority.

It was a very lovely day on the 17th of March (indeed, I suppose it had been preceded by 364 days exactly like it) as we sat upon the gallery looking on the garden, a garden of oranges, roses, citrons, lemons, peaches—what fruit and flower was not growing there?—acres and acres of vineyard beyond, with the tall cane and willows by the stream, and the purple mountains against the sapphire sky. Was there ever anything more exquisite than the peach-blossoms against that blue sky! Such a place of peace. A soft south wind was blowing, and all the air was drowsy with the hum of bees. In the garden is a vine-covered arbor, with seats and tables, and at the end of it is the opening into a little chapel, a domestic chapel, carpeted like a parlor, and bearing all the emblems of a loving devotion. By the garden gate hang three small bells, from some old mission, all cracked, but serving (each has its office) to summon the workmen or to call to prayer.

Perfect system reigns in Signora Del Valle's establishment, and even the least child in it has its duty. At sundown a little slip of a girl went out to the gate and struck one of the bells. "What is that for?" I asked as she returned. "It is the Angelus," she said simply. I do not know what would happen to her if she should neglect to strike it at the hour. At eight o'clock the largest bell was struck, and the Signora and all her household, including the house servants, went out to the little chapel in the garden, which was suddenly lighted with candles, gleaming brilliantly through the orange groves. The Signora read the service, the household responding—a twenty minutes' service, which is as much a part of the administration of the establishment as visiting the granaries and presses, and the bringing home of the goats. The Signora's apartments, which she permitted us to see, were quite in the nature of an oratory, with shrines and sacred pictures and relics of the faith. By the shrine at the head of her bed hung the rosary carried by Father Junipero,—a priceless possession. From her presses and armoires, the Signora, seeing we had a taste for such things, brought out the feminine treasures of three generations, the silk and embroidered dresses of last century, the ribosas, the jewelry, the brilliant stuffs of China and Mexico, each article with a memory and a flavor.

But I must not be betrayed into writing about Ramona's house. How charming indeed it was the next morning,—though the birds in the garden were astir a little too early,—with the thermometer set to the exact degree of warmth without languor, the sky blue, the wind soft, the air scented with orange and jessamine. The Signora had already visited all her premises before we were up. We had seen the evening before an enclosure near the house full of cashmere goats and kids, whose antics were sufficiently amusing—most of them had now gone afield; workmen were coming for their orders, plowing was going on in the barley fields, traders were driving to the plantation store, the fierce eagle in a big cage by the olive press was raging at his detention. Within the house enclosure are an olive mill and press, a wine-press and a great storehouse of wine, containing now little but empty casks,—a dusky, interesting place, with pomegranates and dried bunches of grapes and oranges and pieces of jerked meat hanging from the rafters. Near by is a cornhouse and a small distillery, and the corrals for sheep shearing are not far off. The ranches for cattle and sheep are

on the other side of the mountain.

Peace be with Comulos. It must please the author of "Ramona" to know that it continues in the old ways; and I trust she is undisturbed by the knowledge that the rage for change will not long let it be what it now is.

SIMPLICITY

No doubt one of the most charming creations in all poetry is Nausicaa, the white-armed daughter of King Alcinous. There is no scene, no picture, in the heroic times more pleasing than the meeting of Ulysses with this damsel on the wild seashore of Scheria, where the Wanderer had been tossed ashore by the tempest. The place of this classic meeting was probably on the west coast of Corfu, that incomparable island, to whose beauty the legend of the exquisite maidenhood of the daughter of the king of the Phaeacians has added an immortal bloom.

We have no difficulty in recalling it in all its distinctness: the bright morning on which Nausicaa came forth from the palace, where her mother sat and turned the distaff loaded with a fleece dyed in sea-purple, mounted the car piled with the robes to be cleansed in the stream, and, attended by her bright-haired, laughing handmaidens, drove to the banks of the river, where out of its sweet grasses it flowed over clean sand into the Adriatic. The team is loosed to browse the grass; the garments are flung into the dark water, then trampled with hasty feet in frolic rivalry, and spread upon the gravel to dry. Then the maidens bathe, give their limbs the delicate oil from the cruse of gold, sit by the stream and eat their meal, and, refreshed, mistress and maidens lay aside their veils and play at ball, and Nausicaa begins a song. Though all were fair, like Diana was this spotless virgin midst her maids. A missed ball and maidenly screams waken Ulysses from his sleep in the thicket. At the apparition of the unclad, shipwrecked sailor the maidens flee right and left. Nausicaa alone keeps her place, secure in her unconscious modesty. To the astonished Sport of Fortune the vision of this radiant girl, in shape and stature and in noble air, is more than mortal, yet scarcely more than woman:

*"Like thee, I saw of late,
In Delos, a young palm-tree growing up
Beside Apollo's altar."*

When the Wanderer has bathed, and been clad in robes from the pile on the sand, and refreshed with food and wine which the hospitable maidens put before him, the train sets out for the town, Ulysses following the chariot among the bright-haired women. But before that Nausicaa, in the candor of those early days, says to her attendants:

*"I would that I might call
A man like him my husband, dwelling here
And here content to dwell."*

Is there any woman in history more to be desired than this sweet, pure-minded, honest-hearted girl, as she is depicted with a few swift touches by the great poet?—the dutiful daughter in her father's house, the joyous companion of girls, the beautiful woman whose modest bearing commands the instant homage of man. Nothing is more enduring in literature than this girl and the scene on the—Corfu sands.

The sketch, though distinct, is slight, little more than outlines; no elaboration, no analysis; just an incident, as real as the blue sky of Scheria and the waves on the yellow sand. All the elements of the picture are simple, human, natural, standing in as unconfused relations as any events in common life. I am not recalling it because it is a conspicuous instance of the true realism that is touched with the ideality of genius, which is the immortal element in literature, but as an illustration of the other necessary quality in all productions of the human mind that remain age after age, and that is simplicity. This is the stamp of all enduring work; this is what appeals to the universal understanding from generation to generation. All the masterpieces that endure and become a part of our lives are characterized by it. The eye, like the mind, hates confusion and overcrowding. All the elements in beauty, grandeur, pathos, are simple—as simple as the lines in a Nile picture: the strong river, the yellow desert, the palms, the pyramids; hardly more than a horizontal line and a perpendicular line; only there is the sky, the atmosphere, the color—those need genius.

We may test contemporary literature by its conformity to the canon of simplicity—that is, if it has not that, we may conclude that it lacks one essential lasting quality. It may please;—it may be ingenious —brilliant, even; it may be the fashion of the day, and a fashion that will hold its power of pleasing for half a century, but it will be a fashion. Mannerisms of course will not deceive us, nor extravagances, eccentricities, affectations, nor the straining after effect by the use of coined or far-fetched words and prodigality in adjectives. But, style? Yes, there is such a thing as style, good and bad; and the style should be the writer's own and characteristic of him, as his speech is. But the moment I admire a style for its own sake, a style that attracts my attention so constantly that I say, How good that is! I begin to be suspicious. If it is too good, too pronouncedly good, I fear I shall not like it so well on a second reading. If it comes to stand between me and the thought, or the personality behind the thought, I grow more and more suspicious. Is the book a window, through which I am to see life? Then I cannot have the glass too clear. Is it to affect me like a strain of music? Then I am still more disturbed by any affectations. Is it to produce the effect of a picture? Then I know I want the simplest harmony of color. And I have learned that the most effective word-painting, as it is called, is the simplest. This is true if it is a question only of present enjoyment. But we may be sure that any piece of literature which attracts only by some trick of style, however it may blaze up for a day and startle the world with its flash, lacks the element of endurance. We do not need much experience to tell us the difference between a lamp and a Roman candle. Even in our day we have seen many reputations flare up, illuminate the

sky, and then go out in utter darkness. When we take a proper historical perspective, we see that it is the universal, the simple, that lasts.

I am not sure whether simplicity is a matter of nature or of cultivation. Barbarous nature likes display, excessive ornament; and when we have arrived at the nobly simple, the perfect proportion, we are always likely to relapse into the confused and the complicated. The most cultivated men, we know, are the simplest in manners, in taste, in their style. It is a note of some of the purest modern writers that they avoid comparisons, similes, and even too much use of metaphor. But the mass of men are always relapsing into the tawdry and the over-ornamented. It is a characteristic of youth, and it seems also to be a characteristic of over-development. Literature, in any language, has no sooner arrived at the highest vigor of simple expression than it begins to run into prettiness, conceits, over-elaboration. This is a fact which may be verified by studying different periods, from classic literature to our own day.

It is the same with architecture. The classic Greek runs into the excessive elaboration of the Roman period, the Gothic into the flamboyant, and so on. We, have had several attacks of architectural measles in this country, which have left the land spotted all over with houses in bad taste. Instead of developing the colonial simplicity on lines of dignity and harmony to modern use, we stuck on the pseudo-classic, we broke out in the Mansard, we broke all up into the whimsicalities of the so-called Queen Anne, without regard to climate or comfort. The eye speedily tires of all these things. It is a positive relief to look at an old colonial mansion, even if it is as plain as a barn. What the eye demands is simple lines, proportion, harmony in mass, dignity; above all, adaptation to use. And what we must have also is individuality in house and in furniture; that makes the city, the village, picturesque and interesting. The highest thing in architecture, as in literature, is the development of individuality in simplicity.

Dress is a dangerous topic to meddle with. I myself like the attire of the maidens of Scheria, though Nausicaa, we must note, was "clad royally." But climate cannot be disregarded, and the vestment that was so fitting on a Greek girl whom I saw at the Second Cataract of the Nile would scarcely be appropriate in New York. If the maidens of one of our colleges for girls, say Vassar for illustration, habited like the Phaeacian girls of Scheria, went down to the Hudson to cleanse the rich robes of the house, and were surprised by the advent of a stranger from the city, landing from a steamboat—a wandering broker, let us say, clad in wide trousers, long topcoat, and a tall hat—I fancy that he would be more astonished than Ulysses was at the bevy of girls that scattered at his approach. It is not that women must be all things to all men, but that their simplicity must conform to time and circumstance. What I do not understand is that simplicity gets banished altogether, and that fashion, on a dictation that no one can trace the origin of, makes that lovely in the eyes of women today which will seem utterly abhorrent to them tomorrow. There appears to be no line of taste running through the changes. The only consolation to you, the woman of the moment, is that while the costume your grandmother wore makes her, in the painting, a guy in your eyes, the costume you wear will give your grandchildren the same impression of you. And the satisfaction for you is the thought that the latter raiment will be worse than the other two—that is to say, less well suited to display the shape, station, and noble air which brought Ulysses to his knees on the sands of Corfu.

Another reason why I say that I do not know whether simplicity belongs to nature or art is that fashion is as strong to pervert and disfigure in savage nations as it is in civilized. It runs to as much eccentricity in hair-dressing and ornament in the costume of the jingling belles of Nootka and the maidens of Nubia as in any court or coterie which we aspire to imitate. The only difference is that remote and unsophisticated communities are more constant to a style they once adopt. There are isolated peasant communities in Europe who have kept for centuries the most uncouth and inconvenient attire, while we have run through a dozen variations in the art of attraction by dress, from the most puffed and bulbous ballooning to the extreme of limpness and lankness. I can only conclude that the civilized human being is a restless creature, whose motives in regard to costumes are utterly unfathomable.

We need, however, to go a little further in this question of simplicity. Nausicaa was "clad royally." There was a distinction, then, between her and her handmaidens. She was clad simply, according to her condition. Taste does not by any means lead to uniformity. I have read of a commune in which all the women dressed alike and unbecomingly, so as to discourage all attempt to please or attract, or to give value to the different accents of beauty. The end of those women was worse than the beginning. Simplicity is not ugliness, nor poverty, nor barrenness, nor necessarily plainness. What is simplicity for another may not be for you, for your condition, your tastes, especially for your wants. It is a personal question. You go beyond simplicity when you attempt to appropriate more than your wants, your aspirations, whatever they are, demand—that is, to appropriate for show, for ostentation, more than your life can assimilate, can make thoroughly yours. There is no limit to what you may have, if it is necessary for you, if it is not a superfluity to you. What would be simplicity to you may be superfluity to another. The rich robes that Nausicaa wore she wore like a goddess. The moment your dress, your house, your house-grounds, your furniture, your scale of living, are beyond the rational satisfaction of your own desires—that is, are for ostentation, for imposition upon the public—they are superfluous, the line of simplicity is passed. Every human being has a right to whatever can best feed his life, satisfy his legitimate desires, contribute to the growth of his soul. It is not for me to judge whether this is luxury or want. There is no merit in riches nor in poverty. There is merit in that simplicity of life which seeks to grasp no more than is necessary for the development and enjoyment of the individual. Most of us, in all conditions; are weighted down with superfluities or worried to acquire them. Simplicity is making the journey of this life with just baggage enough.

The needs of every person differ from the needs of every other; we can make no standard for wants or possessions. But the world would be greatly transformed and much more easy to live in if everybody limited his acquisitions to his ability to assimilate them to his life. The destruction of simplicity is a craving for things, not because we need them, but because others have them. Because one man who lives in a plain little house, in all the restrictions of mean surroundings, would be happier in a mansion suited to his taste and his wants, is no argument that another man, living in a palace, in useless ostentation, would not be better off in a dwelling which conforms to his cultivation and habits. It is so hard to learn the lesson that there is no satisfaction in gaining more than we personally want.

The matter of simplicity, then, comes into literary style, into building, into dress, into life, individualized always by one's personality. In each we aim at the expression of the best that is in us, not at imitation or ostentation.

The women in history, in legend, in poetry, whom we love, we do not love because they are "clad royally." In our day, to be clad royally is scarcely a distinction. To have a superfluity is not a distinction. But in those moments when we have a clear vision of life, that which seems to us most admirable and desirable is the simplicity that endears to us the idyl of Nausicaa.

THE ENGLISH VOLUNTEERS DURING THE LATE INVASION

The most painful event since the bombardment of Alexandria has been what is called by an English writer the "invasion" of "American Literature in England." The hostile forces, with an advanced guard of what was regarded as an "awkward squad," had been gradually effecting a landing and a lodgment not unwelcome to the unsuspecting natives. No alarm was taken when they threw out a skirmish-line of magazines and began to deploy an occasional wild poet, who advanced in buckskin leggings, revolver in hand, or a stray sharp-shooting sketcher clad in the picturesque robes of the sunset. But when the main body of American novelists got fairly ashore and into position the literary militia of the island rose up as one man, with the strength of a thousand, to repel the invaders and sweep them back across the Atlantic. The spectacle had a dramatic interest. The invaders were not numerous, did not carry their native tomahawks, they had been careful to wash off the frightful paint with which they usually go into action, they did not utter the defiant whoop of Pogram, and even the militia regarded them as on the whole "amusing" young 'possums" and yet all the resources of modern and ancient warfare were brought to bear upon them. There was a crack of revolvers from the daily press, a lively fusillade of small-arms in the astonished weeklies, a discharge of point-blank blunderbusses from the monthlies; and some of the heavy quarterlies loaded up the old pieces of ordnance, that had not been charged in forty years, with slugs and brickbats and junk-bottles, and poured in raking broadsides. The effect on the island was something tremendous: it shook and trembled, and was almost hidden in the smoke of the conflict. What the effect is upon the invaders it is too soon to determine. If any of them survive, it will be God's mercy to his weak and innocent children.

It must be said that the American people—such of them as were aware of this uprising—took the punishment of their presumption in a sweet and forgiving spirit. If they did not feel that they deserved it, they regarded it as a valuable contribution to the study of sociology and race characteristics, in which they have taken a lively interest of late. We know how it is ourselves, they said; we used to be thin-skinned and self-conscious and sensitive. We used to wince and cringe under English criticism, and try to strike back in a blind fury. We have learned that criticism is good for us, and we are grateful for it from any source. We have learned that English criticism is dictated by love for us, by a warm interest in our intellectual development, just as English anxiety about our revenue laws is based upon a yearning that our down-trodden millions shall enjoy the benefits of free-trade. We did not understand why a country that admits our beef and grain and cheese should seem to seek protection against a literary product which is brought into competition with one of the great British staples, the modern novel. It seemed inconsistent. But we are no more consistent ourselves. We cannot understand the action of our own Congress, which protects the American author by a round duty on foreign books and refuses to protect him by granting a foreign copyright; or, to put it in another way, is willing to steal the brains of the foreign author under the plea of free knowledge, but taxes free knowledge in another form. We have no defense to make of the state of international copyright, though we appreciate the complication of the matter in the conflicting interests of English and American publishers.

Yes; we must insist that, under the circumstances, the American people have borne this outburst of English criticism in an admirable spirit. It was as unexpected as it was sudden. Now, for many years our international relations have been uncommonly smooth, oiled every few days by complimentary banquet speeches, and sweetened by abundance of magazine and newspaper "taffy." Something too much of "taffy" we have thought was given us at times for, in getting bigger in various ways, we have grown more modest. Though our English admirers may not believe it, we see our own faults more clearly than we once did—thanks, partly, to the faithful castigations of our friends—and we sometimes find it difficult to conceal our blushes when we are over-praised. We fancied that we were going on, as an English writer on "Down-Easters" used to say, as "slick as ile," when this miniature tempest suddenly burst out in a revival of the language and methods used in the redoubtable old English periodicals forty years ago. We were interested in seeing how exactly this sort of criticism that slew our literary fathers was revived now for the execution of their degenerate children. And yet it was not exactly the same. We used to call it "slang-whanging." One form of it was a blank surprise at the pretensions of American authors, and a dismissal with the formula of previous ignorance of their existence. This is modified now by a modest expression of "discomfiture" on reading of American authors "whose very names, much less peculiarities, we never heard of before." This is a tribunal from which there is no appeal. Not to have been heard of by an Englishman is next door to annihilation. It is at least discouraging to an author who may think he has gained some reputation over what is now conceded to be a considerable portion of the earth's surface, to be cast into total obscurity by the negative damnation of English ignorance. There is to us something pathetic in this and in the surprise of the English critic, that there can be any standard of respectable achievement outside of a seven-miles radius turning on Charing Cross.

The pathetic aspect of the case has not, however, we are sorry to say, struck the American press, which has too often treated with unbecoming levity this unaccountable exhibition of English sensitiveness. There has been little reply to it; at most, generally only an amused report of the war, and now and then a discriminating acceptance of some of the criticism as just, with a friendly recognition of the fact that on the whole the critic

had done very well considering the limitation of his knowledge of the subject on which he wrote. What is certainly noticeable is an entire absence of the irritation that used to be caused by similar comments on America thirty years ago. Perhaps the Americans are reserving their fire as their ancestors did at Bunker Hill, conscious, maybe, that in the end they will be driven out of their slight literary entrenchments. Perhaps they were disarmed by the fact that the acrid criticism in the London Quarterly Review was accompanied by a cordial appreciation of the novels that seemed to the reviewer characteristically American. The interest in the tatter's review of our poor field must be languid, however, for nobody has taken the trouble to remind its author that Brockden Brown—who is cited as a typical American writer, true to local character, scenery, and color—put no more flavor of American life and soil in his books than is to be found in "Frankenstein."

It does not, I should suppose, lie in the way of The Century, whose general audience on both sides of the Atlantic takes only an amused interest in this singular revival of a traditional literary animosity—an anachronism in these tolerant days when the reading world cares less and less about the origin of literature that pleases it—it does not lie in the way of The Century to do more than report this phenomenal literary effervescence. And yet it cannot escape a certain responsibility as an immediate though innocent occasion of this exhibition of international courtesy, because its last November number contained some papers that seem to have been irritating. In one of them Mr. Howells let fall some chance remarks on the tendency of modern fiction, without adequately developing his theory, which were largely dissented from in this country, and were like the uncorking of six vials in England. The other was an essay on England, dictated by admiration for the achievements of the foremost nation of our time, which, from the awkwardness of the eulogist, was unfortunately the uncorking of the seventh vial—an uncorking which, as we happen to know, so prostrated the writer that he resolved never to attempt to praise England again. His panic was somewhat allayed by the soothing remark in a kindly paper in Blackwood's Magazine for January, that the writer had discussed his theme "by no means unfairly or disrespectfully." But with a shudder he recognized what a peril he had escaped. Great Scott!—the reference is to a local American deity who is invoked in war, and not to the Biblical commentator—what would have happened to him if he had spoken of England "disrespectfully"!

We gratefully acknowledge also the remark of the Blackwood writer in regard to the claims of America in literature. "These claims," he says, "we have hitherto been very charitable to." How our life depends upon a continual exhibition by the critics of this divine attribute of charity it would perhaps be unwise in us to confess. We can at least take courage that it exists—who does not need it in this world of misunderstandings?—since we know that charity is not puffed up, vaunteth not itself, hopeth all things, endureth all things, is not easily provoked; whether there be tongues, they shall cease; whether there be knowledge, it shall vanish; but charity never faileth. And when all our "dialects" on both sides of the water shall vanish, and we shall speak no more Yorkshire or Cape Cod, or London cockney or "Pike" or "Cracker" vowel flatness, nor write them any more, but all use the noble simplicity of the ideal English, and not indulge in such odd-sounding phrases as this of our critic that "the combatants on both sides were by way of detesting each other," though we speak with the tongues of men and of angels—we shall still need charity.

It will occur to the charitable that the Americans are at a disadvantage in this little international "tiff." For while the offenders have inconsiderately written over their own names, the others preserve a privileged anonymity. Any attempt to reply to these voices out of the dark reminds one of the famous duel between the Englishman and the Frenchman which took place in a pitch-dark chamber, with the frightful result that when the tender-hearted Englishman discharged his revolver up the chimney he brought down his man. One never can tell in a case of this kind but a charitable shot might bring down a valued friend or even a peer of the realm.

In all soberness, however, and setting aside the open question, which country has most diverged from the English as it was at the time of the separation of the colonies from the motherland, we may be permitted a word or two in the hope of a better understanding. The offense in The Century paper on "England" seems to have been in phrases such as these: "When we began to produce something that was the product of our own soil and of our own social conditions, it was still judged by the old standards;" and, we are no longer irritated by "the snobbishness of English critics of a certain school," "for we see that its criticism is only the result of ignorance simply of inability to understand."

Upon this the reviewer affects to lose his respiration, and with "a gasp of incredulity" wants to know what the writer means, "and what standards he proposes to himself when he has given up the English ones?" The reviewer makes a more serious case than the writer intended, or than a fair construction of the context of his phrases warrants. It is the criticism of "a certain school" only that was said to be the result of ignorance. It is not the English language nor its body of enduring literature—the noblest monument of our common civilization—that the writer objected to as a standard of our performances. The standard objected to is the narrow insular one (the term "insular" is used purely as a geographical one) that measures life, social conditions, feeling, temperament, and national idiosyncrasies expressed in our literature by certain fixed notions prevalent in England. Probably also the expression of national peculiarities would diverge somewhat from the "old standards." All we thought of asking was that allowance should be made for this expression and these peculiarities, as it would be made in case of other literatures and peoples. It might have occurred to our critics, we used to think, to ask themselves whether the English literature is not elastic enough to permit the play of forces in it which are foreign to their experience. Genuine literature is the expression, we take it, of life-and truth to that is the standard of its success. Reference was intended to this, and not to the common canons of literary art. But we have given up the expectation that the English critic "of a certain school" will take this view of it, and this is the plain reason—not intended to be offensive—why much of the English criticism has ceased to be highly valued in this country, and why it has ceased to annoy. At the same time, it ought to be added, English opinion, when it is seen to be based upon knowledge, is as highly respected as ever. And nobody in America, so far as we know, entertains, or ever entertained, the idea of setting aside as standards the master-minds in British literature. In regard to the "inability to understand," we can, perhaps, make ourselves more clearly understood, for the Blackwood's reviewer has kindly furnished us an illustration in this very paper, when he passes in patronizing review the novels of Mr. Howells. In discussing the character of Lydia Blood, in "The Lady of the Aroostook," he is exceedingly puzzled by the fact that a girl from rural New England, brought up amid surroundings homely in the extreme, should have been considered

a lady. He says:

"The really 'American thing' in it is, we think, quite undiscovered either by the author or his heroes, and that is the curious confusion of classes which attributes to a girl brought up on the humblest level all the prejudices and necessities of the highest society. Granting that there was anything dreadful in it, the daughter of a homely small farmer in England is not guarded and accompanied like a young lady on her journeys from one place to another. Probably her mother at home would be disturbed, like Lydia's aunt, at the thought that there was no woman on board, in case her child should be ill or lonely; but, as for any impropriety, would never think twice on that subject. The difference is that the English girl would not be a young lady. She would find her sweetheart among the sailors, and would have nothing to say to the gentlemen. This difference is far more curious than the misadventure, which might have happened anywhere, and far more remarkable than the fact that the gentlemen did behave to her like gentlemen, and did their best to set her at ease, which we hope would have happened anywhere else. But it is, we think, exclusively American, and very curious and interesting, that this young woman, with her antecedents so distinctly set before us, should be represented as a lady, not at all out of place among her cultivated companions, and 'ready to become an ornament of society the moment she lands in Venice.'"

Reams of writing could not more clearly explain what is meant by "inability to understand" American conditions and to judge fairly the literature growing out of them; and reams of writing would be wasted in the attempt to make our curious critic comprehend the situation. There is nothing in his experience of "farmers' daughters" to give him the key to it. We might tell him that his notion of a farmer's daughters in England does not apply to New England. We might tell him of a sort of society of which he has no conception and can have none, of farmers' daughters and farmers' wives in New England—more numerous, let us confess, thirty or forty years ago than now—who lived in homely conditions, dressed with plainness, and followed the fashions afar off; did their own household work, even the menial parts of it; cooked the meals for the "men folks" and the "hired help," made the butter and cheese, and performed their half of the labor that wrung an honest but not luxurious living from the reluctant soil. And yet those women—the sweet and gracious ornaments of a self-respecting society—were full of spirit, of modest pride in their position, were familiar with much good literature, could converse with piquancy and understanding on subjects of general interest, were trained in the subtleties of a solid theology, and bore themselves in any company with that traditional breeding which we associate with the name of lady. Such strong native sense had they, such innate refinement and courtesy the product, it used to be said, of plain living and high thinking—that, ignorant as they might be of civic ways, they would, upon being introduced to them, need only a brief space of time to "orient" themselves to the new circumstances. Much more of this sort might be said without exaggeration. To us there is nothing incongruous in the supposition that Lydia Blood was "ready to become an ornament to society the moment she lands in Venice."

But we lack the missionary spirit necessary to the exertion to make our interested critic comprehend such a social condition, and we prefer to leave ourselves to his charity, in the hope of the continuance of which we rest in serenity.

NATHAN HALE—1887

In a Memorial Day address at New Haven in 1881, the Hon. Richard D. Hubbard suggested the erection of a statue to Nathan Hale in the State Capitol. With the exception of the monument in Coventry no memorial of the young hero existed. The suggestion was acted on by the Hon. E. S. Cleveland, who introduced a resolution in the House of Representatives in the session of 1883, appropriating money for the purpose. The propriety of this was urged before a committee of the Legislature by Governor Hubbard, in a speech of characteristic grace and eloquence, seconded by the Hon. Henry C. Robinson and the Hon. Stephen W. Kellogg. The Legislature appropriated the sum of five thousand dollars for a statue in bronze, and a committee was appointed to procure it. They opened a public competition, and, after considerable delay, during which the commission was changed by death and by absence,—indeed four successive governors, Hubbard, Waller, Harrison, and Lounsbury have served on it,—the work was awarded to Karl Gerhardt, a young sculptor who began his career in this city. It was finished in clay, and accepted in October, 1886, put in plaster, and immediately sent to the foundry of Melzar Masman in Chicopee, Massachusetts.

Today in all its artistic perfection and beauty it stands here to be revealed to the public gaze. It is proper that the citizens of Connecticut should know how much of this result they owe to the intelligent zeal of Mr. Cleveland, the mover of the resolution in the Legislature, who in the commission, and before he became a member of it, has spared neither time nor effort to procure a memorial worthy of the hero and of the State. And I am sure that I speak the unanimous sentiment of the commission in the regret that the originator of this statue could not have seen the consummation of his idea, and could not have crowned it with the one thing lacking on this occasion, the silver words of eloquence we always heard from his lips, that compact, nervous speech, the perfect union of strength and grace; for who so fitly as the lamented Hubbard could have portrayed the moral heroism of the Martyr-Spy?

This is not a portrait statue. There is no likeness of Nathan Hale extant. The only known miniature of his face, in the possession of the lady to whom he was betrothed at the time of his death, disappeared many years ago. The artist was obliged, therefore, to create an ideal figure, aided by a few fragmentary descriptions of Hale's personal appearance. His object has been to represent an American youth of the period, an American patriot and scholar, whose manly beauty and grace tradition loves to recall, to represent in face and in bearing the moral elevation of character that made him conspicuous among his fellows, and to show forth, if possible, the deed that made him immortal. For it is the deed and the memorable last words we think of when we think of Hale. I know that by one of the canons of art it is held that sculpture should rarely fix a

momentary action; but if this can be pardoned in the Laocoon, where suffering could not otherwise be depicted to excite the sympathy of the spectator, surely it can be justified in this case, where, as one may say, the immortality of the subject rests upon a single act, upon a phrase, upon the attitude of the moment. For all the man's life, all his character, flowered and blossomed into immortal beauty in this one supreme moment of self-sacrifice, triumph, defiance. The ladder of the gallows-tree on which the deserted boy stood, amidst the enemies of his country, when he uttered those last words which all human annals do not parallel in simple patriotism,—the ladder I am sure ran up to heaven, and if angels were not seen ascending and descending it in that gray morning, there stood the embodiment of American courage, unconquerable, American faith, invincible, American love of country, unquenchable, a new democratic manhood in the world, visible there for all men to take note of, crowned already with the halo of victory in the Revolutionary dawn. Oh, my Lord Howe! it seemed a trifling incident to you and to your bloodhound, Provost Marshal Cunningham, but those winged last words were worth ten thousand men to the drooping patriot army. Oh, your Majesty, King George the Third! here was a spirit, could you but have known it, that would cost you an empire, here was an ignominious death that would grow in the estimation of mankind, increasing in nobility above the fading pageantry of kings.

On the 21st of April, 1775, a messenger, riding express from Boston to New York with the tidings of Lexington and Concord, reached New London. The news created intense excitement. A public meeting was called in the court-house at twilight, and among the speakers who exhorted the people to take up arms at once, was one, a youth not yet twenty years of age, who said, "Let us march immediately, and never lay down our arms until we have obtained our independence,"—one of the first, perhaps the first, of the public declarations of the purpose of independence. It was Nathan Hale, already a person of some note in the colony, of a family then not unknown and destined in various ways to distinction in the Republic. A kinsman of the same name lost his life in the Louisburg fight. He had been for a year the preceptor of the Union Grammar School at New London. The morning after the meeting he was enrolled as a volunteer, and soon marched away with his company to Cambridge.

Nathan Hale, descended from Robert Hale who settled in Charlestown in 1632, a scion of the Hales of Kent, England, was born in Coventry, Connecticut, on the 6th of June, 1755, the sixth child of Richard Hale and his wife Elizabeth Strong, persons of strong intellect and the highest moral character, and Puritans of the strictest observances. Brought up in this atmosphere, in which duty and moral rectitude were the unquestioned obligations in life, he came to manhood with a character that enabled him to face death or obloquy without flinching, when duty called, so that his behavior at the last was not an excitement of the moment, but the result of ancestry, training, and principle. Feeble physically in infancy, he developed into a robust boy, strong in mind and body, a lively, sweet-tempered, beautiful youth, and into a young manhood endowed with every admirable quality. In feats of strength and agility he recalls the traditions of Washington; he early showed a remarkable avidity for knowledge, which was so sought that he became before he was of age one of the best educated young men of his time in the colonies. He was not only a classical scholar, with the limitations of those days; but, what was then rare, he made scientific attainments which greatly impressed those capable of judging, and he had a taste for art and a remarkable talent as an artist. His father intended him for the ministry. He received his preparatory education from Dr. Joseph Huntington, a classical scholar and the pastor of the church in Coventry, entered Yale College at the age of sixteen, and graduated with high honors in a class of sixty, in September, 1773. At the time of his graduation his personal appearance was notable. Dr. Enos Monro of New Haven, who knew him well in the last year at Yale, said of him,

"He was almost six feet in height, perfectly proportioned, and in figure and deportment he was the most manly man I have ever met. His chest was broad; his muscles were firm; his face wore a most benign expression; his complexion was roseate; his eyes were light blue and beamed with intelligence; his hair was soft and light brown in color, and his speech was rather low, sweet, and musical. His personal beauty and grace of manner were most charming. Why, all the girls in New Haven fell in love with him," said Dr. Munro, "and wept tears of real sorrow when they heard of his sad fate. In dress he was always neat; he was quick to lend a hand to a being in distress, brute or human; was overflowing with good humor, and was the idol of all his acquaintances."

Dr. Jared Sparks, who knew several of Hale's intimate friends, writes of him:

"Possessing genius, taste, and order, he became distinguished as a scholar; and endowed in an eminent degree with those graces and gifts of Nature which add a charm to youthful excellence, he gained universal esteem and confidence. To high moral worth and irreproachable habits were joined gentleness of manner, an ingenuous disposition, and vigor of understanding. No young man of his years put forth a fairer promise of future usefulness and celebrity; the fortunes of none were fostered more sincerely by the generous good wishes of his superiors."

It was remembered at Yale that he was a brilliant debater as well as scholar. At his graduation he engaged in a debate on the question, "Whether the education of daughters be not, without any just reason, more neglected than that of the sons." "In this debate," wrote James Hillhouse, one of his classmates, "he was the champion of the daughters, and most ably advocated their cause. You may be sure that he received the plaudits of the ladies present."

Hale seems to have had an irresistible charm for everybody. He was a favorite in society; he had the manners and the qualities that made him a leader among men and gained him the admiration of women. He was always intelligently busy, and had the Yankee ingenuity,—he "could do anything but spin," he used to say to the girls of Coventry, laughing over the spinning wheel. There is a universal testimony to his alert intelligence, vivacity, manliness, sincerity, and winningness.

It is probable that while still an under-graduate at Yale, he was engaged to Alice Adams, who was born in Canterbury, a young lady distinguished then as she was afterwards for great beauty and intelligence. After Hale's death she married Mr. Eleazer Ripley, and was left a widow at the age of eighteen, with one child, who survived its father only one year. She married, the second time, William Lawrence, Esq., of Hartford, and died in this city, greatly respected and admired, in 1845, aged eighty-eight. It is a touching note of the hold the memory of her young hero had upon her admiration that her last words, murmured as life was ebbing, were, "Write to Nathan."

Hale's short career in the American army need not detain us. After his flying visit as a volunteer to Cambridge, he returned to New London, joined a company with the rank of lieutenant, participated in the siege of Boston, was commissioned a captain in the Nineteenth Connecticut Regiment in January, 1776, performed the duties of a soldier with vigilance, bravery, and patience, and was noted for the discipline of his company. In the last dispiriting days of 1775, when the terms of his men had expired, he offered to give them his month's pay if they would remain a month longer. He accompanied the army to New York, and shared its fortunes in that discouraging spring and summer. Shortly after his arrival Captain Hale distinguished himself by the brilliant exploit of cutting out a British sloop, laden with provisions, from under the guns of the man-of-war "Asia," sixty-four, lying in the East River, and bringing her triumphantly into slip. During the summer he suffered a severe illness.

The condition of the American army and cause on the 1st of September, 1776, after the retreat from Long Island, was critical. The army was demoralized, clamoring in vain for pay, and deserting by companies and regiments; one-third of the men were without tents, one-fourth of them were on the sick list. On the 7th, Washington called a council of war, and anxiously inquired what should be done. On the 12th it was determined to abandon the city and take possession of Harlem Heights. The British army, twenty-five thousand strong, admirably equipped, and supported by a powerful naval force, threatened to envelop our poor force, and finish the war in a stroke. Washington was unable to penetrate the designs of the British commander, or to obtain any trusty information of the intentions or the movements of the British army. Information was imperatively necessary to save us from destruction, and it could only be obtained by one skilled in military and scientific knowledge and a good draughtsman, a man of quick eye, cool head, tact, sagacity, and courage, and one whose judgment and fidelity could be trusted. Washington applied to Lieutenant-Colonel Knowlton, who summoned a conference of officers in the name of the commander-in-chief, and laid the matter before them. No one was willing to undertake the dangerous and ignominious mission. Knowlton was in despair, and late in the conference was repeating the necessity, when a young officer, pale from recent illness, entered the room and said, "I will undertake it." It was Captain Nathan Hale. Everybody was astonished. His friends besought him not to attempt it. In vain. Hale was under no illusion. He silenced all remonstrances by saying that he thought he owed his country the accomplishment of an object so important and so much desired by the commander-in-chief, and he knew no way to obtain the information except by going into the enemy's camp in disguise. "I wish to be useful," he said; "and every kind of service necessary for the public good becomes honorable by being necessary. If the exigencies of my country demand a peculiar service, its claims to the performance of that service are imperious."

The tale is well known. Hale crossed over from Norwalk to Huntington Cove on Long Island. In the disguise of a schoolmaster, he penetrated the British lines and the city, made accurate drawings of the fortifications, and memoranda in Latin of all that he observed, which he concealed between the soles of his shoes, and returned to the point on the shore where he had first landed. He expected to be met by a boat and to cross the Sound to Norwalk the next morning. The next morning he was captured, no doubt by Tory treachery, and taken to Howe's headquarters, the mansion of James Beekman, situated at (the present) Fiftieth Street and First Avenue. That was on the 21st of September. Without trial and upon the evidence found on his person, Howe condemned him to be hanged as a spy early next morning. Indeed Hale made no attempt at defense. He frankly owned his mission, and expressed regret that he could not serve his country better. His open, manly bearing and high spirit commanded the respect of his captors. Mercy he did not expect, and pity was not shown him. The British were irritated by a conflagration which had that morning laid almost a third of the city in ashes, and which they attributed to incendiary efforts to deprive them of agreeable winter quarters. Hale was at first locked up in the Beekman greenhouse. Whether he remained there all night is not known, and the place of his execution has been disputed; but the best evidence seems to be that it took place on the farm of Colonel Rutger, on the west side, in the orchard in the vicinity of the present East Broadway and Market Street, and that he was hanged to the limb of an apple-tree.

It was a lovely Sunday morning, before the break of day, that he was marched to the place of execution, September 22d. While awaiting the necessary preparations, a courteous young officer permitted him to sit in his tent. He asked for the presence of a chaplain; the request was refused. He asked for a Bible; it was denied. But at the solicitation of the young officer he was furnished with writing materials, and wrote briefly to his mother, his sister, and his betrothed. When the infamous Cunningham, to whom Howe had delivered him, read what was written, he was furious at the noble and dauntless spirit shown, and with foul oaths tore the letters into shreds, saying afterwards "that the rebels should never know that they had a man who could die with such firmness." As Hale stood upon the fatal ladder, Cunningham taunted him, and tauntingly demanded his "last dying speech and confession." The hero did not heed the words of the brute, but, looking calmly upon the spectators, said in a clear voice, "I only regret that I have but one life to lose for my country." And the ladder was snatched from under him.

My friends, we are not honoring today a lad who appears for a moment in a heroic light, but one of the most worthy of the citizens of Connecticut, who has by his lofty character long honored her, wherever patriotism is not a mere name, and where Christian manhood is respected. We have had many heroes, many youths of promise, and men of note, whose names are our only great and enduring riches; but no one of them all better illustrated, short as was his career, the virtues we desire for all our sons. We have long delayed this tribute to his character and his deeds, but in spite of our neglect his fame has grown year by year, as war and politics have taught us what is really admirable in a human being; and we are now sure that we are not erecting a monument to an ephemeral reputation. It is fit that it should stand here, one of the chief distinctions of our splendid Capitol, here in the political centre of the State, here in the city where first in all the world was

proclaimed and put into a political charter the fundamental idea of democracy, that "government rests upon the consent of the people," here in the city where by the action of these self existing towns was formed the model, the town and the commonwealth, the bi-cameral legislature, of our constitutional federal union. If the soul of Nathan Hale, immortal in youth in the air of heaven, can behold today this scene, as doubtless it can, in the midst of a State whose prosperity the young colonist could not have imagined in his wildest dreams for his country, he must feel anew the truth that there is nothing too sacred for a man to give for his native land.

Governor Lounsbury, the labor of the commission is finished. On their behalf I present this work of art to the State of Connecticut.

Let the statue speak for itself.

FASHIONS IN LITERATURE

By Charles Dudley Warner

INTRODUCTION

Thirty years ago and more those who read and valued good books in this country made the acquaintance of Mr. Warner, and since the publication of "My Summer In a Garden" no work of his has needed any other introduction than the presence of his name on the title-page; and now that reputation has mellowed into memory, even the word of interpretation seems superfluous. Mr. Warner wrote out of a clear, as well as a full mind, and lucidity of style was part of that harmonious charm of sincerity and urbanity which made him one of the most intelligible and companionable of our writers.

It is a pleasure, however, to recall him as, not long ago, we saw him move and heard him speak in the ripeness of years which brought him the full flavor of maturity without any loss of freshness from his humor or serenity from his thought. He shared with Lowell, Longfellow, and Curtis a harmony of nature and art, a unity of ideal and achievement, which make him a welcome figure, not only for what he said, but for what he was; one of those friends whose coming is hailed with joy because they seem always at their best, and minister to rather than draw upon our own capital of moral vitality.

Mr. Warner was the most undogmatic of idealists, the most winning of teachers. He had always some thing to say to the ethical sense, a word for the conscience; but his approach was always through the mind, and his enforcement of the moral lesson was by suggestion rather than by commandment. There was nothing ascetic about him, no easy solution of the difficulties of life by ignoring or evading them; nor, on the other hand, was there any confusion of moral standards as the result of a confusion of ideas touching the nature and functions of art. He saw clearly, he felt deeply, and he thought straight; hence the rectitude of his mind, the sanity of his spirit, the justice of his dealings with the things which make for life and art. He used the essay as Addison used it, not for sermonic effect, but as a form of art which permitted a man to deal with serious things in a spirit of gayety, and with that lightness of touch which conveys influence without employing force. He was as deeply enamored as George William Curtis with the highest ideals of life for America, and, like Curtis, his expression caught the grace and distinction of those ideals.

It is a pleasure to hear his voice once more, because its very accents suggest the most interesting, high-minded, and captivating ideals of living; he brings with him that air of fine breeding which is diffused by the men who, in mind as in manners, have been, in a distinctive sense, gentlemen; who have lived so constantly and habitually on intimate terms with the highest things in thought and character that the tone of this really best society has become theirs. Among men of talent there are plebeians as well as patricians; even genius, which is never vulgar, is sometimes unable to hide the vulgarity of the aims and ideas which it clothes with beauty without concealing their essential nature. Mr. Warner was a patrician; the most democratic of men, he was one of the most fastidious in his intellectual companionships and affiliations. The subjects about which he speaks with his oldtime directness and charm in this volume make us aware of the serious temper of his mind, of his deep interest in the life of his time and people, and of the easy and natural grace with which he insisted on facing the fact and bringing it to the test of the highest standards. In his discussion of "Fashions in Literature" he deftly brings before us the significance of literature and the signs which it always wears, while he seems bent upon considering some interesting aspects of contemporary writing.

And how admirably he has described his own work in his definition of qualities which are common to all literature of a high order: simplicity, knowledge of human nature, agreeable personality. It would be impossible in briefer or more comprehensive phrase to sum up and express the secret of his influence and of the pleasure he gives us. It is to suggest this application of his words to himself that this preparatory comment is written.

When "My Summer In a Garden" appeared, it won a host of friends who did not stop to ask whether it was a piece of excellent journalism or a bit of real literature. It was so natural, so informal, so intimate that readers accepted it as matter of course, as they accepted the blooming of flowers and the flitting of birds. It was simply a report of certain things which had happened out of doors, made by an observing neighbor, whose talk seemed to be of a piece with the diffused fragrance and light and life of the old-fashioned garden. This easy approach, along natural lines of interest, by quietly putting himself on common ground with his reader, Mr. Warner never abandoned; he was so delightful a companion that until he ceased to walk beside them,

many of his friends of the mind did not realize how much he had enriched them by the way. This charming simplicity, which made it possible for him to put himself on intimate terms with his readers, was the result of his sincerity, his clearness of thought, and his ripe culture: that knowledge of the best which rids a man forever of faith in devices, dexterities, obscurities, and all other substitutes for the lucid realities of thinking and of character.

To his love of reality and his sincere interest in men, Mr. Warner added natural shrewdness and long observation of the psychology of men and women under the stress and strain of experience. His knowledge of human nature did not lessen his geniality, but it kept the edge of his mind keen, and gave his work the variety not only of humor but of satire. He cared deeply for people, but they did not impose on him; he loved his country with a passion which was the more genuine because it was exacting and, at times, sharply critical. There runs through all his work, as a critic of manners and men, as well as of art, a wisdom of life born of wide and keen observation; put not into the form of aphorisms, but of shrewd comment, of keen criticism, of nice discrimination between the manifold shadings of insincerity, of insight into the action and reaction of conditions, surroundings, social and ethical aims on men and women. The stories written in his later years are full of the evidences of a knowledge of human nature which was singularly trustworthy and penetrating.

When all has been said, however, it remains true of him, as of so many of the writers whom we read and love and love as we read, that the secret of his charm lay in an agreeable personality. At the end of the analysis, if the work is worth while, there is always a man, and the man is the explanation of the work. This is pre-eminently true of those writers whose charm lies less in distinctively intellectual qualities than in temperament, atmosphere, humor—writers of the quality of Steele, Goldsmith, Lamb, Irving. It is not only, therefore, a pleasure to recall Mr. Warner; it is a necessity if one would discover the secret of his charm, the source of his authority.

He was a New Englander by birth and by long residence, but he was also a man of the world in the true sense of the phrase; one whose ethical judgment had been broadened without being lowered; who had learned that truth, though often strenuously enforced, is never so convincing as when stated in terms of beauty; and to whom it had been revealed that to live naturally, sanely, and productively one must live humanly, with due regard to the earthly as well as to heavenly, with ease as well as earnestness of spirit, through play no less than through work, in the large resources of art, society, and humor, as well as with the ancient and well-tested rectitudes of the fathers.

The harmonious play of his whole nature, the breadth of his interests and the sanity of his spirit made Mr. Warner a delightful companion, and kept to the very end the freshness of his mind and the spontaneity of his humor; life never lost its savor for him, nor did his style part with its diffused but thoroughly individual humor. This latest collection of his papers, dealing with a wide range of subjects from the "Education of the Negro" to "Literature and the Stage," with characteristic comments on "Truthfulness" and "The Pursuit of Happiness," shows him at the end of his long and tireless career as a writer still deeply interested in contemporary events, responsive to the appeal of the questions of the hour, and sensitive to all things which affected the dignity and authority of literature. In his interests, his bearing, his relations to the public life of the country, no less than in his work, he held fast to the best traditions of literature, and he has taken his place among the representative American men of Letters.

HAMILTON W. MABIE.

FASHIONS IN LITERATURE

If you examine a collection of prints of costumes of different generations, you are commonly amused by the ludicrous appearance of most of them, especially of those that are not familiar to you in your own decade. They are not only inappropriate and inconvenient to your eye, but they offend your taste. You cannot believe that they were ever thought beautiful and becoming. If your memory does not fail you, however, and you retain a little honesty of mind, you can recall the fact that a costume which seems to you ridiculous today had your warm approval ten years ago. You wonder, indeed, how you could ever have tolerated a costume which has not one graceful line, and has no more relation to the human figure than Mambrino's helmet had to a crown of glory. You cannot imagine how you ever approved the vast balloon skirt that gave your sweetheart the appearance of the great bell of Moscow, or that you yourself could have been complacent in a coat the tails of which reached your heels, and the buttons of which, a rudimentary survival, were between your shoulder-blades—you who are now devoted to a female figure that resembles an old-fashioned churn surmounted by an isosceles triangle.

These vagaries of taste, which disfigure or destroy correct proportions or hide deformities, are nowhere more evident than in the illustrations of works of fiction. The artist who collaborates with the contemporary novelist has a hard fate. If he is faithful to the fashions of the day, he earns the repute of artistic depravity in the eyes of the next generation. The novel may become a classic, because it represents human nature, or even the whimsicalities of a period; but the illustrations of the artist only provoke a smile, because he has represented merely the unessential and the fleeting. The interest in his work is archaeological, not artistic. The genius of the great portrait-painter may to some extent overcome the disadvantages of contemporary costume, but if the costume of his period is hideous and lacks the essential lines of beauty, his work is liable to need the apology of quaintness. The Greek artist and the Mediaeval painter, when the costumes were really picturesque and made us forget the lack of simplicity in a noble sumptuousness, had never this posthumous difficulty to contend with.

In the examination of costumes of different races and different ages, we are also struck by the fact that with primitive or isolated peoples costumes vary little from age to age, and fashion and the fashions are unrecognized, and a habit of dress which is dictated by climate, or has been proved to be comfortable, is

adhered to from one generation to another; while nations that we call highly civilized, meaning commonly not only Occidental peoples, but peoples called progressive, are subject to the most frequent and violent changes of fashions, not in generations only, but in decades and years of a generation, as if the mass had no mind or taste of its own, but submitted to the irresponsible ukase of tailors and modistes, who are in alliance with enterprising manufacturers of novelties. In this higher civilization a costume which is artistic and becoming has no more chance of permanence than one which is ugly and inconvenient. It might be inferred that this higher civilization produces no better taste and discrimination, no more independent judgment, in dress than it does in literature. The vagaries in dress of the Western nations for a thousand years past, to go back no further, are certainly highly amusing, and would be humiliating to people who regarded taste and art as essentials of civilization. But when we speak of civilization, we cannot but notice that some of the great civilizations; the longest permanent and most notable for highest achievement in learning, science, art, or in the graces or comforts of life, the Egyptian, the Saracenic, the Chinese, were subject to no such vagaries in costume, but adhered to that which taste, climate, experience had determined to be the most useful and appropriate. And it is a singular comment upon our modern conceit that we make our own vagaries and changeableness, and not any fixed principles of art or of utility, the criterion of judgment, on other races and other times.

The more important result of the study of past fashions, in engravings and paintings, remains to be spoken of. It is that in all the illustrations, from the simplicity of Athens, through the artificiality of Louis XIV and the monstrosities of Elizabeth, down to the undescribed modistic inventions of the first McKinley, there is discoverable a radical and primitive law of beauty. We acknowledge it among the Greeks, we encounter it in one age and another. I mean a style of dress that is artistic as well as picturesque, that satisfies our love of beauty, that accords with the grace of the perfect human figure, and that gives as perfect satisfaction to the cultivated taste as a drawing by Raphael. While all the other illustrations of the human ingenuity in making the human race appear fantastic or ridiculous amuse us or offend our taste, —except the tailor fashion-plates of the week that is now,—these few exceptions, classic or modern, give us permanent delight, and are recognized as following the eternal law of beauty and utility. And we know, notwithstanding the temporary triumph of bad taste and the public lack of any taste, that there is a standard, artistic and imperishable.

The student of manners might find an interesting field in noting how, in our Occidental civilizations, fluctuations of opinions, of morals, and of literary style have been accompanied by more or less significant exhibitions of costumes. He will note in the Precieux of France and the Euphuist of England a corresponding effeminacy in dress; in the frank paganism of the French Revolution the affectation of Greek and Roman apparel, passing into the Directoire style in the Citizen and the Citizeness; in the Calvinistic cut of the Puritan of Geneva and of New England the grim severity of their theology and morals. These examples are interesting as showing an inclination to express an inner condition by the outward apparel, as the Quakers indicate an inward peace by an external drabness, and the American Indian a bellicose disposition by red and yellow paint; just as we express by red stripes our desire to kill men with artillery, or by yellow stripes to kill them with cavalry. It is not possible to say whether these external displays are relics of barbarism or are enduring necessities of human nature.

The fickleness of men in costume in a manner burlesques their shifty and uncertain taste in literature. A book or a certain fashion in letters will have a run like a garment, and, like that, will pass away before it waxes old. It seems incredible, as we look back over the literary history of the past three centuries only, what prevailing styles and moods of expression, affectations, and prettinesses, each in turn, have pleased reasonably cultivated people. What tedious and vapid things they read and liked to read! Think of the French, who had once had a Villon, intoxicating themselves with somnolent draughts of Richardson. But, then, the French could match the paste euphuisms of Lyly with the novels of Scudery. Every modern literature has been subject to these epidemics and diseases. It is needless to dwell upon them in detail. Since the great diffusion of printing, these literary crazes have been more frequent and of shorter duration. We need go back no further than a generation to find abundant examples of eccentricities of style and expression, of crazes over some author or some book, as unaccountable on principles of art as many of the fashions in social life.—The more violent the attack, the sooner it is over. Readers of middle age can recall the furor over Tupper, the extravagant expectations as to the brilliant essayist Gilfillan, the soon-extinguished hopes of the poet Alexander Smith. For the moment the world waited in the belief of the rising of new stars, and as suddenly realized that it had been deceived. Sometimes we like ruggedness, and again we like things made easy. Within a few years a distinguished Scotch clergyman made a fortune by diluting a paragraph written by Saint Paul. It is in our memory how at one time all the boys tried to write like Macaulay, and then like Carlyle, and then like Ruskin, and we have lived to see the day when all the girls would like to write like Heine.

In less than twenty years we have seen wonderful changes in public taste and in the efforts of writers to meet it or to create it. We saw the everlastingly revived conflict between realism and romanticism. We saw the realist run into the naturalist, the naturalist into the animalist, the psychologist into the sexualist, and the sudden reaction to romance, in the form of what is called the historic novel, the receipt for which can be prescribed by any competent pharmacist. The one essential in the ingredients is that the hero shall be mainly got out of one hole by dropping him into a deeper one, until—the proper serial length being attained—he is miraculously dropped out into daylight, and stands to receive the plaudits of a tenderhearted world, that is fond of nothing so much as of fighting.

The extraordinary vogue of certain recent stories is not so much to be wondered at when we consider the millions that have been added to the readers of English during the past twenty-five years. The wonder is that a new book does not sell more largely, or it would be a wonder if the ability to buy kept pace with the ability to read, and if discrimination had accompanied the appetite for reading. The critics term these successes of some recent fictions “crazes,” but they are really sustained by some desirable qualities—they are cleverly written, and they are for the moment undoubtedly entertaining. Some of them as undoubtedly appeal to innate vulgarity or to cultivated depravity. I will call no names, because that would be to indict the public taste. This recent phenomenon of sales of stories by the hundred thousand is not, however, wholly due to quality. Another element has come in since the publishers have awakened to the fact that literature can be treated like merchandise. To use their own phrase, they “handle” books as they would “handle” patent

medicines, that is, the popular patent medicines that are desired because of the amount of alcohol they contain; indeed, they are sold along with dry-goods and fancy notions. I am not objecting to this great and wide distribution any more than I am to the haste of fruit-dealers to market their products before they decay. The wary critic will be very careful about dogmatizing over the nature and distribution of literary products. It is no certain sign that a book is good because it is popular, nor is it any more certain that it is good because it has a very limited sale. Yet we cannot help seeing that many of the books that are the subject of crazes utterly disappear in a very short time, while many others, approved by only a judicious few, continue in the market and slowly become standards, considered as good stock by the booksellers and continually in a limited demand.

The English essayists have spent a good deal of time lately in discussing the question whether it is possible to tell a good contemporary book from a bad one. Their hesitation is justified by a study of English criticism of new books in the quarterly, monthly, and weekly periodicals from the latter part of the eighteenth century to the last quarter of the nineteenth; or, to name a definite period, from the verse of the Lake poets, from Shelley and Byron, down to Tennyson, there is scarcely a poet who has attained world-wide assent to his position in the first or second rank who was not at the hands of the reviewers the subject of mockery and bitter detraction. To be original in any degree was to be damned. And there is scarcely one who was at first ranked as a great light during this period who is now known out of the biographical dictionary. Nothing in modern literature is more amazing than the bulk of English criticism in the last three-quarters of a century, so far as it concerned individual writers, both in poetry and prose. The literary rancor shown rose to the dignity almost of theological vituperation.

Is there any way to tell a good book from a bad one? Yes. As certainly as you can tell a good picture from a bad one, or a good egg from a bad one. Because there are hosts who do not discriminate as to the eggs or the butter they eat, it does not follow that a normal taste should not know the difference.

Because there is a highly artistic nation that welcomes the flavor of garlic in everything, and another which claims to be the most civilized in the world that cannot tell coffee from chicory, or because the ancient Chinese love rancid sesame oil, or the Esquimaux like spoiled blubber and tainted fish, it does not follow that there is not in the world a wholesome taste for things natural and pure.

It is clear that the critic of contemporary literature is quite as likely to be wrong as right. He is, for one thing, inevitably affected by the prevailing fashion of his little day. And, worse still, he is apt to make his own tastes and prejudices the standard of his judgment. His view is commonly provincial instead of cosmopolitan. In the English period just referred to it is easy to see that most of the critical opinion was determined by political or theological animosity and prejudice. The rule was for a Tory to hit a Whig or a Whig to hit a Tory, under whatever literary guise he appeared. If the new writer was not orthodox in the view of his political or theological critic, he was not to be tolerated as poet or historian, Dr. Johnson had said everything he could say against an author when he declared that he was a vile Whig. Macaulay, a Whig, always consulted his prejudices for his judgment, equally when he was reviewing Croker's Boswell or the impeachment of Warren Hastings. He hated Croker,—a hateful man, to be sure,—and when the latter published his edition of Boswell, Macaulay saw his opportunity, and exclaimed before he had looked at the book, as you will remember, "Now I will dust his jacket." The standard of criticism does not lie with the individual in literature any more than it does in different periods as to fashions and manners. The world is pretty well agreed, and always has been, as to the qualities that make a gentleman. And yet there was a time when the vilest and perhaps the most contemptible man who ever occupied the English throne,—and that is saying a great deal,—George IV, was universally called the "First Gentleman of Europe." The reproach might be somewhat lightened by the fact that George was a foreigner, but for the wider fact that no person of English stock has been on the throne since Saxon Harold, the chosen and imposed rulers of England having been French, Welsh, Scotch, and Dutch, many of them being guiltless of the English language, and many of them also of the English middle-class morality. The impartial old Wraxall, the memorialist of the times of George III, having described a noble as a gambler, a drunkard, a smuggler, an appropriator of public money, who always cheated his tradesmen, who was one and sometimes all of them together, and a profligate generally, commonly adds, "But he was a perfect gentleman." And yet there has always been a standard that excludes George IV from the rank of gentleman, as it excludes Tupper from the rank of poet.

The standard of literary judgment, then, is not in the individual,—that is, in the taste and prejudice of the individual,—any more than it is in the immediate contemporary opinion, which is always in flux and reflux from one extreme to another; but it is in certain immutable principles and qualities which have been slowly evolved during the long historic periods of literary criticism. But how shall we ascertain what these principles are, so as to apply them to new circumstances and new creations, holding on to the essentials and disregarding contemporary tastes; prejudices, and appearances? We all admit that certain pieces of literature have become classic; by general consent there is no dispute about them. How they have become so we cannot exactly explain. Some say by a mysterious settling of universal opinion, the operation of which cannot be exactly defined. Others say that the highly developed critical judgment of a few persons, from time to time, has established forever what we agree to call masterpieces. But this discussion is immaterial, since these supreme examples of literary excellence exist in all kinds of composition,—poetry, fable, romance, ethical teaching, prophecy, interpretation, history, humor, satire, devotional flight into the spiritual and supernatural, everything in which the human mind has exercised itself,—from the days of the Egyptian moralist and the Old Testament annalist and poet down to our scientific age. These masterpieces exist from many periods and in many languages, and they all have qualities in common which have insured their persistence. To discover what these qualities are that have insured permanence and promise indefinite continuance is to have a means of judging with an approach to scientific accuracy our contemporary literature. There is no thing of beauty that does not conform to a law of order and beauty—poem, story, costume, picture, statue, all fall into an ascertainable law of art. Nothing of man's making is perfect, but any creation approximates perfection in the measure that it conforms to inevitable law.

To ascertain this law, and apply it, in art or in literature, to the changing conditions of our progressive life, is the business of the artist. It is the business of the critic to mark how the performance conforms to or

departs from the law evolved and transmitted in the long-experience of the race. True criticism, then, is not a matter of caprice or of individual liking or disliking, nor of conformity to a prevailing and generally temporary popular judgment. Individual judgment may be very interesting and have its value, depending upon the capacity of the judge. It was my good fortune once to fall in with a person who had been moved, by I know not what inspiration, to project himself out of his safe local conditions into France, Greece, Italy, Cairo, and Jerusalem. He assured me that he had seen nothing anywhere in the wide world of nature and art to compare with the beauty of Nebraska.

What are the qualities common to all the masterpieces of literature, or, let us say, to those that have endured in spite of imperfections and local provincialisms?

First of all I should name simplicity, which includes lucidity of expression, the clear thought in fitting, luminous words. And this is true when the thought is profound and the subject is as complex as life itself. This quality is strikingly exhibited for us in Jowett's translation of Plato—which is as modern in feeling and phrase as anything done in Boston—in the naïf and direct Herodotus, and, above all, in the King James vernacular translation of the Bible, which is the great text-book of all modern literature.

The second quality is knowledge of human nature. We can put up with the improbable in invention, because the improbable is always happening in life, but we cannot tolerate the so-called psychological juggling with the human mind, the perversion of the laws of the mind, the forcing of character to fit the eccentricities of plot. Whatever excursions the writer makes in fancy, we require fundamental consistency with human nature. And this is the reason why psychological studies of the abnormal, or biographies of criminal lunatics, are only interesting to pathologists and never become classics in literature.

A third quality common to all masterpieces is what we call charm, a matter more or less of style, and which may be defined as the agreeable personality of the writer. This is indispensable. It is this personality which gives the final value to every work of art as well as of literature. It is not enough to copy nature or to copy, even accurately, the incidents of life. Only by digestion and transmutation through personality does any work attain the dignity of art. The great works of architecture, even, which are somewhat determined by mathematical rule, owe their charm to the personal genius of their creators. For this reason our imitations of Greek architecture are commonly failures. To speak technically, the masterpiece of literature is characterized by the same knowledge of proportion and perspective as the masterpiece in art.

If there is a standard of literary excellence, as there is a law of beauty—and it seems to me that to doubt this in the intellectual world is to doubt the prevalence of order that exists in the natural—it is certainly possible to ascertain whether a new production conforms, and how far it conforms, to the universally accepted canons of art. To work by this rule in literary criticism is to substitute something definite for the individual tastes, moods, and local bias of the critic. It is true that the vast body of that which we read is ephemeral, and justifies its existence by its obvious use for information, recreation, and entertainment. But to permit the impression to prevail that an unenlightened popular preference for a book, however many may hold it, is to be taken as a measure of its excellence, is like claiming that a debased Austrian coin, because it circulates, is as good as a gold stater of Alexander. The case is infinitely worse than this; for a slovenly literature, unrebuked and uncorrected, begets slovenly thought and debases our entire intellectual life.

It should be remembered, however, that the creative faculty in man has not ceased, nor has puny man drawn all there is to be drawn out of the eternal wisdom. We are probably only in the beginning of our evolution, and something new may always be expected, that is, new and fresh applications of universal law. The critic of literature needs to be in an expectant and receptive frame of mind. Many critics approach a book with hostile intent, and seem to fancy that their business is to look for what is bad in it, and not for what is good. It seems to me that the first duty of the critic is to try to understand the author, to give him a fair chance by coming to his perusal with an open mind. Whatever book you read, or sermon or lecture you hear, give yourself for the time absolutely to its influence. This is just to the author, fair to the public, and, above all, valuable to the intellectual sanity of the critic himself. It is a very bad thing for the memory and the judgment to get into a habit of reading carelessly or listening with distracted attention. I know of nothing so harmful to the strength of the mind as this habit. There is a valuable mental training in closely following a discourse that is valueless in itself. After the reader has unreservedly surrendered himself to the influence of the book, and let his mind settle, as we say, and resume its own judgment, he is in a position to look at it objectively and to compare it with other facts of life and of literature dispassionately. He can then compare it as to form, substance, tone, with the enduring literature that has come down to us from all the ages. It is a phenomenon known to all of us that we may for the moment be carried away by a book which upon cool reflection we find is false in ethics and weak in construction. We find this because we have standards outside ourselves.

I am not concerned to define here what is meant by literature. A great mass of it has been accumulated in the progress of mankind, and, fortunately for different wants and temperaments, it is as varied as the various minds that produced it. The main thing to be considered is that this great stream of thought is the highest achievement and the most valuable possession of mankind. It is not only that literature is the source of inspiration to youth and the solace of age, but it is what a national language is to a nation, the highest expression of its being. Whatever we acquire of science, of art, in discovery, in the application of natural laws in industries, is an enlargement of our horizon, and a contribution to the highest needs of man, his intellectual life. The controversy between the claims of the practical life and the intellectual is as idle as the so-called conflict between science and religion. And the highest and final expression of this life of man, his thought, his emotion, his feeling, his aspiration, whatever you choose to call it, is in the enduring literature he creates. He certainly misses half his opportunity on this planet who considers only the physical or what is called the practical. He is a man only half developed. I can conceive no more dreary existence than that of a man who is past the period of business activity, and who cannot, for his entertainment, his happiness, draw upon the great reservoir of literature. For what did I come into this world if I am to be like a stake planted in a fence, and not like a tree visited by all the winds of heaven and the birds of the air?

Those who concern themselves with the printed matter in books and periodicals are often in despair over the volume of it, and their actual inability to keep up with current literature. They need not worry. If all that

appears in books, under the pressure of publishers and the ambition of experimenters in writing, were uniformly excellent, no reader would be under any more obligation to read it than he is to see every individual flower and blossoming shrub. Specimens of the varieties would suffice. But a vast proportion of it is the product of immature minds, and of a yearning for experience rather than a knowledge of life. There is no more obligation on the part of the person who would be well informed and cultivated to read all this than there is to read all the colored incidents, personal gossip, accidents, and crimes repeated daily, with sameness of effect, in the newspapers, some of the most widely circulated of which are a composite of the police gazette and the comic almanac. A great deal of the reading done is mere contagion, one form or another of communicated grippe, and it is consoling and even surprising to know that if you escape the run of it for a season, you have lost nothing appreciable. Some people, it has been often said, make it a rule never to read a book until it is from one to five years old, By this simple device they escape the necessity of reading most of them, but this is only a part of their gain. Considering the fact that the world is full of books of the highest value for cultivation, entertainment, and information, which the utmost leisure we can spare from other pressing avocations does not suffice to give us knowledge of, it does seem to be little less than a moral and intellectual sin to flounder about blindly in the flood of new publications. I am speaking, of course, of the general mass of readers, and not of the specialists who must follow their subjects with ceaseless inquisition. But for most of us who belong to the still comparatively few who, really read books, the main object of life is not to keep up with the printing-press, any more than it is the main object of sensible people to follow all the extremes and whims of fashion in dress. When a fashion in literature has passed, we are surprised that it should ever have seemed worth the trouble of studying or imitating. When the special craze has passed, we notice another thing, and that is that the author, not being of the first rank or of the second, has generally contributed to the world all that he has to give in one book, and our time has been wasted on his other books; and also that in a special kind of writing in a given period—let us say, for example, the historico-romantic—we perceive that it all has a common character, is constructed on the same lines of adventure and with a prevailing type of hero and heroine, according to the pattern set by the first one or two stories of the sort which became popular, and we see its more or less mechanical construction, and how easily it degenerates into commercial book-making. Now while some of this writing has an individual flavor that makes it entertaining and profitable in this way, we may be excused from attempting to follow it all merely because it happens to be talked about for the moment, and generally talked about in a very indiscriminating manner. We need not in any company be ashamed if we have not read it all, especially if we are ashamed that, considering the time at our disposal, we have not made the acquaintance of the great and small masterpieces of literature. It is said that the fashion of this world passeth away, and so does the mere fashion in literature, the fashion that does not follow the eternal law of beauty and symmetry, and contribute to the intellectual and spiritual part of man. Otherwise it is only a waiting in a material existence, like the lovers, in the words of the Arabian story-teller, "till there came to them the Destroyer of Delights and the Sunderer of Companies, he who layeth waste the palaces and peopleth the tombs."

Without special anxiety, then, to keep pace with all the ephemeral in literature, lest we should miss for the moment something that is permanent, we can rest content in the vast accumulation of the tried and genuine that the ages have given us. Anything that really belongs to literature today we shall certainly find awaiting us tomorrow.

The better part of the life of man is in and by the imagination. This is not generally believed, because it is not generally believed that the chief end of man is the accumulation of intellectual and spiritual material. Hence it is that what is called a practical education is set above the mere enlargement and enrichment of the mind; and the possession of the material is valued, and the intellectual life is undervalued. But it should be remembered that the best preparation for a practical and useful life is in the high development of the powers of the mind, and that, commonly, by a culture that is not considered practical. The notable fact about the group of great parliamentary orators in the days of George III is the exhibition of their intellectual resources in the entire world of letters, the classics, and ancient and modern history. Yet all of them owed their development to a strictly classical training in the schools. And most of them had not only the gift of the imagination necessary to great eloquence, but also were so mentally disciplined by the classics that they handled the practical questions upon which they legislated with clearness and precision. The great masters of finance were the classically trained orators William Pitt and Charles James Fox.

In fine, to return to our knowledge of the short life of fashions that are for the moment striking, why should we waste precious time in chasing meteoric appearances, when we can be warmed and invigorated in the sunshine of the great literatures?

THE AMERICAN NEWSPAPER

By Charles Dudley Warner

Our theme for the hour is the American Newspaper. It is a subject in which everybody is interested, and about which it is not polite to say that anybody is not well informed; for, although there are scattered through the land many persons, I am sorry to say, unable to pay for a newspaper, I have never yet heard of anybody unable to edit one.

The topic has many points of view, and invites various study and comment. In our limited time we must select one only. We have heard a great deal about the power, the opportunity, the duty, the "mission," of the press. The time has come for a more philosophical treatment of it, for an inquiry into its relations to our complex civilization, for some ethical account of it as one of the developments of our day, and for some discussion of the effect it is producing, and likely to produce, on the education of the people. Has the time

come, or is it near at hand, when we can point to a person who is alert, superficial, ready and shallow, self-confident and half-informed, and say, "There is a product of the American newspaper"? The newspaper is not a willful creation, nor an isolated phenomenon, but the legitimate outcome of our age, as much as our system of popular education. And I trust that some competent observer will make, perhaps for this association, a philosophical study of it. My task here is a much humbler one. I have thought that it may not be unprofitable to treat the newspaper from a practical and even somewhat mechanical point of view.

The newspaper is a private enterprise. Its object is to make money for its owner. Whatever motive may be given out for starting a newspaper, expectation of profit by it is the real one, whether the newspaper is religious, political, scientific, or literary. The exceptional cases of newspapers devoted to ideas or "causes" without regard to profit are so few as not to affect the rule. Commonly, the cause, the sect, the party, the trade, the delusion, the idea, gets its newspaper, its organ, its advocate, only when some individual thinks he can see a pecuniary return in establishing it.

This motive is not lower than that which leads people into any other occupation or profession. To make a living, and to have a career, is the original incentive in all cases. Even in purely philanthropical enterprises the driving-wheel that keeps them in motion for any length of time is the salary paid the working members. So powerful is this incentive that sometimes the wheel will continue to turn round when there is no grist to grind. It sometimes happens that the friction of the philanthropic machinery is so great that but very little power is transmitted to the object for which the machinery was made. I knew a devoted agent of the American Colonization Society, who, for several years, collected in Connecticut just enough, for the cause, to buy his clothes, and pay his board at a good hotel.

It is scarcely necessary to say, except to prevent a possible misapprehension, that the editor who has no high ideals, no intention of benefiting his fellow-men by his newspaper, and uses it unscrupulously as a means of money-making only, sinks to the level of the physician and the lawyer who have no higher conception of their callings than that they offer opportunities for getting money by appeals to credulity, and by assisting in evasions of the law.

If the excellence of a newspaper is not always measured by its profitableness, it is generally true that, if it does not pay its owner, it is valueless to the public. Not all newspapers which make money are good, for some succeed by catering to the lowest tastes of respectable people, and to the prejudice, ignorance, and passion of the lowest class; but, as a rule, the successful journal pecuniarily is the best journal. The reasons for this are on the surface. The impecunious newspaper cannot give its readers promptly the news, nor able discussion of the news, and, still worse, it cannot be independent. The political journal that relies for support upon drippings of party favor or patronage, the general newspaper that finds it necessary to existence to manipulate stock reports, the religious weekly that draws precarious support from puffing doubtful enterprises, the literary paper that depends upon the approval of publishers, are poor affairs, and, in the long run or short run, come to grief. Some newspapers do succeed by sensationalism, as some preachers do; by a kind of quackery, as some doctors do; by trimming and shifting to any momentary popular prejudice, as some politicians do; by becoming the paid advocate of a personal ambition or a corporate enterprise, as some lawyers do; but the newspaper only becomes a real power when it is able, on the basis of pecuniary independence, to free itself from all such entanglements. An editor who stands with hat in hand has the respect accorded to any other beggar.

The recognition of the fact that the newspaper is a private and purely business enterprise will help to define the mutual relations of the editor and the public. His claim upon the public is exactly that of any manufacturer or dealer. It is that of the man who makes cloth, or the grocer who opens a shop—neither has a right to complain if the public does not buy of him. If the buyer does not like a cloth half shoddy, or coffee half-chicory, he will go elsewhere. If the subscriber does not like one newspaper, he takes another, or none. The appeal for newspaper support on the ground that such a journal ought to be sustained by an enlightened community, or on any other ground than that it is a good article that people want,—or would want if they knew its value,—is purely childish in this age of the world. If any person wants to start a periodical devoted to decorated teapots, with the noble view of inducing the people to live up to his idea of a teapot, very good; but he has no right to complain if he fails.

On the other hand, the public has no rights in the newspaper except what it pays for; even the "old subscriber" has none, except to drop the paper if it ceases to please him. The notion that the subscriber has a right to interfere in the conduct of the paper, or the reader to direct its opinions, is based on a misconception of what the newspaper is. The claim of the public to have its communications printed in the paper is equally baseless. Whether they shall be printed or not rests in the discretion of the editor, having reference to his own private interest, and to his apprehension of the public good. Nor is he bound to give any reason for his refusal. It is purely in his discretion whether he will admit a reply to any thing that has appeared in his columns. No one has a right to demand it. Courtesy and policy may grant it; but the right to it does not exist. If any one is injured, he may seek his remedy at law; and I should like to see the law of libel such and so administered that any person injured by a libel in the newspaper, as well as by slander out of it, could be sure of prompt redress. While the subscriber acquires no right to dictate to the newspaper, we can imagine an extreme case when he should have his money back which had been paid in advance, if the newspaper totally changed its character. If he had contracted with a dealer to supply him with hard coal during the winter, he might have a remedy if the dealer delivered only charcoal in the coldest weather; and so if he paid for a Roman Catholic journal which suddenly became an organ of the spiritists.

The advertiser acquires no more rights in the newspaper than the subscriber. He is entitled to use the space for which he pays by the insertion of such material as is approved by the editor. He gains no interest in any other part of the paper, and has no more claim to any space in the editorial columns, than any other one of the public. To give him such space would be unbusiness-like, and the extension of a preference which would be unjust to the rest of the public. Nothing more quickly destroys the character of a journal, begets distrust of it, and so reduces its value, than the well-founded suspicion that its editorial columns are the property of advertisers. Even a religious journal will, after a while, be injured by this.

Yet it must be confessed that here is one of the greatest difficulties of modern journalism. The newspaper

must be cheap. It is, considering the immense cost to produce it, the cheapest product ever offered to man. Most newspapers cost more than they sell for; they could not live by subscriptions; for any profits, they certainly depend upon advertisements. The advertisements depend upon the circulation; the circulation is likely to dwindle if too much space is occupied by advertisements, or if it is evident that the paper belongs to its favored advertisers. The counting-room desires to conciliate the advertisers; the editor looks to making a paper satisfactory to his readers. Between this see-saw of the necessary subscriber and the necessary advertiser, a good many newspapers go down. This difficulty would be measurably removed by the admission of the truth that the newspaper is a strictly business enterprise, depending for success upon a 'quid pro quo' between all parties connected with it, and upon integrity in its management.

Akin to the false notion that the newspaper is a sort of open channel that the public may use as it chooses, is the conception of it as a charitable institution. The newspaper, which is the property of a private person as much as a drug-shop is, is expected to perform for nothing services which would be asked of no other private person. There is scarcely a charitable enterprise to which it is not asked to contribute of its space, which is money, ten times more than other persons in the community, who are ten times as able as the owner of the newspaper, contribute. The journal is considered "mean" if it will not surrender its columns freely to notices and announcements of this sort. If a manager has a new hen-coop or a new singer he wishes to introduce to the public, he comes to the newspaper, expecting to have his enterprise extolled for nothing, and probably never thinks that it would be just as proper for him to go to one of the regular advertisers in the paper and ask him to give up his space. Anything, from a church picnic to a brass-band concert for the benefit of the widow of the triangles, asks the newspaper to contribute. The party in politics, whose principles the editor advocates, has no doubt of its rightful claim upon him, not only upon the editorial columns, but upon the whole newspaper. It asks without hesitation that the newspaper should take up its valuable space by printing hundreds and often thousands of dollars' worth of political announcements in the course of a protracted campaign, when it never would think of getting its halls, its speakers, and its brass bands, free of expense. Churches, as well as parties, expect this sort of charity. I have known rich churches, to whose members it was a convenience to have their Sunday and other services announced, withdraw the announcements when the editor declined any longer to contribute a weekly fifty-cents' worth of space. No private persons contribute so much to charity, in proportion to ability, as the newspaper. Perhaps it will get credit for this in the next world: it certainly never does in this.

The chief function of the newspaper is to collect and print the news. Upon the kind of news that should be gathered and published, we shall remark farther on. The second function is to elucidate the news, and comment on it, and show its relations. A third function is to furnish reading-matter to the general public.

Nothing is so difficult for the manager as to know what news is: the instinct for it is a sort of sixth sense. To discern out of the mass of materials collected not only what is most likely to interest the public, but what phase and aspect of it will attract most attention, and the relative importance of it; to tell the day before or at midnight what the world will be talking about in the morning, and what it will want the fullest details of, and to meet that want in advance,—requires a peculiar talent. There is always some topic on which the public wants instant information. It is easy enough when the news is developed, and everybody is discussing it, for the editor to fall in; but the success of the news printed depends upon a pre-apprehension of all this. Some papers, which nevertheless print all the news, are always a day behind, do not appreciate the popular drift till it has gone to something else, and err as much by clinging to a subject after it is dead as by not taking it up before it was fairly born. The public craves eagerly for only one thing at a time, and soon wearies of that; and it is to the newspaper's profit to seize the exact point of a debate, the thrilling moment of an accident, the pith of an important discourse; to throw itself into it as if life depended on it, and for the hour to flood the popular curiosity with it as an engine deluges a fire.

Scarcely less important than promptly seizing and printing the news is the attractive arrangement of it, its effective presentation to the eye. Two papers may have exactly the same important intelligence, identically the same despatches: the one will be called bright, attractive, "newsy"; the other, dull and stupid.

We have said nothing yet about that, which, to most people, is the most important aspect of the newspaper,—the editor's responsibility to the public for its contents. It is sufficient briefly to say here, that it is exactly the responsibility of every other person in society,—the full responsibility of his opportunity. He has voluntarily taken a position in which he can do a great deal of good or a great deal of evil, and he, should be held and judged by his opportunity: it is greater than that of the preacher, the teacher, the congressman, the physician. He occupies the loftiest pulpit; he is in his teacher's desk seven days in the week; his voice can be heard farther than that of the most lusty fog-horn politician; and often, I am sorry to say, his columns outshine the shelves of the druggist in display of proprietary medicines. Nothing else ever invented has the public attention as the newspaper has, or is an influence so constant and universal. It is this large opportunity that has given the impression that the newspaper is a public rather than a private enterprise.

It was a nebulous but suggestive remark that the newspaper occupies the borderland between literature and common sense. Literature it certainly is not, and in the popular apprehension it seems often too erratic and variable to be credited with the balance-wheel of sense; but it must have something of the charm of the one, and the steadiness and sagacity of the other, or it will fail to please. The model editor, I believe, has yet to appear. Notwithstanding the traditional reputation of certain editors in the past, they could not be called great editors by our standards; for the elements of modern journalism did not exist in their time. The old newspaper was a broadside of stale news, with a moral essay attached. Perhaps Benjamin Franklin, with our facilities, would have been very near the ideal editor. There was nothing he did not wish to know; and no one excelled him in the ability to communicate what he found out to the average mind. He came as near as anybody ever did to marrying common sense to literature: he had it in him to make it sufficient for journalistic purposes. He was what somebody said Carlyle was, and what the American editor ought to be,—a vernacular man.

The assertion has been made recently, publicly, and with evidence adduced, that the American newspaper is the best in the world. It is like the assertion that the American government is the best in the world; no doubt it is, for the American people.

Judged by broad standards, it may safely be admitted that the American newspaper is susceptible of some improvement, and that it has something to learn from the journals of other nations. We shall be better employed in correcting its weaknesses than in complacently contemplating its excellences.

Let us examine it in its three departments already named,—its news, editorials, and miscellaneous reading-matter.

In particularity and comprehensiveness of news-collecting, it may be admitted that the American newspapers for a time led the world. I mean in the picking-up of local intelligence, and the use of the telegraph to make it general. And with this arose the odd notion that news is made important by the mere fact of its rapid transmission over the wire. The English journals followed, speedily overtook, and some of the wealthier ones perhaps surpassed, the American in the use of the telegraph, and in the presentation of some sorts of local news; not of casualties, and small city and neighborhood events, and social gossip (until very recently), but certainly in the business of the law courts, and the crimes and mishaps that come within police and legal supervision. The leading papers of the German press, though strong in correspondence and in discussion of affairs, are far less comprehensive in their news than the American or the English. The French journals, we are accustomed to say, are not newspapers at all. And this is true as we use the word. Until recently, nothing has been of importance to the Frenchman except himself; and what happened outside of France, not directly affecting his glory, his profit, or his pleasure, did not interest him: hence, one could nowhere so securely intrench himself against the news of the world as behind the barricade of the Paris journals. But let us not make a mistake in this matter. We may have more to learn from the Paris journals than from any others. If they do not give what we call news—local news, events, casualties, the happenings of the day,—they do give ideas, opinions; they do discuss politics, the social drift; they give the intellectual ferment of Paris; they supply the material that Paris likes to talk over, the badinage of the boulevard, the wit of the salon, the sensation of the stage, the new movement in literature and in politics. This may be important, or it may be trivial: it is commonly more interesting than much of that which we call news.

Our very facility and enterprise in news-gathering have overwhelmed our newspapers, and it may be remarked that editorial discrimination has not kept pace with the facilities. We are overpowered with a mass of undigested intelligence, collected for the most part without regard to value. The force of the newspaper is expended in extending these facilities, with little regard to discriminating selection. The burden is already too heavy for the newspaper, and wearisome to the public.

The publication of the news is the most important function of the paper. How is it gathered? We must confess that it is gathered very much by chance. A drag-net is thrown out, and whatever comes is taken. An examination into the process of collecting shows what sort of news we are likely to get, and that nine-tenths of that printed is collected without much intelligence exercised in selection. The alliance of the associated press with the telegraph company is a fruitful source of news of an inferior quality. Of course, it is for the interest of the telegraph company to swell the volume to be transmitted. It is impossible for the associated press to have an agent in every place to which the telegraph penetrates: therefore the telegraphic operators often act as its purveyors. It is for their interest to send something; and their judgment of what is important is not only biased, but is formed by purely local standards. Our news, therefore, is largely set in motion by telegraphic operators, by agents trained to regard only the accidental, the startling, the abnormal, as news; it is picked up by sharp prowlers about town, whose pay depends upon finding something, who are looking for something spicy and sensational, or which may be dressed up and exaggerated to satisfy an appetite for novelty and high flavor, and who regard casualties as the chief news. Our newspapers every day are loaded with accidents, casualties, and crimes concerning people of whom we never heard before and never shall hear again, the reading of which is of no earthly use to any human being.

What is news? What is it that an intelligent public should care to hear of and talk about? Run your eye down the columns of your journal. There was a drunken squabble last night in a New York groggery; there is a petty but carefully elaborated village scandal about a foolish girl; a woman accidentally dropped her baby out of a fourth-story window in Maine; in Connecticut, a wife, by mistake, got into the same railway train with another woman's husband; a child fell into a well in New Jersey; there is a column about a peripatetic horse-race, which exhibits, like a circus, from city to city; a laborer in a remote town in Pennsylvania had a sunstroke; there is an edifying dying speech of a murderer, the love-letter of a suicide, the set-to of a couple of congressmen; and there are columns about a gigantic war of half a dozen politicians over the appointment of a sugar-gauger. Granted that this pabulum is desired by the reader, why not save the expense of transmission by having several columns of it stereotyped, to be reproduced at proper intervals? With the date changed, it would always, have its original value, and perfectly satisfy the demand, if a demand exists, for this sort of news.

This is not, as you see, a description of your journal: it is a description of only one portion of it. It is a complex and wonderful creation. Every morning it is a mirror of the world, more or less distorted and imperfect, but such a mirror as it never had held up to it before. But consider how much space is taken up with mere trivialities and vulgarities under the name of news. And this evil is likely to continue and increase until news-gatherers learn that more important than the reports of accidents and casualties is the intelligence of opinions and thoughts, the moral and intellectual movements of modern life. A horrible assassination in India is instantly telegraphed; but the progress of such a vast movement as that of the Wahabee revival in Islam, which may change the destiny of great provinces, never gets itself put upon the wires. We hear promptly of a landslide in Switzerland, but only very slowly of a political agitation that is changing the constitution of the republic. It should be said, however, that the daily newspaper is not alone responsible for this: it is what the age and the community where it is published make it. So far as I have observed, the majority of the readers in America peruses eagerly three columns about a mill between an English and a naturalized American prize-fighter, but will only glance at a column report of a debate in the English parliament which involves a radical change in the whole policy of England; and devours a page about the Chantilly races, while it ignores a paragraph concerning the suppression of the Jesuit schools.

Our newspapers are overwhelmed with material that is of no importance. The obvious remedy for this would be more intelligent direction in the collection of news, and more careful sifting and supervision of it

when gathered. It becomes every day more apparent to every manager that such discrimination is more necessary. There is no limit to the various intelligence and gossip that our complex life offers—no paper is big enough to contain it; no reader has time enough to read it. And the journal must cease to be a sort of wastebasket at the end of a telegraph wire, into which any reporter, telegraph operator, or gossip-monger can dump whatever he pleases. We must get rid of the superstition that value is given to an unimportant "item" by sending it a thousand miles over a wire.

Perhaps the most striking feature of the American newspaper, especially of the country weekly, is its enormous development of local and neighborhood news. It is of recent date. Horace Greeley used to advise the country editors to give small space to the general news of the world, but to cultivate assiduously the home field, to glean every possible detail of private life in the circuit of the county, and print it. The advice was shrewd for a metropolitan editor, and it was not without its profit to the country editor. It was founded on a deep knowledge of human nature; namely, upon the fact that people read most eagerly that which they already know, if it is about themselves or their neighbors, if it is a report of something they have been concerned in, a lecture they have heard, a fair, or festival, or wedding, or funeral, or barn-raising they have attended. The result is column after column of short paragraphs of gossip and trivialities, chips, chips, chips. Mr. Sales is contemplating erecting a new counter in his store; his rival opposite has a new sign; Miss Bumps of Gath is visiting her cousin, Miss Smith of Bozrah; the sheriff has painted his fence; Farmer Brown has lost his cow; the eminent member from Neopolis has put an ell on one end of his mansion, and a mortgage on the other.

On the face of it nothing is so vapid and profitless as column after column of this reading. These "items" have very little interest, except to those who already know the facts; but those concerned like to see them in print, and take the newspaper on that account. This sort of inanity takes the place of reading-matter that might be of benefit, and its effect must be to belittle and contract the mind. But this is not the most serious objection to the publication of these worthless details. It cultivates self-consciousness in the community, and love of notoriety; it develops vanity and self-importance, and elevates the trivial in life above the essential.

And this brings me to speak of the mania in this age, and especially in America, for notoriety in social life as well as in politics. The newspapers are the vehicle of it, sometimes the occasion, but not the cause. The newspaper may have fostered—it has not created—this hunger for publicity. Almost everybody talks about the violation of decency and the sanctity of private life by the newspaper in the publication of personalities and the gossip of society; and the very people who make these strictures are often those who regard the paper as without enterprise and dull, if it does not report in detail their weddings, their balls and parties, the distinguished persons present, the dress of the ladies, the sumptuousness of the entertainment, if it does not celebrate their church services and festivities, their social meetings, their new house, their distinguished arrivals at this or that watering-place. I believe every newspaper manager will bear me out in saying that there is a constant pressure on him to print much more of such private matter than his judgment and taste permit or approve, and that the gossip which is brought to his notice, with the hope that he will violate the sensitiveness of social life by printing it, is far away larger in amount than all that he publishes.

To return for a moment to the subject of general news. The characteristic of our modern civilization is sensitiveness, or, as the doctors say, nervousness. Perhaps the philanthropist would term it sympathy. No doubt an exciting cause of it is the adaptation of electricity to the transmission of facts and ideas. The telegraph, we say, has put us in sympathy with all the world. And we reckon this enlargement of nerve contact somehow a gain. Our bared nerves are played upon by a thousand wires. Nature, no doubt, has a method of hardening or deadening them to these shocks; but nevertheless, every person who reads is a focus for the excitements, the ills, the troubles, of all the world. In addition to his local pleasures and annoyances, he is in a manner compelled to be a sharer in the universal uneasiness. It might be worth while to inquire what effect this exciting accumulation of the news of the world upon an individual or a community has upon happiness and upon character. Is the New England man any better able to bear or deal with his extraordinary climate by the daily knowledge of the weather all over the globe? Is a man happier, or improved in character, by the woful tale of a world's distress and apprehension that greets him every morning at breakfast? Knowledge, we know, increases sorrow; but I suppose the offset to that is, that strength only comes through suffering. But this is a digression.

Not second in importance to any department of the journal is the reporting; that is, the special reporting as distinguished from the more general news-gathering. I mean the reports of proceedings in Congress, in conventions, assemblies, and conferences, public conversations, lectures, sermons, investigations, law trials, and occurrences of all sorts that rise into general importance. These reports are the basis of our knowledge and opinions. If they are false or exaggerated, we are ignorant of what is taking place, and misled. It is of infinitely more importance that they should be absolutely trustworthy than that the editorial comments should be sound and wise. If the reports on affairs can be depended on, the public can form its own opinion, and act intelligently. And; if the public has a right to demand anything of a newspaper, it is that its reports of what occurs shall be faithfully accurate, unprejudiced, and colorless. They ought not, to be editorials, or the vehicles of personal opinion and feeling. The interpretation of, the facts they give should be left to the editor and the public. There should be a sharp line drawn between the report and the editorial.

I am inclined to think that the reporting department is the weakest in the American newspaper, and that there is just ground for the admitted public distrust of it. Too often, if a person would know what has taken place in a given case, he must read the reports in half a dozen journals, then strike a general average of probabilities, allowing for the personal equation, and then—suspend his judgment. Of course, there is much excellent reporting, and there are many able men engaged in it who reflect the highest honor upon their occupation. And the press of no other country shows more occasional brilliant feats in reporting than ours: these are on occasions when the newspapers make special efforts. Take the last two national party conventions. The fullness, the accuracy, the vividness, with which their proceedings were reported in the leading journals, were marvelous triumphs of knowledge, skill, and expense. The conventions were so photographed by hundreds of pens, that the public outside saw them almost as distinctly as the crowd in attendance. This result was attained because the editors determined that it should be, sent able men to

report, and demanded the best work. But take an opposite and a daily illustration of reporting, that of the debates and proceedings in Congress. I do not refer to the specials of various journals which are good, bad, or indifferent, as the case may be, and commonly colored by partisan considerations, but the regular synopsis sent to the country at large. Now, for some years it has been inadequate, frequently unintelligible, often grossly misleading, failing wholly to give the real spirit and meaning of the most important discussions; and it is as dry as chips besides. To be both stupid and inaccurate is the unpardonable sin in journalism. Contrast these reports with the lively and faithful pictures of the French Assembly which are served to the Paris papers.

Before speaking of the reasons for the public distrust in reports, it is proper to put in one qualification. The public itself, and not the newspapers, is the great factory of baseless rumors and untruths. Although the newspaper unavoidably gives currency to some of these, it is the great corrector of popular rumors. Concerning any event, a hundred different versions and conflicting accounts are instantly set afloat. These would run on, and become settled but unfounded beliefs, as private whispered scandals do run, if the newspaper did not intervene. It is the business of the newspaper, on every occurrence of moment, to chase down the rumors, and to find out the facts and print them, and set the public mind at rest. The newspaper publishes them under a sense of responsibility for its statements. It is not by any means always correct; but I know that it is the aim of most newspapers to discharge this important public function faithfully. When this country had few newspapers it was ten times more the prey of false reports and delusions than it is now.

Reporting requires as high ability as editorial writing; perhaps of a different kind, though in the history of American journalism the best reporters have often become the best editors. Talent of this kind must be adequately paid; and it happens that in America the reporting field is so vast that few journals can afford to make the reporting department correspond in ability to the editorial, and I doubt if the importance of doing so is yet fully realized. An intelligent and representative synopsis of a lecture or other public performance is rare. The ability to grasp a speaker's meaning, or to follow a long discourse, and reproduce either in spirit, and fairly, in a short space, is not common. When the public which has been present reads the inaccurate report, it loses confidence in the newspaper.

Its confidence is again undermined when it learns that an "interview" which it has read with interest was manufactured; that the report of the movements and sayings of a distinguished stranger was a pure piece of ingenious invention; that a thrilling adventure alongshore, or in a balloon, or in a horse-car, was what is called a sensational article, concocted by some brilliant genius, and spun out by the yard according to his necessities. These reports are entertaining, and often more readable than anything else in the newspaper; and, if they were put into a department with an appropriate heading, the public would be less suspicious that all the news in the journal was colored and heightened by a lively imagination.

Intelligent and honest reporting of whatever interests the public is the sound basis of all journalism. And yet so careless have editors been of all this that a reporter has been sent to attend the sessions of a philological convention who had not the least linguistic knowledge, having always been employed on marine disasters. Another reporter, who was assigned to inform the public of the results of a difficult archeological investigation, frankly confessed his inability to understand what was going on; for his ordinary business, he said, was cattle. A story is told of a metropolitan journal, which illustrates another difficulty the public has in keeping up its confidence in newspaper infallibility. It may not be true for history, but answers for an illustration. The annual November meteors were expected on a certain night. The journal prepared an elaborate article, several columns in length, on meteoric displays in general, and on the display of that night in particular, giving in detail the appearance of the heavens from the metropolitan roofs in various parts of the city, the shooting of the meteors amid the blazing constellations, the size and times of flight of the fiery bodies; in short, a most vivid and scientific account of the lofty fireworks. Unfortunately the night was cloudy. The article was in type and ready; but the clouds would not break. The last moment for going to press arrived: there was a probability that the clouds would lift before daylight and the manager took the risk. The article that appeared was very interesting; but its scientific value was impaired by the fact that the heavens were obscured the whole night, and the meteors, if any arrived, were invisible. The reasonable excuse of the editor would be that he could not control the elements.

If the reporting department needs strengthening and reduction to order in the American journal, we may also query whether the department of correspondence sustains the boast that the American newspaper is the best in the world. We have a good deal of excellent correspondence, both foreign and domestic; and our "specials" have won distinction, at least for liveliness and enterprise. I cannot dwell upon this feature; but I suggest a comparison with the correspondence of some of the German, and with that especially of the London journals, from the various capitals of Europe, and from the occasional seats of war. How surpassing able much of it is!

How full of information, of philosophic observation, of accurate knowledge! It appears to be written by men of trained intellect and of experience,—educated men of the world, who, by reason of their position and character, have access to the highest sources of information.

The editorials of our journals seem to me better than formerly, improved in tone, in courtesy, in self-respect,—though you may not have to go far or search long for the provincial note and the easy grace of the frontier,—and they are better written. This is because the newspaper has become more profitable, and is able to pay for talent, and has attracted to it educated young men. There is a sort of editorial ability, of facility, of force, that can only be acquired by practice and in the newspaper office: no school can ever teach it; but the young editor who has a broad basis of general education, of information in history, political economy, the classics, and polite literature, has an immense advantage over the man who has merely practical experience. For the editorial, if it is to hold its place, must be more and more the product of information, culture, and reflection, as well as of sagacity and alertness. Ignorance of foreign affairs, and of economic science, the American people have in times past winked at; but they will not always wink at it.

It is the belief of some shrewd observers that editorials, the long editorials, are not much read, except by editors themselves. A cynic says that, if you have a secret you are very anxious to keep from the female portion of the population, the safest place to put it is in an editorial. It seems to me that editorials are not

conned as attentively as they once were; and I am sure they have not so much influence as formerly. People are not so easily or so visibly led; that is to say, the editorial influence is not so dogmatic and direct. The editor does not expect to form public opinion so much by arguments and appeals as by the news he presents and his manner of presenting it, by the iteration of an idea until it becomes familiar, by the reading-matter selected, and by the quotations of opinions as news, and not professedly to influence the reader. And this influence is all the more potent because it is indirect, and not perceived-by the reader.

There is an editorial tradition—it might almost be termed a superstition—which I think will have to be abandoned. It is that a certain space in the journal must be filled with editorial, and that some of the editorials must be long, without any reference to the news or the necessity of comment on it, or the capacity of the editor at the moment to fill the space with original matter that is readable. There is the sacred space, and it must be filled. The London journals are perfect types of this custom. The result is often a wearisome page of words and rhetoric. It may be good rhetoric; but life is too short for so much of it. The necessity of filling this space causes the writer, instead of stating his idea in the shortest compass in which it can be made perspicuous and telling, to beat it out thin, and make it cover as much ground as possible. This, also, is vanity. In the economy of room, which our journals will more and more be compelled to cultivate, I venture to say that this tradition will be set aside. I think that we may fairly claim a superiority in our journals over the English dailies in our habit of making brief, pointed editorial paragraphs. They are the life of the editorial page. A cultivation of these until they are as finished and pregnant as the paragraphs of "The London Spectator" and "The New-York Nation," the printing of long editorials only when the elucidation of a subject demands length, and the use of the space thus saved for more interesting reading, is probably the line of our editorial evolution.

To continue the comparison of our journals as a class, with the English as a class, ours are more lively, also more flippant, and less restrained by a sense of responsibility or by the laws of libel. We furnish, now and again, as good editorial writing for its purpose; but it commonly lacks the dignity, the thoroughness, the wide sweep and knowledge, that characterizes the best English discussion of political and social topics.

The third department of the newspaper is that of miscellaneous reading-matter. Whether this is the survival of the period when the paper contained little else except "selections," and other printed matter was scarce, or whether it is only the beginning of a development that shall supply the public nearly all its literature, I do not know. Far as our newspapers have already gone in this direction, I am inclined to think that in their evolution they must drop this adjunct, and print simply the news of the day. Some of the leading journals of the world already do this.

In America I am sure the papers are printing too much miscellaneous reading. The perusal of this smattering of everything, these scraps of information and snatches of literature, this infinite variety and medley, in which no subject is adequately treated, is distracting and debilitating to the mind. It prevents the reading of anything in full, and its satisfactory assimilation. It is said that the majority of Americans read nothing except the paper. If they read that thoroughly, they have time for nothing else. What is its reader to do when his journal thrusts upon him every day the amount contained in a fair-sized duodecimo volume, and on Sundays the amount of two of them? Granted that this miscellaneous hodge-podge is the cream of current literature, is it profitable to the reader? Is it a means of anything but superficial culture and fragmentary information? Besides, it stimulates an unnatural appetite, a liking for the striking, the brilliant, the sensational only; for our selections from current literature are, usually the "plums"; and plums are not a wholesome-diet for anybody. A person accustomed to this finds it difficult to sit down patiently to the mastery of a book or a subject, to the study of history, the perusal of extended biography, or to acquire that intellectual development and strength which comes from thorough reading and reflection.

The subject has another aspect. Nobody chooses his own reading; and a whole community perusing substantially the same material tends to a mental uniformity. The editor has the more than royal power of selecting the intellectual food of a large public. It is a responsibility infinitely greater than that of the compiler of schoolbooks, great as that is. The taste of the editor, or of some assistant who uses the scissors, is in a manner forced upon thousands of people, who see little other printed matter than that which he gives them. Suppose his taste runs to murders and abnormal crimes, and to the sensational in literature: what will be the moral effect upon a community of reading this year after year?

