There are numerous other cities, towns, villages and districts notable for industrial, educational, historical, literary, or other associations.

THE VICTORIA EMBANKMENT, LONDON, WITH THE THAMES IN THE FOREGROUND

LONDON, the capital of the British Empire and the second largest city in the world, is situated in the southeast of England on both sides of the River Thames, which winds through it from west to east. The river is crossed by numerous bridges and is deep enough to allow large vessels to come up to London Bridge, the lowest of these (except the movable Tower Bridge), where it is two hundred and sixty-six yards wide. London may be said to stretch from east to west about fourteen miles, from north to south about ten.

The area embraced by the Metropolitan and City police districts, including all parishes within fifteen miles of Charing Cross, is spoken of as Greater London. The population of London roughly equals that of Scotland, Holland, Portugal or Sweden. Under the Act of 1899 London includes the municipal boroughs of Battersea, Bermondsey, Bethnal Green, Camberwell, Chelsea, Deptford, Finsbury, Fulham, Greenwich, Hackney, Hammersmith, Hampstead, Holborn, Islington, Kensington, Lambeth, Lewisham, Paddington, Poplar, St. Marylebone, St. Pancras, Shoreditch, Stoke Newington, Wandsworth, Westminster and Woolwich.

GENERAL FEATURES.—The greater portion of London lies on the north side of the Thames, in the counties of Middlesex and Essex, mainly the former, on a site gradually rising from the river, and marked by several inequalities of no great height, except in the northern suburbs, where the elevation of four hundred and thirty feet is reached; on the opposite bank, in the county of Surrey and partly in Kent, the more densely built parts cover an extensive and nearly uniform flat, in some places below the level of the highest tides, while the outskirts are mostly elevated.

The nucleus of London was formed by what is still distinctively the City of London, situated in the heart of the metropolis on the north bank of the Thames. The City is a separate municipality, having a civic corporation of its own, at its head being the Lord-mayor of London. The City occupies only six hundred and seventy-one acres, and has a resident population of only twenty-seven thousand.

Westminster, another portion of old London, associated with the sovereigns, the parliaments, and the supreme courts of justice of England for over eight hundred years, borders with the City on the west; while across the river from the city lies the ancient quarter of Southwark, or "The Borough." Besides these, London consists of a great number of well-defined quarters or districts, as well as many minor districts, the names of which are familiar to the outside world, such as Whitechapel, Spitalfields, Pimlico, Bloomsbury, Bermondsey, Belgravia, etc. Another loose division of London is into the West End or fashionable quarter, the residence of the wealthy, and the East End, the great seat of trade and manufactures.

PARLIAMENT BUILDINGS, LONDON

The financial and business houses of the city are principally located to the east of St. Paul's; the galleries, theaters, and places of amusement between St. Paul's and St. James's Park; the parks and residences of the nobility upon the western margin of the city. The railway stations are, with few exceptions, in the suburbs.

London, on the whole, may be called a well-built city, brick being the material generally employed, though many public and other edifices are built of stone. In some streets the brick fronts are made to imitate stone by being coated with cement. The streets are generally well kept and well paved and lighted, but, except in some of the more recent quarters, the general appearance of London is not attractive, much of the effect of the fine buildings being lost by overcrowding and the want of fitting sites.

What generally most strikes a stranger in London is its immense size, which can only be grasped by actually traveling about, or by obtaining a view from some elevation, as Primrose Hill in the northwest, or the dome of St. Paul's Cathedral near the center, the most conspicuous building in the metropolis. Other striking and also attractive features of London are the parks, especially Hyde Park and Regent's Park, so valuable as breathing spaces; and the handsome and massive stone embankments along the Thames, forming wide roadways and promenades bordered by trees for long distances.

As the capital of the British Empire, London is from time to time the residence of the sovereign and court. It contains the buildings for the accommodation of parliament and all the great government departments. It is the chief intellectual center of Britain, and is equally great as a center of commerce, banking and finance generally.

MAIN STREETS.—Although in the different districts of London, with the exception of the parts most recently built, there are numerous narrow and crooked streets, yet the whole extent of the metropolis is well united by trunk lines of streets in the principal directions, which render it comparatively easy for a stranger to find his way from one district to another. Piccadilly and Pall Mall; the Strand and its continuation Fleet Street, Oxford Street and its continuations, Holborn, Holborn Viaduct, and Cheapside eastward, and Bayswater Road, Notting Hill High Street, and Holland Park Avenue westward, are among noteworthy streets running east and west; while of those running north and south, Regent Street, perhaps the handsomest street in London, and the location of fashionable shops, is the chief. Edgware Road, with its continuations, is an important thoroughfare running northwest. Kings-way and Aldwych, connecting Holborn with the Strand, were opened in 1905.

Many of the streets are closely associated with special trades, industries, pursuits, etc. Thus Bond Street is associated with jewelers, Oxford Street and Regent Street with milliners, the Burlington Arcade with fashionable haberdashers, Fleet Street with newspapers, Northumberland Avenue and the Strand with hotels, Long Acre with carriage builders, Shaftesbury Avenue with theaters, while Pall Mall is the especial center of clubland. Booksellers' Row and the Lowther Arcade in the Strand, famous respectively for second-hand book shops and for toy shops, have both disappeared quite recently. The Thames Embankment on the north or Middlesex side, known as the Victoria Embankment, also forms a magnificent thoroughfare, adorned by important buildings, and at different points with ornamental grounds and statues.

BRIDGES.—A number of magnificent bridges cross the Thames. The lowest is the Tower Bridge, a "bascule" bridge opening by machinery so as to let ships pass through. The others most remarkable in upward order (exclusive of railway bridges) are London Bridge, nine hundred feet long, and built of Aberdeen granite; Southwark Bridge, and Blackfriars' Bridge, all connecting the city with Southwark; Waterloo Bridge, one thousand three hundred and eighty feet long, consisting of nine elliptical arches of Aberdeen granite; Westminster Bridge, an elegant structure of iron, one thousand two hundred feet long, crossing the river from Westminster to Lambeth; Vauxhall Bridge (rebuilding completed in 1906), carrying an electric railway; Putney Bridge, and Hammersmith Bridge. A great traffic passes under the river in tunnels, some for electric

[458]

[459]

[460]

railways. The old Thames Tunnel, two miles below London Bridge, now contains a railway. The great Blackwall Tunnel, farther down, is for general traffic.

PARKS AND SQUARES.—The chief parks are in the western portion of the metropolis, the largest being Hyde Park and Regent's Park, which, together with St. James's Park and the Green Parks, are royal parks. The most fashionable is Hyde Park, containing about four hundred acres. It is surrounded by a carriage-drive two and one-half miles long, has some fine old trees, large stretches of grass, and contains a handsome sheet of water sadly misnamed the Serpentine River. Kensington Gardens (three hundred and sixty acres), with which Hyde Park communicates at several points, are well wooded and finely laid out. St. James's Park, eighty-three acres, and the Green Park, seventy-one acres in extent, adjoin Hyde Park on the southeast. Regent's Park, in the northwest of London, north of Hyde Park, containing the gardens of the Zoological Society and those of the Royal Botanic Society, covers an area of four hundred and seventy acres. The Zoological Gardens contain the largest collection of living animals of all kinds in the world. Adjoining Regent's Park to the north is Primrose Hill. There are, besides, Victoria Park in the northeast of London, Hampstead Heath in the northwest, the happy hunting-ground of the toilers of the city on "bank holidays." Battersea Park in the southwest, West Ham Park in the extreme east, Greenwich Park at Greenwich, etc.

Of the squares the most central and noteworthy is Trafalgar Square, with Charing Cross adjoining. Most of the squares possess gardens, some public, such as Leicester Square, others private, as Grosvenor Square, Russell Square, Bedford Square, Tavistock Square, etc.

CLEOPATRA'S NEEDLE, LONDON

MONUMENTS.—Among the public monuments are "The Monument" on Fish Street Hill, London Bridge, a fluted Doric column two hundred and two feet high, erected in 1677 in commemoration of the great fire of London; the York Column, in Waterloo Place, one hundred and twenty-four feet high; the Guards' Memorial (those who fell in Crimea), same place; the Nelson Column, in Trafalgar Square, one hundred and seventy-six and one-half feet high, with four colossal lions by Landseer at its base; the national memorial to Prince Albert in Hyde Park, probably one of the finest monuments in Europe, being a Gothic structure one hundred and seventy-six feet high, with a colossal statue of the prince seated under a lofty canopy; Cleopatra's Needle on the Thames Embankment; a handsome modern "cross" at Charing Cross; and numerous statues of public men. The Queen Victoria Memorial at Buckingham Palace, on a grand scale, was designed by Sir Aston Webb, R.A.

PUBLIC BUILDINGS.—Among the royal palaces are St. James's, a brick building erected by Henry VIII.; Buckingham Palace, the King's London residence, built by George IV.; Marlborough House, the residence of the Prince and Princess of Wales; Kensington Palace, a plain brick building, the birthplace of Queen Victoria. These are all in the west of London.

Lambeth Palace, the residence of the Archbishop of Canterbury, is situated on the Surrey side of the river, while Fulham Palace, the residence of the Bishop of London, is in Fulham, near Putney Bridge.

On the north bank of the Thames stand the Houses of Parliament, a magnificent structure in the Tudor Gothic style, with two lofty towers. The buildings cover about eight acres, and cost fifteen million dollars. Westminster Hall, adjacent to the Houses of Parliament, a noble old pile built by William Rufus, was formerly the place in which the Supreme Courts of Justice sat, but is now merely a promenade for members of parliament.

In and near Whitehall in the same quarter are the government offices, comprising the Foreign, Home, Colonial, and India Offices, the new War Office, Horse Guards and Admiralty.

Somerset House, which contains some of the public offices, is in the Strand. The Postoffice in the city occupies spacious and handsome buildings. New Postoffice buildings are on the former site of Christ's Hospital, the king having laid the foundation stone in 1905.

Adjoining the city on the east is the Tower, the ancient citadel of London, which occupies an area of twelve acres on the banks of the Thames. The most ancient part is the White Tower, erected about 1078 for William the Conqueror.

Other noteworthy buildings are the new Law Courts, a Gothic building at the junction of the Strand and Fleet Street; the Bank of England; the Royal Exchange; the Mansion House, the official residence of the lord-mayor; the Guildhall, the seat of the municipal government of the city; and the four Inns of Court, and Inner and Middle Temple, Lincoln's Inn; and Gray's Inn.

CHURCHES.—Among the churches the chief is St. Paul's Cathedral, completed in 1710 by Sir Christopher Wren. It is situated in the City, occupies the summit of Ludgate Hill, and is a classic building, five hundred and ten feet in length, with a dome four hundred feet in height.

Westminster Abbey, one of the finest specimens of the pointed style in Great Britain, dates from the reign of Henry III. and Edward I. It adjoins the Houses of Parliament, is five hundred and thirty-one feet long, including Henry VII.'s chapel, and two hundred and three feet wide at the transepts. Here the kings and queens of England have been crowned, from Edward the Confessor to George V. In the south transept are the tombs and monuments of great poets from Chaucer downward, whence it is called "Poets' Corner"; and in other parts are numerous sculptured monuments to sovereigns, statesmen, warriors, philosophers, divines, patriots, and others, many of whom are interred within its walls. Among many old churches are St. Bartholomew's in West Smithfield; the Chapel Royal, Savoy; St. Andrew's, Undershaft; St. Giles, Cripplegate; St. Margaret's, Westminster; St. Stephen's, Walbrook; the Temple Church, Bow Church, St. Bride's in Fleet Street. The Roman Catholic Cathedrals at Westminster and in Southwark should also be mentioned.

[461]

ST. PAUL'S CATHEDRAL, LONDON

PLACES OF AMUSEMENT.—These are naturally exceedingly numerous. Among the theaters may be mentioned: Covent Garden, the home of opera; Drury Lane, identified with melodrama and pantomime; His Majesty's, famous for its efforts in the cause of the higher drama; the Haymarket, St. James's, Criterion, Wyndham's New, Duke of York's, Garrick, Court, and others, for comedy; the Gaiety, Daly's, Lyric, Prince of Wales's, Savoy, and Vaudeville for musical comedy and comic opera. The "music-hall" is equally conspicuous among London's places of amusement, variety entertainments being given at the Alhambra, Empire, Palace, Coliseum, Hippodrome, Lyceum, and a host of others. Among the more dignified concert halls may be mentioned the Royal Albert Hall (capable of holding an audience of eight thousand persons), Queen's Hall, and Crystal Palace.

MUSEUMS.—The British Museum, the great national collection, in a very central position, is the principal one. It contains an immense collection of books, manuscripts, engravings, drawings, sculptures, coins, etc.

The South Kensington Museum is a capacious series of buildings containing valuable collections in science and the fine and decorative arts, and there is a branch museum from it in Bethnal Green, in the East End. The very extensive natural history department of the British Museum occupies a fine Romanesque building at South Kensington. The India and the Patent Museums are also at South Kensington, and here was built the Imperial Institute, partly intended as a museum of home and colonial products, but now also accommodating the University of London.

The Soane Museum contains many valuable objects of art. The chief picture-galleries are the National Gallery, in Trafalgar Square, the National Gallery of British Art (known as the Tate Gallery), the collection in the Victoria and Albert Museum, and the National Portrait Gallery. Mention must also be made of the Wallace Collection, at Hertford House, Manchester Square, a magnificent collection of pictures, sculpture and objects of art, bequeathed to the nation by the widow of Sir Richard Wallace in 1897.

The chief libraries are the British Museum, Lambeth Palace library, the Guildhall library, Sion College library, the London library, London Institution library. Many free libraries have recently been established.

SHIPPING.—The port of London has been for many years the greatest in the world. The control and management of the business of the port was transferred in March, 1909,

from the Thames Conservancy to the Port of London Authority. This new body controls the river from Teddington to Warden Point, fifty-one miles east of London Bridge. It also took over the India, Millwall, and Surrey Commercial docks. The total cost of the transfer was one hundred and twelve million dollars.

ITS COSMOPOLITAN POPULATION.—There are in London nearly 60,000 persons of Scottish birth and over 60,000 of Irish birth. Of 150,000 foreigners, 40,000 are Russians (including Jews), with 16,000 Russian Poles, 30,000 Germans, 12,000 French, 11,000 Italians, 6,000 Austrians, 6,000 Americans (U. S.), 4,500 Dutch, 45,000 Swiss, 2,500 Belgians, 1,800 Swedes, 1,000 Norwegians, and 1,000 Danes.

COMMERCIAL AND INDUSTRIAL CENTERS

In England and Wales.—*Hull*, the *Tyne Ports* (Newcastle, Gateshead, and Shields), and *Sunderland*, with London, form the great outlets of the east of England. *Liverpool* (with Birkenhead), ranking with London in maritime importance, and *Bristol*, are the great outlets and seats of commerce in the west of England, as *Southampton* and *Plymouth* on the Channel are in the south.

The most important of all the textile industries of England is that of cotton, which has centered itself in *Manchester* and in its satellite cities on the coalfield of Lancashire and Cheshire (Preston, Blackburn, Oldham, Wigan, Bury, Rochdale, Bolton, Stockport, Macclesfield), drawing a dense population round these centers, with their thousands of factories, fed with raw material from abroad, and relieved of their manufactured products by Liverpool and the port of Manchester.

The woolen manufactories, next in importance, are on the opposite side of the Pennine chain, in the great towns of *Leeds* and *Bradford*, as well as in Halifax, Huddersfield, Wakefield, and Dewsbury, clustering round these. Linen manufactories center at *Barnsley*, farther south, also on this Yorkshire coalfield. Three outlying woolen manufacturing centers may be noted; these are *Leicester*, in a famous sheep-raising district, and *Kidderminster*, noted for its carpets, *Stroud*, *Bradford*, and other towns in the west of England, noted for the quality of their cloth. Newtown, in Montgomeryshire, is the center of the Welsh flannel trade.

Hardwares have two great points of production—the one round *Sheffield*, on the Yorkshire coal and iron field, the other round *Birmingham* and the towns on the South Stafford coal and iron field (Wolverhampton, Wednesbury, Bilston, Dudley, Walsall), called the “Black Country” because large parts of it are so completely cut up with collieries and ironworks that no cultivation exists.

In North Staffordshire, between the iron and the cotton manufacturing regions, lies the “Potteries,” a district which by supplying coal is able to maintain its staple industry. *Stoke-upon-Trent* is the center of the cluster of Pottery towns (Burslem, Longton, Hanley, Tunstall), all connected by lines of busy hamlets. Worcester, on the Severn, is also celebrated for its pottery.

English silk manufacturers give importance to three separate districts, those round *Congleton* and *Macclesfield*, in Cheshire; Derby; and *Coventry*, in Warwickshire. *Nottingham* town combines silk and cotton manufactures in hosiery and lace work. *Stafford* town supplies boots and shoes to all the manufacturing towns which lie round it.

The coal trade of North England centers in the *Tyne Ports* and *Sunderland*, which are also famous for their iron, ships and engines, and their chemical works. The South Wales iron and coal field has its heart in *Merthyr Tydfil*, one of the largest towns of Wales; *Cardiff*, with fine docks and iron shipbuilding yards, besides its large coal export trade; *Swansea* is the headquarters of copper and tin smelting, from ores brought thither from the most distant parts of the world; *Milford Haven* aspires to becoming the rival of Liverpool in the trade with America.

Among the few large towns besides London which lie outside the manufacturing and mining region of England, may be noted *Norwich*, in agricultural Norfolk, a seat of manufactures of the most various kind, introduced by about four thousand Flemings who fled thither in Queen Elizabeth's reign.

In Scotland.—On the Scottish coal and iron field, *Glasgow*, favored by its position on the estuary of the Clyde, has risen to be at once the great commercial and manufacturing center of the country, carrying on a large trade with all parts of the world, in manufacturing cottons and machinery, and in building ships. A number of manufacturing towns (Paisley, noted for its shawls; Greenock, for its sugar-refining; Dumbarton, for its iron ships; Airdrie, in the midst of the collieries and iron works) have risen round Glasgow over the Scottish coalfield. *Leith*, the port of Edinburgh, is mainly engaged in the Baltic grain trade; *Dundee*, on the estuary of the Tay, owes much of its prosperity to its jute and hemp factories, and to its Greenland whaling and sealing trade.

In Ireland.—Owing to its poverty in coal and iron, the manufactures of Ireland have not attained an extent at all comparable with those of Britain. Its only extensive manufacturing district is that which lies round *Belfast*, in the northeast, where the flax, grown largely in the north of the country, is made into linen. The linen district extends to *Armagh*, on the west, and *Coleraine*, in the north.

Dublin, the capital, is noted for its poplins, stout, and whiskey; its quays afford excellent accommodation for shipping, and it takes the lead in the foreign trade of Ireland.

Cork, with its fine harbor the “Cove of Cork,” or Queenstown, in the south; *Limerick*, on the Shannon; *Galway*, the port of the west; *Londonderry*, in the north, are the other important centers of population in Ireland.

EDUCATIONAL, HISTORICAL AND LITERARY CENTERS

Edinburgh (ed-in-bo-ro; *Edwin's burgh*), the metropolis of Scotland, grew up originally beneath the protecting walls of its castle, and is not a manufacturing town, but derives its importance mainly from the law courts, its university and schools, and its printing and publishing trade. It is situated upon two ridges of ground, divided by a deep, narrow valley, formerly a morass, now made into a public park, through which the railways pass. To the north of this park is the New Town, composed of modern and elegant buildings—the principal street, Princes Street, bordering upon and overlooking the park. The principal hotels are on the opposite of Princes Street. The railway stations are in the valley. To the south lies the ridge of the Old Town, terminating, to the west in a rocky bluff, upon which stands the Castle in the heart of the city. The Old Town is the historic part of the city, the New being quite modern. The first Scottish Parliament was convened here by Alex. II., 1215.

The principal places of interest are Edinburgh Castle, Holyrood Abbey and Calton Hill. Among the objects of less interest are the house of John Knox, High Street; St. Giles Church; Allan Ramsay's Theater, the favorite resort of Burns; the Black Turnpike, the prison of Queen Mary, near the Iron Church; and the Heart of Midlothian, the site of an old prison. Annie Laurie was married in Iron Church two hundred and fifty years ago. John Knox is buried in the paved court between the Parliament House and St. Giles; marked by the letters J. K. in the pavement.

THE CASTLE, stands on a precipitous rock about three hundred feet above the valley, accessible only from the east side. It is an extensive mass, of which the oldest portion—and the oldest building in the city—is St. Margaret's Chapel, the private oratory of the Saxon Princess Margaret, queen of Malcolm Canmore. Another portion is a lofty range of old buildings, in a small apartment of which Queen Mary gave birth to James VI. in 1566; while in an adjoining apartment are kept the ancient regalia of Scotland. Here, also, is the old Parliament Hall, restored in 1888-1889. The castle as a fortress contains accommodation for two thousand soldiers, and the armory space for thirty thousand stand of arms. An old piece of ordnance built of staves of malleable iron, cask fashion, and known as *Mons Meg*, stands conspicuous in an open area.

HOLYROOD PALACE AND ABBEY was founded by King David I., who is said to have been saved from the horns of a stag, driven to bay near this spot, by a luminous cross in the sky. In the northwest angle of the building are the apartments which were occupied by Mary, Queen of Scots, nearly in the same state in which they were left by that unfortunate princess.

CALTON HILL (*call-ton*) is at the eastern end of Princes Street and has an altitude of about three hundred and fifty feet. Upon the hill, adjacent to the stairs, is Dugald Stewart's monument at the left; to the north is the Old Observatory, and the New Observatory with a small dome. To the south is Nelson's monument, one hundred and two feet high, surmounted by a time-ball. The unfinished colonnade is a part of a structure in honor of Waterloo, intended to be a copy of the Parthenon at Athens. The foundation was laid 1822, but, proving too costly, the project was abandoned.

The view from the summit of this hill is scarcely to be surpassed. To the north is what may be called New Edinburgh, extending toward Granton and the port of Leith. Across the Forth, is Fifeshire. Following down the Forth, is first, the islands of Inch Keith, Portobello, Bass Rock, and the Isle of May, farther at sea. Toward the south and west the Burns monument; Holyrood immediately below; Salisbury Craig and south, Arthur's Seat, eight hundred and twenty feet high; thence to the north the Old Town, commanded by the frowning Castle.

VIEW OF EDINBURGH FROM THE CASTLE

Oxford, capital of Oxford county, and seat of one of the most celebrated universities in the world, is situated about fifty miles northwest of London, on a gentle acclivity between the Cherwell and the Thames, here called the Isis. Oxford, as a city of towers and spires, of fine collegiate buildings, old and new, of gardens, groves, and avenues of trees, is unique in England.

Of the university buildings the most remarkable are Christ's Church, the largest and grandest of all the colleges, with a fine quadrangle and other buildings, and a noble avenue of trees. It was founded by Wolsey in 1525, and its magnificent chapel is the cathedral church of the see of Oxford. The *hall* is a noble room.

Merton College, founded about 1264, has a very beautiful chapel of the fifteenth century, and the library is the oldest in the kingdom.

New College, founded by William of Wykeham, in 1386, is one of the wealthiest of the colleges, and the chapel is very handsome.

The *gardens of St. John's College* are much admired and the grounds of Magdalen College (perhaps the most beautiful college in Oxford) are no less attractive. The latter include “Addison's Walk,” a shaded avenue that was his favorite resort when a student here. The *Bodleian Library* and *Picture Gallery*, the *Theatre* (built by Wren), the *Ashmolean Museum* (also by Wren), the *Radcliffe Library* and *Observatory*, the *Divinity School* (in the hall of which Crammer, Latimer, and Ridley were tried in 1555), *St. Mary's Church*, the *Taylor Institute*, the *University Galleries* and *Museum*, the *Botanical Gardens*, and the *Martyr's Memorial* are also among the noteworthy things in Oxford. The *High Street* is the subject of one of Wordsworth's sonnets; and Hawthorne calls it “the noblest old street in England.” Oxford depends mostly on the university, and on its attractions as a place of residence.

Stratford-on-Avon, Shakespeare's birthplace, is a pleasant town of Warwickshire, eight miles southwest of Warwick, twenty-two miles southeast of Birmingham, and one hundred and ten miles northeast of London. It stands on the right bank of the quiet Avon, which here is spanned by the “great and sumptuous bridge” of fourteen pointed arches, three hundred and seventy-six yards long, that was built by the Lord Mayor of London.

It is a quiet, old-fashioned place, with wide and well-kept streets, and many handsome mansions. The *Town Hall* was dedicated to the memory of the poet. Here is a statue of Shakespeare, presented by Garrick, on the pedestal of which are the lines from *Hamlet*: “Take him for all in all, we shall not look upon his like again.” Very interesting is the *Shakespeare Memorial Building and Theater*, in a charming situation by the Avon, the outgrowth of the feeling that the poet should have a suitable monument in his native town.

SHAKESPEARE'S HOUSE, in Henley Street, became national property in 1847, and has been carefully restored. The room in which the poet is said to have been born seems to have undergone but little change since that day. In another room there is a small museum of Shakespearian curiosities.

STRATFORD CHURCH, in which Shakespeare is buried, is on the bank of the Avon. It is a large and elegant structure, with a graceful stone spire one hundred and sixty-three feet high, erected in 1764 to replace a wooden one that had been taken down. The building has been judiciously restored in recent years. There is an elegant window illustrating Shakespeare's “Seven Ages,” the contribution of Americans.

The grave of Shakespeare is in the chancel, covered by a plain flagstone, while above, on the wall to the left, is the monumental bust which is the most trustworthy representation of the poet. His wife lies near him, with his favorite daughter, “good Mistris Hall,” and Dr. John Hall, her husband. In the chancel there is also an elegant marble monument to John Combe, the poet's friend.

SHOTTERY, where Anne Hathaway lived before she became the wife of Shakespeare, is about a mile from Stratford, and may be reached by a footpath through the fields. The cottage that was Anne's home has a timber and plaster front, and a thatched roof. The interior contains the oaken seat on which Shakespeare and Anne were wont to sit; many bits of venerable furniture; and, upstairs, a vast bed, on which many a Hathaway has drawn the last breath of life.

Stratford also possesses a memorial fountain, presented by George W. Childs of Philadelphia, and Harvard House, the birthplace of the mother of John Harvard, founder of Harvard University. It is still an important agricultural center; but its chief prosperity depends on the thirty thousand or so pilgrims who visit it yearly.

Ayr, forty miles from Glasgow, Scotland, by railway, is noted especially as the birthplace of Burns, the poet; as also the place where Wm. Wallace was imprisoned. The town is divided by the river Ayr, over which are the "two brigs" of Burns. The Burns Cottage, or birthplace, the scene of his "Cotter's Saturday Night," is two miles south of the town, and is now used as a public memorial. It contains few articles associated with Burns.

ALLOWAY KIRK, mentioned in "Tam O'Shanter," or what remains of it, is one-half mile south of the Cottage. Near the church are the Burns monument, a circular shaft sixty feet in height, erected 1820, and the Doon, immortalized in the "Banks and Braes of Bonny Doon."

Burns died at Dumfries, where he had lived three years, and was buried in the churchyard there. Nineteen years later, upon the completion of the monument to his memory, his body was exhumed and placed within the Mausoleum at Dumfries.

Melrose, in the county of Roxburgh, thirty-one miles southeast of Edinburgh, is celebrated for the abbey founded by King David in 1136; destroyed by Edward II. in 1322; rebuilt by Bruce in 1326, and partly demolished by the English in 1545. Sir Walter Scott has given it an enduring description in his *Lay of the Last Minstrel*.

The material of which it is built is a very hard stone, and much of the carving is as perfect as when fresh from the sculptor's hand. Within its walls are the graves of kings, and nobles and priests of the olden time; among them Alexander II. of Scotland, and more than one of the renowned Earls of Douglas. Before the high altar the heart of King Robert Bruce is said to have been deposited. Sir David Brewster's grave is in the churchyard.

DRYBURGH ABBEY, four miles from Melrose, was founded about the same time as Melrose, and, like that, was destroyed in 1322 by Edward II. Robert I. restored it, at least in part; but it was again destroyed in 1544. St. Mary's aisle, the most beautiful part of the ruins, contains the tomb of Scott, buried here September 26, 1832; also the graves of his wife and his eldest son, and of his son-in-law Lockhart.

ABBOTSFORD, HOME OF SIR WALTER SCOTT

ABBOTSFORD, two miles from Melrose, was long the home of the "Great Enchanter of the North." The author's study is the most interesting room. There the old writing-table, the plain leathern armchair, the reference books, seem to indicate that Sir Walter has but just left them. The *Library* (twenty thousand volumes) contains a bust of Scott, by Chantrey, and many miniatures. The roof is of carved oak, designed from models taken from Roslin Chapel. The *Drawing-room*, where Sir Walter died, and the little octagonal dressing-room contain many precious relics. The *Armory* has a fine collection of Scotch weapons.

Windsor, is in Berkshire, England, on the Thames, twenty-one and one-quarter miles from London. It contains a town hall, built by Sir Christopher Wren in 1686, the church of St. John the Baptist, with fine examples of Grinling Gibbon's wood-carving, and a fine Jubilee statue of Queen Victoria.

Windsor owes its chief importance to its castle, which stands east of the town on a height overlooking the River Thames, and is the principal royal residence in the kingdom. It was begun, or at least enlarged, by Henry I., and has been altered and added to by almost every sovereign since. The castle stands in the Home Park or "Little Park," which is four miles in circumference, and this again is connected with the Great Park, which is eighteen miles in circuit, and contains an avenue of trees three miles in length.

[465]

STRATFORD-ON-AVON, IMMORTALIZED BY ITS ASSOCIATIONS WITH SHAKESPEARE

The chief features of interest in the castle are the old state apartments; St. George's Chapel, where the Knights of the Garter are installed, and the vaults of which contain the remains of Henry VI., Edward IV., Henry VIII., Charles I., George III., George IV., and William IV.; the Round Tower or ancient keep; and the present state apartments.

ETON COLLEGE is one-half mile from Windsor across the river. The stone chapel, one hundred and seventy-five feet long, is very handsome. There is also a bronze statue of Henry VI. The college was founded in 1440.

STOKE POGIS, the scene of Gray's *Elegy*, and the burial-place of the poet, is near Windsor.

There is a fine monument to Gray in *Stoke Park*.

Cambridge, fifty-six miles from London, and on the Cam, a narrow stream that rambles all over the town. Tradition gives 630 as the date of the foundation of the University; but the oldest college, *Peterhouse* or *St. Peter's*, can only be referred to 1257. The public buildings are the Shire Hall, Town Hall, University halls and library, and Fitzwilliam Museum.

There are seventeen colleges, inferior in architectural beauty to those of Oxford, though their associations are quite as interesting.

TRINITY, was founded by Henry VIII. in 1546, and has three fine quadrangles; a splendid hall in the Tudor style; gardens; and an important library, with busts of Newton and Bacon, Thorwaldsen's statue of Byron, Newton's telescope and some of John Milton's manuscripts.

CHRIST'S COLLEGE, founded in 1442, was Milton's college. In the gardens is *Milton's Mulberry-Tree*. The quadrangle was rebuilt by Inigo Jones.

JESUS COLLEGE (1496) and *Chapel* are very fine buildings, on the site of a Benedictine nunnery.

CAIUS (pronounced *Kees*) was founded in 1384, and enlarged in 1557 by Dr. Caius, physician to Queen Mary. Rebuilt lately, it is now one of the best.

CORPUS CHRISTI (1351) contains curious portraits, especially those of Sir Thomas More, Wolsey, Erasmus, and Foxe, the author of the *Book of Martyrs*.

KINGS COLLEGE (1441), founded by Henry VI., is the finest building in the University. The chapel is the finest specimen of perpendicular Gothic existing. The roof, unsupported by pillars, contains twelve divisions of exquisite lace-work tracery in stone. The twenty-four stained-glass windows, each fifty feet high, are beautiful.

The *Fitzwilliam Museum*, and some of the churches, especially the round chapel of *St. Sepulchre*, are of considerable interest. *All Saints* contains a monument, by Chantrey, to Henry Kirke White. *Girton College*, for women, founded in 1869, is about two miles northwest of the town. The walk along the Cam behind the colleges, with the view of the "Backs" and bridges, is the pride of Cambridge.

ENGLISH HISTORY

The island of Great Britain in the remotest times bore the name of *Albion*. From a very early period it was visited by Phœnicians, Carthaginians, and Greeks, for the purpose of obtaining tin.

Roman Period.—Cæsar's two expeditions, 55 and 54 B. C., made it known to the Romans, by whom it was generally called *Britannia*; but it was not till the time of Claudius, nearly a hundred years after, that the Romans made a serious attempt to convert Britain into a Roman province. Some forty years later, under Agricola, the ablest of the Roman generals in Britain, they had extended the limits of the *Provincia Romana* as far as the line of the Forth and the Clyde.

Here the Roman armies came into contact with the Caledonians of the interior, described by Tacitus as large-limbed, red-haired men. After defeating the Caledonians, Agricola marched victoriously northward as far as the Moray Firth, establishing stations and camps, remains of which are still to be seen. But the Romans were unable to retain their conquests in the northern part of the island, and were finally forced to abandon their northern wall and forts between the Clyde and the Forth and retire behind their second wall, built in 120 A. D. by Hadrian, between the Solway and the Tyne. Thus the southern part of the island alone remained Roman, and became specially known as *Britannia*, while the northern portion was distinctly called *Caledonia*.

The capital of Roman Britain was York (*Eboracum*). Under the rule of the Romans many flourishing towns arose. Great roads were made, traversing the whole country and helping very much to develop its industries. Christianity was also introduced, and took the place of the Druidism of the native British. Under the tuition of the Romans the useful arts and even many of the refinements of life found their way into the southern part of the island.

Creation of England and Scotland.—From the time of the Roman conquest, and still more decidedly after the Saxon invasions in the fifth century, the history of Britain branches off into a history of the southern part of the island, afterwards known as England, and a history of the northern part of the island, afterwards named Scotland. It was not till the union of the crowns in 1603 that the destinies of England and Scotland began again to unite; and it was not till the final union of the parliaments in 1707 that the histories of the two countries may be said to merge into one.

The Anglo-Saxon Period.—In 411 Honorius abandoned Britain, whose inhabitants, finding it impossible to defend themselves against the Picts, called to their aid the Saxons, who, in 449, assisted them so effectually that they took possession of the country and founded the four kingdoms of Essex, Wessex, Sussex, and Kent. The Angles, who followed them, established three other kingdoms, *viz.*, East Anglia, Deira, and Mercia, 540-584. All these kingdoms ended by being reduced to one, under Egbert, the Saxon

king of Wessex, in 827.

After 835 the Danes ravaged England from time to time, but in 871 Alfred the Great forced them to desist, and from thence till near the end of his reign in 900, the Danes left the island in peace. Returning in 981, the Danes succeeded, in 1013, in putting their king, Sweyn, on the throne, which was not recovered by the Saxon dynasty till 1041.

Norman Conquest.—When William of Normandy landed in England to claim the crown which Edward the Confessor had bequeathed to him, he found that the people had raised to the throne Harold, the son of a popular nobleman. The resources of the Saxons, however, had been wasted in domestic conflicts before the attack of William; and the battle of Hastings, in 1066 A. D., gave England with comparative ease to the Normans. The next twenty years saw the conquest completed, and nearly all the large landed estates of the Saxons pass, on every pretext except the true one, into the hands of the Normans. In the course of time the Normans were absorbed among the Saxons, their very language disappearing, though leaving many traces. From this union arose the English people and the English language as they now exist. The union of the Normans with the Saxons was not fully effected so long as the Normans retained their foreign possessions. In King John's reign the whole of these were lost excepting Guienne and Poitou.

In the reign of Stephen occurred the civil war between the Empress Maud, daughter of Henry I., and Stephen; she finally retired to France, and concluded a peace with her adversary. The great struggles of the successors of William were with the ecclesiastics and with the barons. Sometimes in these the popular sympathies were with, and sometimes against, the crown. The Conqueror himself and his immediate successors had no difficulty in maintaining the superiority of the courts of justice over the ecclesiastics; but even a sovereign so bold and skillful as Henry II. was forced, after the outcry occasioned by the murder of Thomas à Becket (1170 A. D.) to yield the point. The right to nominate the higher ecclesiastics was also secured by the popes.

The Plantagenets.—Under the Plantagenets an era of progress, generally, opened for England. The reign of Henry II. gave to the country the constitution of Clarendon; Ireland was conquered, 1172; England was divided into six circuits for the better administration of justice, and a digest of the laws was made by Glanville about 1181. Richard I. did little for the internal good of the land, his chief exploits occurring on the field of battle in foreign lands.

Magna Charta.—Under John two important events occurred: Magna Charta was obtained, and the French possessions were nearly all lost—both unmitigated blessings; but otherwise John's influence was cast against progress and reform. The degradation of the English monarchy was at its lowest when he consented (1213 A. D.) to hold the crown as a gift from Rome. From Henry II. something similar to the Great Charter had already been gained; but it was the Magna Charta of John which firmly established two great English principles—that no man should suffer arbitrary imprisonment, and that no tax should be imposed without the consent of the council of the nation.

During the reign of Henry III., England obtained her first regular parliament, and gold money was first coined in 1257. Edward I. was crowned 1272, and almost the first event of his reign was the conquest of Wales; Scotland also was subdued, but revolted again in 1297.

The reign of Edward II. was disastrous to himself and to England. The barons rose against his favorites, and Edward was murdered by the connivance of his wife. A new and vigorous era began with the reign of Edward III. The Scots were defeated at Halidon Hill; important victories were gained in France; the Order of the Garter was instituted, and, most important of all, law pleadings were ordered to be in English, instead of in the Norman-French tongue which had hitherto prevailed. Richard II. was crowned in 1377, and with his death in 1385, ended the line of the Plantagenets.

House of Lancaster.—Henry IV. was the first sovereign under this ill-fated house. His reign was disturbed by an insurrection of the Welsh under the Percies, but was otherwise peaceful. Henry V. invaded France and won the famous battle of Agincourt, and gained the French crown, 1420; but during the reign of his successor, Henry VI., all the French possessions were lost save Calais. He was deposed by Warwick the kingmaker, and the first representative of the House of York, Edward IV., was placed on the throne. The Wars of the Roses ensued, which continued through the two succeeding reigns of Edward V. and Richard III, ending with the death of Richard on Bosworth field, the coronation of Henry VII., 1485, and his marriage with Elizabeth, daughter of Edward IV.

The Tudors.—The union of the houses of York and Lancaster under Henry VII. begins a new period in English history. Under him England entered on her career of maritime discovery. He died, 1599, and was succeeded by his second son, Henry VIII. Henry VIII. succeeded under the most favorable auspices. He found the alliance of his now important country courted by both of his contemporaries, Francis I., of France, and Charles V., of Germany. But the interest of the foreign complications of the reign merges in the courts of England and of Rome. Henry was frequently engaged in hostilities with foreign countries, and the great victory of Flodden was won by one of his generals over James IV. of Scotland, husband of his sister Margaret. He threw off his allegiance to the pope, and became head of the church in England. He was six times married, and two of his wives were beheaded and two were repudiated. In his reign the scaffold was occupied by victims from every class of society. He died January 28, 1547, and was succeeded by his only son, Edward VI., whose mother was Jane Seymour, Henry's third wife.

Edward was in his tenth year, and the government was vested in a regency. In this reign the church of England was established, and the nation placed on the Protestant side in the struggle then going on in Europe. When Edward VI. died, July 6, 1553, Lady Jane Grey, to whom Edward had bequeathed the crown, was queen for ten days, when her party was dispersed, and Mary, eldest daughter of Henry VIII., ascended the throne.

The marriage of Mary with Philip II. of Spain led to war between England and France, and an English army joined the Spanish force that invaded France. Mary was a devout Catholic, and caused Cranmer, Latimer, Ridley, and about three hundred other Protestants to be burned. Her death, November 17, 1558, left the throne to Elizabeth, who sided with the Protestants.

Elizabethan Period.—The reign of Elizabeth, which lasted nearly forty-five years, is one of the most brilliant in English history. She triumphed over her enemies, and raised her kingdom to the first place in Europe. She ruled over Scotland in fact, and put the queen of that country, the unfortunate Mary Queen of Scots, to death, after having held her in captivity nearly nineteen years. The Huguenots of France and Henry IV. received aid from her, and but for the assistance which she gave the Dutch they would have sunk under the power of Spain. She invited the Turks to join her in attacking the pope and Phillip II., and over both those potentates she achieved a great triumph in 1588, when the Spanish armada was destroyed. The enterprise of Englishmen led them to circumnavigate the globe, to attempt colonization, to extend commerce, and to inaugurate trade relations with India. Elizabeth died March 24, 1603, and with her terminated the Tudor dynasty, after an existence of nearly one hundred and eighteen years.

House of Stuart.—Elizabeth was succeeded by James VI. of Scotland, the son of her victim, Mary Stuart, and first king of England of the Stuart line, who inherited the English crown in virtue of his descent from Margaret Tudor, eldest daughter of Henry VII., who had married his great-grandfather, James IV. The new king, under the title James I., was hailed with much satisfaction by the English; but he was a pedant and a tyrant, and soon lost his popularity. His first parliament, 1604, in reply to his assertion that all their privileges were derived from him, asserted all those principles for which the English constitutionalists contended as facts not to be questioned.

Then began that civil contest which lasted down to 1689 in full force, and which was not utterly at an end till 1746. The foreign policy of James was as vicious as his home policy, and England sank in the estimation of Europe. He died in 1625, and was succeeded by his son Charles I.

For eleven years (1629-1640) this ruler called no parliament, and England was ruled as despotically as France. His chief instruments were Wentworth, afterward earl of Strafford, and Laud, archbishop of Canterbury. Laud sought to fasten the English church policy on Scotland. War between the Scotch people and the English government followed, and Charles was compelled to call a parliament April, 1640, which was dissolved in a few days, and became known as the "short parliament." Six months later assembled the famous "long parliament," which proceeded to divest the king of much of his power.

Period of the Commonwealth.—The contest between the king and parliament under the lead of Vane, Cromwell and others, led to the great English Civil war, which began in the latter part of 1642. Cromwell was everywhere victorious in the field. The army became the source of all power. The king was tried, condemned and executed. Ireland was conquered by Cromwell, who was almost equally successful in Scotland. The battle of Worcester, September 3, 1651, crushed the royalists for nearly nine years. In 1653 Cromwell dissolved the parliament by force, and was master of England for five years, as Lord Protector. After his death, in 1658, the military and civil republicans quarrelled.

Restoration of the House of Stuart.—Richard, the son and successor of the great Protector, resigned, and the restoration of the Stuarts was effected in the person of Charles II., 1660, whose reign in law dates from the time of his father's execution, January 30, 1649. The king's popularity soon declined, mainly on account of his foreign policy. An unnecessary war with the Dutch produced much disgrace. The triple alliance with Sweden and Holland for a brief interval stayed the course of Louis XIV., but the king's forces assisted in the war on Holland made by Louis, and afterward assistance was sent to the Dutch.

The peace of 1678 was followed by the excitement caused by the alleged popish plot. Parliament after parliament was elected, met, set itself in decided opposition to the government, and was dissolved. The leading object of the opposition was the exclusion of the duke of York, Charles' brother, from the line of succession. Charles II. died in February, 1685, and his brother James II., an avowed Roman Catholic, came to the throne.

James II. was bent on the establishment of a despotism, by the destruction of the constitution in church and state. He punished Monmouth's rebellion with excessive vindictiveness. The king prorogued parliament in November, 1685, and that body never met again. For three years he governed despotically, and a perpetual contest was waged between him and his people.

In June, 1688, it was announced that the king's second wife had given birth to a prince, who was afterwards known as the pretender. It was generally believed that a supposititious child had been placed in the position of heir apparent.

In November, William, prince of Orange, who was the king's nephew and had married his eldest daughter Mary, heir apparent to the British crown, landed in England at the head of an army. James fled, and William and Mary were proclaimed sovereigns.

War was declared against France in 1689, and was ended in 1697. Ireland was subdued. Mary died in 1694, and left William III. sole monarch till his death in March, 1702, when the succession passed to Anne, second daughter of James II.

In May war was declared against France, and after splendid victories achieved by Marlborough, it was ended by the treaty of Utrecht in 1713. The union of England and Scotland was effected in 1707. Anne died August 1, 1714, and the crown passed to the house of Hanover in the person of George I.

House of Hanover under the Four Georges.—The rebellion of 1715 in behalf of the Stuarts proved a failure. The bursting of the "South sea bubble" in 1720 placed Robert Walpole in control of the government, which he retained under George II. (who ascended the throne in 1727) till 1742. His fall was occasioned by a war with Spain, to which one with France was soon added, growing out of the question of the Austrian succession. In 1746 the contest between the reigning dynasty and the remains of the Stuart party was brought to an end at Culloden where the duke of Cumberland defeated Charles Edward. The treaty of Aix-la-Chapelle in 1748 restored peace to Europe for a few years.

The Whigs continued to rule, headed by Henry Pelham, and after his death in 1754 by his brother, the duke of Newcastle. The renewal of the war with France in 1755 was followed by the formation in 1757 of the celebrated Pitt-Newcastle ministry, which carried on the contest with great vigor; so that when George II. died, October 25, 1760, his fleets and armies were everywhere triumphant. The foundation of the East Indian empire of England was laid at Plassey June 23, 1757. French America was conquered at Quebec, September 13, 1759.

The new king, George III. (the first English-born king of his house), grandson of George II., was by nature and education as despotic as the worst of the Stuarts. The attempt to tax the American colonies led to the American revolution. The English in the last years of the war had to fight the Americans, the French, the Spaniards, and the Dutch. The peace of 1783 left England in a low condition.