If this excess of daily miscellany is deleterious to the public, I doubt if it will be, in the long run, profitable to the newspaper, which has a field broad enough in reporting and commenting upon the movement of the world, without attempting to absorb the whole reading field.

I should like to say a word, if time permitted, upon the form of the journal, and about advertisements. I look to see advertisements shorter, printed with less display, and more numerous. In addition to the use now made of the newspaper by the classes called "advertisers," I expect it to become the handy medium of the entire public, the means of ready communication in regard to all wants and exchanges.

Several years ago, the attention of the publishers of American newspapers was called to the convenient form of certain daily journals in South Germany, which were made up in small pages, the number of which varied from day to day, according to the pressure of news or of advertisements. The suggestion as to form has been adopted by many of our religious, literary, and special weeklies, to the great convenience of the readers, and I doubt not of the publishers also. Nothing is more unwieldy than our big blanket-sheets: they are awkward to handle, inconvenient to read, unhandy to bind and preserve. It is difficult to classify matter in them. In dull seasons they are too large; in times of brisk advertising, and in the sudden access of important news, they are too small. To enlarge them for the occasion, resort is had to a troublesome fly-sheet, or, if they are doubled, there is more space to be filled than is needed. It seems to me that the inevitable remedy is a newspaper of small pages or forms, indefinite in number, that can at any hour be increased or diminished according to necessity, to be folded, stitched, and cut by machinery.

We have thus rapidly run over a prolific field, touching only upon some of the relations of the newspaper to our civilization, and omitting many of the more important and grave. The truth is that the development of the modern journal has been so sudden and marvelous that its conductors find themselves in possession of a machine that they scarcely know how to manage or direct. The change in the newspaper caused by the

telegraph, the cable, and by a public demand for news created by wars, by discoveries, and by a new outburst of the spirit of doubt and inquiry, is enormous. The public mind is confused about it, and alternately overestimates and underestimates the press, failing to see how integral and representative a part it is of modern life.

“The power of the press,” as something to be feared or admired, is a favorite theme of dinner-table orators and clergymen. One would think it was some compactly wielded energy, like that of an organized religious order, with a possible danger in it to the public welfare. Discrimination is not made between the power of the printed word—which is limitless—and the influence that a newspaper, as such, exerts. The power of the press is in its facility for making public opinions and events. I should say it is a medium of force rather than force itself. I confess that I am oftener impressed with the powerlessness of the press than otherwise, its slight influence in bringing about any reform, or in inducing the public to do what is for its own good and what it is disinclined to do. Talk about the power of the press, say, in a legislature, when once the members are suspicious that somebody is trying to influence them, and see how the press will retire, with what grace it can, before an invincible and virtuous lobby. The fear of the combination of the press for any improper purpose, or long for any proper purpose, is chimerical. Whomever the newspapers agree with, they do not agree with each other. The public itself never takes so many conflicting views of any topic or event as the ingenious rival journals are certain to discover. It is impossible, in their nature, for them to combine. I should as soon expect agreement among doctors in their empirical profession. And there is scarcely ever a cause, or an opinion, or a man, that does not get somewhere in the press a hearer and a defender. We will drop the subject with one remark for the benefit of whom it may concern. With all its faults, I believe the moral tone of the American newspaper is higher, as a rule, than that of the community in which it is published.

CERTAIN DIVERSITIES OF AMERICAN LIFE

By Charles Dudley Warner

This is a very interesting age. Within the memory of men not yet come to middle life the time of the trotting horse has been reduced from two minutes forty seconds to two minutes eight and a quarter seconds. During the past fifteen years a universal and wholesome pastime of boys has been developed into a great national industry, thoroughly organized and almost altogether relegated to professional hands, no longer the exercise of the million but a spectacle for the million, and a game which rivals the Stock Exchange as a means of winning money on the difference of opinion as to the skill of contending operators.

The newspapers of the country—pretty accurate and sad indicators of the popular taste—devote more daily columns in a week's time to chronicling the news about base-ball than to any other topic that interests the American mind, and the most skillful player, the pitcher, often college bred, whose entire prowess is devoted to not doing what he seems to be doing, and who has become the hero of the American girl as the Olympian wrestler was of the Greek maiden and as the matador is of the Spanish senorita, receives a larger salary for a few hours' exertion each week than any college president is paid for a year's intellectual toil. Such has been the progress in the interest in education during this period that the larger bulk of the news, and that most looked for, printed about the colleges and universities, is that relating to the training, the prospects and achievements of the boat crews and the teams of base-ball and foot-ball, and the victory of any crew or team is a better means of attracting students to its college, a better advertisement, than success in any scholastic contest. A few years ago a tournament was organized in the North between several colleges for competition in oratory and scholarship; it had a couple of contests and then died of inanition and want of public interest.

During the period I am speaking of there has been an enormous advance in technical education, resulting in the establishment of splendid special schools, essential to the development of our national resources; a growth of the popular idea that education should be practical,—that is, such an education as can be immediately applied to earning a living and acquiring wealth speedily,—and an increasing extension of the elective system in colleges,—based almost solely on the notion, having in view, of course, the practical education, that the inclinations of a young man of eighteen are a better guide as to what is best for his mental development and equipment for life than all the experience of his predecessors.

In this period, which you will note is more distinguished by the desire for the accumulation of money than far the general production of wealth, the standard of a fortune has shifted from a fair competence to that of millions of money, so that he is no longer rich who has a hundred thousand dollars, but he only who possesses property valued at many millions, and the men most widely known the country through, most talked about, whose doings and sayings are most chronicled in the journals, whose example is most attractive and stimulating to the minds of youth, are not the scholars, the scientists, the men of letters, not even the orators and statesmen, but those who, by any means, have amassed enormous fortunes. We judge the future of a generation by its ideals.

Regarding education from the point of view of its equipment of a man to make money, and enjoy the luxury which money can command, it must be more and more practical, that is, it must be adapted not even to the higher aim of increasing the general wealth of the world, by increasing production and diminishing waste both of labor and capital, but to the lower aim of getting personal possession of it; so that a striking social feature of the period is that one-half—that is hardly an overestimate—one-half of the activity in America of which we speak with so much enthusiasm, is not directed to the production of wealth, to increasing its volume, but to getting the money of other people away from them. In barbarous ages this object was accomplished by violence; it is now attained by skill and adroitness. We still punish those who gain property by violence; those who get it by smartness and cleverness, we try to imitate, and sometimes we reward them with public office.

It appears, therefore, that speed,—the ability to move rapidly from place to place,—a disproportionate reward of physical over intellectual science, an intense desire to be rich, which is strong enough to compel even education to grind in the mill of the Philistines, and an inordinate elevation in public consideration of rich men simply because they are rich, are characteristics of this little point of time on which we stand. They are not the only characteristics; in a reasonably optimistic view, the age is distinguished for unexampled achievements, and for opportunities for the well-being of humanity never before in all history attainable. But these characteristics are so prominent as to beget the fear that we are losing the sense of the relative value of things in this life.

Few persons come to middle life without some conception of these relative values. It is in the heat and struggle that we fail to appreciate what in the attainment will be most satisfactory to us. After it is over we are apt to see that our possessions do not bring the happiness we expected; or that we have neglected to cultivate the powers and tastes that can make life enjoyable. We come to know, to use a truism, that a person's highest satisfaction depends not upon his exterior acquisitions, but upon what he himself is. There is no escape from this conclusion. The physical satisfactions are limited and fallacious, the intellectual and moral satisfactions are unlimited. In the last analysis, a man has to live with himself, to be his own companion, and in the last resort the question is, what can he get out of himself. In the end, his life is worth just what he has become. And I need not say that the mistake commonly made is as to relative values,—that the things of sense are as important as the things of the mind. You make that mistake when you devote your best energies to your possession of material substance, and neglect the enlargement, the training, the enrichment of the mind. You make the same mistake in a less degree, when you bend to the popular ignorance and conceit so far as to direct your college education to sordid ends. The certain end of yielding to this so-called practical spirit was expressed by a member of a Northern State legislature who said, "We don't want colleges, we want workshops." It was expressed in another way by a representative of the lower house in Washington who said, "The average ignorance of the country has a right to be represented here." It is not for me to say whether it is represented there. Naturally, I say, we ought by the time of middle life to come to a conception of what sort of things are of most value. By analogy, in the continual growth of the Republic, we ought to have a perception of what we have accomplished and acquired, and some clear view of our tendencies. We take justifiable pride in the glittering figures of our extension of territory, our numerical growth, in the increase of wealth, and in our rise to the potential position of almost the first nation in the world. A more pertinent inquiry is, what sort of people have we become? What are we intellectually and morally? For after all the man is the thing, the production of the right sort of men and women is all that gives a nation value. When I read of the establishment of a great industrial centre in which twenty thousand people are employed in the increase of the amount of steel in the world, before I decide whether it would be a good thing for the Republic to create another industrial city of the same sort, I want to know what sort of people the twenty thousand are, how they live, what their morals are, what intellectual life they have, what their enjoyment of life is, what they talk about and think about, and what chance they have of getting into any higher life. It does not seem to me a sufficient gain in this situation that we are immensely increasing the amount of steel in the world, or that twenty more people are enabled on account of this to indulge in an unexampled, unintellectual luxury. We want more steel, no doubt, but haven't we wit enough to get that and at the same time to increase among the producers of it the number of men and women whose horizons are extended, who are companionable, intelligent beings, adding something to the intellectual and moral force upon which the real progress of the Republic depends?

There is no place where I would choose to speak more plainly of our national situation today than in the South, and at the University of the South; in the South, because it is more plainly in a transition state, and at the University of the South, because it is here and in similar institutions that the question of the higher or lower plane of life in the South is to be determined.

To a philosophical observer of the Republic, at the end of the hundred years, I should say that the important facts are not its industrial energy, its wealth, or its population, but the stability of the federal power, and the integrity of the individual States. That is to say, that stress and trial have welded us into an indestructible nation; and not of less consequence is the fact that the life of the Union is in the life of the States. The next most encouraging augury for a great future is the marvelous diversity among the members of this republican body. If nothing would be more speedily fatal to our plan of government than increasing centralization, nothing would be more hopeless in our development than increasing monotony, the certain end of which is mediocrity.

Speaking as one whose highest pride it is to be a citizen of a great and invincible Republic to those whose minds kindle with a like patriotism, I can say that I am glad there are East and North and South, and West, Middle, Northwest, and Southwest, with as many diversities of climate, temperament, habits, idiosyncrasies, genius, as these names imply. Thank Heaven we are not all alike; and so long as we have a common purpose in the Union, and mutual toleration, respect, and sympathy, the greater will be our achievement and the nobler our total development, if every section is true to the evolution of its local traits. The superficial foreign observer finds sameness in our different States, tiresome family likeness in our cities, hideous monotony in our villages, and a certain common atmosphere of life, which increasing facility of communication tends to increase. This is a view from a railway train. But as soon as you observe closely, you find in each city a peculiar physiognomy, and a peculiar spirit remarkable considering the freedom of movement and intercourse, and you find the organized action of each State sui generis to a degree surprising considering the general similarity of our laws and institutions. In each section differences of speech, of habits of thought, of temperament prevail. Massachusetts is unlike Louisiana, Florida unlike Tennessee, Georgia is unlike California, Pennsylvania is unlike Minnesota, and so on, and the unlikeness is not alone or chiefly in physical features. By the different style of living I can tell when I cross the line between Connecticut and New York as certainly as when I cross the line between Vermont and Canada. The Virginian expanded in Kentucky is not the same man he was at home, and the New England Yankee let loose in the West takes on proportions that would astonish his grandfather. Everywhere there is a variety in local sentiment, action, and development. Sit down in the seats of the State governments and study the methods of treatment of essentially the common institutions of government, of charity and discipline, and you will be impressed with the variety of local spirit

and performance in the Union. And this, diversity is so important, this contribution of diverse elements is so necessary to the complex strength and prosperity of the whole, that one must view with alarm all federal interference and tendency to greater centralization.

And not less to be dreaded than monotony from the governmental point of view, is the obliteration of variety in social life and in literary development. It is not enough for a nation to be great and strong, it must be interesting, and interesting it cannot be without cultivation of local variety. Better obtrusive peculiarities than universal sameness. It is out of variety as well as complexity in American life, and not in homogeneity and imitation, that we are to expect a civilization noteworthy in the progress of the human race.

Let us come a little closer to our subject in details. For a hundred years the South was developed on its own lines, with astonishingly little exterior bias. This comparative isolation was due partly to the institution of slavery, partly to devotion to the production of two or three great staples. While its commercial connection with the North was intimate and vital, its literary relation with the North was slight. With few exceptions Northern authors were not read in the South, and the literary movement of its neighbors, such as it was, from 1820 to 1860, scarcely affected it. With the exception of Louisiana, which was absolutely ignorant of American literature and drew its inspiration and assumed its critical point of view almost wholly from the French, the South was English, but mainly English of the time of Walter Scott and George the Third. While Scott was read at the North for his knowledge of human nature, as he always will be read, the chivalric age which moves in his pages was taken more seriously at the South, as if it were of continuing importance in life. In any of its rich private libraries you find yourself in the age of Pope and Dryden, and the classics were pursued in the spirit of Oxford and Cambridge in the time of Johnson. It was little disturbed by the intellectual and ethical agitation of modern England or of modern New England. During this period, while the South excelled in the production of statesmen, orators, trained politicians, great judges, and brilliant lawyers, it produced almost no literature, that is, no indigenous literature, except a few poems and—a few humorous character-sketches; its general writing was ornately classic, and its fiction romantic on the lines of the foreign romances.

From this isolation one thing was developed, and another thing might in due time be expected. The thing developed was a social life, in the favored class, which has an almost unique charm, a power of being agreeable, a sympathetic cordiality, an impulsive warmth, a frankness in the expression of emotion, and that delightful quality of manner which puts the world at ease and makes life pleasant. The Southerners are no more sincere than the Northerners, but they have less reserve, and in the social traits that charm all who come in contact with them, they have an element of immense value in the variety of American life.

The thing that might have been expected in due time, and when the call came—and it is curious to note that the call and cause of any renaissance are always from the outside—was a literary expression fresh and indigenous. This expectation, in a brief period since the war, has been realized by a remarkable performance and is now stimulated by a remarkable promise. The acclaim with which the Southern literature has been received is partly due to its novelty, the new life it exhibited, but more to the recognition in it of a fresh flavor, a literary quality distinctly original and of permanent importance. This production, the first fruits of which are so engaging in quality, cannot grow and broaden into a stable, varied literature without scholarship and hard work, and without a sympathetic local audience. But the momentary concern is that it should develop on its own lines and in its own spirit, and not under the influence of London or Boston or New York. I do not mean by this that it should continue to attract attention by peculiarities of dialect—which is only an incidental, temporary phenomenon, that speedily becomes wearisome, whether “cracker” or negro or Yankee—but by being true to the essential spirit and temperament of Southern life.

During this period there was at the North, and especially in the East, great intellectual activity and agitation, and agitation ethical and moral as well as intellectual. There was awakening, investigation, questioning, doubt. There was a great deal of froth thrown to the surface. In the free action of individual thought and expression grew eccentricities of belief and of practice, and a crop of so-called “isms,” more or less temporary, unprofitable, and pernicious. Public opinion attained an astonishing degree of freedom,—I never heard of any community that was altogether free of its tyranny. At least extraordinary latitude was permitted in the development of extreme ideas, new, fantastic, radical, or conservative. For instance, slavery was attacked and slavery was defended on the same platform, with almost equal freedom. Indeed, for many years, if there was any exception to the general toleration it was in the social ostracism of those who held and expressed extreme opinions in regard to immediate emancipation, and were stigmatized as abolitionists. There was a general ferment of new ideas, not always fruitful in the direction taken, but hopeful in view of the fact that growth and movement are better than stagnation and decay. You can do something with a ship that has headway; it will drift upon the rocks if it has not. With much foam and froth, sure to attend agitation, there was immense vital energy, intense life.

Out of this stir and agitation came the aggressive, conquering spirit that carried civilization straight across the continent, that built up cities and States, that developed wealth, and by invention, ingenuity, and energy performed miracles in the way of the subjugation of nature and the assimilation of societies. Out of this free agitation sprang a literary product, great in quantity and to some degree distinguished in quality, groups of historians, poets, novelists, essayists, biographers, scientific writers. A conspicuous agency of the period was the lecture platform, which did something in the spread and popularization of information, but much more in the stimulation of independent thought and the awakening of the mind to use its own powers.

Along with this and out of this went on the movement of popular education and of the high and specialized education. More remarkable than the achievements of the common schools has been the development of the colleges, both in the departments of the humanities and of science. If I were writing of education generally, I might have something to say of the measurable disappointment of the results of the common schools as at present conducted, both as to the diffusion of information and as to the discipline of the mind and the inculcation of ethical principles; which simply means that they need improvement. But the higher education has been transformed, and mainly by the application of scientific methods, and of the philosophic spirit, to the study of history, economics, and the classics. When we are called to defend the pursuit of metaphysics or the study of the classics, either as indispensable to the discipline or to the enlargement of the mind, we are not

called on to defend the methods of a generation ago. The study of Greek is no longer an exercise in the study of linguistics or the inspection of specimens of an obsolete literature, but the acquaintance with historic thought, habits, and polity, with a portion of the continuous history of the human mind, which has a vital relation to our own life.

However much or little there may be of permanent value in the vast production of northern literature, judged by continental or even English standards, the time has come when American scholarship in science, in language, in occidental or oriental letters, in philosophic and historical methods, can court comparison with any other. In some branches of research the peers of our scholars must be sought not in England but in Germany. So that in one of the best fruits of a period of intellectual agitation, scholarship, the restless movement has thoroughly vindicated itself.

I have called your attention to this movement in order to say that it was neither accidental nor isolated. It was in the historic line, it was fed and stimulated by all that had gone before, and by all contemporary activity everywhere. New England, for instance, was alert and progressive because it kept its doors and windows open. It was hospitable in its intellectual freedom, both of trial and debate, to new ideas. It was in touch with the universal movement of humanity and of human thought and speculation. You lose some quiet by this attitude, some repose that is pleasant and even desirable perhaps, you entertain many errors, you may try many useless experiments, but you gain life and are in the way of better things. New England, whatever else we may say about it, was in the world. There was no stir of thought, of investigation, of research, of the recasting of old ideas into new forms of life, in Germany, in France, in Italy, in England, anywhere, that did not touch it and to which it did not respond with the sympathy that common humanity has in the universal progress. It kept this touch not only in the evolution and expression of thought and emotion which we call literature (whether original or imitative), but in the application of philosophic methods to education, in the attempted regeneration of society and the amelioration of its conditions by schemes of reform and discipline, relating to the institutions of benevolence and to the control of the vicious and criminal. With all these efforts go along always much false sentimentality and pseudo-philanthropy, but little by little gain is made that could not be made in a state of isolation and stagnation.

In fact there is one historic stream of human thought, aspiration, and progress; it is practically continuous, and with all its diversity of local color and movement it is a unit. If you are in it, you move; if you are out of it, you are in an eddy. The eddy may have a provincial current, but it is not in the great stream, and when it has gone round and round for a century, it is still an eddy, and will not carry you anywhere in particular. The value of the modern method of teaching and study is that it teaches the solidarity of human history, the continuance of human thought, in literature, government, philosophy, the unity of the divine purpose, and that nothing that has anywhere befallen the human race is alien to us.

I am not undervaluing the part, the important part, played by conservatism, the conservatism that holds on to what has been gained if it is good, that insists on discipline and heed to the plain teaching of experience, that refuses to go into hysterics of enthusiasm over every flighty suggestion, or to follow every leader simply because he proposes something new and strange—I do not mean the conservatism that refuses to try anything simply because it is new, and prefers to energetic life the stagnation that inevitably leads to decay. Isolation from the great historic stream of thought and agitation is stagnation. While this is true, and always has been true in history, it is also true, in regard to the beneficent diversity of American life, which is composed of so many elements and forces, as I have often thought and said, that what has been called the Southern conservatism in respect to beliefs and certain social problems, may have a very important part to play in the development of the life of the Republic.

I shall not be misunderstood here, where the claims of the higher life are insisted on and the necessity of pure, accurate scholarship is recognized, in saying that this expectation in regard to the South depends upon the cultivation and diffusion of the highest scholarship in all its historic consciousness and critical precision. This sort of scholarship, of widely apprehending intellectual activity, keeping step with modern ideas so far as they are historically grounded, is of the first importance. Everywhere indeed, in our industrial age,—in a society inclined to materialism, scholarship, pure and simple scholarship for its own sake, no less in Ohio than in Tennessee, is the thing to be insisted on. If I may refer to an institution, which used to be midway between the North and the South, and which I may speak of without suspicion of bias, an institution where the studies of metaphysics, the philosophy of history, the classics and pure science are as much insisted on as the study of applied sciences, the College of New Jersey at Princeton, the question in regard to a candidate for a professorship or instructorship, is not whether he was born North or South, whether he served in one army or another or in neither, whether he is a Democrat or a Republican or a Mugwump, what religious denomination he belongs to, but is he a scholar and has he a high character? There is no provincialism in scholarship.

We are not now considering the matter of the agreeableness of one society or another, whether life is on the whole pleasanter in certain conditions at the North or at the South, whether there is not a charm sometimes in isolation and even in provincialism. It is a fair question to ask, what effect upon individual lives and character is produced by an industrial and commercial spirit, and by one less restless and more domestic. But the South is now face to face with certain problems which relate her, inevitably, to the moving forces of the world. One of these is the development of her natural resources and the change and diversity of her industries. On the industrial side there is pressing need of institutions of technology, of schools of applied science, for the diffusion of technical information and skill in regard to mining and manufacturing, and also to agriculture, so that worn-out lands may be reclaimed and good lands be kept up to the highest point of production. Neither mines, forests, quarries, water-ways, nor textile fabrics can be handled to best advantage without scientific knowledge and skilled labor. The South is everywhere demanding these aids to her industrial development. But just in the proportion that she gets them, and because she has them, will be the need of higher education. The only safety against the influence of a rolling mill is a college, the only safety against the practical and materializing tendency of an industrial school is the increased study of whatever contributes to the higher and non-sordid life of the mind. The South would make a poor exchange for her former condition in any amount of industrial success without a corresponding development of the highest intellectual life.

But, besides the industrial problem, there is the race problem. It is the most serious in the conditions under which it is presented that ever in all history confronted a free people. Whichever way you regard it, it is the nearest insoluble. Under the Constitution it is wisely left to the action of the individual States. The heavy responsibility is with them. In the nature of things it is a matter of the deepest concern to the whole Republic, for the prosperity of every part is vital to the prosperity of the whole. In working it out you are entitled, from the outside, to the most impartial attempt to understand its real nature, to the utmost patience with the facts of human nature, to the most profound and most helpful sympathy. It is monstrous to me that the situation should be made on either side a political occasion for private ambition or for party ends.

I would speak of this subject with the utmost frankness if I knew what to say. It is not much of a confession to say that I do not. The more I study it the less I know, and those among you who give it the most anxious thought are the most perplexed, the subject has so many conflicting aspects. In the first place there is the evolution of an undeveloped race. Every race has a right to fair play in the world and to make the most of its capacities, and to the help of the more favored in the attempt. If the suggestion recently made of a wholesale migration to Mexico were carried out, the South would be relieved in many ways, though the labor problem would be a serious one for a long time, but the "elevation" would be lost sight of or relegated to a foreign missionary enterprise; and as for results to the colored people themselves, there is the example of Hayti. If another suggestion, that of abandoning certain States to this race, were carried out, there is the example of Hayti again, and, besides, an anomaly introduced into the Republic foreign to its traditions, spirit, aspirations, and process of assimilation, alien to the entire historic movement of the Aryan races, and infinitely more dangerous to the idea of the Republic than if solid Ireland were dumped down in the Mississippi valley as an independent State.

On the other hand, there rests upon you the responsibility of maintaining a civilization—the civilization of America, not of Hayti or of Guatemala which we have so hardly won. It is neither to be expected nor desired that you should be ruled by an undeveloped race, ignorant of law, letters, history, politics, political economy. There is no right anywhere in numbers or unintelligence to rule intelligence. It is a travesty of civilization. No Northern State that I know of would submit to be ruled by an undeveloped race. And human nature is exactly in the South what it is in the North. That is one impregnable fact, to be taken as the basis of all our calculations; the whites of the South will not, cannot, be dominated, as matters now stand, by the colored race.

But, then, there is the suffrage, the universal, unqualified suffrage. And here is the dilemma. Suffrage once given, cannot be suppressed or denied, perverted by chicane or bribery without incalculable damage to the whole political body. Irregular methods once indulged in for one purpose, and towards one class, so sap the moral sense that they come to be used for all purposes. The danger is ultimately as great to those who suppress or pervert as it is to the suppressed and corrupted. It is the demoralization of all sound political action and life. I know whereof I speak. In the North, bribery in elections and intimidation are fatal to public morality. The legislature elected by bribery is a bribable body.

I believe that the fathers were right in making government depend upon the consent of the governed. I believe there has been as yet discovered no other basis of government so safe, so stable as popular suffrage, but the fathers never contemplated a suffrage without intelligence. It is a contradiction of terms. A proletariat without any political rights in a republic is no more dangerous than an unintelligent mob which can be used in elections by demagogues. Universal suffrage is not a universal panacea; it may be the best device attainable, but it is certain of abuse without safeguards. One of the absolutely necessary safeguards is an educational qualification. No one ought anywhere to exercise it who cannot read and write, and if I had my way, no one should cast a ballot who had not a fair conception of the effect of it, shown by a higher test of intelligence than the mere fact of ability to scrawl his name and to spell out a line or two in the Constitution. This much the State for its own protection is bound to require, for suffrage is an expediency, not a right belonging to universal humanity regardless of intelligence or of character.

The charge is, with regard to this universal suffrage, that you take the fruits of increased representation produced by it, and then deny it to a portion of the voters whose action was expected to produce a different political result. I cannot but regard it as a blunder in statesmanship to give suffrage without an educational qualification, and to deem it possible to put ignorance over intelligence. You are not, responsible for the situation, but you are none the less in an illogical position before the law. Now, would you not gain more in a rectification of your position than you would lose in other ways, by making suffrage depend upon an educational qualification? I do not mean gain party-wise, but in political morals and general prosperity. Time would certainly be gained by this, and it is possible in this shifting world, in the growth of industries and the flow of populations, that before the question of supremacy was again upon you, foreign and industrial immigration would restore the race balance.

We come now to education. The colored race being here, I assume that its education, with the probabilities this involves of its elevation, is a duty as well as a necessity. I speak both of the inherent justice there is in giving every human being the chance of bettering his condition and increasing his happiness that lies in education—unless our whole theory of modern life is wrong—and also of the political and social danger there is in a degraded class numerically strong. Granted integral membership in a body politic, education is a necessity. I am aware of the danger of half education, of that smattering of knowledge which only breeds conceit, adroitness, and a consciousness of physical power, without due responsibility and moral restraint. Education makes a race more powerful both for evil and for good. I see the danger that many apprehend. And the outlook, with any amount of education, would be hopeless, not only as regards the negro and those in neighborhood relations with him, if education should not bring with it thrift, sense of responsibility as a citizen, and virtue. What the negro race under the most favorable conditions is capable of remains to be shown; history does not help us much to determine thus far. It has always been a long pull for any race to rise out of primitive conditions; but I am sure for its own sake, and for the sake of the republic where it dwells, every thoughtful person must desire the most speedy intellectual and moral development possible of the African race. And I mean as a race.

Some distinguished English writers have suggested, with approval, that the solution of the race problem in

this country is fusion, and I have even heard discouraged Southerners accept it as a possibility. The result of their observation of the amalgamation of races and colors in Egypt, in Syria, and Mexico, must be very different from mine. When races of different color mingle there is almost invariably loss of physical stamina, and the lower moral qualities of each are developed in the combination. No race that regards its own future would desire it. The absorption theory as applied to America is, it seems to me, chimerical.

But to return to education. It should always be fitted to the stage of development. It should always mean discipline, the training of the powers and capacities. The early pioneers who planted civilization on the Watauga, the Holston, the Kentucky, the Cumberland, had not much broad learning—they would not have been worse if they had had more but they had courage, they were trained in self-reliance, virile common sense, and good judgment, they had inherited the instinct and capacity of self-government, they were religious, with all their coarseness they had the fundamental elements of nobility, the domestic virtues, and the public spirit needed in the foundation of states. Their education in all the manly arts and crafts of the backwoodsman fitted them very well for the work they had to do. I should say that the education of the colored race in America should be fundamental. I have not much confidence in an ornamental top-dressing of philosophy, theology, and classic learning upon the foundation of an unformed and unstable mental and moral condition. Somehow, character must be built up, and character depends upon industry, upon thrift, upon morals, upon correct ethical perceptions. To have control of one's powers, to have skill in labor, so that work in any occupation shall be intelligent, to have self-respect, which commonly comes from trained capacity, to know how to live, to have a clean, orderly house, to be grounded in honesty and the domestic virtues,—these are the essentials of progress. I suppose that the education to produce these must be an elemental and practical one, one that fits for the duties of life and not for some imaginary sphere above them.

To put it in a word, and not denying that there must be schools for teaching the teachers, with the understanding that the teachers should be able to teach what the mass most needs to know—what the race needs for its own good today, are industrial and manual training schools, with the varied and practical discipline and arts of life which they impart.

What then? What of the 'modus vivendi' of the two races occupying the same soil? As I said before, I do not know. Providence works slowly. Time and patience only solve such enigmas. The impossible is not expected of man, only that he shall do today the duty nearest to him. It is easy, you say, for an outsider to preach waiting, patience, forbearance, sympathy, helpfulness. Well, these are the important lessons we get out of history. We struggle, and fume, and fret, and accomplish little in our brief hour, but somehow the world gets on. Fortunately for us, we cannot do today the work of tomorrow. All the gospel in the world can be boiled down into a single precept. Do right now. I have observed that the boy who starts in the morning with a determination to behave himself till bedtime, usually gets through the day without a thrashing.

But of one thing I am sure. In the rush of industries, in the race problem, it is more and more incumbent upon such institutions as the University of the South to maintain the highest standard of pure scholarship, to increase the number of men and women devoted to the intellectual life. Long ago, in the middle of the seventeenth century, John Ward of Stratford-on-Avon, clergyman and physician, wrote in his diary: "The wealth of a nation depends upon its populousness, and its populousness depends upon the liberty of conscience that is granted to it, for this calls in strangers and promotes trading." Great is the attraction of a benign climate and of a fruitful soil, but a greater attraction is an intelligent people, that values the best things in life, a society hospitable, companionable, instinct with intellectual life, awake to the great ideas that make life interesting.

As I travel through the South and become acquainted with its magnificent resources and opportunities, and know better and love more the admirable qualities of its people, I cannot but muse in a fond prophecy upon the brilliant part it is to play in the diversified life and the great future of the American Republic. But, North and South, we have a hard fight with materializing tendencies. God bless the University of the South!

THE PILGRIM, AND THE AMERICAN OF TODAY—1892

By Charles Dudley Warner

This December evening, the imagination, by a law of contrast, recalls another December night two hundred and seventy years ago. The circle of darkness is drawn about a little group of Pilgrims who have come ashore on a sandy and inhospitable coast. On one side is a vexed and wintry sea, three thousand miles of tossing waves and tempest, beyond which lie the home, the hedgerows and cottages, the church towers, the libraries and universities, the habits and associations of an old civilization, the strongest and dearest ties that can entwine around a human heart, abandoned now definitely and forever by these wanderers; on the other side a wintry forest of unknown extent, without highways, the lair of wild beasts, impenetrable except by trails known only to the savages, whose sudden appearance and disappearance adds mystery and terror to the impression the imagination has conjured up of the wilderness.

This darkness is symbolic. It stands for a vaster obscurity. This is an encampment on the edge of a continent, the proportions of which are unknown, the form of which is only conjectured. Behind this screen of forest are there hills, great streams, with broad valleys, ranges of mountains perhaps, vast plains, lakes, other wildernesses of illimitable extent? The adventurers on the James hoped they could follow the stream to highlands that looked off upon the South Sea, a new route to India and the Spice Islands. This unknown continent is attacked, it is true, in more than one place. The Dutch are at the mouth of the Hudson; there is a London company on the James; the Spaniards have been long in Florida, and have carried religion and

civilization into the deserts of New Mexico. Nevertheless, the continent, vaster and more varied than was guessed, is practically undiscovered, untrodden. How inadequate to the subjection of any considerable portion of it seems this little band of ill-equipped adventurers, who cannot without peril of life stray a league from the bay where the "Mayflower" lies.

It is not to be supposed that the Pilgrims had an adequate conception of the continent, or of the magnitude of their mission on it, or of the nation to come of which they were laying the foundations. They did the duty that lay nearest to them; and the duty done today, perhaps without prescience of its consequences, becomes a permanent stone in the edifice of the future. They sought a home in a fresh wilderness, where they might be undisturbed by superior human authority; they had no doctrinarian notions of equality, nor of the inequality which is the only possible condition of liberty; the idea of toleration was not born in their age; they did not project a republic; they established a theocracy, a church which assumed all the functions of a state, recognizing one Supreme Power, whose will in human conduct they were to interpret. Already, however, in the first moment, with a true instinct of self-government, they drew together in the cabin of the "Mayflower" in an association—to carry out the divine will in society. But, behold how speedily their ideas expanded beyond the Jewish conception, necessarily expanded with opportunity and the practical self-dependence of colonies cut off from the aid of tradition, and brought face to face with the problems of communities left to themselves. Only a few years later, on the banks of the Connecticut, Thomas Hooker, the first American Democrat, proclaimed that "the foundation of authority is laid in the free consent of the people," that "the choice of public magistrates belongs unto the people, by God's own allowance," that it is the right of the people not only to choose but to limit the power of their rulers, and he exhorted, "as God has given us liberty to take it." There, at that moment, in Hartford, American democracy was born; and in the republican union of the three towns of the Connecticut colony, Hartford, Windsor, and Wethersfield, was the germ of the American federal system, which was adopted into the federal constitution and known at the time as the "Connecticut Compromise."

It were not worth while for me to come a thousand miles to say this, or to draw over again for the hundredth time the character of the New England Pilgrim, nor to sketch his achievement on this continent. But it is pertinent to recall his spirit, his attitude toward life, and to inquire what he would probably do in the circumstances in which we find ourselves.

It is another December night, before the dawn of a new year. And this night still symbolizes the future. You have subdued a continent, and it stands in the daylight radiant with a material splendor of which the Pilgrims never dreamed. Yet a continent as dark, as unknown, exists. It is yourselves, your future, your national life. The other continent was made, you had only to discover it, to uncover it. This you must make yourselves.

We have finished the outline sketch of a magnificent nation. The territory is ample; it includes every variety of climate, in the changing seasons, every variety of physical conformation, every kind of production suited to the wants, almost everything desired in the imagination, of man. It comes nearer than any empire in history to being self-sufficient, physically independent of the rest of the globe. That is to say, if it were shut off from the rest of the world, it has in itself the material for great comfort and civilization. And it has the elements of motion, of agitation, of life, because the vast territory is filling up with a rapidity unexampled in history. I am not saying that isolated it could attain the highest civilization, or that if it did touch a high one it could long hold it in a living growth, cut off from the rest of the world. I do not believe it. For no state, however large, is sufficient unto itself. No state is really alive in the highest sense whose receptivity is not equal to its power to contribute to the world with which its destiny is bound up. It is only at its best when it is a part of the vital current of movement, of sympathy, of hope, of enthusiasm of the world at large. There is no doctrine so belittling, so withering to our national life, as that which conceives our destiny to be a life of exclusion of the affairs and interests of the whole globe, hemmed in to the selfish development of our material wealth and strength, surrounded by a Chinese wall built of strata of prejudice on the outside and of ignorance on the inside. Fortunately it is a conception impossible to be realized.

There is something captivating to the imagination in being a citizen of a great nation, one powerful enough to command respect everywhere, and so just as not to excite fear anywhere. This proud feeling of citizenship is a substantial part of a man's enjoyment of life; and there is a certain compensation for hardships, for privations, for self-sacrifice, in the glory of one's own country. It is not a delusion that one can afford to die for it. But what in the last analysis is the object of a government? What is the essential thing, without which even the glory of a nation passes into shame, and the vastness of empire becomes a mockery? I will not say that it is the well-being of every individual, because the term well-being—the 'bien etre' of the philosophers of the eighteenth century—has mainly a materialistic interpretation, and may be attained by a compromise of the higher life to comfort, and even of patriotism to selfish enjoyment.

That is the best government in which the people, and all the people, get the most out of life; for the object of being in this world is not primarily to build up a government, a monarchy, an aristocracy, a democracy, or a republic, or to make a nation, but to live the best sort of life that can be lived.

We think that our form of government is the one best calculated to attain this end. It is of all others yet tried in this world the one least felt by the people, least felt as an interference in the affairs of private life, in opinion, in conscience, in our freedom to attain position, to make money, to move from place to place, and to follow any career that is open to our ability. In order to maintain this freedom of action, this non-interference, we are bound to resist centralization of power; for a central power in a republic, grasped and administered by bosses, is no more tolerable than central power in a despotism, grasped and administered by a hereditary aristocrat. Let us not be deceived by names. Government by the consent of the people is the best government, but it is not government by the people when it is in the hands of political bosses, who juggle with the theory of majority rule. What republics have most to fear is the rule of the boss, who is a tyrant without responsibility. He makes the nominations, he dickers and trades for the elections, and at the end he divides the spoils. The operation is more uncertain than a horse race, which is not decided by the speed of the horses, but by the state of the wagers and the manipulation of the jockeys. We strike directly at his power for mischief when we organize the entire civil service of the nation and of the States on capacity, integrity, experience, and not on political power.

And if we look further, considering the danger of concentration of power in irresponsible hands, we see a new cause for alarm in undue federal mastery and interference. This we can only resist by the constant assertion of the rights, the power, the dignity of the individual State, all that it has not surrendered in the fundamental constitution of the Republic. This means the full weight of the State, as a State, as a political unit, in the election of President; and the full weight of the State, as a State, as a political unit, without regard to its population, in the senate of the United States. The senate, as it stands, as it was meant to be in the Constitution, is the strongest safeguard which the fundamental law established against centralization, against the tyranny of mere majorities, against the destruction of liberty, in such a diversity of climates and conditions as we have in our vast continent. It is not a mere check upon hasty legislation; like some second chambers in Europe, it is the representative of powers whose preservation in their dignity is essential to the preservation of the form of our government itself.

We pursue the same distribution of power and responsibility when we pass to the States. The federal government is not to interfere in what the State can do and ought to do for itself; the State is not to meddle with what the county can best do for itself; nor the county in the affairs best administered by the town and the municipality. And so we come to the individual citizen. He cannot delegate his responsibility. The government even of the smallest community must be, at least is, run by parties and by party machinery. But if he wants good government, he must pay as careful attention to the machinery,—call it caucus, primary, convention, town-meeting,—as he does to the machinery of his own business. If he hands it over to bosses, who make politics a trade for their own livelihood, he will find himself in the condition of stockholders of a bank whose directors are mere dummies, when some day the cashier packs the assets and goes on a foreign journey for his health. When the citizen simply does his duty in the place where he stands, the boss will be eliminated, in the nation, in the State, in the town, and we shall have, what by courtesy we say we have now, a government by the people. Then all the way down from the capital to the city ward, we shall have vital popular government, free action, discussion, agitation, life. What an anomaly it is, that a free people, reputed shrewd and intelligent, should intrust their most vital interests, the making of their laws, the laying of their taxes, the spending of their money, even their education and the management of their public institutions, into the keeping of political bosses, whom they would not trust to manage the least of their business affairs, nor to arbitrate on what is called a trial of speed at an agricultural fair.

But a good government, the best government, is only an opportunity. However vast the country may become in wealth and population, it cannot rise in quality above the average of the majority of its citizens; and its goodness will be tested in history by its value to the average man, not by its bigness, not by its power, but by its adaptability to the people governed, so as to develop the best that is in them. It is incidental and imperative that the country should be an agreeable one to live in; but it must be more than that, it must be favorable to the growth of the higher life. The Puritan community of Massachusetts Bay, whose spirit we may happily contrast with that of the Pilgrims whose anniversary we celebrate, must have been as disagreeable to live in as any that history records; not only were the physical conditions of life hard, but its inquisitorial intolerance overmatched that which it escaped in England. It was a theocratic despotism, untempered by recreation or amusement, and repressive not only of freedom of expression but of freedom of thought. But it had an unconquerable will, a mighty sense of duty, a faith in God, which not only established its grip upon the continent but carried its influence from one ocean to the other. It did not conquer by its bigotry, by its intolerance, its cruel persecuting spirit, but by its higher mental and spiritual stamina. These lower and baser qualities of the age of the Puritans leave a stain upon a great achievement; it took Massachusetts almost two centuries to cast them off and come into a wholesome freedom, but the vital energy and the recognition of the essential verities inhuman life carried all the institutions of the Puritans that were life-giving over the continent.

Here in the West you are near the centre of a vast empire, you feel its mighty pulse, the throb and heartbeat of its immense and growing strength. Some of you have seen this great civilization actually grow on the vacant prairies, in the unoccupied wilderness, on the sandy shores of the inland seas. You have seen the trails of the Indian and the deer replaced by highways of steel, and upon the spots where the first immigrants corralled their wagons, and the voyagers dragged their canoes upon the reedy shore, you have seen arise great cities, centres of industry, of commerce, of art, attaining in a generation the proportions and the world-wide fame of cities that were already famous before the discovery of America.

Naturally the country is proud of this achievement. Naturally we magnify our material prosperity. But in this age of science and invention this development may be said to be inevitable, and besides it is the necessary outlet of the energy of a free people. There must be growth of cities, extension of railways, improvement of agriculture, development of manufactures, amassing of wealth, concentration of capital, beautifying of homes, splendid public buildings, private palaces, luxury, display. Without reservoirs of wealth there would be no great universities, schools of science, museums, galleries of art, libraries, solid institutions of charity, and perhaps not the wide diffusion of culture which is the avowed aim of modern civilization.

But this in its kind is an old story. It is an experiment that has been repeated over and over. History is the record of the rise of splendid civilizations, many of which have flowered into the most glorious products of learning and of art, and have left monuments of the proudest material achievements. Except in the rapidity with which steam and electricity have enabled us to move to our object, and in the discoveries of science which enable us to relieve suffering and prolong human life, there is nothing new in our experiment. We are pursuing substantially the old ends of material success and display. And the ends are not different because we have more people in a nation, or bigger cities with taller buildings, or more miles of railway, or grow more corn and cotton, or make more plows and threshing-machines, or have a greater variety of products than any nation ever had before. I fancy that a pleased visitor from another planet the other day at Chicago, who was shown an assembly much larger than ever before met under one roof, might have been interested to know that it was also the wisest, the most cultivated, the most weighty in character of any assembly ever gathered under one roof. Our experiment on this continent was intended to be something more than the creation of a nation on the old pattern, that should become big and strong, and rich and luxurious, divided into classes of the very wealthy and the very poor, of the enlightened and the illiterate. It was intended to be a nation in which the welfare of the people is the supreme object, and whatever its show among nations it fails if it does

not become this. This welfare is an individual matter, and it means many things. It includes in the first place physical comfort for every person willing and deserving to be physically comfortable, decent lodging, good food, sufficient clothing. It means, in the second place, that this shall be an agreeable country to live in, by reason of its impartial laws, social amenities, and a fair chance to enjoy the gifts of nature and Providence. And it means, again, the opportunity to develop talents, aptitudes for cultivation and enjoyment, in short, freedom to make the most possible out of our lives. This is what Jefferson meant by the "pursuit of happiness"; it was what the Constitution meant by the "general welfare," and what it tried to secure in States, safe-guarded enough to secure independence in the play of local ambition and home rule, and in a federal republic strong enough to protect the whole from foreign interference. We are in no vain chase of an equality which would eliminate all individual initiative, and check all progress, by ignoring differences of capacity and strength, and rating muscles equal to brains. But we are in pursuit of equal laws, and a fairer chance of leading happy lives than humanity in general ever had yet. And this fairer chance would not, for instance, permit any man to become a millionaire by so manipulating railways that the subscribing towns and private stockholders should lose their investments; nor would it assume that any Gentile or Jew has the right to grow rich by the chance of compelling poor women to make shirts for six cents apiece. The public opinion which sustains these deeds is as un-American, and as guilty as their doers. While abuses like these exist, tolerated by the majority that not only make public opinion, but make the laws, this is not a government for the people, any more than a government of bosses is a government by the people.

The Pilgrims of Plymouth could see no way of shaping their lives in accordance with the higher law except by separating themselves from the world. We have their problem, how to make the most of our lives, but the conditions have changed. Ours is an age of scientific aggression, fierce competition, and the widest toleration. The horizon of humanity is enlarged. To live the life now is to be no more isolated or separate, but to throw ourselves into the great movement of thought, and feeling, and achievement. Therefore we are altruists in charity, missionaries of humanity, patriots at home. Therefore we have a justifiable pride in the growth, the wealth, the power of the nation, the state, the city. But the stream cannot rise above its source. The nation is what the majority of its citizens are. It is to be judged by the condition of its humblest members. We shall gain nothing over other experiments in government, although we have money enough to buy peace from the rest of the world, or arms enough to conquer it, although we rear upon our material prosperity a structure of scientific achievement, of art, of literature unparalleled, if the common people are not sharers in this great prosperity, and are not fuller of hope and of the enjoyment of life than common people ever were before.

And we are all common people when it comes to that. Whatever the greatness of the nation, whatever the accumulation of wealth, the worth of the world to us is exactly the worth of our individual lives. The magnificent opportunity in this Republic is that we may make the most possible out of our lives, and it will continue only as we adhere to the original conception of the Republic. Politics without virtue, money-making without conscience, may result in great splendor, but as such an experiment is not new, its end can be predicted. An agreeable home for a vast, and a free, and a happy people is quite another thing. It expects thrift, it expects prosperity, but its foundations are in the moral and spiritual life.

Therefore I say that we are still to make the continent we have discovered and occupied, and that the scope and quality of our national life are still to be determined. If they are determined not by the narrow tenets of the Pilgrims, but by their high sense of duty, and of the value of the human soul, it will be a nation that will call the world up to a higher plane of action than it ever attained before, and it will bring in a new era of humanity. If they are determined by the vulgar successes of a mere material civilization, it is an experiment not worth making. It would have been better to have left the Indians in possession, to see if they could not have evolved out of their barbarism some new line of action.

The Pilgrims were poor, and they built their huts on a shore which gave such niggardly returns for labor that the utmost thrift was required to secure the necessities of life. Out of this struggle with nature and savage life was no doubt evolved the hardihood, the endurance, that builds states and wins the favors of fortune. But poverty is not commonly a nurse of virtue, long continued, it is a degeneration. It is almost as difficult for the very poor man to be virtuous as for the very rich man; and very good and very rich at the same time, says Socrates, a man cannot be. It is a great people that can withstand great prosperity. The condition of comfort without extremes is that which makes a happy life. I know a village of old-fashioned houses and broad elm-shaded streets in New England, indeed more than one, where no one is inordinately rich, and no one is very poor, where paupers are so scarce that it is difficult to find beneficiaries for the small traditional contribution for the church poor; where the homes are centres of intelligence, of interest in books, in the news of the world, in the church, in the school, in politics; whence go young men and women to the colleges, teachers to the illiterate parts of the land, missionaries to the city slums. Multiply such villages all over the country, and we have one of the chief requisites for an ideal republic.

This has been the longing of humanity. Poets have sung of it; prophets have had visions of it; statesmen have striven for it; patriots have died for it. There must be somewhere, some time, a fruition of so much suffering, so much sacrifice, a land of equal laws and equal opportunities, a government of all the people for the benefit of all the people; where the conditions of living will be so adjusted that every one can make the most out of his life, neither waste it in hopeless slavery nor in selfish tyranny, where poverty and crime will not be hereditary generation after generation, where great fortunes will not be for vulgar ostentation, but for the service of humanity and the glory of the State, where the privileges of freemen will be so valued that no one will be mean enough to sell his vote nor corrupt enough to attempt to buy a vote, where the truth will at last be recognized, that the society is not prosperous when half its members are lucky, and half are miserable, and that that nation can only be truly great that takes its orders from the Great Teacher of Humanity.

And, lo! at last here is a great continent, virgin, fertile, a land of sun and shower and bloom, discovered, organized into a great nation, with a government flexible in a distributed home rule, stiff as steel in a central power, already rich, already powerful. It is a land of promise. The materials are all here. Will you repeat the old experiment of a material success and a moral and spiritual failure? Or will you make it what humanity has

passionately longed for? Only good individual lives can do that.

SOME CAUSES OF THE PREVAILING DISCONTENT

By Charles Dudley Warner

The Declaration of Independence opens with the statement of a great and fruitful political truth. But if it had said:—"We hold these truths to be self-evident: that all men are created unequal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty and the pursuit of happiness," it would also have stated the truth; and if it had added, "All men are born in society with certain duties which cannot be disregarded without danger to the social state," it would have laid down a necessary corollary to the first declaration. No doubt those who signed the document understood that the second clause limited the first, and that men are created equal only in respect to certain rights. But the first part of the clause has been taken alone as the statement of a self-evident truth, and the attempt to make this unlimited phrase a reality has caused a great deal of misery. In connection with the neglect of the idea that the recognition of certain duties is as important as the recognition of rights in the political and social state—that is, in connection with the doctrine of *laissez faire*—this popular notion of equality is one of the most disastrous forces in modern society.

Doubtless men might have been created equal to each other in every respect, with the same mental capacity, the same physical ability, with like inheritances of good or bad qualities, and born into exactly similar conditions, and not dependent on each other. But men never were so created and born, so far as we have any record of them, and by analogy we have no reason to suppose that they ever will be. Inequality is the most striking fact in life. Absolute equality might be better, but so far as we can see, the law of the universe is infinite diversity in unity; and variety in condition is the essential of what we call progress—it is, in fact, life. The great doctrine of the Christian era—the brotherhood of man and the duty of the strong to the weak—is in sharp contrast with this doctrinarian notion of equality. The Christian religion never proposed to remove the inequalities of life or its suffering, but by the incoming of charity and contentment and a high mind to give individual men a power to be superior to their conditions.

It cannot, however, be denied that the spirit of Christianity has ameliorated the condition of civilized peoples, cooperating in this with beneficent inventions. Never were the mass of the people so well fed, so well clad, so well housed, as today in the United States. Their ordinary daily comforts and privileges were the luxuries of a former age, often indeed unknown and unattainable to the most fortunate and privileged classes. Nowhere else is it or was it so easy for a man to change his condition, to satisfy his wants, nowhere else has he or had he such advantages of education, such facilities of travel, such an opportunity to find an environment to suit himself. As a rule the mass of mankind have been spot where they were born. A mighty change has taken place in regard to liberty, freedom of personal action, the possibility of coming into contact with varied life and an enlarged participation in the bounties of nature and the inventions of genius. The whole world is in motion, and at liberty to be so. Everywhere that civilization has gone there is an immense improvement in material conditions during the last one hundred years.

And yet men were never so discontented, nor did they ever find so many ways of expressing their discontent. In view of the general amelioration of the conditions of life this seems unreasonable and illogical, but it may seem less so when we reflect that human nature is unchanged, and that which has to be satisfied in this world is the mind. And there are some exceptions to this general material prosperity, in its result to the working classes. Manufacturing England is an exception. There is nothing so pitiful, so hopeless in the record of man, not in the Middle Ages, not in rural France just before the Revolution, as the physical and mental condition of the operators in the great manufacturing cities and in the vast reeking slums of London. The political economists have made England the world's great workshop, on the theory that wealth is the greatest good in life, and that with the golden streams flowing into England from a tributary world, wages would rise, food be cheap, employment constant. The horrible result to humanity is one of the exceptions to the general uplift of the race, not paralleled as yet by anything in this country, but to be taken note of as a possible outcome of any material civilization, and fit to set us thinking whether we have not got on a wrong track. Mr. Froude, fresh from a sight of the misery of industrial England, and borne straight on toward Australia over a vast ocean, through calm and storm, by a great steamer,—horses of fire yoked to a sea-chariot,—exclaims: "What, after all, have these wonderful achievements done to elevate human nature? Human nature remains as it was. Science grows, but morality is stationary, and art is vulgarized. Not here lie the 'things necessary to salvation,' not the things which can give to human life grace, or beauty, or dignity."

In the United States, with its open opportunities, abundant land, where the condition of the laboring class is better actually and in possibility than it ever was in history, and where there is little poverty except that which is inevitably the accompaniment of human weakness and crime, the prevailing discontent seems groundless. But of course an agitation so widespread, so much in earnest, so capable of evoking sacrifice, even to the verge of starvation and the risk of life, must have some reason in human nature. Even an illusion—and men are as ready to die for an illusion as for a reality—cannot exist without a cause.

Now, content does not depend so much upon a man's actual as his relative condition. Often it is not so much what I need, as what others have that disturbs me. I should be content to walk from Boston to New York, and be a fortnight on the way, if everybody else was obliged to walk who made that journey. It becomes a hardship when my neighbor is whisked over the route in six hours and I have to walk. It would still be a hardship if he attained the ability to go in an hour, when I was only able to accomplish the distance in six hours. While there has been a tremendous uplift all along the line of material conditions, and the laboring

man who is sober and industrious has comforts and privileges in his daily life which the rich man who was sober and industrious did not enjoy a hundred years ago, the relative position of the rich man and the poor man has not greatly changed. It is true, especially in the United States, that the poor have become rich and the rich poor, but inequality of condition is about as marked as it was before the invention of labor-saving machinery, and though workmen are better off in many ways, the accumulation of vast fortunes, acquired often in brutal disregard of humanity, marks the contrast of conditions perhaps more emphatically than it ever appeared before. That this inequality should continue in an era of universal education, universal suffrage, universal locomotion, universal emancipation from nearly all tradition, is a surprise, and a perfectly comprehensible cause of discontent. It is axiomatic that all men are created equal. But, somehow, the problem does not work out in the desired actual equality of conditions. Perhaps it can be forced to the right conclusion by violence.

It ought to be said, as to the United States, that a very considerable part of the discontent is imported, it is not native, nor based on any actual state of things existing here. Agitation has become a business. A great many men and some women, to whom work of any sort is distasteful, live by it. Some of them are refugees from military or political despotism, some are refugees from justice, some from the lowest conditions of industrial slavery. When they come here, they assume that the hardships they have come away to escape exist here, and they begin agitating against them. Their business is to so mix the real wrongs of our social life with imaginary hardships, and to heighten the whole with illusory and often debasing theories, that discontent will be engendered. For it is by means of that only that they live. It requires usually a great deal of labor, of organization, of oratory to work up this discontent so that it is profitable. The solid workmen of America who know the value of industry and thrift, and have confidence in the relief to be obtained from all relievable wrongs by legitimate political or other sedate action, have no time to give to the leadership of agitations which require them to quit work, and destroy industries, and attack the social order upon which they depend. The whole case, you may remember, was embodied thousands of years ago in a parable, which Jotham, standing on the top of Mount Gerizim, spoke to the men of Shechem:

"The trees went forth on a time to anoint a king over them; and they said unto the olive-tree, 'Reign thou over us.'

"But the olive-tree said unto them, 'Should I leave my fatness wherewith by me they honor God and man, and go to be promoted over the trees?'

"And the trees said to the fig-tree, 'Come thou and reign over us.'

"But the fig-tree said unto them, 'Should I forsake my sweetness and my good fruit, and go to be promoted over the trees?'

"Then said the trees unto the vine, 'Come thou and reign over us.'

"And the vine said unto them, 'Should I leave my wine, which cheereth God and man, and go to be promoted over the trees?'

"Then said the trees unto the bramble, 'Come thou and reign over us.'

"And the bramble said to the trees, 'If in truth ye anoint me king over you, then come and put your trust in my shadow; and if not, let fire come out of the bramble, and devour the cedars of Lebanon.'"

In our day a conflagration of the cedars of Lebanon has been the only result of the kingship of the bramble.

In the opinion of many, our universal education is one of the chief causes of the discontent. This might be true and not be an argument against education, for a certain amount of discontent is essential to self-development and if, as we believe, the development of the best powers of every human being is a good in itself, education ought not to be held responsible for the evils attending a transitional period. Yet we cannot ignore the danger, in the present stage, of an education that is necessarily superficial, that engenders conceit of knowledge and power, rather than real knowledge and power, and that breeds in two-thirds of those who have it a distaste for useful labor. We believe in education; but there must be something wrong in an education that sets so many people at odds with the facts of life, and, above all, does not furnish them with any protection against the wildest illusions. There is something wanting in the education that only half educates people.

Whether there is the relation of cause and effect between the two I do not pretend to say, but universal and superficial education in this country has been accompanied with the most extraordinary delusions and the evolution of the wildest theories. It is only necessary to refer, by way of illustration, to the greenback illusion, and to the whole group of spiritualistic disturbances and psychological epidemics. It sometimes seems as if half the American people were losing the power to apply logical processes to the ordinary affairs of life.

In studying the discontent in this country which takes the form of a labor movement, one is at first struck by its illogical aspects. So far as it is an organized attempt to better the condition of men by association of interests it is consistent. But it seems strange that the doctrine of individualism should so speedily have an outcome in a personal slavery, only better in the sense that it is voluntary, than that which it protested against. The revolt from authority, the assertion of the right of private judgment, has been pushed forward into a socialism which destroys individual liberty of action, or to a state of anarchy in which the weak would have no protection. I do not imagine that the leaders who preach socialism, who live by agitation and not by labor, really desire to overturn the social order and bring chaos. If social chaos came, their occupation would be gone, for if all men were reduced to a level, they would be compelled to scratch about with the rest for a living. They live by agitation, and they are confident that government will be strong enough to hold things together, so that they can continue agitation.

The strange thing is that their followers who live by labor and expect to live by it, and believe in the doctrine of individualism, and love liberty of action, should be willing to surrender their discretion to an arbitrary committee, and should expect that liberty of action would be preserved if all property were handed over to the State, which should undertake to regulate every man's time, occupation, wages, and so on. The central committee or authority, or whatever it might be called, would be an extraordinary despotism, tempered only by the idea that it could be overturned every twenty-four hours. But what security would there be for any calculations in life in a state of things in expectation of a revolution any moment? Compared with

the freedom of action in such a government as ours, any form of communism is an iniquitous and meddlesome despotism. In a less degree an association to which a man surrenders the right to say when, where, and for how much he shall work, is a despotism, and when it goes further and attempts to put a pressure on all men outside of the association, so that they are free neither to work nor to hire the workmen they choose, it is an extraordinary tyranny. It almost puts in the shade Mexican or Russian personal government. A demand is made upon a railway company that it shall discharge a certain workman because and only because he is not a member of the union. The company refuses. Then a distant committee orders a strike on that road, which throws business far and wide into confusion, and is the cause of heavy loss to tens of thousands who have no interest in any association of capital or labor, many of whom are ruined by this violence. Some of the results of this surrender of personal liberty are as illegal as illogical.

The boycott is a conspiracy to injure another person, and as such indictable at common law. A strike, if a conspiracy only to raise wages or to reduce hours of labor, may not be indictable, if its object cannot be shown to be the injury of another, though that may be incidentally its effect. But in its incidents, such as violence, intimidation, and in some cases injury to the public welfare, it often becomes an indictable offense. The law of conspiracy is the most ill-defined branch of jurisprudence, but it is safe to say of the boycott and the strike that they both introduce an insupportable element of tyranny, of dictation, of interference, into private life. If they could be maintained, society would be at the mercy of an irresponsible and even secret tribunal.

The strike is illogical. Take the recent experience in this country. We have had a long season of depression, in which many earned very little and labor sought employment in vain. In the latter part of winter the prospect brightened, business revived, orders for goods poured in to all the factories in the country, and everybody believed that we were on the eve of a very prosperous season. This was the time taken to order strikes, and they were enforced in perhaps a majority of cases against the wishes of those who obeyed the order, and who complained of no immediate grievance. What men chiefly wanted was the opportunity to work. The result has been to throw us all back into the condition of stagnation and depression. Many people are ruined, an immense amount of capital which ventured into enterprises is lost, but of course the greatest sufferers are the workingmen themselves.

The methods of violence suggested by the communists and anarchists are not remedial. Real difficulties exist, but these do not reach them. The fact is that people in any relations incur mutual obligations, and the world cannot go on without a recognition of duties as well as rights. We all agree that every man has a right to work for whom he pleases, and to quit the work if it does not or the wages do not suit him. On the other hand, a man has a right to hire whom he pleases, pay such wages as he thinks he can afford, and discharge men who do not suit him. But when men come together in the relation of employer and employed, other considerations arise. A man has capital which, instead of loaning at interest or locking up in real estate or bonds, he puts into a factory. In other words, he unlocks it for the benefit partly of men who want wages. He has the expectation of making money, of making more than he could by lending his money. Perhaps he will be disappointed, for a common experience is the loss of capital thus invested. He hires workmen at certain wages. On the strength of this arrangement, he accepts orders and makes contracts for the delivery of goods. He may make money one year and lose the next. It is better for the workman that he should prosper, for the fund of capital accumulated is that upon which they depend to give them wages in a dull time. But some day when he is in a corner with orders, and his rivals are competing for the market, and labor is scarce, his men strike on him.

Conversely, take the workman settled down to work in the mill, at the best wages attainable at the time. He has a house and family. He has given pledges to society. His employer has incurred certain duties in regard to him by the very nature of their relations. Suppose the workman and his family cannot live in any comfort on the wages he receives. The employer is morally bound to increase the wages if he can. But if, instead of sympathizing with the situation of his workman, he forms a combination with all the mills of his sort, and reduces wages merely to increase his gains, he is guilty of an act as worthy of indictment as the strike. I do not see why a conspiracy against labor is not as illegal as a conspiracy against capital. The truth is, the possession of power by men or associations makes them selfish and generally cruel. Few employers consider anything but the arithmetic of supply and demand in fixing wages, and workingmen who have the power, tend to act as selfishly as the male printers used to act in striking in an establishment which dared to give employment to women typesetters. It is of course sentimental to say it, but I do not expect we shall ever get on with less friction than we have now, until men recognize their duties as well as their rights in their relations with each other.

In running over some of the reasons for the present discontent, and the often illogical expression of it, I am far from saying anything against legitimate associations for securing justice and fair play. Disassociated labor has generally been powerless against accumulated capital. Of course, organized labor, getting power will use its power (as power is always used) unjustly and tyrannically. It will make mistakes, it will often injure itself while inflicting general damage. But with all its injustice, with all its surrender of personal liberty, it seeks to call the attention of the world to certain hideous wrongs, to which the world is likely to continue selfishly indifferent unless rudely shaken out of its sense of security. Some of the objects proposed by these associations are chimerical, but the agitation will doubtless go on until another element is introduced into work and wages than mere supply and demand. I believe that some time it will be impossible that a woman shall be forced to make shirts at six cents apiece, with the gaunt figures of starvation or a life of shame waiting at the door. I talked recently with the driver of a street-car in a large city. He received a dollar and sixty cents a day. He went on to his platform at eight in the morning, and left it at twelve at night, sixteen hours of continuous labor every day in the week. He had no rest for meals, only snatched what he could eat as he drove along, or at intervals of five or eight minutes at the end of routes. He had no Sunday, no holiday in the year.

Between twelve o'clock at night and eight the next morning he must wash and clean his car. Thus his hours of sleep were abridged. He was obliged to keep an eye on the passengers to see that they put their fares in the box, to be always, responsible for them, that they got on and off without accident, to watch that the rules

were enforced, and that collisions and common street dangers were avoided. This mental and physical strain for sixteen consecutive hours, with scant sleep, so demoralized him that he was obliged once in two or three months to hire a substitute and go away to sleep. This is treating a human being with less consideration than the horses receive. He is powerless against the great corporation; if he complains, his place is instantly filled; the public does not care.

Now what I want to say about this case, and that of the woman who makes a shirt for six cents (and these are only types of disregard of human souls and bodies that we are all familiar with), is that if society remains indifferent it must expect that organizations will attempt to right them, and the like wrongs, by ways violent and destructive of the innocent and guilty alike. It is human nature, it is the lesson of history, that real wrongs, unredressed, grow into preposterous demands. Men are much like nature in action; a little disturbance of atmospheric equilibrium becomes a cyclone, a slight break in the levee 'a crevasse with immense destructive power.

In considering the growth of discontent, and of a natural disregard of duties between employers and employed, it is to be noted that while wages in nearly all trades are high, the service rendered deteriorates, less conscience is put into the work, less care to give a fair day's work for a fair day's wages, and that pride in good work is vanishing. This may be in the nature of retaliation for the indifference to humanity taught by a certain school of political economists, but it is, nevertheless, one of the most alarming features of these times. How to cultivate the sympathy of the employers with the employed as men, and how to interest the employed in their work beyond the mere wages they receive, is the double problem.

As the intention of this paper was not to suggest remedies, but only to review some of the causes of discontent, I will only say, as to this double problem, that I see no remedy so long as the popular notion prevails that the greatest good of life is to make money rapidly, and while it is denied that all men who contribute to prosperity ought to share equitably in it. The employed must recognize the necessity of an accumulated fund of capital, and on the other hand the employer must be as anxious to have about him a contented, prosperous community, as to heap up money beyond any reasonable use for it. The demand seems to be reasonable that the employer in a prosperous year ought to share with the workmen the profits beyond a limit that capital, risk, enterprise, and superior skill can legitimately claim; and that on the other hand the workmen should stand by the employer in hard times.

Discontent, then, arises from absurd notions of equality, from natural conditions of inequality, from false notions of education, and from the very patent fact, in this age, that men have been educated into wants much more rapidly than social conditions have been adjusted, or perhaps ever can be adjusted, to satisfy those wants. Beyond all the actual hardship and suffering, there is an immense mental discontent which has to be reckoned with.

This leads me to what I chiefly wanted to say in this paper, to the cause of discontent which seems to me altogether the most serious, altogether the most difficult to deal with. We may arrive at some conception of it, if we consider what it is that the well-to-do, the prosperous, the rich, the educated and cultivated portions of society, most value just now.

If, to take an illustration which is sufficiently remote to give us the necessary perspective, if the political economists, the manufacturers, the traders and aristocracy of England had had chiefly in mind the development of the laboring people of England into a fine type of men and women, full of health and physical vigor, with minds capable of expansion and enjoyment, the creation of decent, happy, and contented homes, would they have reared the industrial fabric we now see there? If they had not put the accumulation of wealth above the good of individual humanity, would they have turned England into a grimy and smoky workshop, commanding the markets of the world by cheap labor, condemning the mass of the people to unrelieved toil and the most squalid and degraded conditions of life in towns, while the land is more and more set apart for the parks and pleasure grounds of the rich? The policy pursued has made England the richest of countries, a land of the highest refinement and luxury for the upper classes, and of the most misery for the great mass of common people. On this point we have but to read the testimony of English writers themselves. It is not necessary to suppose that the political economists were inhuman. They no doubt believed that if England attained this commanding position, the accumulated wealth would raise all classes into better conditions. Their mistake is that of all peoples who have made money their first object. Looked at merely on the material side, you would think that what a philanthropic statesman would desire, who wished a vigorous, prosperous nation, would be a strong and virile population, thrifty and industrious, and not mere slaves of mines and mills, degenerating in their children, year by year, physically and morally. But apparently they have gone upon the theory that it is money, not man, that makes a state.

In the United States, under totally different conditions, and under an economic theory that, whatever its defects on paper, has nevertheless insisted more upon the worth of the individual man, we have had, all the same, a distinctly material development. When foreign critics have commented upon this, upon our superficiality, our commonplaceness, what they are pleased to call the weary level of our mediocrity, upon the raging unrest and race for fortune, and upon the tremendous pace of American life, we have said that this is incident to a new country and the necessity of controlling physical conditions, and of fitting our heterogeneous population to their environment. It is hardly to be expected, we have said, until we have the leisure that comes from easy circumstances and accumulated wealth, that we should show the graces of the highest civilization, in intellectual pursuits. Much of this criticism is ignorant, and to say the best of it, ungracious, considering what we have done in the way of substantial appliances for education, in the field of science, in vast charities, and missionary enterprises, and what we have to show in the diffused refinements of life.

We are already wealthy; we have greater resources and higher credit than any other nation; we have more wealth than any save one; we have vast accumulations of fortune, in private hands and in enormous corporations. There exists already, what could not be said to exist a quarter of a century ago, a class who have leisure. Now what is the object in life of this great, growing class that has money and leisure, what does it chiefly care for? In your experience of society, what is it that it pursues and desires? Is it things of the mind or things of the senses? What is it that interests women, men of fortune, club-men, merchants, and

professional men whose incomes give them leisure to follow their inclinations, the young men who have inherited money? Is it political duties, the affairs of state, economic problems, some adjustment of our relations that shall lighten and relieve the wrongs and misery everywhere apparent; is the interest in intellectual pursuits and art (except in a dilettante way dictated for a season by fashion) in books, in the wide range of mental pleasures which make men superior to the accidents of fortune? Or is the interest of this class, for the most part, with some noble exceptions, rather in things grossly material, in what is called pleasure? To come to somewhat vulgar details, is not the growing desire for equipages, for epicurean entertainments, for display, either refined or ostentatious, rivalry in profusion and expense, new methods for killing time, for every imaginable luxury, which is enjoyed partly because it pleases the senses, and partly because it satisfies an ignoble craving for class distinction?

I am not referring to these things as a moralist at all, but simply in their relation to popular discontent. The astonishing growth of luxury and the habit of sensual indulgence are seen everywhere in this country, but are most striking in the city of New York, since the fashion and wealth of the whole country meet there for display and indulgence,—New York, which rivals London and outdoes Paris in sumptuousness. There congregate more than elsewhere idlers, men and women of leisure who have nothing to do except to observe or to act in the spectacle of Vanity Fair. Aside from the display of luxury in the shops, in the streets, in private houses, one is impressed by the number of idle young men and women of fashion.

It is impossible that a workingman who stands upon a metropolitan street corner and observes this Bacchanalian revel and prodigality of expense, should not be embittered by a sense of the inequality of the conditions of life. But this is not the most mischievous effect of the spectacle. It is the example of what these people care for. With all their wealth and opportunities, it seems to him that these select people have no higher object than the pleasures of the senses, and he is taught daily by reiterated example that this is the end and aim of life. When he sees the value the intelligent and the well-to-do set upon material things, and their small regard for intellectual things and the pleasures of the mind, why should he not most passionately desire those things which his more fortunate neighbors put foremost? It is not the sight of a Peter Cooper and his wealth that discontents him, nor the intellectual pursuits of the scholar who uses the leisure his fortune gives him for the higher pleasures of the mind. But when society daily dings upon his senses the lesson that not manhood and high thinking and a contented spirit are the most desirable things, whether one is rich or poor, is he to be blamed for having a wrong notion of what will or should satisfy him? What the well-to-do, the prosperous, are seen to value most in life will be the things most desired by the less fortunate in accumulation. It is not so much the accumulation of money that is mischievous in this country, for the most stupid can see that fortunes are constantly shifting hands, but it is the use that is made of the leisure and opportunity that money brings.

Another observation, which makes men discontented with very slow accumulation, is that apparently, in the public estimation it does not make much difference whether a man acquires wealth justly or unjustly. If he only secures enough, he is a power, he has social position, he grasps the high honors and places in the state. The fact is that the toleration of men who secure wealth by well known dishonest and sharp practices is a chief cause of the demoralization of the public conscience.

However the lines social and political may be drawn, we have to keep in mind that nothing in one class can be foreign to any other, and that practically one philosophy underlies all the movements of an age. If our philosophy is material, resulting in selfish ethics, all our energies will have a materialistic tendency. It is not to be wondered at, therefore, that, in a time when making money is the chief object, if it is not reckoned the chief good, our education should all tend to what is called practical, that is, to that which can be immediately serviceable in some profitable occupation of life, to the neglect of those studies which are only of use in training the intellect and cultivating and broadening the higher intelligence. To this purely material and utilitarian idea of life, the higher colleges and universities everywhere are urged to conform themselves. Thus is the utilitarian spirit eating away the foundations of a higher intellectual life, applying to everything a material measure. In proportion as scholars yield to it, they are lowering the standard of what is most to be desired in human life, acting in perfect concert with that spirit which exalts money making as the chief good, which makes science itself the slave of the avaricious and greedy, and fills all the world with discontented and ignoble longing. We do not need to be told that if we neglect pure science for the pursuit of applied science only, applied science will speedily be degraded and unfruitful; and it is just as true that if we pursue knowledge only for the sake of gain, and not for its own sake, knowledge will lose the power it has of satisfying the higher needs of the human soul. If we are seen to put only a money value on the higher education, why should not the workingman, who regards it only as a distinction of class or privilege, estimate it by what he can see of its practical results in making men richer, or bringing him more pleasure of the senses?

The world is ruled by ideas, by abstract thought. Society, literature, art, politics, in any given age are what the prevailing system of philosophy makes them. We recognize this clearly in studying any past period. We see, for instance, how all the currents of human life changed upon the adoption of the inductive method; no science, no literature, no art, practical or fine, no person, inquiring scholar, day laborer, trader, sailor, fine lady or humblest housekeeper, escaped the influence. Even though the prevailing ethics may teach that every man's highest duty is to himself, we cannot escape community of sympathy and destiny in this cold-blooded philosophy.

No social or political movement stands by itself. If we inquire, we shall find one preponderating cause underlying every movement of the age. If the utilitarian spirit is abroad, it accounts for the devotion to the production of wealth, and to the consequent separation of classes and the discontent, and it accounts also for the demand that all education shall be immediately useful. I was talking the other day with a lady who was doubting what sort of an education to give her daughter, a young girl of exceedingly fine mental capacity. If she pursued a classical course, she would, at the age of twenty-one, know very little of the sciences. And I said, why not make her an intellectual woman? At twenty-one, with a trained mind, all knowledges are at one's feet.

If anything can correct the evils of devotion to money, it seems to me that it is the production of intellectual

men and women, who will find other satisfactions in life than those of the senses. And when labor sees what it is that is really most to be valued, its discontent will be of a nobler kind.

THE EDUCATION OF THE NEGRO

By Charles Dudley Warner

At the close of the war for the Union about five millions of negroes were added to the citizenship of the United States. By the census of 1890 this number had become over seven and a half millions. I use the word negro because the descriptive term black or colored is not determinative. There are many varieties of negroes among the African tribes, but all of them agree in certain physiological if not psychological characteristics, which separate them from all other races of mankind; whereas there are many races, black or colored, like the Abyssinian, which have no other negro traits.

It is also a matter of observation that the negro traits persist in recognizable manifestations, to the extent of occasional reversions, whatever may be the mixture of a white race. In a certain degree this persistence is true of all races not come from an historic common stock.

In the political reconstruction the negro was given the ballot without any requirements of education or property. This was partly a measure of party balance of power; and partly from a concern that the negro would not be secure in his rights as a citizen without it, and also upon the theory that the ballot is an educating influence.

This sudden transition and shifting of power was resented at the South, resisted at first, and finally it has generally been evaded. This was due to a variety of reasons or prejudices, not all of them creditable to a generous desire for the universal elevation of mankind, but one of them the historian will judge adequate to produce the result. Indeed, it might have been foreseen from the beginning. This reconstruction measure was an attempt to put the superior part of the community under the control of the inferior, these parts separated by all the prejudices of race, and by traditions of mastership on the one side and of servitude on the other. I venture to say that it was an experiment that would have failed in any community in the United States, whether it was presented as a piece of philanthropy or of punishment.

A necessary sequence to the enfranchisement of the negro was his education. However limited our idea of a proper common education may be, it is a fundamental requisite in our form of government that every voter should be able to read and write. A recognition of this truth led to the establishment in the South of public schools for the whites and blacks, in short, of a public school system. We are not to question the sincerity and generousness of this movement, however it may have halted and lost enthusiasm in many localities.

This opportunity of education (found also in private schools) was hailed by the negroes, certainly, with enthusiasm. It cannot be doubted that at the close of the war there was a general desire among the freedmen to be instructed in the rudiments of knowledge at least. Many parents, especially women, made great sacrifices to obtain for their children this advantage which had been denied to themselves. Many youths, both boys and girls, entered into it with a genuine thirst for knowledge which it was pathetic to see.

But it may be questioned, from developments that speedily followed, whether the mass of negroes did not really desire this advantage as a sign of freedom, rather than from a wish for knowledge, and covet it because it had formerly been the privilege of their masters, and marked a broad distinction between the races. It was natural that this should be so, when they had been excluded from this privilege by pains and penalties, when in some States it was one of the gravest offenses to teach a negro to read and write. This prohibition was accounted for by the peculiar sort of property that slavery created, which would become insecure if intelligent, for the alphabet is a terrible disturber of all false relations in society.

But the effort at education went further than the common school and the primary essential instruction. It introduced the higher education. Colleges usually called universities—for negroes were established in many Southern States, created and stimulated by the generosity of Northern men and societies, and often aided by the liberality of the States where they existed. The curriculum in these was that in colleges generally,—the classics, the higher mathematics, science, philosophy, the modern languages, and in some instances a certain technical instruction, which was being tried in some Northern colleges. The emphasis, however, was laid on liberal culture. This higher education was offered to the mass that still lacked the rudiments of intellectual training, in the belief that education—the education of the moment, the education of superimposed information, can realize the theory of universal equality.

This experiment has now been in operation long enough to enable us to judge something of its results and its promises for the future. These results are of a nature to lead us seriously to inquire whether our effort was founded upon an adequate knowledge of the negro, of his present development, of the requirements for his personal welfare and evolution in the scale of civilization, and for his training in useful and honorable citizenship. I am speaking of the majority, the mass to be considered in any general scheme, and not of the exceptional individuals—exceptions that will rapidly increase as the mass is lifted—who are capable of taking advantage to the utmost of all means of cultivation, and who must always be provided with all the opportunities needed.

Millions of dollars have been invested in the higher education of the negro, while this primary education has been, taking the whole mass, wholly inadequate to his needs. This has been upon the supposition that the higher would compel the rise of the lower with the undeveloped negro race as it does with the more highly developed white race. An examination of the soundness of this expectation will not lead us far astray from our subject.

The evolution of a race, distinguishing it from the formation of a nation, is a slow process. We recognize a

race by certain peculiar traits, and by characteristics which slowly change. They are acquired little by little in an evolution which, historically, it is often difficult to trace. They are due to the environment, to the discipline of life, and to what is technically called education. These work together to make what is called character, race character, and it is this which is transmitted from generation to generation. Acquirements are not hereditary, like habits and peculiarities, physical or mental. A man does not transmit to his descendants his learning, though he may transmit the aptitude for it. This is illustrated in factories where skilled labor is handed down and fixed in the same families, that is, where the same kind of labor is continued from one generation to another. The child, put to work, has not the knowledge of the parent, but a special aptitude in his skill and dexterity. Both body and mind have acquired certain transmissible traits. The same thing is seen on a larger scale in a whole nation, like the Japanese, who have been trained into what seems an art instinct.

It is this character, quality, habit, the result of a slow educational process, which distinguishes one race from another. It is this that the race transmits, and not the more or less accidental education of a decade or an era. The Brahmins carry this idea into the next life, and say that the departing spirit carries with him nothing except this individual character, no acquirements or information or extraneous culture. It was perhaps in the same spirit that the sad preacher in Ecclesiastes said there is no "knowledge nor wisdom in the grave, whither thou goest."

It is by this character that we classify civilized and even semi-civilized races; by this slowly developed fibre, this slow accumulation of inherent quality in the evolution of the human being from lower to higher, that continues to exist notwithstanding the powerful influence of governments and religions. We are understood when we speak of the French, the Italian, the Pole, the Spanish, the English, the German, the Arab race, the Japanese, and so on. It is what a foreign writer calls, not inaptly, a collective race soul. As it is slow in evolution, it is persistent in enduring.

Further, we recognize it as a stage of progress, historically necessary in the development of man into a civilized adaptation to his situation in this world. It is a process that cannot be much hurried, and a result that cannot be leaped to out of barbarism by any superimposition of knowledge or even quickly by any change of environment. We may be right in our modern notion that education has a magical virtue that can work any kind of transformation; but we are certainly not right in supposing that it can do this instantly, or that it can work this effect upon a barbarous race in the same period of time that it can upon one more developed, one that has acquired at least a race consciousness.

Before going further, and in order to avoid misunderstanding, it is proper to say that I have the firmest belief in the ultimate development of all mankind into a higher plane than it occupies now. I should otherwise be in despair. This faith will never desist in the effort to bring about the end desired.

But, if we work with Providence, we must work in the reasonable ways of Providence, and add to our faith patience.

It seems to be the rule in all history that the elevation of a lower race is effected only by contact with one higher in civilization. Both reform and progress come from exterior influences. This is axiomatic, and applies to the fields of government, religion, ethics, art, and letters.

We have been taught to regard Africa as a dark, stolid continent, unawakened, unvisited by the agencies and influences that have transformed the world from age to age. Yet it was in northern and northeastern Africa that within historic periods three of the most powerful and brilliant civilizations were developed,—the Egyptian, the Carthaginian, the Saracenic. That these civilizations had more than a surface contact with the interior, we know. To take the most ancient of them, and that which longest endured, the Egyptian, the Pharaohs carried their conquests and their power deep into Africa. In the story of their invasions and occupancy of the interior, told in pictures on temple walls, we find the negro figuring as captive and slave. This contact may not have been a fruitful one for the elevation of the negro, but it proves that for ages he was in one way or another in contact with a superior civilization. In later days we find little trace of it in the home of the negro, but in Egypt the negro has left his impress in the mixed blood of the Nile valley.

The most striking example of the contact of the negro with a higher civilization is in the powerful medieval empire of Songhay, established in the heart of the negro country. The vast strip of Africa lying north of the equator and south of the twentieth parallel and west of the upper Nile was then, as it is now, the territory of tribes distinctly described as Negro. The river Niger, running northward from below Jenne to near Timbuctoo, and then turning west and south to the Gulf of Guinea, flows through one of the richest valleys in the world. In richness it is comparable to that of the Nile and, like that of the Nile, its fertility depends upon the water of the central stream. Here arose in early times the powerful empire of Songhay, which disintegrated and fell into tribal confusion about the middle of the seventeenth century. For a long time the seat of its power was the city of Jenne; in later days it was Timbuctoo.

This is not the place to enlarge upon this extraordinary piece of history. The best account of the empire of Songhay is to be found in the pages of Barth, the German traveler, who had access to what seemed to him a credible Arab history. Considerable light is thrown upon it by a recent volume on Timbuctoo by M. Dubois, a French traveler. M. Dubois finds reason to believe that the founders of the Songhese empire came from Yemen, and sought refuge from Moslem fanaticism in Central Africa some hundred and fifty years after the Hejira. The origin of the empire is obscure, but the development was not indigenous. It seems probable that the settlers, following traders, penetrated to the Niger valley from the valley of the Nile as early as the third or fourth century of our era. An evidence of this early influence, which strengthened from century to century, Dubois finds in the architecture of Jenne and Timbuctoo. It is not Roman or Saracenic or Gothic, it is distinctly Pharaonic. But whatever the origin of the Songhay empire, it became in time Mohammedan, and so continued to the end. Mohammedanism seems, however, to have been imposed. Powerful as the empire was, it was never free from tribal insurrection and internal troubles. The highest mark of negro capacity developed in this history is, according to the record examined by Barth, that one of the emperors was a negro.

From all that can be gathered in the records, the mass of the negroes, which constituted the body of this empire, remained pagan, did not become, except in outward conformity, Mohammedan and did not take the Moslem civilization as it was developed elsewhere, and that the disintegration of the empire left the negro

races practically where they were before in point of development. This fact, if it is not overturned by further search, is open to the explanation that the Moslem civilization is not fitted to the development of the African negro.

Contact, such as it has been, with higher civilizations, has not in all these ages which have witnessed the wonderful rise and development of other races, much affected or changed the negro. He is much as he would be if he had been left to himself. And left to himself, even in such a favorable environment as America, he is slow to change. In Africa there has been no progress in organization, government, art.

No negro tribe has ever invented a written language. In his exhaustive work on the History of Mankind, Professor Frederick Ratzel, having studied thoroughly the negro belt of Africa, says "of writing properly so called, neither do the modern negroes show any trace, nor have traces of older writing been found in negro countries."

From this outline review we come back to the situation in the United States, where a great mass of negroes—possibly over nine millions of many shades of colors—is for the first time brought into contact with Christian civilization. This mass is here to make or mar our national life, and the problem of its destiny has to be met with our own. What can we do, what ought we to do, for his own good and for our peace and national welfare?

In the first place, it is impossible to escape the profound impression that we have made a mistake in our estimate of his evolution as a race, in attempting to apply to him the same treatment for the development of character that we would apply to a race more highly organized. Has he developed the race consciousness, the race soul, as I said before, a collective soul, which so strongly marks other races more or less civilized according to our standards? Do we find in him, as a mass (individuals always excepted), that slow deposit of training and education called "character," any firm basis of order, initiative of action, the capacity of going alone, any sure foundation of morality? It has been said that a race may attain a good degree of standing in the world without the refinement of culture, but never without virtue, either in the Roman or the modern meaning of that word.

The African, now the American negro, has come in the United States into a more favorable position for development than he has ever before had offered. He has come to it through hardship, and his severe apprenticeship is not ended. It is possible that the historians centuries hence, looking back over the rough road that all races have traveled in their evolution, may reckon slavery and the forced transportation to the new world a necessary step in the training of the negro. We do not know. The ways of Providence are not measurable by our foot rules. We see that slavery was unjust, uneconomic, and the worst training for citizenship in such a government as ours. It stifled a number of germs that might have produced a better development, such as individuality, responsibility, and thrift,—germs absolutely necessary to the well-being of a race. It laid no foundation of morality, but in place of morality saw cultivated a superstitious, emotional, hysterical religion. It is true that it taught a savage race subordination and obedience. Nor did it stifle certain inherent temperamental virtues, faithfulness, often highly developed, and frequently cheerfulness and philosophic contentment in a situation that would have broken the spirit of a more sensitive race. In short, under all the disadvantages of slavery the race showed certain fine traits, qualities of humor and good humor, and capacity for devotion, which were abundantly testified to by southerners during the progress of the Civil War. It has, as a race, traits wholly distinct from those of the whites, which are not only interesting, but might be a valuable contribution to a cosmopolitan civilization; gifts also, such as the love of music, and temperamental gayety, mixed with a note of sadness, as in the Hungarians.

But slavery brought about one result, and that the most difficult in the development of a race from savagery, and especially a tropical race, a race that has always been idle in the luxuriance of a nature that supplied its physical needs with little labor. It taught the negro to work, it transformed him, by compulsion it is true, into an industrial being, and held him in the habit of industry for several generations. Perhaps only force could do this, for it was a radical transformation. I am glad to see that this result of slavery is recognized by Mr. Booker Washington, the ablest and most clear-sighted leader the negro race has ever had.

But something more was done under this pressure, something more than creation of a habit of physical exertion to productive ends. Skill was developed. Skilled labor, which needs brains, was carried to a high degree of performance. On almost all the Southern plantations, and in the cities also, negro mechanics were bred, excellent blacksmiths, good carpenters, and house-builders capable of executing plans of high architectural merit. Everywhere were negroes skilled in trades, and competent in various mechanical industries.

The opportunity and the disposition to labor make the basis of all our civilization. The negro was taught to work, to be an agriculturist, a mechanic, a material producer of something useful. He was taught this fundamental thing. Our higher education, applied to him in his present development, operates in exactly the opposite direction.

This is a serious assertion. Its truth or falsehood cannot be established by statistics, but it is an opinion gradually formed by experience, and the observation of men competent to judge, who have studied the problem close at hand. Among the witnesses to the failure of the result expected from the establishment of colleges and universities for the negro are heard, from time to time, and more frequently as time goes on, practical men from the North, railway men, manufacturers, who have initiated business enterprises at the South. Their testimony coincides with that of careful students of the economic and social conditions.

There was reason to assume, from our theory and experience of the higher education in its effect upon white races, that the result would be different from what it is. When the negro colleges first opened, there was a glow of enthusiasm, an eagerness of study, a facility of acquirement, and a good order that promised everything for the future. It seemed as if the light then kindled would not only continue to burn, but would penetrate all the dark and stolid communities. It was my fortune to see many of these institutions in their early days, and to believe that they were full of the greatest promise for the race. I have no intention of criticising the generosity and the noble self-sacrifice that produced them, nor the aspirations of their inmates. There is no doubt that they furnish shining examples of emancipation from ignorance, and of useful lives. But

a few years have thrown much light upon the careers and characters of a great proportion of the graduates, and their effect upon the communities of which they form a part, I mean, of course, with regard to the industrial and moral condition of those communities. Have these colleges, as a whole,—[This sentence should have been further qualified by acknowledging the excellent work done by the colleges at Atlanta and Nashville, which, under exceptionally good management, have sent out much-needed teachers. I believe that their success, however, is largely owing to their practical features.—C.D.W.]—stimulated industry, thrift, the inclination to settle down to the necessary hard work of the world, or have they bred idleness, indisposition to work, a vaporous ambition in politics, and that sort of conceit of gentility of which the world has already enough? If any one is in doubt about this he can satisfy himself by a sojourn in different localities in the South. The condition of New Orleans and its negro universities is often cited. It is a favorable example, because the ambition of the negro has been aided there by influence outside of the schools. The federal government has imposed upon the intelligent and sensitive population negro officials in high positions, because they were negroes and not because they were specially fitted for those positions by character or ability. It is my belief that the condition of the race in New Orleans is lower than it was several years ago, and that the influence of the higher education has been in the wrong direction.

This is not saying that the higher education is responsible for the present condition of the negro.

Other influences have retarded his elevation and the development of proper character, and most important means have been neglected. I only say that we have been disappointed in our extravagant expectations of what this education could do for a race undeveloped, and so wanting in certain elements of character, and that the millions of money devoted to it might have been much better applied.

We face a grave national situation. It cannot be successfully dealt with sentimentally. It should be faced with knowledge and candor. We must admit our mistakes, both social and political, and set about the solution of our problem with intelligent resolution and a large charity. It is not simply a Southern question. It is a Northern question as well. For the truth of this I have only to appeal to the consciousness of all Northern communities in which there are negroes in any considerable numbers. Have the negroes improved, as a rule (always remembering the exceptions), in thrift, truthfulness, morality, in the elements of industrious citizenship, even in States and towns where there has been the least prejudice against their education? In a paper read at the last session of this Association, Professor W. F. Willcox of Cornell University showed by statistics that in proportion to population there were more negro criminals in the North than in the South. "The negro prisoners in the Southern States to ten thousand negroes increased between 1880 and 1890 twenty-nine per cent., while the white prisoners to ten thousand whites increased only eight per cent." "In the States where slavery was never established, the white prisoners increased seven per cent. faster than the white population, while the negro prisoners no less than thirty-nine per cent. faster than the negro population. Thus the increase of negro criminality, so far as it is reflected in the number of prisoners, exceeded the increase of white criminality more in the North than it did in the South."

This statement was surprising. It cannot be accounted for by color prejudice at the North; it is related to the known shiftlessness and irresponsibility of a great portion of the negro population. If it could be believed that this shiftlessness is due to the late state of slavery, the explanation would not do away with the existing conditions. Schools at the North have for a long time been open to the negro; though color prejudice exists, he has not been on the whole in an unfriendly atmosphere, and willing hands have been stretched out to help him in his ambition to rise. It is no doubt true, as has been often said lately, that the negro at the North has been crowded out of many occupations by more vigorous races, newly come to this country, crowded out not only of factory industries and agricultural, but of the positions of servants, waiters, barbers, and other minor ways of earning a living. The general verdict is that this loss of position is due to lack of stamina and trustworthiness. Wherever a negro has shown himself able, honest, attentive to the moral and economic duties of a citizen, either successful in accumulating property or filling honorably his station in life, he has gained respect and consideration in the community in which he is known; and this is as true at the South as at the North, notwithstanding the race antagonism is more accentuated by reason of the preponderance of negro population there and the more recent presence of slavery. Upon this ugly race antagonism it is not necessary to enlarge here in discussing the problem of education, and I will leave it with the single observation that I have heard intelligent negroes, who were honestly at work, accumulating property and disposed to postpone active politics to a more convenient season, say that they had nothing to fear from the intelligent white population, but only from the envy of the ignorant.

The whole situation is much aggravated by the fact that there is a considerable infusion of white blood in the negro race in the United States, leading to complications and social aspirations that are infinitely pathetic. Time only and no present contrivance of ours can ameliorate this condition.

I have made this outline of our negro problem in no spirit of pessimism or of prejudice, but in the belief that the only way to remedy an evil or a difficulty is candidly and fundamentally to understand it. Two things are evident: First, the negro population is certain to increase in the United States, in a ratio at least equal to that of the whites. Second, the South needs its labor. Its deportation is an idle dream. The only visible solution is for the negro to become an integral and an intelligent part of the industrial community. The way may be long, but he must work his way up. Sympathetic aid may do much, but the salvation of the negro is in his own hands, in the development of individual character and a race soul. This is fully understood by his wisest leaders. His worst enemy is the demagogue who flatters him with the delusion that all he needs for his elevation is freedom and certain privileges that were denied him in slavery.

In all the Northern cities heroic efforts are made to assimilate the foreign population by education and instruction in Americanism. In the South, in the city and on plantation, the same effort is necessary for the negro, but it must be more radical and fundamental. The common school must be as fully sustained and as far reaching as it is in the North, reaching the lowest in the city slums and the most ignorant in the agricultural districts, but to its strictly elemental teaching must be added moral instructions, and training in industries and in habits of industry. Only by such rudimentary and industrial training can the mass of the negro race in the United States be expected to improve in character and position. A top-dressing of culture on a field with no depth of soil may for a moment stimulate the promise of vegetation, but no fruit will be produced. It is a

gigantic task, and generations may elapse before it can in any degree be relaxed.

Why attempt it? Why not let things drift as they are? Why attempt to civilize the race within our doors, while there are so many distant and alien races to whom we ought to turn our civilizing attention? The answer is simple and does not need elaboration. A growing ignorant mass in our body politic, inevitably cherishing bitterness of feeling, is an increasing peril to the public.

In order to remove this peril, by transforming the negro into an industrial, law-abiding citizen, identified with the prosperity of his country, the cordial assistance of the Southern white population is absolutely essential. It can only be accomplished by regarding him as a man, with the natural right to the development of his capacity and to contentment in a secure social state. The effort for his elevation must be fundamental. The opportunity of the common school must be universal, and attendance in it compulsory. Beyond this, training in the decencies of life, in conduct, and in all the industries, must be offered in such industrial institutions as that of Tuskegee. For the exceptional cases a higher education can be easily provided for those who show themselves worthy of it, but not offered as an indiscriminate panacea.

The question at once arises as to the kind of teachers for these schools of various grades. It is one of the most difficult in the whole problem. As a rule, there is little gain, either in instruction or in elevation of character, if the teacher is not the superior of the taught. The learners must respect the attainments and the authority of the teacher. It is a too frequent fault of our common-school system that, owing to inadequate pay and ignorant selections, the teachers are not competent to their responsible task. The highest skill and attainment are needed to evoke the powers of the common mind, even in a community called enlightened. Much more are they needed when the community is only slightly developed mentally and morally. The process of educating teachers of this race, fit to promote its elevation, must be a slow one. Teachers of various industries, such as agriculture and the mechanic arts, will be more readily trained than teachers of the rudiments of learning in the common schools. It is a very grave question whether, with some exceptions, the school and moral training of the race should not be for a considerable time to come in the control of the white race. But it must be kept in mind that instructors cheap in character, attainments, and breeding will do more harm than good. If we give ourselves to this work, we must give of our best.

Without the cordial concurrence in this effort of all parties, black and white, local and national, it will not be fruitful in fundamental and permanent good. Each race must accept the present situation and build on it. To this end it is indispensable that one great evil, which was inherent in the reconstruction measures and is still persisted in, shall be eliminated. The party allegiance of the negro was bid for by the temptation of office and position for which he was in no sense fit. No permanent, righteous adjustment of relations can come till this policy is wholly abandoned. Politicians must cease to make the negro a pawn in the game of politics.

Let us admit that we have made a mistake. We seem to have expected that we could accomplish suddenly and by artificial contrivances a development which historically has always taken a long time. Without abatement of effort or loss of patience, let us put ourselves in the common-sense, the scientific, the historic line. It is a gigantic task, only to be accomplished by long labor in accord with the Divine purpose.

*"Thou wilt not leave us in the dust;
Thou madest man, he knows not why,
He thinks he was not made to die;
And thou hast made him; thou art just.*

*"Oh, yet we trust that somehow good
Will be the final goal of ill,
To pangs of nature, sins of will,
Defects of doubt, and taints of blood.*

*"That nothing walks with aimless feet,
That not one life shall be destroyed,
Or cast as rubbish to the void,
When God hath made the pile complete."*

THE INDETERMINATE SENTENCE—WHAT SHALL BE DONE WITH THE CRIMINAL CLASS?

By Charles Dudley Warner

The problem of dealing with the criminal class seems insolvable, and it undoubtedly is with present methods. It has never been attempted on a fully scientific basis, with due regard to the protection of society and to the interests of the criminal.

It is purely an economic and educational problem, and must rest upon the same principles that govern in any successful industry, or in education, and that we recognize in the conduct of life. That little progress has been made is due to public indifference to a vital question and to the action of sentimentalists, who, in their philanthropic zeal; fancy that a radical reform can come without radical discipline. We are largely wasting our energies in petty contrivances instead of striking at the root of the evil.

What do we mean by the criminal class? It is necessary to define this with some precision, in order to discuss intelligently the means of destroying this class. A criminal is one who violates a statute law, or, as we say, commits a crime. The human law takes cognizance of crime and not of sin. But all men who commit crime are not necessarily in the criminal class. Speaking technically, we put in that class those whose sole

occupation is crime, who live by it as a profession, and who have no other permanent industry. They prey upon society. They are by their acts at war upon it, and are outlaws.

The State is to a certain extent responsible for this class, for it has trained most of them, from youth up, through successive detentions in lock-ups, city prisons, county jails, and in State prisons, and penitentiaries on relatively short sentences, under influences which tend to educate them as criminals and confirm them in a bad life. That is to say, if a man once violates the law and is caught, he is put into a machine from which it is very difficult for him to escape without further deterioration. It is not simply that the State puts a brand on him in the eyes of the community, but it takes away his self-respect without giving him an opportunity to recover it. Once recognized as in the criminal class, he has no further concern about the State than that of evading its penalties so far as is consistent with pursuing his occupation of crime.

To avoid misunderstanding as to the subject of this paper, it is necessary to say that it is not dealing with the question of prison reform in its whole extent. It attempts to consider only a pretty well defined class. But in doing this it does not say that other aspects of our public peril from crime are not as important as this. We cannot relax our efforts in regard to the relations of poverty, drink, and unsanitary conditions, as leading to crime. We have still to take care of the exposed children, of those with parentage and surroundings inclining to crime, of the degenerate and the unfortunate. We have to keep up the warfare all along the line against the demoralization of society. But we have hereto deal with a specific manifestation; we have to capture a stronghold, the possession of which will put us in much better position to treat in detail the general evil.

Why should we tolerate any longer a professional criminal class? It is not large. It is contemptibly small compared with our seventy millions of people. If I am not mistaken, a late estimate gave us less than fifty thousand persons in our State prisons and penitentiaries. If we add to them those at large who have served one or two terms, and are generally known to the police, we shall not have probably more than eighty thousand of the criminal class. But call it a hundred thousand. It is a body that seventy millions of people ought to take care of with little difficulty. And we certainly ought to stop its increase. But we do not. The class grows every day. Those who watch the criminal reports are alarmed by the fact that an increasing number of those arrested for felonies are discharged convicts. This is an unmistakable evidence of the growth of the outlaw classes.

But this is not all. Our taxes are greatly increased on account of this class. We require more police to watch those who are at large and preying on society. We expend more yearly for apprehending and trying those caught, for the machinery of criminal justice, and for the recurring farce of imprisoning on short sentences and discharging those felons to go on with their work of swindling and robbing. It would be good economy for the public, considered as a taxpayer, to pay for the perpetual keep of these felons in secure confinement.

And still this is not the worst. We are all living in abject terror of these licensed robbers. We fear robbery night and day; we live behind bolts and bars (which should be reserved for the criminal) and we are in hourly peril of life and property in our homes and on the highways. But the evil does not stop here. By our conduct we are encouraging the growth of the criminal class, and we are inviting disregard of law, and diffusing a spirit of demoralization throughout the country.