When France became convulsed by the revolution, England engaged in the war against her that soon followed, which lasted, with two brief intervals, till 1815, ending in the complete triumph of England and her allies. The legislative union between Ireland and Great Britain went into effect January 1, 1801. The exertions made by England, beginning with the administration of Pitt, were vast. Her fleets, chiefly under Nelson, achieved splendid victories over the French and Spaniards, and in the last years of the war her armies were greatly distinguished under the lead of Wellington, who, at Waterloo, inflicted the final defeat on Napoleon in 1815.

In 1810 George III. lost his reason finally, and his eldest son was prince regent till 1820 when he became king as George IV.

In 1812 England became involved in a war with the United States, growing out of the impressment and right of search questions. The contest was virtually terminated by the treaty of Ghent, December 24, 1814. In 1829 the Catholic emancipation act was passed, under a ministry headed by Wellington and Peel. George IV. died in 1830, and was succeeded by his brother, the duke of Clarence, as William IV.

In March, 1831, a bill for parliamentary reform was introduced into the house of commons by Lord John Russell, and after long debates in parliament and intense excitement in the country, caused by the opposition of the house of lords, a bill making extensive changes in the constitution of the house of commons finally passed in June, 1832, under the ministry of Earl Grey.

The first reformed parliament, which met January 29, 1833, contained an overwhelming majority of reformers. Lord Grey retired from office in 1834, and was succeeded by Lord Melbourne. Toward the close of the same year the government was committed to Sir Robert Peel, who formed a conservative ministry. Peel continued in office until April 8, 1835, when he retired, having been repeatedly beaten on Irish church questions. Lord Melbourne returned to office, with many of his old colleagues. The king died on June 20, 1837, and was succeeded by his niece Victoria, the only child of Edward, duke of Kent, fourth son of George III.

The Victorian Period.—The accession of Victoria led to the separation of the crowns of England and Hanover, which had been worn by the same persons since 1714. In 1841 Melbourne resigned, and the conservatives under Peel came into power. In 1846 the Peel ministry brought forward an act to protect life in Ireland, but it was defeated in the commons on the same day that the Corn Laws were repealed, and the ministry came to an end, being succeeded by one at the head of which was Lord John Russell. The Russell ministry went out of office in 1852, and for several months the Tories, led by Lord Derby and Mr. Disraeli, were at the head of affairs. This ministry was followed by one composed of the coalesced Whigs and Peelites, headed by Lord Aberdeen.

Crimean War.—In 1853 the troubles on the Turkish question began, and war was declared against Russia by France and England in March, 1854. Large fleets and armies were sent to the East, and fleets to the Baltic. The Crimea was invaded, the victory of the Alma won by the allies, and Sebastopol partially invested. On September 8 Sebastopol was reduced, the French storming the Malakhoff, and peace was restored by a congress of the powers at Paris in March, 1856.

Indian Mutiny and Final Absorption of the Indian Empire.—Early in 1857 a formidable revolt broke out in England's great Bengal army of sepoys. Delhi fell into the hands of the rebels, and the nominal Mogul emperor found himself once more a sovereign in reality. The mutiny spread rapidly, and in a short time the whole Bengal army had become hostile to the English. The military reputation of England was greatly raised by the successes of her armies in India, achieved under the lead of Sir Henry Havelock, Sir Colin Campbell, and others. In eight months after the breaking out of the mutiny there were nearly seventy thousand effective English troops there, and new native corps had replaced the sepoys. By the end of 1858 the revolt was totally suppressed. The rebellion resulted in the transfer of the immediate government of India from the East India company to the crown, the old directory sitting for the last time September 1, 1858.

In February, 1858, the Palmerston ministry was driven from office, and a new conservative ministry was formed, with the earl of Derby as premier, and Mr. Disraeli as Chancellor of the Exchequer. This ministry soon resigned and Lord Palmerston resumed office in June, 1859. On May 13, 1861, Great Britain recognized the belligerency of the Confederacy during the American Civil war and the blockade of their ports, and proclaimed neutrality.

In 1868 Disraeli became Prime Minister in succession to Lord Derby, but was defeated in the general election of that year and resigned before the end of the year.

[467]

[468]

[469]

[470]

Disraeli was succeeded by Gladstone, who, during the five years of his ministry passed more measures than almost any previous one. Education became compulsory. Trade unions were legalized, the Ballot Act was passed. The Irish Church Act and a Land Act for Ireland were passed, and the state of Ireland at the time also necessitated Coercion Acts.

In 1874 Gladstone resigned, and the Conservatives were returned to power, having for the first time since 1841 a real majority in the House of Commons. The ministry formed by Disraeli was a brilliant one, and the Opposition was for a time weakened by the withdrawal into private life of Gladstone. The great question of Home Rule was gradually forcing itself to the front, and the Irish tactics in the House became obstructive. It was at this time that Disraeli put forward his imperial policy, and the ministry is chiefly noticeable for its attitude on foreign and imperial affairs.

From 1879 to the present time Irish agitation has been for Great Britain a source of serious disquiet. In 1882 Mr. Gladstone adopted a policy of conciliation, but the murder of Lord Frederick Cavendish and of Mr. Burke caused its abandonment and the immediate passing of a coercion law which virtually placed Ireland under martial law. In 1882 the Egyptian army, under the leadership of Arabi Bey, having revolted from the khedive's authority, Great Britain sent a large naval expedition to Egypt, bombarded Alexandria, and defeated the rebellious forces. Since that date the Egyptian government has been under British suzerainty, and in 1896, a British expedition was sent up the Nile with the purpose of regaining the provinces of Egypt held by the mahdist forces.

Within the past quarter of a century Great Britain has largely extended its territory in Africa, bringing great areas in the south and east of the continent under its protection. During the same interval several subjects of dispute have arisen with the United States, which have all been peacefully settled. An imposing festival took place in London in June, 1897, on the occasion of the sixtieth anniversary of Queen Victoria's accession, in which all sections of the empire took part.

Boer War.—October 11, 1899, war was declared by the Boers of the Transvaal and Orange Free State, the aim being the destruction of the British paramountcy in South Africa. This led to the annexation of those states by the British, after a fierce contest, in 1900. In 1900, a new parliament was elected, which again supported the Conservative ministry, with a slightly increased majority.

House of Saxe-Coburg.—Victoria died January 22, 1901, and was succeeded by her eldest son, Edward VII., who proved himself to be an active promoter of peaceful relations with other countries.

The Boer war was concluded in the middle of 1902 by the treaty of Vereeniging, and almost immediately afterward Lord Salisbury retired from office, being succeeded in the premiership by his nephew, Mr. A. J. Balfour. The education act of 1902 did away with school boards where they existed, bringing the voluntary and former board schools alike under education committees in England and Wales, and the same change was made in London in 1903. The Irish land act of 1903 was a measure of the first importance, its object, being to transfer practically all the agricultural land of Ireland to farmers or peasant proprietors. In the autumn of 1903 Mr. Chamberlain resigned office in order to be free to advocate a change in the country's fiscal policy, intended to unite the colonies more closely with the mother country—a change which many have regarded as meaning a return to protection.

In 1905 the Liberal party returned to power under the leadership of Sir Henry Campbell Bannerman, who was succeeded after his death in 1908 by H. H. Asquith.

On May 5, 1910, the illness of King Edward was announced, followed by that of his death the next day. His son, George V., succeeded to the throne May 6, 1910.

A lengthy battle had begun to be waged against the hereditary prerogatives of the House of Lords, to which the death of the king caused a temporary cessation, but, in August, 1911, the Upper House was finally shorn of its permanent veto. In September, 1910, the fisheries dispute with the United States, which had remained unsettled for more than a hundred years, was decided at the Hague.

Early in 1913 the Irish home rule question became the dominant issue and a bill favoring it was passed by the House of Commons by a large majority, only to be overwhelmingly rejected in the House of Lords. In February, 1914, King George urged mutual concessions in the controversy, and in the same year the Home Rule bill became a law without the approval of the Lords, but practically non-operative. Today (1917) home rule for Ireland is still the great unsolved problem of British domestic policy.

The year 1914 also marked the entrance of Great Britain into the great European war that has since engulfed practically the whole of Europe and one-third of the civilized world. England's history since has been almost wholly bound up with the diplomatic, economic, and military aspects of that titanic struggle, the real facts of which it will require more than a generation of dispassionate minds to verify, sift and assess at their true values. An attempt is made to give the leading features of this war, and the parts played in it by the various nations involved, under a [separate heading](#).

IMPORTANT FACTS CONCERNING THE BRITISH EMPIRE

[471]

This title is usually given to the total territory governed or administered in the name of the British government centralized in London. It includes the United Kingdom of Great Britain and Ireland, the self-governing Dominions, Dependencies, Crown colonies and Protectorates whose inhabitants look to the king as their ultimate head. Of the whole area of the lands of the globe, the British Empire occupies nearly one-quarter, extending to every continent.

THE UNITED KINGDOM

COUNTRIES	AREA IN SQUARE MILES	POPULATION, 1911	HOW AND WHEN ACQUIRED BY ENGLAND	CHARACTER OF GOVERNMENT
EUROPE:				
England	50,839	34,043,076	...	Constitutional Monarchy. Constitute the United Kingdom of Great Britain and Ireland.

HENRY VI. (1421-1471).—Son of Henry V.	1422	9 m	39	De throne. Afterwards killed, by order of Edward IV.	Just, chaste, temperate, pious and patient; but had a weak mind.
HOUSE OF YORK					
EDWARD IV. (1441-1483).—Son of Richard, Duke of York; descendant of Edward III.	1461	19	22	Death occasioned by excessive eating.	One of the handsomest men in England, but after crowned was a voluptuary.
EDWARD V. (1470-1483).—Eldest son of Edward IV.	1483	12	2 m.	Smothered by order of Richard, Duke of Gloucester.	...
RICHARD III. (1452-1485).—Brother to Edward IV.	1483	30	2	Killed in the battle of Bosworth Field.	Small, ugly and crooked backed; dissembling and cruel, yet sagacious and brave.
HOUSE OF TUDOR					
HENRY VII. (1457-1509).—Son of Margaret, Countess of Richmond; descendant of John of Gaunt.	1485	28	24	By consumption.	A wise and able prince; pious, chaste, temperate and just; but insatiably covetous.
HENRY VIII. (1491-1547).—Second son of Henry VII.	1509	18	38	Natural causes.	Comely, but very corpulent; brave, candid and liberal; versed in music, philosophy, and divinity; yet was cruel and presumptuous.
EDWARD VI. (1537-1553).—Son of Henry VIII., by Jane Seymour.	1547	9	6	Of a consumption.	Sweet tempered, and had a great genius.
QUEEN MARY (1516-1558).—Daughter of Henry VIII., by Catharine of Aragon.	1553	38	5	Of a dropsy.	Small capacity, bigoted, revengeful and cruel.
QUEEN ELIZABETH (1533-1603).—Daughter of Henry VIII., by Anne Boleyn.	1558	25	45	Natural causes.	Tolerably handsome; had a noble air, and great affability; celebrated for her wit, judgment, economy, policy, sincerity, justice, liberality, and magnificence.
HOUSE OF STUART					
JAMES I. (1566-1625).—Son of Mary, Queen of Scots, and Henry Stuart, Lord Darnley; and great-grandson of Margaret, daughter of Henry VII.	1603	37	22	Of an ague.	Learned and pacific, but wavering and undetermined.
CHARLES I. (1600-1649).—Third son of James I.	1625	25	24	Beheaded near the windows of the banqueting house, Whitehall.	Religious, sober, chaste, affable and courageous; had great penetration and judgment, but too fond of prerogative.
COMMONWEALTH declared May 19.	1649	...	11

HOUSE OF STUART							
CHARLES II. (1630-1685).—Eldest son of Charles I.	1660	29	25	Supposed to have been poisoned.	Extremely liberal and affable; had a sprightly and witty genius, and a wonderful conception.		
JAMES II. (1633-1701).—Brother to Charles II.	1685	52	3	Natural, having abdicated the throne.	A kind father, husband and master; more pious than resolute, and too submissive to his ministers.		
WILLIAM (1650-1702) and MARY (1662-1694).—William, Prince of Orange, (Holland). Mary, eldest daughter of James II., by Anne Hyde.	1688	W. 37 M. 26	W. 14 M. 6	Mary died of the smallpox; William, by a fall from his horse.	Mary, pious and amiable; had an air of grandeur, without pride or affectation. William, not comely in person, had a great genius, was a good statesman and warrior.		
QUEEN ANNE (1685-1714).—Second daughter of King James II., and consort of George, Prince of Denmark.	1702	37	12	Natural causes.	In private life, virtuous, charitable and pious; as a sovereign, easy, kind and generous.		
HOUSE OF HANOVER							
GEORGE I. (1660-1727).—Eldest son of Ernest Augustus, Duke of Brunswick, and Princess Sophia, daughter of Frederick V., of Bohemia.	1714	54	13	Died of a lethargic disorder, at Osnaburg.	Unostentatious and familiar; a circumspect general; a wise and virtuous prince.		
GEORGE II. (1683-1760).—Only son of George I., by Dorothy, daughter and heiress of the Duke of Zell.	1727	44	34	Died instantly, by a sudden rupture of the heart, while in good health.	Well-shaped, fair complexion; hasty, of moderate abilities, humane, liberal, temperate, and a scientific warrior.		
GEORGE III. (1738-1820).—Eldest son of Frederick and Augusta, Prince and Princess of Wales, and grandson of George II.	1760	22	59	By the gradual exhaustion of nature, having been in state of continual mental derangement for nine years.	His figure uniting strength and comeliness; his manners unassuming and liberal; hair light flaxen, eyes grey, eyebrows white, of moderate genius, and very pious.		
GEORGE IV. (1762-1830).—Eldest son of George III., by his consort, Charlotte of Mecklenburg.	1820	58	9		
WILLIAM IV. (1765-1837).—Third son of George III.	1830	65	7	Natural causes.	A man of homely talents, immoral, tactless, but good hearted.		
QUEEN VICTORIA (1819-1901).—Daughter of Edward, fourth son of George III., and Victoria Maria Louisa, daughter of Francis, duke of Saxe-Coburg.	1837	18	64	Natural causes.	A sagacious ruler, jealous of her royal prerogative, persistent, self-devoted, but greatly beloved.		
HOUSE OF SAXE-COBURG							
EDWARD VII. (1841-1910).—Son of Victoria and Prince Albert of Saxe-Coburg and Gotha.	1901	60	9	Natural causes.	Lacked political training, but cultivated the arts of peace. Popular, but lacking in moral force.		
GEORGE V. (1865- —).—Son of Edward VII. and Queen Alexandra, daughter of Christian IX. of Denmark.	1910	45	Without political training; like his father, his foreign policy almost wholly in the hands of a powerful ministry. Personally a notable sportsman and popular.		
NAMES AND LINEAGE OF SOVEREIGNS		PRINCIPAL STATESMEN		CHIEF WARRIORS		EVENTS OF REIGN	
ANGLO-SAXON KINGS							
EGBERT (775?-837)—Son of Alcmund, descended from Imigisl, brother to Ina, king of West Saxons.		...		The king.—Ethelwolf.—Kenneth.		The kingdoms of the Heptarchy united, and take the name of England.	
ETHELWOLF (— 358)—Son of Egbert.		Athelstan.		Wolfhere.—Ethelhelm.—Ceorle.		Tithes instituted; London plundered by the Danes; England becomes tributary to the Holy See.	
ETHELBALD—Son of Ethelwolf.		Swithun, Bishop of Winchester.		Osric.		Scots defeated by the Britons.	
ETHELBERT—Son of Ethelwolf.		...		The king.		Winchester burnt by the Danes.	
ETHELRED I. (871).—Brother to Ethelbert.		...		Young Alfred.		Battles of Aston and Basing—York taken.	
ALFRED THE GREAT (849-901).—Brother to Ethelred, and son of Ethelwolf.		...		The king.—Oddune, earl of Devonshire.		University of Oxford founded. Juries instituted. England divided into shires, tithings and hundreds.	
EDWARD THE ELDER (870?-924).—Second son of Alfred the Great.		...		The king.		Northumberland and East Anglia united to the crown. University of Cambridge founded. Battles of Temford and Malden.	
ATHELSTAN (895?-941).—Natural son of Edward the Elder.		Turketul, Chancellor.		Guy of Warwick.		Constantine III. of Scotland and six Irish and Welsh kings killed at battle of Brunanburh.	
EDMUND THE PIOUS (923-946).—Eldest legitimate son of Edward the Elder.		...		The king.		Cumberland and Westmoreland given up to Malcolm, king of Scotland.	
EDRED (— -955?).—Second legitimate son of Edward the Elder.		Aldheim, Archbishop of Canterbury.		The king.		Northumbrian Danes reduced.	
EDWY (939?-959).—Eldest son of Edmund the Pious.		Odo, Archbishop of Canterbury.		Prince Edgar.		Rebellion of the Mercians.	
EDGAR (943?-975).—Brother to Edwy.		Ethelwold.		...		King of Wales, Ireland and the Isle of Man, recognize Edgar for their sovereign.	
EDWARD THE MARTYR (961?-978).—Eldest son of Edgar.		Dustan.		
ETHELRED II. (Sweyn) (— -1016).—Brother to Edward the Martyr, and son of the beautiful Elfrida.		Siricius, Archbishop of Canterbury.		Prince Edmund. Alfric.		Arabic figures introduced. Sweyn, king of Denmark, conquers England.	
EDMUND, IRONSIDE (989-1017).—Eldest son of Ethelred II.		Edric, Earl of Wilts.		...		Massacre of the Danes. England divided between Edward and Canute I.	
DANISH KINGS							
CANUTE I. (995-1035).—Son of Sweyn, King of Denmark.		Thurkell, Duke of East Anglia.—Urick, Duke of Northumberland.		Godwin, Earl of Kent.		Parents prohibited selling their children. End of the Danish war of two hundred years.	
HAROLD I. (1040- —).—Second son of Canute I., by Queen Alfwen.		Earl Godwin.		Godwin, Earl of Kent.		Paper first used in England.	
CANUTE II. (1019-1042).—Third son of Canute I., by Emma of Normandy.		Earl Godwin.		Leofric, Duke of Mercia.		...	
SAXON KINGS							
EDWARD THE CONFESSOR (1004-1066).—Son of Edmund Ironside.		Robert, Archbishop of Canterbury—Harold.		Siward, Duke of Northumberland.		Common law of England established. Westminster Abbey founded.	
HAROLD II. (1022-1066).—Son of Earl Godwin, by the eldest daughter of Canute I.		Morcar, Earl of Northumberland.		Gurth and Leofwin, the king's brothers.		Battle of Hastings, Norman conquest.	
NORMAN KINGS							
WILLIAM THE CONQUEROR (1027-1087).—Son of Robert, Duke of Normandy, by his mistress Harlotte.		Odo, Bishop of Bayeaux. Fitzosborne, Earl of Hereford.		Malcolm, King of Scotland.		Tower of London built. Domesday book. Bishoprics created.	
WILLIAM RUFUS (1056-1100).—Second son of William the Conqueror.		Herbert—Lozinga.		Earl of Northumberland—Duke of Normandy.		First Holy War. Westminster Hall built. Reduction of the Welsh.	
HENRY I. (1068-1135).—Brother of William Rufus.		Archbishop Anselm. Bishop of Salisbury.		Earl of Flanders.		Normandy conquered. First Parliament.	
STEPHEN (1105-1154).—Son of Stephen, Earl of Blois, and Adela, daughter of William the Conqueror.		William of Ypres.		Earl of Gloucester.		Canon law introduced.	
PLANTAGENETS							
HENRY II. (1133-1189).—Eldest son of Geoffrey, Earl of Anjou, and of the Empress Maud. Heir to Henry I.		Thomas à Becket, Lord Chancellor.		Strongbow, Earl of Pembroke.		King takes possession of Ireland. Judicial circuits established.	
RICHARD I. (1157-1199).—Second son of Henry II.		Bishop of Durham—Longchamp, Bishop of Ely.		The king, surnamed Cœur de Lion.		London divided into companies. King joins the Crusade.	
KING JOHN (1166-1216).—Brother to Richard I.		Archbishop of Hubert, Chancellor.		Prince Arthur.		Phillip II. of France takes possession of Normandy. War with the barons. Magna Charta signed.	
HENRY III. (1207-1272).—King John's eldest son.		William, Earl of Pembroke, Hugh de Burgh, Bishop of Winchester.		Simon, Earl of Leicester. Prince Edward.		Intestine wars. Westminster Abbey rebuilt.	
EDWARD I. (1239-1307).—Eldest son of Henry III.		Giffard, Archbishop of York.		Llewellyn, Prince of Wales.		Wales united to England. Mariner's compass invented.	
EDWARD II. (1284-1327).—Eldest son of Edward I.		Pierce Gaveston—Hugh de Spencer.		Guy, Earl of Warwick.		King abdicates the throne. Courts of Nisi Prius established.	
EDWARD III. (1312-1377).—Son of Edward II.		Mortimer, Earl of March.		Edward, the Black Prince—Sir Richard Knowles.		Battles of Cressy and Poitiers. Order of the Garter instituted.	
RICHARD II. (1366-1400).—Son of Edward the Black Prince, and grandson of Edward III.		Richard de Vere, Duke of Ireland. A. Neville, Archbishop of York.		H. Percy, surnamed Hotspur—John of Gaunt.		Wat Tyler's insurrection. King deposed.	
HOUSE OF LANCASTER							
HENRY IV. (1366?-1413).—Son of John of Gaunt, and grandson of Edward III.		R. Neville, Earl of Westmoreland.		Sir John Oldcastle.		Battle of Shrewsbury.	
HENRY V. (1388-1422).—Eldest son of Henry IV.		Beaufort, Duke of Exeter.		Duke of Gloucester, Wodehouse Gam.		Battle of Agincourt. Siege of Rouen.	
HENRY VI. (1421-1471).—Son of Henry V.		Humphrey, Duke of Gloucester, Duke of Suffolk, Duke of Somerset.		Joan of Arc, Duke of Bedford, Lord Talbot, R. Neville, Earl of Warwick.		Battles of Crevant, Verneuil, St. Albans, and Towton. Siege of Orleans.	
HOUSE OF YORK							
EDWARD IV. (1441-1483).—Son of Richard, Duke of York; descendant of Edward III.		Earl Rivers.		Admiral Coulon.		Printing first in use.	
EDWARD V. (1470-1483).—Eldest son of Edward IV.		Richard, Duke of Gloucester.		Lord Hastings.		Richard's usurpation.	
RICHARD III. (1452-1485).—Brother to Edward IV.		Lord Stanley.		Henry, Earl of Richmond. Duke of Buckingham.		Battle of Bosworth Field.	

HOUSE OF TUDOR			
HENRY VII. (1457-1509).—Son of Margaret, Countess of Richmond; descendant of John of Gaunt.	Cardinal Morton, Sir Edward Poynings.	Lord Lovell.	Discovery of America.
HENRY VIII. (1491-1547).—Second son of Henry VII.	Cardinal Wolsey, Sir Thomas More, Fox, Cromwell.	Duke of Norfolk—Earl of Surrey. Lord Maxwell.	The Reformation. Monasteries dissolved.
EDWARD VI. (1537-1553).—Son of Henry VIII., by Jane Seymour.	Seymour, Duke of Somerset—Dudley, Earl of Warwick.	Lord Russell.	Religious insurrection.
QUEEN MARY (1516-1558).—Daughter of Henry VIII., by Catharine of Aragon.	Gardiner, Chancellor.	Duke of Savoy.	Catholic religion restored.
QUEEN ELIZABETH (1533-1603).—Daughter of Henry VIII., by Anne Boleyn.	Robert Dudley, Sir Nicholas Bacon, Lord Burleigh.	Admiral Howard—Sir Francis Drake. Sir F. Vere. Sir P. Sidney.	Mary Queen of Scots executed. Spanish Armada destroyed. Protestant religion restored.
HOUSE OF STUART			
JAMES I. (1566-1625).—Son of Mary, Queen of Scots, and Henry Stuart, Lord Darnley; and great-grandson of Margaret, daughter of Henry VII.	Robert Car, Earl of Somerset. George Villiers, Duke of Buckingham. Earl of Salisbury.	Sir Horace Vere.	Union of the crowns of England and Scotland. Gunpowder plot.
CHARLES I. (1600-1649).—Third son of James I.	Earls of Portland and Strafford—Laud, Archbishop of Canterbury.	Earl of Essex. Sir T. Fairfax, Earl of Manchester.	Battles of Edge Hill, Tadcaster and Gisborough.
COMMONWEALTH declared May 19.	Oliver Cromwell.	Admiral Blake, General Monk.	Charles I. beheaded. Royal power usurped. Battle of Dunbar.
HOUSE OF STUART			
CHARLES II. (1630-1685).—Eldest son of Charles I.	Earl of Clarendon.	Duke of York. Earl of Sandwich.	Restoration of monarchy. Plague and fire in London. Royal Society founded.
JAMES II. (1633-1701).—Brother to Charles II.	Chancellor Jeffries.	Duke of Monmouth.	King abdicates the throne. Revolution.
WILLIAM (1650-1702) and MARY (1662-1694).—William, Prince of Orange, (Holland). Mary, eldest daughter of James II., by Anne Hyde.	Earl of Sunderland. Earl of Tankerville.	Russell, Shovel, Ginkle.	Bank of England established. Siege of Namur. Battles of Boyne and La Hogue. Treaty of Ryswick.
QUEEN ANNE (1685-1714).—Second daughter of King James II., and consort of George, Prince of Denmark.	Lords Godolphin and Cowper—Earl of Oxford. Harcourt. Bolingbroke.	Duke of Marlboro'—Sir G. Rook, Ormund—Benbow.	Battles of Blenheim and Ramilles. Scotch union.
HOUSE OF HANOVER			
GEORGE I. (1660-1727).—Eldest son of Ernest Augustus, Duke of Brunswick, and Princess Sophia, daughter of Frederick V., of Bohemia.	Dukes of Newcastle and Devonshire. Lords Townsend and Carteret.	Earl of Mar. Duke of Argyle. Lord Cobham.	Insurrection in favor of the Pretender. Septennial parliament.
GEORGE II. (1683-1760).—Only son of George I., by Dorothy, daughter and heiress of the Duke of Zell.	Sir R. Walpole. Mr. Sandys. Earl of Huntingdon. Duke of Bedford.	Duke of Cumberland. Lord Anson. Earl of Stair. Gen. Wolfe.	New style introduced. Battles of Dettingen, Culloden, and Minden. Peace of Aix La Chapelle.
GEORGE III. (1738-1820).—Eldest son of Frederick and Augusta, Prince and Princess of Wales, and grandson of George II.	Chatham. North, Pitt, Fox.	Rodney, Howe, Abercrombie—Nelson, Wellington.	French and American Revolutions. Union with Ireland. Battles of Leipsic and Waterloo.
GEORGE IV. (1762-1830).—Eldest son of George III., by his consort, Charlotte of Mecklenburg.
WILLIAM IV. (1765-1837).—Third son of George III.	Lord John Russell, Robert Peel, Lord Melbourne.	...	Reform Bill passed by Parliament. Municipal Corporations Act. Establishment of the University of London.
QUEEN VICTORIA (1819-1901).—Daughter of Edward, fourth son of George III., and Victoria Maria Louisa, daughter of Francis, duke of Saxe-Coburg. Australian Commonwealth bill. Imperialism strengthened. Marked literary achievements.
HOUSE OF SAXE-COBURG			
EDWARD VII. (1841-1910).—Son of Victoria and Prince Albert of Saxe-Coburg and Gotha.	...	Lord Roberts, General Kitchener.	King Edward and his Ministers were influential in establishing the Triple Entente, including England, France and Russia.
GEORGE V. (1865- —).—Son of Edward VII. and Queen Alexandra, daughter of Christian IX. of Denmark.	Asquith, Lloyd-George, Cecil.	Kitchener, French, Haig.	England the leading and directing power of the Entente in the Great European war against the Germanic Allies.

FRANCE

Location and Extent.—France occupies the narrowest part of the great western peninsula of the European continent between the Mediterranean on the one side, and the Bay of Biscay and the English Channel on the other. As both coasts have many harbors, the situation between two seas is a very advantageous one. In extent it is fully three and a half times larger than England, measuring about six hundred miles each way across it.

Most of its frontiers are natural. On the south the high barrier of the Pyrenees rises between it and Spain; on the east the Alps and Jura separate it from Italy and Switzerland and part of the Vosges mountains forms the boundary towards Germany. On the northeast along the political limit towards Germany and Belgium is artificially drawn, and has to be guarded by a line of fortresses.

Since 1768, France had held the Mediterranean island of *Corsica*, a rugged pyramid of forest-covered mountains.

Divisions of the Country.—Previous to the French Revolution, France was divided into *provinces*, which bore the names of the separate territories out of which the state had been gradually built up. These are accordingly of much greater historical interest than the present division into eighty-seven *departments*, which are almost universally named after the river basins in which they lie. The provincial names are also those which are still most in use in ordinary life in France.

The following are the provinces, with the dates of their incorporation as parts of France, and the departments they include:

ILE DE FRANCE, the original kernel of the state round Paris (*Departments*—Seine, Seine et Oise, Seine et Marne, Oise, Aisne).

CHAMPAGNE (part of France since 1285) to the east of the former (Ardennes, Marne, Haute-Marne, Aube).

LORRAINE (since 1766), east of Champagne (Meuse, Meurthe et Moselle, Vosges, and territory of Belfort).

FLANDERS (since 1677), on the border of Belgium (Nord).

ARTOIS (since 1640), on the Channel (Pas de Calais).

PICARDY (original), adjoining Ile de France on N. (Somme).

NORMANDY (since 1203), along the Channel (Seine-inferieure, Eure, Calvados, La Manche, Orne).

BRITTANY (since 1532), the western peninsula (Finistere, Morbihan, Cotes-du-Nord, Ile et Vilaine, Loire-inferieure).

POITOU (since 1375), southeast of Brittany (Vendee, Deux-Sevres, Vienne).

ANJOU (since 1202) north of Poitou, across the Loire (Maine et Loire).

MAINE (since 1202), between Anjou and Normandy (Mayenne, Sarthe).

ANGOUMOIS, AUNIS and SAINTONGE (since 1242), south of Poitou, along the Bay of Biscay (Charente and Charente-inferieure).

TOURNAI (since 1256), across the Loire, east of Anjou (Indre et Loire).

ORLEANS (original), south of Ile de France (Loire et Cher, Eure et Loire, Loiret).

NIVERNAIS (since 1707), southeast of Orleans (Nievre).

BOURBONNAIS (since 1559), south of Nivernais (Allier).

MARCHE (since 1531), southwest of Bourbonnais (Creuse).

BERRI (since 1100), between Marche and Orleans (Cher, Indre).

LIMOUSIN (since 1369), southwest of Marche (Haute-Vienne and Correze).

AUVERGNE (since 1531), west of Limousin (Cantal, Puy-de-Dome).

LYONNAIS (since 1307), northeast of Auvergne (Loire, Rhone).

BURGUNDY (since 1476), south of Champagne (Ain, Saone et Loire, Cote d'or, Yonne).

FRANCHE COMTE (since 1674), nearest Switzerland (Haute-Saone, Jura, Doubs).

DAUPHINE (since 1349), between the Alps and the Rhone Channel (Isere, Drome, Hautes, Alpes).

SAVOIE (since 1860), south of Lake of Geneva (Savoie, Haute-Savoie).

LANGUEDOC (since 1271), along the Mediterranean, west of the Rhone (Ardeche, Haute-Loire, Lozere, Gard, Herault, Tarn, Haute-Garonne, Aude).

GUYENNE (since 1453), in the basin of the Garonne, southwest (Aveyron, Lot, Dordogne, Tarn et Garonne, Lot et Garonne, Gironde).

GASCOGNE (since 1453), in the southwest, old *Aquitaine* (Landes, Gers, Hautes-Pyrenees).

BEARN and NAVARRE (since 1607) (Basses Pyrenees).

FOIX (since 1607) next Spain, in the south (Ariege).

ROUSSILLON (since 1642), in the southeast (Pyrenees-Orientales).

AVIGNON, VENNAISSIN, and ORANGE (since 1791), near the Rhone delta (Vaucluse).

PROVENCE, Roman Provincia (since 1245), in the southeast along the Mediterranean (Bouches-Du-Rhone, Basses-Alpes, Var, Alpes-Maritimes).

CORSICA (since 1768), in the Mediterranean (Corse).

Surface and Mountains.—Within France the long curve of the *Cevennes Mountains* in the southeast, prolonged northward by the *Cote d'or*, the *Plateau of Langres*, and the *Vosges*, determines the slope of the country. Between them and the *Alps* lies the deep valley of the Rhone, with a southward fall to the Mediterranean. But these high lands, ramifying outward with gentler descent to north and west, give direction to the drainage of the longer slope to the Atlantic coast, the Bay of Biscay, the Channel, and the North Sea.

Mont Blanc, the highest point in Europe, rises within France, near the point of union of its boundary with that of Italy and Switzerland; the *Pic de Nethou*, the highest point of the Pyrenean barrier, stands just outside the boundary on the Spanish side; centrally in the country, the highest point is *Mont Dore*, in the volcanic group of the mountains of Auvergne, embraced by the curve of the Cevennes. The lowlands of France are not level plains like those of Belgium and Holland, but for the most part undulating districts; they lie along the Atlantic border (excepting where the heights of Normandy and Brittany run out into the ocean) and in the Mediterranean valley of the Rhone.

Chief Rivers.—The main direction of the drainage of France is from southeast to northwest over the long slope of land. The *Garonne*, receiving the numerous *gaves*, as the streams from the Pyrenees are called, and its tributary the *Dordogne*, from the mountains of Auvergne, forming the estuary of the *Gironde* in the south; the *Loire*, curving through the center of the country from the Cevennes to the Atlantic,—the longest river of France; the *Seine*, from the Cote d'or, flowing northwest to the English Channel; and the *Meuse*, from the Vosges, passing out to join the Rhine in the Netherlands. All are navigable, forming with their tributaries the natural waterways of France, which possesses a river navigation of about five thousand five hundred miles. The great southern river, the *Rhone*, from the mountains of Switzerland, receiving its chief tributary, the *Saone*, from the southern Vosges, is comparatively valueless to navigation from the rapidity of its current.

Climate and Soil.—Occupying a middle position between northern and southern Europe, France enjoys one of the finest climates of the continent. Toward the northeast it becomes more continental, toward the northwest more maritime and like that of southern England; in the warm south the hot winds from the African deserts may occasionally be felt, and in contrast to these, in the Rhone valley, the chilly northeast wind known as the *Mistral* at times descends from the Alpine Heights with great violence; but the greater part of the country is within the area of the westerly winds.

Products of Soil.—Very few parts of the country are unadapted for cultivation; only some parts of the Pyrenees, the Landes, and of the Vosges, can be thus characterized.

The destruction of natural timber in France within the past two centuries has been enormous. About a sixth part of the surface is wooded, the most extensive remaining forests being those of *Orleans* and *Fontainebleau*, between the northern curve of the Loire and Paris; of the hills of Var in the extreme southeast; and of the Jura and the Vosges. Much of the department of Vaucluse, in the lower valley of the Rhone, is covered with *Truffle oaks*, from about the roots of which enormous quantities of this fungus

are obtained. The western promontory of Brittany is now barest of all, but here, as in the mountains of Auvergne, the Cevennes, the Pyrenees, and the Alps, replanting has begun.

The vine is grown in all parts of France excepting the northwestern departments; more than one thousand four hundred varieties of grapes are recognized; the finest growths being those of *Champagne* and *Burgundy* in the east, and of the basin of the Gironde (*Bordeaux*) in the southwest. Wheat, flax and beet-root for sugar, are the staple products of the north; olives of the extreme southeast. Apples and pears are widely grown in Normandy for cider and perry; oranges, citrons, and pomegranates come from the Mediterranean departments.

In pastoral wealth, in cattle and sheep rearing, France is far behind England and Germany in proportion to its extent.

Industries and Trade.—Agricultural and pastoral pursuits occupy the larger share of the people of France. The trade of the Champagne wine district centers at *Reims* and *Chalons-sur-Marne*, east of Paris; that of the Burgundy wines at *Dijon*, in the Saone valley, on the east; that of the Gironde wines, or claret, at *Bordeaux*, on the southwest. The subsidiary products of vinegar and brandy are made most largely, the one at *Orleans*, on the Loire, the other at *Cognac*, a small town on the Charente, north of Bordeaux.

The French People.—To the aboriginal *Iberian* and *Celtic* peoples of France came the *Romans* chiefly in the south and east; the descendants of this intermixture being the small dark and lively Frenchman of the south; in the north, in some degree, the Germanic element became interwoven; hence the Frenchman of the northern parts of the land partakes more of the character of his neighbors, is taller, blonde, blue-eyed, and less volatile than the southerner. Hence also the old division of the Romanized French language into the *Langue d'oc* (or Provençal) of the south; and the *Langue d'oïl* (or Roman Walloon) of the north, from which the many dialects now spoken have descended.

The *Celtic* element remains almost pure in Brittany, and the *Iberian* in the *Basques* of the western Pyrenees. *Italians* appear in the southeast and in Corsica, *Flemings* on the Belgian frontier, and *Germans* toward Lorraine and Alsace, though, in this direction, the boundary drawn long the Vosges and round Lorraine since the war of 1871 follows as nearly as possible the meeting points of the German and French inhabitants of the northeast.

Religion and Education.—France is a Roman Catholic country. Protestants form but a small proportion, and the most numerous in the southwest between the Loire and the Pyrenees. Public education is entirely under the supervision of the Government, and no longer in the hands of the clergy. The percentage of illiterates is least in the districts which lie nearest to Germany, and greatest in the Atlantic coast-lands of the west and southwest.

There are state universities at Aix, Algiers, Angers, Bordeaux, Caen, Clermont, Dijon, Grenoble, Lille, Lyon, Marseilles, Montauban, Montpellier, Nancy, Nantes, Paris, Poitiers, Rennes, and Toulouse.

Cities and Towns.—More than 8,000,000 people live in the seventy-one chief cities. Fifteen cities have populations of more than 100,000:

Paris	2,888,110
Marseilles	550,619
Lyon	523,796
Bordeaux	261,678
Lille	217,807
Nantes	170,535
Toulouse	149,576
St. Etienne	148,656
Nice	142,940
Le Havre	136,159
Rouen	124,987
Roubaix	122,723
Nancy	119,949
Rheims	115,178
Toulon	104,582

There are besides twenty others of over 50,000 inhabitants.

PLACE DE LA CONCORDE, PARIS, UNDER GIANT SEARCHLIGHTS

Paris (Fr. pron. *Par-ee*), capital of France, and the largest city in Europe after London, is situated on the river Seine, about one hundred and ten miles from its mouth. It lies in the midst of the fertile plain of the Île-de-France, at a point to which converge the chief tributaries of the river, the Yonne, the Marne, and the Oise; and is the center of a great network of rivers, canals, roads, and railways.

France has long been the most highly centralized country in Europe, and Paris as its heart contains a great population of government functionaries. It is a metropolis of pleasure, and attracts the wealthy from all parts of the world; hence it is a city of capitalists and a great financial center.

THE SEINE AND ITS BRIDGES.—The Seine divides the city into two parts, and forms the islands of La Cite and St. Louis, both covered with buildings. This river is navigable by small steamers. The quays or embankments, which extend along its banks on both sides, are built of solid masonry, protect the city from inundation and form excellent promenades. The Seine, within the city, is fully five hundred and thirty feet in width, and is crossed by numerous bridges, the more important being Pont Neuf, Pont de la Concorde, Pont Alexandre III., Pont d'Iena, and the Pont de l'Alma.

THE MADELEINE, PARIS

This splendid edifice, begun in 1764, is modeled after the Parthenon at Athens. In 1806, Napoleon decreed its completion for a Temple of Glory. Louis XVIII. proposed converting it into an expiatory chapel to Louis XVI. and XVII. and Marie Antoinette. It was completed, 1842, at a cost of nearly \$3,000,000.

ENVIRONS AND FORTIFICATIONS.—Paris is surrounded by a line of fortifications twenty-five miles long; outside of this is a chain of fortresses, while beyond that again are the detached forts. These form the two main lines of defense. The inner line consists of sixteen forts, the outer line of eighteen forts besides redoubts; the area thus inclosed measuring four hundred and thirty square miles, with an encircling line of seventy-seven miles.

Montmartre, within the fortifications is four hundred feet high; the city is encircled at a distance of from two to five miles by an outer range of heights, including Villejuif, Meudon, St. Cloud, and Mont-Valerien (six hundred and fifty feet), some of which are crowned by the detached forts which now form the main defenses of the city. At the fifty-six gates in the walls of Paris are paid the octroi dues.

STREETS AND BOULEVARDS.—The houses of Paris are almost all built of white calcareous stone, and their general height is from five to six stories, arranged in separate tenements. Many of the modern street buildings have mansard roofs, and are highly enriched in the renaissance manner. In the older parts of the city the streets are narrow and irregular, but in the newer districts the avenues are straight, wide, and well-paved.

The central point of the city is Place Royal, along which passes the great thoroughfare of the city from southeast to northwest. Beginning at the Place de la Nation, at the southeast margin of the city, this grand avenue, from Place de la Nation to Place de la Bastille, is called *Rue du Faubourg St. Antoine*; from Place Bastille to near Hotel de Ville it is called *Rue St. Antoine*; from Hotel de Ville, past the Louvre, to Place de la Concorde, *Rue de Rivoli*; from Place de la Concorde to the Arc de Triomphe, *Avenue des Champs Elysees*; and beyond the Arch, *Ave. de la Grande Armée*.

THE CENTER OF PARISIAN LIFE.—That which is specifically called *The Boulevard* extends in an irregular arc on the north side of the Seine, from the Place de la Bastille in the east to the Place de la Madeleine in the west and it includes the Boulevards du Temple, St. Martin, St. Denis, des Italiens, Capuchins, and Madeleine, and its length is nearly three miles. Here may be noted also the triumphal arches of the Porte St. Denis and the Porte St. Martin, the former of which is seventy-two feet in height.

On the south side of the Seine the boulevards are neither so numerous nor so extensive, the best-known being the Boulevard St. Germain, which extends from the Pont Sully to the Pont de la Concorde.

After the boulevards among the best streets are the great new streets formed in the time of Napoleon III. are the Rue de Rivoli, two miles in length, the Rue de la Paix, the Rue du Faubourg St. Honore, the Rue Royale and twelve fine avenues radiating from the Place de l'Etoile.

SQUARES AND PARKS.—The most notable public squares or *places* are the Place de la Concorde, one of the largest and most elegant squares in Europe, adorned by an Egyptian obelisk, fountains, and statues; Place de l'Etoile, in which is situated the Arc de Triomphe, a splendid structure one hundred and fifty-two feet in height; the Place Vendôme with column to Napoleon I.; Place des Victoires, with equestrian statue of Louis XIV.; Place de la Bastille, with the Column of July; Place de la République, with colossal statue of the Republic.

A REMARKABLY INFORMING PANORAMA OF PARIS AND IMMEDIATE SUBURBS, SHOWING THE PLAN OF THE CITY, THE COURSE OF THE RIVER SEINE, CHIEF BOULEVARDS AND STREETS, AS WELL AS THE LOCATION AND ARCHITECTURAL OUTLINES OF THE PRINCIPAL BUILDINGS AND MONUMENTS.

[482]

ARC DE TRIOMPHE (ARCH OF TRIUMPH), PARIS

Within the city also are situated the gardens of the Tuileries, which are adorned with numerous statues and fountains; the gardens of the Luxembourg, in which are fine conservatories of rare plants; the Jardin des Plantes, in which are the botanical and zoological gardens, hothouses and museums, which have made this scientific institution famous; the Buttes-Chaumont Gardens, in which an extensive old quarry has been turned to good account in enhancing the beauty of the situation; the Parc Monceaux; and the Champs Elysees, the latter being a favorite promenade of all classes.

TROCADERO PALACE, PARIS

Built for the Exhibition of 1878, the Trocadero contains a fine collection of architectural and monumental casts. The building affords some of the finest views of Paris.

But the most extensive parks are outside the city. Of these the Bois de Boulogne, on the west, covers an area of two thousand one hundred and fifty acres, gives an extensive view toward St. Cloud and Mont Valérien, comprises the racecourses of Longchamps and Auteuil, and in it are lakes, cascades, ornamental cafes, and the Jardin d'Acclimatation.

The Bois de Vincennes, on the east, even larger, is similarly adorned with artificial lakes and streams, and its high plateau offers a fine view over the surrounding country.

The most celebrated and extensive cemetery in Paris is Père la Chaise (one hundred and six and one-half acres), finely situated and containing the tombs of many celebrities. The Catacombs are ancient quarries which extend under a portion of the southern part of the city, and in them are deposited the bones removed from old cemeteries now built over.

CATHEDRALS AND CHURCHES.—Of the churches of Paris the most celebrated is the Cathedral of Notre Dame, situated on one of the islands of the Seine, called the Île de la Cité. It is a vast cruciform structure, with a lofty west front flanked by two square towers, the walls sustained by many flying-buttresses, and the eastern end octagonal.

The church of La Madeleine, a modern structure in the style of a great Roman temple, with a peristyle of lofty Corinthian columns, stands on an elevated basement fronting the north end of the Rue Royale. It is considered by many to be the most beautiful edifice in Paris.