I have spoken of the criminal class as very limited; that is, the class that lives by the industry of crime alone. But it is not isolated, and it has widespread relations. There is a large portion of our population not technically criminals, which is interested in maintaining this criminal class. Every felon is a part of a vast network of criminality. He has his dependents, his allies, his society of vice, all the various machinery of temptation and indulgence.

It happens, therefore, that there is great sympathy with the career of the lawbreakers, many people are hanging on them for support, and among them the so-called criminal lawyers. Any legislation likely to interfere seriously with the occupation of the criminal class or with its increase is certain to meet with the opposition of a large body of voters. With this active opposition of those interested, and the astonishing indifference of the general public, it is easy to see why so little is done to relieve us of this intolerable burden. The fact is, we go on increasing our expenses for police, for criminal procedure, for jails and prisons, and we go on increasing the criminal class and those affiliated with it.

And what do we gain by our present method? We do not gain the protection of society, and we do not gain the reformation of the criminal. These two statements do not admit of contradiction. Even those who cling to the antiquated notion that the business of society is to punish the offender must confess that in this game society is getting the worst of it. Society suffers all the time, and the professional criminal goes on with his occupation, interrupted only by periods of seclusion, during which he is comfortably housed and fed. The punishment he most fears is being compelled to relinquish his criminal career. The object of punishment for violation of statute law is not vengeance, it is not to inflict injury for injury. Only a few persons now hold to that. They say now that if it does little good to the offender, it is deterrent as to others. Now, is our present system deterrent? The statute law, no doubt, prevents many persons from committing crime, but our method of administering it certainly does not lessen the criminal class, and it does not adequately protect society. Is it not time we tried, radically, a scientific, a disciplinary, a really humanitarian method?

The proposed method is the indeterminate sentence. This strikes directly at the criminal class. It puts that class beyond the power of continuing its depredations upon society. It is truly deterrent, because it is a notification to any one intending to enter upon that method of living that his career ends with his first felony. As to the general effects of the indeterminate sentence, I will repeat here what I recently wrote for the Yale Law Journal:

It is unnecessary to say in a law journal that the indeterminate sentence is a measure as yet untried. The phrase has passed into current speech, and a considerable portion of the public is under the impression that an experiment of the indeterminate sentence is actually being made. It is, however, still a theory, not adopted in any legislation or in practice anywhere in the world. The misconception in regard to this has arisen from the fact that under certain regulations paroles are granted before the expiration of the statutory sentence. An indeterminate sentence is a commitment to prison without any

limit. It is exactly such a commitment as the court makes to an asylum of a man who is proved to be insane, and it is paralleled by the practice of sending a sick man to the hospital until he is cured. The introduction of the indeterminate sentence into our criminal procedure would be a radical change in our criminal legislation and practice. The original conception was that the offender against the law should be punished, and that the punishment should be made to fit the crime, an 'opera bouffe' conception which has been abandoned in reasoning though not in practice. Under this conception the criminal code was arbitrarily constructed, so much punishment being set down opposite each criminal offense, without the least regard to the actual guilt of the man as an individual sinner. Within the present century considerable advance has been made in regard to prison reform, especially with reference to the sanitary condition of places of confinement. And besides this, efforts of various kinds have been made with regard to the treatment of convicts, which show that the idea was gaining ground that criminals should be treated as individuals. The application of the English ticket-of-leave system was one of these efforts; it was based upon the notion that, if any criminal showed sufficient evidence of a wish to lead a different life, he should be conditionally released before the expiration of his sentence. The parole system in the United States was an attempt to carry out the same experiment, and with it went along the practice which enabled the prisoner to shorten the time of his confinement by good behavior. In some of the States reformatories have been established to which convicts have been sent under a sort of sliding sentence; that is, with the privilege given to the authorities of the reformatory to retain the offender to the full statutory term for which he might have been sentenced to State prison, unless he had evidently reformed before the expiration of that period. That is to say, if a penal offense entitled the judge to sentence the prisoner for any period from two to fifteen years, he could be kept in the reformatory at the discretion of the authorities for the full statutory term. It is from this law that the public notion of an indeterminate sentence is derived. It is, in fact, determinate, because the statute prescribes its limit. The introduction of the ticket-of-leave and the parole systems, and the earning of time by good behavior were philanthropic suggestions and promising experiments which have not been justified by the results. It is not necessary at this time to argue that no human discretion is adequate to mete out just punishment for crimes; and it has come to be admitted generally, by men enlightened on this subject, that the real basis for dealing with the criminal rests, firstly, upon the right of society to secure itself against the attacks of the vicious, and secondly, upon the duty imposed upon society, to reform the criminal if that is possible. It is patent to the most superficial observation that our present method does not protect society, and does not lessen the number of the criminal class, either by deterrent methods or by reformatory processes, except in a very limited way. Our present method is neither economic nor scientific nor philanthropic. If we consider the well-defined criminal class alone, it can be said that our taxes and expenses for police and the whole criminal court machinery, for dealing with those who are apprehended, and watching those who are preying upon society, yearly increase, while all private citizens in their own houses or in the streets live inconstant terror of the depredations of this class. Considered from the scientific point of view, our method is absolutely crude, and but little advance upon mediaeval conditions; and while it has its sentimental aspects, it is not real philanthropy, because comparatively few of the criminal class are permanently rescued. The indeterminate sentence has two distinct objects: one is the absolute protection of society from the outlaws whose only business in life is to prey upon society; and the second is the placing of these offenders in a position where they can be kept long enough for scientific treatment as decadent human beings, in the belief that their lives can be changed in their purpose. No specific time can be predicted in which a man by discipline can be expected to lay aside his bad habits and put on good habits, because no two human beings are alike, and it is therefore necessary that an indefinite time in each case should be allowed for the experiment of reformation. We have now gone far enough to see that the ticket-of-leave system, the parole system as we administer it in the State prisons (I except now some of the reformatories), and the good conduct method are substantially failures, and must continue to be so until they rest upon the absolute indeterminate sentence. They are worse than failures now, because the public mind is lulled into a false security by them, and efforts at genuine prison reform are defeated. It is very significant that the criminal class adapted itself readily to the parole system with its sliding scale. It was natural that this should be so, for it fits in perfectly well with their scheme of life. This is to them a sort of business career, interrupted now and then only by occasional limited periods of seclusion. Any device that shall shorten those periods is welcome to them. As a matter of fact, we see in the State prisons that the men most likely to shorten their time by good behavior, and to get released on parole before the expiration of their sentence, are the men who make crime their career. They accept this discipline as a part of their lot in life, and it does not interfere with their business any more than the occasional bankruptcy of a merchant interferes with his pursuits. It follows, therefore, that society is not likely to get security for itself, and the criminal class is not likely to be reduced essentially or reformed, without such a radical measure as the indeterminate sentence, which, accompanied, of course, by scientific treatment, would compel the convict to change his course of life, or to stay perpetually in confinement. Of course, the indeterminate sentence would radically change our criminal jurisprudence and our statutory provisions in regard to criminals. It goes without saying that it is

opposed by the entire criminal class, and by that very considerable portion of the population which is dependent on or affiliated with the criminal class, which seeks to evade the law and escape its penalties. It is also opposed by a small portion of the legal profession which gets its living out of the criminal class, and it is sure to meet the objection of the sentimentalists who have peculiar notions about depriving a man of his liberty, and it also has to overcome the objections of many who are guided by precedents, and who think the indeterminate sentence would be an infringement of the judicial prerogative. It is well to consider this latter a little further. Our criminal code, artificial and indiscriminating as it is, is the growth of ages and is the result of the notion that society ought to take vengeance upon the criminal, at least that it ought to punish him, and that the judge, the interpreter of the criminal law, was not only the proper person to determine the guilt of the accused, by the aid of the jury, but was the sole person to judge of the amount of punishment he should receive for his crime. Now two functions are involved here: one is the determination that the accused has broken the law, the other is gauging within the rules of the code the punishment that, each individual should receive. It is a theological notion that the divine punishment for sin is somehow delegated to man for the punishment of crime, but it does not need any argument to show that no tribunal is able with justice to mete out punishment in any individual case, for probably the same degree of guilt does not attach to two men in the violation of the same statute, and while, in the rough view of the criminal law, even, one ought to have a severe penalty, the other should be treated with more leniency. All that the judge can do under the indiscriminating provisions of the statute is to make a fair guess at what the man should suffer. Under the present enlightened opinion which sees that not punishment but the protection of society and the good of the criminal are the things to be aimed at, the judge's office would naturally be reduced to the task of determining the guilt of the man on trial, and then the care of him would be turned over to expert treatment, exactly as in a case when the judge determines the fact of a man's insanity. If objection is made to the indeterminate sentence on the ground that it is an unusual or cruel punishment, it may be admitted that it is unusual, but that commitment to detention cannot be called cruel when the convict is given the key to the house in which he is confined. It is for him to choose whether he will become a decent man and go back into society, or whether he will remain a bad man and stay in confinement. For the criminal who is, as we might say, an accidental criminal, or for the criminal who is susceptible to good influences, the term of imprisonment under the indeterminate sentence would be shorter than it would be safe to make it for criminals under the statute. The incorrigible offender, however, would be cut off at once and forever from his occupation, which is, as we said, varied by periodic residence in the comfortable houses belonging to the State. A necessary corollary of the indeterminate sentence is that every State prison and penitentiary should be a reformatory, in the modern meaning of that term. It would be against the interest of society, all its instincts of justice, and the height of cruelty to an individual criminal to put him in prison without limit unless all the opportunities were afforded him for changing his habits radically. It may be said in passing that the indeterminate sentence would be in itself to any man a great stimulus to reform, because his reformation would be the only means of his terminating that sentence. At the same time a man left to himself, even in the best ordered of our State prisons which is not a reformatory, would be scarcely likely to make much improvement. I have not space in this article to consider the character of the reformatory; that subject is fortunately engaging the attention of scientific people as one of the most interesting of our modern problems. To take a decadent human being, a wreck physically and morally, and try to make a man of him, that is an attempt worthy of a people who claim to be civilized. An illustration of what can be done in this direction is furnished by the Elmira Reformatory, where the experiment is being made with most encouraging results, which, of course, would be still better if the indeterminate sentence were brought to its aid. When the indeterminate sentence has been spoken of with a view to legislation, the question has been raised whether it should be applied to prisoners on the first, second, or third conviction of a penal offense. Legislation in regard to the parole system has also considered whether a man should be considered in the criminal class on his first conviction for a penal offense. Without entering upon this question at length, I will suggest that the convict should, for his own sake, have the indeterminate sentence applied to him upon conviction of his first penal offense. He is much more likely to reform than he would be after he had had a term in the State prison and was again convicted, and the chance of his reformation would be lessened by each subsequent experience of this kind. The great object of the indeterminate sentence, so far as the security of society is concerned, is to diminish the number of the criminal class, and this will be done when it is seen that the first felony a man commits is likely to be his last, and that for a young criminal contemplating this career there is in this direction "no thoroughfare." By his very first violation of the statute he walks into confinement, to stay there until he has given up the purpose of such a career. In the limits of this paper I have been obliged to confine myself to remarks upon the indeterminate sentence itself, without going into the question of the proper organization of reformatory agencies to be applied to the convict, and without consideration of the means of testing the reformation of a man in any given case. I will only add that the methods at Elmira have passed far beyond the experimental stage in this matter.

The necessary effect of the adoption of the indeterminate sentence for felonies is that every State prison and penitentiary must be a reformatory. The convict goes into it for the term of a year at least (since the criminal law, according to ancient precedent, might require that, and because the discipline of the reformatory would require it as a practical rule), and he stays there until, in the judgment of competent authority, he is fit to be trusted at large.

If he is incapable of reform, he must stay there for his natural life. He is a free agent. He can decide to lead an honest life and have his liberty, or he can elect to work for the State all his life in criminal confinement.

When I say that every State prison is to be a reformatory, I except, of course, from its operation, those sentenced for life for murder, or other capital offenses, and those who have proved themselves incorrigible by repeated violations of their parole.

It is necessary now to consider the treatment in the reformatory. Only a brief outline of it can be given here, with a general statement of the underlying principles. The practical application of these principles can be studied in the Elmira Reformatory of New York, the only prison for felons where the proposed system is carried out with the needed disciplinary severity. In studying Elmira, however, it must be borne in mind that the best effects cannot be obtained there, owing to the lack of the indeterminate sentence. In this institution the convict can only be detained for the maximum term provided in the statute for his offense. When that is reached, the prisoner is released, whether he is reformed or not.

The system of reform under the indeterminate sentence, which for convenience may be called the Elmira system, is scientific, and it must be administered entirely by trained men and by specialists; the same sort of training for the educational and industrial work as is required in a college or an industrial school, and the special fitness required for an alienist in an insane asylum. The discipline of the establishment must be equal to that of a military school.

We have so far advanced in civilization that we no longer think of turning the insane, the sick, the feeble-minded, over to the care of men without training chosen by the chance of politics. They are put under specialists for treatment. It is as necessary that convicts should be under the care of specialists, for they are the most difficult and interesting subjects for scientific treatment. If not criminals by heredity, they are largely made so by environment; they are either physical degenerates or they are brutalized by vice. They have lost the power of distinguishing right from wrong; they commonly lack will-power, and so are incapable of changing their habits without external influence. In short, the ordinary criminal is unsound and diseased in mind and body.

To deal with this sort of human decadence is, therefore, the most interesting problem that can be offered to the psychologist, to the physiologist, to the educator, to the believer in the immortality of the soul. He is still a man, not altogether a mere animal, and there is always a possibility that he may be made a decent man, and a law-abiding, productive member of society.

Here, indeed, is a problem worthy of the application of all our knowledge of mind and of matter, of our highest scientific attainments. But it is the same problem that we have in all our education, be it the training of the mind, the development of the body, or the use of both to good ends. And it goes without saying that its successful solution, in a reformatory for criminals, depends upon the character of the man who administers the institution. There must be at the head of it a man of character, of intellectual force, of administrative ability, and all his subordinate officers must be fitted for their special task, exactly as they should be for a hospital, or a military establishment, for a college, or for a school of practical industries. And when such men are demanded, they will be forthcoming, just as they are in any department in life, when a business is to be developed, a great engineering project to be undertaken, or an army to be organized and disciplined.

The development of our railroad system produced a race of great railroad men. The protection of society by the removal and reform of the criminal class, when the public determines upon it, will call into the service a class of men fitted for the great work. We know this is so because already, since the discussion of this question has been current, and has passed into actual experiment, a race of workers and prison superintendents all over the country have come to the front who are entirely capable of administering the reform system under the indeterminate sentence. It is in this respect, and not in the erection of model prisons, that the great advance in penology has been made in the last twenty years. Men of scientific attainment are more and more giving their attention to this problem as the most important in our civilization. And science is ready to take up this problem when the public is tired and ashamed of being any longer harried and bullied and terrorized over by the criminal class.

The note of this reform is discipline, and its success rests upon the law of habit. We are all creatures of habit, physical and mental. Habit is formed by repetition of any action. Many of our physical habits have become automatic. Without entering into a physiological argument, we know that repetition produces habit, and that, if this is long continued, the habit becomes inveterate. We know also that there is a habit, physical and moral, of doing right as well as doing wrong. The criminal has the habit of doing wrong. We propose to submit him to influences that will change that habit. We also know that this is not accomplished by suppressing that habit, but by putting a good one in its place.

It is true in this case that nature does not like a vacuum. The thoughts of men are not changed by leaving them to themselves, they are changed by substituting other thoughts.

The whole theory of the Elmira system is to keep men long enough under a strict discipline to change their habits. This discipline is administered in three ways. They are put to school; they are put at work; they are prescribed minute and severe rules of conduct, and in the latter training is included military drill.

The school and the workshop are both primarily for discipline and the formation of new habits. Only incidentally are the school and the workshop intended to fit a man for an occupation outside of the prison. The whole discipline is to put a man in possession of his faculties, to give him self-respect, to get him in the way of leading a normal and natural life. But it is true that what he acquires by the discipline of study and the discipline of work will be available in his earning an honest living. Keep a man long enough in this three-ply discipline, and he will form permanent habits of well-doing. If he cannot and will not form such habits, his place is in confinement, where he cannot prey upon society.

There is not space here to give the details of the practices at Elmira. They are easily attainable. But I will notice one or two objections that have been made. One is that in the congregate system men necessarily learn evil from each other. This is, of course, an evil. It is here, however, partially overcome by the fact that the inmates are kept so busy in the variety of discipline applied to them that they have little or no time for anything else. They study hard, and are under constant supervision as to conduct. And then their prospect of parole depends entirely upon the daily record they make, and upon their radical change of intention. At night they are separated in their cells. During the day they are associated in class, in the workshop, and in drill, and this association is absolutely necessary to their training. In separation from their fellows, they could not be trained. Fear is expressed that men will deceive their keepers and the board which is to pass upon them, and obtain parole when they do not deserve it. As a matter of fact, men under this discipline cannot successfully play the hypocrite to the experts who watch them. It is only in the ordinary prison where the parole is in use with no adequate discipline, and without the indefinite sentence, that deception can be practiced. But suppose a man does play the hypocrite so as to deceive the officers, who know him as well as any employer knows his workmen or any teacher knows his scholars, and deceives the independent board so as to get a parole. If he violates that parole, he can be remanded to the reformatory, and it will be exceedingly difficult for him to get another parole. And, if he should again violate his parole, he would be considered incorrigible and be placed in a life prison.

We have tried all other means of protecting society, of lessening the criminal class, of reforming the criminal. The proposed indeterminate sentence, with reformatory discipline, is the only one that promises to relieve society of the insolent domination and the terrorism of the criminal class; is the only one that can deter men from making a career of crime; is the only one that offers a fair prospect for the reformation of the criminal offender.

Why not try it? Why not put the whole system of criminal jurisprudence and procedure for the suppression of crime upon a sensible and scientific basis?

LITERARY COPYRIGHT

By Charles Dudley Warner

This is the first public meeting of the National Institute of Arts and Letters. The original members were selected by an invitation from the American Social Science Association, which acted under the power of its charter from the Congress of the United States. The members thus selected, who joined the Social Science Association, were given the alternative of organizing as an independent institute or as a branch of the Social Science Association.

At the annual meeting of the Social Science Association on September 4, 1899, at Saratoga Springs, the members of the Institute voted to organize independently. They formally adopted the revised constitution, which had been agreed upon at the first meeting, in New York in the preceding January, and elected officers as prescribed by the constitution.

The object is declared to be the advancement of art and literature, and the qualification shall be notable achievements in art or letters. The number of active members will probably be ultimately fixed at one hundred. The society may elect honorary and associate members without limit. By the terms of agreement between the American Social Science Association and the National Institute, the members of each are 'ipso facto' associate members of the other.

It is believed that the advancement of art and literature in this country will be promoted by the organization of the producers of literature and art. This is in strict analogy with the action of other professions and of almost all the industries. No one doubts that literature and art are or should be leading interests in our civilization, and their dignity will be enhanced in the public estimation by a visible organization of their representatives, who are seriously determined upon raising the standards by which the work of writers and artists is judged. The association of persons having this common aim cannot but stimulate effort, soften unworthy rivalry into generous competition, and promote enthusiasm and good fellowship in their work. The mere coming together to compare views and discuss interests and tendencies and problems which concern both the workers and the great public, cannot fail to be of benefit to both.

In no other way so well as by association of this sort can be created the feeling of solidarity in our literature, and the recognition of its power. It is not expected to raise any standard of perfection, or in any way to hamper individual development, but a body of concentrated opinion may raise the standard by promoting healthful and helpful criticism, by discouraging mediocrity and meretricious smartness, by keeping alive the traditions of good literature, while it is hospitable to all discoverers of new worlds. A safe motto for any such society would be Tradition and Freedom—"Traditio et Libertas".

It is generally conceded that what literature in America needs at this moment is honest, competent, sound criticism. This is not likely to be attained by sporadic efforts, especially in a democracy of letters where the critics are not always superior to the criticised, where the man in front of the book is not always a better marksman than the man behind the book. It may not be attained even by an organization of men united upon certain standards of excellence. I do not like to use the word authority, but it is not unreasonable to suppose that the public will be influenced by a body devoted to the advancement of art and literature, whose sincerity and discernment it has learned to respect, and admission into whose ranks will, I hope, be considered a distinction to be sought for by good work. The fashion of the day is rarely the judgment of posterity. You will recall what Byron wrote to Coleridge: "I trust you do not permit yourself to be depressed by the temporary partiality of what is called 'the public' for the favorites of the moment; all experience is against the permanency of such impressions. You must have lived to see many of these pass away, and will survive many

more."

The chief concern of the National Institute is with the production of works of art and of literature, and with their distribution. In the remarks following I shall confine myself to the production and distribution of literature. In the limits of this brief address I can only in outline speak of certain tendencies and practices which are affecting this production and this distribution. The interests involved are, first, those of the author; second, those of the publisher; third, those of the public. As to all good literature, the interests of these three are identical if the relations of the three are on the proper basis. For the author, a good book is of more pecuniary value than a poor one, setting aside the question of fame; to the publisher, the right of publishing a good book is solid capital,—an established house, in the long run, makes more money on "Standards" than on "Catchpennies"; and to the public the possession of the best literature is the breath of life, as that of the bad and mediocre is moral and intellectual decadence. But in practice the interests of the three do not harmonize. The author, even supposing his efforts are stimulated by the highest aspirations for excellence and not by any commercial instinct, is compelled by his circumstances to get the best price for his production; the publisher wishes to get the utmost return for his capital and his energy; and the public wants the best going for the least money.

Consider first the author, and I mean the author, and not the mere craftsman who manufactures books for a recognized market. His sole capital is his talent. His brain may be likened to a mine, gold, silver, copper, iron, or tin, which looks like silver when new. Whatever it is, the vein of valuable ore is limited, in most cases it is slight. When it is worked out, the man is at the end of his resources. Has he expended or produced capital? I say he has produced it, and contributed to the wealth of the world, and that he is as truly entitled to the usufruct of it as the miner who takes gold or silver out of the earth. For how long? I will speak of that later on. The copyright of a book is not analogous to the patent right of an invention, which may become of universal necessity to the world. Nor should the greater share of this usufruct be absorbed by the manufacturer and publisher of the book. The publisher has a clear right to guard himself against risks, as he has the right of refusal to assume them. But there is an injustice somewhere, when for many a book, valued and even profitable to somebody, the author does not receive the price of a laborer's day wages for the time spent on it—to say nothing of the long years of its gestation.

The relation between author and publisher ought to be neither complicated nor peculiar. The author may sell his product outright, or he may sell himself by an agreement similar to that which an employee in a manufacturing establishment makes with his master to give to the establishment all his inventions. Either of these methods is fair and businesslike, though it may not be wise. A method that prevailed in the early years of this century was both fair and wise. The author agreed that the publisher should have the exclusive right to publish his book for a certain term, or to make and sell a certain number of copies. When those conditions were fulfilled, the control of the property reverted to the author. The continuance of these relations between the two depended, as it should depend, upon mutual advantage and mutual good-will. By the present common method the author makes over the use of his property to the will of the publisher. It is true that he parts with the use only of the property and not with the property itself, and the publisher in law acquires no other title, nor does he acquire any sort of interest in the future products of the author's brain. But the author loses all control of his property, and its profit to him may depend upon his continuing to make over his books to the same publisher. In this continuance he is liable to the temptation to work for a market, instead of following the free impulses of his own genius. As to any special book, the publisher is the sole judge whether to push it or to let it sink into the stagnation of unadvertised goods.

The situation is full of complications. Theoretically it is the interest of both parties to sell as many books as possible. But the author has an interest in one book, the publisher in a hundred. And it is natural and reasonable that the man who risks his money should be the judge of the policy best for his whole establishment. I cannot but think that this situation would be on a juster footing all round if the author returned to the old practice of limiting the use of his property by the publisher. I say this in full recognition of the fact that the publishers might be unwilling to make temporary investments, or to take risks. What then? Fewer books might be published. Less vanity might be gratified. Less money might be risked in experiments upon the public, and more might be made by distributing good literature. Would the public be injured? It is an idea already discredited that the world owes a living to everybody who thinks he can write, and it is a superstition already fading that capital which exploits literature as a trade acquires any special privileges.

The present international copyright, which primarily concerns itself with the manufacture of books, rests upon an unintelligible protective tariff basis. It should rest primarily upon an acknowledgment of the author's right of property in his own work, the same universal right that he has in any other personal property. The author's international copyright should be no more hampered by restrictions and encumbrances than his national copyright. Whatever regulations the government may make for the protection of manufactures, or trade industries, or for purposes of revenue on importations, they should not be confounded with the author's right of property. They have no business in an international copyright act, agreement, or treaty. The United States copyright for native authors contains no manufacturing restrictions. All we ask is that foreign authors shall enjoy the same privileges we have under our law, and that foreign nations shall give our authors the privileges of their local copyright laws. I do not know any American author of any standing who has ever asked or desired protection against foreign authors.

This subject is so important that I may be permitted to enlarge upon it, in order to make clear suggestions already made, and to array again arguments more or less familiar. I do this in the view of bringing before the institute work worthy of its best efforts, which if successful will entitle this body to the gratitude and respect of the country. I refer to the speedy revision of our confused and wholly inadequate American copyright laws, and later on to a readjustment of our international relations.

In the first place let me bring to your attention what is, to the vast body of authors, a subject of vital interest, which it is not too much to say has never received that treatment from authors themselves which its importance demands. I refer to the property of authors in their productions. In this brief space and time I cannot enter fully upon this great subject, but must be content to offer certain suggestions for your consideration.

The property of an author in the product of his mental labor ought to be as absolute and unlimited as his property in the product of his physical labor. It seems to me idle to say that the two kinds of labor products are so dissimilar that the ownership cannot be protected by like laws. In this age of enlightenment such a proposition is absurd. The history of copyright law seems to show that the treatment of property in brain product has been based on this erroneous idea. To steal the paper on which an author has put his brain work into visible, tangible form is in all lands a crime, larceny, but to steal the brain work is not a crime. The utmost extent to which our enlightened American legislators, at almost the end of the nineteenth century, have gone in protecting products of the brain has been to give the author power to sue in civil courts, at large expense, the offender who has taken and sold his property.

And what gross absurdity is the copyright law which limits even this poor defense of author's property to a brief term of years, after the expiration of which he or his children and heirs have no defense, no recognized property whatever in his products.

And for some inexplicable reason this term of years in which he may be said to own his property is divided into two terms, so that at the end of the first he is compelled to re-assert his ownership by renewing his copyright, or he must lose all ownership at the end of the short term.

It is manifest to all honest minds that if an author is entitled to own his work for a term of years, it is equally the duty of his government to make that ownership perpetual. He can own and protect and leave to his children and his children's children by will the manuscript paper on which he has written, and he should have equal right to leave to them that mental product which constitutes the true money value of his labor. It is unnecessary to say that the mental product is always as easy to be identified as the physical product. Its identification is absolutely certain to the intelligence of judges and juries. And it is apparent that the interests of assignees, who are commonly publishers, are equal with those of authors, in making absolute and perpetual this property in which both are dealers.

Another consideration follows here. Why should the ownership of a bushel of wheat, a piece of silk goods, a watch, or a handkerchief in the possession of an American carried or sent to England, or brought thence to this country, be absolute and unlimited, while the ownership of his own products as an author or as a purchaser from an author is made dependent on his nationality? Why should the property of the manufacturer of cloths, carpets, satins, and any and every description of goods, be able to send his products all over the world, subject only to the tariff laws of the various countries, while the author (alone of all known producers) is forbidden to do so? The existing law of our country says to the foreign author, "You can have property in your book only if you manufacture it into salable form in this country." What would be said of the wisdom or wild folly of a law which sought to protect other American industries by forbidding the importation of all foreign manufactures?

No question of tariff protection is here involved. What duty shall be imposed upon foreign products or foreign manufactures is a question of political economy. The wrong against which authors should protest is in annexing to their terms of ownership of their property a protective tariff revision. For, be it observed, this is a subject of abstract justice, moral right, and it matters nothing whether the author be American, English, German, French, Hindoo, or Chinese,—and it is very certain that when America shall enact a simple, just, copyright law, giving to every human being the same protection of law to his property in his mental products as in the work of his hands, every civilized nation on earth will follow the noble example.

As it now stands, authors who annually produce the raw material for manufacturing purposes to an amount in value of millions, supporting vast populations of people, authors whose mental produce rivals and exceeds in commercial value many of the great staple products of our fields, are the only producers who have no distinct property in their products, who are not protected in holding on to the feeble tenure the law gives them, and whose quasi-property in their works, flimsy as it is, is limited to a few years, and cannot with certainty be handed down to their children. It will be said, it is said, that it is impossible for the author to obtain an acknowledgment of absolute right of property in his brain work. In our civilization we have not yet arrived at this state of justice. It may be so. Indeed some authors have declared that this justice would be against public policy. I trust they are sustained by the lofty thought that in this view they are rising above the petty realm of literature into the broad field of statesmanship.

But I think there will be a general agreement that in the needed revisal of our local copyright law we can attain some measure of justice. Some of the most obvious hardships can be removed. There is no reason why an author should pay for the privilege of a long life by the loss of his copyrights, and that his old age should be embittered by poverty because he cannot have the results of the labor of his vigorous years. There is no reason why if he dies young he should leave those dependent on him without support, for the public has really no more right to appropriate his book than it would have to take his house from his widow and children. His income at best is small after he has divided with the publishers.

No, there can certainly be no valid argument against extending the copyright of the author to his own lifetime, with the addition of forty or fifty years for the benefit of his heirs. I will not leave this portion of the topic without saying that a perfectly harmonious relation between authors and publishers is most earnestly to be desired, nor without the frank acknowledgment that, in literary tradition and in the present experience, many of the most noble friendships and the most generous and helpful relations have subsisted, as they ought always to subsist, between the producers and the distributors of literature, especially when the publisher has a love for literature, and the author is a reasonable being and takes pains to inform himself about the publishing business.

One aspect of the publishing business which has become increasingly prominent during the last fifteen years cannot be overlooked, for it is certain to affect seriously the production of literature as to quality, and its distribution. Capital has discovered that literature is a product out of which money can be made, in the same way that it can be made in cotton, wheat, or iron. Never before in history has so much money been invested in publishing, with the single purpose of creating and supplying the market with manufactured goods. Never before has there been such an appeal to the reading public, or such a study of its tastes, or supposed tastes, wants, likes and dislikes, coupled also with the same shrewd anxiety to ascertain a future demand that governs the purveyors of spring and fall styles in millinery and dressmaking. Not only the

contents of the books and periodicals, but the covers, must be made to catch the fleeting fancy. Will the public next season wear its hose dotted or striped?

Another branch of this activity is the so-called syndicating of the author's products in the control of one salesman, in which good work and inferior work are coupled together at a common selling price and in common notoriety. This insures a wider distribution, but what is its effect upon the quality of literature? Is it your observation that the writer for a syndicate, on solicitation for a price or an order for a certain kind of work, produces as good quality as when he works independently, uninfluenced by the spirit of commercialism? The question is a serious one for the future of literature.

The consolidation of capital in great publishing establishments has its advantages and its disadvantages. It increases vastly the yearly output of books. The presses must be kept running, printers, papermakers, and machinists are interested in this. The maw of the press must be fed. The capital must earn its money. One advantage of this is that when new and usable material is not forthcoming, the "standards" and the best literature must be reproduced in countless editions, and the best literature is broadcast over the world at prices to suit all purses, even the leanest. The disadvantage is that products, in the eagerness of competition for a market, are accepted which are of a character to harm and not help the development of the contemporary mind in moral and intellectual strength. The public expresses its fear of this in the phrase it has invented—"the spawn of the press." The author who writes simply to supply this press, and in constant view of a market, is certain to deteriorate in his quality, nay more, as a beginner he is satisfied if he can produce something that will sell without regard to its quality. Is it extravagant to speak of a tendency to make the author merely an adjunct of the publishing house? Take as an illustration the publications in books and magazines relating to the late Spanish-American war. How many of them were ordered to meet a supposed market, and how many of them were the spontaneous and natural productions of writers who had something to say? I am not quarreling, you see, with the newspapers who do this sort of thing; I am speaking of the tendency of what we have been accustomed to call literature to take on the transient and hasty character of the newspaper.

In another respect, in method if not in quality, this literature approaches the newspaper. It is the habit of some publishing houses, not of all, let me distinctly say, to seek always notoriety, not to nurse and keep before the public mind the best that has been evolved from time to time, but to offer always something new. The year's flooring is threshed off and the floor swept to make room for a fresh batch. Effort eventually ceases for the old and approved, and is concentrated on experiments. This is like the conduct of a newspaper. It is assumed that the public must be startled all the time.

I speak of this freely because I think it as bad policy for the publisher as it is harmful to the public of readers. The same effort used to introduce a novelty will be much better remunerated by pushing the sale of an acknowledged good piece of literature.

Literature depends, like every other product bought by the people, upon advertising, and it needs much effort usually to arrest the attention of our hurrying public upon what it would most enjoy if it were brought to its knowledge.

It would not be easy to fix the limit in this vast country to the circulation of a good book if it were properly kept before the public. Day by day, year by year, new readers are coming forward with curiosity and intellectual wants. The generation that now is should not be deprived of the best in the last generation. Nay more, one publication, in any form, reaches only a comparatively small portion of the public that would be interested in it. A novel, for instance, may have a large circulation in a magazine; it may then appear in a book; it may reach other readers serially again in the columns of a newspaper; it may be offered again in all the by-ways by subscription, and yet not nearly exhaust its legitimate running power. This is not a supposition but a fact proved by trial. Nor is it to be wondered at, when we consider that we have an unequaled homogeneous population with a similar common-school education. In looking over publishers' lists I am constantly coming across good books out of print, which are practically unknown to this generation, and yet are more profitable, truer to life and character, more entertaining and amusing, than most of those fresh from the press month by month.

Of the effect upon the literary product of writing to order, in obedience to a merely commercial instinct, I need not enlarge to a company of authors, any more than to a company of artists I need to enlarge upon the effect of a like commercial instinct upon art.

I am aware that the evolution of literature or art in any period, in relation to the literature and art of the world, cannot be accurately judged by contemporaries and participants, nor can it be predicted. But I have great expectations of the product of both in this country, and I am sure that both will be affected by the conduct of persons now living. It is for this reason that I have spoken.

THE RELATION OF LITERATURE TO LIFE

By Charles Dudley Warner

BIOGRAPHICAL SKETCH

The county of Franklin in Northwestern Massachusetts, if not rivaling in certain ways the adjoining Berkshire, has still a romantic beauty of its own. In the former half of the nineteenth century its population was largely given up to the pursuit of agriculture, though not under altogether favorable conditions. Manufactures had not yet invaded the region either to add to its wealth or to defile its streams. The villages were small, the roads pretty generally wretched save in summer, and from many of the fields the most abundant crop that could be gathered was that of stones.

The character of the people conformed in many ways to that of the soil. The houses which lined the opposite sides of the single street, of which the petty places largely consisted, as well as the dwellings which dotted the country, were the homes of men who possessed in fullness many of the features, good and bad, that characterized the Puritan stock to which they belonged. There was a good deal of religion in these rural communities and occasionally some culture. Still, as a rule, it must be confessed, there would be found in them much more of plain living than of high thinking. Broad thinking could hardly be said to exist at all. By the dwellers in that region Easter had scarcely even been heard of; Christmas was tolerated after a fashion, but was nevertheless looked upon with a good deal of suspicion as a Popish invention. In the beliefs of these men several sins not mentioned in the decalogue took really, if unconsciously, precedence of those which chanced to be found in that list. Dancing was distinctly immoral; card-playing led directly to gambling with all its attendant evils; theatre-going characterized the conduct of the more disreputable denizens of great cities. Fiction was not absolutely forbidden; but the most lenient regarded it as a great waste of time, and the boy who desired its solace on any large scale was under the frequent necessity of seeking the seclusion of the haymow.

But however rigid and stern the beliefs of men might be, nature was there always charming, not only in her summer beauty, but even in her wildest winter moods. Narrow, too, as might be the views of the members of these communities about the conduct of life, there was ever before the minds of the best of them an ideal of devotion to duty, an earnest all-pervading moral purpose which implanted the feeling that neither personal success nor pleasure of any sort could ever afford even remotely compensation for the neglect of the least obligation which their situation imposed. It was no misfortune for any one, who was later to be transported to a broader horizon and more genial air, to have struck the roots of his being in a soil where men felt the full sense of moral responsibility for everything said or done, and where the conscience was almost as sensitive to the suggestion of sin as to its actual accomplishment.

It was amidst such surroundings that Charles Dudley Warner was born on the 12th of September, 1829. His birthplace was the hill town of Plainfield, over two thousand feet above the level of the sea. His father, a farmer, was a man of cultivation, though not college-bred. He died when his eldest son had reached the age of five, leaving to his widow the care of two children. Three years longer the family continued to remain on the farm. But however delightful the scenery of the country might be, its aesthetic attractions did not sufficiently counterbalance its agricultural disadvantages. Furthermore, while the summers were beautiful on this high table land, the winters were long and dreary in the enforced solitude of a thinly settled region. In consequence, the farm was sold after the death of the grandfather, and the home broken up. The mother with her two children, went to the neighboring village of Charlemont on the banks of the Deerfield. There the elder son took up his residence with his guardian and relative, a man of position and influence in the community, who was the owner of a large farm. With him he stayed until he was twelve years old, enjoying all the pleasures and doing all the miscellaneous jobs of the kind which fall to the lot of a boy brought up in an agricultural community.

The story of this particular period of his life was given by Warner in a work which was published about forty years later. It is the volume entitled "Being a Boy." Nowhere has there been drawn a truer or more vivid picture of rural New England. Nowhere else can there be found such a portrayal of the sights and sounds, the pains and pleasures of life on a farm as seen from the point of view of a boy. Here we have them all graphically represented: the daily "chores" that must be looked after; the driving of cows to and from the pasture; the clearing up of fields where vegetation struggled with difficulty against the prevailing stones; the climbing of lofty trees and the swaying back and forth in the wind on their topmost boughs; the hunting of woodchucks; the nutting excursions of November days, culminating in the glories of Thanksgiving; the romance of school life, over which vacations, far from being welcomed with delight, cast a gloom as involving extra work; the cold days of winter with its deep or drifting snows, the mercury of the thermometer clinging with fondness to zero, even when the sun was shining brilliantly; the long chilling nights in which the frost carved fantastic structures on the window-panes; the eager watching for the time when the sap would begin to run in the sugar-maples; the evenings given up to reading, with the inevitable inward discontent at being sent to bed too early; the longing for the mild days of spring to come, when the heavy cowhide boots could be discarded, and the boy could rejoice at last in the covering for his feet which the Lord had provided. These and scores of similar descriptions fill up the picture of the life furnished here. It was nature's own school wherein was to be gained the fullest intimacy with her spirit. While there was much which she could not teach, there was also much which she alone could teach. From his communion with her the boy learned lessons which the streets of crowded cities could never have imparted.

At the age of twelve this portion of his education came to an end. The family then moved to Cazenovia in Madison county in Central New York, from which place Warner's mother had come, and where her immediate relatives then resided. Until he went to college this was his home. There he attended a preparatory school under the direction of the Methodist Episcopal Church, which was styled the Oneida Conference Seminary. It was at this institution that he fitted mainly for college; for to college it had been his father's dying wish that he should go, and the boy himself did not need the spur of this parting injunction. A college near his home was the excellent one of Hamilton in the not distant town of Clinton in the adjoining county of Oneida. Thither he repaired in 1848, and as he had made the best use of his advantages, he was enabled to enter the sophomore class. He was graduated in 1851.

But while fond of study he had all these years been doing something besides studying. The means of the

family were limited, and to secure the education he desired, not only was it necessary to husband the resources he possessed, but to increase them in every possible way. Warner had all the American boy's willingness to undertake any occupation not in itself discreditable. Hence to him fell a full share of those experiences which have diversified the early years of so many men who have achieved success. He set up type in a printing office; he acted as an assistant in a bookstore; he served as clerk in a post-office. He was thus early brought into direct contact with persons of all classes and conditions of life.

The experience gave to his keenly observant mind an insight into the nature of men which was to be of special service to him in later years. Further, it imparted to him a familiarity with their opinions and hopes and aspirations which enabled him to understand and sympathize with feelings in which he did not always share.

During the years which immediately followed his departure from college, Warner led the somewhat desultory and apparently aimless life of many American graduates whose future depends upon their own exertions and whose choice of a career is mainly determined by circumstances. From the very earliest period of his life he had been fond of reading. It was an inherited taste. The few books he found in his childhood's home would have been almost swept out of sight in the torrent, largely of trash, which pours now in a steady stream into the humblest household. But the books, though few, were of a high quality; and because they were few they were read much, and their contents became an integral part of his intellectual equipment. Furthermore, these works of the great masters, with which he became familiar, set for him a standard by which to test the value of whatever he read, and saved him even in his earliest years from having his taste impaired and his judgment misled by the vogue of meretricious productions which every now and then gain popularity for the time. They gave him also a distinct bent towards making literature his profession. But literature, however pleasant and occasionally profitable as an avocation, was not to be thought of as a vocation. Few there are at any period who have succeeded in finding it a substantial and permanent support; at that time and in this country such a prospect was practically hopeless for any one. It is no matter of surprise, therefore, that Warner, though often deviating from the direct path, steadily gravitated toward the profession of law.

Still, even in those early days his natural inclination manifested itself. The Knickerbocker Magazine was then the chosen organ to which all young literary aspirants sent their productions. To it even in his college days Warner contributed to some extent, though it would doubtless be possible now to gather out of this collection but few pieces which, lacking his own identification, could be assigned to him positively. At a later period he contributed articles to Putnam's Magazine, which began its existence in 1853. Warner himself at one time, in that period of struggle and uncertainty, expected to become an editor of a monthly which was to be started in Detroit. But before the magazine was actually set on foot the inability of the person who projected it to supply the necessary means for carrying it on prevented the failure which would inevitably have befallen a venture of that sort, undertaken at that time and in that place. Yet he showed in a way the native bent of his mind by bringing out two years after his graduation from college a volume of selections from English and American authors entitled "The Book of Eloquence." This work a publisher many years afterward took advantage of his later reputation to reprint.

This unsettled period of his life lasted for several years. He was resident for a while in various places. Part of the time he seems to have been in Cazenovia; part of the time in New York; part of the time in the West. One thing in particular there was which stood in the way of fixing definitely his choice of a profession. This was the precarious state of his health, far poorer then than it was in subsequent years. Warner, however, was never at any period of his life what is called robust. It was his exceeding temperance in all things which enabled him to venture upon the assumption and succeed in the accomplishment of tasks which men, physically far stronger than he, would have shrunk from under-taking, even had they been possessed of the same abilities. But his condition, part of that time, was such that it led him to take a course of treatment at the sanatorium in Clifton Springs. It became apparent, however, that life in the open air, for a while at least, was the one thing essential. Under the pressure of this necessity he secured a position as one of an engineering party engaged in the survey of a railway in Missouri. In that occupation he spent a large part of 1853 and 1854. He came back from this expedition restored to health. With that result accomplished, the duty of settling definitely upon what he was to do became more urgent. Among other things he did, while living for a while with his uncle in Binghamton, N. Y., he studied law in the office of Daniel S. Dickinson.

In the Christmas season of 1854 he went with a friend on a visit to Philadelphia and stayed at the house of Philip M. Price, a prominent citizen of that place who was engaged, among other things, in the conveyancing of real estate. It will not be surprising to any one who knew the charm of his society in later life to be told that he became at once a favorite with the older man. The latter was advanced in years, he was anxious to retire from active business. Acting under his advice, Warner was induced to come to Philadelphia in 1855 and join him, and to form subsequently a partnership in legal conveyancing with another young man who had been employed in Mr. Price's office. Thus came into being the firm of Barton and Warner. Their headquarters were first in Spring Garden Street and later in Walnut Street. The future soon became sufficiently assured to justify Warner in marriage, and in October, 1856, he was wedded to Susan Lee, daughter of William Elliott Lee of New York City.

But though in a business allied to the law, Warner was not yet a lawyer. His occupation indeed was only in his eyes a temporary makeshift while he was preparing himself for what was to be his real work in life. Therefore, while supporting himself by carrying on the business of conveyancing, he attended the courses of study at the law department of the University of Pennsylvania, during the academic years of 1856-57 and 1857-58. From that institution he received the degree of bachelor of law in 1858—often misstated 1856—and was ready to begin the practice of his profession.

In those days every young man of ability and ambition was counseled to go West and grow up with the country, and was not unfrequently disposed to take that course of his own accord. Warner felt the general impulse. He had contemplated entering, in fact had pretty definitely made up his mind to enter, into a law partnership with a friend in one of the smaller places in that region. But on a tour, somewhat of exploration, he stopped at Chicago. There he met another friend, and after talking over the situation with him he decided

to take up his residence in that city. So in 1858 the law-firm of Davenport and Warner came into being. It lasted until 1860. It was not exactly a favorable time for young men to enter upon the practice of this profession. The country was just beginning to recover from the depression which had followed the disastrous panic of 1857; but confidence was as yet far from being restored. The new firm did a fairly good business; but while there was sufficient work to do, there was but little money to pay for it. Still Warner would doubtless have continued in the profession had he not received an offer, the acceptance of which determined his future and changed entirely his career.

Hawley, now United States Senator from Connecticut, was Warner's senior by a few years. He had preceded him as a student at the Oneida Conference Seminary and at Hamilton College. Practicing law in Hartford, he had started in 1857, in conjunction with other leading citizens, a paper called the Evening Press. It was devoted to the advocacy of the principles of the Republican party, which was at that time still in what may be called the formative state of its existence. This was a period in which for some years the dissolution had been going on of the two old parties which had divided the country. Men were changing sides and were aligning themselves anew according to their views on questions which were every day assuming greater prominence in the minds of all. There was really but one great subject talked about or thought about. It split into opposing sections the whole land over which was lowering the grim, though as yet unrecognizable, shadow of civil war. The Republican party had been in existence but a very few years, but in that short time it had attracted to its ranks the young and enthusiastic spirits of the North, just as to the other side were impelled the members of the same class in the South. The intellectual contest which preceded the physical was stirring the hearts of all men. Hawley, who was well aware of Warner's peculiar ability, was anxious to secure his co-operation and assistance. He urged him to come East and join him in the conduct of the new enterprise he had undertaken.

Warner always considered that he derived great benefit from his comparatively limited study and practice of law; and that the little time he had given up to it had been far from being misspent. But the opening which now presented itself introduced him to a field of activity much more suited to his talents and his tastes. He liked the study of law better than its practice; for his early training had not been of a kind to reconcile him to standing up strongly for clients and causes that he honestly believed to be in the wrong. Furthermore, his heart, as has been said, had always been in literature; and though journalism could hardly be called much more than a half-sister, the one could provide the support which the other could never promise with certainty. So in 1860 Warner removed to Hartford and joined his friend as associate editor of the newspaper he had founded. The next year the war broke out. Hawley at once entered the army and took part in the four years' struggle. His departure left Warner in editorial charge of the paper, into the conduct of which he threw himself with all the earnestness and energy of his nature, and the ability, both political and literary, displayed in its columns gave it at once a high position which it never lost.

At this point it may be well to give briefly the few further salient facts of Warner's connection with journalism proper. In 1867 the owners of the Press purchased the Courant, the well-known morning paper which had been founded more than a century before, and consolidated the Press with it. Of this journal, Hawley and Warner, now in part proprietors, were the editorial writers. The former, who had been mustered out of the army with the rank of brevet Major-General, was soon diverted from journalism by other employments. He was elected Governor, he became a member of Congress, serving successively in both branches. The main editorial responsibility for the conduct of the paper devolved in consequence upon Warner, and to it he gave up for years nearly all his thought and attention. Once only during that early period was his labor interrupted for any considerable length of time. In May, 1868, he set out on the first of his five trips across the Atlantic. He was absent nearly a year. Yet even then he cannot be said to have neglected his special work. Articles were sent weekly from the other side, describing what he saw and experienced abroad. His active connection with the paper he never gave up absolutely, nor did his interest in it ever cease. But after he became connected with the editorial staff of Harpers Magazine the contributions he made to his journal were only occasional and what may be called accidental.

When 1870 came, forty years of Warner's life had gone by, and nearly twenty years since he had left college. During the latter ten years of this period he had been a most effective and forcible leader-writer on political and social questions, never more so than during the storm and stress of the Civil War. Outside of these topics he had devoted a great deal of attention to matters connected with literature and art. His varied abilities were fully recognized by the readers of the journal he edited.

But as yet there was little or no recognition outside. It is no easy matter to tell what are the influences, what the circumstances, which determine the success of a particular writer or of a particular work. Hitherto Warner's repute was mainly confined to the inhabitants of a provincial capital and its outlying and dependent towns. However cultivated the class to which his writings appealed—and as a class it was distinctly cultivated—their number was necessarily not great. To the country at large what he did or what he was capable of doing was not known at all. Some slight efforts he had occasionally put forth to secure the publication of matter he had prepared. He experienced the usual fate of authors who seek to introduce into the market literary wares of a new and better sort. His productions did not follow conventional lines. Publishers were ready to examine what he offered, and were just as ready to declare that these new wares were of a nature in which they were not inclined to deal.

But during 1870 a series of humorous articles appeared in the Hartford Courant, detailing his experiences in the cultivation of a garden. Warner had become the owner of a small place then almost on the outskirts of the city. With the dwelling-house went the possession of three acres of land. The opportunity thus presented itself of turning into a blessing the primeval curse of tilling the soil, in this instance not with a hoe, but with a pen. These articles detailing his experiences excited so much amusement and so much admiration that a general desire was manifested that they should receive a more permanent life than that accorded to articles appearing in the columns of newspapers, and should reach a circle larger than that to be found in the society of the Connecticut capital. Warner's previous experience had not disposed him to try his fortunes with the members of the publishing fraternity. In fact he did not lay so much stress upon the articles as did his readers and friends. He always insisted that he had previously written other articles which in his eyes certainly were

just as good as they, if not better.

It so chanced that about this time Henry Ward Beecher came to Hartford to visit his sister, Harriet Beecher Stowe. Warner was invited to meet him. In the course of the conversation the articles just mentioned were referred to by some one of those present. Beecher's curiosity was aroused and he expressed a desire to see them. To him they were accordingly sent for perusal. No sooner had he run through them than he recognized in them the presence of a rare and delicate humor which struck a distinctly new note in American literature. It was something he felt which should not be confined to the knowledge of any limited circle. He wrote at once to the publisher James T. Fields, urging the production of these articles in book form. Beecher's recommendation in those days was sufficient to insure the acceptance of any book by any publisher. Mr. Fields agreed to bring out the work, provided the great preacher would prefix an introduction. This he promised to do and did; though in place of the somewhat more formal piece he was asked to write, he sent what he called an introductory letter.

The series of papers published under the title of "My Summer in a Garden" came out at the very end of 1870, with the date of 1871 on the title-page. The volume met with instantaneous success. It was the subject of comment and conversation everywhere and passed rapidly through several editions. There was a general feeling that a new writer had suddenly appeared, with a wit and wisdom peculiarly his own, precisely like which nothing had previously existed in our literature. To the later editions of the work was added an account of a cat which had been presented to the author by the Stowes. For that reason it was given from the Christian name of the husband of the novelist the title of Calvin. To this John was sometimes prefixed, as betokening from the purely animal point of view a certain resemblance to the imputed grimness and earnestness of the great reformer. There was nothing in the least exaggerated in the account which Warner gave of the character and conduct of this really remarkable member of the feline race. No biography was ever truer; no appreciation was ever more sympathetic; and in the long line of cats none was ever more worthy to have his story truly and sympathetically told. All who had the fortune to see Calvin in the flesh will recognize the accuracy with which his portrait was drawn. All who read the account of him, though not having seen him, will find it one of the most charming of descriptions. It has the fullest right to be termed a cat classic.

With the publication of "My Summer in a Garden" Warner was launched upon a career of authorship which lasted without cessation during the thirty years that remained of his life. It covered a wide field. His interests were varied and his activity was unremitting. Literature, art, and that vast diversity of topics which are loosely embraced under the general name of social science—upon all these he had something fresh to say, and he said it invariably with attractiveness and effect. It mattered little what he set out to talk about, the talk was sure to be full both of instruction and entertainment. No sooner had the unequivocal success of his first published work brought his name before the public than he was besieged for contributions by conductors of periodicals of all sorts; and as he had ideas of his own upon all sorts of subjects, he was constantly furnishing matter of the most diverse kind for the most diverse audiences.

As a result, the volumes here gathered together represent but a limited portion of the work he accomplished. All his life, indeed, Warner was not only an omnivorous consumer of the writings of others, but a constant producer. The manifestation of it took place in ways frequently known to but few. It was not merely the fact that as an editor of a daily paper he wrote regularly articles on topics of current interest to which he never expected to pay any further attention; but after his name became widely known and his services were in request everywhere, he produced scores of articles, some long, some short, some signed, some unsigned, of which he made no account whatever. One looking through the pages of contemporary periodical literature is apt at any moment to light upon pieces, and sometimes upon series of them, which the author never took the trouble to collect. Many of those to which his name was not attached can no longer be identified with any approach to certainty. About the preservation of much that he did—and some of it belonged distinctly to his best and most characteristic work—he was singularly careless, or it may be better to say, singularly indifferent.

If I may be permitted to indulge in the recital of a personal experience, there is one incident I recall which will bring out this trait in a marked manner. Once on a visit to him I accompanied him to the office of his paper. While waiting for him to discharge certain duties there, and employing myself in looking over the exchanges, I chanced to light upon a leading article on the editorial page of one of the most prominent of the New York dailies. It was devoted to the consideration of some recent utterances of a noted orator who, after the actual mission of his life had been accomplished, was employing the decline of it in the exploitation of every political and economic vagary which it had entered into the addled brains of men to evolve. The article struck me as one of the most brilliant and entertaining of its kind I had ever read; it was not long indeed before it appeared that the same view of it was taken by many others throughout the country. The peculiar wit of the comment, the keenness of the satire made so much of an impression upon me that I called Warner away from his work to look at it. At my request he hastily glanced over it, but somewhat to my chagrin failed to evince any enthusiasm about it. On our way home I again spoke of it and was a good deal nettled at the indifference towards it which he manifested. It seemed to imply that my critical judgment was of little value; and however true might be his conclusion on that point, one does not enjoy having the fact thrust too forcibly upon the attention in the familiarity of conversation. Resenting therefore the tone he had assumed, I took occasion not only to reiterate my previously expressed opinion somewhat more aggressively, but also went on to insinuate that he was himself distinctly lacking in any real appreciation of what was excellent. He bore with me patiently for a while. "Well, sonny," he said at last, "since you seem to take the matter so much to heart, I will tell you in confidence that I wrote the piece myself." I found that this was not only true in the case just specified, but that while engaged in preparing articles for his own paper he occasionally prepared them for other journals. No one besides himself and those immediately concerned, ever knew anything about the matter. He never asserted any right to these pieces, he never sought to collect them, though some of them exhibited his happiest vein of humor. Unclaimed, unidentified, they are swept into that wallet of oblivion in which time stows the best as well as the worst of newspaper production.

The next volume of Warner's writings that made its appearance was entitled "Saunterings." It was the first and, though good of its kind, was by no means the best of a class of productions in which he was to exhibit

signal excellence. It will be observed that of the various works comprised in this collective edition, no small number consist of what by a wide extension of the phrase may be termed books of travel. There are two or three which fall strictly under that designation. Most of them, however, can be more properly called records of personal experience and adventure in different places and regions, with the comments on life and character to which they gave rise.

Books of travel, if they are expected to live, are peculiarly hard to write. If they come out at a period when curiosity about the region described is predominant, they are fairly certain, no matter how wretched, to achieve temporary success. But there is no kind of literary production to which, by the very law of its being, it is more difficult to impart vitality. Paradoxical as it may seem, it is perfectly true that the greatest hinderance to their permanent interest is the information they furnish. The more full, specific and even accurate that is, the more rapidly does the work containing it lose its value. The fresher knowledge conveyed by a new, and it may be much inferior book, crowds out of circulation those which have gone before. The changed or changing conditions in the region traversed renders the information previously furnished out of date and even misleading. Hence the older works come in time to have only an antiquarian interest. Their pages are consulted only by that very limited number of persons who are anxious to learn what has been and view with stolid indifference what actually is. Something of this transitory nature belongs to all sketches of travel. It is the one great reason why so very few of the countless number of such works, written, and sometimes written by men of highest ability, are hardly heard of a few years after publication. Travels form a species of literary production in which great classics are exceedingly rare.

From this fatal characteristic, threatening the enduring life of such works, most of Warner's writings of this sort were saved by the method of procedure he followed. He made it his main object not to give facts but impressions. All details of exact information, everything calculated to gratify the statistical mind or to quench the thirst of the seeker for purely useful information, he was careful, whether consciously or unconsciously, to banish from those volumes of his in which he followed his own bent and felt himself under no obligation to say anything but what he chose. Hence these books are mainly a record of views of men and manners made by an acute observer on the spot, and put down at the moment when the impression created was most vivid, not deferred till familiarity had dulled the sense of it or custom had caused it to be disregarded. Take as an illustration the little book entitled "Baddeck," one of the slightest of his productions in this field. It purports to be and is nothing more than an account of a two weeks' tour made to a Cape Breton locality in company with the delightful companion to whom it was dedicated. You take it up with the notion that you are going to acquire information about the whole country journeyed over, you are beguiled at times with the fancy that you are getting it. In the best sense it may be said that you do get it; for it is the general impression of the various scenes through which the expedition leads the travelers that is left upon the mind, not those accurate details of a single one of them which the lapse of a year might render inaccurate. It is to the credit of the work therefore than one gains from it little specific knowledge. In its place are the reflections both wise and witty upon life, upon the characters of the men that are met, upon the nature of the sights that are seen.

This is what constitutes the enduring charm of the best of these pictures of travel which Warner produced. It is perhaps misleading to assert that they do not furnish a good deal of information. Still it is not the sort of information which the ordinary tourist gives and which the cultivated reader resents and is careful not to remember. Their dominant note is rather the quiet humor of a delightful story-teller, who cannot fail to say something of interest because he has seen so much; and who out of his wide and varied observation selects for recital certain sights he has witnessed, certain experiences he has gone through, and so relates them that the way the thing is told is even more interesting than the thing told. The chief value of these works does not accordingly depend upon the accidental, which passes. Inns change and become better or worse. Facilities for transportation increase or decrease. Scenery itself alters to some extent under the operation of agencies brought to bear upon it for its own improvement or for the improvement of something else. But man's nature remains a constant quantity. Traits seen here and now are sure to be met with somewhere else, and even in ages to come. Hence works of this nature, embodying descriptions of men and manners, always retain something of the freshness which characterized them on the day of their appearance.

Of these productions in which the personal element predominates, and where the necessity of intruding information is not felt as a burden, those of Warner's works which deal with the Orient take the first rank. The two—"My Winter on the Nile" and "In the Levant"—constitute the record of a visit to the East during the years 1875 and 1876.

They would naturally have of themselves the most permanent value, inasmuch as the countries described have for most educated men an abiding interest. The lifelike representation and graphic characterization which Warner was apt to display in his traveling sketches were here seen at their best, because nowhere else did he find the task of description more congenial. Alike the gorgeousness and the squalor of the Orient appealed to his artistic sympathies. Egypt in particular had for him always a special fascination. Twice he visited it—at the time just mentioned and again in the winter of 1881-82. He rejoiced in every effort made to dispel the obscurity which hung over its early history. No one, outside of the men most immediately concerned, took a deeper interest than he in the work of the Egyptian Exploration Society, of which he was one of the American vice-presidents. To promoting its success he gave no small share of time and attention. Everything connected with either the past or the present of the country had for him an attraction. A civilization which had been flourishing for centuries, when the founder of Israel was a wandering sheik on the Syrian plains or in the hill-country of Canaan; the slow unraveling of records of dynasties of forgotten kings; the memorials of Egypt's vanished greatness and the vision of her future prosperity these and things similar to these made this country, so peculiarly the gift of the Nile, of fascinating interest to the modern traveler who saw the same sights which had met the eyes of Herodotus nearly twenty-five hundred years before.

To the general public the volume which followed—"In the Levant"—was perhaps of even deeper interest. At all events it dealt with scenes and memories with which every reader, educated or uneducated, had associations. The region through which the founder of Christianity wandered, the places he visited, the words he said in them, the acts he did, have never lost their hold over the hearts of men, not even during the periods when the precepts of Christianity have had the least influence over the conduct of those who

professed to it their allegiance. In the Levant, too, were seen the beginnings of commerce, of art, of letters, in the forms in which the modern world best knows them. These, therefore, have always made the lands about the eastern Mediterranean an attraction to cultivated men and the interest of the subject accordingly reinforced the skill of the writer.

There are two or three of these works which can not be included in the class just described. They were written for the specific purpose of giving exact information at the time. Of these the most noticeable are the volumes entitled "South and West" and the account of Southern California which goes under the name of "Our Italy." They are the outcome of journeys made expressly with the intent of investigating and reporting upon the actual situation and apparent prospects of the places and regions described. As they were written to serve an immediate purpose, much of the information contained in them tends to grow more and more out of date as time goes on; and though of value to the student of history, these volumes must necessarily become of steadily diminishing interest to the ordinary reader. Yet it is to be said of them that while the pill of useful information is there, it has at least been sugar-coated. Nor can we afford to lose sight of the fact that the widely-circulated articles, collected under the title of "South and West," by the spirit pervading them as well as by the information they gave, had a marked effect in bringing the various sections of the country into a better understanding of one another, and in imparting to all a fuller sense of the community they possessed in profit and loss, in honor and dishonor.

It is a somewhat singular fact that these sketches of travel led Warner incidentally to enter into an entirely new field of literary exertion. This was novel-writing. Something of this nature he had attempted in conjunction with Mark Twain in the composition of "The Gilded Age," which appeared in 1873. The result, however, was unsatisfactory to both the collaborators. Each had humor, but the humor of each was fundamentally different. But the magazine with which Warner had become connected was desirous that he should prepare for it an account of some of the principal watering-places and summer resorts of the country. Each was to be visited in turn and its salient features were to be described. It was finally suggested that this could be done most effectively by weaving into a love story occurrences that might happen at a number of these places which were made the subjects of description. The principal characters were to take their tours under the personal conduct of the novelist. They were to go to the particular spots selected North and South, according to the varying seasons of the year. It was a somewhat novel way of, visiting resorts of this nature; there are those to whom it will seem altogether more agreeable than would be the visiting of them in person. Hence appeared in 1886 the articles which were collected later in the volume entitled "Their Pilgrimage."

Warner executed the task which had been assigned him with his wonted skill. The completed work met with success—with so much success indeed that he was led later to try his fortune further in the same field and bring out the trilogy of novels which go under the names respectively of "A Little Journey in the World," "The Golden House," and "That Fortune." Each of these is complete in itself, each can be read by itself; but the effect of each and of the whole series can be best secured by reading them in succession. In the first it is the story of how a great fortune was made in the stock market; in the second, how it was fraudulently diverted from the object for which it was intended; and in the third, how it was most beneficially and satisfactorily lost. The scene of the last novel was laid in part in Warner's early home in Charlemont. These works were produced with considerable intervals of time between their respective appearances, the first coming out in 1889 and the third ten years later. This detracted to some extent from the popularity which they would have attained had the different members followed one another rapidly. Still, they met with distinct success, though it has always been a question whether this success was due so much to the story as to the shrewd observation and caustic wit which were brought to bear upon what was essentially a serious study of one side of American social life.

The work with which Warner himself was least satisfied was his life of Captain John Smith, which came out in 1888. It was originally intended to be one of a series of biographies of noted men, which were to give the facts accurately but to treat them humorously. History and comedy, however, have never been blended successfully, though desperate attempts have occasionally been made to achieve that result. Warner had not long been engaged in the task before he recognized its hopelessness. For its preparation it required a special study of the man and the period, and the more time he spent upon the preliminary work, the more the humorous element tended to recede. Thus acted on by two impulses, one of a light and one of a grave nature, he moved for a while in a sort of diagonal between the two to nowhere in particular; but finally ended in treating the subject seriously.

In giving himself up to a biography in which he had no special interest, Warner felt conscious that he could not interest others. His forebodings were realized. The work, though made from a careful study of original sources, did not please him, nor did it attract the public. The attempt was all the more unfortunate because the time and toil he spent upon it diverted him from carrying out a scheme which had then taken full possession of his thoughts. This was the production of a series of essays to be entitled "Conversations on Horseback." Had it been worked up as he sketched it in his mind, it would have been the outdoor counterpart of his "Backlog Studies." Though in a measure based upon a horseback ride which he took in Pennsylvania in 1880, the incidents of travel as he outlined its intended treatment would have barely furnished the slightest of backgrounds. Captain John Smith, however, interfered with a project specially suited to his abilities and congenial to his tastes. That he did so possibly led the author of his life to exhibit a somewhat hostile attitude towards his hero. When the biography was finished, other engagements were pressing upon his attention. The opportunity of taking up and completing the projected series of essays never presented itself, though the subject lay in his mind for a long time and he himself believed that it would have turned out one of the best pieces of work he ever did.

It was unfortunate. For to me—and very likely to many others if not to most—Warner's strength lay above all in essay-writing. What he accomplished in this line was almost invariably pervaded by that genial grace which makes work of the kind attractive, and he exhibited everywhere in it the delicate but sure touch which preserves the just mean between saying too much and too little. The essay was in his nature, and his occupation as a journalist had developed the tendency towards this form of literary activity, as well as skill in its manipulation. Whether he wrote sketches of travel, or whether he wrote fiction, the scene depicted was

from the point of view of the essayist rather than from that of the tourist or of the novelist. It is this characteristic which gives to his work in the former field its enduring interest. Again in his novels, it was not so much the story that was in his thoughts as the opportunity the varying scenes afforded for amusing observations upon manners, for comments upon life, sometimes good-natured, sometimes severe, but always entertaining, and above all, for serious study of the social problems which present themselves on every side for examination. This is distinctly the province of the essayist, and in it Warner always displayed his fullest strength.

We have seen that his first purely humorous publication of this nature was the one which made him known to the general public. It was speedily followed, however, by one of a somewhat graver character, which became at the time and has since remained a special favorite of cultivated readers. This is the volume entitled "Backlog Studies." The attractiveness of this work is as much due to the suggestive social and literary discussions with which it abounds as to the delicate and refined humor with which the ideas are expressed. Something of the same characteristics was displayed in the two little volumes of short pieces dealing with social topics, which came out later under the respective titles of "As We Were Saying," and "As We Go." But there was a deeper and more serious side of his nature which found utterance in several of his essays, particularly in some which were given in the form of addresses delivered at various institutions of learning. They exhibit the charm which belongs to all his writings; but his feelings were too profoundly interested in the subjects considered to allow him to give more than occasional play to his humor. Essays contained in such a volume, for instance, as "The Relation of Literature to Life" will not appeal to him whose main object in reading is amusement. Into them Warner put his deepest and most earnest convictions. The subject from which the book just mentioned derived its title lay near to his heart. No one felt more strongly than he the importance of art of all kinds, but especially of literary art, for the uplifting of a nation. No one saw more distinctly the absolute necessity of its fullest recognition in a moneymaking age and in a money-making land, if the spread of the dry rot of moral deterioration were to be prevented. The ampler horizon it presented, the loftier ideals it set up, the counteracting agency it supplied to the sordidness of motive and act which, left unchecked, was certain to overwhelm the national spirit—all these were enforced by him again and again with clearness and effectiveness. His essays of this kind will never be popular in the sense in which are his other writings. But no thoughtful man will rise up from reading them without having gained a vivid conception of the part which literature plays in the life of even the humblest, and without a deeper conviction of its necessity to any healthy development of the character of a people.

During the early part of his purely literary career a large proportion of Warner's collected writings, which then appeared, were first published in the *Atlantic Monthly*. But about fourteen years before his death he became closely connected with *Harper's Magazine*. From May, 1886, to March, 1892, he conducted the Editor's Drawer of that periodical. The month following this last date he succeeded William Dean Howells as the contributor of the Editor's Study. This position he held until July, 1898. The scope of this department was largely expanded after the death of George William Curtis in the summer of 1892, and the consequent discontinuance of the Editor's Easy Chair. Comments upon other topics than those to which his department was originally devoted, especially upon social questions, were made a distinct feature. His editorial connection with the magazine naturally led to his contributing to it numerous articles besides those which were demanded by the requirements of the position he held. Nearly all these, as well as those which appeared in the *Atlantic Monthly*, are indicated in the bibliographical notes prefixed to the separate works.

There were, however, other literary enterprises in which he was concerned; for the calls upon him were numerous, his own appetite for work was insatiable, and his activity was indefatigable. In 1881 he assumed the editorship of the *American Men of Letters* series. This he opened with his own biography of Washington Irving, the resemblance between whom and himself has been made the subject of frequent remark. Later he became the editor-in-chief of the thirty odd volumes which make up the collection entitled "The World's Best Literature." To this he contributed several articles of his own and carefully allotted and supervised the preparation of a large number of others. The labor he put upon the editing of this collection occupied him a great deal of the time from 1895 to 1898.

But literature, though in it lay his chief interest, was but one of the subjects which employed his many-sided activity. He was constantly called upon for the discharge of civic duties. The confidence felt by his fellow-citizens in his judgment and taste was almost equal to the absolute trust reposed in his integrity. The man who establishes a reputation for the possession of these qualities can never escape from bearing the burdens which a good character always imposes. If any work of art was ordered by the state, Warner was fairly certain to be chosen a member of the commission selected to decide upon the person who was to do it and upon the way it was to be done. By his fellow-townsmen he was made a member of the Park Commission. Such were some of the duties imposed; there were others voluntarily undertaken. During the latter years of his life he became increasingly interested in social questions, some of which partook of a semi-political character. One of the subjects which engaged his attention was the best method to be adopted for elevating the character and conduct of the negro population of the country. He recognized the gravity of the problem with which the nation had to deal and the difficulties attending its solution. One essay on the subject was prepared for the meeting held at Washington in May, 1900, of the American Social Science Association, of which he was president. He was not able to be there in person. The disease which was ultimately to strike him down had already made its preliminary attack. His address was accordingly read for him. It was a subject of special regret that he could not be present to set forth more fully his views; for the debate, which followed the presentation of his paper, was by no means confined to the meeting, but extended to the press of the whole country. Whether the conclusions he reached were right or wrong, they were in no case adopted hastily nor indeed without the fullest consideration.

But a more special interest of his lay in prison reform. The subject had engaged his attention long before he published anything in connection with it. Later one of the earliest articles he wrote for *Harper's Magazine* was devoted to it. It was in his thoughts just before his death. He was a member of the Connecticut commission on prisons, of the National Prison Association, and a vice-president of the New York Association for Prison Reform. A strong advocate of the doctrine of the indeterminate sentence, he had little patience with many of the judicial outgivings on that subject. To him they seemed opinions inherited, not formed, and

in most cases were nothing more than the result of prejudice working upon ignorance. This particular question was one which he purposed to make the subject of his address as president of the Social Science Association, at its annual meeting in 1901. He never lived to complete what he had in mind.

During his later years the rigor of the Northern winter had been too severe for Warner's health. He had accordingly found it advisable to spend as much of this season as he could in warmer regions. He visited at various times parts of the South, Mexico, and California. He passed the winter of 1892-93 at Florence; but he found the air of the valley of the Arno no perceptible improvement upon that of the valley of the Connecticut. In truth, neither disease nor death entertains a prejudice against any particular locality. This fact he was to learn by personal experience. In the spring of 1899, while at New Orleans, he was stricken by pneumonia which nearly brought him to the grave. He recovered, but it is probable that the strength of his system was permanently impaired, and with it his power of resisting disease. Still his condition was not such as to prevent him from going on with various projects he had been contemplating or from forming new ones. The first distinct warning of the approaching end was the facial paralysis which suddenly attacked him in April, 1900, while on a visit to Norfolk, Va. Yet even from that he seemed to be apparently on the full road to recovery during the following summer.

It was in the second week of October, 1900, that Warner paid me a visit of two or three days. He was purposing to spend the winter in Southern California, coming back to the East in ample time to attend the annual meeting of the Social Science Association. His thoughts were even then busy with the subject of the address which, as president, he was to deliver on that occasion. It seemed to me that I had never seen him when his mind was more active or more vigorous. I was not only struck by the clearness of his views—some of which were distinctly novel, at least to me—but by the felicity and effectiveness with which they were put.

Never, too, had I been more impressed with the suavity, the agreeableness, the general charm of his manner. He had determined during the coming winter to learn to ride the wheel, and we then and there planned to take a bicycle trip during the following summer, as we had previously made excursions together on horseback. When we parted, it was with the agreement that we should meet the next spring in Washington and fix definitely upon the time and region of our intended ride. It was on a Saturday morning that I bade him good-by, apparently in the best of health and spirits. It was on the evening of the following Saturday—October 20th—that the condensed, passionless, relentless message which the telegraph transmits, informed me that he had died that afternoon.

That very day he had lunched at a friend's, where were gathered several of his special associates who had chanced to come together at the same house, and then had gone to the office of the Hartford Courant. There was not the slightest indication apparent of the end that was so near. After the company broke up, he started out to pay a visit to one of the city parks, of which he was a commissioner. On his way thither, feeling a certain faintness, he turned aside into a small house whose occupants he knew, and asked to sit down for a brief rest, and then, as the faintness increased, to lie undisturbed on the lounge for a few minutes. The few minutes passed, and with them his life. In the strictest sense of the words, he had fallen asleep. From one point of view it was an ideal way to die. To the individual, death coming so gently, so suddenly, is shorn of all its terrors. It is only those who live to remember and to lament that the suffering comes which has been spared the victim. Even to them, however, is the consolation that though they may have been fully prepared for the coming of the inevitable event, it would have been none the less painful when it actually came.

Warner as a writer we all know. The various and varying opinions entertained about the quality and value of his work do not require notice here. Future times will assign him his exact position in the roll of American authors, and we need not trouble ourselves to anticipate, as we shall certainly not be able to influence, its verdict. But to only a comparatively few of those who knew him as a writer was it given to know him as a man; to still fewer to know him in that familiarity of intimacy which reveals all that is fine or ignoble in a man's personality. Scanty is the number of those who will come out of that severest of ordeals so successfully as he. The same conclusion would be reached, whether we were to consider him in his private relations or in his career as a man of letters. Among the irritable race of authors no one was freer from petty envy or jealousy. During many years of close intercourse, in which he constantly gave utterance to his views both of men and things with absolute unreserve, I recall no disparaging opinion ever expressed of any writer with whom he had been compared either for praise or blame. He had unquestionably definite and decided opinions. He would point out that such or such a work was above or below its author's ordinary level; but there was never any ill-nature in his comment, no depreciation for depreciation's sake. Never in truth was any one more loyal to his friends. If his literary conscience would not permit him to say anything in favor of something which they had done, he usually contented himself with saying nothing. Whatever failing there was on his critical side was due to this somewhat uncritical attitude; for it is from his particular friends that the writer is apt to get the most dispassionate consideration and sometimes the coldest commendation. It was a part of Warner's generous recognition of others that he was in all sincerity disposed to attribute to those he admired and to whom he was attached an ability of which some of them at least were much inclined to doubt their own possession.

Were I indeed compelled to select any one word which would best give the impression, both social and literary, of Warner's personality, I should be disposed to designate it as urbanity. That seems to indicate best the one trait which most distinguished him either in conversation or writing. Whatever it was, it was innate, not assumed. It was the genuine outcome of the kindness and broad-mindedness of his nature and led him to sympathize with men of all positions in life and of all kinds of ability. It manifested itself in his attitude towards every one with whom he came in contact. It led him to treat with fullest consideration all who were in the least degree under his direction, and converted in consequence the toil of subordinates into a pleasure. It impelled him to do unsought everything which lay in his power for the success of those in whom he felt interest. Many a young writer will recall his words of encouragement at some period in his own career when the quiet appreciation of one meant more to him than did later the loud applause of many. As it was in public, so it was in private life. The generosity of his spirit, the geniality and high-bred courtesy of his manner, rendered a visit to his home as much a social delight as his wide knowledge of literature and his appreciation of what was best in it made it an intellectual entertainment.

THE RELATION OF LITERATURE TO LIFE

PRELIMINARY

This paper was prepared and delivered at several of our universities as introductory to a course of five lectures which insisted on the value of literature in common life—some hearers thought with an exaggerated emphasis—and attempted to maintain the thesis that all genuine, enduring literature is the outcome of the time that produces it, is responsive to the general sentiment of its time; that this close relation to human life insures its welcome ever after as a true representation of human nature; and that consequently the most remunerative method of studying a literature is to study the people for whom it was produced. Illustrations of this were drawn from the Greek, the French, and the English literatures. This study always throws a flood of light upon the meaning of the text of an old author, the same light that the reader unconsciously has upon contemporary pages dealing with the life with which he is familiar. The reader can test this by taking up his Shakespeare after a thorough investigation of the customs, manners, and popular life of the Elizabethan period. Of course the converse is true that good literature is an open door into the life and mode of thought of the time and place where it originated.

THE RELATION OF LITERATURE TO LIFE

I had a vision once—you may all have had a like one—of the stream of time flowing through a limitless land. Along its banks sprang up in succession the generations of man. They did not move with the stream—they lived their lives and sank away; and always below them new generations appeared, to play their brief parts in what is called history—the sequence of human actions. The stream flowed on, opening for itself forever a way through the land. I saw that these successive dwellers on the stream were busy in constructing and setting afloat vessels of various size and form and rig—arks, galleys, galleons, sloops, brigs, boats propelled by oars, by sails, by steam. I saw the anxiety with which each builder launched his venture, and watched its performance and progress. The anxiety was to invent and launch something that should float on to the generations to come, and carry the name of the builder and the fame of his generation. It was almost pathetic, these puny efforts, because faith always sprang afresh in the success of each new venture. Many of the vessels could scarcely be said to be launched at all; they sank like lead, close to the shore. Others floated out for a time, and then, struck by a flaw in the wind, heeled over and disappeared. Some, not well put together, broke into fragments in the buffeting of the waves. Others danced on the flood, taking the sun on their sails, and went away with good promise of a long voyage. But only a few floated for any length of time, and still fewer were ever seen by the generation succeeding that which launched them. The shores of the stream were strewn with wrecks; there lay bleaching in the sand the ribs of many a once gallant craft.

Innumerable were the devices of the builders to keep their inventions afloat. Some paid great attention to the form of the hull, others to the kind of cargo and the loading of it, while others—and these seemed the majority—trusted more to some new sort of sail, or new fashion of rudder, or new application of propelling power. And it was wonderful to see what these new ingenuities did for a time, and how each generation was deceived into the belief that its products would sail on forever. But one fate practically came to the most of them. They were too heavy, they were too light, they were built of old material, and they went to the bottom, they went ashore, they broke up and floated in fragments. And especially did the crafts built in imitation of something that had floated down from a previous generation come to quick disaster. I saw only here and there a vessel, beaten by weather and blackened by time—so old, perhaps, that the name of the maker was no longer legible; or some fragments of antique wood that had evidently come from far up the stream. When such a vessel appeared there was sure to arise great dispute about it, and from time to time expeditions were organized to ascend the river and discover the place and circumstances of its origin. Along the banks, at intervals, whole fleets of boats and fragments had gone ashore, and were piled up in bays, like the driftwood of a subsided freshet. Efforts were made to dislodge these from time to time and set them afloat again, newly christened, with fresh paint and sails, as if they stood a better chance of the voyage than any new ones. Indeed, I saw that a large part of the commerce of this river was, in fact, the old hulks and stranded wrecks that each generation had set afloat again. As I saw it in this foolish vision, how pathetic this labor was from generation to generation; so many vessels launched; so few making a voyage even for a lifetime; so many builders confident of immortality; so many lives outlasting this coveted reputation! And still the generations, each with touching hopefulness, busied themselves with this child's play on the banks of the stream; and still the river flowed on, whelming and wrecking the most of that so confidently committed to it, and bearing only here and there, on its swift, wide tide, a ship, a boat, a shingle.

These hosts of men whom I saw thus occupied since history began were authors; these vessels were books; these heaps of refuse in the bays were great libraries. The allegory admits of any amount of ingenious parallelism. It is nevertheless misleading; it is the illusion of an idle fancy. I have introduced it because it expresses, with some whimsical exaggeration—not much more than that of "The Vision of Mirza"—the popular notion about literature and its relation to human life. In the popular conception, literature is as much a thing apart from life as these boats on the stream of time were from the existence, the struggle, the decay of the generations along the shore. I say in the popular conception, for literature is wholly different from this,

not only in its effect upon individual lives, but upon the procession of lives upon this earth; it is not only an integral part of all of them, but, with its sister arts, it is the one unceasing continuity in history. Literature and art are not only the records and monuments made by the successive races of men, not only the local expressions of thought and emotion, but they are, to change the figure, the streams that flow on, enduring, amid the passing show of men, reviving, transforming, ennobling the fleeting generations. Without this continuity of thought and emotion, history would present us only a succession of meaningless experiments. The experiments fail, the experiments succeed—at any rate, they end—and what remains for transmission, for the sustenance of succeeding peoples? Nothing but the thought and emotion evolved and expressed. It is true that every era, each generation, seems to have its peculiar work to do; it is to subdue the intractable earth, to repel or to civilize the barbarians, to settle society in order, to build cities, to amass wealth in centres, to make deserts bloom, to construct edifices such as were never made before, to bring all men within speaking distance of each other—lucky if they have anything to say when that is accomplished—to extend the information of the few among the many, or to multiply the means of easy and luxurious living. Age after age the world labors for these things with the busy absorption of a colony of ants in its castle of sand. And we must confess that the process, such, for instance, as that now going on here—this onset of many peoples, which is transforming the continent of America—is a spectacle to excite the imagination in the highest degree. If there were any poet capable of putting into an epic the spirit of this achievement, what an epic would be his! Can it be that there is anything of more consequence in life than the great business in hand, which absorbs the vitality and genius of this age? Surely, we say, it is better to go by steam than to go afoot, because we reach our destination sooner—getting there quickly being a supreme object. It is well to force the soil to yield a hundred-fold, to congregate men in masses so that all their energies shall be taxed to bring food to themselves, to stimulate industries, drag coal and metal from the bowels of the earth, cover its surface with rails for swift-running carriages, to build ever larger palaces, warehouses, ships. This gigantic achievement strikes the imagination.

If the world in which you live happens to be the world of books, if your pursuit is to know what has been done and said in the world, to the end that your own conception of the value of life may be enlarged, and that better things may be done and said hereafter, this world and this pursuit assume supreme importance in your mind. But you can in a moment place yourself in relations—you have not to go far, perhaps only to speak to your next neighbor—where the very existence of your world is scarcely recognized. All that has seemed to you of supreme importance is ignored. You have entered a world that is called practical, where the things that we have been speaking of are done; you have interest in it and sympathy with it, because your scheme of life embraces the development of ideas into actions; but these men of realities have only the smallest conception of the world that seems to you of the highest importance; and, further, they have no idea that they owe anything to it, that it has ever influenced their lives or can add anything to them. And it may chance that you have, for the moment, a sense of insignificance in the small part you are playing in the drama going forward. Go out of your library, out of the small circle of people who talk of books, who are engaged in research, whose liveliest interest is in the progress of ideas, in the expression of thought and emotion that is in literature; go out of this atmosphere into a region where it does not exist, it may be into a place given up to commerce and exchange, or to manufacturing, or to the development of certain other industries, such as mining, or the pursuit of office—which is sometimes called politics. You will speedily be aware how completely apart from human life literature is held to be, how few people regard it seriously as a necessary element in life, as anything more than an amusement or a vexation. I have in mind a mountain district, stripped, scarred, and blackened by the ruthless lumbermen, ravished of its forest wealth; divested of its beauty, which has recently become the field of vast coal-mining operations. Remote from communication, it was yesterday an exhausted, wounded, deserted country. Today audacious railways are entering it, crawling up its mountain slopes, rounding its dizzy precipices, spanning its valleys on iron cobwebs, piercing its hills with tunnels. Drifts are opened in its coal seams, to which iron tracks shoot away from the main line; in the woods is seen the gleam of the engineer's level, is heard the rattle of heavily-laden wagons on the newly-made roads; tents are pitched, uncouth shanties have sprung up, great stables, boarding-houses, stores, workshops; the miner, the blacksmith, the mason, the carpenter have arrived; households have been set up in temporary barracks, children are already there who need a school, women who must have a church and society; the stagnation has given place to excitement, money has flowed in, and everywhere are the hum of industry and the swish of the goad of American life. On this hillside, which in June was covered with oaks, is already in October a town; the stately trees have been felled; streets are laid out and graded and named; there are a hundred dwellings, there are a store, a post-office, an inn; the telegraph has reached it, and the telephone and the electric light; in a few weeks more it will be in size a city, with thousands of people—a town made out of hand by drawing men and women from other towns, civilized men and women, who have voluntarily put themselves in a position where they must be civilized over again.

This is a marvelous exhibition of what energy and capital can do. You acknowledge as much to the creators of it. You remember that not far back in history such a transformation as this could not have been wrought in a hundred years. This is really life, this is doing something in the world, and in the presence of it you can see why the creators of it regard your world, which seemed to you so important, the world whose business is the evolution and expression of thought and emotion, as insignificant. Here is a material addition to the business and wealth of the race, here employment for men who need it, here is industry replacing stagnation, here is the pleasure of overcoming difficulties and conquering obstacles. Why encounter these difficulties? In order that more coal may be procured to operate more railway trains at higher speed, to supply more factories, to add to the industrial stir of modern life. The men who projected and are pushing on this enterprise, with an executive ability that would maintain and manoeuvre an army in a campaign, are not, however, consciously philanthropists, moved by the charitable purpose of giving employment to men, or finding satisfaction in making two blades of grass grow where one grew before. They enjoy no doubt the sense of power in bringing things to pass, the feeling of leadership and the consequence derived from its recognition; but they embark in this enterprise in order that they may have the position and the luxury that increased wealth will bring, the object being, in most cases, simply material advantages—sumptuous houses, furnished with all the luxuries which are the signs of wealth, including, of course, libraries and pictures and statuary and curiosities, the

most showy equipages and troops of servants; the object being that their wives shall dress magnificently, glitter in diamonds and velvets, and never need to put their feet to the ground; that they may command the best stalls in the church, the best pews in the theatre, the choicest rooms in the inn, and—a consideration that Plato does not mention, because his world was not our world—that they may impress and reduce to obsequious deference the hotel clerk.

This life—for this enterprise and its objects are types of a considerable portion of life—is not without its ideal, its hero, its highest expression, its consummate flower. It is expressed in a word which I use without any sense of its personality, as the French use the word *Barnum*—for our crude young nation has the distinction of adding a verb to the French language, the verb to *barnum*—it is expressed in the well-known name *Croesus*. This is a standard—impossible to be reached perhaps, but a standard. If one may say so, the country is sown with seeds of *Croesus*, and the crop is forward and promising. The interest to us now in the observation of this phase of modern life is not in the least for purposes of satire or of reform. We are inquiring how wholly this conception of life is divorced from the desire to learn what has been done and said to the end that better things may be done and said hereafter, in order that we may understand the popular conception of the insignificant value of literature in human affairs. But it is not aside from our subject, rather right in its path, to take heed of what the philosophers say of the effect in other respects of the pursuit of wealth.

One cause of the decay of the power of defense in a state, says the Athenian Stranger in Plato's *Laws*—one cause is the love of wealth, which wholly absorbs men and never for a moment allows them to think of anything but their private possessions; on this the soul of every citizen hangs suspended, and can attend to nothing but his daily gain; mankind are ready to learn any branch of knowledge and to follow any pursuit which tends to this end, and they laugh at any other; that is the reason why a city will not be in earnest about war or any other good and honorable pursuit.

The accumulation of gold in the treasury of private individuals, says Socrates, in the *Republic*, is the ruin of democracy. They invent illegal modes of expenditure; and what do they or their wives care about the law?

“And then one, seeing another's display, proposes to rival him, and thus the whole body of citizens acquires a similar character.

“After that they get on in a trade, and the more they think of making a fortune, the less they think of virtue; for when riches and virtue are placed together in the balance, the one always rises as the other falls.

“And in proportion as riches and rich men are honored in the state, virtue and the virtuous are dishonored.

“And what is honored is cultivated, and that which has no honor is neglected.

“And so at last, instead of loving contention and glory, men become lovers of trade and money, and they honor and reverence the rich man and make a ruler of him, and dishonor the poor man.

“They do so.”

The object of a reasonable statesman (it is Plato who is really speaking in the *Laws*) is not that the state should be as great and rich as possible, should possess gold and silver, and have the greatest empire by sea and land.

The citizen must, indeed, be happy and good, and the legislator will seek to make him so; but very rich and very good at the same time he cannot be; not at least in the sense in which many speak of riches. For they describe by the term “rich” the few who have the most valuable possessions, though the owner of them be a rogue. And if this is true, I can never assent to the doctrine that the rich man will be happy: he must be good as well as rich. And good in a high degree and rich in a high degree at the same time he cannot be. Some one will ask, Why not? And we shall answer, Because acquisitions which come from sources which are just and unjust indifferently are more than double those which come from just sources only; and the sums which are expended neither honorably nor disgracefully are only half as great as those which are expended honorably and on honorable purposes. Thus if one acquires double and spends half, the other, who is in the opposite case and is a good man, cannot possibly be wealthier than he. The first (I am speaking of the saver, and not of the spender) is not always bad; he may indeed in some cases be utterly bad, but as I was saying, a good man he never is. For he who receives money unjustly as well as justly, and spends neither justly nor unjustly, will be a rich man if he be also thrifty. On the other hand, the utterly bad man is generally profligate, and therefore poor; while he who spends on noble objects, and acquires wealth by just means only, can hardly be remarkable for riches any more than he can be very poor. The argument, then, is right in declaring that the very rich are not good, and if they are not good they are not happy.

And the conclusion of Plato is that we ought not to pursue any occupation to the neglect of that for which riches exist—“I mean,” he says, “soul and body, which without gymnastics and without education will never be worth anything; and therefore, as we have said not once but many times, the care of riches should have the last place in our thoughts.”

Men cannot be happy unless they are good, and they cannot be good unless the care of the soul occupies the first place in their thoughts. That is the first interest of man; the interest in the body is midway; and last of all, when rightly regarded, is the interest about money.

The majority of mankind reverses this order of interests, and therefore it sets literature to one side as of no practical account in human life. More than this, it not only drops it out of mind, but it has no conception of its influence and power in the very affairs from which it seems to be excluded. It is my purpose to show not only the close relation of literature to ordinary life, but its eminent position in life, and its saving power in lives which do not suspect its influence or value. Just as it is virtue that saves the state, if it be saved, although the majority do not recognize it and attribute the salvation of the state to energy, and to obedience to the laws of political economy, and to discoveries in science, and to financial contrivances; so it is that in the life of generations of men, considered from an ethical and not from a religious point of view, the most potent and lasting influence for a civilization that is worth anything, a civilization that does not by its own nature work its decay, is that which I call literature. It is time to define what we mean by literature. We may arrive at the meaning by the definition of exclusion. We do not mean all books, but some books; not all that is written and published, but only a small part of it. We do not mean books of law, of theology, of politics, of science, of

medicine, and not necessarily books of travel, or adventure, or biography, or fiction even. These may all be ephemeral in their nature. The term *belles-lettres* does not fully express it, for it is too narrow. In books of law, theology, politics, medicine, science, travel, adventure, biography, philosophy, and fiction there may be passages that possess, or the whole contents may possess, that quality which comes within our meaning of literature. It must have in it something of the enduring and the universal. When we use the term art, we do not mean the arts; we are indicating a quality that may be in any of the arts. In art and literature we require not only an expression of the facts in nature and in human life, but of feeling, thought, emotion. There must be an appeal to the universal in the race. It is, for example, impossible for a Christian today to understand what the religious system of the Egyptians of three thousand years ago was to the Egyptian mind, or to grasp the idea conveyed to a Chinaman's thought in the phrase, "the worship of the principle of heaven"; but the Christian of today comprehends perfectly the letters of an Egyptian scribe in the time of Thotmes III., who described the comical miseries of his campaign with as clear an appeal to universal human nature as Horace used in his *'Iter Brundisium,'* and the maxims of Confucius are as comprehensible as the bitter-sweetness of Thomas a Kempis. De Quincey distinguishes between the literature of knowledge and the literature of power. The definition is not exact; but we may say that the one is a statement of what is known, the other is an emanation from the man himself; or that one may add to the sum of human knowledge, and the other addresses itself to a higher want in human nature than the want of knowledge. We select and set aside as literature that which is original, the product of what we call genius. As I have said, the subject of a production does not always determine the desired quality which makes it literature. A biography may contain all the facts in regard to a man and his character, arranged in an orderly and comprehensible manner, and yet not be literature; but it may be so written, like Plutarch's *Lives* or Defoe's account of *Robinson Crusoe*, that it is literature, and of imperishable value as a picture of human life, as a satisfaction to the want of the human mind which is higher than the want of knowledge. And this contribution, which I desire to be understood to mean when I speak of literature, is precisely the thing of most value in the lives of the majority of men, whether they are aware of it or not. It may be weighty and profound; it may be light, as light as the fall of a leaf or a bird's song on the shore; it may be the thought of Plato when he discourses of the character necessary in a perfect state, or of Socrates, who, out of the theorem of an absolute beauty, goodness, greatness, and the like, deduces the immortality of the soul; or it may be the lovesong of a Scotch plowman: but it has this one quality of answering to a need in human nature higher than a need for facts, for knowledge, for wealth.

In noticing the remoteness in the popular conception of the relation of literature to life, we must not neglect to take into account what may be called the arrogance of culture, an arrogance that has been emphasized, in these days of reaction from the old attitude of literary obsequiousness, by harsh distinctions and hard words, which are paid back by equally emphasized contempt. The apostles of light regard the rest of mankind as barbarians and Philistines, and the world retorts that these self-constituted apostles are idle word-mongers, without any sympathy with humanity, critics and jeerers who do nothing to make the conditions of life easier. It is natural that every man should magnify the circle of the world in which he is active and imagine that all outside of it is comparatively unimportant. Everybody who is not a drone has his sufficient world. To the lawyer it is his cases and the body of law, it is the legal relation of men that is of supreme importance; to the merchant and manufacturer all the world consists in buying and selling, in the production and exchange of products; to the physician all the world is diseased and in need of remedies; to the clergyman speculation and the discussion of dogmas and historical theology assume immense importance; the politician has his world, the artist his also, and the man of books and letters a realm still apart from all others. And to each of these persons what is outside of his world seems of secondary importance; he is absorbed in his own, which seems to him all-embracing. To the lawyer everybody is or ought to be a litigant; to the grocer the world is that which eats, and pays—with more or less regularity; to the scholar the world is in books and ideas. One realizes how possessed he is with his own little world only when by chance he changes his profession or occupation and looks back upon the law, or politics, or journalism, and sees in its true proportion what it was that once absorbed him and seemed to him so large. When Socrates discusses with Gorgias the value of rhetoric, the use of which, the latter asserts, relates to the greatest and best of human things, Socrates says: I dare say you have heard men singing—at feasts the old drinking-song, in which the singers enumerate the goods of life—first, health; beauty next; thirdly, wealth honestly acquired. The producers of these things—the physician, the trainer, the money-maker—each in turn contends that his art produces the greatest good. Surely, says the physician, health is the greatest good; there is more good in my art, says the trainer, for my business is to make men beautiful and strong in body; and consider, says the money-maker, whether any one can produce a greater good than wealth. But, insists Gorgias, the greatest good of men, of which I am the creator, is that which gives men freedom in their persons, and the power of ruling over others in their several states—that is, the word which persuades the judge in the court, or the senators in the council, or the citizens in the assembly: if you have the power of uttering this word, you will have the physician your slave, and the trainer your slave, and the money-maker of whom you talk will be found to gather treasures, not for himself, but for those who are able to speak and persuade the multitude.

What we call life is divided into occupations and interest, and the horizons of mankind are bounded by them. It happens naturally enough, therefore, that there should be a want of sympathy in regard to these pursuits among men, the politician despising the scholar, and the scholar looking down upon the politician, and the man of affairs, the man of industries, not caring to conceal his contempt for both the others. And still more reasonable does the division appear between all the world which is devoted to material life, and the few who live in and for the expression of thought and emotion. It is a pity that this should be so, for it can be shown that life would not be worth living divorced from the gracious and ennobling influence of literature, and that literature suffers atrophy when it does not concern itself with the facts and feelings of men.

If the poet lives in a world apart from the vulgar, the most lenient apprehension of him is that his is a sort of fool's paradise. One of the most curious features in the relation of literature to life is this, that while poetry, the production of the poet, is as necessary to universal man as the atmosphere, and as acceptable, the poet is regarded with that mingling of compassion and undervaluation, and perhaps awe, which once

attached to the weak-minded and insane, and which is sometimes expressed by the term "inspired idiot." However the poet may have been petted and crowned, however his name may have been diffused among peoples, I doubt not that the popular estimate of him has always been substantially what it is today. And we all know that it is true, true in our individual consciousness, that if a man be known as a poet and nothing else, if his character is sustained by no other achievement than the production of poetry, he suffers in our opinion a loss of respect. And this is only recovered for him after he is dead, and his poetry is left alone to speak for his name. However fond my lord and lady were of the ballad, the place of the minstrel was at the lower end of the hall. If we are pushed to say why this is, why this happens to the poet and not to the producers of anything else that excites the admiration of mankind, we are forced to admit that there is something in the poet to sustain the popular judgment of his in utility. In all the occupations and professions of life there is a sign put up, invisible—but none the less real, and expressing an almost universal feeling—"No poet need apply." And this is not because there are so many poor poets; for there are poor lawyers, poor soldiers, poor statesmen, incompetent business men; but none of the personal disparagement attaches to them that is affixed to the poet. This popular estimate of the poet extends also, possibly in less degree, to all the producers of the literature that does not concern itself with knowledge. It is not our care to inquire further why this is so, but to repeat that it is strange that it should be so when poetry is, and has been at all times, the universal solace of all peoples who have emerged out of barbarism, the one thing not supernatural and yet akin to the supernatural, that makes the world, in its hard and sordid conditions, tolerable to the race. For poetry is not merely the comfort of the refined and the delight of the educated; it is the alleviator of poverty, the pleasure-ground of the ignorant, the bright spot in the most dreary pilgrimage. We cannot conceive the abject animal condition of our race were poetry abstracted; and we do not wonder that this should be so when we reflect that it supplies a want higher than the need for food, for raiment, or ease of living, and that the mind needs support as much as the body. The majority of mankind live largely in the imagination, the office or use of which is to lift them in spirit out of the bare physical conditions in which the majority exist. There are races, which we may call the poetical races, in which this is strikingly exemplified. It would be difficult to find poverty more complete, physical wants less gratified, the conditions of life more bare than among the Oriental peoples from the Nile to the Ganges and from the Indian Ocean to the steppes of Siberia. But there are perhaps none among the more favored races who live so much in the world of imagination fed by poetry and romance. Watch the throng seated about an Arab or Indian or Persian storyteller and poet, men and women with all the marks of want, hungry, almost naked, without any prospect in life of ever bettering their sordid condition; see their eyes kindle, their breathing suspended, their tense absorption; see their tears, hear their laughter, note their excitement as the magician unfolds to them a realm of the imagination in which they are free for the hour to wander, tasting a keen and deep enjoyment that all the wealth of Croesus cannot purchase for his disciples. Measure, if you can, what poetry is to them, what their lives would be without it. To the millions and millions of men who are in this condition, the bard, the story-teller, the creator of what we are considering as literature, comes with the one thing that can lift them out of poverty, suffering—all the woe of which nature is so heedless.