The Pantheon, or church of St. Geneviève, patron saint of Paris (1764) was begun as a church, but converted by the Constituent Assembly into a temple dedicated to the great men of the nation. Napoleon III. restored it to the church and rededicated it to St. Geneviève, but once more, on the occasion of the funeral of Victor Hugo (1885), it was reconverted into a valhalla. There are the tombs also of Voltaire, Rousseau, Marat and Victor Hugo.

[483]

PALACE OF JUSTICE, PARIS
The Sainte Chapelle, in the south court of the Palais of Justice is the most beautiful example of Gothic in Paris.

St. Eustache (1532-1637) is an interesting example of French Renaissance architecture; and others worthy of note are: St. Germain l'Auxerrois; St. Gervais; St. Roch; St. Sulpice; Notre Dame de Lorette; and St. Vincent de Paul. On the very summit of Montmartre is the Church of the Sacred Heart, a vast new structure in the Byzantine style which cost over five million dollars. The chief French Protestant churches are the Oratoire and Rédemption. There are several English, Scotch, and American churches, a Russian Greek church, and several synagogues.

THE PANTHEON, PARIS

It occupies a most commanding position near the Luxembourg Palace, and is one of the finest architectural structures of the city.

PALACES AND PUBLIC BUILDINGS.—Notable among the public buildings of Paris are its palaces.

The Louvre, a great series of buildings within which are two large courts, is now devoted to a museum which comprises splendid collections of sculpture, paintings, engravings, bronzes, pottery, Egyptian and Assyrian antiquities. *The Venus de Milo*, the *Fettered Slaves* of Michael Angelo, the *Mona Lisa* of Leonardo da Vinci, and a noble group of the works of Raphael, Titian, and Veronese are the chief treasures. In one gallery there are twenty-one large pictures by Rubens. The *Salon Carré* contains the most striking works of art.

The palace of the Tuileries was set on fire in 1871 by the Communists. The ruins have been removed, but a few of the architectural details have been preserved.

The Palace of the Luxembourg, south of the Seine, since 1879 the meeting-place of the French senate, was built by Marie de Médicis in the Florentine style. Close to it a gallery has been constructed for the reception of the works of living artists acquired by the state.

The Palais de l'Élysée, situated in the Rue St. Honoré, with a large garden, is now the residence of the president of the republic. The Chambre des Députés—known under the Empire as the Palais du Corps Législatif—is the building in which the deputies meet.

The Hôtel de Ville, or municipal building, is situated in the Place de l'Hôtel de Ville, formerly Place de Grève, on the right bank of the river. It was destroyed by the communists in 1871, but has now been re-erected on the same site with even greater magnificence. It is a very rich example of Renaissance architecture.

[484]

HOTEL DES INVALIDES, PARIS

Prepared as a tomb for Napoleon by Louis Philippe.

The Hôtel des Invalides, built in 1670, is now used as a retreat for disabled soldiers, and is capable of accommodating five thousand. The church attached has a lofty and finely-proportioned dome. It contains the burial-place of the first Napoleon.

The Palais de Justice is an irregular mass of buildings occupying the greater part of the western extremity of the Île de la Cité. Opposite the Palais de Justice is the Tribunal de Commerce, a quadrangular building inclosing a large court roofed with glass. The mint (Hôtel des Monnaies) fronts the Quai Conti, on the south side of the Seine, and contains an immense collection of coins and medals.

GRAND OPERA HOUSE, PARIS

This is the finest building of its class in the world.

THEATERS AND PLACES OF AMUSEMENT.—Paris has numerous theaters. The leading houses are the Opéra, the Théâtre Français—chiefly devoted to classical French drama—the Opéra Comique and the Odéon, which receive a subvention from government. The new opera house, completed in 1875, cost, exclusive of the site, five million, six hundred thousand dollars.

Montmartre is the center of the bohemian life of Paris, and contains many *cafés* and places of amusement. It has upwards of forty theaters.

LATIN QUARTER AND ITS INSTITUTIONS.—The chief institutions connected with the University of France, and with education generally, are still situated in the Quatier Latin.

The Sorbonne, the seat of the Paris faculties of letters, science, and Protestant theology, has been rebuilt and increased in size. The Sorbonne contains lecture-halls and class-rooms, and an extensive library open to the public. There gratuitous lectures are given and degrees are granted by the University of France.

Near the Sorbonne is the Collège de France, where gratuitous lectures are also delivered by eminent scholars and men of letters, as well as a large number of colleges and lycées, the great public schools of France for secondary instruction.

The Ecole Polytechnique, the School of Medicine and the School of Law, the Observatory, and the Jardin des Plantes, with its great museums of natural history, are situated in the same quarter of Paris.

The principal public library is Bibliothèque Nationale, which originated in a small collection of the books placed by Louis XI. in the Louvre.

INDUSTRIES OF PARIS.—Paris cannot be described as a manufacturing town. Its chief and peculiar industries produce articles which derive their value not from the cost of the material, but from the skill and taste bestowed on them by individual workmen. They include jewelry, bronzes, artistic furniture, and decorative articles known as articles de Paris. In consequence of the intelligence and taste required in their trades the Paris workmen are in many respects superior to the machine hands of manufacturing cities.

[485]

STAIRWAY OF HONOR, GRAND OPERA HOUSE

Versailles (*vér-sälz'* Fr. pron. *ver-säy'*), is situated eleven miles west-southwest of Paris. It contains a famous royal palace, a great part of which is now occupied by the Museum of French History, consisting of paintings; but some of the apartments are still preserved with the fittings of a royal residence. The chapel is well proportioned and sumptuous. The great gallery, called the Galerie des Glaces, is one of the finest rooms existing; it is two hundred and forty by thirty-five feet, and forty-two feet high, adorned with mirrors and gilding, and with ceiling-paintings by Lebrun representing the triumphs of Louis XIV.

Here King William of Prussia was proclaimed German emperor in 1871. The council-chamber, the bedroom of Louis XIV., the antechamber of the Mil de Boeuf, the Petits Apartements of the queen, and the theater are all historic and highly interesting.

The gardens are the finest of their kind. They abound with monumental fountains profusely adorned with groups of sculpture, and supplied the model for those of half the palaces of Europe.

St. Denis (*san-dé-né'*), two and one-half miles north of the fortifications of Paris, is chiefly notable for its abbey church, the historic burial-place of the kings of France. Dagobert built the church, which was the nucleus of one begun by Pepin, finished by Charlemagne in 775, and demolished and a larger one built on its ruins four hundred years later. During the Revolution the church was pillaged. It was restored by Viollet-le-Duc. Here Charlemagne was anointed; the Oriflamme was kept; Abélard dwelt; Joan of Arc hung up her arms; Henri IV. abjured Protestantism; and Napoleon I. was married to Marie Louise. The bones of the kings of France from Dagobert (630) to Louis XV. (1774) were buried here; and the mad Revolutionists tore them from their tombs, and buried them in a common ditch. They are now in the crypt, and superb royal monuments adorn the church, whose interior is lighted by splendid stained windows, and enriched with mosaics and statuary.

Among the monuments of greatest interest are those of Frédégonde, Dagobert, Pepin, Charlemagne, Clovis II., Charles Martel, Henry II., Catherine de Médicis, Francis I., Louis XVI., Marie Antoinette, Henry IV., Louis XII., and Louis XIV.

Of the 167 sepulchral monuments, 53 are new or were brought from other churches. In 1817, Louis XVIII. caused the remains of Louis XVI. to be removed from the Madeline cemetery to St. Denis.

THE EIFFEL TOWER

Contains three stories, reached by a series of elevators. The platform at the summit is nine hundred and eighty-five feet above the ground. It cost about one million dollars.

Fontainebleau (*Fong'tehn-bló'*), near the Seine's left bank, thirty-seven miles southwest of Paris, is chiefly famous for its royal château, and the beautiful forest that surrounds it. The château, said to have been founded by Robert the Good toward the end of the tenth century, was rebuilt in 1169 by Louis VII., and enlarged by Louis XI. and his successors. After being allowed to fall into decay, it was repaired and embellished by Francis I., Henry IV., Napoleon I., and Louis-Philippe.

[486]

PETIT TRIANON, VERSAILLES

This beautiful little palace was the favorite residence of the unfortunate Marie Antoinette, after Louis XVI. came to the throne of France. It is now a museum of the personal relics of this beautiful and ill-fated Queen.

Barbizon (*Bar-bee-song'*), is close to the Forest of Fontainebleau. It is a great artists' resort, and was the home and death-place of Millet. Corot, Diaz, Daubigny, and Rousseau were other members of the "Barbizon School" of painters.

Chief Industrial Centers.—Textile manufactures are the most important of the mechanical industries of France.

Lyons, the third city of France, at the junction of the Saône with the Rhone, is the center of the silk-growing region and the metropolis of the *silk manufactures*, in which the country stands unrivalled. *St. Etienne* (146,000), southwest of Lyons, comes second to it in this manufacture, after which come *Nimes*, near the delta of the Rhone, *Tours*, on the Loire, and *Paris*. Inland trade and manufactures in the south are most active at ancient *Toulouse*, on the Garonne, and at *Montpellier*, near the Rhone delta.

Woolen, linen, and cotton manufactures are almost entirely confined to the northern region. Foremost among these manufacturing towns of the north stands *Lille*, with its neighbor towns of *Roubaix* and *Tourcoing*, still nearer the Belgian manufacturing region; and *Cambrai*, *Douai*, *Valenciennes*, and *St. Quentin*, southeast of it. *Rouen*, on the Seine in Normandy, and *Amiens*, on the Somme, between Rouen and Lille, *Reims*, in the Champagne district, *Sedan*, on the Ardennes and *Nancy*, in French Lorraine, still farther east, are the other chief manufacturing towns of the northern region.

At *Sèvres*, southwest of Paris, are the chief *porcelain* factories, which give the models and take the lead in this industry. *Limoges* is also a noted center of porcelain manufacture.

Glass is very extensively made in the northern departments. Paris itself excels in every kind of luxurious and fanciful manufacture. *Besançon*, the largest town near the frontier of Switzerland, is a great depot for the produce of the French half of that country, and manufactures watches largely.

The mining industries of France are comparatively limited. *Coal* is drawn chiefly from the *basin of Valenciennes*, which continues the Belgian coalfield on the north, from the basin of the Loire and Rhone, and from that of *Creuzot*, on the south of the heights of the Côte d'or. Iron occurs in eleven districts and is of excellent quality, but generally lies distant from the fuel necessary to smelt it, so that this metal must also be imported in large quantity. *St. Etienne*, southwest of Lyons, is the most noted center

of the French hardware manufactures, especially of guns and machinery; *Le Creuzot*, in the midst of its coal basin, has also noted ironworks.

The trade of France is only inferior to that of Britain, Germany, and the United States; the position of the country, with coasts on three of the most frequented seas, is exceedingly favorable to its commerce. The great seats of maritime traffic with all the world are *Marseilles*, on the Mediterranean coast; *Bordeaux* and *Nantes*, with *St. Nazaire*, on the coast of the Bay of Biscay; *Le Havre* (at the mouth of the Seine), *Boulogne*, *Calais*, and *Dunkerque*, on the English Channel. All of these may in a sense be called the harbors of the central point of the life of the state, luxurious *Paris*.

Naval and Military Centers.—The naval arsenals of France, dockyards, and stations of the fleet, are at *Cherbourg* and *Brest*, on the northwest coast; *L'Orient* and *Rochefort* (south of La Rochelle) on the Bay of Biscay; and *Toulon*, on the Mediterranean. *Nice* and *Cannes*, on the Riviera, are favorite winter resorts.

France has more than one hundred fortified places; indeed almost every town along the northern and northeastern border is a fortress. *Briançon*, the highest town in the country, in the Alps, south of the pass of Mont Cenis into Italy, is the chief arsenal and depot of this mountain barrier, and is considered impregnable.

[487]

HISTORY

The name France first appears in history about the ninth century. Prior to that time the country which constitutes the greater part of modern France was occupied successively by Celts, Gauls and Franks.

Under the Romans.—When first known this country was called Gallia, and was the center whence swarms of plunderers poured over the mountains into Italy; but the Phœnicians and Greeks had a few trading cities on the Mediterranean coast—especially *Marseilles*—where in the seaport towns traces of descent from the Greeks are said still to be found.

In 125 B. C. the Romans formed in the east of the Rhone a settlement ever since called Provincia or "the Province," whose capital was Aquae Sextiae (now Aix), and where corrupted Latin has never ceased to be the dialect, and their power and influence gradually spread. Between 58 and 51 B. C. Julius Caesar subdued the whole of Gaul, except the granite peninsula of the northwest. Later, refugees from Britain caused it to be called Brittany; and there to the present day the Celtic tongue has prevailed, and the habits have been peculiar. The Iberian or Basque tribes of the Pyrenees have likewise preserved their entirely different tongue, which is not even Aryan.

The Impress of Roman Rule.—Roman habits, civilization and speech were adopted all over the country, and Christianity became nearly universal. Many cities were founded as centers of government from the conquered population, and most of the great cities such as Arles and Lyons and many others date from this time. Nimes and Vienne show splendid monuments of Roman architecture. The Romans also made magnificent roads, and are said to have introduced the olive and the vine, to both of which the climate is eminently suitable.

Under Teutonic Invaders.—Continual warfare on the open frontier soon began between the Roman legions and the advancing Teutonic nations, of whom the Belgians, a mixed race, were the van. The city of Lutetia Parisiorum, now known by its tribal name, Paris, was the headquarters of Emperor Julian before his accession in A.D. 361, while he was struggling with these invaders. After his death, Gaul became a prey to the Teutons. They did not destroy the old population, but quartered themselves as guests on the proprietors of land; while the Roman cities kept up their self-government, and paid ransoms to escape pillage. Chief of these Teutonic tribes were the Goths, Burgundians and Franks.

Merovingians.—The Franks, whose dominion swallowed up those of both the foregoing tribes, had been long settled in the north; and Pharamond, their chief in 420, is considered the founder of the French monarchy, as he was of the first or Merovingian race of Frankish kings. In 485 Clovis defeated Syagrius, the Roman general, at Soissons, and finally extinguished the Roman power in the west, and in 507, by his victory over the Visigoths, he rendered himself master of the country between the Loire and Garonne, but was checked at Arles by Theodoric, king of the Ostrogoths. He then settled in Paris, where he died. His chief aim was a united Frankish kingdom.

AMIENS CATHEDRAL

The most perfect specimen of Gothic architecture in France, dating from the thirteenth century. This splendid structure is embellished with a wealth of magnificent mediæval sculpture. Viollet-le-Duc happily calls this cathedral "the Parthenon of Gothic architecture."

Clovis in 493 married Clotilda, a Christian Burgundian princess, and in 496 embraced her faith.

Though nominally Christians, the Franks brought their old hereditary Teuton customs of inheritance and chieftainship, which, as they had last come from the banks of the Yssel, were known as Salic laws—*i.e.* of the Salian Franks. Their German dominions were called Austreich (the eastern kingdom); their Gaulish Neustreich (not Eastern) or Neustria; and both were Frankland. Their dynasty soon exhausted itself, and latterly their kings were called *Fainéants* or "Do-nothing" kings while the mayors of the palace really governed.

[488]

Carlovingians.—One of the mayors, a Teuton wholly in blood, Charles Martel, in 721 checked the tide of Saracen invasion, and saved Gaul by the great battle of Soissons. His son, Pepin, in 753 was elected king, and thence descended the line known as Carlovingians. Under Pepin and Charles the Great, called by the French "Charlemagne," the country was relatively peaceful and prosperous; but after the latter's death things returned to their original state of confusion.

Charlemagne was one of the really great monarchs of the world. His dominions reached from the Ebro to the Channel, from the Elbe, to the Atlantic, and included North Italy, and in 800 he was crowned by the Pope Emperor of the West. His power was too vast for a single hand of less power, and fell to pieces after his son's death. The Western Franks fell to Charles the Bald, and it was then (about 870) that France became a recognized term for the country between the Channel and the Pyrenees.

The king had, however, very little power; his lands were cut up into divisions under dukes, marquises, and counts, who simply paid him a nominal homage, and were bound to follow him in war, but who ruled quite independently. Moreover, the Northmen or Normans were horribly ravaging the whole country; Paris was fortified against them under Robert the Strong, but, in 911, Charles the Simple found himself obliged to make to Rollo, the chief of the Northmen invaders, a grant of the Neustrian lands, which took the name of Normandy. The Carlovingians finally were deposed in 987, and their last sovereign, Louis V., retired to Lotharingia or Lorraine as duke.

Capetians.—The grandson of Robert the Strong, Hugh, became king. He was called Capet, apparently from the hood which marked him as guardian of the Abbey of St. Denis; and the name is used for his dynasty, which reigned for eight hundred years.

The German influences had passed away, though the king and nobility were of Frankish blood. The whole realm was parcelled out into feudal holdings, the great chiefs of which hardly owned the royal power, and the only place where the king really ruled directly was the county of Paris. There was much confusion and private warfare, and after the conquest of England in 1066, the Dukes of Normandy overshadowed the French kings.

Louis IV. ("the Fat"), in 1108, was the first king of any ability. He judicially overcame a robber count, and in his time (though not on any fixed principles) cities began to be allowed to purchase their power of self-government, such as the southern one had preserved from Roman times. This was called the right of *commune*. Cruelly oppressed and downtrodden by their irresponsible lords, mostly Franks, who covered the land with fortified castles. There was, however, much religious zeal, which found its outlet in the Crusades, first proclaimed at Clermont, in Auvergne, in 1095, and in the religious orders, whose beautiful monasteries and splendid cathedrals still exist.

France was at its weakest under Louis VII., when Henry II. of England, by inheritance Duke of Normandy and Count of Anjou, had married the heiress of the great Duchy of Aquitaine, and obtained the heiress of Brittany for his son. Philip II., called Augustus, spent his life in undermining the power of the English kings, and when King John murdered his nephew Arthur of Brittany, Philip held a court of justice, cited him thither, and, on his non-appearance, adjudged him to have forfeited Normandy and Anjou, which easily were conquered, leaving only Aquitaine as the possession of John's mother, and these lands, being held direct of the crown, much added to the royal power.

Under Louis IX.—The king, Louis IX., was the best and most blameless of French sovereigns. It was he who, in 1258, established the Parliament of Paris. In every Teuton nation the king was supposed to take counsel and do justice among the other nobles and freemen; but to attend courts of law in a large territory was a great vexation to the nobles, who would not come, and yet resented decisions made in their absence. Louis arranged that though every immediate vassal of the crown had a right to sit in, yet in its working state it should only consist of men trained in the law, with just nobles enough to give authority. In this parliament the wills and edicts of the king, and the taxes he imposed, were registered. The provinces, likewise, had parliaments to serve as courts of law. Louis's devotion led him to attempt two unfortunate crusades, and he died in the second, in 1270.

His grandson Philip IV. ("the Fair"), had a desperate quarrel with the Papacy, and by underhand means succeeded in forcing Pope Clement V. to reside in his dominions. The Popes fixed their residence at Avignon, in Provence, a province belonging to the Empire, and held at the time by Philip's uncle, Charles, Count of Anjou, but near enough for French influence. Here the Papal court continued for seventy years. Philip V. was a violent and unscrupulous man, and the three sons who reigned in succession after him had not his force of character.

Philip was succeeded in turn by Louis X., Philip V., and Charles IV. The rivalry between France and England, consequent upon the accession of Duke William of Normandy to the throne of the latter, came to a decisive crisis during the first half of the fourteenth century.

House of Valois and the "Hundred Years' War."—On the death of Charles IV. (1328) Philip of Valois succeeded to the throne, beginning the Valois dynasty; but Edward III. of England, by virtue of hereditary right derived from his mother's side, claimed not only such provinces as had been taken from his ancestors, but the whole kingdom. In this way began the protracted conflict which French historians call the "hundred years' war" (1337-1453), a period covering the reigns of John II. (1350-1364), Charles V. (1364-1380), Charles VI. (1380-1422), and the greater part of the reign of Charles VII. (1422-1461). In 1340 an English fleet destroyed the naval force of France at Sluis, on the coast of Flanders; in 1346, at Crécy, the English archers overcame the flower of French chivalry; and at Poitiers (1356) the Black Prince defeated King John and made him prisoner.

[489]

The States-General were also the scene of a deadly struggle between the regent and the third estate, and the peasantry of several districts broke out into a fearful insurrection, which was named the *Jacquerie*, and marked by all the horrors of a servile war. Charles V., with the help of his great constable, Du Guesclin, regained in a few campaigns almost all the English acquisitions in France. On his death, in 1380, his son Charles VI., surnamed the *Well-Beloved*, ascended the throne.

The reign of this sovereign was signally unfortunate. He fell into a state of insanity, which rendered him incapable of attending to the administration of the government, and in consequence regents were appointed, whose misconduct threw the kingdom into a civil war. During these calamities which afflicted France, Henry V. of England invaded the country, and gained the memorable battle of Agincourt. The consequence of this victory, and other advantages gained by Henry, enabled him to conclude a treaty by which his succession to the throne of France was acknowledged on the death of Charles. Henry and Charles both died shortly after this event, A. D. 1422.

Charles VII. and Joan of Arc.—Charles VII., surnamed the *Victorious*, asserted his right to the throne of his father, while at the same time the infant Henry VI. of England was proclaimed King of France under the regency of his uncle, the Duke of Bedford. The English laid siege to Orleans, a place of the greatest importance, and so successful

were they in their operations against this and other places that the affairs of France began to wear a most gloomy aspect. The tide of misfortune, however, was successfully turned by one of the most extraordinary events recorded in history.

When the hope of saving Orleans was almost abandoned, a young girl named Joan of Arc, about seventeen years of age, who had lived an humble life in a village on the borders of Lorraine, presented herself to the Governor of Vaucouleur, and maintained with much earnestness that she had been sent by Divine commission to raise the siege of that city, and procure the coronation of Charles in the city of Rheims.

After undergoing a most rigid examination before a committee of persons appointed for that purpose, and also before the court and the king himself, she was intrusted with the liberation of Orleans. As she approached the city her presence inspired the inhabitants with confidence, while it spread dismay and consternation among the English, who hastily raised the siege and retired with precipitation, but being pursued by the heroine at the head of the French army, they were entirely defeated at Patay, with a loss of nearly five thousand men, while the French lost only one of their number. From this event Joan was called the Maid of Orleans.

The second part of her mission, which yet remained to be accomplished, was equally arduous and dangerous. The city of Rheims and the intermediate country being in possession of the English or their allies, presented apparently insurmountable difficulties. Charles, however, placing full confidence in her guidance, commenced his march, and as he advanced every obstacle disappeared; the citizens of Rheims, having expelled the garrison, received him with every demonstration of joy. After the coronation was performed, Joan threw herself at the feet of Charles, declaring that her commission was accomplished, and solicited leave to return to her former humble station; but the king, unwilling to part with her services so soon, requested her to remain for some time with the army, with which at length she complied. She afterwards attempted to raise the siege of the city of Campiegne; but her good fortune seemed to have deserted her; she fell into the hands of the English, who, to gratify their revenge for the many losses they sustained through her valour, condemned her, under a charge of various pretended crimes, and caused her to be burned in the public square at Rouen.

By this cruel measure the English hoped to check the success that had attended the operations of Charles. In this they were disappointed; such was the impulse which the heroine had given to the affairs of France, that the English in a few years were expelled from all their possession in the country, with the exception of Calais.

Charles passed the remainder of his reign in improving the internal condition of his kingdom. The close of his life was embittered by the unnatural conduct of his son, who attempted to poison his father. He died in 1464, a prince of acknowledged virtue, justice and discretion.

Louis XI. (1461-1483), the son and successor of Charles VII., annexed Burgundy and Picardy, and acquired Anjou, Maine, Provence, and the counties of Rousillon and Cerdagne; and France thus became one of the great powers on the Mediterranean. On the northwest, by the marriage of Charles VIII. with Anne of Brittany, she gained possession of that large province. Charles VIII. invaded Italy in 1494, and this was the first of a long series of Italian wars in which France was engaged for more than half a century. With Charles VIII., who died in 1498, the direct line of Valois ended, and Louis, duke of Orleans, grandson to a brother of Charles VI., became king under the title of Louis XII. He met at first with some success in Italy, but was at last driven out.

[490]

Wars of Francis I. and Charles V. of Germany.—Francis I. (1515-1547), his successor, being opposed by the emperor Charles V., of Germany, suffered a disastrous defeat at Pavia in 1525, and was carried a prisoner to Madrid, where in 1526 he agreed to a treaty by which he forfeited Burgundy, and all claims to Naples, Milan, Tournay, and Arras. No sooner was he set at liberty than he secured from the pope a release from his oaths, and renewed the struggle, but again with unfavorable results, and was compelled to make another disastrous peace at Cambrai (1529).

The Reformation had now begun, and Charles V. was obliged to turn his attention to Germany. Francis encouraged the Protestant princes in their opposition to the emperor, and in 1536 the war again broke out. It was ended in 1544 by the peace of Crespy, when the emperor was threatening Paris.

Francis I. died in 1546, and was succeeded by his son, Henry II., and the struggle soon began again. Henry recovered Calais for France. Under Francis II. (1559-1560) the Roman Catholic House of Guise obtained possession of the effective power in the state. Their adversaries, the House of Bourbon, headed the movement of the reformers. Under the weak kings Charles IX. (1560-1574) and Henry III. (1574-1589), who were under the influence of their mother, Catherine de' Medici, this division in the French nobility resulted in the war of the League and wars of religion. The massacre of the Protestants on the night of St. Bartholomew (1572) raised to such a pitch the pride of the House of Guise that Henry III. fled to the camp of the Bourbon leader, where he was murdered by a fanatical monk. The name of Charles IX. remains associated with the horrors of the St. Bartholomew's night, which witnesses the striking of a blow at the very heart of the nation.

The Bourbon Line.—The accession of the Bourbon prince, Henry IV. of Navarre (1589-1610), allayed the fury of religious wars, but his recantation of Protestantism in favor of Catholicism disappointed his own party, to which, however, he granted the free exercise of their religion by the edict of Nantes (1598).

Henry, however, meditated the humiliation of the house of Austria, and was on the eve of his departure for the army when he was assassinated by Ravailac, May 14, 1610.

Under the regency of his widow, Maria de' Medici, mother of Louis XIII., the kingdom was distracted by war between the queen mother and the young king. Cardinal Richelieu, who took the reins of government in 1624, consolidated the power of the monarch at home, and, while annihilating the power of the French Protestants, energetically supported the German Protestants against the house of Austria.

His successor, Cardinal Mazarin, pursued the same policy; and the treaty of Westphalia (1648) asserted the triumph of religious and political liberty in Germany, and the victory of France, which added to her territory the province of Alsace.

The troubles of the Fronde, a faint image of the old civil wars, detracted nothing from the influence gained abroad by the French government, and Mazarin concluded with Spain, in 1659, the treaty of the Pyrenees, which secured two other provinces to France—Artois and Roussillon.

Age of Louis XIV.—Under the personal rule of Louis XIV. France rose to the height of glory, while he himself was placed above all control. From the day of Mazarin's death (1661) he assumed the direction of public affairs. In the first years of his administration the national wealth, promoted by the admirable efforts of Colbert, increased with unusual rapidity. Intellectual progress kept pace with material, and everything conspired to create a literary period of great magnificence.

The king's military successes, too, achieved through Condé, Turenne, Luxembourg, and others, were brilliant; and he added to his kingdom Flanders, Franche-Comté, the imperial city of Strasburg, and several other important territories.

But the revocation of the edict of Nantes in 1685 drove from the kingdom a large number of its best citizens, and crippled many branches of industry. The war of 1689-1697 against the league of Augsburg greatly exhausted the country, and that of the Spanish succession nearly reduced it to extremities; but after a contest of twelve years Louis succeeded, and by the treaties of Utrecht and Rastadt (1713 and 1714) the house of Bourbon, in the person of Louis's grandson, Philip V., inherited the best part of the Castilian monarchy.

Louis XIV. died in 1715, after an unparalleled reign of seventy-two years. The burden which he had borne was far too heavy for his weak successors; and toward the end of Louis XV.'s reign France could scarcely be ranked among the great European powers. The four wars in which she then participated, against Spain (1717-1719), during the regency of Philip of Orleans, for the succession of Poland (1733-1735), for the succession of Austria (1740-1748), and finally the seven years' war (1756-1763), were productive only of disgrace and disaster, including the loss of Canada.

Prelude to the Revolution.—Louis XV. died in 1774, and his grandson Louis XVI. ascended the throne at a period which was perhaps the most inglorious of French history. The kingdom was on the verge of financial as well as political ruin, and it seemed evident that a disastrous crisis was approaching.

An attempt to conciliate the power was made by the restoration of the parliament of Paris; but instead of promoting reform, this body proved a hindrance to it. Turgot and Malesherbes, associated with Maupepas in the ministry, acted with considerable efficiency in the endeavor to improve the state of affairs, but were deposed through the influence of the court party. Necker, who became minister of finance in 1777, at first seemed to improve matters slightly; but the opposition of the nobles and clergy to any scheme of general taxation, with other causes, led to his deposition.

[491]

His successor, Calonne, recklessly plunged the finances into a more hopeless condition than ever, and in 1786 the king was induced to call together the States-General, the really popular assembly of representatives, which had not met since 1614, and then in vain. Thereforward there was a succession of barriers thrown down; madness set in upon the long-oppressed people, who wreaked the vengeance of a thousand years. Frightful mobs rose upon all whom they connected with their past misery. Nobles and clergy fell; the king was dethroned, and in 1793 was executed. A reign of terror set in, during which Robespierre and other fanatics, who thought they must destroy in order to build up, sent to the beheading machine, the guillotine, thousands of victims, and hoped to have swept away even the Christian religion, together with all the old abuses of power.

The Advent of Napoleon and the Directory.—When they fell in 1794, less sanguinary counsels prevailed, and, after sundry attempts at forms of government, Napoleon Bonaparte, of Corsican birth, climbed to supreme power. His course had been through victories. Belgium had been overrun, the Austrians forced back across the Rhine, the allied armies of England and Holland gradually pushed back, and Prussia and Spain forced to conclude peace. The new government began on October 28, the convention having been dissolved on the 26th. England, Russia, and Austria, in a new coalition, now began to carry on a more vigorous warfare; but Carnot's strategic direction soon baffled it. Bonaparte was put in command of the army which was not to advance against the Austrians from Italy, and in 1796 and 1797 completely changed the condition of affairs. At the truce of Leoben (April 18, 1797) France controlled all Italy; Austria surrendered all rights in Belgium and recognized those republics which France established; and the history of France became almost wholly identified for nearly eighteen years with that of a single man, Napoleon Bonaparte.

The Consulate.—Bonaparte was chosen first consul for ten years, December 13, 1799; consul for life, August 2, 1802; then hereditary emperor, May 18, 1804. He reformed and reorganized legislation at home by the formation of the civil code, the organization of public instruction, and the improvements he introduced in all the branches of public service; while he added to his military and political glory by a new succession of triumphs, resulting in the treaties of peace signed at Presburg (1805), Tilsit (1807), and Vienna (1809).

He had now reached the height of his glory; he had placed his brothers on the thrones of Holland, Westphalia, and Spain, and his brother-in-law on that of Naples; but his power was shaken by the resistance which he met with in the Spanish peninsula (1808-1813), and his prestige was ruined by his expedition to Russia in 1812. The European nations united against him, and inflicted upon him at Leipsic, October 16-19, 1813, a blow from which he never recovered.

The Restoration.—Napoleon was dethroned in April, 1814, exiled to the island of Elba, and the brother of Louis XVI. received from the conquerors the sceptre of France, now restricted to her old limits. The sudden return of Napoleon from Elba, however, overthrew this new power; and for one hundred days, from March 20 to June 28, 1815, he was again the sovereign of France; but the battle of Waterloo (June 18, 1815) destroyed his power forever, and the Bourbons once more ruled the kingdom.

Louis XVIII. granted a charter to his subjects, and died in 1824 in undisturbed possession of his throne. His brother and successor, Charles X., sought popularity by supporting the Greek insurrection against Turkey and conquering Algiers; but having attempted to suspend some of the most important guarantees secured by the charter, a formidable insurrection broke out, July 27, 1830, and he was obliged to abdicate.

House of Orleans.—After a few days' interval the head of the younger branch of the house of Bourbon, Louis Philippe, duke of Orleans, was appointed "king of the French" (August 9) by the chamber of deputies. The choice, being acceptable to the middle classes or *bourgeoisie*, was maintained; and notwithstanding some occasional outbursts of republicanism among the people, the July monarchy, as it was called, lasted for nearly eighteen years.

Revolution of 1848.—A political manifestation in favor of parliamentary reform brought on another revolution, February 24, 1848, and France became a republic, with a provisional government in which Lamartine played the most conspicuous part; but within a few months the majority of the constituent assembly, frightened by socialistic movements and a terrible civil struggle in the capital (June 23-26), became hostile to the new form of government. On December 10, 1848, Louis Napoleon Bonaparte, nephew of Napoleon I., was elected president, for a term of four years. On December 2, 1851, the president dissolved the assembly, assumed dictatorial powers, and appealed to the people to sanction his act by their votes. He was reelected president for a term of ten years; a new constitution was promulgated; and finally, on November 7, 1852, the senate proposed the reestablishment of the empire.

Second Empire.—The empire was proclaimed, December 2, 1852, and Louis Napoleon ascended the throne with the title of Napoleon III. The chief event of the early portion of this reign was the Crimean war, which largely increased the military prestige of the nation, as well as the popularity and strength of Napoleon's rule. The war with Austria (1859) left France in a position of even greater authority than before in European politics. In 1860 Savoy and Nice were ceded to France by Italy. The emperor's schemes for establishing the Hapsburg prince Maximilian on the throne of Mexico proved so ignominious a failure as to do much toward undermining the opinion of his power that had been held in Europe.

[492]

The course which Napoleon pursued during the Prusso-Austrian war in 1866 did not tend to restore confidence in him. In 1867 he aided in defending the power of the pope against the Garibaldians. In 1868 the growth of public opinion against the emperor was conspicuous; in 1869 much excitement was caused by the exposure of the confusion in financial affairs; and in 1870 popular disturbances, fomented by Rochefort, broke out on the acquittal of Pierre Bonaparte for the shooting of Victor Noir.

The demand for reforms was answered by a new constitution, which was finally confirmed by a *plebiscite* on May 8.

Franco-Prussian War.—In the spring of 1870 there were unmistakable manifestations of a hostile spirit on the part of the government against Prussia. The declaration of the candidature of the Hohenzollern prince Leopold for the throne of Spain furnished an immediate cause of war. The voluntary withdrawal of Prince Leopold followed the remonstrances of France, but the latter demanded also of the king of Prussia an explicit promise that no prince of Hohenzollern should ever be a candidate for the Spanish crown. This demand was refused, and war was declared by France, July 19.

On the 28th Napoleon went to Metz, where he personally took command of his forces; and on August 2 the king of Prussia, accompanied by Bismarck and Moltke, joined his army. On the latter day the French bombarded and took Saarbrück. On August 4 the German advance, under the crown prince, defeated the French at Weissenburg, and on the 6th totally defeated MacMahon at Worth.

On the 11th the three German armies under Steinmetz, Prince Frederick Charles, and the crown prince effected a junction on French territory, with headquarters at Saarbrück. By the 14th Steinmetz had advanced to near Metz, where the French army was concentrated under Bazaine, and on the afternoon of the same day won a victory at Courcelles; on the 16th Frederick Charles won a second battle at Mars-la-Tour; and on the 18th the combined forces under King William again defeated the French at Gravelotte.

Bazaine now drew within the fortifications, and the Germans, leaving a portion of their forces to invest the city, marched against MacMahon at Chalons. News reaching them of the advance of MacMahon to relieve Bazaine, they turned northward to intercept him. On the 30th they surprised a corps of General Faily near Beaumont, and fought a battle which resulted in the retreat of the French beyond the Meuse and their final withdrawal to Sedan.

The battle of Sedan was begun by the Germans September 1. After severe fighting they drove the French from all sides to that fortress, where, almost surrounded and without provisions or defenses, they were compelled to capitulate. The emperor surrendered to King William in person, September 2, and was carried a prisoner to Wilhelmshohe. In dead, wounded, and prisoners, the French thus lost in the last few days an army of nearly one hundred and fifty thousand men.

The Third Republic.—The news of Sedan created intense excitement at Paris, and the popular indignation against Napoleon and his party was without bounds. Gambetta proclaimed the republic; and a provisional government of national defense was at once formed, with General Trochu for president and Jules Favre for vice-president. The empress took refuge in England.

The German army entered Rheims on the 5th, and on the 15th they had closely approached Paris. A sortie by General Ducrot on the 19th was repulsed, and a few days later

the actual investment of the city was begun. The German headquarters were established at Versailles. A portion of the French government of national defense remained in the capital; another portion, in order to be in communication with the provinces, was established at Tours. Toul surrendered on the 23rd. Strasburg capitulated in the night of September 27-28. Soissons and Schlettstadt capitulated respectively on October 16 and 24, and on the 27th Metz also yielded, Bazaine surrendering one hundred and seventy-three thousand men.

In the meantime the situation of Paris had become hopeless; and on January 28 arrangements for its capitulation had been concluded and provision made for a general armistice. On February 17, 1871, Thiers was chosen chief executive of the republic. On the 26th the preliminary treaty of peace was signed at Versailles, by which France ceded to Germany the greater part of Alsace and Lorraine, and agreed to pay as war indemnity five milliards of francs. The definitive treaty with Germany had been signed at Frankfurt on the 10th of May.

In 1873 the Thiers administration was overthrown and replaced by one under Marshal MacMahon. In 1875 a Parliamentary Republic was established, and still remains under the guarantees of the constitution. In 1877 MacMahon was succeeded by Grevy. By this time the republic was fairly firmly established and withstood many attacks. A policy of colonial expansion was adopted, particularly in Egypt, but in spite of the dual control France and England established in 1879, France, in 1882, refused to help England in Egypt, and lost any control she had there.

The Triple Alliance of 1883 isolated France, but in 1890 she confronted the Triple Alliance with the Dual Alliance—between France and Russia—and made great attempts to establish colonial power.

The outstanding events of 1914, 1915 and 1916 were those connected with France's participation in the European war as the leading military power of the Entente Allies. (See further under [Great Wars of History](#).)

Books of Reference.—The chief histories are those of Henri Martin, Michelet, Dareste, Lavalee, Sismondi, Kitchin Lavisse, and Durny. These works cover the general history of France. See, in addition, Tocqueville's *The Ancient Regime*; Taine's *French Revolution*; Carlyle's *History of the French Revolution*; Fyffe's *History of Europe*; Hazlitt's *Life of Napoleon Bonaparte*.

[493]

COLONIES AND DEPENDENCIES

The colonies and dependencies of France (including Algeria and Tunis) have an area roughly estimated at about 4,000,000 square miles with a population of about 41,600,000. Algeria, however, is not regarded as a colony but as a part of France, and Tunis is attached to the Ministry of Foreign Affairs.

The area and population of the colonial domain of France at the beginning of the European war was as follows:

COLONIES AND YEAR OF ACQUISITION	AREA IN SQ. MI.	POPULATION
In Asia:		
India (1679)	196	277,000
Annam (1884)		
Cambodia (1862)		
Cochin-China (1861)	309,980	16,317,000
Tonking (1884)		
Laos (1892)		
Total Asia	310,176	16,594,000
In Africa:		
Algeria (1830-1902)	343,500	5,231,850
Sahara (—)	1,544,000	800,000
Tunis (1881)	45,779	1,500,000
Senegal (1637-1880)		915,000
Upper Senegal & Niger (1893)		4,415,000
Guinea (1843)	1,585,810	1,498,000
Ivory Coast (1843)		890,000
Dahomey (1893)		749,000
Mauritania (1893)		400,000
Congo (1884)	669,280	5,000,000
Reunion (1649)	970	201,000
Madagascar (1643-1896)	226,015	2,701,000
Mayotte (1843)	840	96,000
Somali Coast (1864)	5,790	180,000
Total Africa	4,421,934	24,576,850
In America:		
St. Pierre and Miquelon (1635)	96	6,000
Guadeloupe (1634)	688	182,000
Martinique (1635)	378	182,000
Guiana (1626)	34,000	27,000
Total America	35,222	397,000
In Oceania:		
New Caledonia (1854-1887)	7,200	55,800
Tahiti, etc. (1841-1881)	1,544	30,000
Total Oceania	8,744	85,000
Grand Total	4,776,126	41,653,650

SOVEREIGNS AND PRESIDENTS OF FRANCE

Giving, in order, the Royal Houses to which the French sovereigns belonged; Period of Rule in Chronological order; names of kings, emperors, regents and presidents; dates of birth and death of each; their genealogy or lineage; and other important personal facts.

THE MEROVINGIANS

420-428.—Pharamond (?-?); life obscure.

428-448.—Clodion (?-?); son of Pharamond; king of the Salic Franks.

448-457.—Merovaeus (411?-457); founder of the Merovingian Dynasty.

458-481.—Childeric (?-481); son of Merovaeus, king of the Franks.

481-511.—Clovis I. (465-511); son of Childeric; real founder of the Frankish monarchy. At his death his four sons divided the empire.

Childbert; Paris.

Clodomir; Orleans.

Thierry; Metz; and

Clotaire; Soissons.

558-561.—Clotaire I., sole ruler (497-561); fourth son of Clovis. Upon his death the kingdom was divided between four sons: viz.

Charibert, ruled at Paris.

Gontram, in Orleans and Burgundy.

Sigebert, at Metz and Chilperic, at Soissons; both assassinated by Fredegonde.

575-596.—Childebert II. (570-596); son of Sigebert and Princess Brunehaut; ruled under the regency of his mother; poisoned.

613-628.—Clotaire II. (584-628); son of Chilperic I.

628-638.—Dagobert I., the Great (602-638); son of Clotaire II.; divided the kingdom between his two sons:

Clovis II., Burgundy and Neustria.

Sigebert II., Austrasia.

670-673.—Childeric II. (649-673); son of Clovis II.; assassinated, with his queen and his son Dagobert, in the forest of Livri.

687-714.—Pepin II., of Heristal (?-714); ruled the whole kingdom of the Franks during the reigns of Dagobert II., Clovis III., Childebert III., and Dagobert III.

715-720.—Chilperic II. (?-720); deposed by Charles Martel, mayor of the palace in 717, restored in 720, but soon dies at Noyon.

720-737.—Thierry IV. (712-737); son of Dagobert III.; reigned under the influence of Charles Martel who took the title "duke of the Franks."

737-741.—Interregnum, till death of Charles Martel, 741.

742-752.—Childeric III. (?-755); son of Childeric II.; last of the Merovingians; made king by Pepin, 742; deposed by him, 752.

THE CARLOVINGIANS

751-768.—Pepin the Little (714-768); son of Charles Martel.

768-814.—Charlemagne, or Charles the Great (742-814); son of Pepin the Short; Charles crowned Emperor of the West, by Leo III., 800. Carloman reigned with him three years.

814-840.—Louis I., *le Debonnaire* (778-840); son of Charles the Great; emperor; dethroned, but restored.

843-877.—Charles the Bald (823-877); younger son of Louis le Debonnaire, king; emperor in 875; poisoned by Zedechias, a Jewish physician.

877-879.—Louis II. (846-879); son of Charles the Bald.

879-884.—Louis III. (863-882) and Carloman (?-?); sons of Louis II.; the former died 882, and Carloman reigned two years alone.

884-888.—Charles the Fat (839-888); son of Louis the German; usurps right of Charles the Simple.

888-898.—Count Eudes (?-898); Eudes, or Hugh, count of Paris.

898-922.—Charles the Simple (879-929); son of Louis the Stammerer; Charles III. (or IV.) was deposed, and died in prison in 929; he married Edgiva, daughter of Edward the Elder, of England, by whom he had a son, King Louis IV.

922-936.—Raoul (Rudolph of Burgundy) (?-?); Rudolph, or Raoul, duke of Burgundy; elected king, but never acknowledged by the southern provinces.

936-954.—Louis IV. (921-954); son of Charles the Simple; taken by his mother into England, died by fall from his horse.

954-986.—Lothaire (941-986); son of Louis IV.; ruled with his father from 952, succeeds him at fifteen years of age, protected by Hugh the Great; poisoned.

986-987.—Louis V. (966-987); son of Lothaire; poisoned (supposed by his queen, Blanche); last of race of Charlemagne.

HOUSE OF CAPET

987-996.—Hugh Capet, the Great (?-996); eldest son of Hugh the Abbot; usurps the rights of Charles of Lorraine, uncle of Louis IV. From him this race of kings is called Capetians.

996-1031.—Robert II. (971-1031); son of Hugh Capet; surnamed the Sage; died lamented.

1031-1060.—Henry I. (1011?-1060); son of Robert II.

1060-1108.—Philip I., the Fair (1052-1108); son of Henry I.; succeeded at eight years of age; ruled at fourteen.

1108-1137.—Louis VI. (le Gros) (1078-1137); son of Philip I.

1137-1180.—Louis VII. (1120-1180); son of Louis VI.; surnamed the Young; reigned with his father for some years.

1180-1223.—Philip II., Augustus (1165-1223); son of Louis VII.; succeeds at fifteen; crowned at Rheims in his father's lifetime.

1223-1226.—Louis VIII. (1187-1226); son of Philip Augustus.

1226-1270.—Louis IX., or St. Louis (1215-1270); son of Louis VIII.; succeeded at fifteen, under his mother as guardian and regent; died in camp before Tunis.

1270-1285.—Philip III., the Bold (1245-1285); son of Louis IX.

1285-1314.—Philip IV., the Fair (1268-1314); son of Philip III.; king in his seventeenth year.