It is not alone of the poetical nations of the East that this is true, nor is this desire for the higher enjoyment always wanting in the savage tribes of the West. When the Jesuit Fathers in 1768 landed upon the almost untouched and unexplored southern Pacific coast, they found in the San Gabriel Valley in Lower California that the Indians had games and feasts at which they decked themselves in flower garlands that reached to their feet, and that at these games there were song contests which sometimes lasted for three days. This contest of the poets was an old custom with them. And we remember how the ignorant Icelanders, who had never seen a written character, created the splendid Saga, and handed it down from father to son. We shall scarcely find in Europe a peasantry whose abject poverty is not in some measure alleviated by this power which literature gives them to live outside it. Through our sacred Scriptures, through the ancient storytellers, through the tradition which in literature made, as I said, the chief continuity in the stream of time, we all live a considerable, perhaps the better, portion of our lives in the Orient. But I am not sure that the Scotch peasant, the crofter in his Highland cabin, the operative in his squalid tenement-house, in the hopelessness of poverty, in the grime of a life made twice as hard as that of the Arab by an inimical climate, does not owe more to literature than the man of culture, whose material surroundings are heaven in the imagination of the poor. Think what his wretched life would be, in its naked deformity, without the popular ballads, without the romances of Scott, which have invested his land for him, as for us, with enduring charm; and especially without the songs of Burns, which keep alive in him the feeling that he is a man, which impart to his blunted sensibility the delicious throb of spring-songs that enable him to hear the birds, to see the bits of blue sky-songs that make him tender of the wee bit daisy at his feet—songs that hearten him when his heart is fit to break with misery. Perhaps the English peasant, the English operative, is less susceptible to such influences than the Scotch or the Irish; but over him, sordid as his conditions are, close kin as he is to the clod, the light of poetry is diffused; there filters into his life, also, something of that divine stream of which we have spoken, a dialect poem that touches him, the leaf of a psalm, some bit of imagination, some tale of pathos, set afloat by a poor writer so long ago that it has become the common stock of human tradition—maybe from Palestine, maybe from the Ganges, perhaps from Athens—some expression of real emotion, some creation, we say, that makes for him a world, vague and dimly apprehended, that is not at all the actual world in which he sins and suffers. The poor woman, in a hut with an earth floor, a reeking roof, a smoky chimney, barren of comfort, so indecent that a gentleman would not stable his horse in it, sits and sews upon a coarse garment, while she rocks the cradle of an infant about whom she cherishes no illusions that his lot will be other than that of his father before him. As she sits forlorn, it is not the wretched hovel that she sees, nor other hovels like it—rows of tenements of hopeless poverty, the ale-house, the gin-shop, the coal-pit, and the choking factory—but:

*"Sweet fields beyond the swelling flood
Stand dressed in living green"*

for her, thanks to the poet. But, alas for the poet there is not a peasant nor a wretched operative of them all who will not shake his head and tap his forehead with his forefinger when the poor poet chap passes by. The peasant has the same opinion of him that the physician, the trainer, and the money-lender had of the

rhetorician.

The hard conditions of the lonely New England life, with its religious theories as sombre as its forests, its rigid notions of duty as difficult to make bloom into sweetness and beauty as the stony soil, would have been unendurable if they had not been touched with the ideal created by the poet. There was in creed and purpose the virility that creates a state, and, as Menander says, the country which is cultivated with difficulty produces brave men; but we leave out an important element in the lives of the Pilgrims if we overlook the means they had of living above their barren circumstances. I do not speak only of the culture which many of them brought from the universities, of the Greek and Roman classics, and what unworldly literature they could glean from the productive age of Elizabeth and James, but of another source, more universally resorted to, and more powerful in exciting imagination and emotion, and filling the want in human nature of which we have spoken. They had the Bible, and it was more to them, much more, than a book of religion, than a revelation of religious truth, a rule for the conduct of life, or a guide to heaven. It supplied the place to them of the Mahabharata to the Hindoo, of the story-teller to the Arab. It opened to them a boundless realm of poetry and imagination.

What is the Bible? It might have sufficed, accepted as a book of revelation, for all the purposes of moral guidance, spiritual consolation, and systematized authority, if it had been a collection of precepts, a dry code of morals, an arsenal of judgments, and a treasury of promises. We are accustomed to think of the Pilgrims as training their intellectual faculties in the knottiest problems of human responsibility and destiny, toughening their mental fibre in wrestling with dogmas and the decrees of Providence, forgetting what else they drew out of the Bible: what else it was to them in a degree it has been to few peoples many age. For the Bible is the unequalled record of thought and emotion, the reservoir of poetry, traditions, stories, parables, exaltations, consolations, great imaginative adventure, for which the spirit of man is always longing. It might have been, in warning examples and commands, all-sufficient to enable men to make a decent pilgrimage on earth and reach a better country; but it would have been a very different book to mankind if it had been only a volume of statutes, and if it lacked its wonderful literary quality. It might have enabled men to reach a better country, but not, while on earth, to rise into and live in that better country, or to live in a region above the sordidness of actual life. For, apart from its religious intention and sacred character, the book is so written that it has supremely in its history, poetry, prophecies, promises, stories, that clear literary quality that supplies, as certainly no other single book does, the want in the human mind which is higher than the want of facts or knowledge.

The Bible is the best illustration of the literature of power, for it always concerns itself with life, it touches it at all points. And this is the test of any piece of literature—its universal appeal to human nature. When I consider the narrow limitations of the Pilgrim households, the absence of luxury, the presence of danger and hardship, the harsh laws—only less severe than the contemporary laws of England and Virginia—the weary drudgery, the few pleasures, the curb upon the expression of emotion and of tenderness, the ascetic repression of worldly thought, the absence of poetry in the routine occupations and conditions, I can feel what the Bible must have been to them. It was an open door into a world where emotion is expressed, where imagination can range, where love and longing find a language, where imagery is given to every noble and suppressed passion of the soul, where every aspiration finds wings. It was history, or, as Thucydides said, philosophy teaching by example; it was the romance of real life; it was entertainment unailing; the wonder-book of childhood, the volume of sweet sentiment to the shy maiden, the sword to the soldier, the inciter of the youth to heroic enduring of hardness, it was the refuge of the aged in failing activity. Perhaps we can nowhere find a better illustration of the true relation of literature to life than in this example.

Let us consider the comparative value of literature to mankind. By comparative value I mean its worth to men in comparison with other things of acknowledged importance, such as the creation of industries, the government of States, the manipulation of the politics of an age, the achievements in war and discovery, and the lives of admirable men. It needs a certain perspective to judge of this aright, for the near and the immediate always assume importance. The work that an age has on hand, whether it be discovery, conquest, the wars that determine boundaries or are fought for policies, the industries that develop a country or affect the character of a people, the wielding of power, the accumulation of fortunes, the various activities of any given civilization or period, assume such enormous proportions to those engaged in them that such a modest thing as the literary product seems insignificant in comparison; and hence it is that the man of action always holds in slight esteem the man of thought, and especially the expresser of feeling and emotion, the poet and the humorist. It is only when we look back over the ages, when civilizations have passed or changed, over the rivalries of States, the ambitions and enmities of men, the shining deeds and the base deeds that make up history, that we are enabled to see what remains, what is permanent. Perhaps the chief result left to the world out of a period of heroic exertion, of passion and struggle and accumulation, is a sheaf of poems, or the record by a man of letters of some admirable character. Spain filled a large place in the world in the sixteenth century, and its influence upon history is by no means spent yet; but we have inherited out of that period nothing, I dare say, that is of more value than the romance of Don Quixote. It is true that the best heritage of generation from generation is the character of great men; but we always owe its transmission to the poet and the writer. Without Plato there would be no Socrates. There is no influence comparable in human life to the personality of a powerful man, so long as he is present to his generation, or lives in the memory of those who felt his influence. But after time has passed, will the world, will human life, that is essentially the same in all changing conditions, be more affected by what Bismarck did or by what Goethe said?

We may without impropriety take for an illustration of the comparative value of literature to human needs the career of a man now living. In the opinion of many, Mr. Gladstone is the greatest Englishman of this age. What would be the position of the British empire, what would be the tendency of English politics and society without him, is a matter for speculation. He has not played such a role for England and its neighbors as Bismarck has played for Germany and the Continent, but he has been one of the most powerful influences in molding English action. He is the foremost teacher. Rarely in history has a nation depended more upon a single man, at times, than the English upon Gladstone, upon his will, his ability, and especially his character. In certain recent crises the thought of losing him produced something like a panic in the English mind, justifying in regard to him, the hyperbole of Choate upon the death of Webster, that the sailor on the distant

sea would feel less safe—as if a protecting providence had been withdrawn from the world. His mastery of finance and of economic problems, his skill in debate, his marvelous achievements in oratory, have extorted the admiration of his enemies. There is scarcely a province in government, letters, art, or research in which the mind can win triumphs that he has not invaded and displayed his power in; scarcely a question in politics, reform, letters, religion, archaeology, sociology, which he has not discussed with ability. He is a scholar, critic, parliamentarian, orator, voluminous writer. He seems equally at home in every field of human activity—a man of prodigious capacity and enormous acquirements. He can take up, with a turn of the hand, and always with vigor, the cause of the Greeks, Papal power, education, theology, the influence of Egypt on Homer, the effect of English legislation on King O'Brien, contributing something noteworthy to all the discussions of the day. But I am not aware that he has ever produced a single page of literature. Whatever space he has filled in his own country, whatever and however enduring the impression he has made upon English life and society, does it seem likely that the sum total of his immense activity in so many fields, after the passage of so many years, will be worth to the world as much as the simple story of Rab and his Friends? Already in America I doubt if it is. The illustration might have more weight with some minds if I contrasted the work of this great man—as to its answering to a deep want in human nature—with a novel like 'Henry Esmond' or a poem like 'In Memoriam'; but I think it is sufficient to rest it upon so slight a performance as the sketch by Dr. John Brown, of Edinburgh. For the truth is that a little page of literature, nothing more than a sheet of paper with a poem written on it, may have that vitality, that enduring quality, that adaptation to life, that make it of more consequence to all who inherit it than every material achievement of the age that produced it. It was nothing but a sheet of paper with a poem on it, carried to the door of his London patron, for which the poet received a guinea, and perhaps a seat at the foot of my lord's table. What was that scrap compared to my lord's business, his great establishment, his equipages in the Park, his position in society, his weight in the House of Lords, his influence in Europe? And yet that scrap of paper has gone the world over; it has been sung in the camp, wept over in the lonely cottage; it has gone with the marching regiments, with the explorers—with mankind, in short, on its way down the ages, brightening, consoling, elevating life; and my lord, who regarded as scarcely above a menial the poet to whom he tossed the guinea—my lord, with all his pageantry and power, has utterly gone and left no witness.

“EQUALITY”

By Charles Dudley Warner

In accordance with the advice of Diogenes of Apollonia in the beginning of his treatise on Natural Philosophy—“It appears to me to be well for every one who commences any sort of philosophical treatise to lay down some undeniable principle to start with”—we offer this:

All men are created unequal.

It would be a most interesting study to trace the growth in the world of the doctrine of “equality.” That is not the purpose of this essay, any further than is necessary for definition. We use the term in its popular sense, in the meaning, somewhat vague, it is true, which it has had since the middle of the eighteenth century. In the popular apprehension it is apt to be confounded with uniformity; and this not without reason, since in many applications of the theory the tendency is to produce likeness or uniformity. Nature, with equal laws, tends always to diversity; and doubtless the just notion of equality in human affairs consists with unlikeness. Our purpose is to note some of the tendencies of the dogma as it is at present understood by a considerable portion of mankind.

We regard the formulated doctrine as modern. It would be too much to say that some notion of the “equality of men” did not underlie the socialistic and communistic ideas which prevailed from time to time in the ancient world, and broke out with volcanic violence in the Grecian and Roman communities. But those popular movements seem to us rather blind struggles against physical evils, and to be distinguished from those more intelligent actions based upon the theory which began to stir Europe prior to the Reformation.

It is sufficient for our purpose to take the well-defined theory of modern times. Whether the ideal republic of Plato was merely a convenient form for philosophical speculation, or whether, as the greatest authority on political economy in Germany, Dr. William Roscher, thinks, it “was no mere fancy”; whether Plato's notion of the identity of man and the State is compatible with the theory of equality, or whether it is, as many communists say, indispensable to it, we need not here discuss. It is true that in his Republic almost all the social theories which have been deduced from the modern proclamation of equality are elaborated. There was to be a community of property, and also a community of wives and children. The equality of the sexes was insisted on to the extent of living in common, identical education and pursuits, equal share in all labors, in occupations, and in government. Between the sexes there was allowed only one ultimate difference. The Greeks, as Professor Jowett says, had noble conceptions of womanhood; but Plato's ideal for the sexes had no counterpart in their actual life, nor could they have understood the sort of equality upon which he insisted. The same is true of the Romans throughout their history.

More than any other Oriental peoples the Egyptians of the Ancient Empire entertained the idea of the equality of the sexes; but the equality of man was not conceived by them. Still less did any notion of it exist in the Jewish state. It was the fashion with the socialists of 1793, as it has been with the international assemblages at Geneva in our own day, to trace the genesis of their notions back to the first Christian age. The far-reaching influence of the new gospel in the liberation of the human mind and in promoting just and divinely-ordered relations among men is admitted; its origination of the social and political dogma we are considering is denied. We do not find that Christ himself anywhere expressed it or acted on it. He associated with the lowly, the vile, the outcast; he taught that all men, irrespective of rank or possessions, are sinners,

and in equal need of help. But he attempted no change in the conditions of society. The "communism" of the early Christians was the temporary relation of a persecuted and isolated sect, drawn together by common necessities and dangers, and by the new enthusiasm of self-surrender. ["The community of goods of the first Christians at Jerusalem, so frequently cited and extolled, was only a community of use, not of ownership (Acts iv. 32), and throughout a voluntary act of love, not a duty (v. 4); least of all, a right which the poorer might assert. Spite of all this, that community of goods produced a chronic state of poverty in the church of Jerusalem." (Principles of Political Economy. By William Roscher. Note to Section LXXXI. English translation. New York: Henry Holt & Co. 1878.)]—Paul announced the universal brotherhood of man, but he as clearly recognized the subordination of society, in the duties of ruler and subject, master and slave, and in all the domestic relations; and although his gospel may be interpreted to contain the elements of revolution, it is not probable that he undertook to inculcate, by the proclamation of "universal brotherhood," anything more than the duty of universal sympathy between all peoples and classes as society then existed.

If Christianity has been and is the force in promoting and shaping civilization that we regard it, we may be sure that it is not as a political agent, or an annuller of the inequalities of life, that we are to expect aid from it. Its office, or rather one of its chief offices on earth, is to diffuse through the world, regardless of condition or possessions or talent or opportunity, sympathy and a recognition of the value of manhood underlying every lot and every diversity—a value not measured by earthly accidents, but by heavenly standards. This we understand to be "Christian equality." Of course it consists with inequalities of condition, with subordination, discipline, obedience; to obey and serve is as honorable as to command and to be served.

If the religion of Christ should ever be acclimated on earth, the result would not be the removal of hardships and suffering, or of the necessity of self-sacrifice; but the bitterness and discontent at unequal conditions would measurably disappear. At the bar of Christianity the poor man is the equal of the rich, and the learned of the unlearned, since intellectual acquisition is no guarantee of moral worth. The content that Christianity would bring to our perturbed society would come from the practical recognition of the truth that all conditions may be equally honorable. The assertion of the dignity of man and of labor is, we imagine, the sum and substance of the equality and communism of the New Testament. But we are to remember that this is not merely a "gospel for the poor."

Whatever the theories of the ancient world were, the development of democratic ideas is sufficiently marked in the fifteenth century, and even in the fourteenth, to rob the eighteenth of the credit of originating the doctrine of equality. To mention only one of the early writers,—[For copious references to authorities on the spread of communistic and socialistic ideas and libertine community of goods and women in four periods of the world's history—namely, at the time of the decline of Greece, in the degeneration of the Roman republic, among the moderns in the age of the Reformation, and again in our own day—see Roscher's Political Economy, notes to Section LXXIX., et seq.]—Marsilio, a physician of Padua, in 1324, said that the laws ought to be made by all the citizens; and he based this sovereignty of the people upon the greater likelihood of laws being better obeyed, and also being good laws, when they were made by the whole body of the persons affected.

In 1750 and 1753, J. J. Rousseau published his two discourses on questions proposed by the Academy of Dijon: "Has the Restoration of Sciences Contributed to Purify or to Corrupt Manners?" and "What is the Origin of Inequality among Men, and is it Authorized by Natural Law?" These questions show the direction and the advance of thinking on social topics in the middle of the eighteenth century. Rousseau's *Contrat-Social* and the novel *Emile* were published in 1761.

But almost three-quarters of a century before, in 1690, John Locke published his two treatises on government. Rousseau was familiar with them. Mr. John Morley, in his admirable study of Rousseau, [*Rousseau*. By John Morley. London: Chapman & Hall. 1873—I have used it freely in the glance at this period.]—fully discusses the latter's obligation to Locke; and the exposition leaves Rousseau little credit for originality, but considerable for illogical misconception. He was, in fact, the most illogical of great men, and the most inconsistent even of geniuses. The *Contrat-Social* is a reaction in many things from the discourses, and *Emile* is almost an entire reaction, especially in the theory of education, from both.

His central doctrine of popular sovereignty was taken from Locke. The English philosopher said, in his second treatise, "To understand political power aright and derive it from its original, we must consider what state all men are naturally in; and that is a state of perfect freedom to order their actions and dispose of their persons and possessions as they think fit, within the bounds of the law of nature, without asking leave or depending upon the will of any other man—a state also of equality, wherein all the power and jurisdiction is reciprocal, no one having more than another; there being nothing more evident than that creatures of the same species and rank, promiscuously born to all the advantages of nature and the use of the same faculties, should also be equal one amongst another, without subordination or subjection, unless the Lord and Master of them all should by any manifest declaration of His will set one above another, and confer on him by an evident and clear appointment an undoubted right to dominion and sovereignty." But a state of liberty is not a state of license. We cannot exceed our own rights without assailing the rights of others. There is no such subordination as authorizes us to destroy one another. As every one is bound to preserve himself, so he is bound to preserve the rest of mankind, and except to do justice upon an offender we may not impair the life, liberty, health, or goods of another. Here Locke deduces the power that one man may have over another; community could not exist if transgressors were not punished. Every wrongdoer places himself in "a state of war." Here is the difference between the state of nature and the state of war, which men, says Locke, have confounded—alluding probably to Hobbes's notion of the lawlessness of human society in the original condition.

The portion of Locke's treatise which was not accepted by the French theorists was that relating to property. Property in lands or goods is due wholly and only to the labor man has put into it. By labor he has removed it from the common state in which nature has placed it, and annexed something to it that excludes the common rights of other men.

Rousseau borrowed from Hobbes as well as from Locke in his conception of popular sovereignty; but this was not his only lack of originality. His discourse on primitive society, his unscientific and unhistoric notions

about the original condition of man, were those common in the middle of the eighteenth century. All the thinkers and philosophers and fine ladies and gentlemen assumed a certain state of nature, and built upon it, out of words and phrases, an airy and easy reconstruction of society, without a thought of investigating the past, or inquiring into the development of mankind. Every one talked of "the state of nature" as if he knew all about it. "The conditions of primitive man," says Mr. Morley, "were discussed by very incompetent ladies and gentlemen at convivial supper-parties, and settled with complete assurance." That was the age when solitary Frenchmen plunged into the wilderness of North America, confidently expecting to recover the golden age under the shelter of a wigwam and in the society of a squaw.

The state of nature of Rousseau was a state in which inequality did not exist, and with a fervid rhetoric he tried to persuade his readers that it was the happier state. He recognized inequality, it is true, as a word of two different meanings: first, physical inequality, difference of age, strength, health, and of intelligence and character; second, moral and political inequality, difference of privileges which some enjoy to the detriment of others—such as riches, honor, power. The first difference is established by nature, the second by man. So long, however, as the state of nature endures, no disadvantages flow from the natural inequalities.

In Rousseau's account of the means by which equality was lost, the incoming of the ideas of property is prominent. From property arose civil society. With property came in inequality. His exposition of inequality is confused, and it is not possible always to tell whether he means inequality of possessions or of political rights. His contemporary, Morelly, who published the *Basileade* in 1753, was troubled by no such ambiguity. He accepts the doctrine that men are formed by laws, but holds that they are by nature good, and that laws, by establishing a division of the products of nature, broke up the sociability of men, and that all political and moral evils are the result of private property. Political inequality is an accident of inequality of possessions, and the renovation of the latter lies in the abolition of the former.

The opening sentence of the *Contrat-Social* is, "Man is born free, and everywhere he is a slave," a statement which it is difficult to reconcile with the fact that every human being is born helpless, dependent, and into conditions of subjection, conditions that we have no reason to suppose were ever absent from the race. But Rousseau never said, "All men are born equal." He recognized, as we have seen, natural inequality. What he held was that the artificial differences springing from the social union were disproportionate to the capacities springing from the original constitution; and that society, as now organized, tends to make the gulf wider between those who have privileges and those who have none.

The well-known theory upon which Rousseau's superstructure rests is that society is the result of a compact, a partnership between men. They have not made an agreement to submit their individual sovereignty to some superior power, but they have made a covenant of brotherhood. It is a contract of association. Men were, and ought to be, equal cooperators, not only in politics, but in industries and all the affairs of life. All the citizens are participants in the sovereign authority. Their sovereignty is inalienable; power may be transmitted, but not will; if the people promise to obey, it dissolves itself by the very act—if there is a master, there is no longer a people. Sovereignty is also indivisible; it cannot be split up into legislative, judiciary, and executive power.

Society being the result of a compact made by men, it followed that the partners could at any time remake it, their sovereignty being inalienable. And this the French socialists, misled by a priori notions, attempted to do, on the theory of the *Contrat-Social*, as if they had a *tabula rasa*, without regarding the existing constituents of society, or traditions, or historical growths.

Equality, as a phrase, having done duty as a dissolvent, was pressed into service as a constructor. As this is not so much an essay on the nature of equality is an attempt to indicate some of the modern tendencies to carry out what is illusory in the dogma, perhaps enough has been said of this period. Mr. Morley very well remarks that the doctrine of equality as a demand for a fair chance in the world is unanswerable; but that it is false when it puts him who uses his chance well on the same level with him who uses it ill. There is no doubt that when Condorcet said, "Not only equality of right, but equality of fact, is the goal of the social art," he uttered the sentiments of the socialists of the Revolution.

The next authoritative announcement of equality, to which it is necessary to refer, is in the American Declaration of Independence, in these words: "We hold these truths to be self-evident: that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights governments are instituted among men, deriving their just power from the consent of the governed." And the Declaration goes on, in temperate and guarded language, to assert the right of a people to change their form of government when it becomes destructive of the ends named.

Although the genesis of these sentiments seems to be French rather than English, and equality is not defined, and critics have differed as to whether the equality clause is independent or qualified by what follows, it is not necessary to suppose that Thomas Jefferson meant anything inconsistent with the admitted facts of nature and of history. It is important to bear in mind that the statesmen of our Revolution were inaugurating a political and not a social revolution, and that the gravamen of their protest was against the authority of a distant crown. Nevertheless, these dogmas, independent of the circumstances in which they were uttered, have exercised and do exercise a very powerful influence upon the thinking of mankind on social and political topics, and are being applied without limitations, and without recognition of the fact that if they are true, in the sense meant by their originators, they are not the whole truth. It is to be noticed that rights are mentioned, but not duties, and that if political rights only are meant, political duties are not inculcated as of equal moment. It is not announced that political power is a function to be discharged for the good of the whole body, and not a mere right to be enjoyed for the advantage of the possessor; and it is to be noted also that this idea did not enter into the conception of Rousseau.

The dogma that "government derives its just power from the consent of the governed" is entirely consonant with the book theories of the eighteenth century, and needs to be confronted, and practically is confronted, with the equally good dogma that "governments derive their just power from conformity with the principles of justice." We are not to imagine, for instance, that the framers of the Declaration really contemplated the exclusion from political organization of all higher law than that in the "consent of the governed," or the

application of the theory, let us say, to a colony composed for the most part of outcasts, murderers, thieves, and prostitutes, or to such states as today exist in the Orient. The Declaration was framed for a highly intelligent and virtuous society.

Many writers, and some of them English, have expressed curiosity, if not wonder, at the different fortunes which attended the doctrine of equality in America and in France. The explanation is on the surface, and need not be sought in the fact of a difference of social and political level in the two countries at the start, nor even in the further fact that the colonies were already accustomed to self-government.

The simple truth is that the dogmas of the Declaration were not put into the fundamental law. The Constitution is the most practical state document ever made. It announces no dogmas, proclaims no theories. It accepted society as it was, with its habits and traditions; raising no abstract questions whether men are born free or equal, or how society ought to be organized. It is simply a working compact, made by "the people," to promote union, establish justice, and secure the blessings of liberty; and the equality is in the assumption of the right of "the people of the United States" to do this. And yet, in a recent number of *Blackwood's Magazine*, a writer makes the amusing statement, "I have never met an American who could deny that, while firmly maintaining that the theory was sound which, in the beautiful language of the Constitution, proclaims that all men were born equal, he was," etc.

An enlightening commentary on the meaning of the Declaration, in the minds of the American statesmen of the period, is furnished by the opinions which some of them expressed upon the French Revolution while it was in progress. Gouverneur Morris, minister to France in 1789, was a conservative republican; Thomas Jefferson was a radical democrat. Both of them had a warm sympathy with the French "people" in the Revolution; both hoped for a republic; both recognized, we may reasonably infer, the sufficient cause of the Revolution in the long-continued corruption of court and nobility, and the intolerable sufferings of the lower orders; and both, we have equal reason to believe, thought that a fair accommodation, short of a dissolution of society, was defeated by the imbecility of the king and the treachery and malignity of a considerable portion of the nobility. The Revolution was not caused by theories, however much it may have been excited or guided by them. But both Morris and Jefferson saw the futility of the application of the abstract dogma of equality and the theories of the Social Contract to the reconstruction of government and the reorganization of society in France.

If the aristocracy were malignant—though numbers of them were far from being so—there was also a malignant prejudice aroused against them, and M. Taine is not far wrong when he says of this prejudice, "Its hard, dry kernel consists of the abstract idea of equality."—[*The French Revolution*. By H. A. Taine. Vol. i., bk. ii., chap. ii., sec. iii. Translation. New York: Henry Holt & Co.]—Taine's French Revolution is cynical, and, with all its accumulation of material, omits some facts necessary to a philosophical history; but a passage following that quoted is worth reproducing in this connection: "The treatment of the nobles of the Assembly is the same as the treatment of the Protestants by Louis XIV. . . . One hundred thousand Frenchmen driven out at the end of the seventeenth century, and one hundred thousand driven out at the end of the eighteenth! Mark how an intolerant democracy completes the work of an intolerant monarchy! The moral aristocracy was mowed down in the name of uniformity; the social aristocracy is mowed down in the name of equality. For the second time an abstract principle, and with the same effect, buries its blade in the heart of a living society."

Notwithstanding the world-wide advertisement of the French experiment, it has taken almost a century for the dogma of equality, at least outside of France, to filter down from the speculative thinkers into a general popular acceptance, as an active principle to be used in the shaping of affairs, and to become more potent in the popular mind than tradition or habit. The attempt is made to apply it to society with a brutal logic; and we might despair as to the result, if we did not know that the world is not ruled by logic. Nothing is so fascinating in the hands of the half-informed as a neat dogma; it seems the perfect key to all difficulties. The formula is applied in contempt and ignorance of the past, as if building up were as easy as pulling down, and as if society were a machine to be moved by mechanical appliances, and not a living organism composed of distinct and sensitive beings. Along with the spread of a belief in the uniformity of natural law has unfortunately gone a suggestion of parallelism of the moral law to it, and a notion that if we can discover the right formula, human society and government can be organized with a mathematical justice to all the parts. By many the dogma of equality is held to be that formula, and relief from the greater evils of the social state is expected from its logical extension.

Let us now consider some of the present movements and tendencies that are related, more or less, to this belief:

I. Absolute equality is seen to depend upon absolute supremacy of the state. Professor Henry Fawcett says, "Excessive dependence on the state is the most prominent characteristic of modern socialism." "These proposals to prohibit inheritance, to abolish private property, and to make the state the owner of all the capital and the administrator of the entire industry of the country are put forward as representing socialism in its ultimate and highest development."—[*"Socialism in Germany and the United States,"* *Fortnightly Review*, November, 1878.]

Society and government should be recast till they conform to the theory, or, let us say, to its exaggerations. Men can unmake what they have made. There is no higher authority anywhere than the will of the majority, no matter what the majority is in intellect and morals. Fifty-one ignorant men have a natural right to legislate for the one hundred, as against forty-nine intelligent men.

All men being equal, one man is as fit to legislate and execute as another. A recently elected Congressman from Maine vehemently repudiated in a public address, as a slander, the accusation that he was educated. The theory was that, uneducated, he was the proper representative of the average ignorance of his district, and that ignorance ought to be represented in the legislature in kind. The ignorant know better what they want than the educated know for them. "Their education [that of college men] destroys natural perception and judgment; so that cultivated people are one-sided, and their judgment is often inferior to that of the working people." "Cultured people have made up their minds, and are hard to move." "No lawyer should be elected to a place in any legislative body."—[*Opinions of working-men*, reported in "*The Nationals, their Origin and their Aims*," *The Atlantic Monthly*, November, 1878.]

Experience is of no account, neither is history, nor tradition, nor the accumulated wisdom of ages. On all questions of political economy, finance, morals, the ignorant man stands on a par with the best informed as a legislator. We might cite any number of the results of these illusions. A member of a recent House of Representatives declared that we "can repair the losses of the war by the issue of a sufficient amount of paper money." An intelligent mechanic of our acquaintance, a leader among the Nationals, urging the theory of his party, that banks should be destroyed, and that the government should issue to the people as much "paper money" as they need, denied the right of banks or of any individuals to charge interest on money. Yet he would take rent for the house he owns.

Laws must be the direct expression of the will of the majority, and be altered solely on its will. It would be well, therefore, to have a continuous election, so that, any day, the electors can change their representative for a new man. "If my caprice be the source of law, then my enjoyment may be the source of the division of the nation's resources."—[Stahl's Rechtsphilosophie, quoted by Roscher.]

Property is the creator of inequality, and this factor in our artificial state can be eliminated only by absorption. It is the duty of the government to provide for all the people, and the sovereign people will see to it that it does. The election franchise is a natural right—a man's weapon to protect himself. It may be asked, If it is just this, and not a sacred trust accorded to be exercised for the benefit of society, why may not a man sell it, if it is for his interest to do so?

What is there illogical in these positions from the premise given? "Communism," says Roscher, [Political Economy, bk. i., ch. v., 78.]—"is the logically not inconsistent exaggeration of the principle of equality. Men who hear themselves designated as the sovereign people, and their welfare as the supreme law of the state, are more apt than others to feel more keenly the distance which separates their own misery from the superabundance of others. And, indeed, to what an extent our physical wants are determined by our intellectual mold!"

The tendency of the exaggeration of man's will as the foundation of government is distinctly materialistic; it is a self-sufficiency that shuts out God and the higher law.—["And, indeed, if the will of man is all-powerful, if states are to be distinguished from one another only by their boundaries, if everything may be changed like the scenery in a play by a flourish of the magic wand of a system, if man may arbitrarily make the right, if nations can be put through evolutions like regiments of troops, what a field would the world present for attempts at the realizations of the wildest dreams, and what a temptation would be offered to take possession, by main force, of the government of human affairs, to destroy the rights of property and the rights of capital, to gratify ardent longings without trouble, and to provide the much-coveted means of enjoyment! The Titans have tried to scale the heavens, and have fallen into the most degrading materialism. Purely speculative dogmatism sinks into materialism." (M. Wolowski's Essay on the Historical Method, prefixed to his translation of Roscher's Political Economy.)]—We need to remember that the Creator of man, and not man himself, formed society and instituted government; that God is always behind human society and sustains it; that marriage and the family and all social relations are divinely established; that man's duty, coinciding with his right, is, by the light of history, by experience, by observation of men, and by the aid of revelation, to find out and make operative, as well as he can, the divine law in human affairs. And it may be added that the sovereignty of the people, as a divine trust, may be as logically deduced from the divine institution of government as the old divine right of kings. Government, by whatever name it is called, is a matter of experience and expediency. If we submit to the will of the majority, it is because it is more convenient to do so; and if the republic or the democracy vindicate itself, it is because it works best, on the whole, for a particular people. But it needs no prophet to say that it will not work long if God is shut out from it, and man, in a full-blown socialism, is considered the ultimate authority.

II. Equality of education. In our American system there is, not only theoretically but practically, an equality of opportunity in the public schools, which are free to all children, and rise by gradations from the primaries to the high-schools, in which the curriculum in most respects equals, and in variety exceeds, that of many third-class "colleges." In these schools nearly the whole round of learning, in languages, science, and art, is touched. The system has seemed to be the best that could be devised for a free society, where all take part in the government, and where so much depends upon the intelligence of the electors. Certain objections, however, have been made to it. As this essay is intended only to be tentative, we shall state some of them, without indulging in lengthy comments.

(1.) The first charge is superficiality—a necessary consequence of attempting too much—and a want of adequate preparation for special pursuits in life.

(2.) A uniformity in mediocrity is alleged from the use of the same text-books and methods in all schools, for all grades and capacities. This is one of the most common criticisms on our social state by a certain class of writers in England, who take an unflagging interest in our development. One answer to it is this: There is more reason to expect variety of development and character in a generally educated than in an ignorant community; there is no such uniformity as the dull level of ignorance.

(3.) It is said that secular education—and the general schools open to all in a community of mixed religions must be secular—is training the rising generation to be materialists and socialists.

(4.) Perhaps a better-founded charge is that a system of equal education, with its superficiality, creates discontent with the condition in which a majority of men must be—that of labor—a distaste for trades and for hand-work, an idea that what is called intellectual labor (let us say, casting up accounts in a shop, or writing trashy stories for a sensational newspaper) is more honorable than physical labor; and encourages the false notion that "the elevation of the working classes" implies the removal of men and women from those classes.

We should hesitate to draw adverse conclusions in regard to a system yet so young that its results cannot be fairly estimated. Only after two or three generations can its effects upon the character of a great people be measured: Observations differ, and testimony is difficult to obtain. We think it safe to say that those states are most prosperous which have the best free schools. But if the philosopher inquires as to the general effect upon the national character in respect to the objections named, he must wait for a reply.

III. The pursuit of the chimera of social equality, from the belief that it should logically follow political

equality; resulting in extravagance, misapplication of natural capacities, a notion that physical labor is dishonorable, or that the state should compel all to labor alike, and in efforts to remove inequalities of condition by legislation.

IV. The equality of the sexes. The stir in the middle of the eighteenth century gave a great impetus to the emancipation of woman; though, curiously enough, Rousseau, in unfolding his plan of education for Sophie, in *Emile*, inculcates an almost Oriental subjection of woman—her education simply that she may please man. The true enfranchisement of woman—that is, the recognition (by herself as well as by man) of her real place in the economy of the world, in the full development of her capacities—is the greatest gain to civilization since the Christian era. The movement has its excesses, and the gain has not been without loss. “When we turn to modern literature,” writes Mr. Money, “from the pages in which Fenelon speaks of the education of girls, who does not feel that the world has lost a sacred accent—that some ineffable essence has passed out from our hearts?”

How far the expectation has been realized that women, in fiction, for instance, would be more accurately described, better understood, and appear as nobler and lovelier beings when women wrote the novels, this is not the place to inquire. The movement has results which are unavoidable in a period of transition, and probably only temporary. The education of woman and the development of her powers hold the greatest promise for the regeneration of society. But this development, yet in its infancy, and pursued with much crudeness and misconception of the end, is not enough. Woman would not only be equal with man, but would be like him; that is, perform in society the functions he now performs. Here, again, the notion of equality is pushed towards uniformity. The reformers admit structural differences in the sexes, though these, they say, are greatly exaggerated by subjection; but the functional differences are mainly to be eliminated. Women ought to mingle in all the occupations of men, as if the physical differences did not exist. The movement goes to obliterate, as far as possible, the distinction between sexes. Nature is, no doubt, amused at this attempt. A recent writer—[“Biology and Woman's Rights,” *Quarterly Journal of Science*, November, 1878.]—, says: “The ‘femme libre’ [free woman] of the new social order may, indeed, escape the charge of neglecting her family and her household by contending that it is not her vocation to become a wife and a mother! Why, then, we ask, is she constituted a woman at all? Merely that she may become a sort of second-rate man?”

The truth is that this movement, based always upon a misconception of equality, so far as it would change the duties of the sexes, is a retrograde.—[“It has been frequently observed that among declining nations the social differences between the two sexes are first obliterated, and afterwards even the intellectual differences. The more masculine the women become, the more effeminate become the men. It is no good symptom when there are almost as many female writers and female rulers as there are male. Such was the case, for instance, in the Hellenistic kingdoms, and in the age of the Caesars. What today is called by many the emancipation of woman would ultimately end in the dissolution of the family, and, if carried out, render poor service to the majority of women. If man and woman were placed entirely on the same level, and if in the competition between the two sexes nothing but an actual superiority should decide, it is to be feared that woman would soon be relegated to a condition as hard as that in which she is found among all barbarous nations. It is precisely family life and higher civilization that have emancipated woman. Those theorizers who, led astray by the dark side of higher civilization, preach a community of goods, generally contemplate in their simultaneous recommendation of the emancipation of woman a more or less developed form of a community of wives. The grounds of the two institutions are very similar.” (Roscher's *Political Economy*, p. 250.) Note also that difference in costumes of the sexes is least apparent among lowly civilized peoples.]—One of the most striking features in our progress from barbarism to civilization is the proper adjustment of the work for men and women. One test of a civilization is the difference of this work. This is a question not merely of division of labor, but of differentiation with regard to sex. It not only takes into account structural differences and physiological disadvantages, but it recognizes the finer and higher use of woman in society.

The attainable, not to say the ideal, society requires an increase rather than a decrease of the differences between the sexes. The differences may be due to physical organization, but the structural divergence is but a faint type of deeper separation in mental and spiritual constitution. That which makes the charm and power of woman, that for which she is created, is as distinctly feminine as that which makes the charm and power of men is masculine. Progress requires constant differentiation, and the line of this is the development of each sex in its special functions, each being true to the highest ideal for itself, which is not that the woman should be a man, or the man a woman. The enjoyment of social life rests very largely upon the encounter and play of the subtle peculiarities which mark the two sexes; and society, in the limited sense of the word, not less than the whole structure of our civilization, requires the development of these peculiarities. It is in diversity, and not in an equality tending to uniformity, that we are to expect the best results from the race.

V. Equality of races; or rather a removal of the inequalities, social and political, arising in the contact of different races by intermarriage.

Perhaps equality is hardly the word to use here, since uniformity is the thing aimed at; but the root of the proposal is in the dogma we are considering. The tendency of the age is to uniformity. The facilities of travel and communication, the new inventions and the use of machinery in manufacturing, bring men into close and uniform relations, and induce the disappearance of national characteristics and of race peculiarities. Men, the world over, are getting to dress alike, eat alike, and disbelieve in the same things: It is the sentimental complaint of the traveler that his search for the picturesque is ever more difficult, that race distinctions and habits are in a way to be improved off the face of the earth, and that a most uninteresting monotony is supervening. The complaint is not wholly sentimental, and has a deeper philosophical reason than the mere pleasure in variety on this planet.

We find a striking illustration of the equalizing, not to say leveling, tendency of the age in an able paper by Canon George Rawlinson, of the University of Oxford, contributed recently to an American periodical of a high class and conservative character.—[“Duties of Higher towards Lower Races.” By George Rawlinson. *Princeton Re-view*. November, 1878. New York.]—This paper proposes, as a remedy for the social and political evils caused by the negro element in our population, the miscegenation of the white and black races, to the end that the black race may be wholly absorbed in the white—an absorption of four millions by thirty-

six millions, which he thinks might reasonably be expected in about a century, when the lower type would disappear altogether.

Perhaps the pleasure of being absorbed is not equal to the pleasure of absorbing, and we cannot say how this proposal will commend itself to the victims of the euthanasia. The results of miscegenation on this continent—black with red, and white with black—the results morally, intellectually, and physically, are not such as to make it attractive to the American people.

It is not, however, upon sentimental grounds that we oppose this extension of the exaggerated dogma of equality. Our objection is deeper. Race distinctions ought to be maintained for the sake of the best development of the race, and for the continuance of that mutual reaction and play of peculiar forces between races which promise the highest development for the whole. It is not for nothing, we may suppose, that differentiation has gone on in the world; and we doubt that either benevolence or self-interest requires this age to attempt to restore an assumed lost uniformity, and fuse the race traits in a tiresome homogeneity.

Life consists in an exchange of relations, and the more varied the relations interchanged the higher the life. We want not only different races, but different civilizations in different parts of the globe.

A much more philosophical view of the African problem and the proper destiny of the negro race than that of Canon Rawlinson is given by a recent colored writer,—[“Africa and the Africans.” By Edmund W. Blyden. *Eraser's Magazine*, August, 1878.]—an official in the government of Liberia. We are mistaken, says this excellent observer, in regarding Africa as a land of a homogeneous population, and in confounding the tribes in a promiscuous manner. There are negroes and negroes. “The numerous tribes inhabiting the vast continent of Africa can no more be regarded as in every respect equal than the numerous peoples of Asia or Europe can be so regarded;” and we are not to expect the civilization of Africa to be under one government, but in a great variety of States, developed according to tribal and race affinities. A still greater mistake is this:

“The mistake which Europeans often make in considering questions of negro improvement and the future of Africa is in supposing that the negro is the European in embryo, in the undeveloped stage, and that when, by-and-by, he shall enjoy the advantages of civilization and culture, he will become like the European; in other words, that the negro is on the same line of progress, in the same groove, with the European, but infinitely in the rear This view proceeds upon the assumption that the two races are called to the same work, and are alike in potentiality and ultimate development, the negro only needing the element of time, under certain circumstances, to become European. But to our mind it is not a question between the two races of inferiority or superiority. There is no absolute or essential superiority on the one side, or absolute or essential inferiority on the other side. It is a question of difference of endowment and difference of destiny. No amount of training or culture will make the negro a European. On the other hand, no lack of training or deficiency of culture will make the European a negro. The two races are not moving in the same groove, with an immeasurable distance between them, but on parallel lines. They will never meet in the plane of their activities so as to coincide in capacity or performance. They are not identical, as some think, but unequal; they are distinct, but equal—an idea that is in no way incompatible with the Scripture truth that God hath made of one blood all nations of men.”

The writer goes on, in a strain that is not mere fancy, but that involves one of the truths of inequality, to say that each race is endowed with peculiar talents; that the negro has aptitudes and capacities which the world needs, and will lack until he is normally trained. In the grand symphony of the universe, “there are several sounds not yet brought out, and the feeblest of all is that hitherto produced by the negro; but he alone can furnish it.”—“When the African shall come forward with his peculiar gifts, they will fill a place never before occupied.” In short, the African must be civilized in the line of his capacities. “The present practice of the friends of Africa is to frame laws according to their own notions for the government and improvement of this people, whereas God has already enacted the laws for the government of their affairs, which laws should be carefully ascertained, interpreted, and applied; for until they are found out and conformed to, all labor will be ineffective and resultless.”

We have thus passed in review some of the tendencies of the age. We have only touched the edges of a vast subject, and shall be quite satisfied if we have suggested thought in the direction indicated. But in this limited view of our complex human problem it is time to ask if we have not pushed the dogma of equality far enough. Is it not time to look the facts squarely in the face, and conform to them in our efforts for social and political amelioration?

Inequality appears to be the divine order; it always has existed; undoubtedly it will continue; all our theories and 'a priori' speculations will not change the nature of things. Even inequality of condition is the basis of progress, the incentive to exertion. Fortunately, if today we could make every man white, every woman as like man as nature permits, give to every human being the same opportunity of education, and divide equally among all the accumulated wealth of the world, tomorrow differences, unequal possession, and differentiation would begin again. We are attempting the regeneration of society with a misleading phrase; we are wasting our time with a theory that does not fit the facts.

There is an equality, but it is not of outward show; it is independent of condition; it does not destroy property, nor ignore the difference of sex, nor obliterate race traits. It is the equality of men before God, of men before the law; it is the equal honor of all honorable labor. No more pernicious notion ever obtained lodgment in society than the common one that to “rise in the world” is necessarily to change the “condition.” Let there be content with condition; discontent with individual ignorance and imperfection. “We want,” says Emerson, “not a farmer, but a man on a farm.” What a mischievous idea is that which has grown, even in the United States, that manual labor is discreditable! There is surely some defect in the theory of equality in our society which makes domestic service to be shunned as if it were a disgrace.

It must be observed, further, that the dogma of equality is not satisfied by the usual admission that one is in favor of an equality of rights and opportunities, but is against the sweeping application of the theory made by the socialists and communists. The obvious reply is that equal rights and a fair chance are not possible without equality of condition, and that property and the whole artificial constitution of society necessitate inequality of condition. The damage from the current exaggeration of equality is that the attempt to realize

the dogma in fact—and the attempt is everywhere on foot—can lead only to mischief and disappointment.

It would be considered a humorous suggestion to advocate inequality as a theory or as a working dogma. Let us recognize it, however, as a fact, and shape the efforts for the improvement of the race in accordance with it, encouraging it in some directions, restraining it from injustice in others. Working by this recognition, we shall save the race from many failures and bitter disappointments, and spare the world the spectacle of republics ending in despotism and experiments in government ending in anarchy.

WHAT IS YOUR CULTURE TO ME?

By Charles Dudley Warner

*Delivered before the Alumni of Hamilton College, Clinton, N. Y., Wednesday, June 26,
1872*

Twenty-one years ago in this house I heard a voice calling me to ascend the platform, and there to stand and deliver. The voice was the voice of President North; the language was an excellent imitation of that used by Cicero and Julius Caesar. I remember the flattering invitation—it is the classic tag that clings to the graduate long after he has forgotten the gender of the nouns that end in 'um—*orator proximus*', the grateful voice said, '*ascendat, videlicet*,' and so forth. To be proclaimed an orator, and an ascending orator, in such a sonorous tongue, in the face of a world waiting for orators, stirred one's blood like the herald's trumpet when the lists are thrown open. Alas! for most of us, who crowded so eagerly into the arena, it was the last appearance as orators on any stage.

The facility of the world for swallowing up orators, and company after company of educated young men, has been remarked. But it is almost incredible to me now that the class of 1851, with its classic sympathies and its many revolutionary ideas, disappeared in the flood of the world so soon and so silently, causing scarcely a ripple in the smoothly flowing stream. I suppose the phenomenon has been repeated for twenty years. Do the young gentlemen at Hamilton, I wonder, still carry on their ordinary conversation in the Latin tongue, and their familiar vacation correspondence in the language of Aristophanes? I hope so. I hope they are more proficient in such exercises than the young gentlemen of twenty years ago were, for I have still great faith in a culture that is so far from any sordid aspirations as to approach the ideal; although the young graduate is not long in learning that there is an indifference in the public mind with regard to the first orator that amounts nearly to apathy, and that millions of his fellow-creatures will probably live and die without the consolations of the second orator. It is a melancholy fact that, after a thousand years of missionary effort, the vast majority of civilized men do not know that gerunds are found only in the singular number.

I confess that this failure of the annual graduating class to make its expected impression on the world has its pathetic side. Youth is credulous—as it always ought to be—and full of hope—else the world were dead already—and the graduate steps out into life with an ingenuous self-confidence in his resources. It is to him an event, this turning-point in the career of what he feels to be an important and immortal being. His entrance is public and with some dignity of display. For a day the world stops to see it; the newspapers spread abroad a report of it, and the modest scholar feels that the eyes of mankind are fixed on him in expectation and desire. Though modest, he is not insensible to the responsibility of his position. He has only packed away in his mind the wisdom of the ages, and he does not intend to be stingy about communicating it to the world which is awaiting his graduation. Fresh from the communion with great thoughts in great literatures, he is in haste to give mankind the benefit of them, and lead it on into new enthusiasm and new conquests.

The world, however, is not very much excited. The birth of a child is in itself marvelous, but it is so common. Over and over again, for hundreds of years, these young gentlemen have been coming forward with their specimens of learning, tied up in neat little parcels, all ready to administer, and warranted to be of the purest materials. The world is not unkind, it is not even indifferent, but it must be confessed that it does not act any longer as if it expected to be enlightened. It is generally so busy that it does not even ask the young gentlemen what they can do, but leaves them standing with their little parcels, wondering when the person will pass by who requires one of them, and when there will happen a little opening in the procession into which they can fall. They expected that way would be made for them with shouts of welcome, but they find themselves before long struggling to get even a standing-place in the crowd—it is only kings, and the nobility, and those fortunates who dwell in the tropics, where bread grows on trees and clothing is unnecessary, who have reserved seats in this world.

To the majority of men I fancy that literature is very much the same that history is; and history is presented as a museum of antiquities and curiosities, classified, arranged, and labeled. One may walk through it as he does through the Hotel de Cluny; he feels that he ought to be interested in it, but it is very tiresome. Learning is regarded in like manner as an accumulation of literature, gathered into great storehouses called libraries—the thought of which excites great respect in most minds, but is ineffably tedious. Year after year and age after age it accumulates—this evidence and monument of intellectual activity—piling itself up in vast collections, which it needs a lifetime even to catalogue, and through which the uncultured walk as the idle do through the British Museum, with no very strong indignation against Omar who burned the library at Alexandria.

To the popular mind this vast accumulation of learning in libraries, or in brains that do not visibly apply it, is much the same thing. The business of the scholar appears to be this sort of accumulation; and the young student, who comes to the world with a little portion of this treasure dug out of some classic tomb or mediaeval museum, is received with little more enthusiasm than is the miraculous handkerchief of St.

Veronica by the crowd of Protestants to whom it is exhibited on Holy Week in St. Peter's. The historian must make his museum live again; the scholar must vivify his learning with a present purpose.

It is unnecessary for me to say that all this is only from the unsympathetic and worldly side. I should think myself a criminal if I said anything to chill the enthusiasm of the young scholar, or to dash with any skepticism his longing and his hope. He has chosen the highest. His beautiful faith and his aspiration are the light of life. Without his fresh enthusiasm and his gallant devotion to learning, to art, to culture, the world would be dreary enough. Through him comes the ever-springing inspiration in affairs. Baffled at every turn and driven defeated from a hundred fields, he carries victory in himself. He belongs to a great and immortal army. Let him not be discouraged at his apparent little influence, even though every sally of every young life may seem like a forlorn hope. No man can see the whole of the battle. It must needs be that regiment after regiment, trained, accomplished, gay, and high with hope, shall be sent into the field, marching on, into the smoke, into the fire, and be swept away. The battle swallows them, one after the other, and the foe is yet unyielding, and the ever-remorseless trumpet calls for more and more. But not in vain, for some day, and every day, along the line, there is a cry, "They fly! they fly!" and the whole army advances, and the flag is planted on an ancient fortress where it never waved before. And, even if you never see this, better than inglorious camp-following is it to go in with the wasting regiment; to carry the colors up the slope of the enemy's works, though the next moment you fall and find a grave at the foot of the glacis.

What are the relations of culture to common life, of the scholar to the day-laborer? What is the value of this vast accumulation of higher learning, what is its point of contact with the mass of humanity, that toils and eats and sleeps and reproduces itself and dies, generation after generation, in an unvarying round, on an unvarying level? We have had discussed lately the relation of culture to religion. Mr. Froude, with a singular, reactionary ingenuity, has sought to prove that the progress of the century, so-called, with all its material alleviations, has done little in regard to a happy life, to the pleasure of existence, for the average individual Englishman. Into neither of these inquiries do I purpose to enter; but we may not unprofitably turn our attention to a subject closely connected with both of them.

It has not escaped your attention that there are indications everywhere of what may be called a groundswell. There is not simply an inquiry as to the value of classic culture, a certain jealousy of the schools where it is obtained, a rough popular contempt for the graces of learning, a failure to see any connection between the first aorist and the rolling of steel rails, but there is arising an angry protest against the conditions of a life which make one free of the serene heights of thought and give him range of all intellectual countries, and keep another at the spade and the loom, year after year, that he may earn food for the day and lodging for the night. In our day the demand here hinted at has taken more definite form and determinate aim, and goes on, visible to all men, to unsettle society and change social and political relations. The great movement of labor, extravagant and preposterous as are some of its demands, demagogic as are most of its leaders, fantastic as are many of its theories, is nevertheless real, and gigantic, and full of a certain primeval force, and with a certain justice in it that never sleeps in human affairs, but moves on, blindly often and destructively often, a movement cruel at once and credulous, deceived and betrayed, and revenging itself on friends and foes alike. Its strength is in the fact that it is natural and human; it might have been predicted from a mere knowledge of human nature, which is always restless in any relations it is possible to establish, which is always like the sea, seeking a level, and never so discontented as when anything like a level is approximated.

What is the relation of the scholar to the present phase of this movement? What is the relation of culture to it? By scholar I mean the man who has had the advantages of such an institution as this. By culture I mean that fine product of opportunity and scholarship which is to mere knowledge what manners are to the gentleman. The world has a growing belief in the profit of knowledge, of information, but it has a suspicion of culture. There is a lingering notion in matters religious that something is lost by refinement—at least, that there is danger that the plain, blunt, essential truths will be lost in aesthetic graces. The laborer is getting to consent that his son shall go to school, and learn how to build an undershot wheel or to assay metals; but why plant in his mind those principles of taste which will make him as sensitive to beauty as to pain, why open to him those realms of imagination with the illimitable horizons, the contours and colors of which can but fill him with indefinite longing?

It is not necessary for me in this presence to dwell upon the value of culture. I wish rather to have you notice the gulf that exists between what the majority want to know and that fine fruit of knowledge concerning which there is so widespread an infidelity. Will culture aid a minister in a "protracted meeting"? Will the ability to read Chaucer assist a shop-keeper? Will the politician add to the "sweetness and light" of his lovely career if he can read the "Battle of the Frogs and the Mice" in the original? What has the farmer to do with the "Rose Garden of Saadi"?

I suppose it is not altogether the fault of the majority that the true relation of culture to common life is so misunderstood. The scholar is largely responsible for it; he is largely responsible for the isolation of his position, and the want of sympathy it begets. No man can influence his fellows with any power who retires into his own selfishness, and gives himself to a self-culture which has no further object. What is he that he should absorb the sweets of the universe, that he should hold all the claims of humanity second to the perfecting of himself? This effort to save his own soul was common to Goethe and Francis of Assisi; under different manifestations it was the same regard for self. And where it is an intellectual and not a spiritual greediness, I suppose it is what an old writer calls "laying up treasures in hell."

It is not an unreasonable demand of the majority that the few who have the advantages of the training of college and university should exhibit the breadth and sweetness of a generous culture, and should shed everywhere that light which ennobles common things, and without which life is like one of the old landscapes in which the artist forgot to put sunlight. One of the reasons why the college-bred man does not meet this reasonable expectation is that his training, too often, has not been thorough and conscientious, it has not been of himself; he has acquired, but he is not educated. Another is that, if he is educated, he is not impressed with the intimacy of his relation to that which is below him as well as that which is above him, and his culture is out of sympathy with the great mass that needs it, and must have it, or it will remain a blind force in the world, the lever of demagogues who preach social anarchy and misname it progress. There is no

culture so high, no taste so fastidious, no grace of learning so delicate, no refinement of art so exquisite, that it cannot at this hour find full play for itself in the broadest fields of humanity; since it is all needed to soften the attritions of common life, and guide to nobler aspirations the strong materialistic influences of our restless society.

One reason, as I said, for the gulf between the majority and the select few to be educated is, that the college does not seldom disappoint the reasonable expectation concerning it. The graduate of the carpenter's shop knows how to use his tools—or used to in days before superficial training in trades became the rule. Does the college graduate know how to use his tools? Or has he to set about fitting himself for some employment, and gaining that culture, that training of himself, that utilization of his information which will make him necessary in the world? There has been a great deal of discussion whether a boy should be trained in the classics or mathematics or sciences or modern languages. I feel like saying “yes” to all the various propositions. For Heaven's sake train him in something, so that he can handle himself, and have free and confident use of his powers. There isn't a more helpless creature in the universe than a scholar with a vast amount of information over which he has no control. He is like a man with a load of hay so badly put upon his cart that it all slides off before he can get to market. The influence of a man on the world is generally proportioned to his ability to do something. When Abraham Lincoln was running for the Legislature the first time, on the platform of the improvement of the navigation of the Sangamon River, he went to secure the votes of thirty men who were cradling a wheat field. They asked no questions about internal improvements, but only seemed curious whether Abraham had muscle enough to represent them in the Legislature. The obliging man took up a cradle and led the gang round the field. The whole thirty voted for him.

What is scholarship? The learned Hindu can repeat I do not know how many thousands of lines from the Vedas, and perhaps backwards as well as forwards. I heard of an excellent old lady who had counted how many times the letter A occurs in the Holy Scriptures. The Chinese students who aspire to honors spend years in verbally memorizing the classics—Confucius and Mencius—and receive degrees and public advancement upon ability to transcribe from memory without the error of a point, or misplacement of a single tea-chest character, the whole of some books of morals. You do not wonder that China is today more like an herbarium than anything else. Learning is a kind of fetish, and it has no influence whatever upon the great inert mass of Chinese humanity.

I suppose it is possible for a young gentleman to be able to read—just think of it, after ten years of grammar and lexicon, not to know Greek literature and have flexible command of all its richness and beauty, but to read it!—it is possible, I suppose, for the graduate of college to be able to read all the Greek authors, and yet to have gone, in regard to his own culture, very little deeper than a surface reading of them; to know very little of that perfect architecture and what it expressed; nor of that marvelous sculpture and the conditions of its immortal beauty; nor of that artistic development which made the Acropolis to bud and bloom under the blue sky like the final flower of a perfect nature; nor of that philosophy, that politics, that society, nor of the life of that polished, crafty, joyous race, the springs of it and the far-reaching, still unexpended effects of it.

Yet as surely as that nothing perishes, that the Providence of God is not a patchwork of uncontinued efforts, but a plan and a progress, as surely as the Pilgrim embarkation at Delfshaven has a relation to the battle of Gettysburg, and to the civil rights bill giving the colored man permission to ride in a public conveyance and to be buried in a public cemetery, so surely has the Parthenon some connection with your new State capitol at Albany, and the daily life of the vine-dresser of the Peloponnesus some lesson for the American day-laborer. The scholar is said to be the torch-bearer, transmitting the increasing light from generation to generation, so that the feet of all, the humblest and the loveliest, may walk in the radiance and not stumble. But he very often carries a dark lantern.

Not what is the use of Greek, of any culture in art or literature, but what is the good to me of your knowing Greek, is the latest question of the ditch-digger to the scholar—what better off am I for your learning? And the question, in view of the interdependence of all members of society, is one that cannot be put away as idle. One reason why the scholar does not make the world of the past, the world of books, real to his fellows and serviceable to them, is that it is not real to himself, but a mere unsubstantial place of intellectual idleness, where he dallies some years before he begins his task in life. And another reason is that, while it may be real to him, while he is actually cultured and trained, he fails to see or to feel that his culture is not a thing apart, and that all the world has a right to share its blessed influence. Failing to see this, he is isolated, and, wanting his sympathy, the untutored world mocks at his super-fineness and takes its own rough way to rougher ends. Greek art was for the people, Greek poetry was for the people; Raphael painted his immortal frescoes where throngs could be lifted in thought and feeling by them; Michael Angelo hung the dome over St. Peter's so that the far-off peasant on the Campagna could see it, and the maiden kneeling by the shrine in the Alban hills. Do we often stop to think what influence, direct or other, the scholar, the man of high culture, has today upon the great mass of our people? Why do they ask, what is the use of your learning and your art?

The artist, in the retirement of his studio, finishes a charming, suggestive, historical picture. The rich man buys it and hangs it in his library, where the privileged few can see it. I do not deny that the average rich man needs all the refining influence the picture can exert on him, and that the picture is doing missionary work in his house; but it is nevertheless an example of an educating influence withdrawn and appropriated to narrow uses. But the engraver comes, and, by his mediating art, transfers it to a thousand sheets, and scatters its sweet influence far abroad. All the world, in its toil, its hunger, its sordidness, pauses a moment to look on it—that gray seacoast, the receding Mayflower, the two young Pilgrims in the foreground regarding it, with tender thoughts of the far home—all the world looks on it perhaps for a moment thoughtfully, perhaps tearfully, and is touched with the sentiment of it, is kindled into a glow of nobleness by the sight of that faith and love and resolute devotion which have tinged our early history with the faint light of romance. So art is no longer the enjoyment of the few, but the help and solace of the many.

The scholar who is cultured by books, reflection, travel, by a refined society, consorts with his kind, and more and more removes himself from the sympathies of common life. I know how almost inevitable this is, how almost impossible it is to resist the segregation of classes according to the affinities of taste. But by what mediation shall the culture that is now the possession of the few be made to leaven the world and to elevate

and sweeten ordinary life? By books? Yes. By the newspaper? Yes. By the diffusion of works of art? Yes. But when all is done that can be done by such letters-missive from one class to another, there remains the need of more personal contact, of a human sympathy, diffused and living. The world has had enough of charities. It wants respect and consideration. We desire no longer to be legislated for, it says; we want to be legislated with. Why do you never come to see me but you bring me something? asks the sensitive and poor seamstress. Do you always give some charity to your friends? I want companionship, and not cold pieces; I want to be treated like a human being who has nerves and feelings, and tears too, and as much interest in the sunset, and in the birth of Christ, perhaps as you. And the mass of uncared-for ignorance and brutality, finding a voice at length, bitterly repels the condescensions of charity; you have your culture, your libraries, your fine houses, your church, your religion, and your God, too; let us alone, we want none of them. In the bear-pit at Berne, the occupants, who are the wards of the city, have had meat thrown to them daily for I know not how long, but they are not tamed by this charity, and would probably eat up any careless person who fell into their clutches, without apology.

Do not impute to me quixotic notions with regard to the duties of men and women of culture, or think that I undervalue the difficulties in the way, the fastidiousness on the one side, or the jealousies on the other. It is by no means easy to an active participant to define the drift of his own age; but I seem to see plainly that unless the culture of the age finds means to diffuse itself, working downward and reconciling antagonisms by a commonness of thought and feeling and aim in life, society must more and more separate itself into jarring classes, with mutual misunderstandings and hatred and war. To suggest remedies is much more difficult than to see evils; but the comprehension of dangers is the first step towards mastering them. The problem of our own time—the reconciliation of the interests of classes—is as yet very ill defined. This great movement of labor, for instance, does not know definitely what it wants, and those who are spectators do not know what their relations are to it. The first thing to be done is for them to try to understand each other. One class sees that the other has lighter or at least different labor, opportunities of travel, a more liberal supply of the luxuries of life, a higher enjoyment and a keener relish of the beautiful, the immaterial. Looking only at external conditions, it concludes that all it needs to come into this better place is wealth, and so it organizes war upon the rich, and it makes demands of freedom from toil and of compensation which it is in no man's power to give it, and which would not, if granted over and over again, lift it into that condition it desires. It is a tale in the Gulistan, that a king placed his son with a preceptor, and said, "This is your son; educate him in the same manner as your own." The preceptor took pains with him for a year, but without success, whilst his own sons were completed in learning and accomplishments. The king reproved the preceptor, and said, "You have broken your promise, and not acted faithfully."

He replied, "O king, the education was the same, but the capacities are different. Although silver and gold are produced from a stone, yet these metals are not to be found in every stone. The star Canopus shines all over the world, but the scented leather comes only from Yemen." "'Tis an absolute, and, as it were, a divine perfection," says Montaigne, "for a man to know how loyally to enjoy his being. We seek other conditions, by reason we do not understand the use of our own; and go out of ourselves, because we know not how there to reside."

But nevertheless it becomes a necessity for us to understand the wishes of those who demand a change of condition, and it is necessary that they should understand the compensations as well as the limitations of every condition. The dervish congratulated himself that although the only monument of his grave would be a brick, he should at the last day arrive at and enter the gate of Paradise before the king had got from under the heavy stones of his costly tomb. Nothing will bring us into this desirable mutual understanding except sympathy and personal contact. Laws will not do it; institutions of charity and relief will not do it.

We must believe, for one thing, that the graces of culture will not be thrown away if exercised among the humblest and the least cultured; it is found out that flowers are often more welcome in the squalid tenement-houses of Boston than loaves of bread. It is difficult to say exactly how culture can extend its influence into places uncongenial and to people indifferent to it, but I will try and illustrate what I mean by an example or two.

Criminals in this country, when the law took hold of them, used to be turned over to the care of men who often had more sympathy with the crime than with the criminal, or at least to those who were almost as coarse in feeling and as brutal in speech as their charges. There have been some changes of late years in the care of criminals, but does public opinion yet everywhere demand that jailers and prison-keepers and executioners of the penal law should be men of refinement, of high character, of any degree of culture? I do not know any class more needing the best direct personal influence of the best civilization than the criminal. The problem of its proper treatment and reformation is one of the most pressing, and it needs practically the aid of our best men and women. I should have great hope of any prison establishment at the head of which was a gentleman of fine education, the purest tastes, the most elevated morality and lively sympathy with men as such, provided he had also will and the power of command. I do not know what might not be done for the viciously inclined and the transgressors, if they could come under the influence of refined men and women. And yet you know that a boy or a girl may be arrested for crime, and pass from officer to keeper, and jailer to warden, and spend years in a career of vice and imprisonment, and never once see any man or woman, officially, who has tastes, or sympathies, or aspirations much above that vulgar level whence the criminals came. Anybody who is honest and vigilant is considered good enough to take charge of prison birds.

The age is merciful and abounds in charities-houses of refuge for poor women, societies for the conservation of the exposed and the reclamation of the lost. It is willing to pay liberally for their support, and to hire ministers and distributors of its benefactions. But it is beginning to see that it cannot hire the distribution of love, nor buy brotherly feeling. The most encouraging thing I have seen lately is an experiment in one of our cities. In the thick of the town the ladies of the city have furnished and opened a reading-room, sewing-room, conversation-room, or what not, where young girls, who work for a living and have no opportunity for any culture, at home or elsewhere, may spend their evenings. They meet there always some of the ladies I have spoken of, whose unostentatious duty and pleasure it is to pass the evening with them, in reading or music or the use of the needle, and the exchange of the courtesies of life in conversation.

Whatever grace and kindness and refinement of manner they carry there, I do not suppose are wasted. These are some of the ways in which culture can serve men. And I take it that one of the chief evidences of our progress in this century is the recognition of the truth that there is no selfishness so supreme—not even that in the possession of wealth—as that which retires into itself with all the accomplishments of liberal learning and rare opportunities, and looks upon the intellectual poverty of the world without a wish to relieve it. “As often as I have been among men,” says Seneca, “I have returned less a man.” And Thomas a Kempis declared that “the greatest saints avoided the company of men as much as they could, and chose to live to God in secret.” The Christian philosophy was no improvement upon the pagan in this respect, and was exactly at variance with the teaching and practice of Jesus of Nazareth.

The American scholar cannot afford to live for himself, nor merely for scholarship and the delights of learning. He must make himself more felt in the material life of this country. I am aware that it is said that the culture of the age is itself materialistic, and that its refinements are sensual; that there is little to choose between the coarse excesses of poverty and the polished and more decorous animality of the more fortunate. Without entering directly upon the consideration of this much-talked-of tendency, I should like to notice the influence upon our present and probable future of the bounty, fertility, and extraordinary opportunities of this still new land.

The American grows and develops himself with few restraints. Foreigners used to describe him as a lean, hungry, nervous animal, gaunt, inquisitive, inventive, restless, and certain to shrivel into physical inferiority in his dry and highly oxygenated atmosphere. This apprehension is not well founded. It is quieted by his achievements the continent over, his virile enterprises, his endurance in war and in the most difficult explorations, his resistance of the influence of great cities towards effeminacy and loss of physical vigor. If ever man took large and eager hold of earthly things and appropriated them to his own use, it is the American. We are gross eaters, we are great drinkers. We shall excel the English when we have as long practice as they. I am filled with a kind of dismay when I see the great stock-yards of Chicago and Cincinnati, through which flow the vast herds and droves of the prairies, marching straight down the throats of Eastern people. Thousands are always sowing and reaping and brewing and distilling, to slake the immortal thirst of the country. We take, indeed, strong hold of the earth; we absorb its fatness. When Leicester entertained Elizabeth at Kenilworth, the clock in the great tower was set perpetually at twelve, the hour of feasting. It is always dinner-time in America. I do not know how much land it takes to raise an average citizen, but I should say a quarter section. He spreads himself abroad, he riots in abundance; above all things he must have profusion, and he wants things that are solid and strong. On the Sorrentine promontory, and on the island of Capri, the hardy husbandman and fisherman draws his subsistence from the sea and from a scant patch of ground. One may feast on a fish and a handful of olives. The dinner of the laborer is a dish of polenta, a few figs, some cheese, a glass of thin wine. His wants are few and easily supplied. He is not overfed, his diet is not stimulating; I should say that he would pay little to the physician, that familiar of other countries whose family office is to counteract the effects of over-eating. He is temperate, frugal, content, and apparently draws not more of his life from the earth or the sea than from the genial sky. He would never build a Pacific Railway, nor write a hundred volumes of commentary on the Scriptures; but he is an example of how little a man actually needs of the gross products of the earth.

I suppose that life was never fuller in certain ways than it is here in America. If a civilization is judged by its wants, we are certainly highly civilized. We cannot get land enough, nor clothes enough, nor houses enough, nor food enough. A Bedouin tribe would fare sumptuously on what one American family consumes and wastes. The revenue required for the wardrobe of one woman of fashion would suffice to convert the inhabitants of I know not how many square miles in Africa. It absorbs the income of a province to bring up a baby. We riot in prodigality, we vie with each other in material accumulation and expense. Our thoughts are mainly on how to increase the products of the world; and get them into our own possession.

I think this gross material tendency is strong in America, and more likely to get the mastery over the spiritual and the intellectual here than elsewhere, because of our exhaustless resources. Let us not mistake the nature of a real civilization, nor suppose we have it because we can convert crude iron into the most delicate mechanism, or transport ourselves sixty miles an hour, or even if we shall refine our carnal tastes so as to be satisfied at dinner with the tongues of ortolans and the breasts of singing-birds.

Plato banished the musicians from his feasts because he would not have the charms of conversation interfered with. By comparison, music was to him a sensuous enjoyment. In any society the ideal must be the banishment of the more sensuous; the refinement of it will only repeat the continued experiment of history—the end of a civilization in a polished materialism, and its speedy fall from that into grossness.

I am sure that the scholar, trained to “plain living and high thinking,” knows that the prosperous life consists in the culture of the man, and not in the refinement and accumulation of the material. The word culture is often used to signify that dainty intellectualism which is merely a sensuous pampering of the mind, as distinguishable from the healthy training of the mind as is the education of the body in athletic exercises from the petting of it by luxurious baths and unguents. Culture is the blossom of knowledge, but it is a fruit blossom, the ornament of the age but the seed of the future. The so-called culture, a mere fastidiousness of taste, is a barren flower.

You would expect spurious culture to stand aloof from common life, as it does, to extend its charities at the end of a pole, to make of religion a mere 'cultus,' to construct for its heaven a sort of Paris, where all the inhabitants dress becomingly, and where there are no Communists. Culture, like fine manners, is not always the result of wealth or position. When monseigneur the archbishop makes his rare tour through the Swiss mountains, the simple peasants do not crowd upon him with boorish impudence, but strew his stony path with flowers, and receive him with joyous but modest sincerity. When the Russian prince made his landing in America the determined staring of a bevy of accomplished American women nearly swept the young man off the deck of the vessel. One cannot but respect that tremulous sensitiveness which caused the maiden lady to shrink from staring at the moon when she heard there was a man in it.

The materialistic drift of this age—that is, its devotion to material development—is frequently deplored. I suppose it is like all other ages in that respect, but there appears to be a more determined demand for

change of condition than ever before, and a deeper movement for equalization. Here in America this is, in great part, a movement for merely physical or material equalization. The idea seems to be well-nigh universal that the millennium is to come by a great deal less work and a great deal more pay. It seems to me that the millennium is to come by an infusion into all society of a truer culture, which is neither of poverty nor of wealth, but is the beautiful fruit of the development of the higher part of man's nature.

And the thought I wish to leave with you, as scholars and men who can command the best culture, is that it is all needed to shape and control the strong growth of material development here, to guide the blind instincts of the mass of men who are struggling for a freer place and a breath of fresh air; that you cannot stand aloof in a class isolation; that your power is in a personal sympathy with the humanity which is ignorant but discontented; and that the question which the man with the spade asks about the use of your culture to him is a menace.

MODERN FICTION

By Charles Dudley Warner

One of the worst characteristics of modern fiction is its so-called truth to nature. For fiction is an art, as painting is, as sculpture is, as acting is. A photograph of a natural object is not art; nor is the plaster cast of a man's face, nor is the bare setting on the stage of an actual occurrence. Art requires an idealization of nature. The amateur, though she may be a lady, who attempts to represent upon the stage the lady of the drawing-room, usually fails to convey to the spectators the impression of a lady. She lacks the art by which the trained actress, who may not be a lady, succeeds. The actual transfer to the stage of the drawing-room and its occupants, with the behavior common in well-bred society, would no doubt fail of the intended dramatic effect, and the spectators would declare the representation unnatural.

However our jargon of criticism may confound terms, we do not need to be reminded that art and nature are distinct; that art, though dependent on nature, is a separate creation; that art is selection and idealization, with a view to impressing the mind with human, or even higher than human, sentiments and ideas. We may not agree whether the perfect man and woman ever existed, but we do know that the highest representations of them in form—that in the old Greek sculptures—were the result of artistic selection of parts of many living figures.

When we praise our recent fiction for its photographic fidelity to nature we condemn it, for we deny to it the art which would give it value. We forget that the creation of the novel should be, to a certain extent, a synthetic process, and impart to human actions that ideal quality which we demand in painting. Heine regards Cervantes as the originator of the modern novel. The older novels sprang from the poetry of the Middle Ages; their themes were knightly adventure, their personages were the nobility; the common people did not figure in them. These romances, which had degenerated into absurdities, Cervantes overthrew by "Don Quixote." But in putting an end to the old romances he created a new school of fiction, called the modern novel, by introducing into his romance of pseudo-knighthood a faithful description of the lower classes, and intermingling the phases of popular life. But he had no one-sided tendency to portray the vulgar only; he brought together the higher and the lower in society, to serve as light and shade, and the aristocratic element was as prominent as the popular. This noble and chivalrous element disappears in the novels of the English who imitated Cervantes. "These English novelists since Richardson's reign," says Heine, "are prosaic natures; to the prudish spirit of their time even pithy descriptions of the life of the common people are repugnant, and we see on yonder side of the Channel those bourgeoisie novels arise, wherein the petty humdrum life of the middle classes is depicted." But Scott appeared, and effected a restoration of the balance in fiction. As Cervantes had introduced the democratic element into romances, so Scott replaced the aristocratic element, when it had disappeared, and only a prosaic, bourgeoisie fiction existed. He restored to romances the symmetry which we admire in "Don Quixote." The characteristic feature of Scott's historical romances, in the opinion of the great German critic, is the harmony between the artistocratic and democratic elements.

This is true, but is it the last analysis of the subject? Is it a sufficient account of the genius of Cervantes and Scott that they combined in their romances a representation of the higher and lower classes? Is it not of more importance how they represented them? It is only a part of the achievement of Cervantes that he introduced the common people into fiction; it is his higher glory that he idealized his material; and it is Scott's distinction also that he elevated into artistic creations both nobility and commonalty. In short, the essential of fiction is not diversity of social life, but artistic treatment of whatever is depicted. The novel may deal wholly with an aristocracy, or wholly with another class, but it must idealize the nature it touches into art. The fault of the bourgeoisie novels, of which Heine complains, is not that they treated of one class only, and excluded a higher social range, but that they treated it without art and without ideality. In nature there is nothing vulgar to the poet, and in human life there is nothing uninteresting to the artist; but nature and human life, for the purposes of fiction, need a creative genius. The importation into the novel of the vulgar, sordid, and ignoble in life is always unbearable, unless genius first fuses the raw material in its alembic.

When, therefore, we say that one of the worst characteristics of modern fiction is its so-called truth to nature, we mean that it disregards the higher laws of art, and attempts to give us unidealized pictures of life. The failure is not that vulgar themes are treated, but that the treatment is vulgar; not that common life is treated, but that the treatment is common; not that care is taken with details, but that no selection is made, and everything is photographed regardless of its artistic value. I am sure that no one ever felt any repugnance on being introduced by Cervantes to the muleteers, contrabandistas, servants and serving-maids, and idle vagabonds of Spain, any more than to an acquaintance with the beggar-boys and street gamins on

the canvases of Murillo. And I believe that the philosophic reason of the disgust of Heine and of every critic with the English bourgeoisie novels, describing the petty, humdrum life of the middle classes, was simply the want of art in the writers; the failure on their part to see that a literal transcript of nature is poor stuff in literature. We do not need to go back to Richardson's time for illustrations of that truth. Every week the English press—which is even a greater sinner in this respect than the American—turns out a score of novels which are mediocre, not from their subjects, but from their utter lack of the artistic quality. It matters not whether they treat of middle-class life, of low, slum life, or of drawing-room life and lords and ladies; they are equally flat and dreary. Perhaps the most inane thing ever put forth in the name of literature is the so-called domestic novel, an indigestible, culinary sort of product, that might be named the doughnut of fiction. The usual apology for it is that it depicts family life with fidelity. Its characters are supposed to act and talk as people act and talk at home and in society. I trust this is a libel, but, for the sake of the argument, suppose they do. Was ever produced so insipid a result? They are called moral; in the higher sense they are immoral, for they tend to lower the moral tone and stamina of every reader. It needs genius to import into literature ordinary conversation, petty domestic details, and the commonplace and vulgar phases of life. A report of ordinary talk, which appears as dialogue in domestic novels, may be true to nature; if it is, it is not worth writing or worth reading. I cannot see that it serves any good purpose whatever. Fortunately, we have in our day illustrations of a different treatment of the vulgar. I do not know any more truly realistic pictures of certain aspects of New England life than are to be found in Judd's "Margaret," wherein are depicted exceedingly pinched and ignoble social conditions. Yet the characters and the life are drawn with the artistic purity of Flaxman's illustrations of Homer. Another example is Thomas Hardy's "Far from the Madding Crowd." Every character in it is of the lower class in England. But what an exquisite creation it is! You have to turn back to Shakespeare for any talk of peasants and clowns and shepherds to compare with the conversations in this novel, so racy are they of the soil, and yet so touched with the finest art, the enduring art. Here is not the realism of the photograph, but of the artist; that is to say, it is nature idealized.

When we criticise our recent fiction it is obvious that we ought to remember that it only conforms to the tendencies of our social life, our prevailing ethics, and to the art conditions of our time. Literature is never in any age an isolated product. It is closely related to the development or retrogression of the time in all departments of life. The literary production of our day seems, and no doubt is, more various than that of any other, and it is not easy to fix upon its leading tendency. It is claimed for its fiction, however, that it is analytic and realistic, and that much of it has certain other qualities that make it a new school in art. These aspects of it I wish to consider in this paper.

It is scarcely possible to touch upon our recent fiction, any more than upon our recent poetry, without taking into account what is called the Esthetic movement—a movement more prominent in England than elsewhere. A slight contemplation of this reveals its resemblance to the Romantic movement in Germany, of which the brothers Schlegel were apostles, in the latter part of the last century. The movements are alike in this: that they both sought inspiration in mediaevalism, in feudalism, in the symbols of a Christianity that ran to mysticism, in the quaint, strictly pre-Raphael art which was supposed to be the result of a simple faith. In the one case, the artless and childlike remains of old German pictures and statuary were exhumed and set up as worthy of imitation; in the other, we have carried out in art, in costume, and in domestic life, so far as possible, what has been wittily and accurately described as "stained-glass attitudes." With all its peculiar vagaries, the English school is essentially a copy of the German, in its return to mediaevalism. The two movements have a further likeness, in that they are found accompanied by a highly symbolized religious revival. English aestheticism would probably disown any religious intention, although it has been accused of a refined interest in Pan and Venus; but in all its feudal sympathies it goes along with the religious art and vestment revival, the return to symbolic ceremonies, monastic vigils, and sisterhoods. Years ago, an acute writer in the Catholic World claimed Dante Gabriel Rossetti as a Catholic writer, from the internal evidence of his poems. The German Romanticism, which was fostered by the Romish priesthood, ended, or its disciples ended, in the bosom of the Roman Catholic Church. It will be interesting to note in what ritualistic harbor the aestheticism of our day will finally moor. That two similar revivals should come so near together in time makes us feel that the world moves onward—if it does move onward—in circular figures of very short radii. There seems to be only one thing certain in our Christian era, and that is a periodic return to classic models; the only stable standards of resort seem to be Greek art and literature.

The characteristics which are prominent, when we think of our recent fiction, are a wholly unidealized view of human society, which has got the name of realism; a delight in representing the worst phases of social life; an extreme analysis of persons and motives; the sacrifice of action to psychological study; the substitution of studies of character for anything like a story; a notion that it is not artistic, and that it is untrue to nature, to bring any novel to a definite consummation, and especially to end it happily; and a despondent tone about society, politics, and the whole drift of modern life. Judged by our fiction, we are in an irredeemably bad way. There is little beauty, joy, or light-heartedness in living; the spontaneity and charm of life are analyzed out of existence; sweet girls, made to love and be loved, are extinct; melancholy Jaques never meets a Rosalind in the forest of Arden, and if he sees her in the drawing-room he poisons his pleasure with the thought that she is scheming and artificial; there are no happy marriages—indeed, marriage itself is almost too inartistic to be permitted by our novelists, unless it can be supplemented by a divorce, and art is supposed to deny any happy consummation of true love. In short, modern society is going to the dogs, notwithstanding money is only three and a half per cent. It is a gloomy business life, at the best. Two learned but despondent university professors met, not long ago, at an afternoon "coffee," and drew sympathetically together in a corner. "What a world this would be," said one, "without coffee!" "Yes," replied the other, stirring the fragrant cup in a dejected aspect "yes; but what a hell of a world it is with coffee!"

The analytic method in fiction is interesting, when used by a master of dissection, but it has this fatal defect in a novel—it destroys illusion. We want to think that the characters in a story are real persons. We cannot do this if we see the author set them up as if they were marionettes, and take them to pieces every few pages, and show their interior structure, and the machinery by which they are moved. Not only is the illusion gone, but the movement of the story, if there is a story, is retarded, till the reader loses all enjoyment in impatience and weariness. You find yourself saying, perhaps, What a very clever fellow the author is! What an ingenious

creation this character is! How brightly the author makes his people talk! This is high praise, but by no means the highest, and when we reflect we see how immeasurably inferior, in fiction, the analytic method is to the dramatic. In the dramatic method the characters appear, and show what they are by what they do and say; the reader studies their motives, and a part of his enjoyment is in analyzing them, and his vanity is flattered by the trust reposed in his perspicacity. We realize how unnecessary minute analysis of character and long descriptions are in reading a drama by Shakespeare, in which the characters are so vividly presented to us in action and speech, without the least interference of the author in description, that we regard them as persons with whom we might have real relations, and not as bundles of traits and qualities. True, the conditions of dramatic art and the art of the novel are different, in that the drama can dispense with delineations, for its characters are intended to be presented to the eye; but all the same, a good drama will explain itself without the aid of actors, and there is no doubt that it is the higher art in the novel, when once the characters are introduced, to treat them dramatically, and let them work out their own destiny according to their characters. It is a truism to say that when the reader perceives that the author can compel his characters to do what he pleases all interest in them as real persons is gone. In a novel of mere action and adventure, a lower order of fiction, where all the interest centres in the unraveling of a plot, of course this does not so much matter.

Not long ago, in Edinburgh, I amused myself in looking up some of the localities made famous in Scott's romances, which are as real in the mind as any historical places. Afterwards I read "The Heart of Midlothian." I was surprised to find that, as a work of art, it was inferior to my recollection of it. Its style is open to the charge of prolixity, and even of slovenliness in some parts; and it does not move on with increasing momentum and concentration to a climax, as many of Scott's novels do; the story drags along in the disposition of one character after another. Yet, when I had finished the book and put it away, a singular thing happened. It suddenly came to me that in reading it I had not once thought of Scott as the maker; it had never occurred to me that he had created the people in whose fortunes I had been so intensely absorbed; and I never once had felt how clever the novelist was in the naturally dramatic dialogues of the characters. In short, it had not entered my mind to doubt the existence of Jeanie and Effie Deans, and their father, and Reuben Butler, and the others, who seem as real as historical persons in Scotch history. And when I came to think of it afterwards, reflecting upon the assumptions of the modern realistic school, I found that some scenes, notably the night attack on the old Tolbooth, were as real to me as if I had read them in a police report of a newspaper of the day. Was Scott, then, only a reporter? Far from it, as you would speedily see if he had thrown into the novel a police report of the occurrences at the Tolbooth before art had shorn it of its irrelevancies, magnified its effective and salient points, given events their proper perspective, and the whole picture due light and shade.

The sacrifice of action to some extent to psychological evolution in modern fiction may be an advance in the art as an intellectual entertainment, if the writer does not make that evolution his end, and does not forget that the indispensable thing in a novel is the story. The novel of mere adventure or mere plot, it need not be urged, is of a lower order than that in which the evolution of characters and their interaction make the story. The highest fiction is that which embodies both; that is, the story in which action is the result of mental and spiritual forces in play. And we protest against the notion that the novel of the future is to be, or should be, merely a study of, or an essay or a series of analytic essays on, certain phases of social life.

It is not true that civilization or cultivation has bred out of the world the liking for a story. In this the most highly educated Londoner and the Egyptian fellah meet on common human ground. The passion for a story has no more died out than curiosity, or than the passion of love. The truth is not that stories are not demanded, but that the born raconteur and story-teller is a rare person. The faculty of telling a story is a much rarer gift than the ability to analyze character and even than the ability truly to draw character. It may be a higher or a lower power, but it is rarer. It is a natural gift, and it seems that no amount of culture can attain it, any more than learning can make a poet. Nor is the complaint well founded that the stories have all been told, the possible plots all been used, and the combinations of circumstances exhausted. It is no doubt our individual experience that we hear almost every day—and we hear nothing so eagerly—some new story, better or worse, but new in its exhibition of human character, and in the combination of events. And the strange, eventful histories of human life will no more be exhausted than the possible arrangements of mathematical numbers. We might as well say that there are no more good pictures to be painted as that there are no more good stories to be told.

Equally baseless is the assumption that it is inartistic and untrue to nature to bring a novel to a definite consummation, and especially to end it happily. Life, we are told, is full of incompleteness, of broken destinies, of failures, of romances that begin but do not end, of ambitions and purposes frustrated, of love crossed, of unhappy issues, or a resultless play of influences. Well, but life is full, also, of endings, of the results in concrete action of character, of completed dramas. And we expect and give, in the stories we hear and tell in ordinary intercourse, some point, some outcome, an end of some sort. If you interest me in the preparations of two persons who are starting on a journey, and expend all your ingenuity in describing their outfit and their characters, and do not tell me where they went or what befell them afterwards, I do not call that a story. Nor am I any better satisfied when you describe two persons whom you know, whose characters are interesting, and who become involved in all manner of entanglements, and then stop your narration; and when I ask, say you have not the least idea whether they got out of their difficulties, or what became of them. In real life we do not call that a story where everything is left unconcluded and in the air. In point of fact, romances are daily beginning and daily ending, well or otherwise, under our observation.

Should they always end well in the novel? I am very far from saying that. Tragedy and the pathos of failure have their places in literature as well as in life. I only say that, artistically, a good ending is as proper as a bad ending. Yet the main object of the novel is to entertain, and the best entertainment is that which lifts the imagination and quickens the spirit; to lighten the burdens of life by taking us for a time out of our humdrum and perhaps sordid conditions, so that we can see familiar life somewhat idealized, and probably see it all the more truly from an artistic point of view. For the majority of the race, in its hard lines, fiction is an inestimable boon. Incidentally the novel may teach, encourage, refine, elevate. Even for these purposes, that novel is the best which shows us the best possibilities of our lives—the novel which gives hope and cheer

instead of discouragement and gloom. Familiarity with vice and sordidness in fiction is a low entertainment, and of doubtful moral value, and their introduction is unbearable if it is not done with the idealizing touch of the artist.

Do not misunderstand me to mean that common and low life are not fit subjects of fiction, or that vice is not to be lashed by the satirist, or that the evils of a social state are never to be exposed in the novel. For this, also, is an office of the novel, as it is of the drama, to hold the mirror up to nature, and to human nature as it exhibits itself. But when the mirror shows nothing but vice and social disorder, leaving out the saving qualities that keep society on the whole, and family life as a rule, as sweet and good as they are, the mirror is not held up to nature, but more likely reflects a morbid mind. Still it must be added that the study of unfortunate social conditions is a legitimate one for the author to make; and that we may be in no state to judge justly of his exposure while the punishment is being inflicted, or while the irritation is fresh. For, no doubt, the reader winces often because the novel reveals to himself certain possible baseness, selfishness, and meanness. Of this, however, I (speaking for myself) may be sure: that the artist who so represents vulgar life that I am more in love with my kind, the satirist who so depicts vice and villainy that I am strengthened in my moral fibre, has vindicated his choice of material. On the contrary, those novelists are not justified whose forte it seems to be to so set forth goodness as to make it unattractive.

But we come back to the general proposition that the indispensable condition of the novel is that it shall entertain. And for this purpose the world is not ashamed to own that it wants, and always will want, a story—a story that has an ending; and if not a good ending, then one that in noble tragedy lifts up our nature into a high plane of sacrifice and pathos. In proof of this we have only to refer to the masterpieces of fiction which the world cherishes and loves to recur to.

I confess that I am harassed with the incomplete romances, that leave me, when the book is closed, as one might be on a waste plain at midnight, abandoned by his conductor, and without a lantern. I am tired of accompanying people for hours through disaster and perplexity and misunderstanding, only to see them lost in a thick mist at last. I am weary of going to funerals, which are not my funerals, however chatty and amusing the undertaker may be. I confess that I should like to see again the lovely heroine, the sweet woman, capable of a great passion and a great sacrifice; and I do not object if the novelist tries her to the verge of endurance, in agonies of mind and in perils, subjecting her to wasting sicknesses even, if he only brings her out at the end in a blissful compensation of her troubles, and endued with a new and sweeter charm. No doubt it is better for us all, and better art, that in the novel of society the destiny should be decided by character. What an artistic and righteous consummation it is when we meet the shrewd and wicked old Baroness Bernstein at Continental gaming-tables, and feel that there was no other logical end for the worldly and fascinating Beatrix of Henry Esmond! It is one of the great privileges of fiction to right the wrongs of life, to do justice to the deserving and the vicious. It is wholesome for us to contemplate the justice, even if we do not often see it in society. It is true that hypocrisy and vulgar self-seeking often succeed in life, occupying high places, and make their exit in the pageantry of honored obsequies. Yet always the man is conscious of the hollowness of his triumph, and the world takes a pretty accurate measure of it. It is the privilege of the novelist, without introducing into such a career what is called disaster, to satisfy our innate love of justice by letting us see the true nature of such prosperity. The unscrupulous man amasses wealth, lives in luxury and splendor, and dies in the odor of respectability. His poor and honest neighbor, whom he has wronged and defrauded, lives in misery, and dies in disappointment and penury. The novelist cannot reverse the facts without such a shock to our experience as shall destroy for us the artistic value of his fiction, and bring upon his work the deserved reproach of indiscriminately "rewarding the good and punishing the bad." But we have a right to ask that he shall reveal the real heart and character of this passing show of life; for not to do this, to content himself merely with exterior appearances, is for the majority of his readers to efface the lines between virtue and vice. And we ask this not for the sake of the moral lesson, but because not to do it is, to our deep consciousness, inartistic and untrue to our judgment of life as it goes on. Thackeray used to say that all his talent was in his eyes; meaning that he was only an observer and reporter of what he saw, and not a Providence to rectify human affairs. The great artist undervalued his genius. He reported what he saw as Raphael and Murillo reported what they saw. With his touch of genius he assigned to everything its true value, moving us to tenderness, to pity, to scorn, to righteous indignation, to sympathy with humanity. I find in him the highest art, and not that indifference to the great facts and deep currents and destinies of human life, that want of enthusiasm and sympathy, which has got the name of "art for art's sake." Literary fiction is a barren product if it wants sympathy and love for men. "Art for art's sake" is a good and defensible phrase, if our definition of art includes the ideal, and not otherwise.

I do not know how it has come about that in so large a proportion of recent fiction it is held to be artistic to look almost altogether upon the shady and the seamy side of life, giving to this view the name of "realism"; to select the disagreeable, the vicious, the unwholesome; to give us for our companions, in our hours of leisure and relaxation, only the silly and the weak-minded woman, the fast and slangy girl, the intrigante and the "shady"—to borrow the language of the society she seeks—the hero of irresolution, the prig, the vulgar, and the vicious; to serve us only with the foibles of the fashionable, the low tone of the gay, the gilded ruffraff of our social state; to drag us forever along the dizzy, half-fractured precipice of the seventh commandment; to bring us into relations only with the sordid and the common; to force us to sup with unwholesome company on misery and sensuousness, in tales so utterly unpleasant that we are ready to welcome any disaster as a relief; and then—the latest and finest touch of modern art—to leave the whole weltering mass in a chaos, without conclusion and without possible issue. And this is called a picture of real life! Heavens! Is it true that in England, where a great proportion of the fiction we describe and loathe is produced; is it true that in our New England society there is nothing but frivolity, sordidness, decay of purity and faith, ignoble ambition and ignoble living? Is there no charm in social life—no self-sacrifice, devotion, courage to stem materialistic conditions, and live above them? Are there no noble women, sensible, beautiful, winning, with the grace that all the world loves, albeit with the feminine weaknesses that make all the world hope? Is there no manliness left? Are there no homes where the tempter does not live with the tempted in a mush of sentimental affinity? Or is it, in fact, more artistic to ignore all these, and paint only the feeble and the repulsive in our social state? The feeble, the sordid, and the repulsive in our social state nobody denies, nor does anybody deny the

exceeding cleverness with which our social disorders are reproduced in fiction by a few masters of their art; but is it not time that it should be considered good art to show something of the clean and bright side?

This is pre-eminently the age of the novel. The development of variety of fiction since the days of Scott and Cooper is prodigious. The prejudice against novel-reading is quite broken down, since fiction has taken all fields for its province; everybody reads novels. Three-quarters of the books taken from the circulating library are stories; they make up half the library of the Sunday-schools. If a writer has anything to say, or thinks he has, he knows that he can most certainly reach the ear of the public by the medium of a story. So we have novels for children; novels religious, scientific, historical, archaeological, psychological, pathological, total-abstinence; novels of travel, of adventure and exploration; novels domestic, and the perpetual spawn of books called novels of society. Not only is everything turned into a story, real or so called, but there must be a story in everything. The stump-speaker holds his audience by well-worn stories; the preacher wakes up his congregation by a graphic narrative; and the Sunday-school teacher leads his children into all goodness by the entertaining path of romance; we even had a President who governed the country nearly by anecdotes. The result of this universal demand for fiction is necessarily an enormous supply, and as everybody writes, without reference to gifts, the product is mainly trash, and trash of a deleterious sort; for bad art in literature is bad morals. I am not sure but the so-called domestic, the diluted, the "goody," namby-pamby, unrobust stories, which are so largely read by school-girls, young ladies, and women, do more harm than the "knowing," audacious, wicked ones,—also, it is reported, read by them, and written largely by their own sex. For minds enfeebled and relaxed by stories lacking even intellectual fibre are in a poor condition to meet the perils of life. This is not the place for discussing the stories written for the young and for the Sunday-school. It seems impossible to check the flow of them, now that so much capital is invested in this industry; but I think that healthy public sentiment is beginning to recognize the truth that the excessive reading of this class of literature by the young is weakening to the mind, besides being a serious hindrance to study and to attention to the literature that has substance.

In his account of the Romantic School in Germany, Heine says, "In the breast of a nation's authors there always lies the image of its future, and the critic who, with a knife of sufficient keenness, dissects a new poet can easily prophesy, as from the entrails of a sacrificial animal, what shape matters will assume in Germany." Now if all the poets and novelists of England and America today were cut up into little pieces (and we might sacrifice a few for the sake of the experiment), there is no inspecting augur who could divine therefrom our literary future. The diverse indications would puzzle the most acute dissector. Lost in the variety, the multiplicity of minute details, the refinements of analysis and introspection, he would miss any leading indications. For with all its variety, it seems to me that one characteristic of recent fiction is its narrowness—narrowness of vision and of treatment. It deals with lives rather than with life. Lacking ideality, it fails of broad perception. We are accustomed to think that with the advent of the genuine novel of society, in the first part of this century, a great step forward was taken in fiction. And so there was. If the artist did not use a big canvas, he adopted a broad treatment. But the tendency now is to push analysis of individual peculiarities to an extreme, and to substitute a study of traits for a representation of human life.

It scarcely need be said that it is not multitude of figures on a literary canvas that secures breadth of treatment. The novel may be narrow, though it swarms with a hundred personages. It may be as wide as life, as high as imagination can lift itself; it may image to us a whole social state, though it pats in motion no more persons than we made the acquaintance of in one of the romances of Hawthorne. Consider for a moment how Thackeray produced his marvelous results. We follow with him, in one of his novels of society, the fortunes of a very few people. They are so vividly portrayed that we are convinced the author must have known them in that great world with which he was so familiar; we should not be surprised to meet any of them in the streets of London. When we visit the Charterhouse School, and see the old forms where the boys sat nearly a century ago, we have in our minds Colonel Newcome as really as we have Charles Lamb and Coleridge and De Quincey. We are absorbed, as we read, in the evolution of the characters of perhaps only half a dozen people; and yet all the world, all great, roaring, struggling London, is in the story, and Clive, and Philip, and Ethel, and Becky Sharpe, and Captain Costigan are a part of life. It is the flowery month of May; the scent of the hawthorn is in the air, and the tender flush of the new spring suffuses the Park, where the tide of fashion and pleasure and idleness surges up and down—the sauntering throng, the splendid equipages, the endless cavalcade in Rotten Row, in which Clive descries afar off the white plume of his ladylove dancing on the waves of an unattainable society; the club windows are all occupied; Parliament is in session, with its nightly echoes of imperial politics; the thronged streets roar with life from morn till nearly morn again; the drawing-rooms hum and sparkle in the crush of a London season; as you walk the midnight pavement, through the swinging doors of the cider-cellars comes the burst of bacchanalian song. Here is the world of the press and of letters; here are institutions, an army, a navy, commerce, glimpses of great ships going to and fro on distant seas, of India, of Australia. This one book is an epitome of English life, almost of the empire itself. We are conscious of all this, so much breadth and atmosphere has the artist given his little history of half a dozen people in this struggling world.

But this background of a great city, of an empire, is not essential to the breadth of treatment upon which we insist in fiction, to broad characterization, to the play of imagination about common things which transfigures them into the immortal beauty of artistic creations. What a simple idyl in itself is Goethe's "Hermann and Dorothea"! It is the creation of a few master-touches, using only common material. Yet it has in it the breadth of life itself, the depth and passion of all our human struggle in the world—a little story with a vast horizon.

It is constantly said that the conditions in America are unfavorable to the higher fiction; that our society is unformed, without centre, without the definition of classes, which give the light and shade that Heine speaks of in "Don Quixote"; that it lacks types and customs that can be widely recognized and accepted as national and characteristic; that we have no past; that we want both romantic and historic background; that we are in a shifting, flowing, forming period which fiction cannot seize on; that we are in diversity and confusion that baffle artistic treatment; in short, that American life is too vast, varied, and crude for the purpose of the novelist.

These excuses might be accepted as fully accounting for our failure—or shall we say our delay?—if it were not for two or three of our literary performances. It is true that no novel has been written, and we dare say no novel will be written, that is, or will be, an epitome of the manifold diversities of American life, unless it be in the form of one of Walt Whitman's catalogues. But we are not without peculiar types; not without characters, not without incidents, stories, heroisms, inequalities; not without the charms of nature in infinite variety; and human nature is the same here that it is in Spain, France, and England. Out of these materials Cooper wrote romances, narratives stamped with the distinct characteristics of American life and scenery, that were and are eagerly read by all civilized peoples, and which secured the universal verdict which only breadth of treatment commands. Out of these materials, also, Hawthorne, child-endowed with a creative imagination, wove those tragedies of interior life, those novels of our provincial New England, which rank among the great masterpieces of the novelist's art. The master artist can idealize even our crude material, and make it serve. These exceptions to a rule do not go to prove the general assertion of a poverty of material for fiction here; the simple truth probably is that, for reasons incident to the development of a new region of the earth, creative genius has been turned in other directions than that of fictitious literature. Nor do I think that we need to take shelter behind the wellworn and convenient observation, the truth of which stands in much doubt, that literature is the final flower of a nation's civilization.