[494]

1314-1316.—Louis X. (1239-1316); son of Philip IV.; surnamed *Hutin*, an old word for headstrong, or mutinous.
1316-1321.—Philip the Hardy (1294-1322) second son of Philip IV.
1322-1328.—Charles IV., the Fair (1294-1328); youngest son of Philip the Fair.

HOUSE OF VALOIS

1328-1350.—Philip VI., of Valois (1293-1350); son of Charles of Valois.
1350-1364.—John II., the Good (1319-1364); son of Philip VI.; died suddenly in the Savoy in London.
1364-1380.—Charles V., the Wise (1337-1380); son of John II.
1380-1422.—Charles VI. (1368-1422); son of Charles V.
1422-1461.—Charles the Victorious (1403-1461); son of Charles VI.
1461-1483.—Louis XI. (1423-1483); son of Charles VII.; able but cruel.
1483-1498.—Charles VIII. (1470-1498); son of Louis XI.; the Father of his People; great-grandson of Charles V.
1498-1515.—Louis XII. (1462-1515); a descendant of the younger son of Charles V.
1515-1547.—Francis I. (1494-1547); son of Charles, Count of Angoulême; called the Father of Letters; great-great-grandson of Charles V.
1547-1559.—Henry II. (1519-1559); son of Francis I.; died of accidental wound by comte de Montmorency at the tournament for nuptials of his sister with the duke of Savoy.
1559-1560.—Francis II. (1543-1560); eldest son of Henry II.; married Mary Stuart, Queen of Scots.
1560-1574.—Charles IX. (1550-1574); second son of Henry II.; Catherine de' Medici, his mother, regent.
1574-1589.—Henry III. (1551-1589); third son of Henry II.; elected king of Poland; last of the house of Valois; stabbed by Jacques Clement, a Dominican friar.

HOUSE OF BOURBON

1589-1610.—Henry IV., the Great (1553-1610); son of Antoine de Bourbon, King of Navarre; son-in-law of Henry II.; assassinated by Francis Ravallac.
1610-1643.—Louis XIII., the Just (1601-1643); son of Henry IV.
1643-1715.—Louis XIV., the Great (1638-1715); son of Louis XIII. and Anne of Austria.
1715-1774.—Louis XV. (1710-1774); great-grandson of Louis XIV.
1774-1793.—Louis XVI. (1754-1793); grandson of Louis XV.; ascended the throne in his twentieth year; married the archduchess Marie Antoinette, of Austria, May, 1770; dethroned, July, 1789; guillotined, January, 1793, and his queen, October following.
.....—Louis XVII., son of Louis XVI., never reigned; and died in prison, supposed by poison, June, 1795, aged ten years two months.

THE FIRST REPUBLIC

1792-1795.—National convention; first sat September 21, 1792; it consisted of seven hundred and fifty members.
1795-1799.—Directory nominated. November 1, 1795; the Directory (Lareveillère Lepaux, Letourneur, Rewbell, Barras, and Carnot) nominated November; abolished, and Bonaparte, Ducos, and Siéyès appointed an executive commission, November, 1799.

THE CONSULATE

1799-1804.—Napoleon Bonaparte (1769-1821); Cambacérès (1753-1824); and Lebrun (1739-1824), appointed consuls, December, 1799. Napoleon appointed consul for ten years, May, 1802; for life, August, 1802.

THE EMPIRE

(Established by the Senate, May 18, 1804.)
1804-1814.—Napoleon (Bonaparte) I. (1769-1821), decreed Emperor, May 18, 1804. He renounced the thrones of France and Italy, and accepted the Isle of Elba for his retreat, April 5, 1814. Again appeared in France, March 1, 1815. Was defeated at Waterloo, June 18, 1815. Abdicated in favor of his infant son, June 22, 1815. Banished to St. Helena, where he died, May 5, 1821.
.....—Napoleon II. (1811-1832); never reigned; he was Napoleon's son by his second wife, Maria Louisa of Austria, and later created Duke of Reichstadt, and King of Rome.

RESTORATION OF THE BOURBONS

1814-1824.—Louis XVIII. (1755-1824); brother of Louis XVI.; married Marie-Josephine-Louise of Savoy; entered Paris, and took possession of the throne, May, 1814; obliged to flee, March, 1815; returned July, same year; died without issue.
1824-1830.—Charles X. (1757-1836); younger brother of Louis XVIII.; married Marie-Thérèse of Savoy; deposed July, 1830. He resided in Great Britain till 1832, and died at Gratz, in Hungary.

HOUSE OF ORLEANS

1830-1848.—Louis Philippe (1773-1850); son of Louis-Philippe, duke of Orleans, called *Egalité*, descended from Philippe, duke of Orleans, son of Louis XIII.; married, 1809, Maria-Amelia, daughter of Ferdinand I., king of the Two Sicilies; raised to the throne as king of the French, 1830; abdicated, 1848; died in exile, in England.

THE SECOND REPUBLIC, 1848

February 22 to December 19, 1848.—The revolution commenced in a popular insurrection at Paris, February, 1848. The royal family escaped by flight to England; a provisional government was established, monarchy abolished, and France declared a republic.
1848-1852.—Charles Louis Napoleon (1808-1873); declared by the National Assembly President of the Republic of France; and proclaimed next day, December 20, 1848; elected for ten years, December, 1851.

THE SECOND EMPIRE

1852-1870.—Napoleon III. (1808-1873); nephew of Napoleon I.; formerly president of the French Republic as Charles Louis Napoleon; elected Emperor, November, 1852; proclaimed, December, 1852; surrendered himself a prisoner to the King of Prussia at Sedan, September, 1870; deposed at Paris, September 4; died at Chislehurst, England, and buried there.

THE THIRD REPUBLIC

1870-1871.—Committee of Public Defense.
1871-1873.—I. Louis Adolphe Thiers (1797-1877); appointed President of the French Republic by the National Assembly, 1871; resigned, 1873.
1873-1879.—II. Marshal M. E. Patrice Maurice MacMahon (1808-1893); elected president, 1873.
1879-1887.—III. François Paul Jules Grévy (1807-1891); elected president, January, 1879; reelected, 1885; resigned, December, 1887.
1887-1894.—IV. Marie-François Sadi-Carnot (1837-1894); elected president, December, 1887; assassinated, June, 1894.
1895-1899.—V. Jean Pierre Paul Casimir-Perier (1847-1907); elected president, June, 1894; resigned, January, 1895.
1899-1906.—VI. François Felix Faure (1841-1899); elected president, January, 1895; died, February, 1899.
1906-1913.—VII. Emile François Loubet (1838- —); elected president, February, 1899.
1913- —.—VIII. Raymond Poincaré (1860- —); elected president, 1906.

GERMAN EMPIRE.

GERMANY (from Lat. Germania) is the English name of the country which the natives call Deutschland, and the French L'Allemagne; while internationally it is known as the German Empire (Das Deutsches Reich), especially since 1871.

The German Empire is composed of a federation of twenty-five states, with one common imperial province, the names of which, with their areas and populations, are given on a subsequent page. Heligoland was ceded by Britain to Germany in 1890.

Divisions of the Empire.—The political divisions or states of the German Empire, together with their areas and population at the last census, are given in the subjoined table:

STATES	AREA IN SQ. MILES	POPULATION AT LAST CENSUS
KINGDOMS		
1. Prussia	134,616	40,163,333
2. Bavaria	29,292	6,876,497
3. Saxony	5,789	4,802,485
4. Württemberg	7,534	2,435,611
GRAND-DUCHIES		
5. Baden	5,823	2,141,832
6. Hesse	2,966	1,282,219
7. Mecklenburg-Schwerin	5,068	639,879
8. Saxe-Weimar	1,397	417,166
9. Mecklenburg-Strelitz	1,131	106,347
10. Oldenburg	2,482	482,430
DUCHIES		
11. Brunswick	1,418	494,387
12. Saxe-Meiningen	953	278,792
13. Saxe-Altenburg	511	216,313
14. Saxe-Coburg-Gotha	764	257,208
15. Anhalt	888	331,047
PRINCIPALITIES		
16. Schwarzburg-Sondershausen	333	89,984
17. Schwarzburg-Rudolstadt	363	100,712
18. Waldeck-Pyrmont	433	61,723
19. Reuss, Junior Branch	122	152,765
20. Reuss, Elder Branch	319	72,616
21. Schaumburg-Lippe	131	46,650
22. Lippe-Detmold	469	150,749
FREE-TOWNS		
23. Lübeck	115	116,533
24. Bremen	99	298,736
25. Hamburg	160	1,015,707
REICHSLAND		
26. Alsace-Lorraine	5,604	1,871,702
TOTAL	208,780	64,903,423

Location and Extent.—This combination of Germanic States extends now from the Alps and the Bohemian mountains on the south to the Baltic on the north; and from the borders of France, Belgium, and Holland, on the west, to those of Russia on the east; the greatest distance across it from east to west and from north to south being about five hundred miles. The coast-line measures about nine hundred and fifty miles. The most remarkable features of the coast are the expansions of the river mouths in the Baltic; the lagoons called the Kurische Haff, Frische Haff, and Stettiner Haff; the estuaries of the Elbe and Weser; and the rounded inlets of Jade Bay and the Ems mouth, on the North Sea.

The mountains on the south and the sea on the north give natural frontiers for the most part, but west and east artificial boundaries are marked out, which correspond only in a few parts with the ethnographic limits of Germanic and Romanic peoples on the one side, and Germanic and Slavonic on the other.

Surface Characteristics.—The surface of the empire falls naturally into three divisions: the lowlands in the north, the table-land of the south, and the basin of the Middle Rhine.

The LOWLANDS are part of the Great European plain, and are largely occupied with sandy tracts, with here and there deposits of peat. They are well watered, and in certain

districts fertile, while the monotony of their level is broken by two lines of hills whose heights vary from five hundred to eight hundred feet, and which may be said to extend roughly from the Mecklenberg to the Vistula, and from the moors of Lüneburg in Hanover to Silesia.

TABLE-LANDS.—In the southern plateau of Bavaria, the Fichtelgebirge is clearly the pivot round which the other mountain systems revolve. Thus, to its northwest there rises the Thuringian Forest and the Harz Mountains, and to the northeast the Erzgebirge, the Riesengebirge, and the Sudetic Mountains. Southwest radiate the Franconian and Swabian Juras and the Schwarzwald or Black Forest heights. Westward stretch the Taunus Mountains, while beyond these, and divided only by the Rhine, are the ridges of the Vosges. In the extreme southeast of Bavaria the Tyrolean or Noric Alps follow the northern bank of the Inn, and from this range rises the Zugspitze (nine thousand seven hundred feet), which is the highest summit in the whole empire. Between Basle and Mannheim, the Middle Rhine is splendidly sheltered by the Vosges and the Black Forest, which guard its course to left and right. (See further under [the Rhine](#).)

Rivers.—By far the greater part of the country is drained northwards to the Baltic and the North Sea by its navigable highways, the Vistula, Oder, Elbe, Weser, and Rhine. The southeastern corner alone belongs to the upper basin of the Danube, flowing towards the Black Sea. (See [Danube](#).)

The Vistula and the Oder are Baltic waterways, but more important from a commercial point of view are the Elbe, with its chief affluents the Mulde, Havel, and the Saale, and the great Rhine, which both empty into the North Sea, along with the smaller Ems and the Weser, which latter is the only purely German stream. This fact is worth noticing, as the sources of the Oder, Elbe, and Vistula must be traced in Austria, and sections only of the Rhine and Danube traverse the empire.

Climate.—Broadly speaking, the general contours are not favorable to climate; for the level exposed flats, north and east offer no resistance to the passage in winter of the dry, piercing winds from Siberia and the Arctic, while to the south and west the mountainous tracts form effectual barriers against the moist Anti-trades. Extremes of temperature increase eastward in proportion to the distance from the Atlantic. In the warmer latitudes of the south, the elevations counteract the natural tendency to grow hotter, so that Ratisbon has the same temperature as Hamburg. In the Upper Harz the rainfall reaches sixty-six inches, but the mean annual precipitation is only about twenty inches. On the whole the climate may briefly be described as continental. It should be noted that the general slope of the country is from the southeast to northwest, that is, away from the sun, and also that the Rhine valley is so delightfully sheltered that it reaps the full benefit of its warm latitude, and thus enjoys excellent weather conditions.

Internal Communications.—The commercial prosperity of the empire may in some measure be traced to the excellence of the railways, the majority of which are managed by the state. Berlin is splendidly provided with communications by rail, and it may with truth be said that it is within twenty-four hours' reach of almost every point in the empire. Further, the trunk systems have many of them an international importance; for the great Oriental express from Paris to Constantinople traverses the line from Strassburg to Vienna through Munich, while Paris is linked with the remote Siberia by means of the lines from Cologne to Berlin and from Berlin to Warsaw. Berlin is also directly connected with Breslau, Hamburg, Danzig, and Königsberg. From Frankfurt-on-Main, which is the trading center between north and south Germany, lines radiate to Cologne, Ostend, Antwerp, Flushing, Rotterdam, and Berlin northward, and in a southerly direction to Strassburg, Basle, Munich, and Vienna, while east and west it is joined up with Dresden, Breslau and Metz.

Domestic commerce has been further facilitated by an elaborate network of canals. By far the most important of these is the Kaiser-Wilhelm Canal (sixty-one miles long), which unites the North Sea and the Baltic. The Dortmund-Ems (one hundred and fifty miles long) and the Elbe-Trave (forty-three miles long) have only recently been completed. Since the building of the Rhine and Rhone canal through Mulhausen, it has been possible for a barge to pass from Rotterdam to Marseilles without unloading.

The union of the Danube and Rhine is effected by the Ludwigs canal, and that of the Seine and Rhine by the Rhine and Marne Canal. A number of canals, including the Teltow (opened in 1906), serve to connect the Spree, and therefore Berlin, with the Oder and the Elbe, the Oder and Vistula being joined by what is known as the Bromberger Canal.

Productions and Industries.—Following this distribution of climate, the forests which still cover a great part of Germany, and form a feature of its landscapes, are chiefly of the hardier pines in the north and east, and of deciduous trees in the south and west. About sixty-one per cent of the surface of the empire is suitable for cultivation, the forests occupy twenty-five per cent, and the uncultivable moors and mountain tracts only eight per cent.

AGRICULTURE.—There are sixty-five million acres of cultivated soil, and over twenty-one million acres of grass and pasture lands. Rye and oats are the chief grains, the former flourishing in the north despite the drawbacks of poor climate and soil. Almost as much land is devoted to potatoes as to rye; for the sandy plains of western Prussia and Pomerania seem to suit this crop equally well. Flax, hemp, and the beet—the last for the sugar industry—are grown in Saxony and in the Baltic provinces, especially in Hanover. The vine covers the dry, sunny slopes of the Vosges, and is also extensively grown along the Rhine. The rich alluvial soils of the sheltered valleys in the southwest are also favorable to the production of tobacco and hops, which are accordingly cultivated with success in Baden, Hesse, and Bavaria.

MINERALS.—Germany is rich in minerals, especially in coal and iron. The great industrial activity of the country very largely depends on the fact that these two minerals are found together, and moreover in proximity to navigable water-courses. In the Rhine basin the coal beds follow the courses of the Ruhr, Saar, and Ill, and excellent iron ore is found in both the Ruhr and Saar coal fields. Coal is also found in Silesia, while the Saxon mines in the Elbe basin yield chiefly the lignite variety.

Almost one half of the zinc produced in the world is mined in Germany, the chief centers being at Aachen (Aix-la-Chapelle), in Rhenish Prussia, and Königshütte, on the Oder coal fields, while nearly half the silver of Europe is produced from the silver, lead, and copper ores found in the Harz Mountains, Silesia, and the mines of Freiberg (Saxony). Most of the German copper comes from the Harz and Erzgebirge Mountains. Large quantities of rock and potassium salts are produced in Hanover, Saxony, Thuringia, and Anhalt. The mineral springs of Baden-Baden, Wiesbaden, Ems, etc., are world famous.

MANUFACTURES.—The industrial development of the empire proceeded at an almost unprecedented rate throughout the last century. The following catalogue will give some idea of the local distribution of the various industries: Iron goods and machinery are manufactured in Prussia, Saxony, Alsace-Lorraine, and Bavaria; steel goods in Rhenish Prussia. Woolens and worsteds are produced in Saxony and the Rhine province; cotton goods in Prussia, Saxony, Baden, Bavaria and Alsace-Lorraine; silk at Elberfeld (Rhenish Prussia) and in Baden; and linen goods in Westphalia, Silesia, and Saxony. The Rhine and Moselle districts are important centers for light wares; Bavaria is famous for its toys, like Nuremberg for its watches and pencils, and Meissen, Dresden, and Berlin, etc., for their porcelain. Finally there are manufactories up and down the country of chemicals, beer, sugar, tobacco, leather (in Hesse-Darmstadt), and paper.

People and Language.—The German-speaking inhabitants of the empire are about ninety-three per cent of the total population; but a considerable proportion of these are not of the Germanic stock. Among the peoples retaining their own language (about four and one-fourth millions) are Poles (exclusively in eastern and northeastern Prussia), Wends (in Silesia, Brandenburg, and Saxony), Czechs (in Silesia), Lithuanians (in eastern Prussia), Danes (in Sleswick), French (in Rhenish Prussia, Alsace and Lorraine) and Walloons (about Aix-la-Chapelle in Rhenish Prussia). The Germans are divided into High and Low Germans; the language of the former is the cultivated language of all the German states; that of the latter, known as Platt-Deutsch, is spoken in the north and northwest. (See further, [Teutonic peoples](#), in [Book of Races](#).)

Education and General Culture.—Germany stands conspicuously foremost in the field of state education, and so far is without rival for the admirable systemization and for the variety and thoroughness of the technical trainings provided. It is established by law that every child from the age of six to fourteen must attend one of the elementary schools ("Volksschulen"), or some other recognized scholastic institution.

There are also a number of fully-equipped Technical High Schools, with the power of granting degrees, and some one thousand four hundred secondary schools (gymnasias, realschulen, oberrealschulen, etc.); numerous special schools of technology, agriculture, forestry, mining, commerce, military science, etc. There are twenty-one universities in the empire: at Königsberg, Berlin, Breslau, Greifswald (in Pomerania, southeast of Stralsund), Kiel, Halle, Göttingen, Münster, Bonn, Marburg, Rostock, Giessen, Jena, Leipzig, Heidelberg, Freiburg, Strassburg, Tübingen, Munich, Erlangen, and Würzburg. All of these have the four faculties of theology, law, medicine, and philosophy, and many are some of the oldest foundations of their kind in Europe.

Outside the country the best known are probably Berlin, Munich, Leipzig, and Bonn, which also have the largest numbers of undergraduates, and Göttingen, Strassburg, Heidelberg, and Jena. Four teach theology according to the Roman Catholic doctrine, while in four others the theological faculty is open to both Protestants and Roman Catholics; the remaining universities are Protestant.

Culture is further stimulated in the large towns by public libraries, learned societies, museums, art galleries, and observatories, whilst musical knowledge and appreciation diffuses itself from the highly-reputed conservatories at Leipzig, Dresden, Munich, Frankfurt, and Berlin.

Religion.—The Constitution provides for entire liberty of conscience and for complete social equality among all religious confessions. The relation between Church and State varies in different parts of the empire. The Jesuit order is interdicted in all parts of Germany, and all convents and religious orders have been suppressed.

Protestantism predominates in the north and middle, and Roman Catholicism in the southeast and west, although very few states exhibit exclusively either form of faith. The Protestants belong chiefly either to the Lutheran confession, which prevails in Saxony, Thuringia, Hanover, and Bavaria east of the Rhine, or to the Reformed or Calvinistic Church, which prevails in Hesse, Anhalt, and the Palatinate. A union between these two churches has taken place in Prussia. There are five Roman Catholic archbishoprics and fourteen Roman Catholic suffragan bishoprics and six bishoprics immediately subject to Rome.

Defense.—Military service in Germany is compulsory and universal, with the usual exemptions.

ARMY.—By the regulations in force, every German who is capable of bearing arms must be in the standing army for seven years (generally his twentieth to his twenty-seventh year). Two years must be spent in active service and the remainder in the army of reserve. He then spends five years in the first class of the Landwehr, after which he belongs to the second class till his thirty-ninth year. Besides this, every German, from seventeen to twenty-one and from thirty-nine to forty-five is a member of the Landsturm, a force only to be called out in the last necessity. Those who pass certain examinations require to serve only one year with the colors, and are known as "volunteers."

The wide stretches of unprotected borderlands have obliged the Germans to consider very carefully the question of frontier defenses. Thus the empire is at present divided into ten "fortress districts," in which the following are the chief fortified cities: Danzig, Königsberg Posen, Neisse, Spandau, Magdeburg, Küstrin, Mainz, Ulm, Metz, Cologne, Koblenz, Kiel, and Strassburg.

NAVY.—Rapid progress has been made in recent years in the formation of a German navy. Prussia took the initiative in gathering together a fleet, but by 1851 it had grown only to fifty-one vessels, thirty-six of which were small gunboats. However, an advance was made in 1867, when every vessel in the navy flew the national colors (black, white, and red), and during the last twenty-five years the measure of progress has been phenomenal. (See further, [Armies and Navies of the World](#).)

Kiel is the chief naval station on the Baltic, and Wilhelmshaven on the North Sea, these two bases being connected by the Kaiser Wilhelm Canal across the Schleswig-Holstein peninsula. Other naval establishments are Danzig, Cuxhaven, and Sonderburg.

Chief Cities.—German cities and towns are officially distinguished as large cities (with one hundred thousand inhabitants and upwards); medium cities (twenty thousand to one hundred thousand inhabitants); small cities (five thousand to twenty thousand inhabitants); and country towns (two thousand to five thousand inhabitants). According to the latest census, the population of cities over fifty thousand was as follows:

CITIES	STATE	LATEST POPULATION
Berlin	Prussia	2,070,695
Hamburg	Hamburg	932,166
Munich	Bavaria	595,053
Leipzig	Saxony	587,635
Dresden	Saxony, K.	546,882
Cologne	Prussia	516,167
Breslau	Prussia	511,891
Frankfurt-on-Main	Prussia	414,598

Kaiserslautern	Bavaria	53,803
Brandenburg-on-Havel	Prussia	53,595
Mülheim-on-Rhein	Prussia	53,428

CITIES OF PRUSSIA

Berlin, capital both of the Empire and of the Kingdom of Prussia, is by far the most important center of population in Germany. It lies on both sides of the Spree, and by the Spandau and Tetlow canals to the Havel it is linked with the systems of the Oder and the Elbe. It is eighty-four miles from Stettin and one hundred and eighty miles from Hamburg, and is the center of the great Prussian state railway system. (See [Internal Communications](#).)

The city itself is served by an Outer Circle (*Ringbahn*) and by the *Stadtbahn*, running east and west through the city. There are electric surface lines, an overhead, or elevated, electric railway, and a shallow underground railway.