However, this is somewhat a digression. We are speaking of the tendency of recent fiction, very much the same everywhere that novels are written, which we have imperfectly sketched. It is probably of no more use to protest against it than it is to protest against the vulgar realism in pictorial art, which holds ugliness and beauty in equal esteem; or against aestheticism gone to seed in languid affectations; or against the enthusiasm of a social life which wrecks its religion on the color of a vestment, or sighs out its divine soul over an ancient pewter mug. Most of our fiction, in its extreme analysis, introspection and self-consciousness, in its devotion to details, in its disregard of the ideal, in its selection as well as in its treatment of nature, is simply of a piece with a good deal else that passes for genuine art. Much of it is admirable in workmanship, and exhibits a cleverness in details and a subtlety in the observation of traits which many great novels lack. But I should be sorry to think that the historian will judge our social life by it, and I doubt not that most of us are ready for a more ideal, that is to say, a more artistic, view of our performances in this bright and pathetic world.

THOUGHTS SUGGESTED BY MR. FROUDE'S "PROGRESS"

By Charles Dudley Warner

To revisit this earth, some ages after their departure from it, is a common wish among men. We frequently hear men say that they would give so many months or years of their lives in exchange for a less number on the globe one or two or three centuries from now. Merely to see the world from some remote sphere, like the distant spectator of a play which passes in dumb show, would not suffice. They would like to be of the world again, and enter into its feelings, passions, hopes; to feel the sweep of its current, and so to comprehend what it has become.

I suppose that we all who are thoroughly interested in this world have this desire. There are some select souls who sit apart in calm endurance, waiting to be translated out of a world they are almost tired of patronizing, to whom the whole thing seems, doubtless, like a cheap performance. They sit on the fence of criticism, and cannot for the life of them see what the vulgar crowd make such a toil and sweat about. The prizes are the same dreary, old, fading bay wreaths. As for the soldiers marching past, their uniforms are torn, their hats are shocking, their shoes are dusty, they do not appear (to a man sitting on the fence) to march with any kind of spirit, their flags are old and tattered, the drums they beat are barbarous; and, besides, it is not probable that they are going anywhere; they will merely come round again, the same people, like the marching chorus in the "Beggar's Opera." Such critics, of course, would not care to see the vulgar show over again; it is enough for them to put on record their protest against it in the weekly "Judgment Days" which they edit, and by-and-by withdraw out of their private boxes, with pity for a world in the creation of which they were not consulted.

The desire to revisit this earth is, I think, based upon a belief, well-nigh universal, that the world is to make some progress, and that it will be more interesting in the future than it is now. I believe that the human mind, whenever it is developed enough to comprehend its own action, rests, and has always rested, in this expectation. I do not know any period of time in which the civilized mind has not had expectation of something better for the race in the future. This expectation is sometimes stronger than it is at others; and, again, there are always those who say that the Golden Age is behind them. It is always behind or before us; the poor present alone has no friends; the present, in the minds of many, is only the car that is carrying us away from an age of virtue and of happiness, or that is perhaps bearing us on to a time of ease and comfort and security.

Perhaps it is worth while, in view of certain recent discussions, and especially of some free criticisms of this country, to consider whether there is any intention of progress in this world, and whether that intention is discoverable in the age in which we live.

If it is an old question, it is not a settled one; the practical disbelief in any such progress is widely entertained. Not long ago Mr. James Anthony Froude published an essay on Progress, in which he examined some of the evidences upon which we rely to prove that we live in an "era of progress." It is a melancholy essay, for its tone is that of profound skepticism as to certain influences and means of progress upon which we in this country most rely. With the illustrative arguments of Mr. Froude's essay I do not purpose specially

to meddle; I recall it to the attention of the reader as a representative type of skepticism regarding progress which is somewhat common among intellectual men, and is not confined to England. It is not exactly an acceptance of Rousseau's notion that civilization is a mistake, and that it would be better for us all to return to a state of nature—though in John Ruskin's case it nearly amounts to this; but it is a hostility in its last analysis to what we understand by the education of the people, and to the government of the people by themselves. If Mr. Froude's essay is anything but an exhibition of the scholarly weapons of criticism, it is the expression of a profound disbelief in the intellectual education of the masses of the people. Mr. Ruskin goes further. He makes his open proclamation against any emancipation from hand-toil. Steam is the devil himself let loose from the pit, and all labor-saving machinery is his own invention. Mr. Ruskin is the bull that stands upon the track and threatens with annihilation the on-coming locomotive; and I think that any spectator who sees his menacing attitude and hears his roaring cannot but have fears for the locomotive.

There are two sorts of infidelity concerning humanity, and I do not know which is the more withering in its effects. One is that which regards this world as only a waste and a desert, across the sands of which we are merely fugitives, fleeing from the wrath to come. The other is that doubt of any divine intention in development, in history, which we call progress from age to age.

In the eyes of this latter infidelity history is not a procession or a progression, but only a series of disconnected pictures, each little era rounded with its own growth, fruitage, and decay, a series of incidents or experiments, without even the string of a far-reaching purpose to connect them. There is no intention of progress in it all. The race is barbarous, and then it changes to civilized; in the one case the strong rob the weak by brute force; in the other the crafty rob the unwary by finesse. The latter is a more agreeable state of things; but it comes to about the same. The robber used to knock us down and take away our sheepskins; he now administers chloroform and relieves us of our watches. It is a gentlemanly proceeding, and scientific, and we call it civilization. Meantime human nature remains the same, and the whole thing is a weary round that has no advance in it.

If this is true the succession of men and of races is no better than a vegetable succession; and Mr. Froude is quite right in doubting if education of the brain will do the English agricultural laborer any good; and Mr. Ruskin ought to be aided in his crusade against machinery, which turns the world upside down. The best that can be done with a man is the best that can be done with a plant—set him out in some favorable locality, or leave him where he happened to strike root, and there let him grow and mature in measure and quiet—especially quiet—as he may in God's sun and rain. If he happens to be a cabbage, in Heaven's name don't try to make a rose of him, and do not disturb the vegetable maturing of his head by grafting ideas upon his stock.

The most serious difficulty in the way of those who maintain that there is an intention of progress in this world from century to century, from age to age—a discernible growth, a universal development—is the fact that all nations do not make progress at the same time or in the same ratio; that nations reach a certain development, and then fall away and even retrograde; that while one may be advancing into high civilization, another is lapsing into deeper barbarism, and that nations appear to have a limit of growth. If there were a law of progress, an intention of it in all the world, ought not all peoples and tribes to advance *pari passu*, or at least ought there not to be discernible a general movement, historical and contemporary? There is no such general movement which can be computed, the law of which can be discovered—therefore it does not exist. In a kind of despair, we are apt to run over in our minds empires and pre-eminent civilizations that have existed, and then to doubt whether life in this world is intended to be anything more than a series of experiments. There is the German nation of our day, the most aggressive in various fields of intellectual activity, a Hercules of scholarship, the most thoroughly trained and powerful—though its civilization marches to the noise of the hateful and barbarous drum. In what points is it better than the Greek nation of the age of its superlative artists, philosophers, poets—the age of the most joyous, elastic human souls in the most perfect human bodies?

Again, it is perhaps a fanciful notion that the Atlantis of Plato was the northern part of the South American continent, projecting out towards Africa, and that the Antilles are the peaks and headlands of its sunken bulk. But there are evidences enough that the shores of the Gulf of Mexico and the Caribbean Sea were within historic periods the seat of a very considerable civilization—the seat of cities, of commerce, of trade, of palaces and pleasure—gardens—faint images, perhaps, of the luxurious civilization of Baia! and Pozzuoli and Capri in the most profligate period of the Roman empire. It is not more difficult to believe that there was a great material development here than to believe it of the African shore of the Mediterranean. Not to multiply instances that will occur to all, we see as many retrograde as advance movements, and we see, also, that while one spot of the earth at one time seems to be the chosen theatre of progress, other portions of the globe are absolutely dead and without the least leaven of advancing life, and we cannot understand how this can be if there is any such thing as an all-pervading and animating intention or law of progress. And then we are reminded that the individual human mind long ago attained its height of power and capacity. It is enough to recall the names of Moses, Buddha, Confucius, Socrates, Paul, Homer, David.

No doubt it has seemed to other periods and other nations, as it now does to the present civilized races, that they were the chosen times and peoples of an extraordinary and limitless development. It must have seemed so to the Jews who overran Palestine and set their shining cities on all the hills of heathendom. It must have seemed so to the Babylonish conquerors who swept over Palestine in turn, on their way to greater conquests in Egypt. It must have seemed so to Greece when the Acropolis was to the outlying world what the imperial calla is to the marsh in which it lifts its superb flower. It must have seemed so to Rome when its solid roads of stone ran to all parts of a tributary world—the highways of the legions, her ministers, and of the wealth that poured into her treasury. It must have seemed so to followers of Mahomet, when the crescent knew no pause in its march up the Arabian peninsula to the Bosphorus, to India, along the Mediterranean shores to Spain, where in the eighth century it flowered into a culture, a learning, a refinement in art and manners, to which the Christian world of that day was a stranger. It must have seemed so in the awakening of the sixteenth century, when Europe, Spain leading, began that great movement of discovery and aggrandizement which has, in the end, been profitable only to a portion of the adventurers. And what shall we say of a nation as old, if not older than any of these we have mentioned, slowly building up meantime a

civilization and perfecting a system of government and a social economy which should outlast them all, and remain to our day almost the sole monument of permanence and stability in a shifting world?

How many times has the face of Europe been changed—and parts of Africa, and Asia Minor too, for that matter—by conquests and crusades, and the rise and fall of civilizations as well as dynasties? while China has endured, almost undisturbed, under a system of law, administration, morality, as old as the Pyramids probably—existed a coherent nation, highly developed in certain essentials, meeting and mastering, so far as we can see, the great problem of an over-populated territory, living in a good degree of peace and social order, of respect for age and law, and making a continuous history, the mere record of which is printed in a thousand bulky volumes. Yet we speak of the Chinese empire as an instance of arrested growth, for which there is no salvation, except it shall catch the spirit of progress abroad in the world. What is this progress, and where does it come from?

Think for a moment of this significant situation. For thousands of years, empires, systems of society, systems of civilization—Egyptian, Jewish, Greek, Roman, Moslem, Feudal—have flourished and fallen, grown to a certain height and passed away; great organized fabrics have gone down, and, if there has been any progress, it has been as often defeated as renewed. And here is an empire, apart from this scene of alternate success and disaster, which has existed in a certain continuity and stability, and yet, now that it is uncovered and stands face to face with the rest of the world, it finds that it has little to teach us, and almost everything to learn from us. The old empire sends its students to learn of us, the newest child of civilization; and through us they learn all the great past, its literature, law, science, out of which we sprang. It appears, then, that progress has, after all, been with the shifting world, that has been all this time going to pieces, rather than with the world that has been permanent and unshaken.

When we speak of progress we may mean two things. We may mean a lifting of the races as a whole by reason of more power over the material world, by reason of what we call the conquest of nature and a practical use of its forces; or we may mean a higher development of the individual man, so that he shall be better and happier. If from age to age it is discoverable that the earth is better adapted to man as a dwelling-place, and he is on the whole fitted to get more out of it for his own growth, is not that progress, and is it not evidence of an intention of progress?

Now, it is sometimes said that Providence, in the economy of this world, cares nothing for the individual, but works out its ideas and purposes through the races, and in certain periods, slowly bringing in, by great agencies and by processes destructive to individuals and to millions of helpless human beings, truths and principles; so laying stepping-stones onward to a great consummation. I do not care to dwell upon this thought, but let us see if we can find any evidence in history of the presence in this world of an intention of progress.

It is common to say that, if the world makes progress at all, it is by its great men, and when anything important for the race is to be done, a great man is raised up to do it. Yet another way to look at it is, that the doing of something at the appointed time makes the man who does it great, or at least celebrated. The man often appears to be only a favored instrument of communication. As we glance back we recognize the truth that, at this and that period, the time had come for certain discoveries. Intelligence seemed pressing in from the invisible. Many minds were on the alert to apprehend it. We believe, for instance, that if Gutenberg had not invented movable types, somebody else would have given them to the world about that time. Ideas, at certain times, throng for admission into the world; and we are all familiar with the fact that the same important idea (never before revealed in all the ages) occurs to separate and widely distinct minds at about the same time. The invention of the electric telegraph seemed to burst upon the world simultaneously from many quarters—not perfect, perhaps, but the time for the idea had come—and happy was it for the man who entertained it. We have agreed to call Columbus the discoverer of America, but I suppose there is no doubt that America had been visited by European, and probably Asiatic, people ages before Columbus; that four or five centuries before him people from northern Europe had settlements here; he was fortunate, however, in “discovering” it in the fullness of time, when the world, in its progress, was ready for it. If the Greeks had had gunpowder, electro-magnetism, the printing press, history would need to be rewritten. Why the inquisitive Greek mind did not find out these things is a mystery upon any other theory than the one we are considering.

And it is as mysterious that China, having gunpowder and the art of printing, is not today like Germany.

There seems to me to be a progress, or an intention of progress, in the world, independent of individual men. Things get on by all sorts of instruments, and sometimes by very poor ones. There are times when new thoughts or applications of known principles seem to throng from the invisible for expression through human media, and there is hardly ever an important invention set free in the world that men do not appear to be ready cordially to receive it. Often we should be justified in saying that there was a widespread expectation of it. Almost all the great inventions and the ingenious application of principles have many claimants for the honor of priority.

On any other theory than this, that there is present in the world an intention of progress which outlasts individuals, and even races, I cannot account for the fact that, while civilizations decay and pass away, and human systems go to pieces, ideas remain and accumulate. We, the latest age, are the inheritors of all the foregoing ages. I do not believe that anything of importance has been lost to the world. The Jewish civilization was torn up root and branch, but whatever was valuable in the Jewish polity is ours now. We may say the same of the civilizations of Athens and of Rome; though the entire organization of the ancient world, to use Mr. Froude's figure, collapsed into a heap of incoherent sand, the ideas remained, and Greek art and Roman law are part of the world's solid possessions.

Even those who question the value to the individual of what we call progress, admit, I suppose, the increase of knowledge in the world from age to age, and not only its increase, but its diffusion. The intelligent schoolboy today knows more than the ancient sages knew—more about the visible heavens, more of the secrets of the earth, more of the human body. The rudiments of his education, the common experiences of his everyday life, were, at the best, the guesses and speculations of a remote age. There is certainly an accumulation of facts, ideas, knowledge. Whether this makes men better, wiser, happier, is indeed disputed.

In order to maintain the notion of a general and intended progress, it is not necessary to show that no preceding age has excelled ours in some special development. Phidias has had no rival in sculpture, we may admit. It is possible that glass was once made as flexible as leather, and that copper could be hardened like steel. But I do not take much stock in the "lost arts," the wondering theme of the lyceums. The knowledge of the natural world, and of materials, was never, I believe, so extensive and exact as it is today. It is possible that there are tricks of chemistry, ingenious processes, secrets of color, of which we are ignorant; but I do not believe there was ever an ancient alchemist who could not be taught something in a modern laboratory. The vast engineering works of the ancient Egyptians, the remains of their temples and pyramids, excite our wonder; but I have no doubt that President Grant, if he becomes the tyrant they say he is becoming, and commands the labor of forty millions of slaves—a large proportion of them office-holders—could build a Karnak, or erect a string of pyramids across New Jersey.

Mr. Froude runs lightly over a list of subjects upon which the believer in progress relies for his belief, and then says of them that the world calls this progress—he calls it only change. I suppose he means by this two things: that these great movements of our modern life are not any evidence of a permanent advance, and that our whole structure may tumble into a heap of incoherent sand, as systems of society have done before; and, again, that it is questionable if, in what we call a stride in civilization, the individual citizen is becoming any purer or more just, or if his intelligence is directed towards learning and doing what is right, or only to the means of more extended pleasures.

It is, perhaps, idle to speculate upon the first of these points—the permanence of our advance, if it is an advance. But we may be encouraged by one thing that distinguishes this period—say from the middle of the eighteenth century—from any that has preceded it. I mean the introduction of machinery, applied to the multiplication of man's power in a hundred directions—to manufacturing, to locomotion, to the diffusion of thought and of knowledge. I need not dwell upon this familiar topic. Since this period began there has been, so far as I know, no retrograde movement anywhere, but, besides the material, an intellectual and spiritual kindling the world over, for which history has no sort of parallel. Truth is always the same, and will make its way, but this subject might be illustrated by a study of the relation of Christianity and of the brotherhood of men to machinery. The theme would demand an essay by itself. I leave it with the one remark, that this great change now being wrought in the world by the multiplicity of machinery is not more a material than it is an intellectual one, and that we have no instance in history of a catastrophe widespread enough and adequate to sweep away its results. That is to say, none of the catastrophes, not even the corruptions, which brought to ruin the ancient civilizations, would work anything like the same disaster in an age which has the use of machinery that this age has.

For instance: Gibbon selects the period between the accession of Trajan and the death of Marcus Aurelius as the time in which the human race enjoyed more general happiness than they had ever known before, or had since known. Yet, says Mr. Froude, in the midst of this prosperity the heart of the empire was dying out of it; luxury and selfishness were eating away the principle that held society together, and the ancient world was on the point of collapsing into a heap of incoherent sand. Now, it is impossible to conceive that the catastrophe which did happen to that civilization could have happened if the world had then possessed the steam-engine, the printing-press, and the electric telegraph. The Roman power might have gone down, and the face of the world been recast; but such universal chaos and such a relapse for the individual people would seem impossible.

If we turn from these general considerations to the evidences that this is an "era of progress" in the condition of individual men, we are met by more specific denials. Granted, it is said, all your facilities for travel and communication, for cheap and easy manufacture, for the distribution of cheap literature and news, your cheap education, better homes, and all the comforts and luxuries of your machine civilization, is the average man, the agriculturist, the machinist, the laborer any better for it all? Are there more purity, more honest, fair dealing, genuine work, fear and honor of God? Are the proceeds of labor more evenly distributed? These, it is said, are the criteria of progress; all else is misleading.

Now, it is true that the ultimate end of any system of government or civilization should be the improvement of the individual man. And yet this truth, as Mr. Froude puts it, is only a half-truth, so that this single test of any system may not do for a given time and a limited area. Other and wider considerations come in. Disturbances, which for a while unsettle society and do not bring good results to individuals, may, nevertheless, be necessary, and may be a sign of progress. Take the favorite illustration of Mr. Froude and Mr. Ruskin—the condition of the agricultural laborer of England. If I understand them, the civilization of the last century has not helped his position as a man. If I understand them, he was a better man, in a better condition of earthly happiness, and with a better chance of heaven, fifty years ago than now, before the "era of progress" found him out. (It ought to be noticed here, that the report of the Parliamentary Commission on the condition of the English agricultural laborer does not sustain Mr. Froude's assumptions. On the contrary, the report shows that his condition is in almost all respects vastly better than it was fifty years ago.) Mr. Ruskin would remove the steam-engine and all its devilish works from his vicinity; he would abolish factories, speedy travel by rail, new-fangled instruments of agriculture, our patent education, and remit him to his ancient condition—tied for life to a bit of ground, which should supply all his simple wants; his wife should weave the clothes for the family; his children should learn nothing but the catechism and to speak the truth; he should take his religion without question from the hearty, fox-hunting parson, and live and die undisturbed by ideas. Now, it seems to me that if Mr. Ruskin could realize in some isolated nation this idea of a pastoral, simple existence, under a paternal government, he would have in time an ignorant, stupid, brutal community in a great deal worse case than the agricultural laborers of England are at present. Three-fourths of the crime in the kingdom of Bavaria is committed in the Ultramontane region of the Tyrol, where the conditions of popular education are about those that Mr. Ruskin seems to regret as swept away by the present movement in England—a stagnant state of things, in which any wind of heaven would be a blessing, even if it were a tornado. Education of the modern sort unsettles the peasant, renders him unfit for labor, and gives us a half-educated idler in place of a conscientious workman. The disuse of the apprentice system is not made good by the present system of education, because no one learns a trade well, and the consequence is poor work, and a sham civilization generally. There is some truth in these complaints. But the way out is not backward, but

forward. The fault is not with education, though it may be with the kind of education. The education must go forward; the man must not be half but wholly educated. It is only half-knowledge like half-training in a trade that is dangerous.

But what I wish to say is, that notwithstanding certain unfavorable things in the condition of the English laborer and mechanic, his chance is better in the main than it was fifty years ago. The world is a better world for him. He has the opportunity to be more of a man. His world is wider, and it is all open to him to go where he will. Mr. Ruskin may not so easily find his ideal, contented peasant, but the man himself begins to apprehend that this is a world of ideas as well as of food and clothes, and I think, if he were consulted, he would have no desire to return to the condition of his ancestors. In fact, the most hopeful symptom in the condition of the English peasant is his discontent. For, as skepticism is in one sense the handmaid of truth, discontent is the mother of progress. The man is comparatively of little use in the world who is contented.

There is another thought pertinent here. It is this: that no man, however humble, can live a full life if he lives to himself alone. He is more of a man, he lives in a higher plane of thought and of enjoyment, the more his communications are extended with his fellows and the wider his sympathies are. I count it a great thing for the English peasant, a solid addition to his life, that he is every day being put into more intimate relations with every other man on the globe.

I know it is said that these are only vague and sentimental notions of progress— notions of a “salvation by machinery.” Let us pass to something that may be less vague, even if it be more sentimental. For a hundred years we have reckoned it progress, that the people were taking part in government. We have had a good deal of faith in the proposition put forth at Philadelphia a century ago, that men are, in effect, equal in political rights. Out of this simple proposition springs logically the extension of suffrage, and a universal education, in order that this important function of a government by the people may be exercised intelligently.

Now we are told by the most accomplished English essayists that this is a mistake, that it is change, but no progress. Indeed, there are philosophers in America who think so. At least I infer so from the fact that Mr. Froude fathers one of his definitions of our condition upon an American. When a block of printer's type is by accident broken up and disintegrated, it falls into what is called “pi.” The “pi,” a mere chaos, is afterwards sorted and distributed, preparatory to being built up into fresh combinations. “A distinguished American friend,” says Mr. Froude, “describes Democracy as making pi.” It is so witty a sarcasm that I almost think Mr. Froude manufactured it himself. Well, we have been making this “pi” for a hundred years; it seems to be a national dish in considerable favor with the rest of the world—even such ancient nations as China and Japan want a piece of it.

Now, of course, no form of human government is perfect, or anything like it, but I should be willing to submit the question to an English traveler even, whether, on the whole, the people of the United States do not have as fair a chance in life and feel as little the oppression of government as any other in the world; whether anywhere the burdens are more lifted off men's shoulders.

This infidelity to popular government and unbelief in any good results to come from it are not, unfortunately, confined to the English essayists. I am not sure but the notion is growing in what is called the intellectual class, that it is a mistake to intrust the government to the ignorant many, and that it can only be lodged safely in the hands of the wise few. We hear the corruptions of the times attributed to universal suffrage. Yet these corruptions certainly are not peculiar to the United States: It is also said here, as it is in England, that our diffused and somewhat superficial education is merely unfitting the mass of men, who must be laborers, for any useful occupation.

This argument, reduced to plain terms, is simply this: that the mass of mankind are unfit to decide properly their own political and social condition; and that for the mass of mankind any but a very limited mental development is to be deprecated. It would be enough to say of this, that class government and popular ignorance have been tried for so many ages, and always with disaster and failure in the end, that I should think philanthropical historians would be tired of recommending them. But there is more to be said.

I feel that as a resident on earth, part owner of it for a time, unavoidably a member of society, I have a right to a voice in determining what my condition and what my chance in life shall be. I may be ignorant, I should be a very poor ruler of other people, but I am better capable of deciding some things that touch me nearly than another is. By what logic can I say that I should have a part in the conduct of this world and that my neighbor should not? Who is to decide what degree of intelligence shall fit a man for a share in the government? How are we to select the few capable men that are to rule all the rest? As a matter of fact, men have been rulers who had neither the average intelligence nor virtue of the people they governed. And, as a matter of historical experience, a class in power has always sought its own benefit rather than that of the whole people. Lunacy, extraordinary stupidity, and crime aside, a man is the best guardian of his own liberty and rights.

The English critics, who say we have taken the government from the capable few and given it to the people, speak of universal suffrage as a quack panacea of this “era of progress.” But it is not the manufactured panacea of any theorist or philosopher whatever. It is the natural result of a diffused knowledge of human rights and of increasing intelligence. It is nothing against it that Napoleon III. used a mockery of it to govern France. It is not a device of the closet, but a method of government, which has naturally suggested itself to men as they have grown into a feeling of self-reliance and a consciousness that they have some right in the decision of their own destiny in the world. It is true that suffrage peculiarly fits a people virtuous and intelligent. But there has not yet been invented any government in which a people would thrive who were ignorant and vicious.

Our foreign critics seem to regard our “American system,” by the way, as a sort of invention or patent right, upon which we are experimenting; forgetting that it is as legitimate a growth out of our circumstances as the English system is out of its antecedents. Our system is not the product of theorists or closet philosophers; but it was ordained in substance and inevitable from the day the first “town meeting” assembled in New England, and it was not in the power of Hamilton or any one else to make it otherwise.

So you must have education, now you have the ballot, say the critics of this era of progress; and this is

another of your cheap inventions. Not that we undervalue book knowledge. Oh, no! but it really seems to us that a good trade, with the Lord's Prayer and the Ten Commandments back of it, would be the best thing for most of you. You must work for a living anyway; and why, now, should you unsettle your minds?

This is such an astounding view of human life and destiny that I do not know what to say to it. Did it occur to Mr. Froude to ask the man whether he would be contented with a good trade and the Ten Commandments? Perhaps the man would like eleven commandments? And, if he gets hold of the eleventh, he may want to know something more about his fellow-men, a little geography maybe, and some of Mr. Froude's history, and thus he may be led off into literature, and the Lord knows where.

The inference is that education—book fashion—will unfit the man for useful work. Mr. Froude here again stops at a half-truth. As a general thing, intelligence is useful in any position a man occupies. But it is true that there is a superficial and misdirected sort of education, so called, which makes the man who receives it despise labor; and it is also true that in the present educational revival there has been a neglect of training in the direction of skilled labor, and we all suffer more or less from cheap and dishonest work. But the way out of this, again, is forward, and not backward. It is a good sign, and not a stigma upon this era of progress, that people desire education. But this education must be of the whole man; he must be taught to work as well as to read, and he is, indeed, poorly educated if he is not fitted to do his work in the world. We certainly shall not have better workmen by having ignorant workmen. I need not say that the real education is that which will best fit a man for performing well his duties in life. If Mr. Froude, instead of his plaint over the scarcity of good mechanics, and of the Ten Commandments in England, had recommended the establishment of industrial schools, he would have spoken more to the purpose.

I should say that the fashionable skepticism of today, here and in England, is in regard to universal suffrage and the capacity of the people to govern themselves. The whole system is the sharp invention of Thomas Jefferson and others, by which crafty demagogues can rule. Instead of being, as we have patriotically supposed, a real progress in human development, it is only a fetich, which is becoming rapidly a failure. Now, there is a great deal of truth in the assertion that, whatever the form of government, the ablest men, or the strongest, or the most cunning in the nation, will rule. And yet it is true that in a popular government, like this, the humblest citizen, if he is wronged or oppressed, has in his hands a readier instrument of redress than he has ever had in any form of government. And it must not be forgotten that the ballot in the hands of all is perhaps the only safeguard against the tyranny of wealth in the hands of the few. It is true that bad men can band together and be destructive; but so they can in any government. Revolution by ballot is much safer than revolution by violence; and, granting that human nature is selfish, when the whole people are the government selfishness is on the side of the government. Can you mention any class in this country whose interest it is to overturn the government? And, then, as to the wisdom of the popular decisions by the ballot in this country. Look carefully at all the Presidential elections from Washington's down, and say, in the light of history, if the popular decision has not, every time, been the best for the country. It may not have seemed so to some of us at the time, but I think it is true, and a very significant fact.

Of course, in this affirmation of belief that one hundred years of popular government in this country is a real progress for humanity, and not merely a change from the rule of the fit to the rule of the cunning, we cannot forget that men are pretty much everywhere the same, and that we have abundant reason for national humility. We are pretty well aware that ours is not an ideal state of society, and should be so, even if the English who pass by did not revile us, wagging their heads. We might differ with them about the causes of our disorders. Doubtless, extended suffrage has produced certain results. It seems, strangely enough, to have escaped the observation of our English friends that to suffrage was due the late horse disease. No one can discover any other cause for it. But there is a cause for the various phenomena of this period of shoddy, of inflated speculation, of disturbance of all values, social, moral, political, and material, quite sufficient in the light of history to account for them. It is not suffrage; it is an irredeemable paper currency. It has borne its usual fruit with us, and neither foreign nor home critics can shift the responsibility of it upon our system of government. Yes, it is true, we have contrived to fill the world with our scandals of late. I might refer to a loose commercial and political morality; to betrayals of popular trust in politics; to corruptions in legislatures and in corporations; to an abuse of power in the public press, which has hardly yet got itself adjusted to its sudden accession of enormous influence. We complain of its injustice to individuals sometimes. We might imagine that something like this would occur.

A newspaper one day says: "We are exceedingly pained to hear that the Hon. Mr. Blank, who is running for Congress in the First District, has permitted his aged grandmother to go to the town poorhouse. What renders this conduct inexplicable is the fact that Mr. Blank is a man of large fortune."

The next day the newspaper says: "The Hon. Mr. Blank has not seen fit to deny the damaging accusation in regard to the treatment of his grandmother."

The next day the newspaper says: "Mr. Blank is still silent. He is probably aware that he cannot afford to rest under this grave charge."

The next day the newspaper asks: "Where's Blank? Has he fled?"

At last, goaded by these remarks, and most unfortunately for himself, Mr. Blank writes to the newspaper and most indignantly denies the charge; he never sent his grandmother to the poorhouse.

Thereupon the newspaper says: "Of course a rich man who would put his own grandmother in the poorhouse would deny it. Our informant was a gentleman of character. Mr. Blank rests the matter on his unsupported word. It is a question of veracity."

Or, perhaps, Mr. Blank, more unfortunately for himself, begins by making an affidavit, wherein he swears that he never sent his grandmother to the poorhouse, and that, in point of fact, he has not any grandmother whatever.

The newspaper then, in language that is now classical, "goes for" Mr. Blank. It says: "Mr. Blank resorts to the common device of the rogue—the affidavit. If he had been conscious of rectitude, would he not have relied upon his simple denial?"

Now, if an extreme case like this could occur, it would be bad enough. But, in our free society, the remedy

would be at hand. The constituents of Mr. Blank would elect him in triumph. The newspaper would lose public confidence and support and learn to use its position more justly. What I mean to indicate by such an extreme instance as this is, that in our very license of individual freedom there is finally a correcting power.

We might pursue this general subject of progress by a comparison of the society of this country now with that of fifty years ago. I have no doubt that in every essential this is better than that, in manners, in morality, in charity and toleration, in education and religion. I know the standard of morality is higher. I know the churches are purer. Not fifty years ago, in a New England town, a distinguished doctor of divinity, the pastor of a leading church, was part owner in a distillery. He was a great light in his denomination, but he was an extravagant liver, and, being unable to pay his debts, he was arrested and put into jail, with the liberty of the "limits." In order not to interrupt his ministerial work, the jail limits were made to include his house and his church, so that he could still go in and out before his people. I do not think that could occur anywhere in the United States today.

I will close these fragmentary suggestions by saying that I, for one, should like to see this country a century from now. Those who live then will doubtless say of this period that it was crude, and rather disorderly, and fermenting with a great many new projects; but I have great faith that they will also say that the present extending notion, that the best government is for the people, by the people, was in the line of sound progress. I should expect to find faith in humanity greater and not less than it is now, and I should not expect to find that Mr. Froude's mournful expectation had been realized, and that the belief in a life beyond the grave had been withdrawn.

ENGLAND

By Charles Dudley Warner

England has played a part in modern history altogether out of proportion to its size. The whole of Great Britain, including Ireland, has only eleven thousand more square miles than Italy; and England and Wales alone are not half so large as Italy. England alone is about the size of North Carolina. It is, as Franklin, in 1763, wrote to Mary Stevenson in London, "that petty island which, compared to America, is but a stepping-stone in a brook, scarce enough of it above water to keep one's shoes dry."

A considerable portion of it is under water, or water-soaked a good part of the year, and I suppose it has more acres for breeding frogs than any other northern land, except Holland. Old Harrison says that the North Britons when overcome by hunger used to creep into the marshes till the water was up to their chins and there remain a long time, "onlie to qualifie the heats of their stomachs by violence, which otherwise would have wrought and beene readie to oppresse them for hunger and want of sustinance." It lies so far north—the latitude of Labrador—that the winters are long and the climate inhospitable. It would be severely cold if the Gulf Stream did not make it always damp and curtain it with clouds. In some parts the soil is heavy with water, in others it is only a thin stratum above the chalk; in fact, agricultural production could scarcely be said to exist there until fortunes made in India and in other foreign adventure enabled the owners of the land to pile it knee-deep with fertilizers from Peru and elsewhere. Thanks to accumulated wealth and the Gulf Stream, its turf is green and soft; figs, which will not mature with us north of the capes of Virginia, ripen in sheltered nooks in Oxford, and the large and unfrequent strawberry sometimes appears upon the dinner-table in such profusion that the guests can indulge in one apiece.

Yet this small, originally infertile island has been for two centuries, and is today, the most vital influence on the globe. Cast your eye over the world upon her possessions, insular and continental, into any one of which, almost, England might be dropped, with slight disturbance, as you would transfer a hanging garden. For any parallel to her power and possessions you must go back to ancient Rome. Egypt under Thotmes and Seti overran the then known world and took tribute of it; but it was a temporary wave of conquest and not an assimilation. Rome sent her laws and her roads to the end of the earth, and made an empire of it; but it was an empire of barbarians largely, of dynasties rather than of peoples. The dynasties fought, the dynasties submitted, and the dynasties paid the tribute. The modern "people" did not exist. One battle decided the fate of half the world—it might be lost or won for a woman's eyes; the flight of a chieftain might settle the fate of a province; a campaign might determine the allegiance of half Asia. There was but one compact, disciplined, law-ordered nation, and that had its seat on the Tiber.

Under what different circumstances did England win her position! Before she came to the front, Venice controlled, and almost monopolized, the trade of the Orient. When she entered upon her career Spain was almost omnipotent in Europe, and was in possession of more than half the Western world; and besides Spain, England had, wherever she went, to contend for a foothold with Portugal, skilled in trade and adventure; and with Holland, rich, and powerful on the sea. That is to say, she met everywhere civilizations old and technically her superior. Of the ruling powers, she was the least in arts and arms. If you will take time to fill out this picture, you will have some conception of the marvelous achievements of England, say since the abdication of the Emperor Charles V.

This little island is today the centre of the wealth, of the solid civilization, of the world. I will not say of art, of music, of the lighter social graces that make life agreeable; but I will say of the moral forces that make progress possible and worth while. Of this island the centre is London; of London the heart is "the City," and in the City you can put your finger on one spot where the pulse of the world is distinctly felt to beat. The Moslem regards the Kaaba at Mecca as the centre of the universe; but that is only a theological phrase. The centre of the world is the Bank of England in Leadenhall Street. There is not an occurrence, not a conquest or a defeat, a revolution, a panic, a famine, an abundance, not a change in value of money or material, no depression or stoppage in trade, no recovery, no political, and scarcely any great religious movement—say

the civil deposition of the Pope or the Wahhabee revival in Arabia and India—that does not report itself instantly at this sensitive spot. Other capitals feel a local influence; this feels all the local influences. Put your ear at the door of the Bank or the Stock Exchange near by, and you hear the roar of the world.

But this is not all, nor the most striking thing, nor the greatest contrast to the empires of Rome and of Spain. The civilization that has gone forth from England is a self-sustaining one, vital to grow where it is planted, in vast communities, in an order that does not depend, as that of the Roman world did, upon edicts and legions from the capital. And it must be remembered that if the land empire of England is not so vast as that of Rome, England has for two centuries been mistress of the seas, with all the consequences of that opportunity—consequences to trade beyond computation. And we must add to all this that an intellectual and moral power has been put forth from England clear round the globe, and felt beyond the limits of the English tongue.

How is it that England has attained this supremacy—a supremacy in vain disputed on land and on sea by France, but now threatened by an equipped and disciplined Germany, by an unformed Colossus—a Slav and Tartar conglomerate; and perhaps by one of her own children, the United States? I will mention some of the things that have determined England's extraordinary career; and they will help us to consider her prospects. I name:

I. The Race. It is a mixed race, but with certain dominant qualities, which we call, loosely, Teutonic; certainly the most aggressive, tough, and vigorous people the world has seen. It does not shrink from any climate, from any exposure, from any geographic condition; yet its choice of migration and of residence has mainly been on the grass belt of the globe, where soil and moisture produce good turf, where a changing and unequal climate, with extremes of heat and cold, calls out the physical resources, stimulates invention, and requires an aggressive and defensive attitude of mind and body. The early history of this people is marked by two things:

(1) Town and village organizations, nurseries of law, order, and self-dependence, nuclei of power, capable of indefinite expansion, leading directly to a free and a strong government, the breeders of civil liberty.

(2) Individualism in religion, Protestantism in the widest sense: I mean by this, cultivation of the individual conscience as against authority. This trait was as marked in this sturdy people in Catholic England as it is in Protestant England. It is in the blood. England never did submit to Rome, not even as France did, though the Gallic Church held out well. Take the struggle of Henry II. and the hierarchy. Read the fight with prerogative all along. The English Church never could submit. It is a shallow reading of history to attribute the final break with Rome to the unbridled passion of Henry VIII.; that was an occasion only: if it had not been that, it would have been something else.

Here we have the two necessary traits in the character of a great people: the love and the habit of civil liberty and religious conviction and independence. Allied to these is another trait—truthfulness. To speak the truth in word and action, to the verge of bluntness and offense—and with more relish sometimes because it is individually obnoxious and unlovely—is an English trait, clearly to be traced in the character of this people, notwithstanding the equivocations of Elizabethan diplomacy, the proverbial lying of English shopkeepers, and the fraudulent adulteration of English manufactures. Not to lie is perhaps as much a matter of insular pride as of morals; to lie is unbecoming an Englishman. When Captain Burnaby was on his way to Khiva he would tolerate no Oriental exaggeration of his army rank, although a higher title would have smoothed his way and added to his consideration. An English official who was a captive at Bokhara (or Khiva) was offered his life by the Khan if he would abjure the Christian faith and say he was a Moslem; but he preferred death rather than the advantage of a temporary equivocation. I do not suppose that he was a specially pious man at home or that he was a martyr to religious principle, but for the moment Christianity stood for England and English honor and civilization. I can believe that a rough English sailor, who had not used a sacred name, except in vain, since he said his prayer at his mother's knee, accepted death under like circumstances rather than say he was not a Christian.

The next determining cause in England's career is:

II. The insular position. Poor as the island was, this was the opportunity. See what came of it:

(1) Maritime opportunity. The irregular coastlines, the bays and harbors, the near islands and mainlands invited to the sea. The nation became, per force, sailors—as the ancient Greeks were and the modern Greeks are: adventurers, discoverers—hardy, ambitious, seeking food from the sea and wealth from every side.

(2) Their position protected them. What they got they could keep; wealth could accumulate. Invasion was difficult and practically impossible to their neighbors. And yet they were in the bustling world, close to the continent, commanding the most important of the navigable seas. The wealth of Holland was on the one hand, the wealth of France on the other. They held the keys.

(3) The insular position and their free institutions invited refugees from all the Continent, artisans and skilled laborers of all kinds. Hence, the beginning of their great industries, which made England rich in proportion as her authority and chance of trade expanded over distant islands and continents. But this would not have been possible without the third advantage which I shall mention, and that is:

III. Coal. England's power and wealth rested upon her coal-beds. In this bounty nature was more liberal to the tight little island than to any other spot in Western Europe, and England took early advantage of it. To be sure, her coal-field is small compared with that of the United States—an area of only 11,900 square miles to our 192,000. But Germany has only 1,770; Belgium, 510; France, 2,086; and Russia only in her expansion of territory leads Europe in this respect, and has now 30,000 square miles of coal-beds. But see the use England makes of this material: in 1877, she took out of the ground 134,179,968 tons. The United States the same year took out 50,000,000 tons; Germany, 48,000,000; France, 16,000,000; Belgium, 14,000,000. This tells the story of the heavy industries.

We have considered as elements of national greatness the race itself, the favorable position, and the material to work with. I need not enlarge upon the might and the possessions of England, nor the general beneficence of her occupation wherever she has established fort, factory, or colony. With her flag go much injustice, domineering, and cruelty; but, on the whole, the best elements of civilization.

The intellectual domination of England has been as striking as the physical. It is stamped upon all her colonies; it has by no means disappeared in the United States. For more than fifty years after our independence we imported our intellectual food—with the exception of politics, and theology in certain forms—and largely our ethical guidance from England. We read English books, or imitations of the English way of looking at things; we even accepted the English caricatures of our own life as genuine—notably in the case of the so-called typical Yankee. It is only recently that our writers have begun to describe our own life as it is, and that readers begin to feel that our society may be as interesting in print as that English society which they have been all their lives accustomed to read about. The reading-books of children in schools were filled with English essays, stories, English views of life; it was the English heroines over whose woes the girls wept; it was of the English heroes that the boys declaimed. I do not know how much the imagination has to do in shaping the national character, but for half a century English writers, by poems and novels, controlled the imagination of this country. The principal reading then, as now—and perhaps more then than now—was fiction, and nearly all of this England supplied. We took in with it, it will be noticed, not only the romance and gilding of chivalry and legitimacy, such as Scott gives us, but constant instruction in a society of ranks and degrees, orders of nobility and commonalty, a fixed social status, a well-ordered, and often attractive, permanent social inequality, a state of life and relations based upon lingering feudal conditions and prejudices. The background of all English fiction is monarchical; however liberal it may be, it must be projected upon the existing order of things. We have not been examining these foreign social conditions with that simple curiosity which leads us to look into the social life of Russia as it is depicted in Russian novels; we have, on the contrary, absorbed them generation after generation as part of our intellectual development, so that the novels and the other English literature must have had a vast influence in molding our mental character, in shaping our thinking upon the political as well as the social constitution of states.

For a long time the one American counteraction, almost the only, to this English influence was the newspaper, which has always kept alive and diffused a distinctly American spirit—not always lovely or modest, but national. The establishment of periodicals which could afford to pay for fiction written about our society and from the American point of view has had a great effect on our literary emancipation. The wise men whom we elect to make our laws—and who represent us intellectually and morally a good deal better than we sometimes like to admit—have always gone upon the theory, with regard to the reading for the American people, that the chief requisite of it was cheapness, with no regard to its character so far as it is a shaper of notions about government and social life. What educating influence English fiction was having upon American life they have not inquired, so long as it was furnished cheap, and its authors were cheated out of any copyright on it.

At the North, thanks to a free press and periodicals, to a dozen reform agitations, and to the intellectual stir generally accompanying industries and commerce, we have been developing an immense intellectual activity, a portion of which has found expression in fiction, in poetry, in essays, that are instinct with American life and aspiration; so that now for over thirty years, in the field of literature, we have had a vigorous offset to the English intellectual domination of which I spoke. How far this has in the past molded American thought and sentiment, in what degree it should be held responsible for the infidelity in regard to our “American experiment,” I will not undertake to say. The South furnishes a very interesting illustration in this connection. When the civil war broke down the barriers of intellectual non-intercourse behind which the South had ensconced itself, it was found to be in a colonial condition. Its libraries were English libraries, mostly composed of old English literature. Its literary growth stopped with the reign of George III. Its latest news was the Spectator and the Tatler. The social order it covered was that of monarchical England, undisturbed by the fiery philippics of Byron or Shelley or the radicalism of a manufacturing age. Its chivalry was an imitation of the antiquated age of lords and ladies, and tournaments, and buckram courtesies, when men were as touchy to fight, at the lift of an eyelid or the drop of the glove, as Brian de Bois-Guilbert, and as ready for a drinking-bout as Christopher North. The intellectual stir of the North, with its disorganizing radicalism, was rigorously excluded, and with it all the new life pouring out of its presses. The South was tied to a republic, but it was not republican, either in its politics or its social order. It was, in its mental constitution, in its prejudices, in its tastes, exactly what you would expect a people to be, excluded from the circulation of free ideas by its system of slavery, and fed on the English literature of a century ago. I dare say that a majority of its reading public, at any time, would have preferred a monarchical system and a hierarchy of rank.

To return to England. I have said that English domination usually carries the best elements of civilization. Yet it must be owned that England has pursued her magnificent career in a policy often insolent and brutal, and generally selfish. Scarcely any considerations have stood in the way of her trade and profit. I will not dwell upon her opium culture in India, which is a proximate cause of famine in district after district, nor upon her forcing the drug upon China—a policy disgraceful to a Christian queen and people. We have only just got rid of slavery, sustained so long by Biblical and official sanction, and may not yet set up as critics. But I will refer to a case with which all are familiar—England's treatment of her American colonies. In 1760 and onward, when Franklin, the agent of the colonies of Pennsylvania and Massachusetts, was cooling his heels in lords' waiting-rooms in London, America was treated exactly as Ireland was—that is, discriminated against in every way; not allowed to manufacture; not permitted to trade with other nations, except under the most vexatious restrictions; and the effort was continued to make her a mere agricultural producer and a dependent. All that England cared for us was that we should be a market for her manufactures. This same selfishness has been the keynote of her policy down to the present day, except as the force of circumstances has modified it. Steadily pursued, it has contributed largely to make England the monetary and industrial master of the world.

With this outline I pass to her present condition and outlook. The dictatorial and selfish policy has been forced to give way somewhat in regard to the colonies. The spirit of the age and the strength of the colonies forbid its exercise; they cannot be held by the old policy. Australia boldly adopts a protective tariff, and her parliament is only nominally controlled by the crown. Canada exacts duties on English goods, and England cannot help herself. Even with these concessions, can England keep her great colonies? They are still loyal in word. They still affect English manners and English speech, and draw their intellectual supplies from

England. On the prospect of a war with Russia they nearly all offered volunteers. But everybody knows that allegiance is on the condition of local autonomy. If united Canada asks to go, she will go. So with Australia. It may be safely predicted that England will never fight again to hold the sovereignty of her new-world possessions against their present occupants. And, in the judgment of many good observers, a dissolution of the empire, so far as the Western colonies are concerned, is inevitable, unless Great Britain, adopting the plan urged by Franklin, becomes an imperial federation, with parliaments distinct and independent, the crown the only bond of union—the crown, and not the English parliament, being the titular and actual sovereign. Sovereign power over America in the parliament Franklin never would admit. His idea was that all the inhabitants of the empire must be citizens, not some of them subjects ruled by the home citizens. The two great political parties of England are really formed on lines constructed after the passage of the Reform Bill of 1832. The Tories had been long in power. They had made many changes and popular concessions, but they resisted parliamentary reform. The great Whig lords, who had tried to govern England without the people and in opposition to the crown in the days of George III., had learned to seek popular support. The Reform Bill, which was ultimately forced through by popular pressure and threat of civil war, abolished the rotten boroughs, gave representation to the large manufacturing towns and increased representation to the counties, and the suffrage to all men who had 'paid ten pounds a year rent in boroughs, or in the counties owned land worth ten pounds a year or paid fifty pounds rent. The immediate result of this was to put power into the hands of the middle classes and to give the lower classes high hopes, so that, in 1839, the Chartist movement began, one demand of which was universal suffrage. The old party names of Whig and Tory had been dropped and the two parties had assumed their present appellations of Conservatives and Liberals. Both parties had, however, learned that there was no rest for any ruling party except a popular basis, and the Conservative party had the good sense to strengthen itself in 1867 by carrying through Mr. Disraeli's bill, which gave the franchise in boroughs to all householders paying rates, and in counties to all occupiers of property rated at fifteen pounds a year. This broadening of the suffrage places the power irrevocably in the hands of the people, against whose judgment neither crown nor ministry can venture on any important step.

In general terms it may be said that of these two great parties the Conservative wishes to preserve existing institutions, and latterly has leaned to the prerogatives of the crown, and the Liberal is inclined to progress and reform, and to respond to changes demanded by the people. Both parties, however, like parties elsewhere, propose and oppose measures and movements, and accept or reject policies, simply to get office or keep office. The Conservative party of late years, principally because it has the simple task of holding back, has been better able to define its lines and preserve a compact organization. The Liberals, with a multitude of reformatory projects, have, of course, a less homogeneous organization, and for some years have been without well-defined issues. The Conservative aristocracy seemed to form a secure alliance with the farmers and the great agricultural interests, and at the same time to have a strong hold upon the lower classes. In what his opponents called his "policy of adventure," Lord Beaconsfield had the support of the lower populace. The Liberal party is an incongruous host. On one wing are the Whig lords and great landowners, who cannot be expected to take kindly to a land reform that would reform them out of territorial power; and on the other wing are the Radicals, who would abolish the present land system and the crown itself, and institute the rule of a democracy. Between these two is the great body of the middle class, a considerable portion of the educated and university trained, the majorities of the manufacturing towns, and perhaps, we may say, generally the Nonconformists. There are some curious analogies in these two parties to our own parties before the war. It is, perhaps, not fanciful to suppose that the Conservative lords resemble our own aristocratic leaders of democracy, who contrived to keep near the people and had affiliations that secured them the vote of the least educated portion of the voters; while the great Liberal lords are not unlike our old aristocratic Whigs, of the cotton order, who have either little sympathy with the people or little faculty of showing it. It is a curious fact that during our civil war respect for authority gained us as much sympathy from the Conservatives, as love for freedom (hampered by the greed of trade and rivalry in manufactures) gained us from the Liberals.

To return to the question of empire. The bulk of the Conservative party would hold the colonies if possible, and pursue an imperial policy; while certainly a large portion of the Liberals—not all, by any means—would let the colonies go, and, with the Manchester school, hope to hold England's place by free-trade and active competition. The imperial policy may be said to have two branches, in regard to which parties will not sharply divide: one is the relations to be held towards the Western colonies, and the other in the policy to be pursued in the East in reference to India and to the development of the Indian empire, and also the policy of aggression and subjection in South Africa.

An imperial policy does not necessarily imply such vagaries as the forcible detention of the forcibly annexed Boer republic. But everybody sees that the time is near when England must say definitely as to the imperial policy generally whether it will pursue it or abandon it. And it may be remarked in passing that the Gladstone government, thus far, though pursuing this policy more moderately than the Beaconsfield government, shows no intention of abandoning it. Almost everybody admits that if it is abandoned England must sink to the position of a third-rate power like Holland. For what does abandonment mean? It means to have no weight, except that of moral example, in Continental affairs: to relinquish her advantages in the Mediterranean; to let Turkey be absorbed by Russia; to become so weak in India as to risk rebellion of all the provinces, and probable attack from Russia and her Central Asian allies. But this is not all. Lost control in Asia is lost trade; this is evident in every foot of control Russia has gained in the Caucasus, about the Caspian Sea, in Persia. There Russian manufactures supplant the English; and so in another quarter: in order to enjoy the vast opening trade of Africa, England must be on hand with an exhibition of power. We might show by a hundred examples that the imperial idea in England does not rest on pride alone, on national glory altogether, though that is a large element in it, but on trade instincts. "Trade follows the flag" is a well-known motto; and that means that the lines of commerce follow the limits of empire.

Take India as an illustration. Why should England care to keep India? In the last forty years the total revenue from India, set down up to 1880 as L 1,517,000,000, has been L 53,000,000 less than the expenditure. It varies with the years, and occasionally the balance is favorable, as in 1879, when the expenditure was L 63,400,000 and the revenue was L 64,400,000. But to offset this average deficit the very

profitable trade of India, which is mostly in British hands, swells the national wealth; and this trade would not be so largely in British hands if the flag were away.

But this is not the only value of India. Grasp on India is part of the vast Oriental network of English trade and commerce, the carrying trade, the supply of cotton and iron goods. This largely depends upon English prestige in the Orient, and to lose India is to lose the grip. On practically the same string with India are Egypt, Central Africa, and the Euphrates valley. A vast empire of trade opens out. To sink the imperial policy is to shut this vision. With Russia pressing on one side and America competing on the other, England cannot afford to lose her military lines, her control of the sea, her prestige.

Again, India offers to the young and the adventurous a career, military, civil, or commercial. This is of great weight—great social weight. One of the chief wants of England today is careers and professions for her sons. The population of the United Kingdom in 1876 was estimated at near thirty-four millions; in the last few decades the decennial increase had been considerably over two millions; at that rate the population in 1900 would be near forty millions. How can they live in their narrow limits? They must emigrate, go for good, or seek employment and means of wealth in some such vast field as India. Take away India now, and you cut off the career of hundreds of thousands of young Englishmen, and the hope of tens of thousands of households.

There is another aspect of the case which it would be unfair to ignore. Opportunity is the measure of a nation's responsibility. I have no doubt that Mr. Thomas Hughes spoke for a very respectable portion of Christian England, in 1861, when he wrote Mr. James Russell Lowell, in a prefatory note to "Tom Brown at Oxford," these words:

"The great tasks of the world are only laid on the strongest shoulders. We, who have India to guide and train, who have for our task the educating of her wretched people into free men, who feel that the work cannot be shifted from ourselves, and must be done as God would have it done, at the peril of England's own life, can and do feel for you."

It is safe, we think, to say that if the British Empire is to be dissolved, disintegration cannot be permitted to begin at home. Ireland has always been a thorn in the side of England. And the policy towards it could not have been much worse, either to impress it with a respect for authority or to win it by conciliation; it has been a strange mixture of untimely concession and untimely cruelty. The problem, in fact, has physical and race elements that make it almost insolvable. A water-logged country, of which nothing can surely be predicted but the uncertainty of its harvests, inhabited by a people of most peculiar mental constitution, alien in race, temperament, and religion, having scarcely one point of sympathy with the English. But geography settles some things in this world, and the act of union that bound Ireland to the United Kingdom in 1800 was as much a necessity of the situation as the act of union that obliterated the boundary line between Scotland and England in 1707. The Irish parliament was confessedly a failure, and it is scarcely within the possibilities that the experiment will be tried again. Irish independence, so far as English consent is concerned, and until England's power is utterly broken, is a dream. Great changes will doubtless be made in the tenure and transfer of land, and these changes will react upon England to the ultimate abasement of the landed aristocracy; but this equalization of conditions would work no consent to separation. The undeniable growth of the democratic spirit in England can no more be relied on to bring it about, when we remember what renewed executive vigor and cohesion existed with the Commonwealth and the fiery foreign policy of the first republic of France. For three years past we have seen the British Empire in peril on all sides, with the addition of depression and incipient rebellion at home, but her horizon is not as dark as it was in 1780, when, with a failing cause in America, England had the whole of Europe against her.

In any estimate of the prospects of England we must take into account the recent marked changes in the social condition. Mr. Escott has an instructive chapter on this in his excellent book on England. He notices that the English character is losing its insularity, is more accessible to foreign influences, and is adopting foreign, especially French, modes of living. Country life is losing its charm; domestic life is changed; people live in "flats" more and more, and the idea of home is not what it was; marriage is not exactly what it was; the increased free and independent relations of the sexes are somewhat demoralizing; women are a little intoxicated with their newly-acquired freedom; social scandals are more frequent. It should be said, however, that perhaps the present perils are due not to the new system, but to the fact that it is new; when the novelty is worn off the peril may cease.

Mr. Escott notices primogeniture as one of the stable and, curious enough, one of the democratic institutions of society. It is owing to primogeniture that while there is a nobility in England there is no noblesse. If titles and lands went to all the children there would be the multitudinous noblesse of the Continent. Now, by primogeniture, enough is retained for a small nobility, but all the younger sons must go into the world and make a living. The three respectable professions no longer offer sufficient inducement, and they crowd more and more into trade. Thus the middle class is constantly recruited from the upper. Besides, the upper is all the time recruited from the wealthy middle; the union of aristocracy and plutocracy may be said to be complete. But merit makes its way continually from even the lower ranks upward, in the professions, in the army, the law, the church, in letters, in trade, and, what Mr. Escott does not mention, in the reformed civil service, newly opened to the humblest lad in the land. Thus there is constant movement up and down in social England, approaching, except in the traditional nobility, the freedom of movement in our own country. This is all wholesome and sound. Even the nobility itself, driven by ennui, or a loss of former political control, or by the necessity of more money to support inherited estates, goes into business, into journalism, writes books, enters the professions.

What are the symptoms of decay in England? Unless the accumulation of wealth is a symptom of decay, I do not see many. I look at the people themselves. It seems to me that never in their history were they more full of vigor. See what travelers, explorers, adventurers they are. See what sportsmen, in every part of the globe, how much they endure, and how hale and jolly they are—women as well as men. The race, certainly, has not decayed. And look at letters. It may be said that this is not the age of pure literature—and I'm sure I hope the English patent for producing machine novels will not be infringed—but the English language was never

before written so vigorously, so clearly, and to such purpose. And this is shown even in the excessive refinement and elaboration of trifles, the minutia of reflection, the keenness of analysis, the unrelenting pursuit of every social topic into subtleties untouched by the older essayists. And there is still more vigor, without affectation, in scientific investigation, in the daily conquests made in the realm of social economy, the best methods of living and getting the most out of life. Art also keeps pace with luxury, and shows abundant life and promise for the future.

I believe, from these and other considerations, that this vigorous people will find a way out of its present embarrassment, and a way out without retreating. For myself, I like to see the English sort of civilization spreading over the world rather than the Russian or the French. I hope England will hang on to the East, and not give it over to the havoc of squabbling tribes, with a dozen religions and five hundred dialects, or to the military despotism of an empire whose morality is only matched by the superstition of its religion.

The relations of England and the United States are naturally of the first interest to us. Our love and our hatred have always been that of true relatives. For three-quarters of a century our 'amour propre' was constantly kept raw by the most supercilious patronage. During the past decade, when the quality of England's regard has become more and more a matter of indifference to us, we have been the subject of a more intelligent curiosity, of increased respect, accompanied with a sincere desire to understand us. In the diplomatic scale Washington still ranks below the Sublime Porte, but this anomaly is due to tradition, and does not represent England's real estimate of the status of the republic. There is, and must be, a good deal of selfishness mingled in our friendship—patriotism itself being a form of selfishness—but our ideas of civilization so nearly coincide, and we have so many common aspirations for humanity that we must draw nearer together, notwithstanding old grudges and present differences in social structure. Our intercourse is likely to be closer, our business relations will become more inseparable. I can conceive of nothing so lamentable for the progress of the world as a quarrel between these two English-speaking peoples.

But, in one respect, we are likely to diverge. I refer to literature; in that, assimilation is neither probable nor desirable. We were brought up on the literature of England; our first efforts were imitations of it; we were criticised—we criticised ourselves on its standards. We compared every new aspirant in letters to some English writer. We were patted on the back if we resembled the English models; we were stared at or sneered at if we did not. When we began to produce something that was the product of our own soil and our own social conditions, it was still judged by the old standards, or, if it was too original for that, it was only accepted because it was curious or bizarre, interesting for its oddity. The criticism that we received for our best was evidently founded on such indifference or toleration that it was galling. At first we were surprised; then we were grieved; then we were indignant. We have long ago ceased to be either surprised, grieved, or indignant at anything the English critics say of us. We have recovered our balance. We know that since Gulliver there has been no piece of original humor produced in England equal to "Knickerbocker's New York"; that not in this century has any English writer equaled the wit and satire of the "Biglow Papers." We used to be irritated at what we called the snobbishness of English critics of a certain school; we are so no longer, for we see that its criticism is only the result of ignorance—simply of inability to understand.

And we the more readily pardon it, because of the inability we have to understand English conditions, and the English dialect, which has more and more diverged from the language as it was at the time of the separation. We have so constantly read English literature, and kept ourselves so well informed of their social life, as it is exhibited in novels and essays, that we are not so much in the dark with regard to them as they are with regard to us; still we are more and more bothered by the insular dialect. I do not propose to criticise it; it is our misfortune, perhaps our fault, that we do not understand it; and I only refer to it to say that we should not be too hard on the Saturday Review critic when he is complaining of the American dialect in the English that Mr. Howells writes. How can the Englishman be expected to come into sympathy with the fiction that has New England for its subject—from Hawthorne's down to that of our present novelists—when he is ignorant of the whole background on which it is cast; when all the social conditions are an enigma to him; when, if he has, historically, some conception of Puritan society, he cannot have a glimmer of comprehension of the subtle modifications and changes it has undergone in a century? When he visits America and sees it, it is a puzzle to him. How, then, can he be expected to comprehend it when it is depicted to the life in books?

No, we must expect a continual divergence in our literatures. And it is best that there should be. There can be no development of a nation's literature worth anything that is not on its own lines, out of its own native materials. We must not expect that the English will understand that literature that expresses our national life, character, conditions, any better than they understand that of the French or of the Germans. And, on our part, the day has come when we receive their literary efforts with the same respectful desire to be pleased with them that we have to like their dress and their speech.

THE NOVEL AND THE COMMON SCHOOL

By Charles Dudley Warner

There has been a great improvement in the physical condition of the people of the United States within two generations. This is more noticeable in the West than in the East, but it is marked everywhere; and the foreign traveler who once detected a race deterioration, which he attributed to a dry and stimulating atmosphere and to a feverish anxiety, which was evident in all classes, for a rapid change of condition, finds very little now to sustain his theory. Although the restless energy continues, the mixed race in America has certainly changed physically for the better. Speaking generally, the contours of face and form are more rounded. The change is most marked in regions once noted for leanness, angularity, and sallowness of complexion, but throughout the country the types of physical manhood are more numerous; and if women of

rare and exceptional beauty are not more numerous, no doubt the average of comeliness and beauty has been raised. Thus far, the increase of beauty due to better development has not been at the expense of delicacy of complexion and of line, as it has been in some European countries. Physical well-being is almost entirely a matter of nutrition. Something is due in our case to the accumulation of money, to the decrease in an increasing number of our population of the daily anxiety about food and clothes, to more leisure; but abundant and better-prepared food is the direct agency in our physical change. Good food is not only more abundant and more widely distributed than it was two generations ago, but it is to be had in immeasurably greater variety. No other people existing, or that ever did exist, could command such a variety of edible products for daily consumption as the mass of the American people habitually use today. In consequence they have the opportunity of being better nourished than any other people ever were. If they are not better nourished, it is because their food is badly prepared. Whenever we find, either in New England or in the South, a community ill-favored, dyspeptic, lean, and faded in complexion, we may be perfectly sure that its cooking is bad, and that it is too ignorant of the laws of health to procure that variety of food which is so easily obtainable. People who still diet on sodden pie and the products of the frying-pan of the pioneer, and then, in order to promote digestion, attempt to imitate the patient cow by masticating some elastic and fragrant gum, are doing very little to bring in that universal physical health or beauty which is the natural heritage of our opportunity.

Now, what is the relation of our intellectual development to this physical improvement? It will be said that the general intelligence is raised, that the habit of reading is much more widespread, and that the increase of books, periodicals, and newspapers shows a greater mental activity than existed formerly. It will also be said that the opportunity for education was never before so nearly universal. If it is not yet true everywhere that all children must go to school, it is true that all may go to school free of cost. Without doubt, also, great advance has been made in American scholarship, in specialized learning and investigation; that is to say, the proportion of scholars of the first rank in literature and in science is much larger to the population than a generation ago.

But what is the relation of our general intellectual life to popular education? Or, in other words, what effect is popular education having upon the general intellectual habit and taste? There are two ways of testing this. One is by observing whether the mass of minds is better trained and disciplined than formerly, less liable to delusions, better able to detect fallacies, more logical, and less likely to be led away by novelties in speculation, or by theories that are unsupported by historic evidence or that are contradicted by a knowledge of human nature. If we were tempted to pursue this test, we should be forced to note the seeming anomaly of a scientific age peculiarly credulous; the ease with which any charlatan finds followers; the common readiness to fall in with any theory of progress which appeals to the sympathies, and to accept the wildest notions of social reorganization. We should be obliged to note also, among scientific men themselves, a disposition to come to conclusions on inadequate evidence—a disposition usually due to one-sided education which lacks metaphysical training and the philosophic habit. Multitudes of fairly intelligent people are afloat without any base-line of thought to which they can refer new suggestions; just as many politicians are floundering about for want of an apprehension of the Constitution of the United States and of the historic development of society. An honest acceptance of the law of gravitation would banish many popular delusions; a comprehension that something cannot be made out of nothing would dispose of others; and the application of the ordinary principles of evidence, such as men require to establish a title to property, would end most of the remaining. How far is our popular education, which we have now enjoyed for two full generations, responsible for this state of mind? If it has not encouraged it, has it done much to correct it?

The other test of popular education is in the kind of reading sought and enjoyed by the majority of the American people. As the greater part of this reading is admitted to be fiction, we have before us the relation of the novel to the common school. As the common school is our universal method of education, and the novels most in demand are those least worthy to be read, we may consider this subject in two aspects: the encouragement, by neglect or by teaching, of the taste that demands this kind of fiction, and the tendency of the novel to become what this taste demands.

Before considering the common school, however, we have to notice a phenomenon in letters—namely, the evolution of the modern newspaper as a vehicle for general reading-matter. Not content with giving the news, or even with creating news and increasing its sensational character, it grasps at the wider field of supplying reading material for the million, usurping the place of books and to a large extent of periodicals. The effect of this new departure in journalism is beginning to attract attention. An increasing number of people read nothing except the newspapers. Consequently, they get little except scraps and bits; no subject is considered thoroughly or exhaustively; and they are furnished with not much more than the small change for superficial conversation. The habit of excessive newspaper reading, in which a great variety of topics is inadequately treated, has a curious effect on the mind. It becomes demoralized, gradually loses the power of concentration or of continuous thought, and even loses the inclination to read the long articles which the newspaper prints. The eye catches a thousand things, but is detained by no one. Variety, which in limitations is wholesome in literary as well as in physical diet, creates dyspepsia when it is excessive, and when the literary viands are badly cooked and badly served the evil is increased. The mind loses the power of discrimination, the taste is lowered, and the appetite becomes diseased. The effect of this scrappy, desultory reading is bad enough when the hashed compound selected is tolerably good. It becomes a very serious matter when the reading itself is vapid, frivolous, or bad. The responsibility of selecting the mental food for millions of people is serious. When, in the last century, in England, the Society for the Diffusion of Useful Information, which accomplished so much good, was organized, this responsibility was felt, and competent hands prepared the popular books and pamphlets that were cheap in price and widely diffused. Now, it happens that a hundred thousand people, perhaps a million in some cases, surrender the right of the all-important selection of the food for their minds to some unknown and irresponsible person whose business it is to choose the miscellaneous reading-matter for a particular newspaper. His or her taste may be good, or it may be immature and vicious; it may be used simply to create a sensation; and yet the million of readers get nothing except what this one person chooses they shall read. It is an astonishing abdication of individual preference. Day after day, Sunday after Sunday, they read only what this unknown person selects for them. Instead of

going to the library and cultivating their own tastes, and pursuing some subject that will increase their mental vigor and add to their permanent stock of thought, they fritter away their time upon a hash of literature chopped up for them by a person possibly very unfit even to make good hash. The mere statement of this surrender of one's judgment of what shall be his intellectual life is alarming.

But the modern newspaper is no doubt a natural evolution in our social life. As everything has a cause, it would be worth while to inquire whether the encyclopaedic newspaper is in response to a demand, to a taste created by our common schools. Or, to put the question in another form, does the system of education in our common schools give the pupils a taste for good literature or much power of discrimination? Do they come out of school with the habit of continuous reading, of reading books, or only of picking up scraps in the newspapers, as they might snatch a hasty meal at a lunch-counter? What, in short, do the schools contribute to the creation of a taste for good literature?

Great anxiety is felt in many quarters about the modern novel. It is feared that it will not be realistic enough, that it will be too realistic, that it will be insincere as to the common aspects of life, that it will not sufficiently idealize life to keep itself within the limits of true art. But while the critics are busy saying what the novel should be, and attacking or defending the fiction of the previous age, the novel obeys pretty well the laws of its era, and in many ways, especially in the variety of its development, represents the time. Regarded simply as a work of art, it may be said that the novel should be an expression of the genius of its writer conscientiously applied to a study of the facts of life and of human nature, with little reference to the audience. Perhaps the great works of art that have endured have been so composed. We may say, for example, that "Don Quixote" had to create its sympathetic audience. But, on the other hand, works of art worthy the name are sometimes produced to suit a demand and to please a taste already created. A great deal of what passes for literature in these days is in this category of supply to suit the demand, and perhaps it can be said of this generation more fitly than of any other that the novel seeks to hit the popular taste; having become a means of livelihood, it must sell in order to be profitable to the producer, and in order to sell it must be what the reading public want. The demand and sale are widely taken as the criterion of excellence, or they are at least sufficient encouragement of further work on the line of the success. This criterion is accepted by the publisher, whose business it is to supply a demand. The conscientious publisher asks two questions: Is the book good? and Will it sell? The publisher without a conscience asks only one question: Will the book sell? The reflex influence of this upon authors is immediately felt.

The novel, mediocre, banal, merely sensational, and worthless for any purpose of intellectual stimulus or elevation of the ideal, is thus encouraged in this age as it never was before. The making of novels has become a process of manufacture. Usually, after the fashion of the silk-weavers of Lyons, they are made for the central establishment on individual looms at home; but if demand for the sort of goods furnished at present continues, there is no reason why they should not be produced, even more cheaply than they are now, in great factories, where there can be division of labor and economy of talent. The shoal of English novels conscientiously reviewed every seventh day in the London weeklies would preserve their present character and gain in firmness of texture if they were made by machinery. One has only to mark what sort of novels reach the largest sale and are most called for in the circulating libraries, to gauge pretty accurately the public taste, and to measure the influence of this taste upon modern production. With the exception of the novel now and then which touches some religious problem or some socialistic speculation or uneasiness, or is a special freak of sensationalism, the novels which suit the greatest number of readers are those which move in a plane of absolute mediocrity, and have the slightest claim to be considered works of art. They represent the chromo stage of development.

They must be cheap. The almost universal habit of reading is a mark of this age—nowhere else so conspicuous as in America; and considering the training of this comparatively new reading public, it is natural that it should insist upon cheapness of material, and that it should require quality less than quantity. It is a note of our general intellectual development that cheapness in literature is almost as much insisted on by the rich as by the poor. The taste for a good book has not kept pace with the taste for a good dinner, and multitudes who have commendable judgment about the table would think it a piece of extravagance to pay as much for a book as for a dinner, and would be ashamed to smoke a cigar that cost less than a novel. Indeed, we seem to be as yet far away from the appreciation of the truth that what we put into the mind is as important to our well-being as what we put into the stomach.

No doubt there are more people capable of appreciating a good book, and there are more good books read, in this age, than in any previous, though the ratio of good judges to the number who read is less; but we are considering the vast mass of the reading public and its tastes. I say its tastes, and probably this is not unfair, although this traveling, restless, reading public meekly takes, as in the case of the reading selected in the newspapers, what is most persistently thrust upon its attention by the great news agencies, which find it most profitable to deal in that which is cheap and ephemeral. The houses which publish books of merit are at a disadvantage with the distributing agencies.

Criticism which condemns the common-school system as a nurse of superficiality, mediocrity, and conceit does not need serious attention, any more than does the criticism that the universal opportunity of individual welfare offered by a republic fails to make a perfect government. But this is not saying that the common school does all that it can do, and that its results answer to the theories about it. It must be partly due to the want of proper training in the public schools that there are so few readers of discrimination, and that the general taste, judged by the sort of books now read, is so mediocre. Most of the public schools teach reading, or have taught it, so poorly that the scholars who come from them cannot read easily; hence they must have spice, and blood, and vice to stimulate them, just as a man who has lost taste peppers his food. We need not agree with those who say that there is no merit whatever in the mere ability to read; nor, on the other hand, can we join those who say that the art of reading will pretty surely encourage a taste for the nobler kind of reading, and that the habit of reading trash will by-and-by lead the reader to better things. As a matter of experience, the reader of the namby-pamby does not acquire an appetite for anything more virile, and the reader of the sensational requires constantly more highly flavored viands. Nor is it reasonable to expect good taste to be recovered by an indulgence in bad taste.

What, then, does the common school usually do for literary taste? Generally there is no thought about it. It is not in the minds of the majority of teachers, even if they possess it themselves. The business is to teach the pupils to read; how they shall use the art of reading is little considered. If we examine the reading-books from the lowest grade to the highest, we shall find that their object is to teach words, not literature. The lower-grade books are commonly inane (I will not say childish, for that is a libel on the open minds of children) beyond description. There is an impression that advanced readers have improved much in quality within a few years, and doubtless some of them do contain specimens of better literature than their predecessors. But they are on the old plan, which must be radically modified or entirely cast aside, and doubtless will be when the new method is comprehended, and teachers are well enough furnished to cut loose from the machine. We may say that to learn how to read, and not what to read, is confessedly the object of these books; but even this object is not attained. There is an endeavor to teach how to call the words of a reading-book, but not to teach how to read; for reading involves, certainly for the older scholars, the combination of known words to form new ideas. This is lacking. The taste for good literature is not developed; the habit of continuous pursuit of a subject, with comprehension of its relations, is not acquired; and no conception is gained of the entirety of literature or its importance to human life. Consequently, there is no power of judgment or faculty of discrimination.

Now, this radical defect can be easily remedied if the school authorities only clearly apprehend one truth, and that is that the minds of children of tender age can be as readily interested and permanently interested in good literature as in the dreary feebleness of the juvenile reader. The mind of the ordinary child should not be judged by the mind that produces stuff of this sort: "Little Jimmy had a little white pig." "Did the little pig know Jimmy?" "Yes, the little pig knew Jimmy, and would come when he called." "How did little Jimmy know his pig from the other little pigs?" "By the twist in his tail." ("Children," asks the teacher, "what is the meaning of 'twist'?") "Jimmy liked to stride the little pig's back." "Would the little pig let him?" "Yes, when he was absorbed eating his dinner." ("Children, what is the meaning of 'absorbed'?") And so on.

This intellectual exercise is, perhaps, read to children who have not got far enough in "word-building" to read themselves about little Jimmy and his absorbed pig. It may be continued, together with word-learning, until the children are able to say (is it reading?) the entire volume of this precious stuff. To what end? The children are only languidly interested; their minds are not awakened; the imagination is not appealed to; they have learned nothing, except probably some new words, which are learned as signs. Often children have only one book even of this sort, at which they are kept until they learn it through by heart, and they have been heard to "read" it with the book bottom side up or shut! All these books cultivate inattention and intellectual vacancy. They are—the best of them—only reading exercises; and reading is not perceived to have any sort of value. The child is not taught to think, and not a step is taken in informing him of his relation to the world about him. His education is not begun.

Now it happens that children go on with this sort of reading and the ordinary text-books through the grades of the district school into the high school, and come to the ages of seventeen and eighteen without the least conception of literature, or of art, or of the continuity of the relations of history; are ignorant of the great names which illuminate the ages; have never heard of Socrates, or of Phidias, or of Titian; do not know whether Franklin was an Englishman or an American; would be puzzled to say whether it was Ben Franklin or Ben Jonson who invented lightning—think it was Ben Somebody; cannot tell whether they lived before or after Christ, and indeed never have thought that anything happened before the time of Christ; do not know who was on the throne of Spain when Columbus discovered America—and so on. These are not imagined instances. The children referred to are in good circumstances and have had fairly intelligent associations, but their education has been intrusted to the schools. They know nothing except their text-books, and they know these simply for the purpose of examination. Such pupils come to the age of eighteen with not only no taste for the best reading, for the reading of books, but without the ability to be interested even in fiction of the first class, because it is full of allusions that convey nothing to their minds. The stories they read, if they read at all—the novels, so called, that they have been brought up on—are the diluted and feeble fictions that flood the country, and that scarcely rise above the intellectual level of Jimmy and the absorbed pig.

It has been demonstrated by experiment that it is as easy to begin with good literature as with the sort of reading described. It makes little difference where the beginning is made. Any good book, any real book, is an open door into the wide field of literature; that is to say, of history—that is to say, of interest in the entire human race. Read to children of tender years, the same day, the story of Jimmy and a Greek myth, or an episode from the "Odyssey," or any genuine bit of human nature and life; and ask the children next day which they wish to hear again. Almost all of them will call for the repetition of the real thing, the verity of which they recognize, and which has appealed to their imaginations. But this is not all. If the subject is a Greek myth, they speedily come to comprehend its meaning, and by the aid of the teacher to trace its development elsewhere, to understand its historic significance, to have the mind filled with images of beauty, and wonder. Is it the Homeric story of Nausicaa? What a picture! How speedily Greek history opens to the mind! How readily the children acquire knowledge of the great historic names, and see how their deeds and their thoughts are related to our deeds and our thoughts! It is as easy to know about Socrates as about Franklin and General Grant. Having the mind open to other times and to the significance of great men in history, how much more clearly they comprehend Franklin and Grant and Lincoln! Nor is this all. The young mind is open to noble thoughts, to high conceptions; it follows by association easily along the historic and literary line; and not only do great names and fine pieces of literature become familiar, but the meaning of the continual life in the world begins to be apprehended. This is not at all a fancy sketch. The writer has seen the whole assembly of pupils in a school of six hundred, of all the eight grades, intelligently interested in a talk which contained classical and literary allusions that would have been incomprehensible to an ordinary school brought up on the ordinary readers and text-books.

But the reading need not be confined to the classics nor to the master-pieces of literature. Natural history—generally the most fascinating of subjects—can be taught; interest in flowers and trees and birds and the habits of animals can be awakened by reading the essays of literary men on these topics as they never can be by the dry text-books. The point I wish to make is that real literature for the young, literature which is almost absolutely neglected in the public schools, except in a scrappy way as a reading exercise, is the best open

door to the development of the mind and to knowledge of all sorts. The unfolding of a Greek myth leads directly to art, to love of beauty, to knowledge of history, to an understanding of ourselves. But whatever the beginning is, whether a classic myth, a Homeric epic, a play of Sophocles, the story of the life and death of Socrates, a mediaeval legend, or any genuine piece of literature from the time of Virgil down to our own, it may not so much matter (except that it is better to begin with the ancients in order to gain a proper perspective) whatever the beginning is, it should be the best literature. The best is not too good for the youngest child. Simplicity, which commonly characterizes greatness, is of course essential. But never was a greater mistake made than in thinking that a youthful mind needs watering with the slops ordinarily fed to it. Even children in the kindergarten are eager for Whittier's "Barefoot Boy" and Longfellow's "Hiawatha." It requires, I repeat, little more pains to create a good taste in reading than a bad taste.

It would seem that in the complete organization of the public schools all education of the pupil is turned over to them as it was not formerly, and it is possible that in the stress of text-book education there is no time for reading at home. The competent teachers contend not merely with the difficulty of the lack of books and the deficiencies of those in use, but with the more serious difficulty of the erroneous ideas of the function of text-books. They will cease to be a commercial commodity of so much value as now when teachers teach. If it is true that there is no time for reading at home, we can account for the deplorable lack of taste in the great mass of the reading public educated at the common schools; and we can see exactly what the remedy should be—namely, the teaching of the literature at the beginning of school life, and following it up broadly and intelligently during the whole school period. It will not crowd out anything else, because it underlies everything. After many years of perversion and neglect, to take up the study of literature in a comprehensive text-book, as if it were to be learned—like arithmetic, is a ludicrous proceeding. This, is not teaching literature nor giving the scholar a love of good reading. It is merely stuffing the mind with names and dates, which are not seen to have any relation to present life, and which speedily fade out of the mind. The love of literature is not to be attained in this way, nor in any way except by reading the best literature.

The notion that literature can be taken up as a branch of education, and learned at the proper time and when studies permit, is one of the most farcical in our scheme of education. It is only matched in absurdity by the other current idea, that literature is something separate and apart from general knowledge. Here is the whole body of accumulated thought and experience of all the ages, which indeed forms our present life and explains it, existing partly in tradition and training, but more largely in books; and most teachers think, and most pupils are led to believe, that this most important former of the mind, maker of character, and guide to action can be acquired in a certain number of lessons out of a textbook! Because this is so, young men and young women come up to college almost absolutely ignorant of the history of their race and of the ideas that have made our civilization. Some of them have never read a book, except the text-books on the specialties in which they have prepared themselves for examination. We have a saying concerning people whose minds appear to be made up of dry, isolated facts, that they have no atmosphere. Well, literature is the atmosphere. In it we live, and move, and have our being, intellectually. The first lesson read to, or read by, the child should begin to put him in relation with the world and the thought of the world. This cannot be done except by the living teacher. No text-book, no one reading-book or series of reading-books, will do it. If the teacher is only the text-book orally delivered, the teacher is an uninspired machine. We must revise our notions of the function of the teacher for the beginners. The teacher is to present evidence of truth, beauty, art. Where will he or she find it? Why, in experimental science, if you please, in history, but, in short, in good literature, using the word in its broadest sense. The object in selecting reading for children is to make it impossible for them to see any evidence except the best. That is the teacher's business, and how few understand their business! How few are educated! In the best literature we find truth about the world, about human nature; and hence, if children read that, they read what their experience will verify. I am told that publishers are largely at fault for the quality of the reading used in schools—that schools would gladly receive the good literature if they could get it. But I do not know, in this case, how much the demand has to do with the supply. I am certain, however, that educated teachers would use only the best means for forming the minds and enlightening the understanding of their pupils. It must be kept in mind that reading, silent reading done by the scholar, is not learning signs and calling words; it is getting thought. If children are to get thought, they should be served with the best—that which will not only be true, but appeal so naturally to their minds that they will prefer it to all meaner stuff. If it is true that children cannot acquire this taste at home—and it is true for the vast majority of American children—then it must be given in the public schools. To give it is not to interrupt the acquisition of other knowledge; it is literally to open the door to all knowledge.

When this truth is recognized in the common schools, and literature is given its proper place, not only for the development of the mind, but as the most easily-opened door to history, art, science, general intelligence, we shall see the taste of the reading public in the United States undergo a mighty change: It will not care for the fiction it likes at present, and which does little more than enfeeble its powers; and then there can be no doubt that fiction will rise to supply the demand for something better. When the trash does not sell, the trash will not be produced, and those who are only capable of supplying the present demand will perhaps find a more useful occupation. It will be again evident that literature is not a trade, but an art requiring peculiar powers and patient training. When people know how to read, authors will need to know how to write.

In all other pursuits we carefully study the relation of supply to demand. Why not in literature? Formerly, when readers were comparatively few, and were of a class that had leisure and the opportunity of cultivating the taste, books were generally written for this class, and aimed at its real or supposed capacities. If the age was coarse in speech or specially affected in manner, the books followed the lead given by the demand; but, coarse or affected, they had the quality of art demanded by the best existing cultivation. Naturally, when the art of reading is acquired by the great mass of the people, whose taste has not been cultivated, the supply for this increased demand will, more or less, follow the level of its intelligence. After our civil war there was a patriotic desire to commemorate the heroic sacrifices of our soldiers in monuments, and the deeds of our great captains in statues. This noble desire was not usually accompanied by artistic discrimination, and the land is filled with monuments and statues which express the gratitude of the people. The coming age may wish to replace them by images and structures which will express gratitude and patriotism in a higher because more artistic form. In the matter of art the development is distinctly reflex. The exhibition of works

of genius will slowly instruct and elevate the popular taste, and in time the cultivated popular taste will reject mediocrity and demand better things. Only a little while ago few people in the United States knew how to draw, and only a few could tell good drawing from bad. To realize the change that has taken place, we have only to recall the illustrations in books, magazines, and comic newspapers of less than a quarter of a century ago. Foreign travel, foreign study, and the importation of works of art (still blindly restricted by the American Congress) were the lessons that began to work a change. Now, in all our large towns, and even in hundreds of villages, there are well-established art schools; in the greater cities, unions and associations, under the guidance of skillful artists, where five or six hundred young men and women are diligently, day and night, learning the rudiments of art. The result is already apparent. Excellent drawing is seen in illustrations for books and magazines, in the satirical and comic publications, even in the advertisements and theatrical posters. At our present rate of progress, the drawings in all our amusing weeklies will soon be as good as those in the 'Fliegende Blätter.' The change is marvelous; and the popular taste has so improved that it would not be profitable to go back to the ill-drawn illustrations of twenty years ago. But as to fiction, even if the writers of it were all trained in it as an art, it is not so easy to lift the public taste to their artistic level. The best supply in this case will only very slowly affect the quality of the demand. When the poor novel sells vastly better than the good novel, the poor will be produced to supply the demand, the general taste will be still further lowered, and the power of discrimination fade out more and more. What is true of the novel is true of all other literature. Taste for it must be cultivated in childhood. The common schools must do for literature what the art schools are doing for art. Not every one can become an artist, not every one can become a writer—though this is contrary to general opinion; but knowledge to distinguish good drawing from bad can be acquired by most people, and there are probably few minds that cannot, by right methods applied early, be led to prefer good literature, and to have an enjoyment in it in proportion to its sincerity, naturalness, verity, and truth to life.

It is, perhaps, too much to say that all the American novel needs for its development is an audience, but it is safe to say that an audience would greatly assist it. Evidence is on all sides of a fresh, new, wonderful artistic development in America in drawing, painting, sculpture, in instrumental music and singing, and in literature. The promise of this is not only in the climate, the free republican opportunity, the mixed races blending the traditions and aptitudes of so many civilizations, but it is in a certain temperament which we already recognize as American. It is an artistic tendency. This was first most noticeable in American women, to whom the art of dress seemed to come by nature, and the art of being agreeable to be easily acquired.

Already writers have arisen who illustrate this artistic tendency in novels, and especially in short stories. They have not appeared to owe their origin to any special literary centre; they have come forward in the South, the West, the East. Their writings have to a great degree (considering our pupilage to the literature of Great Britain, which is prolonged by the lack of an international copyright) the stamp of originality, of naturalness, of sincerity, of an attempt to give the facts of life with a sense of their artistic value. Their affiliation is rather with the new literatures of France, of Russia, of Spain, than with the modern fiction of England. They have to compete in the market with the uncopyrighted literature of all other lands, good and bad, especially bad, which is sold for little more than the cost of the paper it is printed on, and badly printed at that. But besides this fact, and owing to a public taste not cultivated or not corrected in the public schools, their books do not sell in anything like the quantity that the inferior, mediocre, other home novels sell. Indeed, but for the intervention of the magazines, few of the best writers of novels and short stories could earn as much as the day laborer earns. In sixty millions of people, all of whom are, or have been, in reach of the common school, it must be confessed that their audience is small.

This relation between the fiction that is, and that which is to be, and the common school is not fanciful. The lack in the general reading public, in the novels read by the greater number of people, and in the common school is the same—the lack of inspiration and ideality. The common school does not cultivate the literary sense, the general public lacks literary discrimination, and the stories and tales either produced by or addressed to those who have little ideality simply respond to the demand of the times.

It is already evident, both in positive and negative results, both in the schools and the general public taste, that literature cannot be set aside in the scheme of education; nay, that it is of the first importance. The teacher must be able to inspire the pupil; not only to awaken eagerness to know, but to kindle the imagination. The value of the Hindoo or the Greek myth, of the Roman story, of the mediaeval legend, of the heroic epic, of the lyric poem, of the classic biography, of any genuine piece of literature, ancient or modern, is not in the knowledge of it as we may know the rules of grammar and arithmetic or the formulas of a science, but in the enlargement of the mind to a conception of the life and development of the race, to a study of the motives of human action, to a comprehension of history; so that the mind is not simply enriched, but becomes discriminating, and able to estimate the value of events and opinions. This office for the mind acquaintance with literature can alone perform. So that, in school, literature is not only, as I have said, the easiest open door to all else desirable, the best literature is not only the best means of awakening the young mind, the stimulus most congenial, but it is the best foundation for broad and generous culture. Indeed, without its co-ordinating influence the education of the common school is a thing of shreds and patches. Besides, the mind aroused to historic consciousness, kindled in itself by the best that has been said and done in all ages, is more apt in the pursuit, intelligently, of any specialty; so that the shortest road to the practical education so much insisted on in these days begins in the awakening of the faculties in the manner described. There is no doubt of the value of manual training as an aid in giving definiteness, directness, exactness to the mind, but mere technical training alone will be barren of those results, in general discriminating culture, which we hope to see in America.

The common school is a machine of incalculable value. It is not, however, automatic. If it is a mere machine, it will do little more to lift the nation than the mere ability to read will lift it. It can easily be made to inculcate a taste for good literature; it can be a powerful influence in teaching the American people what to read; and upon a broadened, elevated, discriminating public taste depends the fate of American art, of American fiction.

It is not an inappropriate corollary to be drawn from this that an elevated public taste will bring about a truer estimate of the value of a genuine literary product. An invention which increases or cheapens the

conveniences or comforts of life may be a fortune to its originator. A book which amuses, or consoles, or inspires; which contributes to the highest intellectual enjoyment of hundreds of thousands of people; which furnishes substance for thought or for conversation; which dispels the cares and lightens the burdens of life; which is a friend when friends fail, a companion when other intercourse wearies or is impossible, for a year, for a decade, for a generation perhaps, in a world which has a proper sense of values, will bring a like competence to its author. (1890.)

THE PEOPLE FOR WHOM SHAKESPEARE WROTE

By Charles Dudley Warner

Queen Elizabeth being dead about ten o'clock in the morning, March 24, 1603, Sir Robert Cary posted away, unsend, to King James of Scotland to inform him of the "accident," and got made a baron of the realm for his ride. On his way down to take possession of his new kingdom the king distributed the honor of knighthood right and left liberally; at Theobald's he created eight-and-twenty knights, of whom Sir Richard Baker, afterwards the author of "A Chronicle of the Kings of England," was one. "God knows how many hundreds he made the first year," says the chronicler, "but it was indeed fit to give vent to the passage of Honour, which during Queen Elizabeth's reign had been so stopped that scarce any county of England had knights enow to make a jury."

Sir Richard Baker was born in 1568, and died in 1645; his "Chronicle" appeared in 1641. It was brought down to the death of James in 1625, when, he having written the introduction to the life of Charles I, the storm of the season caused him to "break off in amazement," for he had thought the race of "Stewards" likely to continue to the "world's end"; and he never resumed his pen. In the reign of James two things lost their lustre—the exercise of tilting, which Elizabeth made a special solemnity, and the band of Yeomen of the Guard, choicest persons both for stature and other good parts, who graced the court of Elizabeth; James "was so intente to Realities that he little regarded shows," and in his time these came utterly to be neglected. The virgin queen was the last ruler who seriously regarded the pomps and splendors of feudalism.

It was characteristic of the age that the death of James, which occurred in his fifty-ninth year, should have been by rumor attributed to "poyson"; but "being dead, and his body opened, there was no sign at all of poyson, his inward parts being all sound, but that his Spleen was a little faulty, which might be cause enough to cast him into an Ague: the ordinary high-way, especially in old bo'dies, to a natural death."

The chronicler records among the men of note of James's time Sir Francis Vere, "who as another Hannibal, with his one eye, could see more in the Martial Discipline than common men can do with two"; Sir Edward Coke; Sir Francis Bacon, "who besides his profounder book, of *Novum Organum*, hath written the reign of King Henry the Seventh, in so sweet a style, that like Manna, it pleaseth the tast of all palats"; William Camden, whose Description of Britain "seems to keep Queen Elizabeth alive after death"; "and to speak it in a word, the Trojan Horse was not fuller of Heroick Grecians, than King James his Reign was full of men excellent in all kindes of Learning." Among these was an old university acquaintance of Baker's, "Mr. John Dunne, who leaving Oxford, lived at the Innes of Court, not dissolute, but very neat; a great Visitor of Ladies, a great frequenter of Playes, a great writer of conceited Verses; until such times as King James taking notice of the pregnancy of his Wit, was a means that he betook him to the study of Divinity, and thereupon proceeding Doctor, was made Dean of Pauls; and became so rare a Preacher, that he was not only commended, but even admired by all who heard him."

The times of Elizabeth and James were visited by some awful casualties and portents. From December, 1602, to the December following, the plague destroyed 30,518 persons in London; the same disease that in the sixth year of Elizabeth killed 20,500, and in the thirty-sixth year 17,890, besides the lord mayor and three aldermen. In January, 1606, a mighty whale came up the Thames within eight miles of London, whose body, seen divers times above water, was judged to be longer than the largest ship on the river; "but when she tasted the fresh water and scented the Land, she returned into the sea." Not so fortunate was a vast whale cast upon the Isle of Thanet, in Kent, in 1575, which was "twenty Ells long, and thirteen foot broad from the belly to the backbone, and eleven foot between the eyes. One of his eyes being taken out of his head was more than a cart with six horses could draw; the Oyl being boyled out of his head was *Parmacittee*." Nor the monstrous fish cast ashore in Lincolnshire in 1564, which measured six yards between the eyes and had a tail fifteen feet broad; "twelve men stood upright in his mouth to get the Oyl." In 1612 a comet appeared, which in the opinion of Dr. Bainbridge, the great mathematician of Oxford, was as far above the moon as the moon is above the earth, and the sequel of it was that infinite slaughters and devastations followed it both in Germany and other countries. In 1613, in Standish, in Lancashire, a maiden child was born having four legs, four arms, and one head with two faces—the one before, the other behind, like the picture of Janus. (One thinks of the prodigies that presaged the birth of Glendower.) Also, the same year, in Hampshire, a carpenter, lying in bed with his wife and a young child, "was himself and the childe both burned to death with a sudden lightning, no fire appearing outwardly upon him, and yet lay burning for the space of almost three days till he was quite consumed to ashes." This year the Globe playhouse, on the Bankside, was burned, and the year following the new playhouse, the Fortune, in Golding Lane, "was by negligence of a candle, clean burned down to the ground." In this year also, 1614, the town of Stratford-on-Avon was burned. One of the strangest events, however, happened in the first year of Elizabeth (1558), when "dyed Sir Thomas Cheney, Lord Warden of the Cinque Ports, of whom it is reported for a certain, that his pulse did beat more than three quarters of an hour after he was dead, as strongly as if he had been still alive." In 1580 a strange apparition happened in Somersetshire—three score personages all clothed in black, a furlong in distance from those that

beheld them; "and after their appearing, and a little while tarrying, they vanished away, but immediately another strange company, in like manner, color, and number appeared in the same place, and they encountered one another and so vanished away. And the third time appeared that number again, all in bright armour, and encountered one another, and so vanished away. This was examined before Sir George Norton, and sworn by four honest men that saw it, to be true." Equally well substantiated, probably, was what happened in Herefordshire in 1571: "A field of three acres, in Blackmore, with the Trees and Fences, moved from its place and passed over another field, traveling in the highway that goeth to Herne, and there stayed." Herefordshire was a favorite place for this sort of exercise of nature. In 1575 the little town of Kinnaston was visited by an earthquake: "On the seventeenth of February at six o'clock of the evening, the earth began to open and a Hill with a Rock under it (making at first a great bellowing noise, which was heard a great way off) lifted itself up a great height, and began to travel, bearing along with it the Trees that grew upon it, the Sheep-folds, and Flocks of Sheep abiding there at the same time. In the place from whence it was first moved, it left a gaping distance forty foot broad, and fourscore Ells long; the whole Field was about twenty Acres. Passing along, it overthrew a Chappell standing in the way, removed an Ewe-Tree planted in the Churchyard, from the West into the East; with the like force it thrust before it High-ways, Sheep-folds, Hedges, and Trees, made Tilled ground Pasture, and again turned Pasture into Tillage. Having walked in this sort from Saturday in the evening, till Monday noon, it then stood still." It seems not improbable that Birnam wood should come to Dunsinane.

It was for an age of faith, for a people whose credulity was fed on such prodigies and whose imagination glowed at such wonderful portents, that Shakespeare wrote, weaving into the realities of sense those awful mysteries of the supernatural which hovered not far away from every Englishman of his time.

Shakespeare was born in 1564, when Elizabeth had been six years on the throne, and he died in 1616, nine years before James I., of the faulty spleen, was carried to the royal chapel in Westminster, "with great solemnity, but with greater lamentation." Old Baker, who says of himself that he was the unworthiest of the knights made at Theobald's, condescends to mention William Shakespeare at the tail end of the men of note of Elizabeth's time. The ocean is not more boundless, he affirms, than the number of men of note of her time; and after he has finished with the statesmen ("an exquisite statesman for his own ends was Robert Earl of Leicester, and for his Countries good, Sir William Cecill, Lord Burleigh"), the seamen, the great commanders, the learned gentlemen and writers (among them Roger Askam, who had sometime been schoolmaster to Queen Elizabeth, but, taking too great delight in gaming and cock-fighting, lived and died in mean estate), the learned divines and preachers, he concludes: "After such men, it might be thought ridiculous to speak of Stage-players; but seeing excellency in the meanest things deserve remembering, and Roscius the Comedian is recorded in History with such commendation, it may be allowed us to do the like with some of our Nation. Richard Bourbidge and Edward Allen, two such actors as no age must ever look to see the like; and to make their Comedies compleat, Richard Tarleton, who for the Part called the Clowns Part, never had his match, never will have. For Writers of Playes, and such as have been players themselves, William Shakespeare and Benjamin Johnson have especially left their Names recommended to posterity."

Richard Bourbidge (or Burbadge) was the first of the great English tragic actors, and was the original of the greater number of Shakespeare's heroes—Hamlet, Othello, Lear, Shylock, Macbeth, Richard III., Romeo, Brutus, etc. Dick Tarleton, one of the privileged scapegraces of social life, was regarded by his contemporaries as the most witty of clowns and comedians. The clown was a permitted character in the old theatres, and intruded not only between the acts, but even into the play itself, with his quips and antics. It is probable that he played the part of clown, grave-digger, etc., in Shakespeare's comedies, and no doubt took liberties with his parts. It is thought that part of Hamlet's advice to the players—"and let those that play your clowns speak no more than is set down for them," etc.—was leveled at Tarleton.

The question is often asked, but I consider it an idle one, whether Shakespeare was appreciated in his own day as he is now. That the age, was unable to separate him from itself, and see his great stature, is probable; that it enjoyed him with a sympathy to which we are strangers there is no doubt. To us he is inexhaustible. The more we study him, the more are we astonished at his multiform genius. In our complex civilization, there is no development of passion, or character, or trait of human nature, no social evolution, that does not find expression somewhere in those marvelous plays; and yet it is impossible for us to enter into a full, sympathetic enjoyment of those plays unless we can in some measure recreate for ourselves the atmosphere in which they were written. To superficial observation great geniuses come into the world at rare intervals in history, in a manner independent of what we call the progress of the race. It may be so; but the form the genius shall take is always determined by the age in which it appears, and its expression is shaped by the environments. Acquaintance with the Bedouin desert life of today, which has changed little for three thousand years, illumines the book of Job like an electric light. Modern research into Hellenic and Asiatic life has given a new meaning to the Iliad and the Odyssey, and greatly enhanced our enjoyment of them. A fair comprehension of the Divina Commedia is impossible without some knowledge of the factions that rent Florence; of the wars of Guelf and Ghibelline; of the spirit that banished Dante, and gave him an humble tomb in Ravenna instead of a sepulchre in the pantheon of Santa Croce. Shakespeare was a child of his age; it had long been preparing for him; its expression culminated in him. It was essentially a dramatic age. He used the accumulated materials of centuries. He was playwright as well as poet. His variety and multiform genius cannot otherwise be accounted for. He called in the coinage of many generations, and reissued it purified and unalloyed, stamped in his own mint. There was a Hamlet probably, there were certainly Romeos and Juliets, on the stage before Shakespeare. In him were received the imaginations, the inventions, the aspirations, the superstitions, the humors, the supernatural intimations; in him met the converging rays of the genius of his age, as in a lens, to be sent onward thenceforth in an ever-broadening stream of light.

It was his fortune to live not only in a dramatic age, but in a transition age, when feudalism was passing away, but while its shows and splendors could still be seriously comprehended. The dignity that doth hedge a king was so far abated that royalty could be put upon the stage as a player's spectacle; but the reality of kings and queens and court pageantry was not so far past that it did not appeal powerfully to the imaginations of the frequenters of the Globe, the Rose, and the Fortune. They had no such feeling as we have in regard to the pasteboard kings and queens who strut their brief hour before us in anachronic absurdity. But, besides that

he wrote in the spirit of his age, Shakespeare wrote in the language and the literary methods of his time. This is not more evident in the contemporary poets than in the chroniclers of that day. They all delighted in ingenuities of phrase, in neat turns and conceits; it was a compliment then to be called a "conceited" writer.

Of all the guides to Shakespeare's time, there is none more profitable or entertaining than William Harrison, who wrote for Holinshed's chronicle "The Description of England," as it fell under his eyes from 1577 to 1587. Harrison's England is an unfailing mine of information for all the historians of the sixteenth century; and in the edition published by the New Shakespeare Society, and edited, with a wealth of notes and contemporary references, by Mr. Frederick J. Furnivall, it is a new revelation of Shakespeare's England to the general reader.

Harrison himself is an interesting character, and trustworthy above the general race of chroniclers. He was born in 1534, or, to use his exactness of statement, "upon the 18th of April, hora ii, minut 4, Secunde 56, at London, in Cordwainer streete, otherwise called bowe-lane." This year was also remarkable as that in which "King Henry 8 polleth his head; after whom his household and nobility, with the rest of his subjects do the like." It was the year before Anne Boleyn, haled away to the Tower, accused, condemned, and executed in the space of fourteen days, "with sigheing teares" said to the rough Duke of Norfolk, "Hither I came once my lord, to fetch a crown imperial; but now to receive, I hope, a crown immortal." In 1544, the boy was at St. Paul's school; the litany in the English tongue, by the king's command, was that year sung openly in St. Paul's, and we have a glimpse of Harrison with the other children, enforced to buy those books, walking in general procession, as was appointed, before the king went to Boulogne. Harrison was a student at both Oxford and Cambridge, taking the degree of bachelor of divinity at the latter in 1569, when he had been an Oxford M.A. of seven years' standing. Before this he was household chaplain to Sir William Brooke, Lord Cobham, who gave him, in 1588-89, the rectory of Radwinter, in Essex, which he held till his death, in 1593. In 1586 he was installed canon of Windsor. Between 1559 and 1571 he married Marion Isebrande,—of whom he said in his will, referring to the sometime supposed unlawfulness of priests' marriages, "by the laws of God I take and repute in all respects for my true and lawful wife." At Radwinter, the old parson, working in his garden, collected Roman coins, wrote his chronicles, and expressed his mind about the rascally lawyers of Essex, to whom flowed all the wealth of the land. The lawyers in those days stirred up contentions, and then reaped the profits. "Of all that ever I knew in Essex," says Harrison, "Denis and Mainford excelled, till John of Ludlow, alias Mason, came in place, unto whom in comparison these two were but children." This last did so harry a client for four years that the latter, still called upon for new fees, "went to bed, and within four days made an end of his woeful life, even with care and pensiveness." And after his death the lawyer so handled his son "that there was never sheep shorn in May, so near clipped of his fleece present, as he was of many to come." The Welsh were the most litigious people. A Welshman would walk up to London bare-legged, carrying his hose on his neck, to save wear and because he had no change, importune his countrymen till he got half a dozen writs, with which he would return to molest his neighbors, though no one of his quarrels was worth the money he paid for a single writ.

The humblest mechanic of England today has comforts and conveniences which the richest nobles lacked in Harrison's day, but it was nevertheless an age of great luxury and extravagance; of brave apparel, costly and showy beyond that of any Continental people, though wanting in refined taste; and of mighty banquets, with service of massive plate, troops of attendants, and a surfeit of rich food and strong drink.

In this luxury the clergy of Harrison's rank did not share. Harrison was poor on forty pounds a year. He complains that the clergy were taxed more than ever, the church having become "an ass whereon every man is to ride to market and cast his wallet." They paid tenths and first-fruits and subsidies, so that out of twenty pounds of a benefice the incumbent did not reserve more than L 13 6s. 8d. for himself and his family. They had to pay for both prince and laity, and both grumbled at and slandered them. Harrison gives a good account of the higher clergy; he says the bishops were loved for their painful diligence in their calling, and that the clergy of England were reputed on the Continent as learned divines, skillful in Greek and Hebrew and in the Latin tongue.

There was, however, a scarcity of preachers and ministers in Elizabeth's time, and their character was not generally high. What could be expected when covetous patrons canceled their debts to their servants by bestowing advowsons of benefices upon their bakers, butlers, cooks, grooms, pages, and lackeys—when even in the universities there was cheating at elections for scholarships and fellowships, and gifts were for sale! The morals of the clergy were, however, improved by frequent conferences, at which the good were praised and the bad reproved; and these conferences were "a notable spur unto all the ministers, whereby to apply their books, which otherwise (as in times past) would give themselves to hawking, hunting, tables, cards, dice, tipling at the ale house, shooting, and other like vanities." The clergy held a social rank with tradespeople; their sons learned trades, and their daughters might go out to service. Jewell says many of them were the "basest sort of people" unlearned, fiddlers, pipers, and what not. "Not a few," says Harrison, "find fault with our threadbare gowns, as if not our patrons but our wives were the causes of our woe." He thinks the ministers will be better when the patrons are better, and he defends the right of the clergy to marry and to leave their goods, if they have any, to their widows and children instead of to the church, or to some school or almshouse. What if their wives are fond, after the decease of their husbands, to bestow themselves not so advisedly as their calling requireth; do not duchesses, countesses, and knights' wives offend in the like fully so often as they? And Eve, remarks the old philosopher of Radwinter—"Eve will be Eve, though Adam would say nay."

The apparel of the clergy, at any rate, was more comely and decent than it ever was in the popish church, when the priests "went either in divers colors like players, or in garments of light hue, as yellow, red, green, etc.; with their shoes piked, their hair crisped, their girdles armed with silver; their shoes, spurs, bridles, etc., buckled with like metal; their apparel (for the most part) of silk, and richly furred; their caps laced and buttoned with gold; so that to meet a priest, in those days, was to behold a peacock that spreadeth his tail when he danceth before the hen."

Hospitality among the clergy was never better used, and it was increased by their marriage; for the meat and drink were prepared more orderly and frugally, the household was better looked to, and the poor oftener

fed. There was perhaps less feasting of the rich in bishops' houses, and "it is thought much peradventure, that some bishops in our time do come short of the ancient gluttony and prodigality of their predecessors;" but this is owing to the curtailing of their livings, and the excessive prices whereunto things are grown.

Harrison spoke his mind about dignitaries. He makes a passing reference to Thomas a Becket as "the old Cocke of Canturburie," who did crow in behalf of the see of Rome, and the "young cockerels of other sees did imitate his demeanour." He is glad that images, shrines, and tabernacles are removed out of churches. The stories in glass windows remain only because of the cost of replacing them with white panes. He would like to stop the wakes, guilds, paternities, church-ales, and brides-ales, with all their rioting, and he thinks they could get on very well without the feasts of apostles, evangelists, martyrs, the holy-days after Christmas, Easter, and Whitsuntide, and those of the Virgin Mary, with the rest. "It is a world to see," he wrote of 1552, "how ready the Catholicks are to cast the communion tables out of their churches, which in derision they call Oysterboards, and to set up altars whereon to say mass." And he tells with sinful gravity this tale of a sacrilegious sow: "Upon the 23rd of August, the high altar of Christ Church in Oxford was trimly decked up after the popish manner and about the middest of evensong, a sow cometh into the quire, and pulled all to the ground; for which heinous fact, it is said she was afterwards beheaded; but to that I am not privy." Think of the condition of Oxford when pigs went to mass! Four years after this there was a sickness in England, of which a third part of the people did taste, and many clergymen, who had prayed not to live after the death of Queen Mary, had their desire, the Lord hearing their prayer, says Harrison, "and intending thereby to give his church a breathing time."

There were four classes in England—gentlemen, citizens, yeomen, and artificers or laborers. Besides the nobles, any one can call himself a gentleman who can live without work and buy a coat of arms—though some of them "bear a bigger sail than his boat is able to sustain." The complaint of sending abroad youth to be educated is an old one; Harrison says the sons of gentlemen went into Italy, and brought nothing home but mere atheism, infidelity, vicious conversation, and ambitious, proud behavior, and retained neither religion nor patriotism. Among citizens were the merchants, of whom Harrison thought there were too many; for, like the lawyers, they were no furtherance to the commonwealth, but raised the price of all commodities. In former, free-trade times, sugar was sixpence a pound, now it is two shillings sixpence; raisins were one penny, and now sixpence. Not content with the old European trade, they have sought out the East and West Indies, and likewise Cathay and Tartary, whence they pretend, from their now and then suspicious voyages, they bring home great commodities. But Harrison cannot see that prices are one whit abated by this enormity, and certainly they carry out of England the best of its wares.

The yeomen are the stable, free men, who for the most part stay in one place, working the farms of gentlemen, are diligent, sometimes buy the land of unthrifty gentlemen, educate their sons to the schools and the law courts, and leave them money to live without labor. These are the men that made France afraid. Below these are the laborers and men who work at trades, who have no voice in the commonwealth, and crowds of young serving-men who become old beggars, highway-robbers, idle fellows, and spreaders of all vices. There was a complaint then, as now, that in many trades men scamped their work, but, on the whole, husbandmen and artificers had never been so good; only there were too many of them, too many handicrafts of which the country had no need. It appears to be a fault all along in history that there are too many of almost every sort of people.

In Harrison's time the greater part of the building in cities and towns was of timber, only a few of the houses of the commonalty being of stone. In an old plate giving a view of the north side of Cheapside, London, in 1638, we see little but quaint gable ends and rows of small windows set close together. The houses are of wood and plaster, each story overhanging the other, terminating in sharp pediments; the roofs projecting on cantilevers, and the windows occupying the whole front of each of the lower stories. They presented a lively and gay appearance on holidays, when the pentices of the shop fronts were hung with colored draperies, and the balconies were crowded with spectators, and every pane of glass showed a face. In the open country, where timber was scarce, the houses were, between studs, impaneled with clay-red, white, or blue. One of the Spaniards who came over in the suite of Philip remarked the large diet in these homely cottages: "These English," quoth he, "have their houses made of sticks and dirt, but they fare commonly so well as the king." "Whereby it appeareth," comments Harrison, "that he liked better of our good fare in such coarse cabins, than of their own thin diet in their prince-like habitations and palaces." The timber houses were covered with tiles; the other sort with straw or reeds. The fairest houses were ceiled within with mortar and covered with plaster, the whiteness and evenness of which excited Harrison's admiration. The walls were hung with tapestry, arras-work, or painted cloth, whereon were divers histories, or herbs, or birds, or else ceiled with oak. Stoves had just begun to be used, and only in some houses of the gentry, "who build them not to work and feed in, as in Germany and elsewhere, but now and then to sweat in, as occasion and need shall require." Glass in windows, which was then good and cheap, and made even in England, had generally taken the place of the lattices and of the horn, and of the beryl which noblemen formerly used in windows. Gentlemen were beginning to build their houses of brick and stone, in stately and magnificent fashion. The furniture of the houses had also grown in a manner "passing delicacy," and not of the nobility and gentry only, but of the lowest sort. In noblemen's houses there was abundance of arras, rich hangings of tapestry, and silver vessels, plate often to the value of one thousand and two thousand pounds. The knights, gentlemen, and merchants had great provision of tapestry, Turkie work, pewter, brass, fine linen, and cupboards of plate worth perhaps a thousand pounds. Even the inferior artificers and many farmers had learned also to garnish their cupboards with plate, their joined beds with silk hangings, and their tables with fine linen—evidences of wealth for which Harrison thanks God and reproaches no man, though he cannot see how it is brought about, when all things are grown to such excessive prices.

Old men of Radwinter noted three things marvelously altered in England within their remembrance. The first was the multitude of chimneys lately erected; whereas in their young days there were not, always except those in the religious and manor houses, above two or three chimneys in most upland towns of the realm; each one made his fire against a reredos in the hall, where he dined and dressed his meat. The second was the amendment in lodging. In their youth they lay upon hard straw pallets covered only with a sheet, and mayhap a dogswain coverlet over them, and a good round log for pillow. If in seven years after marriage a

man could buy a mattress and a sack of chaff to rest his head on, he thought himself as well lodged as a lord. Pillows were thought meet only for sick women. As for servants, they were lucky if they had a sheet over them, for there was nothing under them to keep the straw from pricking their hardened hides. The third notable thing was the exchange of treene (wooden) platters into pewter, and wooden spoons into silver or tin. Wooden stuff was plenty, but a good farmer would not have above four pieces of pewter in his house; with all his frugality, he was unable to pay his rent of four pounds without selling a cow or horse. It was a time of idleness, and if a farmer at an alehouse, in a bravery to show what he had, slapped down his purse with six shillings in it, all the rest together could not match it. But now, says Harrison, though the rent of four pounds has improved to forty, the farmer has six or seven years' rent, lying by him, to purchase a new term, garnish his cupboard with pewter, buy three or four feather-beds, coverlets, carpets of tapestry, a silver salt, a nest of bowls for wine, and a dozen spoons. All these things speak of the growing wealth and luxury of the age. Only a little before this date, in 1568, Lord Buckhurst, who had been ordered to entertain the Cardinal de Chatillon in Queen Elizabeth's palace at Sheen, complains of the meanness of the furniture of his rooms. He showed the officers who preceded the cardinal such furniture and stuff as he had, but it did not please them. They wanted plate, he had none; such glass vessels as he had they thought too base. They wanted damask for long tables, and he had only linen for a square table, and they refused his square table. He gave the cardinal his only unoccupied tester and bedstead, and assigned to the bishop the bedstead upon which his wife's waiting-women did lie, and laid them on the ground. He lent the cardinal his own basin and ewer, candlesticks from his own table, drinking-glasses, small cushions, and pots for the kitchen. My Lord of Leicester sent down two pair of fine sheets for the cardinal and one pair for the bishop.

Harrison laments three things in his day: the enhancing of rents, the daily oppression of poor tenants by the lords of manors, and the practice of usury—a trade brought in by the Jews, but now practiced by almost every Christian, so that he is accounted a fool that doth lend his money for nothing. He prays the reader to help him, in a lawful manner, to hang up all those that take cent. per cent. for money. Another grievance, and most sorrowful of all, is that many gentlemen, men of good port and countenance, to the injury of the farmers and commonalty, actually turn Braziers, butchers, tanners, sheep-masters, and woodmen. Harrison also notes the absorption of lands by the rich; the decay of houses in the country, which comes of the eating up of the poor by the rich; the increase of poverty; the difficulty a poor man had to live on an acre of ground; his forced contentment with bread made of oats and barley, and the divers places that formerly had good tenants and now were vacant, hop-yards and gardens.

Harrison says it is not for him to describe the palaces of Queen Elizabeth; he dare hardly peep in at her gates. Her houses are of brick and stone, neat and well situated, but in good masonry not to be compared to those of Henry VIII's building; they are rather curious to the eye, like paper-works, than substantial for continuance. Her court is more magnificent than any other in Europe, whether you regard the rich and infinite furniture of the household, the number of officers, or the sumptuous entertainments. And the honest chronicler is so struck with admiration of the virtuous beauty of the maids of honor that he cannot tell whether to award preeminence to their amiable countenances or to their costliness of attire, between which there is daily conflict and contention. The courtiers of both sexes have the use of sundry languages and an excellent vein of writing. Would to God the rest of their lives and conversation corresponded with these gifts! But the courtiers, the most learned, are the worst men when they come abroad that any man shall hear or read of. Many of the gentlewomen have sound knowledge of Greek and Latin, and are skillful in Spanish, Italian, and French; and the noblemen even surpass them. The old ladies of the court avoid idleness by needlework, spinning of silk, or continual reading of the Holy Scriptures or of histories, and writing diverse volumes of their own, or translating foreign works into English or Latin; and the young ladies, when they are not waiting on her majesty, "in the mean time apply their lutes, citherns, pricksong, and all kinds of music." The elders are skillful in surgery and the distillation of waters, and sundry other artificial practices pertaining to the ornature and commendation of their bodies; and when they are at home they go into the kitchen and supply a number of delicate dishes of their own devising, mostly after Portuguese receipts; and they prepare bills of fare (a trick lately taken up) to give a brief rehearsal of all the dishes of every course. I do not know whether this was called the "higher education of women" at the time.

In every office of the palaces is a Bible, or book of acts of the church, or chronicle, for the use of whoever comes in, so that the court looks more like a university than a palace. Would to God the houses of the nobles were ruled like the queen's! The nobility are followed by great troops of serving-men in showy liveries; and it is a goodly sight to see them muster at court, which, being filled with them, "is made like to the show of a peacock's tail in the full beauty, or of some meadow garnished with infinite kinds and diversity of pleasant flowers." Such was the discipline of Elizabeth's court that any man who struck another within it had his right hand chopped off by the executioner in a most horrible manner.

The English have always had a passion for gardens and orchards. In the Roman time grapes abounded and wine was plenty, but the culture disappeared after the Conquest. From the time of Henry IV. to Henry VIII. vegetables were little used, but in Harrison's day the use of melons, pompions, radishes, cucumbers, cabbages, turnips, and the like was revived. They had beautiful flower-gardens annexed to the houses, wherein were grown also rare and medicinal herbs; it was a wonder to see how many strange herbs, plants, and fruits were daily brought from the Indies, America and the Canaries. Every rich man had great store of flowers, and in one garden might be seen from three hundred to four hundred medicinal herbs. Men extol the foreign herbs to the neglect of the native, and especially tobacco, "which is not found of so great efficacy as they write." In the orchards were plums, apples, pears, walnuts, filberts; and in noblemen's orchards store of strange fruit-apricots, almonds, peaches, figs, and even in some oranges, lemons, and capers. Grafters also were at work with their artificial mixtures, "dallying, as it were, with nature and her course, as if her whole trade were perfectly known unto them: of hard fruits they will make soft, of sour sweet, of sweet yet more delicate; bereaving also some of their kernels, others of their cores, and finally endowing them with the flavor of musk, amber, or sweet spices at their pleasure." Gardeners turn annual into perpetual herbs, and such pains are they at that they even used dish-water for plants. The Gardens of Hesperides are surely not equal to these. Pliny tells of a rose that had sixty leaves on one bud, but in 1585 there was a rose in Antwerp that had one hundred and eighty leaves; and Harrison might have had a slip of it for ten pounds, but he thought it a

"tickle hazard." In his own little garden, of not above three hundred square feet, he had near three hundred samples, and not one of them of the common, or usually to be had.

Our kin beyond sea have always been stout eaters of solid food, and in Elizabeth's time their tables were more plentifully laden than those of any other nation. Harrison scientifically accounts for their inordinate appetite. "The situation of our region," he says, "lying near unto the north, does cause the heat of our stomachs to be of somewhat greater force; therefore our bodies do crave a little more ample nourishment than the inhabitants of the hotter regions are accustomed withal, whose digestive force is not altogether so vehement, because their internal heat is not so strong as ours, which is kept in by the coldness of the air, that from time to time (specially in winter) doth environ our bodies." The north Britons in old times were accustomed often to great abstinence, and lived when in the woods on roots and herbs. They used sometimes a confection, "whereof so much as a bean would qualify their hunger above common expectation"; but when they had nothing to qualify it with, they crept into the marsh water up to their chins, and there remained a long time, "only to qualify the heat of their stomachs by violence."

In Harrison's day the abstemious Welsh had learned to eat like the English, and the Scotch exceeded the latter in "over much and distemperate gormandize." The English eat all they can buy, there being no restraint of any meat for religion's sake or for public order. The white meats—milk, butter, and cheese—though very dear, are reputed as good for inferior people, but the more wealthy feed upon the flesh of all sorts of cattle and all kinds of fish. The nobility ("whose cooks are for the most part musical-headed Frenchmen and strangers ") exceed in number of dishes and change of meat. Every day at dinner there is beef, mutton, veal, lamb, kid, pork, conie, capon, pig, or as many of these as the season yielded, besides deer and wildfowl, and fish, and sundry delicacies "wherein the sweet hand of the seafaring Portingale is not wanting." The food was brought in commonly in silver vessels at tables of the degree of barons, bishops, and upwards, and referred first to the principal personage, from whom it passed to the lower end of the table, the guests not eating of all, but choosing what each liked; and nobody stuffed himself. The dishes were then sent to the servants, and the remains of the feast went to the poor, who lay waiting at the gates in great numbers.

Drink was served in pots, goblets, jugs, and bowls of silver in noblemen's houses, and also in Venice glasses. It was not set upon the table, but the cup was brought to each one who thirsted; he called for such a cup of drink as he wished, and delivered it again to one of the by-standers, who made it clean by pouring out what remained, and restored it to the sideboard. This device was to prevent great drinking, which might ensue if the full pot stood always at the elbow. But this order was not used in noblemen's halls, nor in any order under the degree of knight or squire of great revenue. It was a world to see how the nobles preferred to gold and silver, which abounded, the new Venice glass, whence a great trade sprang up with Murano that made many rich. The poorest even would have glass, but home-made—a foolish expense, for the glass soon went to bits, and the pieces turned to no profit. Harrison wanted the philosopher's stone to mix with this molten glass and toughen it.

There were multitudes of dependents fed at the great houses, and everywhere, according to means, a wide-open hospitality was maintained. Froude gives a notion of the style of living in earlier times by citing the details of a feast given when George Neville, brother of Warwick the king-maker, was made archbishop of York. There were present, including servants, thirty-five hundred persons. These are a few of the things used at the banquet: three hundred quarters of wheat, three hundred tuns of ale, one hundred and four tuns of wine, eighty oxen, three thousand geese, two thousand pigs,—four thousand conies, four thousand heronshaws, four thousand venison pasties cold and five hundred hot, four thousand cold tarts, four thousand cold custards, eight seals, four porpoises, and so on.

The merchants and gentlemen kept much the same tables as the nobles, especially at feasts, but when alone were content with a few dishes. They also desired the dearest food, and would have no meat from the butcher's but the most delicate, while their list of fruits, cakes, Gates, and outlandish confections is as long as that at any modern banquet. Wine ran in excess. There were used fifty-six kinds of light wines, like the French, and thirty of the strong sorts, like the Italian and Eastern. The stronger the wine, the better it was liked. The strongest and best was in old times called theologicum, because it was had from the clergy and religious men, to whose houses the laity sent their bottles to be filled, sure that the religious would neither drink nor be served with the worst; for the merchant would have thought his soul should have gone straightway to the devil if he had sent them any but the best. The beer served at noblemen's tables was commonly a year old, and sometimes two, but this age was not usual. In households generally it was not under a month old, for beer was liked stale if it were not sour, while bread was desired as new as possible so that it was not hot.

The husbandman and artificer ate such meat as they could easiest come by and have most quickly ready; yet the banquets of the trades in London were not inferior to those of the nobility. The husbandmen, however, exceed in profusion, and it is incredible to tell what meat is consumed at bridals, purifications, and such like odd meetings; but each guest brought his own provision, so that the master of the house had only to provide bread, drink, houseroom, and fire. These lower classes Harrison found very friendly at their tables—merry without malice, plain without Italian or French subtlety—so that it would do a man good to be in company among them; but if they happen to stumble upon a piece of venison or a cup of wine or very strong beer, they do not stick to compare themselves with the lord-mayor—and there is no public man in any city of Europe that may compare with him in port and countenance during the term of his office.

Harrison commends the great silence used at the tables of the wiser sort, and generally throughout the realm, and likewise the moderate eating and drinking. But the poorer countrymen do babble somewhat at table, and mistake ribaldry and loquacity for wit and wisdom, and occasionally are cup-shotten; and what wonder, when they who have hard diet and small drink at home come to such opportunities at a banquet! The wealthier sort in the country entertain their visitors from afar, however long they stay, with as hearty a welcome the last day as the first; and the countrymen contrast this hospitality with that of their London cousins, who joyfully receive them the first day, tolerate them the second, weary of them the third, and wish 'em at the devil after four days.

The gentry usually ate wheat bread, of which there were four kinds, and the poor generally bread made of

rye, barley, and even oats and acorns. Corn was getting so dear, owing to the forestallers and middlemen, that, says the historian, "if the world last a while after this rate, wheat and rye will be no grain for poor men to feed on; and some catterpillers [two-legged speculators] there are that can say so much already."

The great drink of the realm was, of course, beer (and it is to be noted that a great access of drunkenness came into England with the importation much later of Holland gin) made from barley, hops, and water, and upon the brewing of it Harrison dwells lovingly, and devotes many pages to a description of the process, especially as "once in a month practiced by my wife and her maid servants." They ground eight bushels of malt, added half a bushel of wheat meal, half a bushel of oat meal, poured in eighty gallons of water, then eighty gallons more, and a third eighty gallons, and boiled with a couple of pounds of hops. This, with a few spices thrown in, made three hogsheads of good beer, meet for a poor man who had only forty pounds a year. This two hundred gallons of beer cost altogether twenty shillings; but although he says his wife brewed it "once in a month," whether it lasted a whole month the parson does not say. He was particular about the water used: the Thames is best, the marsh worst, and clear spring water next worst; "the fattest standing water is always the best." Cider and perry were made in some parts of England, and a delicate sort of drink in Wales, called metheglin; but there was a kind of "swish-swash" made in Essex from honey-combs and water, called mead, which differed from the metheglin as chalk from cheese.

In Shakespeare's day much less time was spent in eating and drinking than formerly, when, besides breakfast in the forenoon and dinners, there were "beverages" or "nuntion" after dinner, and supper before going to bed—"a toie brought in by hardie Canutus," who was a gross feeder. Generally there were, except for the young who could not fast till dinnertime, only two meals daily, dinner and supper. Yet the Normans had brought in the habit of sitting long at the table—a custom not yet altogether abated, since the great people, especially at banquets, sit till two or three o'clock in the afternoon; so that it is a hard matter to rise and go to evening prayers and return in time for supper.

Harrison does not make much account of the early meal called "breakfast"; but Froude says that in Elizabeth's time the common hour of rising, in the country, was four o'clock, summer and winter, and that breakfast was at five, after which the laborers went to work and the gentlemen to business. The Earl and Countess of Northumberland breakfasted together and alone at seven. The meal consisted of a quart of ale, a quart of wine, and a chine of beef; a loaf of bread is not mentioned, but we hope (says Froude) it may be presumed. The gentry dined at eleven and supped at five. The merchants took dinner at noon, and, in London, supped at six. The university scholars out of term ate dinner at ten. The husbandmen dined at high noon, and took supper at seven or eight. As for the poorer sort, it is needless to talk of their order of repast, for they dined and supped when they could. The English usually began meals with the grossest food and ended with the most delicate, taking first the mild wines and ending with the hottest; but the prudent Scot did otherwise, making his entrance with the best, so that he might leave the worse to the menials.

I will close this portion of our sketch of English manners with an extract from the travels of Hentzner, who visited England in 1598, and saw the great queen go in state to chapel at Greenwich, and afterwards witnessed the laying of the table for her dinner. It was on Sunday. The queen was then in her sixty-fifth year, and "very majestic," as she walked in the splendid procession of barons, earls, and knights of the garter: "her face, oblong, fair, but wrinkled; her eyes small, yet black and pleasant; her nose a little hooked; her lips narrow, and her teeth black (a defect the English seem subject to from their great use of sugar). She had in her ears two pearls with very rich drops; she wore false hair, and that red; upon her head she had a small crown, reported to be made of some of the gold of the celebrated Lunebourg table. Her bosom was uncovered, as all the English ladies have it till they marry; and she had on a necklace of exceeding fine jewels; her hands were small, her fingers long, and her stature neither small nor low; her air was stately, her manner of speaking mild and obliging. That day she was dressed in white silk, bordered with pearls of the size of beans, and over it a mantle of black silk, shot with silver threads; her train was very long, and the end of it borne by a marchioness; instead of a chain she had an oblong collar of gold and jewels." As she swept on in this magnificence, she spoke graciously first to one, then to another, and always in the language of any foreigner she addressed; whoever spoke to her kneeled, and wherever she turned her face, as she was going along, everybody fell down on his knees. When she pulled off her glove to give her hand to be kissed, it was seen to be sparkling with rings and jewels. The ladies of the court, handsome and well shaped, followed, dressed for the most part in white; and on either side she was guarded by fifty gentlemen pensioners with gilt battle-axes. In the ante-chapel, where she graciously received petitions, there was an acclaim of "Long live Queen Elizabeth!" to which she answered, "I thank you, my good people." The music in the chapel was excellent, and the whole service was over in half an hour. This is Hentzner's description of the setting out of her table:

"A gentleman entered the room bearing a rod, and along with him another who had a table-cloth, which, after they had both kneeled three times, he spread upon the table; and after kneeling again they both retired. Then came two others, one with the rod again, the other with a salt-cellar, a plate, and bread; and when they had kneeled as the others had done, and placed what was brought upon the table, they two retired with the same ceremonies performed by the first. At last came an unmarried lady (we were told she was a countess) and along with her a married one, bearing a tasting-knife; the former was dressed in white silk, who, when she had prostrated herself three times, in the most graceful manner approached the table, and rubbed the plates with bread and salt, with as much awe as if the Queen had been present. When they had waited there a little while the Yeomen of the Guard entered, bare-headed, clothed in scarlet, with a golden rose upon their backs, bringing in at each turn a course of twenty-four dishes, served in plate, most of it gilt; these dishes were received by a gentleman in the same order they were brought, and placed upon the table, while the Lady Taster gave to each of the guard a mouthful to eat, of the particular dish he had brought, for fear of, any poison. During the time that this guard, which consists of the tallest and stoutest men that can be found in all England, being carefully selected for this service, were bringing dinner, twelve trumpets and two kettle-drums made the hall ring for half an hour together. At the end of all this ceremonial, a number of unmarried ladies appeared, who with particular solemnity lifted the meat off the table and conveyed it into the Queen's inner and more private chamber, where, after she had chosen for herself, the rest goes to the Ladies of the court."

The queen dined and supped alone, with very few attendants. II

We now approach perhaps the most important matter in this world, namely, dress. In nothing were the increasing wealth and extravagance of the period more shown than in apparel. And in it we are able to study the origin of the present English taste for the juxtaposition of striking and uncomplementary colors. In Coryat's "Crudities," 1611, we have an Englishman's contrast of the dress of the Venetians and the English. The Venetians adhered, without change, to their decent fashion, a thousand years old, wearing usually black: the slender doublet made close to the body, without much quilting; the long hose plain, the jerkin also black—but all of the most costly stuffs Christendom can furnish, satin and taffetas, garnished with the best lace. Gravity and good taste characterized their apparel. "In both these things," says Coryat, "they differ much from us Englishmen. For whereas they have but one color, we use many more than are in the rainbow, all the most light, garish, and unseemly colors that are in the world. Also for fashion we are much inferior to them. For we wear more fantastical fashions than any nation under the sun doth, the French only excepted." On festival days, in processions, the senators wore crimson damask gowns, with flaps of crimson velvet cast over their left shoulders; and the Venetian knights differed from the other gentlemen, for under their black damask gowns, with long sleeves, they wore red apparel, red silk stockings, and red pantofles.

Andrew Boord, in 1547, attempting to describe the fashions of his countrymen, gave up the effort in sheer despair over the variety and fickleness of costume, and drew a naked man with a pair of shears in one hand and a piece of cloth in the other, to the end that he should shape his apparel as he himself liked; and this he called an Englishman. Even the gentle Harrison, who gives Boord the too harsh character of a lewd popish hypocrite and ungracious priest, admits that he was not void of judgment in this; and he finds it easier to inveigh against the enormity, the fickleness, and the fantasticality of the English attire than to describe it. So unstable is the fashion, he says, that today the Spanish guise is in favor; tomorrow the French toys are most fine and delectable; then the high German apparel is the go; next the Turkish manner is best liked, the Morisco gowns, the Barbary sleeves, and the short French breeches; in a word, "except it were a dog in a doublet, you shall not see any so disguised as are my countrymen in England."

This fantastical folly was in all degrees, from the courtier down to the tarter. "It is a world to see the costliness and the curiosity, the excess and the vanity, the pomp and the bravery, the change and the variety, and finally the fickleness and the folly that is in all degrees; insomuch that nothing is more constant in England than inconstancy of attire. So much cost upon the body, so little upon souls; how many suits of apparel hath the one, or how little furniture hath the other!" "And how men and women worry the poor tailors, with endless fittings and sending back of garments, and trying on!" "Then must the long seams of our hose be set with a plumb line, then we puff, then we blow, and finally sweat till we drop, that our clothes may stand well upon us."

The barbers were as cunning in variety as the tailors. Sometimes the head was polled; sometimes the hair was curled, and then suffered to grow long like a woman's locks, and many times cut off, above or under the ears, round as by a wooden dish. And so with the beards: some shaved from the chin, like the Turks; some cut short, like the beard of the Marquis Otto; some made round, like a rubbing-brush; some peaked, others grown long. If a man have a lean face, the Marquis Otto's cut makes it broad; if it be platterlike, the long, slender beard makes it seem narrow; "if he be weasel-beaked, then much hair left on the cheeks will make the owner look big like a bowdled hen, and so grim as a goose." Some courageous gentlemen wore in their ears rings of gold and stones, to improve God's work, which was otherwise set off by monstrous quilted and stuffed doublets, that puffed out the figure like a barrel.

There is some consolation, though I don't know why, in the knowledge that writers have always found fault with women's fashions, as they do today. Harrison says that the women do far exceed the lightness of the men; "such staring attire as in time past was supposed meet for light housewives only is now become an habit for chaste and sober matrons." And he knows not what to say of their doublets, with pendant pieces on the breast full of jags and cuts; their "galligascons," to make their dresses stand out plumb round; their farthingales and divers colored stockings. "I have met," he says, "with some of these trulls in London so disguised that it hath passed my skill to determine whether they were men or women." Of all classes the merchants were most to be commended for rich but sober attire; "but the younger sort of their wives, both in attire and costly housekeeping, cannot tell when and how to make an end, as being women indeed in whom all kind of curiosity is to be found and seen." Elizabeth's time, like our own, was distinguished by new fashionable colors, among which are mentioned a queer greenish-yellow, a pease-porridge-tawny, a popinjay of blue, a lusty gallant, and the "devil in the hedge." These may be favorites still, for aught I know.

Mr. Furnivall quotes a description of a costume of the period, from the manuscript of Orazio Busino's "Anglipotrida." Busino was the chaplain of Piero Contarina, the Venetian ambassador to James I, in 1617. The chaplain was one day stunned with grief over the death of the butler of the embassy; and as the Italians sleep away grief, the French sing, the Germans drink, and the English go to plays to be rid of it, the Venetians, by advice, sought consolation at the Fortune Theatre; and there a trick was played upon old Busino, by placing him among a bevy of young women, while the concealed ambassador and the secretary enjoyed the joke. "These theatres," says Busino, "are frequented by a number of respectable and handsome ladies, who come freely and seat themselves among the men without the slightest hesitation . . . Scarcely was I seated ere a very elegant dame, but in a mask, came and placed herself beside me . . . She asked me for my address both in French and English; and, on my turning a deaf ear, she determined to honor me by showing me some fine diamonds on her fingers, repeatedly taking off no fewer than three gloves, which were worn one over the other . . . This lady's bodice was of yellow satin, richly embroidered, her petticoat—[It is a trifle in human progress, perhaps scarcely worth noting, that the "round gown," that is, an entire skirt, not open in front and parting to show the under petticoat, did not come into fashion till near the close of the eighteenth century.]—of gold tissue with stripes, her robe of red velvet with a raised pile, lined with yellow muslin with broad stripes of pure gold. She wore an apron of point lace of various patterns; her headtire was highly perfumed, and the collar of white satin beneath the delicately wrought ruff struck me as exceedingly pretty." It was quite in keeping with the manners of the day for a lady of rank to have lent herself to this hoax of the chaplain.

Van Meteren, a Netherlander, 1575, speaks also of the astonishing change or changeableness in English fashions, but says the women are well dressed and modest, and they go about the streets without any covering of mantle, hood, or veil; only the married women wear a hat in the street and in the house; the unmarried go without a hat; but ladies of distinction have lately learned to cover their faces with silken masks or vizards, and to wear feathers. The English, he notes, change their fashions every year, and when they go abroad riding or traveling they don their best clothes, contrary to the practice of other nations. Another foreigner, Jacob Rathgeb, 1592, says the English go dressed in exceeding fine clothes, and some will even wear velvet in the street, when they have not at home perhaps a piece of dry bread. "The lords and pages of the royal court have a stately, noble air, but dress more after the French fashion, only they wear short cloaks and sometimes Spanish caps."

Harrison's arraignment of the English fashions of his day may be considered as almost commendative beside the diatribes of the old Puritan Philip Stubbes, in "The Anatomie of Abuses," 1583. The English language is strained for words hot and rude enough to express his indignation, contempt, and fearful expectation of speedy judgments. The men escape his hands with scarcely less damage than the women. First he wreaks his indignation upon the divers kinds of hats, stuck full of feathers, of various colors, "ensigns of vanity," "fluttering sails and feathered flags of defiance to virtue"; then upon the monstrous ruffs that stand out a quarter of a yard from the neck. "As the devil, in the fullness of his malice, first invented these ruffs, so has he found out two stays to bear up this his great kingdom of ruffs—one is a kind of liquid matter they call starch; the other is a device made of wires, for an under-propper. Then there are shirts of cambric, holland, and lawn, wrought with fine needle-work of silk and curiously stitched, costing sometimes as much as five pounds. Worse still are the monstrous doublets, reaching down to the middle of the thighs, so hard quilted, stuffed, bombasted, and sewed that the wearer can hardly stoop down in them. Below these are the gally-hose of silk, velvet, satin, and damask, reaching below the knees. So costly are these that "now it is a small matter to bestow twenty nobles, ten pound, twenty pound, fortie pound, yea a hundred pound of one pair of Breeches. (God be merciful unto us!) To these gay hose they add nether-socks, curiously knit with open seams down the leg, with quirks and clocks about the ankles, and sometimes interlaced with gold and silver thread as is wonderful to behold. Time has been when a man could clothe his whole body for the price of these nether-socks. Satan was further let loose in the land by reason of cork shoes and fine slippers, of all colors, carved, cut, and stitched with silk, and laced on with gold and silver, which went flipping and flapping up and down in the dirt. The jerkins and cloaks are of all colors and fashions; some short, reaching to the knee; others dragging on the ground; red, white, black, violet, yellow, guarded, laced, and faced; hanged with points and tassels of gold, silver, and silk. The hilts of daggers, rapiers, and swords are gilt thrice over, and have scabbards of velvet. And all this while the poor lie in London streets upon pallets of straw, or else in the mire and dirt, and die like dogs!"

Stubbes was a stout old Puritan, bent upon hewing his way to heaven through all the allurements of this world, and suspecting a devil in every fair show. I fear that he looked upon woman as only a vain and trifling image, a delusive toy, away from whom a man must set his face. Shakespeare, who was country-bred when he came up to London, and lived probably on the roystering South Side, near the theatres and bear-gardens, seems to have been impressed with the painted faces of the women. It is probable that only town-bred women painted. Stubbes declares that the women of England color their faces with oils, liquors, unguents, and waters made to that end, thinking to make themselves fairer than God made them—a presumptuous audacity to make God untrue in his word; and he heaps vehement curses upon the immodest practice. To this follows the trimming and tricking of their heads, the laying out their hair to show, which is curled, crisped, and laid out on wreaths and borders from ear to ear. Lest it should fall down it is under-propped with forks, wires, and what not. On the edges of their bolstered hair (for it standeth crested round about their frontiers, and hanging over their faces like pendices with glass windows on every side) is laid great wreaths of gold and silver curiously wrought. But this is not the worst nor the tenth part, for no pen is able to describe the wickedness. "The women use great ruffs and neckerchers of holland, lawn, camerick, and such cloth, as the greatest thread shall not be so big as the least hair that is: then, lest they should fall down, they are smeared and starched in the Devil's liquor, I mean Starch; after that dried with great diligence, streaked, patted and rubbed very nicely, and so applied to their goodly necks, and, withall, under-propped with supportasses, the stately arches of pride; beyond all this they have a further fetch, nothing inferior to the rest; as, namely, three or four degrees of minor ruffs, placed gradatim, step by step, one beneath another, and all under the Master devil ruff. The skirts, then, of these great ruffs are long and side every way, pleted and crested full curiously, God wot."

Time will not serve us to follow old Stubbes into his particular inquisition of every article of woman's attire, and his hearty damnation of them all and several. He cannot even abide their carrying of nosegays and posies of flowers to smell at, since the palpable odors and fumes of these do enter the brain to degenerate the spirit and allure to vice. They must needs carry looking-glasses with them; "and good reason," says Stubbes, savagely, "for else how could they see the devil in them? for no doubt they are the devil's spectacles [these women] to allure us to pride and consequently to destruction forever." And, as if it were not enough to be women, and the devil's aids, they do also have doublets and jerkins, buttoned up the breast, and made with wings, welts, and pinions on the shoulder points, as man's apparel is, for all the world. We take reluctant leave of this entertaining woman-hater, and only stay to quote from him a "fearful judgment of God, shewed upon a gentlewoman of Antwerp of late, even the 27th of May, 1582," which may be as profitable to read now as it was then: "This gentlewoman being a very rich Merchant man's daughter: upon a time was invited to a bridal, or wedding, which was solemnized in that Toune, against which day she made great preparation, for the pluming herself in gorgeous array, that as her body was most beautiful, fair, and proper, so her attire in every respect might be correspondent to the same. For the accomplishment whereof she curled her hair, she dyed her locks, and laid them out after the best manner, she colored her face with waters and Ointments: But in no case could she get any (so curious and dainty she was) that could starch, and set her Ruffs and Neckerchers to her mind wherefore she sent for a couple of Laundresses, who did the best they could to please her humors, but in any wise they could not. Then fell she to swear and tear, to curse and damn, casting the Ruffs under feet, and wishing that the Devil might take her when she wear any of those

Neckerchers again. In the meantime (through the sufferance of God) the Devil transforming himself into the form of a young man, as brave and proper as she in every point of outward appearance, came in, feigning himself to be a wooer or suitor unto her. And seeing her thus agonized, and in such a pelting chase, he demanded of her the cause thereof, who straightway told him (as women can conceal nothing that lieth upon their stomachs) how she was abused in the setting of her Ruffs, which thing being heard of him, he promised to please her mind, and thereto took in hand the setting of her Ruffs, which he performed to her great contentation and liking, in so much as she looking herself in a glass (as the Devil bade her) became greatly enamoured of him. This done, the young man kissed her, in the doing whereof she writhe her neck in, sunder, so she died miserably, her body being metamorphosed into black and blue colors, most ugglesome to behold, and her face (which before was so amorous) became most deformed, and fearful to look upon. This being known, preperance was made for her burial, a rich coffin was provided, and her fearful body was laid therein, and it covered very sumptuously. Four men immediately assayed to lift up the corpse, but could not move it; then six attempted the like, but could not once stir it from the place where it stood. Whereat the standers-by marveling, caused the coffin to be opened to see the cause thereof. Where they found the body to be taken away, and a black Cat very lean and deformed sitting in the coffin, setting of great Ruffs, and frizzling of hair, to the great fear and wonder of all beholders."

Better than this pride which forerunneth destruction, in the opinion of Stubbes, is the habit of the Brazilian women, who "esteem so little of apparel" that they rather choose to go naked than be thought to be proud.

As I read the times of Elizabeth, there was then greater prosperity and enjoyment of life among the common people than fifty or a hundred years later. Into the question of the prices of labor and of food, which Mr. Froude considers so fully in the first chapter of his history, I shall not enter any further than to remark that the hardness of the laborer's lot, who got, mayhap, only twopence a day, is mitigated by the fact that for a penny he could buy a pound of meat which now costs a shilling. In two respects England has greatly changed for the traveler, from the sixteenth to the eighteenth century—in its inns and its roads.

In the beginning of Elizabeth's reign travelers had no choice but to ride on horseback or to walk. Goods were transported on strings of pack-horses. When Elizabeth rode into the city from her residence at Greenwich, she placed herself behind her lord chancellor, on a pillion. The first improvement made was in the construction of a rude wagon a cart without springs, the body resting solidly on the axles. In such a vehicle Elizabeth rode to the opening of her fifth Parliament. In 1583, on a certain day, Sir Harry Sydney entered Shrewsbury in his wagon, "with his trumpeter blowynge, verey joyfull to behold and see." Even such conveyances fared hard on the execrable roads of the period. Down to the end of the seventeenth century most of the country roads were merely broad ditches, water-worn and strewn with loose stones. In 1640 Queen Henrietta was four weary days dragging over the road from Dover to London, the best in England. Not till the close of the sixteenth century was the wagon used, and then rarely. Fifty years later stage-wagons ran, with some regularity, between London and Liverpool; and before the close of the seventeenth century the stagecoach, a wonderful invention, which had been used in and about London since 1650, was placed on three principal roads of the kingdom. It averaged two to three miles an hour. In the reign of Charles II. a Frenchman who landed at Dover was drawn up to London in a wagon with six horses in a line, one after the other. Our Venetian, Busino, who went to Oxford in the coach with the ambassador in 1617, was six days in going one hundred and fifty miles, as the coach often stuck in the mud, and once broke down. So bad were the main thoroughfares, even, that markets were sometimes inaccessible for months together, and the fruits of the earth rotted in one place, while there was scarcity not many miles distant.

But this difficulty of travel and liability to be detained long on the road were cheered by good inns, such as did not exist in the world elsewhere. All the literature of the period reflects lovingly the homelike delights of these comfortable houses of entertainment. Every little village boasted an excellent inn, and in the towns on the great thoroughfares were sumptuous houses that would accommodate from two to three hundred guests with their horses. The landlords were not tyrants, as on the Continent, but servants of their guests; and it was, says Harrison, a world to see how they did contend for the entertainment of their guests—as about fineness and change of linen, furniture of bedding, beauty of rooms, service at the table, costliness of plate, strength of drink, variety of wines, or well-using of horses. The gorgeous signs at their doors sometimes cost forty pounds. The inns were cheap too, and the landlord let no one depart dissatisfied with his bill. The worst inns were in London, and the tradition has been handed down. But the ostlers, Harrison confesses, did sometimes cheat in the feed, and they with the tapsters and chamberlains were in league (and the landlord was not always above suspicion) with highwaymen outside, to ascertain if the traveler carried any valuables; so that when he left the hospitable inn he was quite likely to be stopped on the highway and relieved of his money. The highwayman was a conspicuous character. One of the most romantic of these gentry at one time was a woman named Mary Frith, born in 1585, and known as Moll Cut-Purse. She dressed in male attire, was an adroit fencer, a bold rider, and a staunch royalist; she once took two hundred gold jacobuses from the Parliamentary General Fairfax on Hounslow Heath. She is the chief character in Middleton's play of the "Roaring Girl"; and after a varied life as a thief, cutpurse, pickpocket, highwayman, trainer of animals, and keeper of a thieves' fence, she died in peace at the age of seventy. To return to the inns, Fyner Morrison, a traveler in 1617, sustains all that Harrison says of the inns as the best and cheapest in the world, where the guest shall have his own pleasure. No sooner does he arrive than the servants run to him—one takes his horse, another shows him his chamber and lights his fire, a third pulls off his boots. Then come the host and hostess to inquire what meat he will choose, and he may have their company if he like. He shall be offered music while he eats, and if he be solitary the musicians will give him good-day with music in the morning. In short, "a man cannot more freely command at home, in his own house, than he may do in his inn."

The amusements of the age were often rough, but certainly more moral than they were later; and although the theatres were denounced by such reformers as Stubbes as seminaries of vice, and disapproved by Harrison; they were better than after the Restoration, when the plays of Shakespeare were out of fashion. The Londoners went for amusement to the Bankside, or South Side of the Thames, where were the famous Paris Gardens, much used as a rendezvous by gallants; and there were the places for bear and bull baiting; and there were the theatres—the Paris Gardens, the Swan, the Rose, the Hope, and the Globe. The pleasure-seekers went over usually in boats, of which there were said to be four thousand plying between banks; for

there was only one bridge, and that was crowded with houses. All distinguished visitors were taken over to see the gardens and the bears baited by dogs; the queen herself went, and perhaps on Sunday, for Sunday was the great day, and Elizabeth is said to have encouraged Sunday sports, she had been (we read) so much hunted on account of religion! These sports are too brutal to think of; but there are amusing accounts of lion-baiting both by bears and dogs, in which the beast who figures so nobly on the escutcheon nearly always proved himself an arrant coward, and escaped away as soon as he could into his den, with his tail between his legs. The spectators were once much disgusted when a lion and lioness, with the dog that pursued them, all ran into the den, and, like good friends, stood very peaceably together looking out at the people.

The famous Globe Theatre, which was built in 1599, was burned in 1613, and in the fire it is supposed were consumed Shakespeare's manuscripts of his plays. It was of wood (for use in summer only), octagon shaped, with a thatched roof, open in the centre. The daily performance here, as in all theatres, was at three o'clock in the afternoon, and boys outside held the horses of the gentlemen who went in to the play. When theatres were restrained, in 1600, only two were allowed, the Globe and the Fortune, which was on the north side, on Golden Lane. The Fortune was fifty feet square within, and three stories high, with galleries, built of wood on a brick foundation, and with a roof of tiles. The stage was forty-three feet wide, and projected into the middle of the yard (as the pit was called), where the groundlings stood. To one of the galleries admission was only twopence. The young gallants used to go into the yards and spy about the galleries and boxes for their acquaintances. In these theatres there was a drop-curtain, but little or no scenery. Spectators had boxes looking on the stage behind the curtain, and they often sat upon the stage with the actors; sometimes the actors all remained upon the stage during the whole play. There seems to have been great familiarity between the audience and the actors. Fruits in season, apples, pears, and nuts, with wine and beer, were carried about to be sold, and pipes were smoked. There was neither any prudery in the plays or the players, and the audiences in behavior were no better than the plays.

The actors were all men. The female parts were taken usually by boys, but frequently by grown men, and when Juliet or Desdemona was announced, a giant would stride upon the stage. There is a story that Kynaston, a handsome fellow, famous in female characters, and petted by ladies of rank, once kept Charles I. waiting while he was being shaved before appearing as Evadne in "The Maid's Tragedy." The innovation of women on the stage was first introduced by a French company in 1629, but the audiences would not tolerate it, and hissed and pelted the actresses off the stage. But thirty years later women took the place they have ever since held; when the populace had once experienced the charm of a female Juliet and Ophelia, they would have no other, and the rage for actresses ran to such excess at one time that it was a fashion for women to take the male parts as well. But that was in the abandoned days of Charles II. Pepys could not control his delight at the appearance of Nell Gwynne, especially "when she comes like a young gallant, and hath the motions and carriage of a spark the most that ever I saw any man have. It makes me, I confess, admire her." The acting of Shakespeare himself is only a faint tradition. He played the ghost in "Hamlet," and Adam in "As You Like It." William Oldys says (Oldys was an antiquarian who was pottering about in the first part of the eighteenth century, picking up gossip in coffee-houses, and making memoranda on scraps of paper in book-shops) Shakespeare's brother Charles, who lived past the middle of the seventeenth century, was much inquired of by actors about the circumstances of Shakespeare's playing. But Charles was so old and weak in mind that he could recall nothing except the faint impression that he had once seen "Will" act a part in one of his own comedies, wherein, being to personate a decrepit old man, he wore a long beard, and appeared so weak and drooping and unable to walk that he was forced to be supported and carried by another person to a table, at which he was seated among some company who were eating, and one of them sang a song. And that was Shakespeare!

The whole Bankside, with its taverns, play-houses, and worse, its bear pits and gardens, was the scene of roystering and coarse amusement. And it is surprising that plays of such sustained moral greatness as Shakespeare's should have been welcome.

The more private amusements of the great may well be illustrated by an account given by Busino of a masque (it was Ben Jonson's "Pleasure Reconciled to Virtue") performed at Whitehall on Twelfthnight, 1617. During the play, twelve cavaliers in masks, the central figure of whom was Prince Charles, chose partners, and danced every kind of dance, until they got tired and began to flag; whereupon King James, "who is naturally choleric, got impatient, and shouted aloud, 'Why don't they dance? What did you make me come here for? Devil take you all, dance!' On hearing this, the Marquis of Buckingham, his majesty's most favored minion, immediately sprang forward, cutting a score of lofty and very minute capers, with so much grace and agility that he not only appeased the ire of his angry sovereign, but moreover rendered himself the admiration and delight of everybody. The other masquers, being thus encouraged, continued successively exhibiting their powers with various ladies, finishing in like manner with capers, and by lifting their goddesses from the ground . . . The prince, however, excelled them all in bowing, being very exact in making his obeisance both to the king and his partner; nor did we ever see him make one single step out of time—a compliment which can scarcely be paid to his companions. Owing to his youth, he has not much wind as yet, but he nevertheless cut a few capers very gracefully." The prince then went and kissed the hand of his serene parent, who embraced and kissed him tenderly. When such capers were cut at Whitehall, we may imagine what the revelry was in the Bankside taverns.

The punishments of the age were not more tender than the amusements were refined. Busino saw a lad of fifteen led to execution for stealing a bag of currants. At the end of every month, besides special executions, as many as twenty-five people at a time rode through London streets in Tyburn carts, singing ribald songs, and carrying sprigs of rosemary in their hands. Everywhere in the streets the machines of justice were visible—pillories for the neck and hands, stocks for the feet, and chains to stretch across, in case of need, and stop a mob. In the suburbs were oak cages for nocturnal offenders. At the church doors might now and then be seen women enveloped in sheets, doing penance for their evil deeds. A bridle, something like a bit for a restive horse, was in use for the curbing of scolds; but this was a later invention than the cucking-stool, or ducking-stool. There is an old print of one of these machines standing on the Thames' bank: on a wheeled platform is an upright post with a swinging beam across the top, on one end of which the chair is suspended over the river, while the other is worked up and down by a rope; in it is seated a light sister of the Bankside,

being dipped into the unsavory flood. But this was not so hated by the women as a similar discipline—being dragged in the river by a rope after a boat.

Hanging was the common punishment for felony, but traitors and many other offenders were drawn, hanged, boweled, and quartered; nobles who were traitors usually escaped with having their heads chopped off only. Torture was not practiced; for, says Harrison, our people despise death, yet abhor to be tormented, being of frank and open minds. And “this is one cause why our condemned persons do go so cheerfully to their deaths, for our nation is free, stout, hearty, and prodigal of life and blood, and cannot in any wise digest to be used as villains and slaves.” Felony covered a wide range of petty crimes—breach of prison, hunting by night with painted or masked faces, stealing above forty shillings, stealing hawks' eggs, conjuring, prophesying upon arms and badges, stealing deer by night, cutting purses, counterfeiting coin, etc. Death was the penalty for all these offenses. For poisoning her husband a woman was burned alive; a man poisoning another was boiled to death in water or oil; heretics were burned alive; some murderers were hanged in chains; perjurers were branded on the forehead with the letter P; rogues were burned through the ears; suicides were buried in a field with a stake driven through their bodies; witches were burned or hanged; in Halifax thieves were beheaded by a machine almost exactly like the modern guillotine; scolds were ducked; pirates were hanged on the seashore at low-water mark, and left till three tides overwashed them; those who let the sea-walls decay were staked out in the breach of the banks, and left there as parcel of the foundation of the new wall. Of rogues—that is, tramps and petty thieves—the gallows devoured three to four hundred annually, in one place or another; and Henry VIII. in his time did hang up as many as seventy-two thousand rogues. Any parish which let a thief escape was fined. Still the supply held out.

The legislation against vagabonds, tramps, and sturdy beggars, and their punishment by whipping, branding, etc., are too well known to need comment. But considerable provision was made for the unfortunate and deserving poor—poorhouses were built for them, and collections taken up. Only sixty years before Harrison wrote there were few beggars, but in his day he numbers them at ten thousand; and most of them were rogues, who counterfeited sores and wounds, and were mere thieves and caterpillars on the commonwealth. He names twenty-three different sorts of vagabonds known by cant names, such as “ruffers,” “uprightmen,” “priggers,” “fraters,” “palliards,” “Abrams,” “dummerers”; and of women, “demanders for glimmer or fire,” “mortes,” “walking mortes,” “doxes,” “kinching coves.”

London was esteemed by its inhabitants and by many foreigners as the richest and most magnificent city in Christendom. The cities of London and Westminster lay along the north bank in what seemed an endless stretch; on the south side of the Thames the houses were more scattered. But the town was mostly of wood, and its rapid growth was a matter of anxiety. Both Elizabeth and James again and again attempted to restrict it by forbidding the erection of any new buildings within the town, or for a mile outside; and to this attempt was doubtless due the crowded rookeries in the city. They especially forbade the use of wood in house-fronts and windows, both on account of the danger from fire, and because all the timber in the kingdom, which was needed for shipping and other purposes, was being used up in building. They even ordered the pulling down of new houses in London, Westminster, and for three miles around. But all efforts to stop the growth of the city were vain.

London, according to the Venetian Busino, was extremely dirty. He did not admire the wooden architecture; the houses were damp and cold, the staircases spiral and inconvenient, the apartments “sorry and ill connected.” The wretched windows, without shutters, he could neither open by day nor close by night. The streets were little better than gutters, and were never put in order except for some great parade. Hentzner, however, thought the streets handsome and clean. When it rained it must have been otherwise. There was no provision for conducting away the water; it poured off the roofs upon the people below, who had not as yet heard of the Oriental umbrella; and the countryman, staring at the sights of the town, knocked about by the carts, and run over by the horsemen, was often surprised by a douche from a conduit down his back. And, besides, people had a habit of throwing water and slops out of the windows, regardless of passers-by.

The shops were small, open in front, when the shutters were down, much like those in a Cairo bazaar, and all the goods were in sight. The shopkeepers stood in front and cried their wares, and besought customers. Until 1568 there were but few silk shops in London, and all those were kept by women. It was not till about that time that citizens' wives ceased to wear white knit woolen caps, and three-square Minever caps with peaks. In the beginning of Elizabeth's reign the apprentices (a conspicuous class) wore blue cloaks in winter and blue gowns in summer; unless men were threescore years old, it was not lawful to wear gowns lower than the calves of the legs, but the length of cloaks was not limited. The journeymen and apprentices wore long daggers in the daytime at their backs or sides. When the apprentices attended their masters and mistresses in the night they carried lanterns and candles, and a great long club on the neck. These apprentices were apt to lounge with their clubs about the fronts of shops, ready to take a hand in any excitement—to run down a witch, or raid an objectionable house, or tear down a tavern of evil repute, or spoil a playhouse. The high-streets, especially in winter-time, were annoyed by hourly frays of sword and buckler-men; but these were suddenly suppressed when the more deadly fight with rapier and dagger came in. The streets were entirely unlighted and dangerous at night, and for this reason the plays at the theatres were given at three in the afternoon.

About Shakespeare's time many new inventions and luxuries came in: masks, muffs, fans, periwigs, shoe-roses, love-handkerchiefs (tokens given by maids and gentlewomen to their favorites), heath-brooms for hair-brushes, scarfs, garters, waistcoats, flat-caps; also hops, turkeys, apricots, Venice glass, tobacco. In 1524, and for years after, was used this rhyme

*“Turkeys, Carpes, Hops: Piccarel, and beers,
Came into England: all in one year.”*

There were no coffee-houses as yet, for neither tea nor coffee was introduced till about 1661. Tobacco was first made known in England by Sir John Hawkins in 1565, though not commonly used by men and women till some years after. It was urged as a great medicine for many ills. Harrison says, 1573, “In these days the taking in of the smoke of the Indian herb called ‘Tabaco,’ by an instrument formed like a little ladle, whereby

it passeth from the mouth into the head and stomach, is greatly taken up and used in England, against Rewmes and some other diseases engendered in the lungs and inward parts, and not without effect." Its use spread rapidly, to the disgust of James I. and others, who doubted that it was good for cold, aches, humors, and rheums. In 1614 it was said that seven thousand houses lived by this trade, and that L 399,375 a year was spent in smoke. Tobacco was even taken on the stage. Every base groom must have his pipe; it was sold in all inns and ale-houses, and the shops of apothecaries, grocers, and chandlers were almost never, from morning till night, without company still taking of tobacco.

There was a saying on the Continent that "England is a paradise for women, a prison for servants, and a hell or purgatory for horses." The society was very simple compared with the complex condition of ours, and yet it had more striking contrasts, and was a singular mixture of downrightness and artificiality; plainness and rudeness of speech went with the utmost artificiality of dress and manner. It is curious to note the insular, not to say provincial, character of the people even three centuries ago. When the Londoners saw a foreigner very well made or particularly handsome, they were accustomed to say, "It is a pity he is not an ENGLISHMAN." It is pleasant, I say, to trace this "certain condescension" in the good old times. Jacob Rathgeb (1592) says the English are magnificently dressed, and extremely proud and overbearing; the merchants, who seldom go unto other countries, scoff at foreigners, who are liable to be ill-used by street boys and apprentices, who collect in immense crowds and stop the way. Of course Cassandra Stubbes, whose mind was set upon a better country, has little good to say of his countrymen.

"As concerning the nature, propertie, and disposition of the people they be desirous of new fangles, praising things past, contemning things present, and coveting after things to come. Ambitious, proud, light, and unstable, ready to be carried away with every blast of wind." The French paid back with scorn the traditional hatred of the English for the French. Perlin (1558) finds the people "proud and seditious, with bad consciences and unfaithful to their word in war unfortunate, in peace unfaithful"; and there was a Spanish or Italian proverb: "England, good land, bad people." But even Perlin likes the appearance of the people: "The men are handsome, rosy, large, and dexterous, usually fair-skinned; the women are esteemed the most beautiful in the world, white as alabaster, and give place neither to Italian, Flemish, nor German; they are joyous, courteous, and hospitable (de bon recueil)." He thinks their manners, however, little civilized: for one thing, they have an unpleasant habit of eructation at the table (car iceux routent a la table sans honte & ignominie); which recalls Chaucer's description of the Trumpington miller's wife and daughter:

*"Men might her rowtyng hearen a forlong,
The wenche routeth eek par companye."*

Another inference as to the table manners of the period is found in Coryat's "Crudities" (1611). He saw in Italy generally a curious custom of using a little fork for meat, and whoever should take the meat out of the dish with his fingers—would give offense. And he accounts for this peculiarity quite naturally: "The reason of this their curiosity is, because the Italian cannot by any means indure to have his dish touched with fingers, seeing all men's fingers are not alike cleane." Coryat found the use of the fork nowhere else in Christendom, and when he returned, and, oftentimes in England, imitated the Italian fashion, his exploit was regarded in a humorous light. Busino says that fruits were seldom served at dessert, but that the whole population were munching them in the streets all day long, and in the places of amusement; and it was an amusement to go out into the orchards and eat fruit on the spot, in a sort of competition of gormandize between the city belles and their admirers. And he avers that one young woman devoured twenty pounds of cherries, beating her opponent by two pounds and a half.

All foreigners were struck with the English love of music and drink, of banqueting and good cheer. Perlin notes a pleasant custom at table: during the feast you hear more than a hundred times, "Drink iou" (he loves to air his English), that is to say, "Je m'en vois boyre a toy." You respond, in their language, "Iplaigiu"; that is to say, "Je vous plege." If you thank them, they say in their language, "God tanque artelay"; that is, "Je vous remercie de bon coeur." And then, says the artless Frenchman, still improving on his English, you should respond thus: "Bigod, sol drink iou agoud oin." At the great and princely banquets, when the pledge went round and the heart's desire of lasting health, says the chronicler, "the same was straight wayes knowne, by sound of Drumme and Trumpet, and the cannon's loudest voyce." It was so in Hamlet's day:

*"And as he drains his draughts of Rhenish down,
The kettle-drum and trumpet thus bray out
The triumph of his pledge."*

According to Hentzner (1598), the English are serious, like the Germans, and love show and to be followed by troops of servants wearing the arms of their masters; they excel in music and dancing, for they are lively and active, though thicker of make than the French; they cut their hair close in the middle of the head, letting it grow on either side; "they are good sailors, and better pyrates, cunning, treacherous, and thievish;" and, he adds, with a touch of satisfaction, "above three hundred are said to be hanged annually in London." They put a good deal of sugar in their drink; they are vastly fond of great noises, firing of cannon, beating of drums, and ringing of bells, and when they have a glass in their heads they go up into some belfry, and ring the bells for hours together, for the sake of exercise. Perlin's comment is that men are hung for a trifle in England, and that you will not find many lords whose parents have not had their heads chopped off.

It is a pleasure to turn to the simple and hearty admiration excited in the breasts of all susceptible foreigners by the English women of the time. Van Meteren, as we said, calls the women beautiful, fair, well dressed, and modest. To be sure, the wives are, their lives only excepted, entirely in the power of their husbands, yet they have great liberty; go where they please; are shown the greatest honor at banquets, where they sit at the upper end of the table and are first served; are fond of dress and gossip and of taking it easy; and like to sit before their doors, decked out in fine clothes, in order to see and be seen by the passers-by. Rathgeb also agrees that the women have much more liberty than in any other place. When old Busino went to the Masque at Whitehall, his colleagues kept exclaiming, "Oh, do look at this one—oh, do see that! Whose wife is this?—and that pretty one near her, whose daughter is she?" There was some chaff mixed in,

he allows, some shriveled skins and devotees of S. Carlo Borromeo, but the beauties greatly predominated.

In the great street pageants, it was the beauty and winsomeness of the London ladies, looking on, that nearly drove the foreigners wild. In 1606, upon the entry of the king of Denmark, the chronicler celebrates "the unimaginable number of gallant ladies, beauteous virgins, and other delicate dames, filling the windows of every house with kind aspect." And in 1638, when Cheapside was all alive with the pageant of the entry of the queen mother, "this miserable old queen," as Lilly calls Marie de' Medicis (Mr. Furnivall reproduces an old cut of the scene), M. de la Serre does not try to restrain his admiration for the pretty women on view: only the most fecund imagination can represent the content one has in admiring the infinite number of beautiful women, each different from the other, and each distinguished by some sweetness or grace to ravish the heart and take captive one's liberty. No sooner has he determined to yield to one than a new object of admiration makes him repent the precipitation of his judgment.

And all the other foreigners were in the like case of "goneness." Kiechel, writing in 1585, says, "Item, the women there are charming, and by nature so mighty pretty as I have scarcely ever beheld, for they do not falsify, paint, or bedaub themselves as in Italy or other places;" yet he confesses (and here is another tradition preserved) "they are somewhat awkward in their style of dress." His second "item" of gratitude is a Netherland custom that pleased him—whenever a foreigner or an inhabitant went to a citizen's house on business, or as a guest, he was received by the master, the lady, or the daughter, and "welcomed" (as it is termed in their language); "he has a right to take them by the arm and to kiss them, which is the custom of the country; and if any one does not do so, it is regarded and imputed as ignorance and ill-breeding on his part." Even the grave Erasmus, when he visited England, fell easily into this pretty practice, and wrote with untheological fervor of the "girls with angel faces," who were "so kind and obliging." "Wherever you come," he says, "you are received with a kiss by all; when you take your leave you are dismissed with kisses; you return, kisses are repeated. They come to visit you, kisses again; they leave you, you kiss them all round. Should they meet you anywhere, kisses in abundance in fine, wherever you move there is nothing but kisses"—a custom, says this reformer, who has not the fear of Stubbes before his eyes, "never to be sufficiently commended."

We shall find no more convenient opportunity to end this part of the social study of the age of Shakespeare than with this naive picture of the sex which most adorned it. Some of the details appear trivial; but grave history which concerns itself only with the actions of conspicuous persons, with the manoeuvres of armies, the schemes of politics, the battles of theologies, fails signally to give us the real life of the people by which we judge the character of an age.

III

When we turn from France to England in, the latter part of the sixteenth and the beginning of the seventeenth century, we are in another atmosphere; we encounter a literature that smacks of the soil, that is as varied, as racy, often as rude, as human life itself, and which cannot be adequately appreciated except by a study of the popular mind and the history of the time which produced it.

"Voltaire," says M. Guizot, "was the first person in France who spoke of Shakespeare's genius; and although he spoke of him merely as a barbarian genius, the French public were of the opinion that he had said too much in his favor. Indeed, they thought it nothing less than profanation to apply the words genius and glory to dramas which they considered as crude as they were coarse."

Guizot was one of the first of his nation to approach Shakespeare in the right spirit—that is, in the spirit in which he could hope for any enlightenment; and in his admirable essay on "Shakespeare and His Times," he pointed out the exact way in which any piece or period of literature should be studied, that is worth studying at all. He inquired into English civilization, into the habits, manners, and modes of thought of the people for whom Shakespeare wrote. This method, this inquiry into popular sources, has been carried much further since Guizot wrote, and it is now considered the most remunerative method, whether the object of study is literature or politics. By it not only is the literature of a period for the first time understood, but it is given its just place as an exponent of human life and a monument of human action.

The student who takes up Shakespeare's plays for the purpose of either amusement or cultivation, I would recommend to throw aside the whole load of commentary, and speculation, and disquisition, and devote himself to trying to find out first what was the London and the England of Shakespeare's day, what were the usages of all classes of society, what were the manners and the character of the people who crowded to hear his plays, or who denounced them as the works of the devil and the allies of sin. I say again to the student that by this means Shakespeare will become a new thing to him, his mind will be enlarged to the purpose and scope of the great dramatist, and more illumination will be cast upon the plays than is received from the whole race of inquisitors into his phrases and critics of his genius. In the light of contemporary life, its visions of empire, its spirit of adventure, its piracy, exploration, and warlike turmoil, its credulity and superstitious wonder at natural phenomena, its implicit belief in the supernatural, its faith, its virility of daring, coarseness of speech, bluntness of manner, luxury of apparel, and ostentation of wealth, the mobility of its shifting society, these dramas glow with a new meaning, and awaken a profounder admiration of the poet's knowledge of human life.

The experiences of the poet began with the rude and rural life of England, and when he passed into the presence of the court and into the bustle of great London in an age of amazing agitation, he felt still in his veins the throb of the popular blood. There were classic affectations in England, there were masks and mummeries and classic puerilities at court and in noble houses—Elizabeth's court would well have liked to be classical, remarks Guizot—but Shakespeare was not fettered by classic conventionalities, nor did he obey the unities, nor attempt to separate on the stage the tragedy and comedy of life—"immense and living stage,"

says the writer I like to quote because he is French, upon which all things are represented, as it were, in their solid form, and in the place which they occupied in a stormy and complicated civilization. In these dramas the comic element is introduced whenever its character of reality gives it the right of admission and the advantage of opportune appearance. Falstaff appears in the train of Henry V., and Doll Tear-Sheet in the train of Falstaff; the people surround the kings, and the soldiers crowd around their generals; all conditions of society, all the phases of human destiny appear by turns in juxtaposition, with the nature which properly belongs to them, and in the position which they naturally occupy. . . .

"Thus we find the entire world, the whole of human realities, reproduced by Shakespeare in tragedy, which, in his eyes, was the universal theatre of life and truth."

It is possible to make a brutal picture of the England of Shakespeare's day by telling nothing that is not true, and by leaving out much that is true. M. Taine, who has a theory to sustain, does it by a graphic catalogue of details and traits that cannot be denied; only there is a great deal in English society that he does not include, perhaps does not apprehend. Nature, he thinks, was never so completely acted out. These robust men give rein to all their passions, delight in the strength of their limbs like Carmen, indulge in coarse language, undisguised sensuality, enjoy gross jests, brutal buffooneries. Humanity is as much lacking as decency. Blood, suffering, does not move them. The court frequents bull and bear baitings; Elizabeth beats her maids, spits upon a courtier's fringed coat, boxes Essex's ears; great ladies beat their children and their servants. "The sixteenth century," he says, "is like a den of lions. Amid passions so strong as these there is not one lacking. Nature appears here in all its violence, but also in all its fullness. If nothing has been softened, nothing has been mutilated. It is the entire man who is displayed, heart, mind, body, senses, with his noblest and finest aspirations, as with his most bestial and savage appetites, without the preponderance of any dominant passion to cast him altogether in one direction, to exalt or degrade him. He has not become rigid as he will under Puritanism. He is not uncrowned as in the Restoration." He has entered like a young man into all the lusty experiences of life, every allurements is known, the sweetness and novelty of things are strong with him. He plunges into all sensations. "Such were the men of this time, Raleigh, Essex, Elizabeth, Henry VIII himself, excessive and inconstant, ready for devotion and for crime, violent in good and evil, heroic with strange weaknesses, humble with sudden changes of mood, never vile with premeditation like the roisterers of the Restoration, never rigid on principle like the Puritans of the Revolution, capable of weeping like children, and of dying like men, often base courtiers, more than once true knights, displaying constantly, amidst all these contradictions of bearing, only the overflowing of nature. Thus prepared, they could take in everything, sanguinary ferocity and refined generosity, the brutality of shameless debauchery, and the most divine innocence of love, accept all the characters, wantons and virgins, princes and mountebanks, pass quickly from trivial buffoonery to lyrical sublimities, listen alternately to the quibbles of clowns and the songs of lovers. The drama even, in order to satisfy the prolixity of their nature, must take all tongues, pompous, inflated verse, loaded with imagery, and side by side with this vulgar prose; more than this, it must distort its natural style and limits, put songs, poetical devices in the discourse of courtiers and the speeches of statesmen; bring on the stage the fairy world of opera, as Middleton says, gnomes, nymphs of the land and sea, with their groves and meadows; compel the gods to descend upon the stage, and hell itself to furnish its world of marvels. No other theatre is so complicated, for nowhere else do we find men so complete."

M. Taine heightens this picture in generalizations splashed with innumerable blood-red details of English life and character. The English is the most warlike race in Europe, most redoubtable in battle, most impatient of slavery. "English savages" is what Cellini calls them; and the great shins of beef with which they fill themselves nourish the force and ferocity of their instincts. To harden them thoroughly, institutions work in the same groove as nature. The nation is armed. Every man is a soldier, bound to have arms according to his condition, to exercise himself on Sundays and holidays. The State resembles an army; punishments must inspire terror; the idea of war is ever present. Such instincts, such a history, raises before them with tragic severity the idea of life; death is at hand, wounds, blood, tortures. The fine purple cloaks, the holiday garments, elsewhere signs of gayety of mind, are stained with blood and bordered with black. Throughout a stern discipline, the axe ready for every suspicion of treason; "great men, bishops, a chancellor, princes, the king's relations, queens, a protector kneeling in the straw, sprinkled the Tower with their blood; one after the other they marched past, stretched out their necks; the Duke of Buckingham, Queen Anne Boleyn, Queen Catherine Howard, the Earl of Surrey, Admiral Seymour, the Duke of Somerset, Lady Jane Grey and her husband, the Duke of Northumberland, the Earl of Essex, all on the throne, or on the steps of the throne, in the highest ranks of honor, beauty, youth, genius; of the bright procession nothing is left but senseless trunks, marred by the tender mercies of the executioner."

The gibbet stands by the highways, heads of traitors and criminals grin on the city gates. Mournful legends multiply, church-yard ghosts, walking spirits. In the evening, before bedtime, in the vast country houses, in the poor cottages, people talk of the coach which is seen drawn by headless horses, with headless postilions and coachmen. All this, with unbounded luxury, unbridled debauchery, gloom, and revelry hand in hand. "A threatening and sombre fog veils their mind like their sky, and joy, like the sun, pierces through it and upon them strongly and at intervals." All this riot of passion and frenzy of vigorous life, this madness and sorrow, in which life is a phantom and destiny drives so remorselessly, Taine finds on the stage and in the literature of the period.

To do him justice, he finds something else, something that might give him a hint of the innate soundness of English life in its thousands of sweet homes, something of that great force of moral stability, in the midst of all violence and excess of passion and performance, which makes a nation noble. "Opposed to this band of tragic figures," which M. Taine arrays from the dramas, "with their contorted features, brazen fronts, combative attitudes, is a troop (he says) of timid figures, tender before everything, the most graceful and love-worthy whom it has been given to man to depict. In Shakespeare you will meet them in Miranda, Juliet, Desdemona, Virginia, Ophelia, Cordelia, Imogen; but they abound also in the others; and it is a characteristic of the race to have furnished them, as it is of the drama to have represented them. By a singular coincidence the women are more of women, the men more of men, here than elsewhere. The two natures go to its extreme—in the one to boldness, the spirit of enterprise and resistance, the warlike, imperious, and unpolished character; in the other to sweetness, devotion, patience, inextinguishable affection (hence the

happiness and strength of the marriage tie), a thing unknown in distant lands, and in France especially a woman here gives herself without drawing back, and places her glory and duty in obedience, forgiveness, adoration, wishing, and pretending only to be melted and absorbed daily deeper and deeper in him whom she has freely and forever chosen." This is an old German instinct. The soul in this race is at once primitive and serious. Women are disposed to follow the noble dream called duty. "Thus, supported by innocence and conscience, they introduce into love a profound and upright sentiment, abjure coquetry, vanity, and flirtation; they do not lie, they are not affected. When they love they are not tasting a forbidden fruit, but are binding themselves for their whole life. Thus understood, love becomes almost a holy thing; the spectator no longer wishes to be malicious or to jest; women do not think of their own happiness, but of that of the loved ones; they aim not at pleasure, but at devotion."

Thus far M. Taine's brilliant antitheses—the most fascinating and most dangerous model for a young writer. But we are indebted to him for a most suggestive study of the period. His astonishment, the astonishment of the Gallic mind, at what he finds, is a measure of the difference in the literature of the two races as an expression of their life. It was natural that he should somewhat exaggerate what he regards as the source of this expression, leaving out of view, as he does, certain great forces and currents which an outside observer cannot feel as the race itself feels. We look, indeed, for the local color of this English literature in the manners and habits of the times, traits of which Taine has so skillfully made a mosaic from Harrison, Stubbes, Stowe, Holinshed, and the pages of Reed and Drake; but we look for that which made it something more than a mirror of contemporary manners, vices, and virtues, made it representative of universal men, to other causes and forces—such as the Reformation, the immense stir, energy, and ambition of the age (the result of invention and discovery), newly awakened to the sense that there was a world to be won and made tributary; that England, and, above all places on the globe at that moment, London, was the centre of a display of energy and adventure such as has been scarcely paralleled in history. And underneath it all was the play of an uneasy, protesting democracy, eager to express itself in adventure, by changing its condition, in the joy of living and overcoming, and in literature, with small regard for tradition or the unities.

When Shakespeare came up to London with his first poems in his pocket, the town was so great and full of marvels, and luxury, and entertainment, as to excite the astonishment of continental visitors. It swarmed with soldiers, adventurers, sailors who were familiar with all seas and every port, men with projects, men with marvelous tales. It teemed with schemes of colonization, plans of amassing wealth by trade, by commerce, by planting, mining, fishing, and by the quick eye and the strong hand. Swaggering in the coffee-houses and ruffling it in the streets were the men who had sailed with Frobisher and Drake and Sir Humphrey Gilbert, Hawkins, and Sir Richard Granville; had perhaps witnessed the heroic death of Sir Philip Sidney, at Zutphen; had served with Raleigh in Anjou, Picardy, Languedoc, in the Netherlands, in the Irish civil war; had taken part in the dispersion of the Spanish Armada, and in the bombardment of Cadiz; had filled their cups to the union of Scotland with England; had suffered shipwreck on the Barbary Coast, or had, by the fortune of war, felt the grip of the Spanish Inquisition; who could tell tales of the marvels seen in new-found America and the Indies, and, perhaps, like Captain John Smith, could mingle stories of the naive simplicity of the natives beyond the Atlantic, with charming narratives of the wars in Hungary, the beauties of the seraglio of the Grand Turk, and the barbaric pomp of the Khan of Tartary. There were those in the streets who would see Raleigh go to the block on the scaffold in Old Palace Yard, who would fight against King Charles on the fields of Newbury or Naseby, Kinton or Marston Moor, and perchance see the exit of Charles himself from another scaffold erected over against the Banqueting House.

Although London at the accession of James I. (1603) had only about one hundred and fifty thousand inhabitants—the population of England then numbering about five million—it was so full of life and activity that Frederick, Duke of Wurtemberg, who saw it a few years before, in 1592, was impressed with it as a large, excellent, and mighty city of business, crowded with people buying and selling merchandise, and trading in almost every corner of the world, a very populous city, so that one can scarcely pass along the streets on account of the throng; the inhabitants, he says, are magnificently appareled, extremely proud and overbearing, who scoff and laugh at foreigners, and no one dare oppose them lest the street boys and apprentices collect together in immense crowds and strike to right and left unmercifully without regard to persons.

There prevailed an insatiable curiosity for seeing strange sights and hearing strange adventures, with an eager desire for visiting foreign countries, which Shakespeare and all the play-writers satirize. Conversation turned upon the wonderful discoveries of travelers, whose voyages to the New World occupied much of the public attention. The exaggeration which from love of importance inflated the narratives, the poets also take note of. There was also a universal taste for hazard in money as well as in travel, for putting it out on risks at exorbitant interest, and the habit of gaming reached prodigious excess. The passion for sudden wealth was fired by the success of the sea-rovers, news of which inflamed the imagination. Samuel Kiechel, a merchant of Ulm, who was in London in 1585, records that, "news arrived of a Spanish ship captured by Drake, in which it was said there were two millions of uncoined gold and silver in ingots, fifty thousand crowns in coined reals, seven thousand hides, four chests of pearls, each containing two bushels, and some sacks of cochineal—the whole valued at twenty-five barrels of gold; it was said to be one year and a half's tribute from Peru."

The passion for travel was at such a height that those who were unable to accomplish distant journeys, but had only crossed over into France and Italy, gave themselves great airs on their return. "Farewell, monsieur traveler," says Shakespeare; "look, you lisp, and wear strange suits; disable all the benefits of your own country; be out of love with your nativity, and almost chide God for making you that countenance you are, or I will scarce think you have swam in a gondola." The Londoners dearly loved gossip, and indulged in exaggeration of speech and high-flown compliment. One gallant says to another: "O, signior, the star that governs my life is contentment; give me leave to interre myself in your arms."—"Not so, sir, it is too unworthy an enclosure to contain such preciousness!"

Dancing was the daily occupation rather than the amusement at court and elsewhere, and the names of dances exceeded the list of the virtues—such as the French brawl, the pavon, the measure, the canary, and many under the general titles of corantees, jigs, galliards, and fancies. At the dinner and ball given by James

I. to Juan Fernandez de Velasco, Constable of Castile, in 1604, fifty ladies of honor, very elegantly dressed and extremely beautiful, danced with the noblemen and gentlemen. Prince Henry danced a galliard with a lady, "with much sprightliness and modesty, cutting several capers in the course of the dance"; the Earl of Southampton led out the queen, and with three other couples danced a brando, and so on, the Spanish visitors looking on. When Elizabeth was old and had a wrinkled face and black teeth, she was one day discovered practicing the dance step alone, to the sound of a fiddle, determined to keep up to the last the limberness and agility necessary to impress foreign ambassadors with her grace and youth. There was one custom, however, that may have made dancing a labor of love: it was considered ill manners for the gentleman not to kiss his partner. Indeed, in all households and in all ranks of society the guest was expected to salute thus all the ladies a custom which the grave Erasmus, who was in England in the reign of Henry VIII., found not disagreeable.

Magnificence of display went hand in hand with a taste for cruel and barbarous amusements. At this same dinner to the Constable of Castile, the two buffets of the king and queen in the audience-chamber, where the banquet was held, were loaded with plate of exquisite workmanship, rich vessels of gold, agate, and other precious stones. The constable drank to the king the health of the queen from the lid of a cup of agate of extraordinary beauty and richness, set with diamonds and rubies, praying his majesty would condescend to drink the toast from the cup, which he did accordingly, and then the constable directed that the cup should remain in his majesty's buffet. The constable also drank to the queen the health of the king from a very beautiful dragon-shaped cup of crystal garnished with gold, drinking from the cover, and the queen, standing up, gave the pledge from the cup itself, and then the constable ordered that the cup should remain in the queen's buffet.

The banquet lasted three hours, when the cloth was removed, the table was placed upon the ground—that is, removed from the dais—and their majesties, standing upon it, washed their hands in basins, as did the others. After the dinner was the ball, and that ended, they took their places at the windows of a room that looked out upon a square, where a platform was raised and a vast crowd was assembled to see the king's bears fight with greyhounds. This afforded great amusement. Presently a bull, tied to the end of a rope, was fiercely baited by dogs. After this tumblers danced upon a rope and performed feats of agility on horseback. The constable and his attendants were lighted home by half an hundred halberdiers with torches, and, after the fatigues of the day, supped in private. We are not surprised to read that on Monday, the 30th, the constable awoke with a slight attack of lumbago.

Like Elizabeth, all her subjects were fond of the savage pastime of bear and bull baiting. It cannot be denied that this people had a taste for blood, took delight in brutal encounters, and drew the sword and swung the cudgel with great promptitude; nor were they fastidious in the matter of public executions. Kiechel says that when the criminal was driven in the cart under the gallows, and left hanging by the neck as the cart moved from under him, his friends and acquaintances pulled at his legs in order that he might be strangled the sooner.

When Shakespeare was managing his theatres and writing his plays London was full of foreigners, settled in the city, who no doubt formed part of his audience, for they thought that English players had attained great perfection. In 1621 there were as many as ten thousand strangers in London, engaged in one hundred and twenty-one different trades. The poet need not go far from Blackfriars to pick up scraps of German and folk-lore, for the Hanse merchants were located in great numbers in the neighborhood of the steel-yard in Lower Thames Street.

Foreigners as well as contemporary chronicles and the printed diatribes against luxury bear witness to the profusion in all ranks of society and the variety and richness in apparel. There was a rage for the display of fine clothes. Elizabeth left hanging in her wardrobe above three thousand dresses when she was called to take that unseemly voyage down the stream, on which the clown's brogan jostles the queen's slipper. The plays of Shakespeare, Jonson, Beaumont and Fletcher, and of all the dramatists, are a perfect commentary on the fashions of the day, but a knowledge of the fashions is necessary to a perfect enjoyment of the plays. We see the fine lady in a gown of velvet (the foreigners thought it odd that velvet should be worn in the street), or cloth of gold and silver tissue, her hair eccentrically dressed, and perhaps dyed, a great hat with waving feathers, sometimes a painted face, maybe a mask or a muffler hiding all the features except the eyes, with a muff, silk stockings, high-heeled shoes, imitated from the "chopine" of Venice, perfumed bracelets, necklaces, and gloves—"gloves sweet as damask roses"—a pocket-handkerchief wrought in gold and silver, a small looking-glass pendant at the girdle, and a love-lock hanging wantonly over the shoulder, artificial flowers at the corsage, and a mincing step. "These fashionable women, when they are disappointed, dissolve into tears, weep with one eye, laugh with the other, or, like children, laugh and cry they can both together, and as much pity is to be taken of a woman weeping as of a goose going barefoot," says old Burton.

The men had even greater fondness for finery. Paul Hentzner, the Brandenburg jurist, in 1598, saw, at the Fair at St. Bartholomew, the lord mayor, attended by twelve gorgeous aldermen, walk in a neighboring field, dressed in a scarlet gown, and about his neck a golden chain, to which hung a Golden Fleece. Men wore the hair long and flowing, with high hats and plumes of feathers, and carried muffs like the women; gallants sported gloves on their hats as tokens of ladies' favors, jewels and roses in the ears, a long love-lock under the left ear, and gems in a ribbon round the neck. This tall hat was called a "capatain." Vincentio, in the "Taming of the Shrew," exclaims: "O fine villain! A silken doublet! A velvet hose! A scarlet cloak! And a capatain hat!" There was no limit to the caprice and extravagance. Hose and breeches of silk, velvet, or other rich stuff, and fringed garters wrought of gold or silver, worth five pounds apiece, are some of the items noted. Burton says, "'Tis ordinary for a gallant to put a thousand oaks and an hundred oxen into a suit of apparel, to wear a whole manor on his back." Even serving-men and tailors wore jewels in their shoes.

We should note also the magnificence in the furnishing of houses, the arras, tapestries, cloth of gold and silver, silk hangings of many colors, the splendid plate on the tables and sideboards. Even in the houses of the middle classes the furniture was rich and comfortable, and there was an air of amenity in the chambers and parlors strewn with sweet herbs and daily decked with pretty nosegays and fragrant flowers. Lights were placed on antique candelabra, or, wanting these at suppers, there were living candleholders. "Give me a

torch," says Romeo; "I'll be a candle-holder, and look on." Knowledge of the details of luxury of an English home of the sixteenth century will make exceedingly vivid hosts of allusions in Shakespeare.

Servants were numerous in great households, a large retinue being a mark of gentility, and hospitality was unbounded. During the lord mayor's term in London he kept open house, and every day any stranger or foreigner could dine at his table, if he could find an empty seat. Dinner, served at eleven in the early years of James, attained a degree of epicureanism rivaling dinners of the present day, although the guests ate with their fingers or their knives, forks not coming in till 1611. There was mighty eating and swigging at the banquets, and carousing was carried to an extravagant height, if we may judge by the account of an orgy at the king's palace in 1606, for the delectation of the King and Queen of Denmark, when the company and even their majesties abandoned discretion and sobriety, and "the ladies are seen to roll about in intoxication."

The manners of the male population of the period, says Nathan Drake, seem to have been compounded from the characters of the two sovereigns. Like Elizabeth, they are brave, magnanimous, and prudent; and sometimes, like James, they are credulous, curious, and dissipated. The credulity and superstition of the age, and its belief in the supernatural, and the sumptuousness of masques and pageants at the court and in the city, of which we read so much in the old chronicles, are abundantly reflected in the pages of Jonson, Shakespeare, and other writers.

The town was full of public-houses and pleasure-gardens, but, curiously enough, the favorite place of public parading was the middle aisle of St. Paul's Cathedral—"Paul's Walk," as it was called—which was daily frequented by nobles, gentry, perfumed gallants, and ladies, from ten to twelve and three to six o'clock, to talk on business, politics, or pleasure. Hither came, to acquire the fashions, make assignations, arrange for the night's gaming, or shun the bailiff, the gallant, the gamester, the ladies whose dresses were better than their manners, the stale knight, the captain out of service. Here Falstaff purchased Bardolph. "I bought him," says the knight, "at Paul's." The tailors went there to get the fashions of dress, as the gallants did to display them, one suit before dinner and another after. What a study was this varied, mixed, flaunting life, this dance of pleasure and license before the very altar of the church, for the writers of satire, comedy, and tragedy!

But it is not alone town life and court life and the society of the fine folk that is reflected in the English drama and literature of the seventeenth century, and here is another wide difference between it and the French literature of the same period; rural England and the popular life of the country had quite as much to do in giving tone and color to the writings of the time. It is necessary to know rural England to enter into the spirit of this literature, and to appreciate how thoroughly it took hold of life in every phase. Shakespeare knew it well. He drew from life the country gentleman, the squire, the parson, the pedantic schoolmaster who was regarded as half conjurer, the yeoman or farmer, the dairy maids, the sweet English girls, the country louts, shepherds, boors, and fools. How he loved a fool! He had talked with all these persons, and knew their speeches and humors. He had taken part in the country festivals—May Day, Plow Monday, the Sheep Shearing, the Morris Dances and Maud Marian, the Harvest Home and Twelfth Night. The rustic merrymakings, the feasts in great halls, the games on the greensward, the love of wonders and of marvelous tales, the regard for portents, the naive superstitions of the time pass before us in his pages. Drake, in his "Shakespeare and his Times," gives a graphic and indeed charming picture of the rural life of this century, drawn from Harrison and other sources.

In his spacious hall, floored with stones and lighted by large transom windows, hung with coats of mail and helmets, and all military accoutrements, long a prey to rust, the country squire, seated at a raised table at one end, held a baronial state and dispensed prodigal hospitality. The long table was divided into upper and lower messes by a huge salt-cellar; and the consequence of the guests was marked by their seats above or below the salt. The distinction extended to the fare, for wine frequently circulated only above the salt, and below it the food was of coarser quality. The literature of the time is full of allusions to this distinction. But the luxury of the table and good cooking were well understood in the time of Elizabeth and James. There was massive eating done in those days, when the guests dined at eleven, rose from the banquet to go to evening prayers, and returned to a supper at five or six, which was often as substantial as the dinner. Gervase Markham in his "English Housewife," after treating of the ordering of great feasts, gives directions for "a more humble feast of an ordinary proportion." This "humble feast," he says, should consist for the first course of "sixteen full dishes, that is, dishes of meat that are of substance, and not empty, or for shew—as thus, for example: first, a shield of brawn with mustard; secondly, a boyl'd capon; thirdly, a boyl'd piece of beef; fourthly, a chine of beef roasted; fifthly, a neat's tongue roasted; sixthly, a pig roasted; seventhly, chewets bak'd; eighthly, a goose roasted; ninthly, a swan roasted; tenthly, a turkey roasted; the eleventh, a haunch of venison roasted; the twelfth, a pasty of venison; the thirteenth, a kid with a pudding in the belly; the fourteenth, an olive-pye; the fifteenth, a couple of capons; the sixteenth, a custard or dowsets. Now to these full dishes may be added sallets, fricases, 'quelque choses,' and devised paste; as many dishes more as will make no less than two and thirty dishes, which is as much as can conveniently stand on one table, and in one mess; and after this manner you may proportion both your second and third course, holding fullness on one half the dishes, and shew in the other, which will be both frugal in the splendor, contentment to the guest, and much pleasure and delight to the beholders." After this frugal repast it needed an interval of prayers before supper.

The country squire was a long-lived but not always an intellectual animal. He kept hawks of all kinds, and all sorts of hounds that ran buck, fox, hare, otter, and badger. His great hall was commonly strewn with marrow-bones, and full of hawks' perches, of hounds, spaniels, and terriers. His oyster-table stood at one end of the room, and oysters he ate at dinner and supper. At the upper end of the room stood a small table with a double desk, one side of which held a church Bible, the other Fox's "Book of Martyrs." He drank a glass or two of wine at his meals, put syrup of gilly-flower in his sack, and always had a tun-glass of small beer standing by him, which he often stirred about with rosemary. After dinner, with a glass of ale by his side he improved his mind by listening to the reading of a choice passage out of the "Book of Martyrs."

This is a portrait of one Henry Hastings, of Dorsetshire, in Gilpin's "Forest Scenery." He lived to be a hundred, and never lost his sight nor used spectacles. He got on horseback without help, and rode to the death of the stag till he was past fourscore.

The plain country fellow, plowman, or clown, is several pegs lower, and described by Bishop Earle as one

that manures his ground well, but lets himself lie fallow and untitled. His hand guides the plow, and the plow his thoughts. His mind is not much disturbed by objects, but he can fix a half-hour's contemplation on a good fat cow. His habitation is under a poor thatched roof, distinguished from his barn only by loop-holes that let out the smoke. Dinner is serious work, for he sweats at it as much as at his labor, and he is a terrible fastener on a piece of beef. His religion is a part of his copyhold, which he takes from his landlord and refers it wholly to his discretion, but he is a good Christian in his way, that is, he comes to church in his best clothes, where he is capable only of two prayers—for rain and fair weather.

The country clergymen, at least those of the lower orders, or readers, were distinguished in Shakespeare's time by the appellation "Sir," as Sir Hugh, in the "Merry Wives," Sir Topas, in "Twelfth Night," Sir Oliver, in "As You Like It." The distinction is marked between priesthood and knighthood when Vista says, "I am one that would rather go with Sir Priest than Sir Knight." The clergy were not models of conduct in the days of Elizabeth, but their position excites little wonder when we read that they were often paid less than the cook and the minstrel.

There was great fondness in cottage and hall for merry tales of errant knights, lovers, lords, ladies, dwarfs, friars, thieves, witches, goblins, for old stories told by the fireside, with a toast of ale on the hearth, as in Milton's allusion

*"--to the nut-brown ale,
With stories told of many a feat"*

A designation of winter in "Love's Labour's Lost" is

"When roasted crabs hiss in the bowl."

To "turne a crab" is to roast a wild apple in the fire in order to throw it hissing hot into a bowl of nutbrown ale, into which had been put a toast with some spice and sugar. Puck describes one of his wanton pranks:

*"And sometimes I lurk in a gossip's bowl,
In very likeness of a roasted crab,
And when she drinks against her lips I bob:"*

I love no roast, says John Still, in "Gammer Gurton's Needle,"

*"I love no rost, but a nut-browne torte,
And a crab layde in the fyre;
A lytle bread shall do me stead,
Much bread I not desire."*

In the bibulous days of Shakespeare, the peg tankard, a species of wassail or wish-health bowl, was still in use. Introduced to restrain intemperance, it became a cause of it, as every drinker was obliged to drink down to the peg. We get our expression of taking a man "a peg lower," or taking him "down a peg," from this custom.

In these details I am not attempting any complete picture of the rural life at this time, but rather indicating by illustrations the sort of study which illuminates its literature. We find, indeed, if we go below the surface of manners, sober, discreet, and sweet domestic life, and an appreciation of the virtues. Of the English housewife, says Gervase Markham, was not only expected sanctity and holiness of life, but "great modesty and temperance, as well outwardly as inwardly. She must be of chaste thoughts, stout courage, patient, untired, watchful, diligent, witty, pleasant, constant in friendship, full of good neighborhood, wise in discourse, but not frequent therein, sharp and quick of speech, but not bitter or talkative, secret in her affairs, comortable in her counsels, and generally skillful in the worthy knowledges which do belong to her vocation." This was the mistress of the hospitable house of the country knight, whose chief traits were loyalty to church and state, a love of festivity, and an ardent attachment to field sports. His well-educated daughter is charmingly described in an exquisite poem by Drayton:

He had, as antique stories tell,

*He had, as antique stories tell,
A daughter cleaped Dawsabel,
A maiden fair and free;
And for she was her father's heir,
Full well she ycond the leir
Of mickle courtesy.*

*"The silk well couth she twist and twine,
And make the fine march-pine,
And with the needle work:
And she couth help the priest to say
His matins on a holy day,
And sing a psalm in Kirk.*

*"She wore a frock of frolic green
Might well become a maiden queen,
Which seemly was to see;
A hood to that so neat and fine,
In color like the columbine,
Ywrought full featously.*

*"Her features all as fresh above
As is the grass that grows by Dove,
And lythe as lass of Kent.
Her skin as soft as Lemster wool,
As white as snow on Peakish Hull,
Or swan that swims in Trent.*

*"This maiden in a morn betime
Went forth when May was in the prime
To get sweet setywall,
The honey-suckle, the harlock,
The lily, and the lady-smock,
To deck her summer hall."*

How late such a simple and pretty picture could have been drawn to life is uncertain, but by the middle of the seventeenth century the luxury of the town had penetrated the country, even into Scotland. The dress of a rich farmer's wife is thus described by Dunbar. She had "a robe of fine scarlet, with a white hood, a gay purse and gingling keys pendant at her side from a silken belt of silver tissue; on each finger she wore two rings, and round her waist was bound a sash of grass-green silk, richly embroidered with silver."

Shakespeare was the mirror of his time in things small as well as great. How far he drew his characters from personal acquaintances has often been discussed. The clowns, tinkers, shepherds, tapsters, and such folk, he probably knew by name. In the Duke of Manchester's "Court and Society from Elizabeth to Anne" is a curious suggestion about Hamlet. Reading some letters from Robert, Earl of Essex, to Lady Rich, his sister, the handsome, fascinating, and disreputable Penelope Devereaux, he notes, in their humorous melancholy and discontent with mankind, something in tone and even language which suggests the weak and fantastic side of Hamlet's mind, and asks if the poet may not have conceived his character of Hamlet from Essex, and of Horatio from Southampton, his friend and patron. And he goes on to note some singular coincidences. Essex was supposed by many to have a good title to the throne. In person he had his father's beauty and was all that Shakespeare has described the Prince of Denmark. His mother had been tempted from her duty while her noble and generous husband was alive, and this husband was supposed to have been poisoned by her and her paramour. After the father's murder the seducer had married the guilty mother. The father had not perished without expressing suspicion of foul play against himself, yet sending his forgiveness to his faithless wife. There are many other agreements in the facts of the case and the incidents of the play. The relation of Claudius to Hamlet is the same as that of Leicester to Essex: under pretense of fatherly friendship he was suspicious of his motives, jealous of his actions; kept him much in the country and at college; let him see little of his mother, and clouded his prospects in the world by an appearance of benignant favor. Gertrude's relations with her son Hamlet were much like those of Lettice with Robert Devereaux. Again, it is suggested, in his moodiness, in his college learning, in his love for the theatre and the players, in his desire for the fiery action for which his nature was most unfit, there are many kinds of hints calling up an image of the Danish Prince.

This suggestion is interesting in the view that we find in the characters of the Elizabethan drama not types and qualities, but individuals strongly projected, with all their idiosyncrasies and contradictions. These dramas touch our sympathies at all points, and are representative of human life today, because they reflected the human life of their time. This is supremely true of Shakespeare, and almost equally true of Jonson and many of the other stars of that marvelous epoch. In England as well as in France, as we have said, it was the period of the classic revival; but in England the energetic reality of the time was strong enough to break the classic fetters, and to use classic learning for modern purposes. The English dramatists, like the French, used classic histories and characters. But two things are to be noted in their use of them. First, that the characters and the play of mind and passion in them are thoroughly English and of the modern time. And second, and this seems at first a paradox, they are truer to the classic spirit than the characters in the contemporary French drama. This results from the fact that they are truer to the substance of things, to universal human nature, while the French seem to be in great part an imitation, having root neither in the soil of France nor Attica. M. Guizot confesses that France, in order to adopt the ancient models, was compelled to limit its field in some sort to one corner of human existence. He goes on to say that the present "demands of the drama pleasures and emotions that can no longer be supplied by the inanimate representation of a world that has ceased to exist. The classic system had its origin in the life of the time; that time has passed away; its image subsists in brilliant colors in its works, but can no more be reproduced." Our own literary monuments must rest on other ground. "This ground is not the ground of Corneille or Racine, nor is it that of Shakespeare; it is our own; but Shakespeare's system, as it appears to me, may furnish the plans according to which genius ought now to work. This system alone includes all those social conditions and those general and diverse feelings, the simultaneous conjuncture and activity of which constitute for us at the present day the spectacle of human things."

That is certainly all that any one can claim for Shakespeare and his fellow-dramatists. They cannot be models in form any more than Sophocles and Euripides; but they are to be followed in making the drama, or any literature, expressive of its own time, while it is faithful to the emotions and feeling of universal human nature. And herein, it seems to me, lies the broad distinction between most of the English and French literature of the latter part of the sixteenth and the beginning of the seventeenth centuries. Perhaps I may be indulged in another observation on this topic, touching a later time. Notwithstanding the prevalent notion that the French poets are the sympathetic heirs of classic culture, it appears to me that they are not so imbued with the true classic spirit, art, and mythology as some of our English poets, notably Keats and Shelley.

Ben Jonson was a man of extensive and exact classical erudition; he was a solid scholar in the Greek and Roman literatures, in the works of the philosophers, poets, and historians. He was also a man of uncommon attainments in all the literary knowledge of his time. In some of his tragedies his classic learning was thought to be ostentatiously displayed, but this was not true of his comedy, and on the whole he was too strong to be swamped in pseudo-classicism. For his experience of men and of life was deep and varied. Before he became a public actor and dramatist, and served the court and fashionable society with his entertaining, if pedantic, masques, he had been student, tradesman, and soldier; he had traveled in Flanders and seen Paris, and wandered on foot through the length of England. London he knew as well as a man knows his own house and club, the comforts of its taverns, the revels of lords and ladies, the sports of Bartholomew Fair, and the humors of suburban villages; all the phases, language, crafts, professions of high and low city life were

familiar to him. And in his comedies, as Mr. A. W. Ward pertinently says, his marvelously vivid reproduction of manners is unsurpassed by any of his contemporaries. "The age lives in his men and women, his country gulls and town gulls, his imposters and skeldering captains, his court ladies and would-be court ladies, his puling poetasters and whining Puritans, and, above all, in the whole ragamuffin rout of his Bartholomew Fair. Its pastimes, fashionable and unfashionable, its games and vapors and jeering, its high-polite courtships and its pulpit-shows, its degrading superstitions and confounding hallucinations, its clubs of naughty ladies and its offices of lying news, its taverns and its tobacco shops, its giddy heights and its meanest depths—all are brought before us by our author."

No, he was not swamped by classicism, but he was affected by it, and just here, and in that self-consciousness which Shakespeare was free from, and which may have been more or less the result of his classic erudition, he fails of being one of the universal poets of mankind. The genius of Shakespeare lay in his power to so use the real and individual facts of life as to raise in the minds of his readers a broader and nobler conception of human life than they had conceived before. This is creative genius; this is the idealist dealing faithfully with realistic material; this is, as we should say in our day, the work of the artist as distinguished from the work of the photographer. It may be an admirable but it is not the highest work of the sculptor, the painter, or the writer, that does not reveal to the mind—that comes into relation with it something before out of his experience and beyond the facts either brought before him or with which he is acquainted.

What influence Shakespeare had upon the culture and taste of his own time and upon his immediate audience would be a most interesting inquiry. We know what his audiences were. He wrote for the people, and the theatre in his day was a popular amusement for the multitude, probably more than it was a recreation for those who enjoyed the culture of letters. A taste for letters was prevalent among the upper class, and indeed was fashionable among both ladies and gentlemen of rank. In this the court of Elizabeth set the fashion. The daughter of the duchess was taught not only to distill strong waters, but to construe Greek. When the queen was translating Socrates or Seneca, the maids of honor found it convenient to affect at least a taste for the classics. For the nobleman and the courtier an intimacy with Greek, Latin, and Italian was essential to "good form." But the taste for erudition was mainly confined to the metropolis or the families who frequented it, and to persons of rank, and did not pervade the country or the middle classes. A few of the country gentry had some pretension to learning, but the majority cared little except for hawks and hounds, gaming and drinking; and if they read it was some old chronicle, or story of knightly adventure, "Amadis de Gaul," or a stray playbook, or something like the "History of Long Meg of Westminster," or perhaps a sheet of news. To read and write were still rare accomplishments in the country, and Dogberry expressed a common notion when he said reading and writing come by nature. Sheets of news had become common in the town in James's time, the first newspaper being the English Mercury, which appeared in April, 1588, and furnished food for Jonson's satire in his "Staple of News." His accusation has a familiar sound when he says that people had a "hunger and thirst after published pamphlets of news, set out every Saturday, but made all at home, and no syllable of truth in them."

Though Elizabeth and James were warm patrons of the theatre, the court had no such influence over the plays and players as had the court in Paris at the same period. The theatres were built for the people, and the audiences included all classes. There was a distinction between what were called public and private theatres, but the public frequented both. The Shakespeare theatres, at which his plays were exclusively performed, were the Globe, called public, on the Bankside, and the Blackfriars, called private, on the City side, the one for summer, the other for winter performances. The Blackfriars was smaller than the Globe, was roofed over, and needed to be lighted with candles, and was frequented more by the better class than the more popular Globe. There is no evidence that Elizabeth ever attended the public theatres, but the companies were often summoned to play before her in Whitehall, where the appointments and scenery were much better than in the popular houses.

The price of general admission to the Globe and Blackfriars was sixpence, at the Fashion Theatre twopence, and at some of the inferior theatres one penny. The boxes at the Globe were a shilling, at the Blackfriars one-and-six. The usual net receipts of a performance were from nine to ten pounds, and this was about the sum that Elizabeth paid to companies for a performance at Whitehall, which was always in the evening and did not interfere with regular hours. The theatres opened as early as one o'clock and not later than three in the afternoon. The crowds that filled the pit and galleries early, to secure places, amused themselves variously before the performance began: they drank ale, smoked, fought for apples, cracked nuts, chaffed the boxes, and a few read the cheap publications of the day that were hawked in the theatre. It was a rough and unsavory audience in pit and gallery, but it was a responsive one, and it enjoyed the acting with little help to illusion in the way of scenery. In fact, scenery did not exist, as we understand it. A board inscribed with the name of the country or city indicated the scene of action. Occasionally movable painted scenes were introduced. The interior roof of the stage was painted sky-blue, or hung with drapery of that tint, to represent the heavens. But when the idea of a dark, starless night was to be imposed, or tragedy was to be acted, these heavens were hung with black stuffs, a custom illustrated in many allusions in Shakespeare, like that in the line,

"Hung be the heavens in black, yield day to night"

To hang the stage with black was to prepare it for tragedy. The costumes of the players were sometimes less niggardly than the furnishing of the stage, for it was an age of rich and picturesque apparel, and it was not difficult to procure the cast-off clothes of fine gentlemen for stage use. But there was no lavishing of expense. I am recalling these details to show that the amusement was popular and cheap. The ordinary actors, including the boys and men who took women's parts (for women did not appear on the stage till after the Restoration) received only about five or six shillings a week (for Sundays and all), and the first-class actor, who had a share in the net receipts, would not make more than ninety pounds a year. The ordinary price paid for a new play was less than seven pounds; Oldys, on what authority is not known, says that Shakespeare received only five pounds for "Hamlet."

The influence of the theatre upon politics, contemporary questions that interested the public, and morals, was early recognized in the restraints put upon representations by the censorship, and in the floods of attacks upon its licentious and demoralizing character. The plays of Shakespeare did not escape the most bitter animadversions of the moral reformers. We have seen how Shakespeare mirrored his age, but we have less means of ascertaining what effect he produced upon the life of his time. Until after his death his influence was mainly direct, upon the play-goers, and confined to his auditors. He had been dead seven years before his plays were collected. However the people of his day regarded him, it is safe to say that they could not have had any conception of the importance of the work he was doing. They were doubtless satisfied with him. It was a great age for romances and story-telling, and he told stories, old in new dresses, but he was also careful to use contemporary life, which his hearers understood.

It is not to his own age, but to those following, and especially to our own time, that we are to look for the shaping and enormous influence upon human life of the genius of this poet. And it is measured not by the libraries of comments that his works have called forth, but by the prevalence of the language and thought of his poetry in all subsequent literature, and by its entrance into the current of common thought and speech. It may be safely said that the English-speaking world and almost every individual of it are different from what they would have been if Shakespeare had never lived. Of all the forces that have survived out of his creative time, he is one of the chief.

OUR ITALY.

CHAPTER I.

HOW OUR ITALY IS MADE.

The traveller who descends into Italy by an Alpine pass never forgets the surprise and delight of the transition. In an hour he is whirled down the slopes from the region of eternal snow to the verdure of spring or the ripeness of summer. Suddenly—it may be at a turn in the road—winter is left behind; the plains of Lombardy are in view; the Lake of Como or Maggiore gleams below; there is a tree; there is an orchard; there is a garden; there is a villa overrun with vines; the singing of birds is heard; the air is gracious; the slopes are

terraced, and covered with vineyards; great sheets of silver sheen in the landscape mark the growth of the olive; the dark green orchards of oranges and lemons are starred with gold; the lusty fig, always a temptation as of old, leans invitingly over the stone wall; everywhere are bloom and color under the blue sky; there are shrines by the way-side, chapels on the hill; one hears the melodious bells, the call of the vine-dressers, the laughter of girls.

[Pg 2]

The contrast is as great from the Indians of the Mojave Desert, two types of which are here given, to the vine-dressers of the Santa Ana Valley.

Italy is the land of the imagination, but the sensation on first beholding it from the northern heights, aside from its associations of romance and poetry, can be repeated in our own land by whoever will cross the burning desert of Colorado, or the savage wastes of the Mojave wilderness of stone and sage-brush, and come suddenly, as he must come by train, into the bloom of Southern California. Let us study a little the physical conditions.

The bay of San Diego is about three hundred miles east of San Francisco. The coast line runs south-east, but at Point Conception it turns sharply east, and then curves south-easterly about two hundred and fifty miles to the Mexican coast boundary, the extreme south-west limits of the United States, a few miles below San Diego. This coast, defined by these two limits, has a southern exposure on the sunniest of oceans. Off this coast, south of Point Conception, lies a chain of islands, curving in position in conformity with the shore, at a distance of twenty to seventy miles from the main-land. These islands are San Miguel, Santa Rosa, Santa Cruz, Anacapa, Santa Barbara, San Nicolas, Santa Catalina, San Clemente, and Los Coronados, which lie in Mexican waters. Between this chain of islands and the main-land is Santa Barbara Channel, flowing northward. The great ocean current from the north flows past Point Conception like a mill-race, and makes a suction, or a sort of eddy. It approaches nearer the coast in Lower California, where the return current, which is much warmer, flows northward and westward along the curving shore. The Santa Barbara Channel, which may be called an arm of the Pacific, flows by many a bold point and lovely bay, like those of San Pedro, Redondo, and Santa Monica; but it has no secure harbor, except the magnificent and unique bay of San Diego.

[Pg 3]

MOJAVE DESERT.

The southern and western boundary of Southern California is this mild Pacific sea, studded with rocky and picturesque islands. The northern boundary of this region is ranges of lofty mountains, from five thousand to eleven thousand feet in height, some of them always snow-clad, which run eastward from Point Conception nearly to the Colorado Desert. They are parts of the Sierra Nevada range, but they take various names, Santa Ynes, San Gabriel, San Bernardino, and they are spoken of all together as the Sierra Madre. In the San Gabriel group, "Old Baldy" lifts its snow-peak over nine thousand feet, while the San Bernardino "Grayback" rises over eleven thousand feet above the sea. Southward of this, running down into San Diego County, is the San Jacinto range, also snow-clad; and eastward the land falls rapidly away into the Salt Desert of the Colorado, in which is a depression about three hundred feet below the Pacific.

[Pg 4]

The Point Arguilles, which is above Point Conception, by the aid of the outlying islands, deflects the cold current from the north off the coast of Southern California, and the mountain ranges from Point Conception east divide the State of California into two climatic regions, the southern having more warmth, less rain and fog, milder winds, and less variation of daily temperature than the climate of Central California to the north. [A] Other striking climatic conditions are produced by the daily interaction of the Pacific Ocean and the Colorado Desert, infinitely diversified in minor particulars by the exceedingly broken character of the region—a jumble of bare mountains, fruitful foot-hills, and rich valleys. It would be only from a balloon that one could get an adequate idea of this strange land.

[Pg 5]

The United States has here, then, a unique corner of the earth, without its like in its own vast territory, and unparalleled, so far as I know, in the world. Shut off from sympathy with external conditions by the giant mountain ranges and the desert wastes, it has its own climate unaffected by cosmic changes. Except a tidal wave from Japan, nothing would seem to be able to affect or disturb it. The whole of Italy feels more or less the climatic variations of the rest of Europe. All our Atlantic coast, all our interior basin from Texas to Manitoba, is in climatic sympathy. Here is a region larger than New England which manufactures its own weather and refuses to import any other.

With considerable varieties of temperature according to elevation or protection from the ocean breeze, its climate is nearly, on the whole, as agreeable as that of the Hawaiian Islands, though pitched in a lower key, and with greater variations between day and night. The key to its peculiarity, aside from its southern exposure, is the Colorado Desert. That desert, waterless and treeless, is cool at night and intolerably hot in the daytime, sending up a vast column of hot air, which cannot escape eastward, for Arizona manufactures a

like column. It flows high above the mountains westward till it strikes the Pacific and parts with its heat, creating an immense vacuum which is filled by the air from the coast flowing up the slope and over the range, and plunging down 6000 feet into the desert. "It is easy to understand," says Mr. Van Dyke, making his observations from the summit of the Cuyamaca, in San Diego County, 6500 feet above the sea-level, "how land thus rising a mile or more in fifty or sixty miles, rising away from the coast, and falling off abruptly a mile deep into the driest and hottest of American deserts, could have a great variety of climates.... Only ten miles away on the east the summers are the hottest, and only sixty miles on the west the coolest known in the United States (except on this coast), and between them is every combination that mountains and valleys can produce. And it is easy to see whence comes the sea-breeze, the glory of the California summer. It is passing us here, a gentle breeze of six or eight miles an hour. It is flowing over this great ridge directly into the basin of the Colorado Desert, 6000 feet deep, where the temperature is probably 120°, and perhaps higher. For many leagues each side of us this current is thus flowing at the same speed, and is probably half a mile or more in depth. About sundown,

when the air on the desert cools and descends, the current will change and come the other way, and flood these western slopes with an air as pure as that of the Sahara and nearly as dry.

BIRD'S-EYE VIEW OF RIVERSIDE.

"The air, heated on the western slopes by the sea, would by rising produce considerable suction, which could be filled only from the sea, but that alone would not make the sea-breeze as dry as it is. The principal suction is caused by the rising of heated air from the great desert.... On the top of old Grayback (in San Bernardino) one can feel it [this breeze] setting westward, while in the cañons, 6000 feet below, it is blowing eastward.... All over Southern California the conditions of this breeze are about the same, the great Mojave Desert and the valley of the San Joaquin above operating in the same way, assisted by interior plains and slopes. Hence these deserts, that at first seem to be a disadvantage to the land, are the great conditions of its climate, and are of far more value than if they were like the prairies of Illinois. Fortunately they will remain deserts forever. Some parts will in time be reclaimed by the waters of the Colorado River, but wet spots of a few hundred thousand acres would be too trifling to affect general results, for millions of acres of burning desert would forever defy all attempts at irrigation or settlement."

This desert-born breeze explains a seeming anomaly in regard to the humidity of this coast. I have noticed on the sea-shore that salt does not become damp on the table, that the Portuguese fishermen on Point Loma are drying their fish on the shore, and that while the hydrometer gives a humidity as high as seventy-four, and higher at times, and fog may prevail for three or four days continuously, the fog is rather "dry," and the general impression is that of a dry instead of the damp and chilling atmosphere such as exists in foggy times on the Atlantic coast.

"From the study of the origin of this breeze we see," says Mr. Van Dyke, "why it is that a wind coming from the broad Pacific should be drier than the dry land-breezes of the Atlantic States, causing no damp walls, swelling doors, or rusting guns, and even on the coast drying up, without salt or soda, meat cut in strips an

inch thick and fish much thicker."

At times on the coast the air contains plenty of moisture, but with the rising of this breeze the moisture decreases instead of increases. It should be said also that this constantly returning current of air is always pure, coming in contact nowhere with marshy or malarious influences nor any agency injurious to health. Its character causes the whole coast from Santa Barbara to San Diego to be an agreeable place of residence or resort summer and winter, while its daily inflowing tempers the heat of the far inland valleys to a delightful atmosphere in the shade even in midsummer, while cool nights are everywhere the rule. The greatest surprise of the traveller is that a region which is in perpetual bloom and fruitage, where semi-tropical fruits mature in perfection, and the most delicate flowers dazzle the eye with color the winter through, should have on the whole a low temperature, a climate never enervating, and one requiring a dress of woollen in every month. [Pg 9]

[A] For these and other observations upon physical and climatic conditions I am wholly indebted to Dr. P. C. Remondino and Mr. T. S. Van Dyke, of San Diego, both scientific and competent authorities.

CHAPTER II.

[Pg 10]

OUR CLIMATIC AND COMMERCIAL MEDITERRANEAN.

Winter as we understand it east of the Rockies does not exist. I scarcely know how to divide the seasons. There are at most but three. Spring may be said to begin with December and end in April; summer, with May (whose days, however, are often cooler than those of January), and end with September; while October and November are a mild autumn, when nature takes a partial rest, and the leaves of the deciduous trees are gone. But how shall we classify a climate in which the strawberry (none yet in my experience equal to the Eastern berry) may be eaten in every month of the year, and ripe figs may be picked from July to March? What shall I say of a frost (an affair of only an hour just before sunrise) which is hardly anywhere severe enough to disturb the delicate heliotrope, and even in the deepest valleys where it may chill the orange, will respect the bloom of that fruit on contiguous ground fifty or a hundred feet higher? We boast about many things in the United States, about our blizzards and our cyclones, our inundations and our areas of low pressure, our hottest and our coldest places in the world, but what can we say for this little corner which is practically frostless, and yet never had a sunstroke, knows nothing of thunder-storms and lightning, never experienced a cyclone, which is so warm that the year round one is tempted to live out-of-doors, and so cold that woollen garments are never uncomfortable? Nature here, in this protected and petted area, has the knack of being genial without being enervating, of being stimulating without "bracing" a person into the tomb. I think it conducive to equanimity of spirit and to longevity to sit in an orange grove and eat the fruit and inhale the fragrance of it while gazing upon a snow-mountain. [Pg 11]

SCENE IN SAN BERNARDINO.

This southward-facing portion of California is irrigated by many streams of pure water rapidly falling from the mountains to the sea. The more important are the Santa Clara, the Los Angeles and San Gabriel, the Santa Ana, the Santa Margarita, the San Luis Rey, the San Bernardo, the San Diego, and, on the Mexican border, the Tia Juana. Many of them go dry or flow underground in the summer months (or, as the Californians say, the bed of the river gets on top), but most of them can be used for artificial irrigation. In the lowlands water is sufficiently near the surface to moisten the soil, which is broken and cultivated; in most regions good wells are reached at a small depth, in others artesian-wells spout up abundance of water, and considerable portions of the regions best known for fruit are watered by irrigating ditches and pipes supplied by ample reservoirs in the mountains. From natural rainfall and the sea moisture the mesas and hills, which look arid before ploughing, produce large crops of grain when cultivated after the annual rains, without artificial watering. [Pg 12]

Southern California has been slowly understood even by its occupants, who have wearied the world with boasting of its productiveness. Originally it was a vast cattle and sheep ranch. It was supposed that the land was worthless except for grazing. Held in princely ranches of twenty, fifty, one hundred thousand acres, in some cases areas larger than German principalities, tens of thousands of cattle roamed along the watercourses and over the mesas, vast flocks of sheep cropped close the grass and trod the soil into hardpan. The owners exchanged cattle and sheep for corn, grain, and garden vegetables; they had no faith that they could grow cereals, and it was too much trouble to procure water for a garden or a fruit orchard. It was the firm belief that most of the rolling mesa land was unfit for cultivation, and that neither forest nor fruit trees would grow without irrigation. Between Los Angeles and Redondo Beach is a ranch of 35,000 acres. Seventeen years ago it was owned by a Scotchman, who used the whole of it as a sheep ranch. In selling it to the present owner he warned him not to waste time by attempting to farm it; he himself raised no fruit or vegetables, planted no trees, and bought all his corn, wheat, and barley. The purchaser, however, began to experiment. He planted trees and set out orchards which grew, and in a couple of years he wrote to the former owner that he had 8000 acres in fine wheat. To say it in a word, there is scarcely an acre of the tract which is not highly productive in barley, wheat, corn, potatoes, while considerable parts of it are especially

SCENES IN MONTECITO AND LOS ANGELES.

On this route to the sea the road is lined with gardens. Nothing could be more unpromising in appearance^[Pg 14] than this soil before it is ploughed and pulverized by the cultivator. It looks like a barren waste. We passed a tract that was offered three years ago for twelve dollars an acre. Some of it now is rented to Chinamen at thirty dollars an acre; and I saw one field of two acres off which a Chinaman has sold in one season \$750 worth of cabbages.

The truth is that almost all the land is wonderfully productive if intelligently handled. The low ground has water so near the surface that the pulverized soil will draw up sufficient moisture for the crops; the mesa, if sown and cultivated after the annual rains, matures grain and corn, and sustains vines and fruit-trees. It is singular that the first settlers should never have discovered this productiveness. When it became apparent—that is, productiveness without artificial watering—there spread abroad a notion that irrigation generally was not needed. We shall have occasion to speak of this more in detail, and I will now only say, on good authority, that while cultivation, not to keep down the weeds only, but to keep the soil stirred and prevent its baking, is^[Pg 15] the prime necessity for almost all land in Southern California, there are portions where irrigation is always necessary, and there is no spot where the yield of fruit or grain will not be quadrupled by judicious irrigation. There are places where irrigation is excessive and harmful both to the quality and quantity of oranges and grapes.

The history of the extension of cultivation in the last twenty and especially in the past ten years from the foot-hills of the Sierra Madre in Los Angeles and San Bernardino counties southward to San Diego is very curious. Experiments were timidly tried. Every acre of sand and sage-bush reclaimed southward was supposed to be the last capable of profitable farming or fruit-growing. It is unsafe now to say of any land that has not been tried that it is not good. In every valley and on every hill-side, on the mesas and in the sunny nooks in the mountains, nearly anything will grow, and the application of water produces marvellous results. From San Bernardino and Redlands, Riverside, Pomona, Ontario, Santa Anita, San Gabriel, Pasadena, all the way to Los Angeles, is almost a continuous fruit garden, the green areas only emphasized by wastes yet unreclaimed; a land of charming cottages, thriving towns, hospitable to the fruit of every clime; a land of perpetual sun and ever-flowing breeze, looked down on by purple mountain ranges tipped here and there with enduring snow. And what is in progress here will be seen before long in almost every part of this wonderful land, for conditions of soil and climate are essentially everywhere the same, and capital is finding out how to store in and bring from the fastnesses of the mountains rivers of clear water taken at such^[Pg 16] elevations that the whole arable surface can be irrigated. The development of the country has only just begun.

FAN-PALM, LOS ANGELES.

YUCCA-PALM, SANTA BARBARA.

If the reader will look upon the map of California he will see that the eight counties that form Southern California—San Luis Obispo, Santa Barbara, Ventura, Kern, Los Angeles, San Bernardino, Orange, and San Diego—appear very mountainous. He will also notice that the eastern slopes of San Bernardino and San Diego are deserts. But this is an immense area. San Diego County alone is as large as Massachusetts, Connecticut, and Rhode Island combined, and the amount of arable land in the valleys, on the foot-hills, on the rolling mesas, is enormous, and capable of sustaining a dense population, for its fertility and its yield to the acre under cultivation are incomparable. The reader will also notice another thing. With the railroads now built and certain to be built through all this diversified region, round from the Santa Barbara Mountains to the San Bernardino, the San Jacinto, and down to Cuyamaca, a ride of an hour or two hours brings one to some point on the 250 miles of sea-coast—a sea-coast genial, inviting in winter and summer, never harsh, and rarely tempestuous like the Atlantic shore.

Here is our Mediterranean! Here is our Italy! It is a Mediterranean without marshes and without malaria, and it does not at all resemble the Mexican Gulf, which we have sometimes tried to fancy was like the classic sea that laves Africa and Europe. Nor is this region Italian in appearance, though now and then some bay with its purple hills running to the blue sea, its surrounding mesas and cañons blooming in semi-tropical luxuriance, some conjunction of shore and mountain, some golden color, some white light and sharply defined shadows, some refinement of lines, some poetic tints in violet and ashy ranges, some ultramarine in the sea, or delicate blue in the sky, will remind the traveller of more than one place of beauty in Southern Italy and Sicily. It is a Mediterranean with a more equable climate, warmer winters and cooler summers, than the

North Mediterranean shore can offer; it is an Italy whose mountains and valleys give almost every variety of elevation and temperature.

But it is our commercial Mediterranean. The time is not distant when this corner of the United States will produce in abundance, and year after year without failure, all the fruits and nuts which for a thousand years the civilized world of Europe has looked to the Mediterranean to supply. We shall not need any more to send over the Atlantic for raisins, English walnuts, almonds, figs, olives, prunes, oranges, lemons, limes, and a variety of other things which we know commercially as Mediterranean products. We have all this luxury and wealth at our doors, within our limits. The orange and the lemon we shall still bring from many places; the date and the pineapple and the banana will never grow here except as illustrations of the climate, but it is difficult to name any fruit of the temperate and semi-tropic zones that Southern California cannot be relied on to produce, from the guava to the peach.

It will need further experiment to determine what are the more profitable products of this soil, and it will take longer experience to cultivate them and send them to market in perfection. The pomegranate and the apple thrive side by side, but the apple is not good here unless it is grown at an elevation where frost is certain and occasional snow may be expected. There is no longer any doubt about the peach, the nectarine, the pear, the grape, the orange, the lemon, the apricot, and so on; but I believe that the greatest profit will be in the products that cannot be grown elsewhere in the United States—the products to which we have long given the name of Mediterranean—the olive, the fig, the raisin, the hard and soft shell almond, and the walnut. The orange will of course be a staple, and constantly improve its reputation as better varieties are raised, and the right amount of irrigation to produce the finest and sweetest is ascertained.

It is still a wonder that a land in which there was no indigenous product of value, or to which cultivation could give value, should be so hospitable to every sort of tree, shrub, root, grain, and flower that can be brought here from any zone and temperature, and that many of these foreigners to the soil grow here with a vigor and productiveness surpassing those in their native land. This bewildering adaptability has misled many into unprofitable experiments, and the very rapidity of growth has been a disadvantage. The land has been advertised by its monstrous vegetable productions, which are not fit to eat, and but testify to the fertility of the soil; and the reputation of its fruits, both deciduous and citrus, has suffered by specimens sent to Eastern markets whose sole recommendation was size. Even in the vineyards and orange orchards quality has been sacrificed to quantity. Nature here responds generously to every encouragement, but it cannot be forced without taking its revenge in the return of inferior quality. It is just as true of Southern California as of any other land, that hard work and sagacity and experience are necessary to successful horticulture and agriculture, but it is undeniably true that the same amount of well-directed industry upon a much smaller area of land will produce more return than in almost any other section of the United States. Sensible people do not any longer pay much attention to those tempting little arithmetical sums by which it is demonstrated that paying so much for ten acres of barren land, and so much for planting it with vines or oranges, the income in three years will be a competence to the investor and his family. People do not spend much time now in gaping over abnormal vegetables, or trying to convince themselves that wines of every known variety and flavor can be produced within the limits of one flat and well-watered field. Few now expect to make a fortune by cutting arid land up into twenty-foot lots, but notwithstanding the extravagance of recent speculation, the value of arable land has steadily appreciated, and is not likely to recede, for the return from it, either in fruits, vegetables, or grain, is demonstrated to be beyond the experience of farming elsewhere.

MAGNOLIA AVENUE, RIVERSIDE.

Land cannot be called dear at one hundred or one thousand dollars an acre if the annual return from it is fifty or five hundred dollars. The climate is most agreeable the year through. There are no unpleasant months, and few unpleasant days. The eucalyptus grows so fast that the trimmings from the trees of a small grove or highway avenue will in four or five years furnish a family with its firewood. The strong, fattening alfalfa gives three, four, five, and even six harvests a year. Nature needs little rest, and, with the encouragement of water and fertilizers, apparently none. But all this prodigality and easiness of life detracts a little from ambition. The lesson has been slowly learned, but it is now pretty well coned, that hard work is as necessary here as elsewhere to thrift and independence. The difference between this and many other parts of our land is that nature seems to work with a man, and not against him.

CHAPTER III.

EARLY VICISSITUDES.—PRODUCTIONS.—SANITARY

CLIMATE.

Southern California has rapidly passed through varied experiences, and has not yet had a fair chance to show the world what it is. It had its period of romance, of pastoral life, of lawless adventure, of crazy speculation, all within a hundred years, and it is just now entering upon its period of solid, civilized development. A certain light of romance is cast upon this coast by the Spanish voyagers of the sixteenth century, but its history begins with the establishment of the chain of Franciscan missions, the first of which was founded by the great Father Junipero Serra at San Diego in 1769. The fathers brought with them the vine and the olive, reduced the savage Indians to industrial pursuits, and opened the way for that rancho and adobe civilization which, down to the coming of the American, in about 1840, made in this region the most picturesque life that our continent has ever seen. Following this is a period of desperado adventure and revolution, of pioneer State-building; and then the advent of the restless, the cranky, the invalid, the fanatic, from every other State in the Union. The first experimenters in making homes seem to have fancied that they had come to a ready-made elysium—the idle man's heaven. They seem to have brought with them little knowledge of agriculture or horticulture, were ignorant of the conditions of success in this soil and climate, and left behind the good industrial maxims of the East. The result was a period of chance experiment, one in which extravagant expectation and boasting to some extent took the place of industry. The imagination was heated by the novelty of such varied and rapid productiveness. Men's minds were inflamed by the apparently limitless possibilities. The invalid and the speculator thronged the transcontinental roads leading thither. In this condition the frenzy of 1886-87 was inevitable. I saw something of it in the winter of 1887. The scenes then daily and commonplace now read like the wildest freaks of the imagination. ^[Pg 25]

The bubble collapsed as suddenly as it expanded. Many were ruined, and left the country. More were merely ruined in their great expectations. The speculation was in town lots. When it subsided it left the climate as it was, the fertility as it was, and the value of arable land not reduced. Marvellous as the boom was, I think the present recuperation is still more wonderful. In 1890, to be sure, I miss the bustle of the cities, and the creation of towns in a week under the hammer of the auctioneer. But in all the cities, and most of the villages, there has been growth in substantial buildings, and in the necessities of civic life—good sewerage, water supply, and general organization; while the country, as the acreage of vines and oranges, wheat and barley, grain and corn, and the shipments by rail testify, has improved more than at any other period, and commerce is beginning to feel the impulse of a genuine prosperity, based upon the intelligent cultivation of the ground. School-houses have multiplied; libraries have been founded; many "boom" hotels, built in order to sell city lots in the sage-brush, have been turned into schools and colleges. ^[Pg 26]

There is immense rivalry between different sections. Every Californian thinks that the spot where his house stands enjoys the best climate and is the most fertile in the world; and while you are with him you think he is justified in his opinion; for this rivalry is generally a wholesome one, backed by industry. I do not mean to say that the habit of tall talk is altogether lost. Whatever one sees he is asked to believe is the largest and best in the world. The gentleman of the whip who showed us some of the finest places in Los Angeles—places that in their wealth of flowers and semi-tropical gardens would rouse the enthusiasm of the most jaded traveller—was asked whether there were any finer in the city. "Finer? Hundreds of them;" and then, meditatively and regretfully, "I should not dare to show you the best." The semi-ecclesiastical custodian of the old adobe mission of San Gabriel explained to us the twenty portraits of apostles on the walls, all done by Murillo. As they had got out of repair, he had them all repainted by the best artist. "That one," he said, simply, "cost ten dollars. It often costs more to repaint a picture than to buy an original."

The temporary evils in the train of the "boom" are fast disappearing. I was told that I should find the country stagnant. Trade, it is true, is only slowly coming in, real-estate deals are sleeping, but in all avenues of solid prosperity and productiveness the country is the reverse of stagnant. Another misapprehension this visit is correcting. I was told not to visit Southern California at this season on account of the heat. But I have no experience of a more delightful summer climate than this, especially on or near the coast. ^[Pg 27]

AVENUE LOS ANGELES.

In secluded valleys in the interior the thermometer rises in the daytime to 85°, 90°, and occasionally 100°, but I have found no place in them where there was not daily a refreshing breeze from the ocean, where the dryness of the air did not make the heat seem much less than it was, and where the nights were not agreeably cool. My belief is that the summer climate of Southern California is as desirable for pleasure-seekers, for invalids, for workmen, as its winter climate. It seems to me that a coast temperature 60° to 75°, stimulating, without harshness or dampness, is about the perfection of summer weather. It should be said, however, that there are secluded valleys which become very hot in the daytime in midsummer, and ^[Pg 29]

intolerably dusty. The dust is the great annoyance everywhere. It gives the whole landscape an ashy tint, like some of our Eastern fields and way-sides in a dry August. The verdure and the wild flowers of the rainy season disappear entirely. There is, however, some picturesque compensation for this dust and lack of green. The mountains and hills and great plains take on wonderful hues of brown, yellow, and red.

I write this paragraph in a high chamber in the Hotel del Coronado, on the great and fertile beach in front of San Diego. It is the 2d of June. Looking southward, I see the great expanse of the Pacific Ocean, sparkling^[Pg 30] in the sun as blue as the waters at Amalfi. A low surf beats along the miles and miles of white sand continually, with the impetus of far-off seas and trade-winds, as it has beaten for thousands of years, with one unending roar and swish, and occasional shocks of sound as if of distant thunder on the shore. Yonder, to the right, Point Loma stretches its sharp and rocky promontory into the ocean, purple in the sun, bearing a light-house on its highest elevation. From this signal, bending in a perfect crescent, with a silver rim, the shore sweeps around twenty-five miles to another promontory running down beyond Tia Juana to the Point of Rocks, in Mexican territory. Directly in front—they say eighteen miles away, I think five sometimes, and sometimes a hundred—lie the islands of Coronado, named, I suppose, from the old Spanish adventurer Vasques de Coronado, huge bulks of beautiful red sandstone, uninhabited and barren, becalmed there in the changing blue of sky and sea, like enormous mastless galleons, like degraded icebergs, like Capri and Ischia. They say that they are stationary. I only know that when I walk along the shore towards Point Loma they seem to follow, until they lie opposite the harbor entrance, which is close by the promontory; and that when I return, they recede and go away towards Mexico, to which they belong. Sometimes, as seen from the beach, owing to the difference in the humidity of the strata of air over the ocean, they seem smaller at the bottom than at the top. Occasionally they come quite near, as do the sea-lions and the gulls, and again they almost fade out of the horizon in a violet light. This morning they stand away, and the fleet of white-sailed fishing-boats from the Portuguese hamlet of La Playa, within the harbor entrance, which is dancing off Point Loma, will have a long sail if they pursue the barracuda to those shadowy rocks. [Pg 31]

IN THE GARDEN AT SANTA BARBARA MISSION.

We crossed the bay the other day, and drove up a wild road to the height of the promontory, and along its^[Pg 33] narrow ridge to the light-house. This site commands one of the most remarkable views in the accessible civilized world, one of the three or four really great prospects which the traveller can recall, astonishing in its immensity, interesting in its peculiar details. The general features are the great ocean, blue, flecked with sparkling, breaking wavelets, and the wide, curving coast-line, rising into mesas, foot-hills, ranges on ranges of mountains, the faintly seen snow-peaks of San Bernardino and San Jacinto to the Cuyamaca and the flat top of Table Mountain in Mexico. Directly under us on one side are the fields of kelp, where the whales come to feed in winter; and on the other is a point of sand on Coronado Beach, where a flock of pelicans have assembled after their day's fishing, in which occupation they are the rivals of the Portuguese. The perfect crescent of the ocean beach is seen, the singular formation of North and South Coronado Beach, the entrance to the harbor along Point Loma, and the spacious inner bay, on which lie San Diego and National City, with lowlands and heights outside sprinkled with houses, gardens, orchards, and vineyards. The near hills about this harbor are varied in form and poetic in color, one of them, the conical San Miguel, constantly recalling Vesuvius. Indeed, the near view, in color, vegetation, and forms of hills and extent of arable land, suggests^[Pg 34] that of Naples, though on analysis it does not resemble it. If San Diego had half a million of people it would be more like it; but the Naples view is limited, while this stretches away to the great mountains that overlook the Colorado Desert. It is certainly one of the loveliest prospects in the world, and worth long travel to see.

Standing upon this point of view, I am reminded again of the striking contrasts and contiguous different climates on the coast. In the north, of course not visible from here, is Mount Whitney, on the borders of Inyo County and of the State of Nevada, 15,086 feet above the sea, the highest peak in the United States, excluding Alaska. South of it is Grayback, in the San Bernardino range, 11,000 feet in altitude, the highest

point above its base in the United States. While south of that is the depression in the Colorado Desert in San Diego County, about three hundred feet below the level of the Pacific Ocean, the lowest land in the United States. These three exceptional points can be said to be almost in sight of each other.

[Pg 35]

SCENE AT PASADENA.

I have insisted so much upon the Mediterranean character of this region that it is necessary to emphasize^[Pg 37] the contrasts also. Reserving details and comments on different localities as to the commercial value of products and climatic conditions, I will make some general observations. I am convinced that the fig can not only be grown here in sufficient quantity to supply our markets, but of the best quality. The same may be said of the English walnut. This clean and handsome tree thrives wonderfully in large areas, and has no enemies. The olive culture is in its infancy, but I have never tasted better oil than that produced at Santa Barbara and on San Diego Bay. Specimens of the pickled olive are delicious, and when the best varieties are generally grown, and the best method of curing is adopted, it will be in great demand, not as a mere relish, but as food. The raisin is produced in all the valleys of Southern California, and in great quantities in the hot valley of San Joaquin, beyond the Sierra Madre range. The best Malaga raisins, which have the reputation of being the best in the world, may never come to our market, but I have never eaten a better raisin for size, flavor, and thinness of skin than those raised in the El Cajon Valley, which is watered by the great flume which taps a reservoir in the Cuyamaca Mountains, and supplies San Diego. But the quality of the raisin in California will be improved by experience in cultivation and handling.

The contrast with the Mediterranean region—I refer to the western basin—is in climate. There is hardly any point along the French and Italian coast that is not subject to great and sudden changes, caused by the north wind, which has many names, or in the extreme southern peninsula and islands by the sirocco. There are few points that are not reached by malaria, and in many resorts—and some of them most sunny and agreeable to the invalid—the deadliest fevers always lie in wait. There is great contrast between summer and winter, and exceeding variability in the same month. This variability is the parent of many diseases of the lungs, the bowels, and the liver. It is demonstrated now by long-continued observations that dampness and cold are not^[Pg 38] so inimical to health as variability.

The Southern California climate is an anomaly. It has been the subject of a good deal of wonder and a good deal of boasting, but it is worthy of more scientific study than it has yet received. Its distinguishing feature I take to be its equability. The temperature the year through is lower than I had supposed, and the contrast is not great between the summer and the winter months. The same clothing is appropriate, speaking generally, for the whole year. In all seasons, including the rainy days of the winter months, sunshine is the rule. The variation of temperature between day and night is considerable, but if the new-comer exercises a little care, he will not be unpleasantly affected by it. There are coast fogs, but these are not chilling and raw. Why it is that with the hydrometer showing a considerable humidity in the air the general effect of the climate is that of dryness, scientists must explain. The constant exchange of desert airs with the ocean air may account for the anomaly, and the actual dryness of the soil, even on the coast, is put forward as another explanation. Those who come from heated rooms on the Atlantic may find the winters cooler than they expect, and those used to the heated terms of the Mississippi Valley and the East will be surprised at the cool and salubrious summers. A land without high winds or thunder-storms may fairly be said to have a unique climate.

[Pg 39]

LIVE-OAK NEAR LOS ANGELES.

I suppose it is the equability and not conditions of dampness or dryness that renders this region so remarkably exempt from epidemics and endemic diseases. The diseases of children prevalent elsewhere are unknown here; they cut their teeth without risk, and *cholera infantum* never visits them. Diseases of the bowels are practically unknown. There is no malaria, whatever that may be, and consequently an absence of those various fevers and other disorders which are attributed to malarial conditions. Renal diseases are also wanting; disorders of the liver and kidneys, and Bright's disease, gout, and rheumatism, are not native. The climate in its effect is stimulating, but at the same time soothing to the nerves, so that if "nervous prostration" is wanted, it must be brought here, and cannot be relied on to continue long. These facts are^[Pg 40] derived from medical practice with the native Indian and Mexican population. Dr. Remondino, to whom I have before referred, has made the subject a study for eighteen years, and later I shall offer some of the results of his observations upon longevity. It is beyond my province to venture any suggestion upon the effect of the climate upon deep-seated diseases, especially of the respiratory organs, of invalids who come here for health. I only know that we meet daily and constantly so many persons in fair health who say that it is impossible for them to live elsewhere that the impression is produced that a considerable proportion of the immigrant population was invalid. There are, however, two suggestions that should be made. Care is needed in acclimation to a climate that differs from any previous experience; and the locality that will suit any invalid can only be determined by personal experience. If the coast does not suit him, he may be benefited in a protected valley, or he may be improved on the foot-hills, or on an elevated mesa, or on a high mountain elevation.

One thing may be regarded as settled. Whatever the sensibility or the peculiarity of invalidism, the equable climate is exceedingly favorable to the smooth working of the great organic functions of respiration, digestion, and circulation.

It is a pity to give this chapter a medical tone. One need not be an invalid to come here and appreciate the graciousness of the air; the color of the landscape, which is wanting in our Northern clime; the constant procession of flowers the year through; the purple hills stretching into the sea; the hundreds of hamlets, with^[Pg 41] picturesque homes overgrown with roses and geranium and heliotrope, in the midst of orange orchards and of palms and magnolias, in sight of the snow-peaks of the giant mountain ranges which shut in this land of marvellous beauty.

[Pg 42]

CHAPTER IV.

THE WINTER OF OUR CONTENT.

California is the land of the Pine and the Palm. The tree of the Sierras, native, vigorous, gigantic, and the tree of the Desert, exotic, supple, poetic, both flourish within the nine degrees of latitude. These two, the widely separated lovers of Heine's song, symbolize the capacities of the State, and although the sugar-pine is indigenous, and the date-palm, which will never be more than an ornament in this hospitable soil, was planted by the Franciscan Fathers, who established a chain of missions from San Diego to Monterey over a century ago, they should both be the distinction of one commonwealth, which, in its seven hundred miles of indented sea-coast, can boast the climates of all countries and the products of all zones.

If this State of mountains and valleys were divided by an east and west line, following the general course of the Sierra Madre range, and cutting off the eight lower counties, I suppose there would be conceit enough in either section to maintain that it only is the Paradise of the earth, but both are necessary to make the unique and contradictory California which fascinates and bewilders the traveller. He is told that the inhabitants of San Francisco go away from the draught of the Golden Gate in the summer to get warm, and yet the earliest^[Pg 43] luscious cherries and apricots which he finds in the far south market of San Diego come from the Northern Santa Clara Valley. The truth would seem to be that in an hour's ride in any part of the State one can change his climate totally at any time of the year, and this not merely by changing his elevation, but by getting in or out of the range of the sea or the desert currents of air which follow the valleys.

To recommend to any one a winter climate is far from the writer's thought. No two persons agree on what is desirable for a winter residence, and the inclination of the same person varies with his state of health. I can

only attempt to give some idea of what is called the winter months in Southern California, to which my observations mainly apply. The individual who comes here under the mistaken notion that climate ever does anything more than give nature a better chance, may speedily or more tardily need the service of an undertaker; and the invalid whose powers are responsive to kindly influences may live so long, being unable to get away, that life will be a burden to him. The person in ordinary health will find very little that is hostile to the orderly organic processes. In order to appreciate the winter climate of Southern California one should stay here the year through, and select the days that suit his idea of winter from any of the months. From the fact that the greatest humidity is in the summer and the least in the winter months, he may wear an overcoat in July in a temperature, according to the thermometer, which in January would render the overcoat unnecessary. It is dampness that causes both cold and heat to be most felt. The lowest temperatures, in^[Pg 44] Southern California generally, are caused only by the extreme dryness of the air; in the long nights of December and January there is a more rapid and longer continued radiation of heat. It must be a dry and clear night that will send the temperature down to thirty-four degrees. But the effect of the sun upon this air is instantaneous, and the cold morning is followed at once by a warm forenoon; the difference between the average heat of July and the average cold of January, measured by the thermometer, is not great in the valleys, foot-hills, and on the coast. Five points give this result of average for January and July respectively: Santa Barbara, 52°, 66°; San Bernardino, 51°, 70°; Pomona, 52°, 68°; Los Angeles, 52°, 67°; San Diego, 53°, 66°. The day in the winter months is warmer in the interior and the nights are cooler than on the coast, as shown by the following figures for January: 7 a.m., Los Angeles, 46.5°; San Diego, 47.5°; 3 p.m., Los Angeles, 65.2°; San Diego, 60.9°. In the summer the difference is greater. In June I saw the thermometer reach 103° in Los Angeles when it was only 79° in San Diego. But I have seen the weather unendurable in New York with a temperature of 85°, while this dry heat of 103° was not oppressive. The extraordinary equanimity of the coast climate (certainly the driest marine climate in my experience) will be evident from the average mean for each month, from records of sixteen years, ending in 1877, taken at San Diego, giving each month in order, beginning with January: 53.5°, 54.7°, 56.0°, 58.2°, 60.2°, 64.6°, 67.1°, 69.0°, 66.7°, 62.9°, 58.1°, 56.0°. In the year 1877 the mean temperature at 3 p.m. at San Diego was as follows, beginning with January: 60.9°, 57.7°,^[Pg 45] 62.4°, 63.3°, 66.3°, 68.5°, 69.6°, 69.6°, 69.5°, 69.6°, 64.4°, 60.5°. For the four months of July, August, September, and October there was hardly a shade of difference at 3 p.m. The striking fact in all the records I have seen is that the difference of temperature in the daytime between summer and winter is very small, the great difference being from midnight to just before sunrise, and this latter difference is greater inland than on the coast. There are, of course, frost and ice in the mountains, but the frost that comes occasionally in the low inland valleys is of very brief duration in the morning hour, and rarely continues long enough to have a serious effect upon vegetation.

In considering the matter of temperature, the rule for vegetation and for invalids will not be the same. A spot in which delicate flowers in Southern California bloom the year round may be too cool for many invalids. It must not be forgotten that the general temperature here is lower than that to which most Eastern people are accustomed. They are used to living all winter in overheated houses, and to protracted heated terms rendered worse by humidity in the summer. The dry, low temperature of the California winter, notwithstanding its perpetual sunshine, may seem, therefore, wanting to them in direct warmth. It may take a year or two to acclimate them to this more equable and more refreshing temperature.

Neither on the coast nor in the foot-hills will the invalid find the climate of the Riviera or of Tangier—not the tramontane wind of the former, nor the absolutely genial but somewhat enervating climate of the latter.^[Pg 46] But it must be borne in mind that in this, our Mediterranean, the seeker for health or pleasure can find almost any climate (except the very cold or the very hot), down to the minutest subdivision. He may try the dry marine climate of the coast, or the temperature of the fruit lands and gardens from San Bernardino to Los Angeles, or he may climb to any altitude that suits him in the Sierra Madre or the San Jacinto ranges. The difference may be all-important to him between a valley and a mesa which is not a hundred feet higher; nay, between a valley and the slope of a foot-hill, with a shifting of not more than fifty feet elevation, the change may be as marked for him as it is for the most sensitive young fruit-tree. It is undeniable, notwithstanding these encouraging "averages," that cold snaps, though rare, do come occasionally, just as in summer there will occur one or two or three continued days of intense heat. And in the summer in some localities—it happened in June, 1890, in the Santiago hills in Orange County—the desert sirocco, blowing over the Colorado furnace, makes life just about unendurable for days at a time. Yet with this dry heat sunstroke is never experienced, and the diseases of the bowels usually accompanying hot weather elsewhere are unknown. The experienced traveller who encounters unpleasant weather, heat that he does not expect, cold that he did not provide for, or dust that deprives him of his last atom of good-humor, and is told that it is "exceptional," knows exactly what that word means. He is familiar with the "exceptional" the world over, and he feels a sort of compassion for the inhabitants who have not yet learned the adage, "Good wine needs no^[Pg 47] bush." Even those who have bought more land than they can pay for can afford to tell the truth.

The rainy season in Southern California, which may open with a shower or two in October, but does not set in till late in November, or till December, and is over in April, is not at all a period of cloudy weather or continuous rainfall. On the contrary, bright warm days and brilliant sunshine are the rule. The rain is most likely to fall in the night. There may be a day of rain, or several days that are overcast with distributed rain, but the showers are soon over, and the sky clears. Yet winters vary greatly in this respect, the rainfall being much greater in some than in others. In 1890 there was rain beyond the average, and even on the equable beach of Coronada there were some weeks of weather that from the California point of view were very unpleasant. It was unpleasant by local comparison, but it was not damp and chilly, like a protracted period of falling weather on the Atlantic. The rain comes with a southerly wind, caused by a disturbance far north, and with the resumption of the prevailing westerly winds it suddenly ceases, the air clears, and neither before nor after it is the atmosphere "steamy" or enervating. The average annual rainfall of the Pacific coast diminishes by regular gradation from point to point all the way from Puget Sound to the Mexican boundary. At Neah Bay it is 111 inches, and it steadily lessens down to Santa Cruz, 25.24; Monterey, 11.42; Point Conception, 12.21; San Diego, 11.01. There is fog on the coast in every month, but this diminishes, like the rainfall, from north to south. I have encountered it in both February and June. In the south it is apt to be most persistent in April^[Pg 48]

and May, when for three or four days together there will be a fine mist, which any one but a Scotchman would call rain. Usually, however, the fog-bank will roll in during the night, and disappear by ten o'clock in the morning. There is no wet season properly so called, and consequently few days in the winter months when it is not agreeable to be out-of-doors, perhaps no day when one may not walk or drive during some part of it. Yet as to precipitation or temperature it is impossible to strike any general average for Southern California. In 1883-84 San Diego had 25.77 inches of rain, and Los Angeles (fifteen miles inland) had 38.22. The annual average at Los Angeles is 17.64; but in 1876-77 the total at San Diego was only 3.75, and at Los Angeles only 5.28. Yet elevation and distance from the coast do not always determine the rainfall. The yearly mean rainfall at Julian, in the San Jacinto range, at an elevation of 4500 feet, is 37.74; observations at Riverside, 1050 feet above the sea, give an average of 9.37.

It is probably impossible to give an Eastern man a just idea of the winter of Southern California. Accustomed to extremes, he may expect too much. He wants a violent change. If he quits the snow, the slush, the leaden skies, the alternate sleet and cold rain of New England, he would like the tropical heat, the languor, the color of Martinique. He will not find them here. He comes instead into a strictly temperate region; and even when he arrives, his eyes deceive him. He sees the orange ripening in its dark foliage, the long lines of the eucalyptus, the feathery pepper-tree, the magnolia, the English walnut, the black live-oak,^[Pg 49] the fan-palm, in all the vigor of June; everywhere beds of flowers of every hue and of every country blazing in the bright sunlight—the heliotrope, the geranium, the rare hot-house roses overrunning the hedges of cypress, and the scarlet passion-vine climbing to the roof-tree of the cottages; in the vineyard or the orchard the horticulturist is following the cultivator in his shirt-sleeves; he hears running water, the song of birds, the scent of flowers is in the air, and he cannot understand why he needs winter clothing, why he is always seeking the sun, why he wants a fire at night. It is a fraud, he says, all this visible display of summer, and of an almost tropical summer at that; it is really a cold country. It is incongruous that he should be looking at a date-palm in his overcoat, and he is puzzled that a thermometrical heat that should enervate him elsewhere, stimulates him here. The green, brilliant, vigorous vegetation, the perpetual sunshine, deceive him; he is careless about the difference of shade and sun, he gets into a draught, and takes cold. Accustomed to extremes of temperature and artificial heat, I think for most people the first winter here is a disappointment. I was told by a physician who had eighteen years' experience of the climate that in his first winter he thought he had never seen a people so insensitive to cold as the San Diegans, who seemed not to require warmth. And all this time the trees are growing like asparagus, the most delicate flowers are in perpetual bloom, the annual crops are most luscious. I fancy that the soil is always warm. The temperature is truly moderate. The records for a number of years show that the mid-day temperature of clear days in winter is from 60° to 70° on the coast, from 65° to 80° in the interior, while that of rainy days is about 60° by the sea and inland. Mr. Van^[Pg 50] Dyke says that the lowest mid-day temperature recorded at the United States signal station at San Diego during eight years is 51°. This occurred but once. In those eight years there were but twenty-one days when the mid-day temperature was not above 55°. In all that time there were but six days when the mercury fell below 36° at any time in the night; and but two when it fell to 32°, the lowest point ever reached there. On one of these two last-named days it went to 51° at noon, and on the other to 56°. This was the great "cold snap" of December, 1879.

It goes without saying that this sort of climate would suit any one in ordinary health, inviting and stimulating to constant out-of-door exercise, and that it would be equally favorable to that general breakdown of the system which has the name of nervous prostration. The effect upon diseases of the respiratory organs can only be determined by individual experience. The government has lately been sending soldiers who have consumption from various stations in the United States to San Diego for treatment. This experiment will furnish interesting data. Within a period covering a little over two years, Dr. Huntington, the post surgeon, has had fifteen cases sent to him. Three of these patients had tubercular consumption; twelve had consumption induced by attacks of pneumonia. One of the tubercular patients died within a month after his arrival; the second lived eight months; the third was discharged cured, left the army, and contracted malaria elsewhere, of which he died. The remaining twelve were discharged practically cured of consumption, but^[Pg 51] two of them subsequently died. It is exceedingly common to meet persons of all ages and both sexes in Southern California who came invalided by disease of the lungs or throat, who have every promise of fair health here, but who dare not leave this climate. The testimony is convincing of the good effect of the climate upon all children, upon women generally, and of its rejuvenating effect upon men and women of advanced years.

CHAPTER V.

HEALTH AND LONGEVITY.

In regard to the effect of climate upon health and longevity, Dr. Remondino quotes old Hufeland that "uniformity in the state of the atmosphere, particularly in regard to heat, cold, gravity, and lightness, contributes in a very considerable degree to the duration of life. Countries, therefore, where great and sudden varieties in the barometer and the thermometer are usual cannot be favorable to longevity. Such countries may be healthy, and many men may become old in them, but they will not attain to a great age, for all rapid variations are so many internal mutations, and these occasion an astonishing consumption both of the forces and the organs." Hufeland thought a marine climate most favorable to longevity. He describes, and perhaps we may say prophesied, a region he had never known, where the conditions and combinations were most favorable to old age, which is epitomized by Dr. Remondino: "where the latitude gives warmth and the sea or ocean tempering winds, where the soil is warm and dry and the sun is also bright and warm, where uninterrupted bright clear weather and a moderate temperature are the rule, where extremes neither of heat nor cold are to be found, where nothing may interfere with the exercise of the aged, and where the actual results and cases of longevity will bear testimony as to the efficacy of all its climatic conditions being favorable to a long and comfortable existence."

MIDWINTER, PASADENA.

In an unpublished paper Dr. Remondino comments on the extraordinary endurance of animals and men in^[Pg 55] the California climate, and cites many cases of uncommon longevity in natives. In reading the accounts of early days in California I am struck with the endurance of hardship, exposure, and wounds by the natives and the adventurers, the rancheros, horsemen, herdsmen, the descendants of soldiers and the Indians, their insensibility to fatigue, and their agility and strength. This is ascribed to the climate; and what is true of man is true of the native horse. His only rival in strength, endurance, speed, and intelligence is the Arabian. It was long supposed that this was racial, and that but for the smallness of the size of the native horse, crossing with it would improve the breed of the Eastern and Kentucky racers. But there was reluctance to cross the finely proportioned Eastern horse with his diminutive Western brother. The importation and breeding of thoroughbreds on this coast has led to the discovery that the desirable qualities of the California horse were not racial but climatic. The Eastern horse has been found to improve in size, compactness of muscle, in strength of limb, in wind, with a marked increase in power of endurance. The traveller here notices the fine horses and their excellent condition, and the power and endurance of those that have considerable age. The records made on Eastern race-courses by horses from California breeding farms have already attracted attention. It is also remarked that the Eastern horse is usually improved greatly by a sojourn of a season or^[Pg 56] two on this coast, and the plan of bringing Eastern race-horses here for the winter is already adopted.

Man, it is asserted by our authority, is as much benefited as the horse by a change to this climate. The newcomer may have certain unpleasant sensations in coming here from different altitudes and conditions, but he will soon be conscious of better being, of increased power in all the functions of life, more natural and recuperative sleep, and an accession of vitality and endurance. Dr. Remondino also testifies that it occasionally happens in this rejuvenation that families which have seemed to have reached their limit at the East are increased after residence here.

The early inhabitants of Southern California, according to the statement of Mr. H. H. Bancroft and other reports, were found to be living in Spartan conditions as to temperance and training, and in a highly moral condition, in consequence of which they had uncommon physical endurance and contempt for luxury. This training in abstinence and hardship, with temperance in diet, combined with the climate to produce the astonishing longevity to be found here. Contrary to the customs of most other tribes of Indians, their aged were the care of the community. Dr. W. A. Winder, of San Diego, is quoted as saying that in a visit to El Cajon Valley some thirty years ago he was taken to a house in which the aged persons were cared for. There were half a dozen who had reached an extreme age. Some were unable to move, their bony frame being seemingly ankylosed. They were old, wrinkled, and bleary-eyed; their skin was hanging in leathery folds about their withered limbs; some had hair as white as snow, and had seen some seven-score of years; others, still able to crawl, but so aged as to be unable to stand, went slowly about on their hands and knees, their limbs being attenuated and withered. The organs of special sense had in many nearly lost all activity some generations back. Some had lost the use of their limbs for more than a decade or a generation; but the organs of life and the "great sympathetic" still kept up their automatic functions, not recognizing the fact, and surprisingly indifferent to it, that the rest of the body had ceased to be of any use a generation or more in the past. And it is remarked that "these thoracic and abdominal organs and their physiological action being kept alive and active, as it were, against time, and the silent and unconscious functional activity of the great sympathetic and its ganglia, show a tenacity of the animal tissues to hold on to life that is phenomenal."^[Pg 57]

A TYPICAL GARDEN, NEAR SANTA ANA.

I have no space to enter upon the nature of the testimony upon which the age of certain Indians hereafter^[Pg 59] referred to is based. It is such as to satisfy Dr. Remondino, Dr. Edward Palmer, long connected with the Agricultural Department of the Smithsonian Institution, and Father A. D. Ubach, who has religious charge of the Indians in this region. These Indians were not migratory; they lived within certain limits, and were known to each other. The missions established by the Franciscan friars were built with the assistance of the Indians. The friars have handed down by word of mouth many details in regard to their early missions; others are found in the mission records, such as carefully kept records of family events—births, marriages, and deaths. And there is the testimony of the Indians regarding each other. Father Ubach has known a number who were^[Pg 60] employed at the building of the mission of San Diego (1769-71), a century before he took charge of this mission. These men had been engaged in carrying timber from the mountains or in making brick, and many of them were living within the last twenty years. There are persons still living at the Indian village of Capitan Grande whose ages he estimates at over one hundred and thirty years. Since the advent of civilization the abstemious habits and Spartan virtues of these Indians have been impaired, and their care for the aged has relaxed.

Dr. Palmer has a photograph (which I have seen) of a squaw whom he estimates to be 126 years old. When he visited her he saw her put six watermelons in a blanket, tie it up, and carry it on her back for two miles. He is familiar with Indian customs and history, and a careful cross-examination convinced him that her information of old customs was not obtained by tradition. She was conversant with tribal habits she had seen practised, such as the cremation of the dead, which the mission fathers had compelled the Indians to relinquish. She had seen the Indians punished by the fathers with floggings for persisting in the practice of cremation.

At the mission of San Tomas, in Lower California, is still living an Indian (a photograph of whom Dr. Remondino shows), bent and wrinkled, whose age is computed at 140 years. Although blind and naked, he is still active, and daily goes down the beach and along the beds of the creeks in search of drift-wood, making it his daily task to gather and carry to camp a fagot of wood. [Pg 61]

OLD ADOBE HOUSE, POMONA.

Another instance I give in Dr. Remondino's words: "Philip Crossthwaite, who has lived here since 1843, has an old man on his ranch who mounts his horse and rides about daily, who was a grown man breaking horses for the mission fathers when Don Antonio Serrano was an infant. Don Antonio I know quite well, having attended him through a serious illness some sixteen years ago. Although now at the advanced age of ninety-three, he is as erect as a pine, and he rides his horse with his usual vigor and grace. He is thin and spare and^[Pg 62] very tall, and those who knew him fifty years or more remember him as the most skilful horseman in the neighborhood of San Diego. And yet, as fabulous as it may seem, the man who danced this Don Antonio on his knee when he was an infant is not only still alive, but is active enough to mount his horse and canter about the country. Some years ago I attended an elderly gentleman, since dead, who knew this man as a full-grown man when he and Don Serrano were play-children together. From a conversation with Father Ubach I learned that the man's age is perfectly authenticated to be beyond one hundred and eighteen years."

In the many instances given of extreme old age in this region the habits of these Indians have been those of strict temperance and abstemiousness, and their long life in an equable climate is due to extreme simplicity of diet. In many cases of extreme age the diet has consisted simply of acorns, flour, and water. It is asserted that the climate itself induces temperance in drink and abstemiousness in diet. In his estimate of the climate as a factor of longevity, Dr. Remondino says that it is only necessary to look at the causes of death, and the ages most subject to attack, to understand that the less of these causes that are present the greater are the chances of man to reach great age. "Add to these reflections that you run no gantlet of diseases to undermine or deteriorate the organism; that in this climate childhood finds an escape from those diseases which are the terror of mothers, and against which physicians are helpless, as we have here none of those affections of the first three years of life so prevalent during the summer months in the East and the rest of the United States.^[Pg 63] Then, again, the chance of gastric or intestinal disease is almost incredibly small. This immunity extends

through every age of life. Hepatic and kindred diseases are unknown; of lung affections there is no land that can boast of like exemption. Be it the equability of the temperature or the aseptic condition of the atmosphere, the free sweep of winds or the absence of disease germs, or what else it may be ascribed to, one thing is certain, that there is no pneumonia, bronchitis, or pleurisy lying in wait for either the infant or the aged."

FAN-PALM, FERNANDO ST. LOS ANGELES.

The importance of this subject must excuse the space I have given to it. It is evident from this testimony^[Pg 64] that here are climatic conditions novel and worthy of the most patient scientific investigation. Their effect upon hereditary tendencies and upon persons coming here with hereditary diseases will be studied. Three years ago there was in some localities a visitation of small-pox imported from Mexico. At that time there were cases of pneumonia. Whether these were incident to carelessness in vaccination, or were caused by local unsanitary conditions, I do not know. It is not to be expected that unsanitary conditions will not produce disease here as elsewhere. It cannot be too strongly insisted that this is a climate that the new-comer must get used to, and that he cannot safely neglect the ordinary precautions. The difference between shade and sun is strikingly marked, and he must not be deceived into imprudence by the prevailing sunshine or the general equability.

[Pg 65]

CHAPTER VI.

IS RESIDENCE HERE AGREEABLE?

After all these averages and statistics, and not considering now the chances of the speculator, the farmer, the fruit-raiser, or the invalid, is Southern California a particularly agreeable winter residence? The question deserves a candid answer, for it is of the last importance to the people of the United States to know the truth—to know whether they have accessible by rail a region free from winter rigor and vicissitudes, and yet with few of the disadvantages of most winter resorts. One would have more pleasure in answering the question if he were not irritated by the perpetual note of brag and exaggeration in every locality that each is the paradise of the earth, and absolutely free from any physical discomfort. I hope that this note of exaggeration is not the effect of the climate, for if it is, the region will never be socially agreeable.

There are no sudden changes of season here. Spring comes gradually day by day, a perceptible hourly waking to life and color; and this glides into a summer which never ceases, but only becomes tired and fades into the repose of a short autumn, when the sere and brown and red and yellow hills and the purple mountains are waiting for the rain clouds. This is according to the process of nature; but wherever irrigation^[Pg 66] brings moisture to the fertile soil, the green and bloom are perpetual the year round, only the green is powdered with dust, and the cultivated flowers have their periods of exhaustion.

I should think it well worth while to watch the procession of nature here from late November or December to April. It is a land of delicate and brilliant wild flowers, of blooming shrubs, strange in form and wonderful in color. Before the annual rains the land lies in a sort of swoon in a golden haze; the slopes and plains are bare, the hills yellow with ripe wild-oats or ashy gray with sage, the sea-breeze is weak, the air grows drier, the sun hot, the shade cool. Then one day light clouds stream up from the south-west, and there is a gentle rain. When the sun comes out again its rays are milder, the land is refreshed and brightened, and almost immediately a greenish tinge appears on plain and hill-side. At intervals the rain continues, daily the landscape is greener in infinite variety of shades, which seem to sweep over the hills in waves of color. Upon this carpet of green by February nature begins to weave an embroidery of wild flowers, white, lavender, golden, pink, indigo, scarlet, changing day by day and every day more brilliant, and spreading from patches

into great fields until dale and hill and table-land are overspread with a refinement and glory of color that would be the despair of the carpet-weavers of Daghestan.

This, with the scent of orange groves and tea-roses, with cool nights, snow in sight on the high mountains, an occasional day of rain, days of bright sunshine, when an overcoat is needed in driving, must suffice the sojourner for winter. He will be humiliated that he is more sensitive to cold than the heliotrope or the violet, but he must bear it. If he is looking for malaria, he must go to some other winter resort. If he wants a "norther" continuing for days, he must move on. If he is accustomed to various insect pests, he will miss them here. If there comes a day warmer than usual, it will not be damp or soggy. So far as nature is concerned there is very little to grumble at, and one resource of the traveller is therefore taken away.

But is it interesting? What is there to do? It must be confessed that there is a sort of monotony in the scenery as there is in the climate. There is, to be sure, great variety in a way between coast and mountain, as, for instance, between Santa Barbara and Pasadena, and if the tourist will make a business of exploring the valleys and uplands and cañons little visited, he will not complain of monotony; but the artist and the photographer find the same elements repeated in little varying combinations. There is undeniable repetition in the succession of flower-gardens, fruit orchards, alleys of palms and peppers, vineyards, and the cultivation about the villas is repeated in all directions. The Americans have not the art of making houses or a land picturesque. The traveller is enthusiastic about the exquisite drives through these groves of fruit, with the ashy or the snow-covered hills for background and contrast, and he exclaims at the pretty cottages, vine and rose clad, in their semi-tropical setting, but if by chance he comes upon an old adobe or a Mexican ranch house in the country, he has emotions of a different sort.

[Pg 68]

SCARLET PASSION-VINE.

There is little left of the old Spanish occupation, but the remains of it make the romance of the country, and appeal to our sense of fitness and beauty. It is to be hoped that all such historical associations will be preserved, for they give to the traveller that which our country generally lacks, and which is so largely the attraction of Italy and Spain. Instead of adapting and modifying the houses and homes that the climate suggests, the new American comers have brought here from the East the smartness and prettiness of our modern nondescript architecture. The low house, with recesses and galleries, built round an inner court, or *patio*, which, however small, would fill the whole interior with sunshine and the scent of flowers, is the sort of dwelling that would suit the climate and the habit of life here. But the present occupiers have taken no hints from the natives. In village and country they have done all they can, in spite of the maguey and the cactus and the palm and the umbrella-tree and the live-oak and the riotous flowers and the thousand novel forms of vegetation, to give everything a prosaic look. But why should the tourist find fault with this? The American likes it, and he would not like the picturesqueness of the Spanish or the Latin races.

So far as climate and natural beauty go to make one contented in a winter resort, Southern California has unsurpassed attractions, and both seem to me to fit very well the American temperament; but the associations of art and history are wanting, and the tourist knows how largely his enjoyment of a vacation in Southern Italy or Sicily or Northern Africa depends upon these—upon these and upon the aspects of human nature foreign to his experience.

It goes without saying that this is not Europe, either in its human interest or in a certain refinement of landscape that comes only by long cultivation and the occupancy of ages. One advantage of foreign travel to the restless American is that he carries with him no responsibility for the government or the progress of the country he is in, and that he leaves business behind him; whereas in this new country, which is his own, the development of which is so interesting, and in which the opportunities of fortune seem so inviting, he is constantly tempted "to take a hand in." If, however, he is superior to this fever, and is willing simply to rest, to drift along with the equable days, I know of no other place where he can be more truly contented. Year by year the country becomes more agreeable for the traveller, in the first place, through the improvement in the hotels, and in the second, by better roads. In the large villages and cities there are miles of excellent drives, well sprinkled, through delightful avenues, in a park-like country, where the eye is enchanted with color and luxurious vegetation, and captivated by the remarkable beauty of the hills, the wildness and picturesqueness of which enhance the charming cultivation of the orchards and gardens. And no country is more agreeable for riding and driving, for even at mid-day, in the direct sun rays, there is almost everywhere a refreshing breeze,

and one rides or drives or walks with little sense of fatigue. The horses are uniformly excellent, either in the carriage or under the saddle. I am sure they are remarkable in speed, endurance, and ease of motion. If the visiting season had no other attraction, the horses would make it distinguished.

A great many people like to spend months in a comfortable hotel, lounging on the piazzas, playing lawn-tennis, taking a morning ride or afternoon drive, making an occasional picnic excursion up some mountain cañon, getting up charades, playing at private theatricals, dancing, flirting, floating along with more or less sentiment and only the weariness that comes when there are no duties. There are plenty of places where all these things can be done, and with no sort of anxiety about the weather from week to week, and with the^[Pg 71] added advantage that the women and children can take care of themselves. But for those who find such a life monotonous there are other resources. There is very good fishing in the clear streams in the foot-hills, hunting in the mountains for large game still worthy of the steadiest nerves, and good bird-shooting everywhere. There are mountains to climb, cañons to explore, lovely valleys in the recesses of the hills to be discovered—in short, one disposed to activity and not afraid of roughing it could occupy himself most agreeably and healthfully in the wild parts of San Bernardino and San Diego counties; he may even still start a grizzly in the Sierra Madre range in Los Angeles County. Hunting and exploring in the mountains, riding over the mesas, which are green from the winter rains and gay with a thousand delicate grasses and flowering plants, is manly occupation to suit the most robust and adventurous. Those who saunter in the trim gardens, or fly from one hotel parlor to the other, do not see the best of Southern California in the winter.

[Pg 72]

CHAPTER VII.

THE WINTER ON THE COAST.

But the distinction of this coast, and that which will forever make it attractive at the season when the North Atlantic is forbidding, is that the ocean-side is as equable, as delightful, in winter as in summer. Its sea-side places are truly all-the-year-round resorts. In subsequent chapters I shall speak in detail of different places as to climate and development and peculiarities of production. I will now only give a general idea of Southern California as a wintering place. Even as far north as Monterey, in the central part of the State, the famous Hotel del Monte, with its magnificent park of pines and live-oaks, and exquisite flower-gardens underneath the trees, is remarkable for its steadiness of temperature. I could see little difference between the temperature of June and of February. The difference is of course greatest at night. The maximum the year through ranges from about 65° to about 80°, and the minimum from about 35° to about 58°, though there are days when the thermometer goes above 90°, and nights when it falls below 30°.

[Pg 73]

ROSE-BUSH, SANTA BARBARA.

To those who prefer the immediate ocean air to that air as modified by such valleys as the San Gabriel and^[Pg 75] the Santa Ana, the coast offers a variety of choice in different combinations of sea and mountain climate all along the southern sunny exposure from Santa Barbara to San Diego. In Santa Barbara County the Santa Inez range of mountains runs westward to meet the Pacific at Point Conception. South of this noble range are a number of little valleys opening to the sea, and in one of these, with a harbor and sloping upland and cañon of its own, lies Santa Barbara, looking southward towards the sunny islands of Santa Rosa and Santa Cruz. Above it is the Mission Cañon, at the entrance of which is the best-preserved of the old Franciscan missions. There is a superb drive eastward along the long and curving sea-beach of four miles to the cañon of Monticito, which is rather a series of nooks and terraces, of lovely places and gardens, of plantations of oranges and figs, rising up to the base of the gray mountains. The long line of the Santa Inez suggests the promontory of Sorrento, and a view from the opposite rocky point, which encloses the harbor on the west, by the help of cypresses which look like stone-pines, recalls many an Italian coast scene, and in situation the Bay

of Naples. The whole aspect is foreign, enchanting, and the semi-tropical fruits and vines and flowers, with a golden atmosphere poured over all, irresistibly take the mind to scenes of Italian romance. There is still a little Spanish flavor left in the town, in a few old houses, in names and families historic, and in the life without hurry or apprehension. There is a delightful commingling here of sea and mountain air, and in a hundred fertile nooks in the hills one in the most delicate health may be sheltered from every harsh wind. I think no one ever leaves Santa Barbara without a desire to return to it.

[Pg 76]

Farther down the coast, only eighteen miles from Los Angeles, and a sort of Coney Island resort of that thriving city, is Santa Monica. Its hotel stands on a high bluff in a lovely bend of the coast. It is popular in summer as well as winter, as the number of cottages attest, and it was chosen by the directors of the National Soldiers' Home as the site of the Home on the Pacific coast. There the veterans, in a commodious building, dream away their lives most contentedly, and can fancy that they hear the distant thunder of guns in the pounding of the surf.

At about the same distance from Los Angeles, southward, above Point Vincent, is Redondo Beach, a new resort, which, from its natural beauty and extensive improvements, promises to be a delightful place of sojourn at any time of the year. The mountainous, embracing arms of the bay are exquisite in contour and color, and the beach is very fine. The hotel is perfectly comfortable—indeed, uncommonly attractive—and the extensive planting of trees, palms, and shrubs, and the cultivation of flowers, will change the place in a year or two into a scene of green and floral loveliness; in this region two years, such is the rapid growth, suffices to transform a desert into a park or garden. On the hills, at a little distance from the beach and pier, are the buildings of the Chautauqua, which holds a local summer session here. The Chautauqua people, the country over, seem to have, in selecting slightly and agreeable sites for their temples of education and amusement, as good judgment as the old monks had in planting their monasteries and missions.

[Pg 77]

AT AVALON, SANTA CATALINA ISLAND.

If one desires a thoroughly insular climate, he may cross to the picturesque island of Santa Catalina. All along the coast flowers bloom in the winter months, and the ornamental semi-tropical plants thrive; and there are many striking headlands and pretty bays and gentle seaward slopes which are already occupied by villages, and attract visitors who would practise economy. The hills frequently come close to the shore, forming those valleys in which the Californians of the pastoral period placed their ranch houses. At San Juan Capistrano the fathers had one of their most flourishing missions, the ruins of which are the most picturesque the traveller will find. It is altogether a genial, attractive coast, and if the tourist does not prefer an inland situation, like the Hotel Raymond (which scarcely has a rival anywhere in its lovely surroundings), he will keep on down the coast to San Diego.

The transition from the well-planted counties of Los Angeles and Orange is not altogether agreeable to the eye. One misses the trees. The general aspect of the coast about San Diego is bare in comparison. This simply means that the southern county is behind the others in development. Nestled among the hills there are live-oaks and sycamores; and of course at National City and below, in El Cajon and the valley of the Sweetwater, there are extensive plantations of oranges, lemons, olives, and vines, but the San Diego region generally lies in the sun shadeless. I have a personal theory that much vegetation is inconsistent with the best atmosphere for the human being. The air is nowhere else so agreeable to me as it is in a barren New Mexican or Arizona desert at the proper elevation. I do not know whether the San Diego climate would be injured if the hills were covered with forest and the valleys were all in the highest and most luxuriant vegetation. The theory is that the interaction of the desert and ocean winds will always keep it as it is, whatever man may do. I can only say that, as it is, I doubt if it has its equal the year round for agreeableness and healthfulness in our Union; and it is the testimony of those whose experience of the best Mediterranean climate is more extended and much longer continued than mine, that it is superior to any on that enclosed sea. About this great harbor, whose outer beach has an extent of twenty-five miles, whose inland circuit of mountains must be over fifty miles, there are great varieties of temperature, of shelter and exposure, minute subdivisions of climate, whose personal fitness can only be attested by experience. There is a great difference, for instance, between the quality of the climate at the elevation of the Florence Hotel, San Diego, and the University Heights on the mesa above the town, and that on the long Coronado Beach which protects the inner harbor from the ocean surf. The latter, practically surrounded by water, has a true marine climate, but a peculiar and dry marine climate, as tonic in its effect as that of Capri, and, I believe, with fewer harsh days in the winter season. I wish to speak with entire frankness about this situation, for I am sure that what so much pleases me will suit a great number of people, who will thank me for not being reserved. Doubtless it will not suit hundreds of people as well as some other localities in Southern California, but I found no other place where I had the feeling of absolute content and willingness to stay on indefinitely. There is a geniality about it for which the thermometer does not account, a charm which it is difficult to explain. Much of the agreeability is due to

[Pg 81]

artificial conditions, but the climate man has not made nor marred.

The Coronado Beach is about twelve miles long. A narrow sand promontory, running northward from the main-land, rises to the Heights, then broadens into a table-land, which seems to be an island, and measures about a mile and a half each way; this is called South Beach, and is connected by another spit of sand with a like area called North Beach, which forms, with Point Loma, the entrance to the harbor. The North Beach, covered partly with chaparral and broad fields of barley, is alive with quail, and is a favorite coursing-ground for rabbits. The soil, which appears uninviting, is with water uncommonly fertile, being a mixture of loam, disintegrated granite, and decomposed shells, and especially adapted to flowers, rare tropical trees, fruits, and flowering shrubs of all countries.

The development is on the South Beach, which was in January, 1887, nothing but a waste of sand and chaparral. I doubt if the world can show a like transformation in so short a time. I saw it in February of that year, when all the beauty, except that of ocean, sky, and atmosphere, was still to be imagined. It is now as if the wand of the magician had touched it. In the first place, abundance of water was brought over by a submarine conduit, and later from the extraordinary Coronado Springs (excellent soft water for drinking and bathing, and with a recognized medicinal value), and with these streams the beach began to bloom like a tropical garden. Tens of thousands of trees have attained a remarkable growth in three years. The nursery is^[Pg 82] one of the most interesting botanical and flower gardens in the country; palms and hedges of Monterey cypress and marguerites line the avenues. There are parks and gardens of rarest flowers and shrubs, whose brilliant color produces the same excitement in the mind as strains of martial music. A railway traverses the beach for a mile from the ferry to the hotel. There are hundreds of cottages with their gardens scattered over the surface; there is a race-track, a museum, an ostrich farm, a labyrinth, good roads for driving, and a dozen other attractions for the idle or the inquisitive. ^[Pg 83]

HOTEL DEL CORONADO.

The hotel stands upon the south front of the beach and near the sea, above which it is sufficiently elevated^[Pg 85] to give a fine prospect. The sound of the beating surf is perpetual there. At low tide there is a splendid driving beach miles in extent, and though the slope is abrupt, the opportunity for bathing is good, with a little care in regard to the undertow. But there is a safe natatorium on the harbor side close to the hotel. The stranger, when he first comes upon this novel hotel and this marvellous scene of natural and created beauty, is apt to exhaust his superlatives. I hesitate to attempt to describe this hotel—this airy and picturesque and half-bizarre wooden creation of the architect. Taking it and its situation together, I know nothing else in the world with which to compare it, and I have never seen any other which so surprised at first, that so improved on a two weeks' acquaintance, and that has left in the mind an impression so entirely agreeable. It covers about four and a half acres of ground, including an inner court of about an acre, the rich made soil of which is raised to the level of the main floor. The house surrounds this, in the Spanish mode of building, with a series of galleries, so that most of the suites of rooms have a double outlook—one upon this lovely garden, the other upon the ocean or the harbor. The effect of this interior court or *patio* is to give gayety and an air of friendliness to the place, brilliant as it is with flowers and climbing vines; and when the royal and date palms that are vigorously thriving in it attain their growth it will be magnificent. Big hotels and caravansaries are usually tiresome, unfriendly places; and if I should lay too much stress upon the vast dining-room (which has a floor area of ten thousand feet without post or pillar), or the beautiful breakfast-room, or the circular ballroom (which has an area of eleven thousand feet, with its timber roof open to the lofty observatory), or the music-room, billiard-rooms for ladies, the reading-rooms and parlors, the pretty gallery overlooking the spacious office rotunda, and then say that the whole is illuminated with electric lights, and capable of being heated to any temperature desired—I might convey a false impression as to the actual comfort and homelikeness of this charming place. On the sea side the broad galleries of each story are shut in by glass, which can be opened to admit or shut to exclude the fresh ocean breeze. Whatever the temperature outside, those great galleries are always agreeable for lounging or promenading. For me, I never tire of the sea and its

changing color and movement. If this great house were filled with guests, so spacious are its lounging places I should think it would never appear to be crowded; and if it were nearly empty, so admirably are the rooms^[Pg 86] contrived for family life it will not seem lonesome. I shall add that the management is of the sort that makes the guest feel at home and at ease. Flowers, brought in from the gardens and nurseries, are every where in profusion—on the dining-tables, in the rooms, all about the house. So abundantly are they produced that no amount of culling seems to make an impression upon their mass.

OSTRICH YARD, CORONADO BEACH.

But any description would fail to give the secret of the charm of existence here. Restlessness disappears, for one thing, but there is no languor or depression. I cannot tell why, when the thermometer is at 60° or 63°, the air seems genial and has no sense of chilliness, or why it is not oppressive at 80° or 85°. I am sure the^[Pg 87] place will not suit those whose highest idea of winter enjoyment is tobogganing and an ice palace, nor those who revel in the steam and languor of a tropical island; but for a person whose desires are moderate, whose tastes are temperate, who is willing for once to be good-humored and content in equable conditions, I should commend Coronado Beach and the Hotel del Coronado, if I had not long ago learned that it is unsafe to commend to any human being a climate or a doctor.

But you can take your choice. It lies there, our Mediterranean region, on a blue ocean, protected by barriers of granite from the Northern influences, an infinite variety of plain, cañon, hills, valleys, sea-coast; our New Italy without malaria, and with every sort of fruit which we desire (except the tropical), which will be grown in perfection when our knowledge equals our ambition; and if you cannot find a winter home there or pass some contented weeks in the months of Northern inclemency, you are weighing social advantages against those of the least objectionable climate within the Union. It is not yet proved that this equability and the daily out-door life possible there will change character, but they are likely to improve the disposition and soften the asperities of common life. At any rate, there is a land where from November to April one has not to make a continual fight with the elements to keep alive.

It has been said that this land of the sun and of the equable climate will have the effect that other lands of a southern aspect have upon temperament and habits. It is feared that Northern-bred people, who are guided^[Pg 88] by the necessity of making hay while the sun shines, will not make hay at all in a land where the sun always shines. It is thought that unless people are spurred on incessantly by the exigencies of the changing seasons they will lose energy, and fall into an idle floating along with gracious nature. Will not one sink into a comfortable and easy procrastination if he has a whole year in which to perform the labor of three months? Will Southern California be an exception to those lands of equable climate and extraordinary fertility where every effort is postponed till "to-morrow?"

I wish there might be something solid in this expectation; that this may be a region where the restless American will lose something of his hurry and petty, feverish ambition. Partially it may be so. He will take, he is already taking, something of the tone of the climate and of the old Spanish occupation. But the race instinct of thrift and of "getting on" will not wear out in many generations. Besides, the condition of living at all in Southern California in comfort, and with the social life indispensable to our people, demands labor, not exhausting and killing, but still incessant—demands industry. A land that will not yield satisfactorily without irrigation, and whose best paying produce requires intelligent as well as careful husbandry, will never be an idle land. Egypt, with all its *dolce far niente*, was never an idle land for the laborer.

It may be expected, however, that no more energy will be developed or encouraged than is needed for the daily tasks, and these tasks being lighter than elsewhere, and capable of being postponed, that there will be^[Pg 89] less stress and strain in the daily life. Although the climate of Southern California is not enervating, in fact is stimulating to the new-comer, it is doubtless true that the monotony of good weather, of the sight of perpetual bloom and color in orchards and gardens, will take away nervousness and produce a certain placidity, which might be taken for laziness by a Northern observer. It may be that engagements will not be kept with desired punctuality, under the impression that the enjoyment of life does not depend upon exact response to the second-hand of a watch; and it is not unpleasant to think that there is a corner of the Union where there will be a little more leisure, a little more of serene waiting on Providence, an abatement of the restless rush and haste of our usual life. The waves of population have been rolling westward for a long time, and now, breaking over the mountains, they flow over Pacific slopes and along the warm and inviting seas. Is it altogether an unpleasing thought that the conditions of life will be somewhat easier there, that there will be some physical repose, the race having reached the sunset of the continent, comparable to the desirable placidity of life called the sunset of old age? This may be altogether fanciful, but I have sometimes felt, in the sunny moderation of nature there, that this land might offer for thousands at least a winter of content.

CHAPTER VIII.

THE GENERAL OUTLOOK.—LAND AND PRICES.

From the northern limit of California to the southern is about the same distance as from Portsmouth, New Hampshire, to Charleston, South Carolina. Of these two coast lines, covering nearly ten degrees of latitude, or over seven hundred miles, the Atlantic has greater extremes of climate and greater monthly variations, and the Pacific greater variety of productions. The State of California is, however, so mountainous, cut by longitudinal and transverse ranges, that any reasonable person can find in it a temperature to suit him the year through. But it does not need to be explained that it would be difficult to hit upon any general characteristic that would apply to the stretch of the Atlantic coast named, as a guide to a settler looking for a home; the description of Massachusetts would be wholly misleading for South Carolina. It is almost as difficult to make any comprehensive statement about the long line of the California coast.

It is possible, however, limiting the inquiry to the southern third of the State—an area of about fifty-eight thousand square miles, as large as Maine, New Hampshire, Massachusetts, Connecticut, and Rhode Island—to answer fairly some of the questions oftenest asked about it. These relate to the price of land, its productiveness, the kind of products most profitable, the sort of labor required, and its desirability as a place^[Pg 91] of residence for the laborer, for the farmer or horticulturist of small means, and for the man with considerable capital. Questions on these subjects cannot be answered categorically, but I hope to be able, by setting down my own observations and using trustworthy reports, to give others the material on which to exercise their judgment. In the first place, I think it demonstrable that a person would profitably exchange 160 acres of farming land east of the one hundredth parallel for ten acres, with a water right, in Southern California. [Pg 92]

YUCCA-PALM.

In making this estimate I do not consider the question of health or merely the agreeability of the climate, but the conditions of labor, the ease with which one could support a family, and the profits over and above a fair living. It has been customary in reckoning the value of land there to look merely to the profit of it beyond its support of a family, forgetting that agriculture and horticulture the world over, like almost all other kinds of business, usually do little more than procure a good comfortable living, with incidental education, to those who engage in them. That the majority of the inhabitants of Southern California will become rich by the culture of the orange and the vine is an illusion; but it is not an illusion that twenty times its present population can live there in comfort, in what might be called luxury elsewhere, by the cultivation of the soil, all far removed from poverty and much above the condition of the majority of the inhabitants of the foreign wine and fruit-producing countries. This result is assured by the extraordinary productiveness of the land, uninterrupted the year through, and by the amazing extension of the market in the United States for products that can be nowhere else produced with such certainty and profusion as in California. That State is only just learning how to supply a demand which is daily increasing, but it already begins to command the market in certain fruits. This command of the market in the future will depend upon itself, that is, whether it will send East and North only sound wine, instead of crude, ill-cured juice of the grape, only the best and most carefully canned apricots, nectarines, peaches, and plums, only the raisins and prunes perfectly prepared,^[Pg 93] only such oranges, lemons, and grapes and pears as the Californians are willing to eat themselves. California has yet much to learn about fruit-raising and fruit-curing, but it already knows that to compete with the rest of the world in our markets it must beat the rest of the world in quality. It will take some time yet to remove the unfavorable opinion of California wines produced in the East by the first products of the vineyards sent here.

DATE-PALM.

The difficulty for the settler is that he cannot "take up" ten acres with water in California as he can 160 acres elsewhere. There is left little available Government land. There is plenty of government land not taken up and which may never be occupied, that is, inaccessible mountain and irreclaimable desert. There are also little nooks and fertile spots here and there to be discovered which may be pre-empted, and which will some day have value. But practically all the arable land, or that is likely to become so, is owned now in large tracts, under grants or by wholesale purchase. The circumstances of the case compelled associate effort. Such a^[Pg 94] desert as that now blooming region known as Pasadena, Pomona, Riverside, and so on, could not be subdued by individual exertion. Consequently land and water companies were organized. They bought large tracts of unimproved land, built dams in the mountain cañons, sunk wells, drew water from the rivers, made reservoirs, laid pipes, carried ditches and conduits across the country, and then sold the land with the inseparable water right in small parcels. Thus the region became subdivided among small holders, each independent, but all mutually dependent as to water, which is the *sine qua non* of existence. It is only a few years since there was a forlorn and struggling colony a few miles east of Los Angeles known as the Indiana settlement. It had scant water, no railway communication, and everything to learn about horticulture. That spot is now the famous Pasadena.

What has been done in the Santa Ana and San Gabriel valleys will be done elsewhere in the State. There are places in Kern County, north of the Sierra Madre, where the land produces grain and alfalfa without irrigation, where farms can be bought at from five to ten dollars an acre—land that will undoubtedly increase in value with settlement and also by irrigation. The great county of San Diego is practically undeveloped, and contains an immense area, in scattered mesas and valleys, of land which will produce apples, grain, and grass without irrigation, and which the settler can get at moderate prices. Nay, more, any one with a little ready money, who goes to Southern California expecting to establish himself and willing to work, will be welcomed and aided, and be pretty certain to find some place where he can steadily improve his condition. But the^[Pg 95] regions about which one hears most, which are already fruit gardens and well sprinkled with rose-clad homes, command prices per acre which seem extravagant. Land, however, like a mine, gets its value from what it will produce; and it is to be noted that while the subsidence of the "boom" knocked the value out of twenty-foot city lots staked out in the wilderness, and out of insanely inflated city property, the land upon which crops are raised has steadily appreciated in value.

So many conditions enter into the price of land that it is impossible to name an average price for the arable land of the southern counties, but I have heard good judges place it at \$100 an acre. The lands, with water, are very much alike in their producing power, but some, for climatic reasons, are better adapted to citrus fruits, others to the raisin grape, and others to deciduous fruits. The value is also affected by railway facilities, contiguity to the local commercial centre, and also by the character of the settlement—that is, by its morality, public spirit, and facilities for education. Every town and settlement thinks it has special advantages as to improved irrigation, equability of temperature, adaptation to this or that product, attractions for invalids, tempered ocean breezes, protection from "northers," schools, and varied industries. These things are so much matter of personal choice that each settler will do well to examine widely for himself, and not buy until he is suited.

Some figures, which may be depended on, of actual sales and of annual yields, may be of service. They are of the district east of Pasadena and Pomona, but fairly represent the whole region down to Los Angeles. The^[Pg 96] selling price of raisin grape land unimproved, but with water, at Riverside is \$250 to \$300 per acre; at South Riverside, \$150 to \$200; in the highland district of San Bernardino, and at Redlands (which is a new settlement east of the city of San Bernardino), \$200 to \$250 per acre. At Banning and at Hesperia, which lie north of the San Bernardino range, \$125 to \$150 per acre are the prices asked. Distance from the commercial centre accounts for the difference in price in the towns named. The crop varies with the care and skill of the cultivator, but a fair average from the vines at two years is two tons per acre; three years, three tons; four

years, five tons; five years, seven tons. The price varies with the season, and also whether its sale is upon the vines, or after picking, drying, and sweating, or the packed product. On the vines \$20 per ton is a fair average price. In exceptional cases vineyards at Riverside have produced four tons per acre in twenty months from the setting of the cuttings, and six-year-old vines have produced thirteen and a half tons per acre. If the grower has a crop of, say, 2000 packed boxes of raisins of twenty pounds each box, it will pay him to pack his own crop and establish a "brand" for it. In 1889 three adjoining vineyards in Riverside, producing about the same average crops, were sold as follows: The first vineyard, at \$17 50 per ton on the vines, yielded \$150 per acre; the second, at six cents a pound, in the sweat boxes, yielded \$276 per acre; the third, at \$1 80 per box, packed, yielded \$414 per acre.

Land adapted to the deciduous fruits, such as apricots and peaches, is worth as much as raisin land, and some years pays better. The pear and the apple need greater elevation, and are of better quality when grown^[Pg 97] on high ground than in the valleys. I have reason to believe that the mountain regions of San Diego County are specially adapted to the apple.

Good orange land unimproved, but with water, is worth from \$300 to \$500 an acre. If we add to this price the cost of budded trees, the care of them for four years, and interest at eight per cent. per annum for four years, the cost of a good grove will be about \$1000 an acre. It must be understood that the profit of an orange grove depends upon care, skill, and business ability. The kind of orange grown with reference to the demand, the judgment about more or less irrigation as affecting the quality, the cultivation of the soil, and the arrangements for marketing, are all elements in the problem. There are young groves at Riverside, five years old, that are paying ten per cent. net upon from \$3000 to \$5000 an acre; while there are older groves, which, at the prices for fruit in the spring of 1890—\$1 60 per box for seedlings and \$3 per box for navels delivered at the packing-houses—paid at the rate of ten per cent. net on \$7500 per acre.

In all these estimates water must be reckoned as a prime factor. What, then, is water worth per inch, generally, in all this fruit region from Redlands to Los Angeles? It is worth just the amount it will add to the commercial value of land irrigated by it, and that may be roughly estimated at from \$500 to \$1000 an inch of continuous flow. Take an illustration. A piece of land at Riverside below the flow of water was worth \$300 an acre. Contiguous to it was another piece not irrigated which would not sell for \$50 an acre. By bringing water to it, it would quickly sell for \$300, thus adding \$250 to its value. As the estimate at Riverside is that one inch^[Pg 98] of water will irrigate five acres of fruit land, five times \$250 would be \$1250 per inch, at which price water for irrigation has actually been sold at Riverside.

The standard of measurement of water in Southern California is the miner's inch under four inches' pressure, or the amount that will flow through an inch-square opening under a pressure of four inches measured from the surface of the water in the conduit to the centre of the opening through which it flows. This is nine gallons a minute, or, as it is figured, 1728 cubic feet or 12,960 gallons in twenty-four hours, and 1.50 of a cubic foot a second. This flow would cover ten acres about eighteen inches deep in a year; that is, it would give the land the equivalent of eighteen inches of rain, distributed exactly when and where it was needed, none being wasted, and more serviceable than fifty inches of rainfall as it generally comes. This, with the natural rainfall, is sufficient for citrus fruits and for corn and alfalfa, in soil not too sandy, and it is too much for grapes and all deciduous fruits.

[Pg 99]

CHAPTER IX.

THE ADVANTAGES OF IRRIGATION.

It is necessary to understand this problem of irrigation in order to comprehend Southern California, the exceptional value of its arable land, the certainty and great variety of its products, and the part it is to play in our markets. There are three factors in the expectation of a crop—soil, sunshine, and water. In a region where we can assume the first two to be constant, the only uncertainty is water. Southern California is practically without rain from May to December. Upon this fact rests the immense value of its soil, and the certainty that it can supply the rest of the Union with a great variety of products. This certainty must be purchased by a previous investment of money. Water is everywhere to be had for money, in some localities by surface wells, in others by artesian-wells, in others from such streams as the Los Angeles and the Santa Ana, and from reservoirs secured by dams in the heart of the high mountains. It is possible to compute the cost of any one of the systems of irrigation, to determine whether it will pay by calculating the amount of land it will irrigate. The cost of procuring water varies greatly with the situation, and it is conceivable that money can be lost in such an investment, but I have yet to hear of any irrigation that has not been more or less successful. ^[Pg 100]

Farming and fruit-raising are usually games of hazard. Good crops and poor crops depend upon enough rain and not too much at just the right times. A wheat field which has a good start with moderate rain may later wither in a drought, or be ruined by too much water at the time of maturity. And, avoiding all serious reverses from either dryness or wet, every farmer knows that the quality and quantity of the product would be immensely improved if the growing stalks and roots could have water when and only when they need it. The difference would be between, say, twenty and forty bushels of grain or roots to the acre, and that means the difference between profit and loss. There is probably not a crop of any kind grown in the great West that would not be immensely benefited if it could be irrigated once or twice a year; and probably anywhere that water is attainable the cost of irrigation would be abundantly paid in the yield from year to year. Farming in the West with even a little irrigation would not be the game of hazard that it is. And it may further be assumed that there is not a vegetable patch or a fruit orchard East or West that would not yield better quality and more abundantly with irrigation. ^[Pg 101]

RAISIN-CURING.

But this is not all. Any farmer who attempts to raise grass and potatoes and strawberries on contiguous fields, subject to the same chance of drought or rainfall, has a vivid sense of his difficulties. The potatoes are spoiled by the water that helps the grass, and the coquettish strawberry will not thrive on the regimen that suits the grosser crops. In California, which by its climate and soil gives a greater variety of products than any other region in the Union, the supply of water is adjusted to the needs of each crop, even on contiguous fields. No two products need the same amount of water, or need it at the same time. The orange needs more than the grape, the alfalfa more than the orange, the peach and apricot less than the orange; the olive, the fig, the almond, the English walnut, demand each a different supply. Depending entirely on irrigation six months of the year, the farmer in Southern California is practically certain of his crop year after year; and if all his plants and trees are in a healthful condition, as they will be if he is not too idle to cultivate as well as irrigate, his yield will be about double what it would be without systematic irrigation. It is this practical control of the water the year round, in a climate where sunshine is the rule, that makes the productiveness of California so large as to be incomprehensible to Eastern people. Even the trees are not dormant more than three or four months in the year. Pg 102]

But irrigation, in order to be successful, must be intelligently applied. In unskilful hands it may work more damage than benefit. Mr. Theodore S. Van Dyke, who may always be quoted with confidence, says that the ground should never be flooded; that water must not touch the plant or tree, or come near enough to make the soil bake around it; and that it should be let in in small streams for two or three days, and not in large streams for a few hours. It is of the first importance that the ground shall be stirred as soon as dry enough, the cultivation to be continued, and water never to be substituted for the cultivator to prevent baking. The methods of irrigation in use may be reduced to three. First, the old Mexican way—running a small ditch from tree to tree, without any basin round the tree. Second, the basin system, where a large basin is made round the tree, and filled several times. This should only be used where water is scarce, for it trains the roots like a brush, instead of sending them out laterally into the soil. Third, the Riverside method, which is the best in the world, and produces the largest results with the least water and the least work. It is the closest imitation of the natural process of wetting by gentle rain. "A small flume, eight or ten inches square, of common red-wood is laid along the upper side of a ten-acre tract. At intervals of one to three feet, according to the nature of the ground and the stuff to be irrigated, are bored one-inch holes, with a small wooden button over them to Pg 103] regulate the flow. This flume costs a trifle, is left in position, lasts for years, and is always ready. Into this flume is turned from the ditch an irrigating head of 20, 25, or 30 inches of water, generally about 20 inches. This is divided by the holes and the buttons into streams of from one-sixth to one-tenth of an inch each, making from 120 to 200 small streams. From five to seven furrows are made between two rows of trees, two between rows of grapes, one furrow between rows of corn, potatoes, etc. It may take from fifteen to twenty hours for one of the streams to get across the tract. They are allowed to run from forty-eight to seventy-two hours. The ground is then thoroughly wet in all directions, and three or four feet deep. As soon as the ground is dry enough cultivation is begun, and kept up from six to eight weeks before water is used again." Only when the ground is very sandy is the basin system necessary. Long experiment has taught that this system is by far the best; and, says Mr. Van Dyke, "Those whose ideas are taken from the wasteful systems of flooding or soaking from big ditches have something to learn in Southern California."

As to the quantity of water needed in the kind of soil most common in Southern California I will again quote Mr. Van Dyke: "They will tell you at Riverside that they use an inch of water to five acres, and some say an inch to three acres. But this is because they charge to the land all the waste on the main ditch, and because they use thirty per cent. of the water in July and August, when it is the lowest. But this is no test of the duty of water; the amount actually delivered on the land should be taken. What they actually use for ten acres at Pg 104] Riverside, Redlands, etc., is a twenty-inch stream of three days' run five times a year, equal to 300 inches for one day, or one inch steady run for 300 days. As an inch is the equivalent of 365 inches for one day, or one inch for 365 days, 300 inches for one day equals an inch to twelve acres. Many use even less than this, running the water only two or two and a half days at a time. Others use more head; but it rarely exceeds 24 inches for three days and five times a year, which would be 72 multiplied by 5, or 360 inches—a little less than a full inch for a year for ten acres."

IRRIGATION BY ARTESIAN-WELL SYSTEM.

[Pg 105]

IRRIGATION BY PIPE SYSTEM.

I have given room to these details because the Riverside experiment, which results in such large returns of excellent fruit, is worthy of the attention of cultivators everywhere. The constant stirring of the soil, to keep it loose as well as to keep down useless growths, is second in importance only to irrigation. Some years ago, when it was ascertained that tracts of land which had been regarded as only fit for herding cattle and sheep would by good ploughing and constant cultivation produce fair crops without any artificial watering, there spread abroad a notion that irrigation could be dispensed with. There are large areas, dry and cracked on the surface, where the soil is moist three and four feet below the surface in the dry season. By keeping the surface broken and well pulverized the moisture rises sufficiently to insure a crop. Many Western farmers have found out this secret of cultivation, and more will learn in time the good sense of not spreading themselves over too large an area; that forty acres planted and cultivated will give a better return than eighty^[Pg 106] acres planted and neglected. Crops of various sorts are raised in Southern California by careful cultivation with little or no irrigation, but the idea that cultivation alone will bring sufficiently good production is now practically abandoned, and the almost universal experience is that judicious irrigation always improves the crop in quality and in quantity, and that irrigation and cultivation are both essential to profitable farming or fruit-raising.

[Pg 107]

CHAPTER X.

THE CHANCE FOR LABORERS AND SMALL FARMERS.

It would seem, then, that capital is necessary for successful agriculture or horticulture in Southern California. But where is it not needed? In New England? In Kansas, where land which was given to actual settlers is covered with mortgages for money absolutely necessary to develop it? But passing this by, what is the chance in Southern California for laborers and for mechanics? Let us understand the situation. In California there is no exception to the rule that continual labor, thrift, and foresight are essential to the getting of a good living or the gaining of a competence. No doubt speculation will spring up again. It is inevitable with the present enormous and yearly increasing yield of fruits, the better intelligence in vine culture, wine-making, and raisin-curing, the growth of marketable oranges, lemons, etc., and the consequent rise in the value of land. Doubtless fortunes will be made by enterprising companies who secure large areas of unimproved land at low prices, bring water on them, and then sell in small lots. But this will come to an end. The tendency is to subdivide the land into small holdings—into farms and gardens of ten and twenty acres. The great ranches are sure to be broken up. With the resulting settlement by industrious people the

[Pg 108]

cities will again experience "booms;" but these are not peculiar to California. In my mind I see the time when this region (because it will pay better proportionally to cultivate a small area) will be one of small farms, of neat cottages, of industrious homes. The owner is pretty certain to prosper—that is, to get a good living (which is independence), and lay aside a little yearly—if the work is done by himself and his family. And the peculiarity of the situation is that the farm or garden, whichever it is called, will give agreeable and most healthful occupation to all the boys and girls in the family all the days in the year that can be spared from the school. Aside from the ploughing, the labor is light. Pruning, grafting, budding, the picking of the grapes, the gathering of the fruit from the trees, the sorting, packing, and canning, are labor for light and deft hands, and labor distributed through the year. The harvest, of one sort and another, is almost continuous, so that young girls and boys can have, in well-settled districts, pretty steady employment—a long season in establishments packing oranges; at another time, in canning fruits; at another, in packing raisins.

It goes without saying that in the industries now developed, and in others as important which are in their infancy (for instance, the culture of the olive for oil and as an article of food; the growth and curing of figs; the gathering of almonds, English walnuts, etc.), the labor of the owners of the land and their families will not suffice. There must be as large a proportion of day-laborers as there are in other regions where such products are grown. Chinese labor at certain seasons has been a necessity. Under the present policy of California this must diminish, and its place be taken by some other. The pay for this labor has always been good. It is certain to be more and more in demand. Whether the pay will ever approach near to the European standard is a question, but it is a fair presumption that the exceptional profit of the land, owing to its productiveness, will for a long time keep wages up. Pg 109]

During the "boom" period all wages were high, those of skilled mechanics especially, owing to the great amount of building on speculation. The ordinary laborer on a ranch had \$30 a month and board and lodging; laborers of a higher grade, \$2 to \$2 50 a day; skilled masons, \$6; carpenters, from \$3 50 to \$5; plasterers, \$4 to \$5; house-servants, from \$23 to \$33 a month. Since the "boom," wages of skilled mechanics have declined at least 25 per cent., and there has been less demand for labor generally, except in connection with fruit raising and harvesting. It would be unwise for laborers to go to California on an uncertainty, but it can be said of that country with more confidence than of any other section that its peculiar industries, now daily increasing, will absorb an increasing amount of day labor, and later on it will remunerate skilled artisan labor.

In deciding whether Southern California would be an agreeable place of residence there are other things to be considered besides the productiveness of the soil, the variety of products, the ease of out-door labor distributed through the year, the certainty of returns for intelligent investment with labor, the equability of summer and winter, and the adaptation to personal health. There are always disadvantages attending the development of a new country and the evolution of a new society. It is not a small thing, and may be one of daily discontent, the change from a landscape clad with verdure, the riotous and irrepressible growth of a rainy region, to a land that the greater part of the year is green only where it is artificially watered, where all the hills and unwatered plains are brown and sere, where the foliage is coated with dust, and where driving anywhere outside the sprinkled avenues of a town is to be enveloped in a cloud of powdered earth. This discomfort must be weighed against the commercial advantages of a land of irrigation. Pg 110]

GARDEN SCENE, SANTA ANA.

What are the chances for a family of very moderate means to obtain a foothold and thrive by farming in Southern California? I cannot answer this better than by giving substantially the experience of one family, and by saying that this has been paralleled, with change of details, by many others. Of course, in a highly developed settlement, where the land is mostly cultivated, and its actual yearly produce makes its price very high, it is not easy to get a foothold. But there are many regions—say in Orange County, and certainly in San Diego—where land can be had at a moderate price and on easy terms of payment. Indeed, there are few places, as I have said, where an industrious family would not find welcome and cordial help in establishing itself. And it must be remembered that there are many communities where life is very simple, and the great expense of keeping up an appearance attending life elsewhere need not be reckoned. Pg 111]

A few years ago a professional man in a New England city, who was in delicate health, with his wife and

five boys, all under sixteen, and one too young to be of any service, moved to San Diego. He had in money a small sum, less than a thousand dollars. He had no experience in farming or horticulture, and his health would not have permitted him to do much field work in our climate. Fortunately he found in the fertile El Cajon Valley, fifteen miles from San Diego, a farmer and fruit-grower, who had upon his place a small unoccupied house. Into that house he moved, furnishing it very simply with furniture bought in San Diego, and hired his services to the landlord. The work required was comparatively easy, in the orchard and vineyards, and consisted largely in superintending other laborers. The pay was about enough to support his family without encroaching on his little capital. Very soon, however, he made an arrangement to buy the small house and tract of some twenty acres on which he lived, on time, perhaps making a partial payment. He began at once to put out an orange orchard and plant a vineyard; this he accomplished with the assistance of his boys, who did practically most of the work after the first planting, leaving him a chance to give most of his days to his employer. The orchard and vineyard work is so light that a smart, intelligent boy is almost as valuable a worker in the field as a man. The wife, meantime, kept the house and did its work. House-keeping was comparatively easy; little fuel was required except for cooking; the question of clothes was a minor one. In that climate wants for a fairly comfortable existence are fewer than with us. From the first, almost, vegetables, raised upon the ground while the vines and oranges were growing, contributed largely to the support of the family. The out-door life and freedom from worry insured better health, and the diet of fruit and vegetables, suitable to the climate, reduced the cost of living to a minimum. As soon as the orchard and the vineyard began to produce fruit, the owner was enabled to quit working for his neighbor, and give all his time to the development of his own place. He increased his planting; he added to his house; he bought a piece of land adjoining which had a grove of eucalyptus, which would supply him with fuel. At first the society circle was small, and there was no school; but the incoming of families had increased the number of children, so that an excellent public school was established. When I saw him he was living in conditions of comfortable industry; his land had trebled in value; the pair of horses which he drove he had bought cheap, for they were Eastern horses; but the climate had brought them up, so that the team was a serviceable one in good condition. The story is not one of brilliant success, but to me it is much more hopeful for the country than the other tales I heard of sudden wealth or lucky speculation. It is the founding in an unambitious way of a comfortable home. The boys of the family will branch out, get fields, orchards, vineyards of their own, and add to the solid producing industry of the country. This orderly, contented industry, increasing its gains day by day, little by little, is the life and hope of any State.

[Pg 114]

CHAPTER XI.

SOME DETAILS OF THE WONDERFUL DEVELOPMENT.

It is not the purpose of this volume to describe Southern California. That has been thoroughly done; and details, with figures and pictures in regard to every town and settlement, will be forthcoming on application, which will be helpful guides to persons who can see for themselves, or make sufficient allowance for local enthusiasm. But before speaking further of certain industries south of the great mountain ranges, the region north of the Sierra Madre, which is allied to Southern California by its productions, should be mentioned. The beautiful antelope plains and the Kern Valley (where land is still cheap and very productive) should not be overlooked. The splendid San Joaquin Valley is already speaking loudly and clearly for itself. The region north of the mountains of Kern County, shut in by the Sierra Nevada range on the east and the Coast Range on the west, substantially one valley, fifty to sixty miles in breadth, watered by the King and the San Joaquin, and gently sloping to the north, say for two hundred miles, is a land of marvellous capacity, capable of sustaining a dense population. It is cooler in winter than Southern California, and the summers average much warmer. Owing to the greater heat, the fruits mature sooner. It is just now becoming celebrated for its raisins, which in quality are unexcelled; and its area, which can be well irrigated from the rivers and from the mountains on either side, seems capable of producing raisins enough to supply the world. It is a wonderfully rich valley in a great variety of products. Fresno County, which occupies the centre of this valley, has 1,200,000 acres of agricultural and 4,400,000 of mountain and pasture land. The city of Fresno, which occupies land that in 1870 was a sheep ranch, is the commercial centre of a beautiful agricultural and fruit region, and has a population estimated at 12,000. From this centre were shipped in the season of 1890, 1500 car-loads of raisins. In 1865 the only exports of Fresno County were a few bales of wool. The report of 1889 gave a shipment of 700,000 boxes of raisins, and the whole export of 1890, of all products, was estimated at \$10,000,000. Whether these figures are exact or not, there is no doubt of the extraordinary success of the raisin industry, nor that this is a region of great activity and promise.

The traveller has constantly to remind himself that this is a new country, and to be judged as a new country. It is out of his experience that trees can grow so fast, and plantations in so short a time put on an appearance of maturity. When he sees a roomy, pretty cottage overrun with vines and flowering plants, set in the midst of trees and lawns and gardens of tropical appearance and luxuriance, he can hardly believe that three years before this spot was desert land. When he looks over miles of vineyards, of groves of oranges, olives, walnuts, prunes, the trees all in vigorous bearing, he cannot believe that five or ten years before the whole region was a waste. When he enters a handsome village, with substantial buildings of brick, and perhaps of stone, with fine school-houses, banks, hotels, an opera-house, large packing-houses, and warehouses and shops of all sorts, with tasteful dwellings and lovely ornamented lawns, it is hard to understand that all this is the creation of two or three years. Yet these surprises meet the traveller at every turn, and the wonder is that there is not visible more crudeness, eccentric taste, and evidence of hasty beginnings.

A GRAPE-VINE, MONTECITO VALLEY, SANTA BARBARA.

San Bernardino is comparatively an old town. It was settled in 1853 by a colony of Mormons from Salt Lake^{Pg 117} The remains of this colony, less than a hundred, still live here, and have a church like the other sects, but they call themselves Josephites, and do not practise polygamy. There is probably not a sect or schism in the United States that has not its representative in California. Until 1865 San Bernardino was merely a straggling settlement, and a point of distribution for Arizona. The discovery that a large part of the county was adapted to the orange and the vine, and the advent of the Santa Fé railway, changed all that. Land that then might have been bought for \$4 an acre is now sold at from \$200 to \$300, and the city has become the busy commercial centre of a large number of growing villages, and of one of the most remarkable orange and vine districts in the world. It has many fine buildings, a population of about 6000, and a decided air of vigorous business. The great plain about it is mainly devoted to agricultural products, which are grown without irrigation, while in the near foot-hills the orange and the vine flourish by the aid of irrigation. Artesian-wells abound in the San Bernardino plain, but the mountains are the great and unfailing source of water supply. The Bear Valley Dam is a most daring and gigantic construction. A solid wall of masonry, 300 feet long and 60 feet high, curving towards the reservoir, creates an inland lake in the mountains holding water enough to irrigate 20,000 acres of land. This is conveyed to distributing reservoirs in the east end of the valley. On a terrace in the foot-hills a few miles to the north, 2000 feet above the sea, are the Arrow-head Hot Springs (named from the figure of a gigantic "arrow-head" on the mountain above), already a favorite resort for^{Pg 118} health and pleasure. The views from the plain of the picturesque foot-hills and the snow-peaks of the San Bernardino range are exceedingly fine. The marvellous beauty of the purple and deep violet of the giant hills at sunset, with spotless snow, lingers in the memory.

Perhaps the settlement of Redlands, ten miles by rail east of San Bernardino, is as good an illustration as any of rapid development and great promise. It is devoted to the orange and the grape. As late as 1875 much of it was Government land, considered valueless. It had a few settlers, but the town, which counts now about 2000 people, was only begun in 1887. It has many solid brick edifices and many pretty cottages on its gentle slopes and rounded hills, overlooked by the great mountains. The view from any point of vantage of orchards and vineyards and semi-tropical gardens, with the wide sky-line of noble and snow-clad hills, is exceedingly attractive. The region is watered by the Santa Ana River and Mill Creek, but the main irrigating streams, which make every hill-top to bloom with vegetation, come from the Bear Valley Reservoir. On a hill to the south of the town the Smiley Brothers, of Catskill fame, are building fine residences, and planting their 125 acres with fruit-trees and vines, evergreens, flowers, and semi-tropic shrubbery in a style of landscape-gardening that in three years at the furthest will make this spot one of the few great showplaces of the country. Behind their ridge is the San Mateo Cañon, through which the Southern Pacific Railway runs, while in front are the splendid sloping plains, valleys, and orange groves, and the great sweep of mountains from San Jacinto round to the Sierra Madre range. It is almost a matchless prospect. The climate is most^{Pg 119} agreeable, the plantations increase month by month, and thus far the orange-trees have not been visited by the scale, nor the vines by any sickness. Although the groves are still young, there were shipped from Redlands in the season of 1889-90 80 car-loads of oranges, of 286 boxes to the car, at a price averaging nearly \$1000 a car. That season's planting of oranges was over 1200 acres. It had over 5000 acres in fruits, of which nearly 3000 were in peaches, apricots, grapes, and other sorts called deciduous.

Riverside may without prejudice be regarded as the centre of the orange growth and trade. The railway shipments of oranges from Southern California in the season of 1890 aggregated about 2400 car-loads, or about 800,000 boxes, of oranges (in which estimate the lemons are included), valued at about \$1,500,000. Of this shipment more than half was from Riverside. This has been, of course, greatly stimulated by the improved railroad facilities, among them the shortening of the time to Chicago by the Santa Fé route, and the running of special fruit trains. Southern California responds like magic to this chance to send her fruits to the East, and the area planted month by month is something enormous. It is estimated that the crop of oranges alone in 1891 will be over 4500 car-loads. We are accustomed to discount all California estimates, but I think that no one yet has comprehended the amount to which the shipments to Eastern markets of vegetables and

fresh and canned fruits will reach within five years. I base my prediction upon some observation of the Eastern demand and the reports of fruit-dealers, upon what I saw of the new planting all over the State in 1890, and upon the statistics of increase. Take Riverside as an example. In 1872 it was a poor sheep ranch. In 1880-81 it shipped 15 car-loads, or 4290 boxes, of oranges; the amount yearly increased, until in 1888-89 it was 925 car-loads, or 263,879 boxes. In 1890 it rose to 1253 car-loads, or 358,341 boxes; and an important fact is that the largest shipment was in April (455 car-loads, or 130,226 boxes), at the time when the supply from other orange regions for the markets East had nearly ceased.

IRRIGATING AN ORCHARD.

It should be said, also, that the quality of the oranges has vastly improved. This is owing to better cultivation, knowledge of proper irrigation, and the adoption of the best varieties for the soil. As different sorts of oranges mature at different seasons, a variety is needed to give edible fruit in each month from December to May inclusive. In February, 1887, I could not find an orange of the first class compared with the best fruit in other regions. It may have been too early for the varieties I tried; but I believe there has been a marked improvement in quality. In May, 1890, we found delicious oranges almost everywhere. The seedless Washington and Australian navels are favorites, especially for the market, on account of their great size and fine color. When in perfection they are very fine, but the skin is thick and the texture coarser than that of some others. The best orange I happened to taste was a Tahiti seedling at Montecito (Santa Barbara). It is a small orange, with a thin skin and a compact, sweet pulp that leaves little fibre. It resembles the famous orange of Malta. But there are many excellent varieties—the Mediterranean sweet, the paper rind St. Michael, the Maltese blood, etc. The experiments with seedlings are profitable, and will give ever new varieties. I noted that the "grape fruit," which is becoming so much liked in the East, is not appreciated in California.

[Pg 121]

ORANGE CULTURE. Packing Oranges—
Navel Orange-tree Six Years Old—
Irrigating an Orange Grove.

The city of Riverside occupies an area of some five miles by three, and claims to have 6000 inhabitants; the centre is a substantial town with fine school and other public buildings, but the region is one succession of orange groves and vineyards, of comfortable houses and broad avenues. One avenue through which we drove is 125 feet wide and 12 miles long, planted in three rows with palms, magnolias, the *Grevillea robusta* (Australian fern), the pepper, and the eucalyptus, and lined all the way by splendid orange groves, in the midst of which are houses and grounds with semi-tropical attractions. Nothing could be lovelier than such a scene of fruits and flowers, with the background of purple hills and snowy peaks. The mountain views are superb. Frost is a rare visitor. Not in fifteen years has there been enough to affect the orange. There is little rain after March, but there are fogs and dew-falls, and the ocean breeze is felt daily. The grape grown for

[Pg 123]

raisins is the muscat, and this has had no "sickness." Vigilance and a quarantine have also kept from the orange the scale which has been so annoying in some other localities. The orange, when cared for, is a generous bearer; some trees produce twenty boxes each, and there are areas of twenty acres in good bearing which have brought to the owner as much as \$10,000 a year.

The whole region of the Santa Ana and San Gabriel valleys, from the desert on the east to Los Angeles, the city of gardens, is a surprise, and year by year an increasing wonder. In production it exhausts the catalogue of fruits and flowers; its scenery is varied by ever new combinations of the picturesque and the luxuriant; every town boasts some special advantage in climate, soil, water, or society; but these differences, many of them visible to the eye, cannot appear in any written description. The traveller may prefer the scenery of Pasadena, or that of Pomona, or of Riverside, but the same words in regard to color, fertility, combinations of orchards, avenues, hills, must appear in the description of each. Ontario, Pomona, Puente, Alhambra—wherever one goes there is the same wonder of color and production.

Pomona is a pleasant city in the midst of fine orange groves, watered abundantly by artesian-wells and irrigating ditches from a mountain reservoir. A specimen of the ancient adobe residence is on the Meserve plantation, a lovely old place, with its gardens of cherries, strawberries, olives, and oranges. From the top of San José hill we had a view of a plain twenty-five miles by fifty in extent, dotted with cultivation, surrounded by mountains—a wonderful prospect. Pomona, like its sister cities in this region, has a regard for the intellectual side of life, exhibited in good school-houses and public libraries. In the library of Pomona is what may be regarded as the tutelary deity of the place—the goddess Pomona, a good copy in marble of the famous statue in the Uffizi Gallery, presented to the city by the Rev. C. F. Loop. This enterprising citizen is making valuable experiments in olive culture, raising a dozen varieties in order to ascertain which is best adapted to this soil, and which will make the best return in oil and in a marketable product of cured fruit for the table.

The growth of the olive is to be, it seems to me, one of the leading and most permanent industries of Southern California. It will give us, what it is nearly impossible to buy now, pure olive oil, in place of the cotton-seed and lard mixture in general use. It is a most wholesome and palatable article of food. Those whose chief experience of the olive is the large, coarse, and not agreeable Spanish variety, used only as an appetizer, know little of the value of the best varieties as food, nutritious as meat, and always delicious. Good bread and a dish of pickled olives make an excellent meal. The sort known as the Mission olive, planted by the Franciscans a century ago, is generally grown now, and the best fruit is from the older trees. The most successful attempts in cultivating the olive and putting it on the market have been made by Mr. F. A. Kimball, of National City, and Mr. Ellwood Cooper, of Santa Barbara. The experiments have gone far enough to show that the industry is very remunerative. The best olive oil I have ever tasted anywhere is that produced from the Cooper and the Kimball orchards; but not enough is produced to supply the local demand. Mr. Cooper has written a careful treatise on olive culture, which will be of great service to all growers. The art of pickling is not yet mastered, and perhaps some other variety will be preferred to the old Mission for the table. A mature olive grove in good bearing is a fortune. I feel sure that within twenty-five years this will be one of the most profitable industries of California, and that the demand for pure oil and edible fruit in the United States will drive out the adulterated and inferior present commercial products. But California can easily ruin its reputation by adopting the European systems of adulteration.

IN A FIELD OF GOLDEN PUMPKINS.

We drove one day from Arcadia Station through the region occupied by the Baldwin plantations, an area of over fifty thousand acres—a happy illustration of what industry and capital can do in the way of variety of productions, especially in what are called the San Anita vineyards and orchards, extending southward from the foot-hills. About the home place and in many sections where the irrigating streams flow one might fancy he was in the tropics, so abundant and brilliant are the flowers and exotic plants. There are splendid orchards of oranges, almonds, English walnuts, lemons, peaches, apricots, figs, apples, and olives, with grain and corn—in short, everything that grows in garden or field. The ranch is famous for its brandies and wines as well as fruits. We lunched at the East San Gabriel Hotel, a charming place with a peaceful view from the wide veranda of live-oaks, orchards, vineyards, and the noble Sierra Madre range. The Californians may be excused for using the term paradisiacal about such scenes. Flowers, flowers everywhere, color on color, and the song of the mocking-bird!

CHAPTER XII.

HOW THE FRUIT PERILS WERE MET.—FURTHER DETAILS OF LOCALITIES.

In the San Gabriel Valley and elsewhere I saw evidence of the perils that attend the culture of the vine and the fruit-tree in all other countries, and from which California in the early days thought it was exempt. Within the past three or four years there has prevailed a sickness of the vine, the cause of which is unknown, and for which no remedy has been discovered. No blight was apparent, but the vine sickened and failed. The disease was called consumption of the vine. I saw many vineyards subject to it, and hundreds of acres of old vines had been rooted up as useless. I was told by a fruit-buyer in Los Angeles that he thought the raisin industry below Fresno was ended unless new planting recovered the vines, and that the great wine fields were about "played out." The truth I believe to be that the disease is confined to the vineyards of Old Mission grapes. Whether these had attained the limit of their active life, and sickened, I do not know. The trouble for a time was alarming; but new plantings of other varieties of grapes have been successful, the vineyards look healthful, and the growers expect no further difficulty. The planting, which was for a time suspended, has been more vigorously renewed.

[Pg 129]

The insect pests attacking the orange were even more serious, and in 1887-88, though little was published about it, there was something like a panic, in the fear that the orange and lemon culture in Southern California would be a failure. The enemies were the black, the red, and the white scale. The latter, the *icerya purchasi*, or cottony cushion scale, was especially loathsome and destructive; whole orchards were enfeebled, and no way was discovered of staying its progress, which threatened also the olive and every other tree, shrub, and flower. Science was called on to discover its parasite. This was found to be the Australian lady-bug (*vedolia cardinalis*), and in 1888-89 quantities of this insect were imported and spread throughout Los Angeles County, and sent to Santa Barbara and other afflicted districts. The effect was magical. The *vedolia* attacked the cottony scale with intense vigor, and everywhere killed it. The orchards revived as if they had been recreated, and the danger was over. The enemies of the black and the red scale have not yet been discovered, but they probably will be. Meantime the growers have recovered courage, and are fertilizing and fumigating. In Santa Ana I found that the red scale was fought successfully by fumigating the trees. The operation is performed at night under a movable tent, which covers the tree. The cost is about twenty cents a tree. One lesson of all this is that trees must be fed in order to be kept vigorous to resist such attacks, and that fruit-raising, considering the number of enemies that all fruits have in all climates, is not an idle occupation. The clean, handsome English walnut is about the only tree in the State that thus far has no enemy.

[Pg 130]

One cannot take anywhere else a more exhilarating, delightful drive than about the rolling, highly cultivated, many-villaed Pasadena, and out to the foot-hills and the Sierra Madre Villa. He is constantly exclaiming at the varied loveliness of the scene—oranges, palms, formal gardens, hedges of Monterey cypress. It is very Italy-like. The Sierra Madre furnishes abundant water for all the valley, and the swift irrigating stream from Eaton Cañon waters the Sierra Madre Villa. Among the peaks above it rises Mt. Wilson, a thousand feet above the plain, the site selected for the Harvard Observatory with its 40-inch glass. The clearness of the air at this elevation, and the absence of clouds night and day the greater portion of the year, make this a most advantageous position, it is said, to use the glass in dissolving nebulæ. The Sierra Madre Villa, once the most favorite resort in this region, was closed. In its sheltered situation, its luxuriant and half-neglected gardens, its wide plantations and irrigating streams, it reminds one of some secularized monastery on the promontory of Sorrento. It only needs good management to make the hotel very attractive and especially agreeable in the months of winter.

[Pg 131]

PACKING CHERRIES, POMONA.

Pasadena, which exhibits everywhere evidences of wealth and culture, and claims a permanent population of 12,000, has the air of a winter resort; the great Hotel Raymond is closed in May, the boarding-houses want occupants, the shops and livery-stables customers, and the streets lack movement. This is easily explained. It is not because Pasadena is not an agreeable summer residence, but because the visitors are drawn there in the winter principally to escape the inclement climate of the North and East, and because special efforts have been made for their entertainment in the winter. We found the atmosphere delightful in the middle of May. The mean summer heat is 67°, and the nights are always cool. The hills near by may be resorted to with the certainty of finding as decided a change as one desires in the summer season. I must repeat that the Southern California summer is not at all understood in the East. The statement of the general equability of

[Pg 133]

the temperature the year through must be insisted on. We lunched one day in a typical California house, in the midst of a garden of fruits, flowers, and tropical shrubs; in a house that might be described as half roses and half tent, for added to the wooden structure were rooms of canvas, which are used as sleeping apartments winter and summer.

This attractive region, so lovely in its cultivation, with so many charming drives, offering good shooting on the plains and in the hills, and centrally placed for excursions, is only eight miles from the busy city of Los Angeles. An excellent point of view of the country is from the graded hill on which stands the Raymond Hotel, a hill isolated but easy of access, which is in itself a mountain of bloom, color, and fragrance. From all the broad verandas and from every window the prospect is charming, whether the eye rests upon cultivated orchards and gardens and pretty villas, or upon the purple foot-hills and the snowy ranges. It enjoys a daily ocean breeze, and the air is always exhilarating. This noble hill is a study in landscape-gardening. It is a mass of brilliant color, and the hospitality of the region generally to foreign growths may be estimated by the trees acclimated on these slopes. They are the pepper, eucalyptus, pine, cypress, sycamore, red-wood, olive, date^{Pg 1341} and fan palms, banana, pomegranate, guava, Japanese persimmon, umbrella, maple, elm, locust, English walnut, birch, ailantus, poplar, willow, and more ornamental shrubs than one can well name.

I can indulge in few locality details except those which are illustrative of the general character of the country. In passing into Orange County, which was recently set off from Los Angeles, we come into a region of less "fashion," but one that for many reasons is attractive to people of moderate means who are content with independent simplicity. The country about the thriving village of Santa Ana is very rich, being abundantly watered by the Santa Ana River and by artesian-wells. The town is nine miles from the ocean. On the ocean side the land is mainly agricultural; on the inland side it is specially adapted to fruit. We drove about it, and in Tustin City, which has many pleasant residences and a vacant "boom" hotel, through endless plantations of oranges. On the road towards Los Angeles we passed large herds of cattle and sheep, and fine groves of the English walnut, which thrives especially well in this soil and the neighborhood of the sea. There is comparatively little waste land in this valley district, as one may see by driving through the country about Santa Ana, Orange, Anaheim, Tustin City, etc. Anaheim is a prosperous German colony. It was here that Madame Modjeska and her husband, Count Bozenta, first settled in California. They own and occupy now a picturesque ranch in the Santiago Cañon of the Santa Ana range, twenty-two miles from Santa Ana. This is^{Pg 1351} one of the richest regions in the State, and with its fair quota of working population, it will be one of the most productive.

From Newport, on the coast, or from San Pedro, one may visit the island of Santa Catalina. Want of time prevented our going there. Sportsmen enjoy there the exciting pastime of hunting the wild goat. From the photographs I saw, and from all I heard of it, it must be as picturesque a resort in natural beauty as the British Channel islands.

Los Angeles is the metropolitan centre of all this region. A handsome, solid, thriving city, environed by gardens, gay everywhere with flowers, it is too well known to require any description from me. To the traveller from the East it will always be a surprise. Its growth has been phenomenal, and although it may not equal the expectations of the crazy excitement of 1886-87, 50,000 people is a great assemblage for a new city which numbered only about 11,000 in 1880. It of course felt the subsidence of the "boom," but while I missed the feverish crowds of 1887, I was struck with its substantial progress in fine, solid buildings, pavements, sewerage, railways, educational facilities, and ornamental grounds. It has a secure hold on the commerce of the region. The assessment roll of the city increased from \$7,627,632 in 1881 to \$44,871,073 in 1889. Its bank business, public buildings, school-houses, and street improvements are in accord with this increase, and show solid, vigorous growth. It is altogether an attractive city, whether seen on a drive through its well-planted and bright avenues, or looked down on from the hills which are climbed by the cable roads. A curious social note was the effect of the "boom" excitement upon the birth rate. The report of children under the age^{Pg 1361} of one year was in 1887, 271 boy babies and 264 girl babies; from 1887 to 1888 there were only 176 boy babies and 162 girl babies. The return at the end of 1889 was 465 boy babies, and 500 girl babies.

OLIVE-TREES SIX YEARS OLD.

Although Los Angeles County still produces a considerable quantity of wine and brandy, I have an impression that the raising of raisins will supplant wine-making largely in Southern California, and that the principal wine producing will be in the northern portions of the State. It is certain that the best quality is^{Pg 1371}

grown in the foot-hills. The reputation of "California wines" has been much injured by placing upon the market crude juice that was in no sense wine. Great improvement has been made in the past three to five years, not only in the vine and knowledge of the soil adapted to it, but in the handling and the curing of the wine. One can now find without much difficulty excellent table wines—sound claret, good white Reisling, and sauterne. None of these wines are exactly like the foreign wines, and it may be some time before the taste accustomed to foreign wines is educated to like them. But in Eastern markets some of the best brands are already much called for, and I think it only a question of time and a little more experience when the best California wines will be popular. I found in the San Francisco market excellent red wines at \$3.50 the case, and what was still more remarkable, at some of the best hotels sound, agreeable claret at from fifteen to twenty cents the pint bottle.

It is quite unnecessary to emphasize the attractions of Santa Barbara, or the productiveness of the valleys in the counties of Santa Barbara and Ventura. There is no more poetic region on the continent than the bay south of Point Conception, and the pen and the camera have made the world tolerably familiar with it. There is a graciousness, a softness, a color in the sea, the cañons, the mountains there that dwell in the memory. It is capable of inspiring the same love that the Greek colonists felt for the region between the bays of Salerno and Naples. It is as fruitful as the Italian shores, and can support as dense a population. The figures that have been given as to productiveness and variety of productions apply to it. Having more winter rainfall than the counties south of it, agriculture is profitable in most years. Since the railway was made down the valley of the Santa Clara River and along the coast to Santa Barbara, a great impulse has been given to farming. Orange and other fruit orchards have increased. Near Buenaventura I saw hundreds of acres of lima beans. The yield is about one ton to the acre. With good farming the valleys yield crops of corn, barley, and wheat much above the average. Still it is a fruit region, and no variety has yet been tried that does not produce very well there. The rapid growth of all trees has enabled the region to demonstrate in a short time that there is scarcely any that it cannot naturalize. The curious growths of tropical lands, the trees of aromatic and medicinal gums, the trees of exquisite foliage and wealth of fragrant blossoms, the sturdy forest natives, and the bearers of edible nuts are all to be found in the gardens and by the road-side, from New England, from the Southern States, from Europe, from North and South Africa, Southern Asia, China, Japan, from Australia and New Zealand and South America. The region is an arboreal and botanical garden on an immense scale, and full of surprises. The floriculture is even more astonishing. Every land is represented. The profusion and vigor are as wonderful as the variety. At a flower show in Santa Barbara were exhibited 160 varieties of roses all cut from one garden the same morning. The open garden rivals the Eastern conservatory. The country is new and many of the conditions of life may be primitive and rude, but it is impossible that any region shall not be beautiful, clothed with such a profusion of bloom and color. [Pg 138]

I have spoken of the rapid growth. The practical advantage of this as to fruit-trees is that one begins to have an income from them here sooner than in the East. No one need be under the delusion that he can live in California without work, or thrive without incessant and intelligent industry, but the distinction of the country for the fruit-grower is the rapidity with which trees and vines mature to the extent of being profitable. But nothing thrives without care, and kindly as the climate is to the weak, it cannot be too much insisted on that this is no place for confirmed invalids who have not money enough to live without work. [Pg 139]

CHAPTER XIII.

THE ADVANCE OF CULTIVATION SOUTHWARD.

The immense county of San Diego is on the threshold of its development. It has comparatively only spots of cultivation here and there, in an area on the western slope of the county only, that Mr. Van Dyke estimates to contain about one million acres of good arable land for farming and fruit-raising. This mountainous region is full of charming valleys, and hidden among the hills are fruitful nooks capable of sustaining thriving communities. There is no doubt about the salubrity of the climate, and one can literally suit himself as to temperature by choosing his elevation. The traveller by rail down the wild Temecula Cañon will have some idea of the picturesqueness of the country, and, as he descends in the broadening valley, of the beautiful mountain parks of live-oak and clear running water, and of the richness both for grazing and grain of the ranches of the Santa Margarita, Las Flores, and Santa Rosa. Or if he will see what a few years of vigorous cultivation will do, he may visit Escondido, on the river of that name, which is at an elevation of less than a thousand feet, and fourteen miles from the ocean. This is only one of many settlements that have great natural beauty and thrifty industrial life. In that region are numerous attractive villages. I have a report from a little cañon, a few miles north of Escondido, where a woman with an invalid husband settled in 1883. The ground was thickly covered with brush, and its only product was rabbits and quails. In 1888 they had 100 acres cleared and fenced, mostly devoted to orchard fruits and berries. They had in good bearing over 1200 fruit-trees among them 200 oranges and 283 figs, which yielded one and a half tons of figs a week during the bearing season, from August to November. The sprouts of the peach-trees grew twelve feet in 1889. Of course such a little fruit farm as this is the result of self-denial and hard work, but I am sure that the experiment in this region need not be exceptional. [Pg 141]

SEXTON NURSERIES, NEAR SANTA BARBARA.

San Diego will be to the southern part of the State what San Francisco is to the northern. Nature seems to have arranged for this, by providing a magnificent harbor, when it shut off the southern part by a mountain range. During the town-lot lunacy it was said that San Diego could not grow because it had no back country, and the retort was that it needed no back country, its harbor would command commerce. The fallacy of this assumption lay in the forgetfulness of the fact that the profitable and peculiar exports of Southern California must go East by rail, and reach a market in the shortest possible time, and that the inhabitants look to the Pacific for comparatively little of the imports they need. If the Isthmus route were opened by a ship-canal, San Diego would doubtless have a great share of the Pacific trade, and when the population of that part of the State is large enough to demand great importations from the islands and lands of the Pacific, this harbor will not go begging. But in its present development the entire Pacific trade of Japan, China, and the islands, gives only a small dividend each to the competing ports. For these developments this fine harbor must wait, but meantime the wealth and prosperity of San Diego lie at its doors. A country as large as the three richest New England States, with enormous wealth of mineral and stone in its mountains, with one of the finest climates in the world, with a million acres of arable land, is certainly capable of building up one great seaport town. These million of acres on the western slope of the mountain ranges of the country are geographically tributary to San Diego, and almost every acre by its products is certain to attain a high value. [Pg 142]

The end of the ridiculous speculation in lots of 1887-88 was not so disastrous in the loss of money invested, or even in the ruin of great expectations by the collapse of fictitious values, as in the stoppage of immigration. The country has been ever since adjusting itself to a normal growth, and the recovery is just in proportion to the arrival of settlers who come to work and not to speculate. I had heard that the "boom" had left San Diego and vicinity the "deadest" region to be found anywhere. A speculator would probably so regard it. But the people have had a great accession of common-sense. The expectation of attracting settlers by a fictitious show has subsided, and attention is directed to the development of the natural riches of the country. Since the boom San Diego has perfected a splendid system of drainage, paved its streets, extended its railways, built up the business part of the town solidly and handsomely, and greatly improved the mesa above the town. In all essentials of permanent growth it is much better in appearance than in 1887. Business is better organized, and, best of all, there is an intelligent appreciation of the agricultural resources of the country. It is discovered that San Diego has a "back country" capable of producing great wealth. The Chamber of Commerce has organized a permanent exhibition of products. It is assisted in this work of stimulation by competition by a "Ladies' Annex," a society numbering some five hundred ladies, who devote themselves not to æsthetic pursuits, but to the quickening of all the industries of the farm and the garden, and all public improvements. [Pg 144]

SWEETWATER DAM.

To the mere traveller who devotes only a couple of weeks to an examination of this region it is evident that the spirit of industry is in the ascendant, and the result is a most gratifying increase in orchards and vineyards, and the storage and distribution of water for irrigation. The region is unsurpassed for the production of the orange, the lemon, the raisin-grape, the fig, and the olive. The great reservoir of the Cuyamaca, which supplies San Diego, sends its flume around the fertile valley of El Cajon (which has already a great reputation for its raisins), and this has become a garden, the land rising in value every year. The region of National City and Chula Vista is supplied by the reservoir made by the great Sweetwater Dam—a marvel of engineering skill—and is not only most productive in fruit, but is attractive by pretty villas and most ^{Pg 145]} sightly and agreeable homes. It is an unanswerable reply to the inquiry if this region was not killed by the boom that all the arable land, except that staked out for fancy city prices, has steadily risen in value. This is true of all the bay region down through Otay (where a promising watch factory is established) to the border at Tia Juana. The rate of settlement in the county outside of the cities and towns has been greater since the boom than before—a most healthful indication for the future. According to the school census of 1889, Mr. Van Dyke estimates a permanent growth of nearly 50,000 people in the county in four years. Half of these are well distributed in small settlements which have the advantages of roads, mails, and school-houses, and which offer to settlers who wish to work adjacent unimproved land at prices which experience shows are still moderate.

[Pg 146]

CHAPTER XIV.

A LAND OF AGREEABLE HOMES.

In this imperfect conspectus of a vast territory I should be sorry to say anything that can raise false expectations. Our country is very big; and though scarcely any part of it has not some advantages, and notwithstanding the census figures of our population, it will be a long time before our vast territory will fill up. California must wait with the rest; but it seems to me to have a great future. Its position in the Union with regard to its peculiar productions is unique. It can and will supply us with much that we now import, and labor and capital sooner or later will find their profit in meeting the growing demand for California products.

There are many people in the United States who could prolong life by moving to Southern California; there are many who would find life easier there by reason of the climate, and because out-door labor is more agreeable there the year through; many who have to fight the weather and a niggardly soil for existence could there have pretty little homes with less expense of money and labor. It is well that people for whom this is true should know it. It need not influence those who are already well placed to try the fortune of a distant country and new associations.

I need not emphasize the disadvantage in regard to beauty of a land that can for half the year only keep ^{Pg 147]} vernal appearance by irrigation; but to eyes accustomed to it there is something pleasing in the contrast of the green valleys with the brown and gold and red of the hills. The picture in my mind for the future of the Land of the Sun, of the mountains, of the sea—which is only an enlargement of the picture of the present—is one of great beauty. The rapid growth of fruit and ornamental trees and the profusion of flowers render easy the making of a lovely home, however humble it may be. The nature of the industries—requiring careful attention to a small piece of ground—points to small holdings as a rule. The picture I see is of a land of small farms and gardens, highly cultivated, in all the valleys and on the foot-hills; a land, therefore, of luxuriance and great productiveness and agreeable homes. I see everywhere the gardens, the vineyards, the orchards, with the various greens of the olive, the fig, and the orange. It is always picturesque, because the country is broken and even rugged; it is always interesting, because of the contrast with the mountains and the desert; it has the color that makes Southern Italy so poetic. It is the fairest field for the experiment of a contented community, without any poverty and without excessive wealth.

[Pg 148]

CHAPTER XV.

SOME WONDERS BY THE WAY.—YOSEMITE.—MARIPOSA TREES.—MONTEREY.

I went to it with reluctance. I shrink from attempting to say anything about it. If you knew that there was one spot on the earth where Nature kept her secret of secrets, the key to the action of her most gigantic and

patient forces through the long eras, the marvel of constructive and destructive energy, in features of sublimity made possible to mental endurance by the most exquisite devices of painting and sculpture, the wonder which is without parallel or comparison, would you not hesitate to approach it? Would you not wander and delay with this and that wonder, and this and that beauty and nobility of scenery, putting off the day when the imagination, which is our highest gift, must be extinguished by the reality? The mind has this judicious timidity. Do we not loiter in the avenue of the temple, dallying with the vista of giant plane-trees and statues, and noting the carving and the color, mentally shrinking from the moment when the full glory shall burst upon us? We turn and look when we are near a summit, we pick a flower, we note the shape of the clouds, the passing breeze, before we take the last step that shall reveal to us the vast panorama of mountains and valleys.

[Pg 149]

I cannot bring myself to any description of the Grand Cañon of the Colorado by any other route, mental or physical, than that by which we reached it, by the way of such beauty as Monterey, such a wonder as the Yosemite, and the infinite and picturesque deserts of New Mexico and Arizona. I think the mind needs the training in the desert scenery to enable it to grasp the unique sublimity of the Grand Cañon.

The road to the Yosemite, after leaving the branch of the Southern Pacific at Raymond, is an unnecessarily fatiguing one. The journey by stage—sixty-five miles—is accomplished in less than two days—thirty-nine miles the first day, and twenty-six the second. The driving is necessarily slow, because two mountain ridges have to be surmounted, at an elevation each of about 6500 feet. The road is not a "road" at all as the term is understood in Switzerland, Spain, or in any highly civilized region—that is, a graded, smooth, hard, and sufficiently broad track. It is a makeshift highway, generally narrow (often too narrow for two teams to pass), cast up with loose material, or excavated on the slopes with frequent short curves and double curves. Like all mountain roads which skirt precipices, it may seem "pokerish," but it is safe enough if the drivers are skilful and careful (all the drivers on this route are not only excellent, but exceedingly civil as well), and there is no break in wagon or harness. At the season this trip is made the weather is apt to be warm, but this would not matter so much if the road were not intolerably dusty. Over a great part of the way the dust rises in clouds and is stifling. On a well-engineered road, with a good road-bed, the time of passage might not be shortened, but the journey would be made with positive comfort and enjoyment, for though there is a certain monotony in the scenery, there is the wild freshness of nature, now and then an extensive prospect, a sight of the snow-clad Nevadas, and vast stretches of woodland; and a part of the way the forests are magnificent, especially the stupendous growth of the sugar-pine. These noble forests are now protected by their inaccessibility.

[Pg 150]

From 1855 to 1864, nine years, the Yosemite had 653 visitors; in 1864 there were 147. The number increased steadily till 1869, the year the overland railroad was completed, when it jumped to 1122. Between 4000 and 5000 persons visit it now each year. The number would be enormously increased if it could be reached by rail, and doubtless a road will be built to the valley in the near future, perhaps up the Merced River. I believe that the pilgrims who used to go to the Yosemite on foot or on horseback regret the building of the stage road, the enjoyment of the wonderful valley being somehow cheapened by the comparative ease of reaching it. It is feared that a railway would still further cheapen, if it did not vulgarize it, and that passengers by train would miss the mountain scenery, the splendid forests, the surprises of the way (like the first view of the valley from Inspiration Point), and that the Mariposa big trees would be farther off the route than they are now. The traveller sees them now by driving eight miles from Wawona, the end of the first day's staging. But the romance for the few there is in staging will have to give way to the greater comfort of the many by rail.

[Pg 151]

THE YOSEMITE DOME.

The railway will do no more injury to the Yosemite than it has done to Niagara, and, in fact, will be the means of immensely increasing the comfort of the visitor's stay there, besides enabling tens of thousands of people to see it who cannot stand the fatigue of the stage ride over the present road. The Yosemite will remain as it is. The simplicity of its grand features is unassailable so long as the Government protects the

[Pg 154]

forests that surround it and the streams that pour into it. The visitor who goes there by rail will find plenty of adventure for days and weeks in following the mountain trails, ascending to the great points of view, exploring the cañons, or climbing so as to command the vast stretch of the snowy Sierras. Or, if he is not inclined to adventure, the valley itself will satisfy his highest imaginative flights of the sublime in rock masses and perpendicular ledges, and his sense of beauty in the graceful water-falls, rainbow colors, and exquisite lines of domes and pinnacles. It is in the grouping of objects of sublimity and beauty that the Yosemite excels. The narrow valley, with its gigantic walls, which vary in every change of the point of view, lends itself to the most astonishing scenic effects, and these the photograph has reproduced, so that the world is familiar with the striking features of the valley, and has a tolerably correct idea of the sublimity of some of these features. What the photograph cannot do is to give an impression of the unique grouping, of the majesty, and at times crushing weight upon the mind of the forms and masses, of the atmospheric splendor and illusion, and of the total value of such an assemblage of wonders. The level surface of the peaceful, park-like valley has much to do with the impression. The effect of El Capitan, seen across a meadow and rising from a beautiful park, is much greater than if it were encountered in a savage mountain gorge. The traveller may have seen elsewhere greater water-falls, and domes and spires of rock as surprising, but he has nowhere else seen such a combination as this. He may be fortified against surprise by the photographs he has seen and the reports of word painters, but he will not escape (say, at Inspiration Point, or Artist Point, or other lookouts), a quickening of the pulse and an elation which is physical as well as mental, in the sight of such unexpected sublimity and beauty. And familiarity will scarcely take off the edge of his delight, so varied are the effects in the passing hours and changing lights. The Rainbow Fall, when water is abundant, is exceedingly impressive as well as beautiful. Seen from the carriage road, pouring out of the sky overhead, it gives a sense of power, and at the proper hour before sunset, when the vast mass of leaping, foaming water is shot through with the colors of the spectrum, it is one of the most exquisite sights the world can offer; the elemental forces are overwhelming, but the loveliness is engaging. One turns from this to the noble mass of El Capitan with a shock of surprise, however often it may have been seen. This is the hour also, in the time of high-water, to see the reflection of the Yosemite Falls. As a spectacle it is infinitely finer than anything at Mirror Lake, and is unique in its way. To behold this beautiful series of falls, flowing down out of the blue sky above, and flowing up out of an equally blue sky in the depths of the earth, is a sight not to be forgotten. And when the observer passes from these displays to the sight of the aerial domes in the upper end of the valley, new wonders opening at every turn of the forest road, his excitement has little chance of subsiding: he may be even a little oppressed. The valley, so verdant and friendly with grass and trees and flowers, is so narrow compared with the height of its perpendicular guardian walls, and this little secluded spot is so imprisoned in the gigantic mountains, that man has a feeling of helplessness in it. This powerlessness in the presence of elemental forces was heightened by the deluge of water. There had been an immense fall of snow the winter before, the Merced was a raging torrent, overflowing its banks, and from every ledge poured a miniature cataract.

COAST OF MONTEREY.

Noble simplicity is the key-note to the scenery of the Yosemite, and this is enhanced by the park-like appearance of the floor of the valley. The stems of the fine trees are in harmony with the perpendicular lines, and their foliage adds the necessary contrast to the gray rock masses. In order to preserve these forest-trees, the underbrush, which is liable to make a conflagration in a dry season, should be removed generally, and the view of the great features be left unimpeded. The minor cañons and the trails are, of course, left as much as possible to the riot of vegetation. The State Commission, which labors under the disadvantages of getting its supplies from a Legislature that does not appreciate the value of the Yosemite to California, has developed the trails judiciously, and established a model trail service. The Yosemite, it need not be said, is a great attraction to tourists from all parts of the world; it is the interest of the State, therefore, to increase their number by improving the facilities for reaching it, and by resolutely preserving all the surrounding region from ravage.

CYPRESS POINT.

NEAR SEAL ROCK.

This is as true of the Mariposa big tree region as of the valley. Indeed, more care is needed for the trees than for the great chasm, for man cannot permanently injure the distinctive features of the latter, while the destruction of the sequoias will be an irreparable loss to the State and to the world. The *Sequoia gigantea* differs in leaf, and size and shape of cone, from the great *Sequoia semper virens* on the coast near Santa Cruz; neither can be spared. The Mariposa trees, scattered along on a mountain ridge 6500 feet above the sea, do not easily obtain their victory, for they are a part of a magnificent forest of other growths, among which the noble sugar-pine is conspicuous for its enormous size and graceful vigor. The sequoias dominate among splendid rivals only by a magnitude that has no comparison elsewhere in the world. I think no one can anticipate the effect that one of these monarchs will have upon him. He has read that a coach and six can drive through one of the trees that is standing; that another is thirty-three feet in diameter, and that its vast stem, 350 feet high, is crowned with a mass of foliage that seems to brush against the sky. He might be prepared for a tower 100 feet in circumference, and even 400 feet high, standing upon a level plain; but this living growth is quite another affair. Each tree is an individual, and has a personal character. No man can stand in the presence of one of these giants without a new sense of the age of the world and the insignificant span of one human life; but he is also overpowered by a sense of some gigantic personality. It does not relieve him to think of this as the Methuselah of trees, or to call it by the name of some great poet or captain. The awe the tree inspires is of itself. As one lies and looks up at the enormous bulk, it seems not so much the bulk, so lightly is it carried, as the spirit of the tree—the elastic vigor, the patience, the endurance of storm and change, the confident might, and the soaring, almost contemptuous pride, that overwhelm the puny spectator. It is just because man can measure himself, his littleness, his brevity of existence, with this growth out of the earth, that he is more personally impressed by it than he might be by the mere variation in the contour of the globe which is called a mountain. The imagination makes a plausible effort to comprehend it, and is foiled. No; clearly it is not mere size that impresses one; it is the dignity, the character in the tree, the authority and power of antiquity. Side by side of these venerable forms are young sequoias, great trees themselves, that have only just begun their millennial career—trees that will, if spared, perpetuate to remote ages this race of giants, and in two to four thousand years from now take the place of their great-grandfathers, who are sinking under the weight of years, and one by one measuring their length on the earth.

LAGUNA, FROM THE SOUTH-EAST.

The transition from the sublime to the exquisitely lovely in nature can nowhere else be made with more celerity than from the Sierras to the coast at Monterey; California abounds in such contrasts and surprises. After the great stirring of the emotions by the Yosemite and the Mariposa, the Hotel del Monte Park and vicinity offer repose, and make an appeal to the sense of beauty and refinement. Yet even here something unique is again encountered. I do not refer to the extraordinary beauty of the giant live-oaks and the landscape-gardening about the hotel, which have made Monterey famous the world over, but to the sea-beach drive of sixteen miles, which can scarcely be rivalled elsewhere either for marine loveliness or variety of coast scenery. It has points like the ocean drive at Newport, but is altogether on a grander scale, and shows a more poetic union of shore and sea; besides, it offers the curious and fascinating spectacles of the rocks inhabited by the sea-lions, and the Cypress Point. These huge, uncouth creatures can be seen elsewhere, but probably nowhere else on this coast are they massed in greater numbers. The trees of Cypress Point are

unique, this species of cypress having been found nowhere else. The long, never-ceasing swell of the Pacific incessantly flows up the many crescent sand beaches, casting up shells of brilliant hues, sea-weed, and kelp, which seems instinct with animal life, and flotsam from the far-off islands. But the rocks that lie off the shore, and the jagged points that project in fanciful forms, break the even great swell, and send the waters, churned into spray and foam, into the air with a thousand hues in the sun. The shock of these sharp collisions mingles with the heavy ocean boom. Cypress Point is one of the most conspicuous of these projections, and its strange trees creep out upon the ragged ledges almost to the water's edge. These cypresses are quite as instinct with individual life and quite as fantastic as any that Doré drew for his "Inferno." They are as gnarled and twisted as olive-trees two centuries old, but their attitudes seem not only to show struggle with the elements, but agony in that struggle. The agony may be that of torture in the tempest, or of some fabled creatures fleeing and pursued, stretching out their long arms in terror, and fixed in that writhing fear. They are creatures of the sea quite as much as of the land, and they give to this lovely coast a strange charm and fascination.

[Pg 164]

CHAPTER, XVI.

FASCINATIONS OF THE DESERT.—THE LAGUNA PUEBLO.

The traveller to California by the Santa Fé route comes into the arid regions gradually, and finds each day a variety of objects of interest that upsets his conception of a monotonous desert land. If he chooses to break the continental journey midway, he can turn aside at Las Vegas to the Hot Springs. Here, at the head of a picturesque valley, is the Montezuma Hotel, a luxurious and handsome house, 6767 feet above sea-level, a great surprise in the midst of the broken and somewhat savage New Mexican scenery. The low hills covered with pines and piñons, the romantic glens, and the wide views from the elevations about the hotel, make it an attractive place; and a great deal has been done, in the erection of bath-houses, ornamental gardening, and the grading of roads and walks, to make it a comfortable place. The latitude and the dryness of the atmosphere insure for the traveller from the North in our winter an agreeable reception, and the elevation makes the spot in the summer a desirable resort from Southern heat. It is a sanitarium as well as a pleasure resort. The Hot Springs have much the same character as the Töplitz waters in Bohemia, and the saturated earth—the *Mütterlager*—furnishes the curative "mud baths" which are enjoyed at Marienbad and Carlsbad. The union of the climate, which is so favorable in diseases of the respiratory organs, with the waters, which do so much for rheumatic sufferers, gives a distinction to Las Vegas Hot Springs. This New Mexican air—there is none purer on the globe—is an enemy to hay-fever and malarial diseases. It was a wise enterprise to provide that those who wish to try its efficacy can do so at the Montezuma without giving up any of the comforts of civilized life.

[Pg 165]

CHURCH AT LAGUNA.

It is difficult to explain to one who has not seen it, or will not put himself in the leisurely frame of mind to enjoy it, the charms of the desert of the high plateaus of New Mexico and Arizona. Its arid character is not so impressive as its ancientness; and the part which interests us is not only the procession of the long geologic eras, visible in the extinct volcanoes, the *barrancas*, the painted buttes, the petrified forests, but as well in the evidences of civilizations gone by, or the remains of them surviving in our day—the cliff dwellings, the ruins of cities that were thriving when Coronado sent his lieutenants through the region three centuries ago, and the present residences of the Pueblo Indians, either villages perched upon an almost inaccessible rock like Acamo, or clusters of adobe dwellings like Isleta and Laguna. The Pueblo Indians, of whom the Zuñis are a tribe, have been dwellers in villages and cultivators of the soil and of the arts of peace immemorially, a gentle, amiable race. It is indeed such a race as one would expect to find in the land of the sun and the cactus. Their manners and their arts attest their antiquity and a long refinement in fixed dwellings and

[Pg 166]

occupations. The whole region is a most interesting field for the antiquarian.

We stopped one day at Laguna, which is on the Santa Fé line west of Isleta, another Indian pueblo at the Atlantic and Pacific junction, where the road crosses the Rio Grande del Norte west of Albuquerque. Near Laguna a little stream called the Rio Puerco flows southward and joins the Rio Grande. There is verdure along these streams, and gardens and fruit orchards repay the rude irrigation. In spite of these watercourses the aspect of the landscape is wild and desert-like—low barren hills and ragged ledges, wide sweeps of sand and dry gray bushes, with mountains and long lines of horizontal ledges in the distance. Laguna is built upon a rounded elevation of rock. Its appearance is exactly that of a Syrian village, the same cluster of little, square, flat-roofed houses in terraces, the same brown color, and under the same pale blue sky. And the resemblance was completed by the figures of the women on the roofs, or moving down the slope, erect and supple, carrying on the head a water jar, and holding together by one hand the mantle worn like a Spanish *rebozo*. The village is irregularly built, without much regard to streets or alleys, and it has no special side of entrance or approach. Every side presents a blank wall of adobe, and the entrance seems quite by chance. Yet the way we went over, the smooth slope was worn here and there in channels three or four inches deep, as if by the passing feet of many generations. The only semblance of architectural regularity is in the plaza, not perfectly square, upon which some of the houses look, and where the annual dances take place. The houses have the effect of being built in terraces rising one above the other, but it is hard to say exactly what a house is—whether it is anything more than one room. You can reach some of the houses only by aid of a ladder. You enter others from the street. If you will go farther you must climb a ladder which brings you to the roof that is used as the sitting-room or door-yard of the next room. From this room you may still ascend to others, or you may pass through low and small door-ways to other apartments. It is all haphazard, but exceedingly picturesque. You may find some of the family in every room, or they may be gathered, women and babies, on a roof which is protected by a parapet. At the time of our visit the men were all away at work in their fields. Notwithstanding the houses are only sun-dried bricks, and the village is without water or street commissioners, I was struck by the universal cleanliness. There was no refuse in the corners or alleys, no odors, and many of the rooms were patterns of neatness. To be sure, an old woman here and there kept her hens in an adjoining apartment above her own, and there was the litter of children and of rather careless house-keeping. But, taken altogether, the town is an example for some more civilized, whose inhabitants wash oftener and dress better than these Indians.

TERRACED HOUSES, PUEBLO OF LAGUNA.

We were put on friendly terms with the whole settlement through three or four young maidens who had been at the Carlisle school, and spoke English very prettily. They were of the ages of fifteen and sixteen, and some of them had been five years away. They came back, so far as I could learn, gladly to their own people and to the old ways. They had resumed the Indian dress, which is much more becoming to them, as I think they know, than that which had been imposed upon them. I saw no books. They do not read any now, and they appear to be perfectly content with the idle drudgery of their semi-savage condition. In time they will marry in their tribe, and the school episode will be a thing of the past. But not altogether. The pretty Josephine, who was our best cicerone about the place, a girl of lovely eyes and modest mien, showed us with pride her own room, or "house," as she called it, neat as could be, simply furnished with an iron bedstead and snow-white cot, a mirror, chair, and table, and a trunk, and some "advertising" prints on the walls. She said that she was needed at home to cook for her aged mother, and her present ambition was to make money enough by the sale of pottery and curios to buy a cooking stove, so that she could cook more as the whites do. The house-work of the family had mainly fallen upon her; but it was not burdensome, I fancied, and she and the other girls of her age had leisure to go to the station on the arrival of every train, in hope of selling something to the passengers, and to sit on the rocks in the sun and dream as maidens do. I fancy it would be better for Josephine and for all the rest if there were no station and no passing trains. The elder women were uniformly ugly, but not repulsive like the Mojaves; the place swarmed with children, and the babies, aged

women, and pleasing young girls grouped most effectively on the roofs.

The whole community were very complaisant and friendly when we came to know them well, which we did in the course of an hour, and they enjoyed as much as we did the bargaining for pottery. They have for sale a great quantity of small pieces, fantastic in form and brilliantly colored—toys, in fact; but we found in their houses many beautiful jars of large size and excellent shape, decorated most effectively. The ordinary utensils for cooking and for cooling water are generally pretty in design and painted artistically. Like the ancient Peruvians, they make many vessels in the forms of beasts and birds. Some of the designs of the decoration are highly conventionalized, and others are just in the proper artistic line of the natural—a spray with a bird, or a sunflower on its stalk. The ware is all unglazed, exceedingly light and thin, and baked so hard that it has a metallic sound when struck. Some of the large jars are classic in shape, and recall in form and decoration the ancient Cypriote ware, but the colors are commonly brilliant and barbaric. The designs seem to be indigenous, and to betray little Spanish influence. The art displayed in this pottery is indeed wonderful, and, to my eye, much more effective and lastingly pleasing than much of our cultivated decoration. A couple of handsome jars that I bought of an old woman, she assured me she made and decorated herself; but I saw no ovens there, nor any signs of manufacture, and suppose that most of the ware is made at Acoma. [Pg 171]

It did not seem to be a very religious community, although the town has a Catholic church, and I understand that Protestant services are sometimes held in the place. The church is not much frequented, and the only evidence of devotion I encountered was in a woman who wore a large and handsome silver cross, made by the Navajos. When I asked its price, she clasped it to her bosom, with an upward look full of faith and of refusal to part with her religion at any price. The church, which is adobe, and at least two centuries old, is one of the most interesting I have seen anywhere. It is a simple parallelogram, 104 feet long and 21 feet broad, the gable having an opening in which the bells hang. The interior is exceedingly curious, and its decorations are worth reproduction. The floor is of earth, and many of the tribe who were distinguished and died long ago are said to repose under its smooth surface, with nothing to mark their place of sepulture. It has an open timber roof, the beams supported upon carved corbels. The ceiling is made of wooden sticks, about two inches in diameter and some four feet long, painted in alternated colors—red, blue, orange, and black—and so twisted or woven together as to produce the effect of plaited straw, a most novel and agreeable decoration. Over the entrance is a small gallery, the under roof of which is composed of sticks laid in straw pattern and colored. All around the wall runs a most striking dado, an odd, angular pattern, with conventionalized birds at intervals, painted in strong yet *fade* colors—red, yellow, black, and white. The north wall is without windows; all the light, when the door is closed, comes from two irregular windows, without glass, high up in the south wall. [Pg 172]

GRAND CAÑON ON THE COLORADO—VIEW FROM POINT SUBLIME.

The chancel walls are covered with frescos, and there are several quaint paintings, some of them not very ^{Pg 174]} bad in color and drawing. The altar, which is supported at the sides by twisted wooden pillars, carved with a knife, is hung with ancient sheepskins brightly painted. Back of the altar are some archaic wooden images, colored; and over the altar, on the ceiling, are the stars of heaven, and the sun and the moon, each with a face in it. The interior was scrupulously clean and sweet and restful to one coming in from the glare of the sun on the desert. It was evidently little used, and the Indians who accompanied us seemed under no strong impression of its sanctity; but we liked to linger in it, it was so *bizarre*, so picturesque, and exhibited in its rude decoration so much taste. Two or three small birds flitting about seemed to enjoy the coolness and the subdued light, and were undisturbed by our presence.

These are children of the desert, kin in their condition and the influences that formed them to the sedentary tribes of upper Egypt and Arabia, who pitch their villages upon the rocky eminences, and depend for subsistence upon irrigation and scant pasturage. Their habits are those of the dwellers in an arid land which has little in common with the wilderness—the inhospitable northern wilderness of rain and frost and snow. Rain, to be sure, insures some sort of vegetation in the most forbidding and intractable country, but that does not save the harsh landscape from being unattractive. The high plateaus of New Mexico and Arizona have everything that the rainy wilderness lacks—sunshine, heaven's own air, immense breadth of horizon, color ^{Pg 175]} and infinite beauty of outline, and a warm soil with unlimited possibilities when moistened. All that these deserts need is water. A fatal want? No. That is simply saying that science can do for this region what it cannot do for the high wilderness of frost—by the transportation of water transform it into gardens of bloom and fields of fruitfulness. The wilderness shall be made to feed the desert.

INTERIOR OF THE CHURCH AT LAGUNA.

I confess that these deserts in the warm latitudes fascinate me. Perhaps it is because I perceive in them such a chance for the triumph of the skill of man, seeing how, here and there, his energy has pushed the desert out of his path across the continent. But I fear that I am not so practical. To many the desert in its stony sterility, its desolateness, its unbroken solitude, its fantastic savageness, is either appalling or repulsive. To them it is tiresome and monotonous. The vast plains of Kansas and Nebraska are monotonous even in the agricultural green of summer. Not so to me the desert. It is as changeable in its lights and colors as the ocean. It is even in its general features of sameness never long the same. If you traverse it on foot or on horseback, there is ever some minor novelty. And on the swift train, if you draw down the curtain against the glare, or turn to your book, you are sure to miss something of interest—a deep cañon rift in the plain, a turn that gives a wide view glowing in a hundred hues in the sun, a savage gorge with beetling rocks, a solitary butte or red truncated pyramid thrust up into the blue sky, a horizontal ledge cutting the horizon line as straight as a ruler for miles, a pointed cliff uplifted sheer from the plain and laid in regular courses of Cyclopean masonry, the battlements of a fort, a terraced castle with towers and esplanade, a great trough of a valley, gray and parched, enclosed by far purple mountains. And then the unlimited freedom of it, its infinite expansion, its air like wine to the senses, the floods of sunshine, the waves of color, the translucent atmosphere that aids the imagination to create in the distance all architectural splendors and realms of peace. It is all like a mirage and a dream. We pass swiftly, and make a moving panorama of beauty in hues, of strangeness in forms, of sublimity in extent, of overawing and savage antiquity. I would miss none of it. And when we pass to the accustomed again, to the fields of verdure and the forests and the hills of green, and are limited in view and shut in by that which we love, after all, better than the arid land, I have a great longing to see again the desert, to be a part of its vastness, and to feel once more the freedom and inspiration of its illimitable horizons.

[Pg 178]

CHAPTER XVII.

THE HEART OF THE DESERT.

There is an arid region lying in Northern Arizona and Southern Utah which has been called the District of the Grand Cañon of the Colorado. The area, roughly estimated, contains from 13,000 to 16,000 square miles—about the size of the State of Maryland. This region, fully described by the explorers and studied by the geologists in the United States service, but little known to even the travelling public, is probably the most interesting territory of its size on the globe. At least it is unique. In attempting to convey an idea of it the writer can be assisted by no comparison, nor can he appeal in the minds of his readers to any experience of scenery that can apply here. The so-called Grand Cañon differs not in degree from all other scenes; it differs in kind.

The Colorado River flows southward through Utah, and crosses the Arizona line below the junction with the San Juan. It continues southward, flowing deep in what is called the Marble Cañon, till it is joined by the Little Colorado, coming up from the south-east; it then turns westward in a devious line until it drops straight south, and forms the western boundary of Arizona. The centre of the district mentioned is the westwardly flowing part of the Colorado. South of the river is the Colorado Plateau, at a general elevation of about 7000 feet. North of it the land is higher, and ascends in a series of plateaus, and then terraces, a succession of cliffs like a great stair-way, rising to the high plateaus of Utah. The plateaus, adjoining the river on the north and well marked by north and south dividing lines, or faults, are, naming them from east to west, the Paria, the Kaibab, the Kanab, the Uinkaret, and the Sheavwitz, terminating in a great wall on the west, the Great Wash fault, where the surface of the country drops at once from a general elevation of 6000 feet to from 1300

to 3000 feet above the sea-level—into a desolate and formidable desert.

If the Grand Cañon itself did not dwarf everything else, the scenery of these plateaus would be superlative in interest. It is not all desert, nor are the gorges, cañons, cliffs, and terraces, which gradually prepare the mind for the comprehension of the Grand Cañon, the only wonders of this land of enchantment. These are contrasted with the sylvan scenery of the Kaibab Plateau, its giant forests and parks, and broad meadows decked in the summer with wild flowers in dense masses of scarlet, white, purple, and yellow. The Vermilion Cliffs, the Pink Cliffs, the White Cliffs, surpass in fantastic form and brilliant color anything that the imagination conceives possible in nature, and there are dreamy landscapes quite beyond the most exquisite fancies of Claude and of Turner. The region is full of wonders, of beauties, and sublimities that Shelley's imaginings do not match in the "Prometheus Unbound," and when it becomes accessible to the tourist it will offer an endless field for the delight of those whose minds can rise to the heights of the sublime and the beautiful. In all imaginative writing or painting the material used is that of human experience, otherwise it could not be understood; even heaven must be described in the terms of an earthly paradise. Human experience has no prototype of this region, and the imagination has never conceived of its forms and colors. It is impossible to convey an adequate idea of it by pen or pencil or brush. The reader who is familiar with the glowing descriptions in the official reports of Major J. W. Powell, Captain C. E. Dutton, Lieutenant Ives, and others, will not save himself from a shock of surprise when the reality is before him. This paper deals only with a single view in this marvellous region.

[Pg 180]

GRAND CAÑON OF THE COLORADO—VIEW OPPOSITE POINT SUBLIME.

The point where we struck the Grand Cañon, approaching it from the south, is opposite the promontory of the Kaibab Plateau named Point Sublime by Major Powell, just north of the 36th parallel, and 112° 15' west longitude. This is only a few miles west of the junction with the Little Colorado. About three or four miles west of this junction the river enters the east slope of the east Kaibab monocline, and here the Grand Cañon begins. Rapidly the chasm deepens to about 6000 feet, or rather it penetrates a higher country, the slope of the river remaining about the same. Through this lofty plateau—an elevation of 7000 to 9000 feet—the chasm extends for sixty miles, gradually changing its course to the north-west, and entering the Kanab Plateau. The Kaibab division of the Grand Cañon is by far the sublimest of all, being 1000 feet deeper than any other. It is not grander only on account of its greater depth, but it is broader and more diversified with magnificent architectural features.

[Pg 182]

The Kanab division, only less magnificent than the Kaibab, receives the Kanab Cañon from the north and the Cataract Cañon from the south, and ends at the Toroweap Valley.

The section of the Grand Cañon seen by those who take the route from Peach Springs is between 113° and 114° west longitude, and, though wonderful, presents few of the great features of either the Kaibab or the Kanab divisions. The Grand Cañon ends, west longitude 114°, at the Great Wash, west of the Hurricane Ledge or Fault. Its whole length from Little Colorado to the Great Wash, measured by the meanderings of the surface of the river, is 220 miles; by a median line between the crests of the summits of the walls with two-mile cords, about 195 miles; the distance in a straight line is 125 miles.

In our journey to the Grand Cañon we left the Santa Fé line at Flagstaff, a new town with a lively lumber industry, in the midst of a spruce-pine forest which occupies the broken country through which the road passes for over fifty miles. The forest is open, the trees of moderate size are too thickly set with low-growing limbs to make clean lumber, and the foliage furnishes the minimum of shade; but the change to these woods is a welcome one from the treeless reaches of the desert on either side. The cañon is also reached from Williams, the next station west, the distance being a little shorter, and the point on the cañon visited being usually a little farther west. But the Flagstaff route is for many reasons usually preferred. Flagstaff lies just south-east of the San Francisco Mountain, and on the great Colorado Plateau, which has a pretty uniform elevation of about 7000 feet above the sea. The whole region is full of interest. Some of the most remarkable cliff dwellings are within ten miles of Flagstaff, on the Walnut Creek Cañon. At Holbrook, 100 miles east, the traveller finds a road some forty miles long, that leads to the great petrified forest, or Chalcedony Park. Still farther east are the villages of the Pueblo Indians, near the line, while to the northward is the great reservation of the Navajos, a nomadic tribe celebrated for its fine blankets and pretty work in silver—a tribe that preserves much of its manly independence by shunning the charity of the United States. No Indians have come into intimate or dependent relations with the whites without being deteriorated.

[Pg 183]

TOURISTS IN THE COLORADO CAÑON.

Flagstaff is the best present point of departure, because it has a small hotel, good supply stores, and a large livery-stable, made necessary by the business of the place and the objects of interest in the neighborhood, and because one reaches from there by the easiest road the finest scenery incomparably on the Colorado. The distance is seventy-six miles through a practically uninhabited country, much of it a desert, and with water very infrequent. No work has been done on the road; it is made simply by driving over it. There are a few miles here and there of fair wheeling, but a good deal of it is intolerably dusty or exceedingly stony, and progress is slow. In the daytime (it was the last of June) the heat is apt to be excessive; but this could be borne, the air is so absolutely dry and delicious, and breezes occasionally spring up, if it were not for the dust. It is, notwithstanding the novelty of the adventure and of the scenery by the way, a tiresome journey of two days. A day of rest is absolutely required at the cañon, so that five days must be allowed for the trip. This will cost the traveller, according to the size of the party made up, from forty to fifty dollars. But a much longer sojourn at the cañon is desirable. Pg 184]

Our party of seven was stowed in and on an old Concord coach drawn by six horses, and piled with camp equipage, bedding, and provisions. A four-horse team followed, loaded with other supplies and cooking utensils. The road lies on the east side of the San Francisco Mountain. Returning, we passed around its west side, gaining thus a complete view of this shapely peak. The compact range is a group of extinct volcanoes, the craters of which are distinctly visible. The cup-like summit of the highest is 13,000 feet above the sea, and snow always lies on the north escarpment. Rising about 6000 feet above the point of view of the great plateau, it is from all sides a noble object, the dark rock, snow-sprinkled, rising out of the dense growth of pine and cedar. We drove at first through open pine forests, through park-like intervals, over the foot-hills of the mountain, through growths of scrub cedar, and out into the ever-varying rolling country to widely-extended prospects. Two considerable hills on our right attracted us by their unique beauty. Upon the summit and side of each was a red glow exactly like the tint of sunset. We thought surely that it was the effect of reflected light, but the sky was cloudless and the color remained constant. The color came from the soil. The first was called Sunset Mountain. One of our party named the other, and the more beautiful, Peachblow Mountain, a poetic and perfectly descriptive name. Pg 185]

We lunched at noon beside a swift, clouded, cold stream of snow-water from the San Francisco, along which grew a few gnarled cedars and some brilliant wild flowers. The scene was more than picturesque; in the clear hot air of the desert the distant landscape made a hundred pictures of beauty. Behind us the dark form of San Francisco rose up 6000 feet to its black crater and fields of spotless snow. Away off to the north-east, beyond the brown and gray pastures, across a far line distinct in dull color, lay the Painted Desert, like a mirage, like a really painted landscape, glowing in red and orange and pink, an immense city rather than a landscape, with towers and terraces and façades, melting into indistinctness as in a rosy mist, spectral but constant, weltering in a tropic glow and heat, walls and columns and shafts, the wreck of an Oriental capital on a wide violet plain, suffused with brilliant color softened into exquisite shades. All over this region nature has such surprises, that laugh at our inadequate conception of her resources. Pg 186]

Our camp for the night was at the next place where water could be obtained, a station of the Arizona Cattle Company. Abundant water is piped down to it from mountain springs. The log-house and stable of the cowboys were unoccupied, and we pitched our tent on a knoll by the corral. The night was absolutely dry, and sparkling with the starlight. A part of the company spread their blankets on the ground under the sky. It is apt to be cold in this region towards morning, but lodging in the open air is no hardship in this delicious climate. The next day the way part of the distance, with only a road marked by wagon wheels, was through extensive and barren-looking cattle ranges, through pretty vales of grass surrounded by stunted cedars, and over stormy ridges and plains of sand and small boulders. The water having failed at Red Horse, the only place where it is usually found in the day's march, our horses went without, and we had resource to our canteens. The whole country is essentially arid, but snow falls in the winter-time, and its melting, with

occasional showers in the summer, create what are called surface wells, made by drainage. Many of them go dry by June. There had been no rain in the region since the last of March, but clouds were gathering daily^{Pg 187]} and showers are always expected in July. The phenomenon of rain on this baked surface, in this hot air, and with this immense horizon, is very interesting. Showers in this tentative time are local. In our journey we saw showers far off, we experienced a dash for ten minutes, but it was local, covering not more than a mile or two square. We have in sight a vast canopy of blue sky, of forming and dispersing clouds. It is difficult for them to drop their moisture in the rising columns of hot air. The result at times was a very curious spectacle—rain in the sky that did not reach the earth. Perhaps some cold current high above us would condense the moisture, which would begin to fall in long trailing sweeps, blown like fine folds of muslin, or like sheets of dissolving sugar, and then the hot air of the earth would dissipate it, and the showers would be absorbed in the upper regions. The heat was sometimes intense, but at intervals a refreshing wind would blow, the air being as fickle as the rain; and now and then we would see a slender column of dust, a thousand or two feet high, marching across the desert, apparently not more than two feet in diameter, and wavering like the threads of moisture that tried in vain to reach the earth as rain. Of life there was not much to be seen in our desert route. In the first day we encountered no habitation except the ranch-house mentioned, and saw no human being; and the second day none except the solitary occupant of the dried well at Red Horse, and two or three Indians on the hunt. A few squirrels were seen, and a rabbit now and then, and occasionally a bird. The general impression was that of a deserted land. But antelope abound in the timber regions, and we saw^{Pg 188]} several of these graceful creatures quite near us. Excellent antelope steaks, bought of the wandering Indian hunters, added something to our "canned" supplies. One day as we lunched, without water, on the cedar slope of a lovely grass interval, we saw coming towards us over the swells of the prairie a figure of a man on a horse. It rode to us straight as the crow flies. The Indian pony stopped not two feet from where our group sat, and the rider, who was an Oualapai chief, clad in sacking, with the print of the brand of flour or salt on his back, dismounted with his Winchester rifle, and stood silently looking at us without a word of salutation. He stood there, impassive, until we offered him something to eat. Having eaten all we gave him, he opened his mouth and said, "Smoke 'em?" Having procured from the other wagon a pipe of tobacco and a pull at the driver's canteen, he returned to us all smiles. His only baggage was the skull of an antelope, with the horns, hung at his saddle. Into this he put the bread and meat which we gave him, mounted the wretched pony, and without a word rode straight away. At a little distance he halted, dismounted, and motioned towards the edge of the timber, where he had spied an antelope. But the game eluded him, and he mounted again and rode off across the desert—a strange figure. His tribe lives in the cañon some fifty miles west, and was at present encamped, for the purpose of hunting, in the pine woods not far from the point we were aiming at.

[Pg 189]

CHAPTER XVIII.

ON THE BRINK OF THE GRAND CAÑON.—THE UNIQUE MARVEL OF NATURE.

The way seemed long. With the heat and dust and slow progress, it was exceedingly wearisome. Our modern nerves are not attuned to the slow crawling of a prairie-wagon. There had been growing for some time in the coach a feeling that the journey did not pay; that, in fact, no mere scenery could compensate for the fatigue of the trip. The imagination did not rise to it. "It will have to be a very big cañon," said the duchess.

Late in the afternoon we entered an open pine forest, passed through a meadow where the Indians had set their camp by a shallow pond, and drove along a ridge, in the cool shades, for three or four miles. Suddenly, on the edge of a descent, we who were on the box saw through the tree-tops a vision that stopped the pulse for a second, and filled us with excitement. It was only a glimpse, far off and apparently lifted up—red towers, purple cliffs, wide-spread apart, hints of color and splendor; on the right distance, mansions, gold and white and carmine (so the light made them), architectural habitations in the sky it must be, and suggestions of others far off in the middle distance—a substantial aerial city, or the ruins of one, such as the prophet saw in a vision. It was only a glimpse. Our hearts were in our mouths. We had a vague impression of something^{Pg 190]} wonderful, fearful—some incomparable splendor that was not earthly. Were we drawing near the "City?" and should we have yet a more perfect view thereof? Was it Jerusalem or some Hindoo temples there in the sky? "It was builded of pearls and precious stones, also the streets were paved with gold; so that by reason of the natural glory of the city, and the reflection of the sunbeams upon it, Christian with desire fell sick." It was a momentary vision of a vast amphitheatre of splendor, mostly hidden by the trees and the edge of the plateau.

We descended into a hollow. There was the well, a log-cabin, a tent or two under the pine-trees. We dismounted with impatient haste. The sun was low in the horizon, and had long withdrawn from this grassy dell. Tired as we were, we could not wait. It was only to ascend the little steep, stony slope—300 yards—and we should see! Our party were straggling up the hill: two or three had reached the edge. I looked up. The duchess threw up her arms and screamed. We were not fifteen paces behind, but we saw nothing. We took the few steps, and the whole magnificence broke upon us. No one could be prepared for it. The scene is one to strike dumb with awe, or to unstring the nerves; one might stand in silent astonishment, another would burst into tears.

There are some experiences that cannot be repeated—one's first view of Rome, one's first view of Jerusalem. But these emotions are produced by association, by the sudden standing face to face with the scenes most wrought into our whole life and education by tradition and religion. This was without association, as it was without parallel. It was a shock so novel that the mind, dazed, quite failed to comprehend it. All that we could grasp was a vast confusion of amphitheatres and strange architectural forms resplendent with color. The vastness of the view amazed us quite as much as its transcendent beauty.

[Pg 191]

GRAND CAÑON OF THE COLORADO
—VIEW FROM THE HANSE TRAIL.

We had expected a cañon—two lines of perpendicular walls 6000 feet high, with the ribbon of a river at the bottom; but the reader may dismiss all his notions of a cañon, indeed of any sort of mountain or gorge scenery with which he is familiar. We had come into a new world. What we saw was not a cañon, or a chasm, or a gorge, but a vast area which is a break in the plateau. From where we stood it was twelve miles across to the opposite walls—a level line of mesa on the Utah side. We looked up and down for twenty to thirty miles. This great space is filled with gigantic architectural constructions, with amphitheatres, gorges, precipices, walls of masonry, fortresses terraced up to the level of the eye, temples mountain size, all brilliant with horizontal lines of color—streaks of solid hues a few feet in width, streaks a thousand feet in width—yellows, mingled white and gray, orange, dull red, brown, blue, carmine, green, all blending in the sunlight into one transcendent suffusion of splendor. Afar off we saw the river in two places, a mere thread, as motionless and smooth as a strip of mirror, only we knew it was a turbid, boiling torrent, 6000 feet below us. Directly opposite the overhanging ledge on which we stood was a mountain, the sloping base of which was ashy gray and bluish; it rose in a series of terraces to a thousand-foot wall of dark red sandstone, receding upward, with ranges of columns and many fantastic sculptures, to a finial row of gigantic opera-glasses 6000 feet above the river. The great San Francisco Mountain, with its snowy crater, which we had passed on the way, might have been set down in the place of this one, and it would have been only one in a multitude of such forms that met the eye whichever way we looked. Indeed, all the vast mountains in this region might be hidden in this cañon.

Wandering a little away from the group and out of sight, and turning suddenly to the scene from another point of view, I experienced for a moment an indescribable terror of nature, a confusion of mind, a fear to be alone in such a presence. With all this grotesqueness and majesty of form and radiance of color, creation seemed in a whirl. With our education in scenery of a totally different kind, I suppose it would need long acquaintance with this to familiarize one with it to the extent of perfect mental comprehension.

The vast abyss has an atmosphere of its own, one always changing and producing new effects, an atmosphere and shadows and tones of its own—golden, rosy, gray, brilliant, and sombre, and playing a thousand fantastic tricks to the vision. The rich and wonderful color effects, says Captain Dutton, "are due to the inherent colors of the rocks, modified by the atmosphere. Like any other great series of strata in the plateau province, the carboniferous has its own range of colors, which might serve to distinguish it, even if we had no other criterion. The summit strata are pale gray, with a faint yellowish cast. Beneath them the cross-bedded sandstone appears, showing a mottled surface of pale pinkish hue. Underneath this member are nearly 1000 feet of the lower Aubrey sandstones, displaying an intensely brilliant red, which is somewhat marked by the talus shot down from the gray cherty limestone at the summit. Beneath the lower Aubrey is the face of the Red Wall limestone, from 2000 to 3000 feet high. It has a strong red tone, but a very peculiar one. Most of the red strata of the West have the brownish or vermilion tones, but these are rather purplish red, as if the pigment had been treated to a dash of blue. It is not quite certain that this may not arise in part from the intervention of the blue haze, and probably it is rendered more conspicuous by this cause; but, on the whole, the purplish cast seems to be inherent. This is the dominant color of the cañon, for the expanse of the rock surface displayed is more than half in the Red Wall group."

I was continually likening this to a vast city rather than a landscape, but it was a city of no man's creation nor of any man's conception. In the visions which inspired or crazy painters have had of the New Jerusalem, of Babylon the Great, of a heaven in the atmosphere, with endless perspective of towers and steeples that hang in the twilight sky, the imagination has tried to reach this reality. But here are effects beyond the artist, forms the architect has not hinted at; and yet everything reminds us of man's work. And the explorers have tried by the use of Oriental nomenclature to bring it within our comprehension, the East being the land of the imagination. There is the Hindoo Amphitheatre, the Bright Angel Amphitheatre, the Ottoman Amphitheatre, Shiva's Temple, Vishnu's Temple, Vulcan's Throne. And here, indeed, is the idea of the pagoda architecture,

of the terrace architecture, of the bizarre constructions which rise with projecting buttresses, rows of pillars, recesses, battlements, esplanades, and low walls, hanging gardens, and truncated pinnacles. It is a city, but a city of the imagination. In many pages I could tell what I saw in one day's lounging for a mile or so along the edge of the precipice. The view changed at every step, and was never half an hour the same in one place. Nor did it need much fancy to create illusions or pictures of unearthly beauty. There was a castle, terraced up with columns, plain enough, and below it a parade-ground; at any moment the knights in armor and with banners might emerge from the red gates and deploy there, while the ladies looked down from the balconies. But there were many castles and fortresses and barracks and noble mansions. And the rich sculpture in this brilliant color! In time I began to see queer details: a Richardson house, with low portals and round arches, surmounted by a Nuremberg gable; perfect panels, 600 feet high, for the setting of pictures; a train of cars partly derailed at the door of a long, low warehouse, with a garden in front of it. There was no end to such devices.

It was long before I could comprehend the vastness of the view, see the enormous chasms and rents and seams, and the many architectural ranges separated by great gulfs, between me and the wall of the mesa twelve miles distant. Away to the north-east was the blue Navajo Mountain, the lone peak in the horizon; but on the southern side of it lay a desert level, which in the afternoon light took on the exact appearance of a blue lake; its edge this side was a wall thousands of feet high, many miles in length, and straightly horizontal; over this seemed to fall water. I could see the foam of it at the foot of the cliff; and below that was a lake of shimmering silver, in which the giant precipice and the fall and their color were mirrored. Of course there was no silver lake, and the reflection that simulated it was only the sun on the lower part of the immense wall.

Some one said that all that was needed to perfect this scene was a Niagara Falls. I thought what figure a fall 150 feet high and 3000 long would make in this arena. It would need a spy-glass to discover it. An adequate Niagara here should be at least three miles in breadth, and fall 2000 feet over one of these walls. And the Yosemite—ah! the lovely Yosemite! Dumped down into this wilderness of gorges and mountains, it would take a guide who knew of its existence a long time to find it.

The process of creation is here laid bare through the geologic periods. The strata of rock, deposited or upheaved, preserve their horizontal and parallel courses. If we imagine a river flowing on a plain, it would wear for itself a deeper and deeper channel. The walls of this channel would recede irregularly by weathering and by the coming in of other streams. The channel would go on deepening, and the outer walls would again recede. If the rocks were of different material and degrees of hardness, the forms would be carved in the fantastic and architectural manner we find them here. The Colorado flows through the tortuous inner chasm, and where we see it, it is 6000 feet below the surface where we stand, and below the towers of the terraced forms nearer it. The splendid views of the cañon at this point given in Captain Dutton's report are from Point Sublime, on the north side. There seems to have been no way of reaching the river from that point. From the south side the descent, though wearisome, is feasible. It reverses mountaineering to descend 6000 feet for a view, and there is a certain pleasure in standing on a mountain summit without the trouble of climbing it. Hence, the guide, who has charge of the well, has made a path to the bottom. The route is seven miles long. Half-way down he has a house by a spring. At the bottom, somewhere in those depths, is a sort of farm, grass capable of sustaining horses and cattle, and ground where fruit-trees can grow. Horses are actually living there, and parties descend there with tents, and camp for days at a time. It is a world of its own. Some of the photographic views presented here, all inadequate, are taken from points on Hance's trail. But no camera or pen can convey an adequate conception of what Captain Dutton happily calls a great innovation in the modern ideas of scenery. To the eye educated to any other, it may be shocking, grotesque, incomprehensible; but "those who have long and carefully studied the Grand Cañon of the Colorado do not hesitate for a moment to pronounce it by far the most sublime of all earthly spectacles."

I have space only to refer to the geologic history in Captain Dutton's report of 1882, of which there should be a popular edition. The waters of the Atlantic once overflowed this region, and were separated from the Pacific, if at all, only by a ridge. The story is of long eras of deposits, of removal, of upheaval, and of volcanic action. It is estimated that in one period the thickness of strata removed and transported away was 10,000 feet. Long after the Colorado began its work of corrosion there was a mighty upheaval. The reader will find the story of the making of the Grand Cañon more fascinating than any romance.

Without knowing this story the impression that one has in looking on this scene is that of immense antiquity, hardly anywhere else on earth so overwhelming as here. It has been here in all its lonely grandeur and transcendent beauty, exactly as it is, for what to us is an eternity, unknown, unseen by human eye. To the recent Indian, who roved along its brink or descended to its recesses, it was not strange, because he had known no other than the plateau scenery. It is only within a quarter of a century that the Grand Cañon has been known to the civilized world. It is scarcely known now. It is a world largely unexplored. Those who best know it are most sensitive to its awe and splendor. It is never twice the same, for, as I said, it has an atmosphere of its own. I was told by Hance that he once saw a thunder-storm in it. He described the chaos of clouds in the pit, the roar of the tempest, the reverberations of thunder, the inconceivable splendor of the rainbows mingled with the colors of the towers and terraces. It was as if the world were breaking up. He fled away to his hut in terror.

The day is near when this scenery must be made accessible. A railway can easily be built from Flagstaff. The projected road from Utah, crossing the Colorado at Lee's Ferry, would come within twenty miles of the Grand Cañon, and a branch to it could be built. The region is arid, and in the "sight-seeing" part of the year the few surface wells and springs are likely to go dry. The greatest difficulty would be in procuring water for railway service or for such houses of entertainment as are necessary. It could, no doubt, be piped from the San Francisco Mountain. At any rate, ingenuity will overcome the difficulties, and travellers from the wide world will flock thither, for there is revealed the long-kept secret, the unique achievement of nature.

A CLIMATE FOR INVALIDS.

The following notes on the climate of Southern California, written by Dr. H. A. Johnson, of Chicago, at the solicitation of the writer of this volume and for his information, I print with his permission, because the testimony of a physician who has made a special study of climatology in Europe and America, and is a recognized authority, belongs of right to the public:

The choice of a climate for invalids or semi-invalids involves the consideration of: First, the invalid, his physical condition (that is, disease), his peculiarities (mental and emotional), his social habits, and his natural and artificial needs. Second, the elements of climate, such as temperature, moisture, direction and force of winds, the averages of the elements, the extremes of variation, and the rapidity of change.

The climates of the western and south-western portions of the United States are well suited to a variety of morbid conditions, especially those pertaining to the pulmonary organs and the nervous system. Very few localities, however, are equally well adapted to diseases of innervation of circulation and respiration. For the first and second, as a rule, high altitudes are not advisable; for the third, altitudes of from two thousand to six thousand feet are not only admissible but by many thought to be desirable. It seems, however, probable that it is to the dryness of the air and the general antagonisms to vegetable growths, rather than to altitude alone, that the benefits derived in these regions by persons suffering from consumption and kindred diseases should be credited.

Proximity to large bodies of water, river valleys, and damp plateaus are undesirable as places of residence for invalids with lung troubles. There are exceptions to this rule. Localities near the sea with a climate subject to slight variations in temperature, a dry atmosphere, little rainfall, much sunshine, not so cold in winter as to prevent much out-door life and not so hot in summer as to make out-door exercise exhausting, are well adapted not only to troubles of the nervous and circulatory systems, but also to those of the respiratory organs.

Such a climate is found in the extreme southern portions of California. At San Diego the rainfall is much less, the air is drier, and the number of sunshiny days very much larger than on our Atlantic seaboard, or in Central and Northern California. The winters are not cold; flowers bloom in the open air all the year round; the summers are not hot. The mountains and sea combine to give to this region a climate with few sudden changes, and with a comfortable range of all essential elements.

A residence during a part of the winter of 1889-90 at Coronado Beach, and a somewhat careful study of the comparative climatology of the south-western portions of the United States, leads me to think that we have few localities where the comforts of life can be secured, and which at the same time are so well adapted to the needs of a variety of invalids, as San Diego and its surroundings. In saying this I do not wish to be understood as preferring it to all others for some one condition or disease, but only that for weak hearts, disabled lungs, and worn-out nerves it seems to me to be unsurpassed.

Chicago, July 12, 1890.

THE COMING OF WINTER IN SOUTHERN CALIFORNIA.

From Mr. Theodore S. Van Dyke's altogether admirable book on *Southern California* I have permission to quote the following exquisite description of the floral procession from December to March, when the Land of the Sun is awakened by the first winter rain:

Sometimes this season commences with a fair rain in November, after a light shower or two in October, but some of the very best seasons begin about the time that all begin to lose hope. November adds its full tribute to the stream of sunshine that for months has poured along the land; and, perhaps, December closes the long file of cloudless days with banners of blue and gold. The plains and slopes lie bare and brown; the low hills that break away from them are yellow with dead foxtail or wild oats, gray with mustard-stalks, or ashy green with chemical or sage. Even the chaparral, that robes the higher hills in living green, has a tired air, and the long timber-line that marks the cañon winding up the mountain-slopes is decidedly paler. The sea-breeze has fallen off to a faint breath of air; the land lies silent and dreamy with golden haze; the air grows drier, the sun hotter, and the shade cooler; the smoke of brush-fires hangs at times along the sky; the water has risen in the springs and sloughs as if to meet the coming rain, but it has never looked less like rain than it now does.

Suddenly a new wind arises from the vast watery plains upon the south-west; long, fleecy streams of cloud reach out along the sky; the distant mountain-tops seem swimming in a film of haze, and the great California weather prophet—a creature upon whom the storms of adverse experience have beaten for years without making even a weather crack in the smooth cheek of his conceit—lavishes his wisdom as confidently as if he had never made a false prediction. After a large amount of fuss, and enough preliminary skirmishing over the sky for a dozen storms in any Eastern State, the clouds at last get ready, and a soft pattering is heard upon the roof—the sweetest music that ever cheers a Californian ear, and one which the author of "The Rain upon the Roof" should have heard before writing his poem.

When the sun again appears it is with a softer, milder beam than before. The land looks bright and refreshed, like a tired and dirty boy who has had a good bath and a nap, and already the lately bare plains and hill-sides show a greenish tinge. Fine little leaves of various kinds are springing from the ground, but nearly all are lost in a general profusion of dark green ones, of such shape and delicacy of texture that a careless eye might readily take them for ferns. This is the alfileria, the prevailing flower of the land. The rain may continue at intervals. Daily the land grows greener, while the shades of green, varied by the play of sunlight on the slopes and rolling hills, increase in number and intensity. Here the color is soft, and there bright; yonder it rolls in wavy alternations, and yonder it reaches in an unbroken shade where the plain sweeps broad and free. For many weeks green is the only color, though cold nights may perhaps tinge it with a rusty red. About the first of February a little starlike flower of bluish pink begins to shine along the ground. This is the bloom of the alfileria, and swiftly it spreads from the southern slopes, where it begins, and runs from meadow to hill-top. Soon after a cream-colored bell-flower begins to nod from a tall, slender stalk;

another of sky-blue soon opens beside it; beneath these a little five-petaled flower of deep pink tries to outshine the blossoms of the alfileria; and above them soon stands the radiant shooting-star, with reflexed petals of white, yellow, and pink shining behind its purplish ovaries. On every side violets, here of the purest golden hue and overpowering fragrance, appear in numbers beyond all conception. And soon six or seven varieties of clover, all with fine, delicate leaves, unfold flowers of yellow, red, and pink. Delicate little crucifers of white and yellow shine modestly below all these; little cream-colored flowers on slender scapes look skyward on every side; while others of purer white, with every variety of petal, crowd up among them. Standing now upon some hill-side that commands miles of landscape, one is dazzled with a blaze of color, from acres and acres of pink, great fields of violets, vast reaches of blue, endless sweeps of white.

Upon this—merely the warp of the carpet about to cover the land—the sun fast weaves a woof of splendor. Along the southern slopes of the lower hills soon beams the orange light of the poppy, which swiftly kindles the adjacent slopes, then flames along the meadow, and blazes upon the northern hill-sides. Spires of green, mounting on every side, soon open upon the top into lilies of deep lavender, and the scarlet bracts of the painted-cup glow side by side with the crimson of the cardinal-flower. And soon comes the iris, with its broad golden eye fringed with rays of lavender blue; and five varieties of phacelia overwhelm some places with waves of purple, blue, indigo, and whitish pink. The evening primrose covers the lower slopes with long sheets of brightest yellow, and from the hills above the rock-rose adds its golden bloom to that of the sorrel and the wild alfalfa, until the hills almost outshine the bright light from the slopes and plains. And through all this nods a tulip of most delicate lavender; vetches, lupins, and all the members of the wild-pea family are pushing and winding their way everywhere in every shade of crimson, purple, and white; along the ground crowfoot weaves a mantle of white, through which, amid a thousand comrades, the orthocarpus rears its tufted head of pink. Among all these are mixed a thousand other flowers, plenty enough as plenty would be accounted in other countries, but here mere pin-points on a great map of colors.

As the stranger gazes upon this carpet that now covers hill and dale, undulates over the table-lands, and robes even the mountain with a brilliancy and breadth of color that strikes the eye from miles away, he exhausts his vocabulary of superlatives, and goes away imagining he has seen it all. Yet he has seen only the background of an embroidery more varied, more curious and splendid, than the carpet upon which it is wrought. Asters bright with centre of gold and lavender rays soon shine high above the iris, and a new and larger tulip of deepest yellow nods where its lavender cousin is drooping its lately proud head. New bell-flowers of white and blue and indigo rise above the first, which served merely as ushers to the display, and whole acres ablaze with the orange of the poppy are fast turning with the indigo of the larkspur. Where the ground was lately aglow with the marigold and the four-o'clock the tall penstemon now reaches out a hundred arms full-hung with trumpets of purple and pink. Here the silene rears high its head with fringed corolla of scarlet; and there the wild gooseberry dazzles the eye with a perfect shower of tubular flowers of the same bright color. The mimulus alone is almost enough to color the hills. Half a dozen varieties, some with long, narrow, trumpet-shaped flowers, others with broad flaring mouths; some of them tall herbs, and others large shrubs, with varying shades of dark red, light red, orange, cream-color, and yellow, spangle hill-side, rock-pile, and ravine. Among them the morning-glory twines with flowers of purest white, new lupins climb over the old ones, and the trailing vetch festoons rock and shrub and tree with long garlands of crimson, purple, and pink. Over the scarlet of the gooseberry or the gold of the high-bush mimulus along the hills, the honeysuckle hangs its tubes of richest cream-color, and the wild cucumber pours a shower of white over the green leaves of the sumach or sage. Snap-dragons of blue and white, dandelions that you must look at three or four times to be certain what they are, thistles that are soft and tender with flowers too pretty for the thistle family, orchids that you may try in vain to classify, and sages and mints of which you can barely recognize the genera, with cruciferæ, compositæ, and what-not, add to the glare and confusion.

Meanwhile, the chaparral, which during the long dry season has robed the hills in sombre green, begins to brighten with new life; new leaves adorn the ragged red arms of the manzanita, and among them blow thousands of little urn-shaped flowers of rose-color and white. The bright green of one lilac is almost lost in a luxuriance of sky-blue blossoms, and the white lilac looks at a distance as if drifted over with snow. The cercocarpus almost rivals the lilac in its display of white and blue, and the dark, forbidding adenostoma now showers forth dense panicles of little white flowers. Here, too, a new mimulus pours floods of yellow light, and high above them all the yucca rears its great plume of purple and white.