On an island in the center of the city stands the Royal Palace, a foursquare pile built at different times between 1451 and the present day. It stands in the Schloss-platz, and is one of the few old buildings in Berlin, dating from the sixteenth century. It contains over six hundred rooms, including the great White Salon, and halls of the Black and Red Eagle orders.

UNTER DEN LINDEN.—From this island stretches westward the noblest street in Berlin, Unter den Linden ("under the lime trees"). The triumphal arch at the west end of the street, the Brandenburg Gate (a copy, made in 1789-93, of the Propylæa at Athens), forms the entrance to the large park (six hundred and thirty acres) of the Thiergarten. In the east is the magnificent avenue of the Siegesallee or Avenue of Victory, adorned with thirty-two marble groups of the rulers of Prussia and Brandenburg. In the Unter den Linden are many splendid public edifices, among which are the Armory, the Opera House, the Royal Library, the new Town Hall, the University, the palaces of William I. and of Frederick III., and the monument to Frederick the Great by Rauch.

In the northeast of the Thiergarten stands the most imposing building of the city, the Imperial Diet or Parliament, erected from designs by Wallot, in 1884-94, at a cost of over five million dollars.

BUSINESS QUARTER.—The Friedrichs-Stadt is the business center of Berlin, and the streets in this section are interesting. The banking street, Behrenstrasse, and the Wilhelmstrasse, the official quarter, where is the imperial chancellor's palace, lie to the south. Fine shops and restaurants line the Friedrichstrasse, while Viktoriastrasse is one of the many thoroughfares of the fashionable district, southwest. Königstrasse and Kaiser Wilhelmstrasse are the business streets of the city proper.

The Tempelhofn Feld, also to the south, is the parade and review ground of the Berlin garrison.

The most striking bridge is the Schloss-brücke, or Palace bridge, by F. Schinkel, with colossal marble figures. It leads from Unter den Linden, to the Lustgarten, a park in which stands an equestrian statue of Frederick William III.

DRAMATIC THEATER, GENSDARMEN MARKT

The Opera Platz contains statues of five generals, by Rauch, and is bounded by the Palace, University, Opera House, and St. Hedwig's Church, an imitation of the Roman Pantheon. The Schauspielhaus, the leading dramatic theater, is in Gensdarmen Markt. The Schauspielhaus, with the church on each side, is considered one of the finest architectural groups in Berlin.

STATUES AND ART MUSEUMS, ETC.—No city has so many statues and monuments to the national heroes, kingly or military, or to those famed in literature, science and art.

GERMAN CATHEDRAL, GENSDARMEN MARKT

The Royal Library, once in the palace, is now in the new building, built in 1909 on Unter den Linden; it contains nearly five million printed books. The University Library is housed in the same building. There is a large public library and twenty-eight municipal libraries.

The Royal Museum, in the Lustgarten, north of the Schlossplatz, is divided into the Old and the New Museums, containing the treasures of classical and mediæval sculpture, the Egyptian collection, etc. The Old Museum is the finest building in the city, with a grand Ionic portico, adorned with colossal bronze groups, and richly frescoed halls. It has vast collections of antiquities; the halls of Greek, Roman, mediæval, and modern sculptures; and the Hall of the Heroes.

The New Museum is entered from the Old, and contains Kaulbach's famous mural paintings, the Egyptian museum, an immense collection of casts, twelve cabinets of Northern antiquities four rooms of objects of art, and five hundred thousand engravings. It has a renaissance façade to the east. Opposite is the new Corinthian temple of the National Gallery, which contains a magnificent and world-renowned collection of ancient and modern paintings.

BERLIN SUBURBS.—In recent years there has been a remarkable expansion of the suburban districts of Berlin, residential sites have sprung up in the pine woods and by the lakes of the Havel to the northwest, and Spandau, Charlottenburg, and Potsdam may almost be regarded as suburbs.

[501]

THE BOURSE, OR EXCHANGE, BERLIN

POTSDAM, "the Versailles of Prussia," with its palaces and parks, is sixteen miles from Berlin, among wooded hills and the lakelike expanses of the Havel. Here is the Sans Souci Palace, built by Frederick the Great, and full of reminiscences of him. Near by are the Picture-Gallery, the Orangery (adorned with fine statuary), and the Sicilian Garden. The New Palace has two hundred richly adorned rooms, with fine paintings, and a noteworthy Marble Saloon.

The Marble Palace is north of Potsdam, and has many paintings. Babelsberg is a new Gothic palace, with rich art-treasures. The Royal Palace (1660) is full of relics of the Great Frederick. The Garrison Church contains his tomb and military trophies. The Church of Peace is a noble Ionic basilica, with masterpieces of sculpture. The famous Sans Souci fountains play on summer Sunday afternoons.

INDUSTRIES OF BERLIN.—In its industries Berlin is almost as varied as London, but machinery, especially locomotive and electrical, woolens, dyeing, furniture and metal work are the chief. It is beginning to rival Leipzig in book production, and its breweries are large. Besides being the center of the great trade in corn and other cereals of Eastern Europe, its great banks exercise increasing international influence.

A CENTER OF EDUCATION AND CULTURE.—The famous Friedrich Wilhelm University, founded in 1810, now the largest in numbers in Germany, the splendid technical institution at Charlottenburg, and its numerous schools of all ranks, make Berlin one of the greatest intellectual and educational centers of the world. As the seat of the Imperial Court, and of the Imperial Parliament and administration, it is also the social center of the empire, and its modern wealth and luxury have made it a growing rival to Paris as a city of pleasure.

Since 1878 the city has been practically rebuilt; the sudden growth of population has resulted in much overcrowding and crushingly high rentals. Once deplorable, the sanitation, water supply, and public hygiene are now of the highest standard, and German scientific thoroughness has made it the most highly organized and best administered city in the world.

ST. HEDWIG'S CHURCH, BERLIN

THE NEW HOHENZOLLERN CATHEDRAL, BERLIN

[502]

Other Prussian Cities.—Breslau on the Oder, the capital of the mining districts of Silesia, has grown to be the second town of the kingdom, carrying on very extensive manufactures and a great trade by river and railway. It is also the emporium of the flax-growing district of Silesia. About the Rhenish coal fields, which yield half the supply of the kingdom, stand the manufacturing and trading towns of Cologne, Aachen or Aix, Barmen, Düsseldorf, Elberfeld, Crefeld and Dortmund, spinning cotton, wool, linen, and silk; and the famous iron and steel works of Solingen and Essen, where Krupp's steel guns are made.

Magdeburg, on the Elbe, and Cassel, on the Fulda, are the great manufacturing and trading towns of central Prussia. Much of the internal trade of Germany is still carried on at great annual fairs, and in this respect the two Frankforts (on the Main to the west, and on the Oder to the east) hold the most important place. Hanover, on the Leine, is the point of exchange of the mineral products of the Harz for the goods which come in by Bremen on the Weser, and has important manufactures of its own.

The chief ports belonging to Prussia are the Baltic ones—Königsberg, Danzig, Stettin, Stralsund, Memel, Rostock, Wismar, and Kiel, on the Baltic; Altona, on the Elbe, next Hamburg. Posen, on the Warthe, was the ancient capital of Poland, and is the most important fortress towards the Russian frontier. Wiesbaden is the most important and the oldest of the watering-places which have grown up round the mineral springs of Nassau. Eisleben, where Luther was born, and Erfurt, where he resided, both in Prussian Saxony, are notable points in connection with the history of the Reformation in Germany.

THE NEW PALACE AT POTSDAM

Erected by Frederick the Great, at a cost of \$2,250,000. The principal rooms are the Shell Saloon, the rooms of Frederick the Great, the Marble (concert) room, and ball room.

Dresden and Other Cities of Saxony.—Dresden, its capital, finely placed on both banks of the Elbe, famous for its art treasures, has also many varied manufactures. Its architecture and its art collections have given it the name of "the German Florence."

[503]

The old bridge, Augustusbrücke (Augustus Bridge), may be taken as the center of the most interesting part of Dresden. Immediately to the east of the Augustusbrücke, on the Altstadt side, stretches the beautiful Brühl Terrace, whence are fine views over the river. There are high-class concerts in the Belvedere on the Brühl Terrace. Near the flight of steps to the terrace, facing the Royal Palace and Catholic Church, is the Rathaus (Town Hall) with an equestrian statue of King Albert in front.

THE ZWINGER, DRESDEN, CONTAINING THE WORLD-RENOWNED GALLERY OF

The Royal Palace, just south of the Augustusbrücke, will be discovered by its lofty tower, three hundred and thirty-one feet high. The Zwinger, to the west of the Schloss, is a range of buildings of seven pavilions, with the Museum at one corner. In the Museum are the picture gallery, with collections of engravings and drawings, and mineralogical collections, with scientific instruments.

The Picture Gallery is of world renown, containing more than two thousand four hundred paintings, mostly by Italian and Flemish masters. The gem of the collection is Raphael's "Sistine Madonna;" other masterpieces being Titian's "Tribute Money," and Correggio's "Magdalene" and "La Notte."

The Green Vault in the Royal Palace contains an unrivaled collection of precious stones, articles wrought in gold, silver, and ivory, etc. The new Hoftheater is one of the finest theaters in Europe. Of the churches the most noted are the Frauenkirche, with its lofty dome (three hundred and ten feet high).

The so-called "Dresden china" is made for the most part at Meissen, fifteen miles from Dresden. **Leipzig** is not only the seat of a famous university and the great book market of Germany, but has one of the largest annual fairs in the world, to which merchants come from all parts of the earth, even from America and China.

Chemnitz and Zwickau, beside the Saxon coal field, are the great woolen and machine-manufacturing towns of the kingdom. Freiberg is famed for its school of mines. **Cities of Bavaria.**—Munich (München), the capital, stands in the midst of a bare elevated plain on the left bank of the Isar, one thousand seven hundred feet above sea-level, but has risen to importance as the central point of the great grain-growing plateau of southern Bavaria. It is the great corn depot of the country, and the place of manufacture of its favorite beer. In recent times it has become celebrated as a seat of the fine arts and for its splendid buildings.

Augsburg, on the Lech, northwest of Munich, where the Protestants presented the Confession of Faith to Charles V., is a chief center of Bavarian trade and exchange. Würzburg, on the Main, is the old capital of Franconia, the district which was peopled by colonies of Franks in the sixth century. Speyer or Spire and the fortress of Landau are also important places in the palatinate.

Cities of Württemberg.—Stuttgart, where Hegel was born, and where Schiller spent his youth, is the capital, and stands next to Leipzig and Berlin in the printing arts and book trade. The fortress of Ulm, on the Danube, where it leaves Württemberg, has a large transit trade. Heilbronn is another important trading place. Tübingen is the university town.

[504]

THE PINAKOTHEK, MUNICH, FAMOUS GERMAN MUSEUM OF FINE ARTS

The little territory belonging to the house of Hohenzollern, which runs into Württemberg on the south, fell by inheritance to the king of Prussia in 1849.

Cities of Baden, and Elsass-Lothringen (Alsace-Lorraine).—Carlsruhe, the capital, and Mannheim, at the confluence of the Neckar and Rhine, are its largest towns. Heidelberg (north) and Freiburg (south) are the seats of universities. Baden-Baden in the center, the famous watering-place, gives its name to the Duchy.

The fortress of Strassburg, on the Rhine, in central Elsass, anciently a free imperial city of Germany, is the chief place in the Reichsland and its university town, noted also for its manufacture of leather-work and of beer. The cotton, wool and silk factories and machine works of the province center at Mülhausen in southern Elsass.

The fortresses of Metz and Diedenhofen or Thionville, memorable in the war of 1871, are the chief places in Lothringen.

Cities of the Smaller States.—Hamburg, Bremen and Lübeck, the remaining free Hanse^[6] towns, are republics, each governed by a senate and house of burgesses. Each of them has a small territory besides that occupied by the city.

[6] The Hansa or League of the North German towns was the first trade union of Europe, and dates from the thirteenth century. At one time it included eighty-five towns, and had several foreign factories.

They are the great gates of the external commerce of Germany, and from this have also become important centers for the preparation of foreign products, and of the necessities of trading (tobacco, sugar-refining, cotton-spinning, shipbuilding). Besides the traffic brought to Hamburg and Bremen by their rivers, all the railways of the northwest converge toward them.

GERMAN COLONIES.—At the commencement of the war these had a total area of 1,134,239 square miles, with a population of about 14,890,000, of whom 24,170 (including garrison and police) were whites. Of these whites about 18,500 were settled Germans.

The following is a list of the principal colonies and regions under the protection or influence of Germany, with approximate estimates of area and population:

COLONIES AND DEPENDENCIES	DATE OF ACQUISITION	METHOD OF GOVERNMENT	ESTIMATED AREA SQ. MILES	ESTIMATED POPULATION
IN AFRICA				
Togoland	1884	Imperial Governor	33,700	1,000,000
Kamerun	1884	Imperial Governor	191,130	3,000,000
German South West Africa	1884-1890	Imperial Governor	322,450	120,000
German East Africa	1885-1890	Imperial Governor	384,180	10,000,000
Total African Possessions	1884-1890		931,460	14,120,000
IN ASIA				
Kiauchau Bay	1897	Imperial Governor	200	33,000
IN THE PACIFIC				
<i>German New Guinea</i>				
Kaiser Wilhelm's Land	1885-1886	Imperial Governor	70,000	300,000
Bismarck Archipelago	1885		20,000	
Caroline Islands	1899		...	
Palau or Pelew Islands	1899		560	
Marianne Islands	1899		250	
Solomon Islands	1886		4,200	
Marshall Islands, etc.	1886	150	56,000	
<i>Samoan Islands</i>				
Savii	1899	Imperial Governor	660	37,000
Upolu	1899		340	
Total Pacific Possessions	1884-1899		96,160	393,000

[505]

PARLIAMENT BUILDINGS, BERLIN

HISTORY OF GERMANY

The earliest information we have of the Germans, the peoples and the tribes who dwelt among the dense forests that stretched from the Rhine to the Vistula and from the Danube to the Baltic Sea, comes to us from the Romans.

First Contact with Romans.—The first tribes of Germanic race to come into collision with the arms of Rome were the Cimabri and Teutones, who in 113 B. C. had invaded Styria, and there met with defeat from the troops of the consul Papirius. When in 58 B. C. Cæsar began his campaigns in Gaul, he found several hordes of Germans, mostly Marcomanni and Suevi, settled between the Rhine and the Vosges, and even on the western side of these hills.

Appealed to by the Gauls of those regions to free them from their German oppressors, Cæsar inflicted a crushing defeat upon their ambitious chieftain, Ariovistus, and chased him and his followers across the Rhine. In the period 166-74 Aurelius was engaged in beating back a formidable incursion of the Marcomanni and Quadi into Roman territory. From the third century we no longer read of single tribes, but of great confederations of tribes, as the Goths, Alemanni, Franks, Frisians, Saxons, Thuringians, and others. Of the history of Germany itself we learn little more that is authentic until we come down to the times of the Franks, by whom the kingdoms of France and Germany were subsequently formed.

Henceforward, till the time of Charlemagne, Germany was occupied by a number of chieftains, who were perpetually at war with one another, except when invasions from

without forced them into transitory alliance.

Charlemagne, or Charles the Great, the Frankish king, was crowned emperor of Rome by the pope in 800, and after his death his empire was partitioned among his four sons, and the result of the family struggles which followed was the separation of Germany from Gaul and of both from Burgundy and Italy by the Treaty of Verdun in 843. (See [history of France](#); also [Empire of Charlemagne](#).)

A separate kingdom of Germany was then formed under Lewis the German. A temporary reunion of the dominions of Charlemagne—with the exception of Burgundy—was effected under Charles the Fat in 884, but he was deposed in 887 and the final separation into the East and West Frankish kingdoms was accomplished.

The inroads of the Norsemen were checked in 891 by Arnulf, but they were followed by the savage attacks of the Hungarians during the reign of Louis the Child, with whom ended the race of Charlemagne in 911.

Under Feudal System.—The royal power had now almost vanished, and the system of granting fiefs had resulted in the formation of a class of powerful local rulers—the dukes of the great groups or confederations of tribes. The maintenance of central authority at all was probably due only to external danger from Slavs, Norsemen, and Magyars, and even this could not prevent constant warfare between the great feudal lords. Conrad of Franconia, elected by the leading nobles, was unable to enforce his authority, and was, at his own suggestion, succeeded by his great enemy, Henry, Duke of Saxony.

THE BRANDENBURG GATE

at the western terminus of the Unter den Linden, was erected 1789, at a cost of three hundred and seventy thousand dollars, after the Propylæa of Athens, and is regarded as the finest archway in Europe next to the Arc de Triomphe at Paris. The Quadriga or four-horse car of Victory, by Schadow, was taken to Paris by the French in 1806, and returned 1814.

Henry I. Establishes Order.—A born leader of men, statesman and general, Henry I. (919-936) introduced a new civil and military organization. He created the burgher class by the foundation of towns, compelling every tenth freeman to labor on buildings, and these towns he made the centers for judicial administration, ceremonies and festivals, markets, and trade. He broke the power of the Magyars, subdued Danes and Slavs, and before his death private war had ceased.

Otto the Great Revives the Holy Roman Empire.—His son, Otto the Great (936-973), consolidated the royal power, and reduced the great Duchies to submission, keeping them in his own hands or in those of members of his family. In 951 he entered Italy to settle the affairs of the Lombard kingdom, but returned to cope with a revolt terminated only by the vital danger of an invasion by the Magyars, whose power was finally crushed in 955. Crowned Emperor by the Pope in 962, he set an example to subsequent German kings, who claimed the Imperial and Lombard crowns as of right; but the precedent led also to the continued absences of the German rulers in Italy and the severance of their interests from those of their own proper dominions. The sense of German nationality grew in his reign, yet this was accompanied by a weakening of central authority and the development of the power of the great vassals, dukes, and princes, ecclesiastical and secular.

Under the House of Franconia.—After his death constant civil war increased their power until their growing independence was checked by Conrad II. (1024-1039), the first of the Franconian Emperors, who rendered the mediate nobles, vassals of the great lords, less dependent on their feudal superiors, and formed a close alliance with the towns. His son, Henry III. (1039-1056), further strengthened the royal power, put down private war, and in 1043 proclaimed a general peace.

Struggle with the Papacy.—His attempted reformation of the Papacy and appointment of four German popes in succession commenced the long and fierce struggle between the Emperors and the Popes. During the minority of his son, Henry IV., the great nobles recovered much of their power. His opposition to the famous decree of Pope Gregory VII. in 1075 against the marriage of the clergy and their investiture by laymen was followed by his summons to Rome, his deposition of the Pope through a synod of German bishops, his excommunication and complete humiliation at Canossa in 1077. The dispute was only settled under his son, Henry V., by a compromise, the "Concordat of Worms," in 1122, but the power of the Papacy had been enormously strengthened. It had attempted to dispose of the Imperial Crown, and Innocent II. even claimed to have granted it to Lothar of Saxony (1125-1137) in 1133 as to a vassal.

Famous Hohenstaufen Line.—With Conrad III. of Franconia (1137-1152) commences the line of the famous Hohenstaufen Emperors. The two great parties supporting the Pope and the Emperor now first became known as Guelphs and Ghibelines (Welfs and Waiblingns). His successor, the great Frederick Barbarossa (1152-1190), was occupied in Italy during long years with the now permanent struggle against the Popes and the Italian cities supporting them. In Germany Teutonic power was extended over the Slavonic countries along the Baltic by Henry the Lion of Saxony and Albert the Bear, to whom was granted the Mark of Brandenburg. Under Frederick II. (1212-1250) the struggle with the Papacy was continued. Sentence of excommunication was launched against him, and a rival king was elected, and his continued absence in Italy led to the utmost anarchy in Germany. Meanwhile the conquest of the Slavonic lands now forming a great part of Prussia progressed steadily under the Knights of the Teutonic Order and of the Order of the Sword.

The period of the Hohenstaufens was one of great brilliancy. Chivalry was promoted in the Crusades, literature was in full bloom in the works of the Minnesänger, Gothic architecture received its finest developments, the towns increased in prosperity, many serfs were freed, and codes of local customs and usages were compiled, such as the *Sachsenspiegel* and the *Schwabenspiegel*. On the other hand, the greater vassals became practically independent, and the principle of inheritance was applied to their lands and offices. The privileges usurped by the ecclesiastical and secular princes were confirmed by Frederick II. in the "Pragmatic Sanctions" of 1220 and 1232, and the right of electing the Emperor was confined to the Seven Electors.

The Interregnum.—The period of anarchy culminating in the "Great Interregnum" (1250-1273) is marked by the formation of the Rhenish Confederation of some seventy leading cities for mutual defense, and of the powerful Hanseatic League.

Beginning of the Hapsburg Line.—Rudolf of Hapsburg, elected in 1273, revived the royal authority and strictly enforced justice, but his rule was unfavorable to the growing privileges of the towns. In this respect his policy was reversed by his successor, Adolf of Nassau (1291-1298), and by his son, Albert I. (1298-1308), who even befriended the serfs and the Jews. The long struggle between the Empire and the Papacy practically ended under Louis IV. (1314-1347), by the formal declaration of the Electors in 1338 that the Papal sanction was not needed to the election of the emperor. Public peace was encouraged under Louis IV., and his friendship to the towns was constant. Industry and trade flourished more and more in the cities, and their government was now becoming more democratic through the victory of the craft-guilds over the old patrician families.

House of Luxemburg.—Charles IV. (1347-1378), the first emperor who retained his hereditary lands on election, by the "Golden Bull" in 1356 regulated the method of election and confirmed the complete sovereignty of the Electors in their own territories. In 1396 the foundations of Swiss independence were laid in the victory of the "Eidgenossen" over Duke Leopold of Austria at Sempach.

Reformation Foreshadowed.—In the reign of Sigismund (1410-1437), who united the dignities of King of Hungary, King of Bohemia, and Margrave of Brandenburg, and who was the last Emperor crowned at Rome, the Hussite war, consequent on the burning of John Huss by the Council of Constance in 1415, foreshadowed the Reformation. The Mark of Brandenburg now passed to the Hohenzollerns, under whom it was to grow into the kingdom of Prussia.

The reigns of Frederick IV. (1440-1493), and Maximilian I. (1493-1519), the husband of Mary, the heiress of Charles the Bold, last Duke of Burgundy, bring the Middle Ages to a close. The age of chivalry was ended by the invention of gunpowder and the use of mercenary troops; the realities of feudalism had passed away, the Imperial authority had dwindled to nominal control, and princes and cities had attained independence. But the Imperial dignity was now permanently connected with the House of Hapsburg and combined with great territorial possessions. The semblance and, to some extent, the reality of unity were established by the growing use of Roman law, by the constitution in 1495 of an Imperial Tribunal or Court of Appeal (the "Aulic Council"), and by the division of Germany in 1501 and 1512 into "Circles," each with its own "States" charged to carry out the decisions of the Imperial Chamber.

Period of Charles V.—Luther's denunciation of indulgences was made in 1517, but the full storm of the Reformation burst after the accession of Charles V. (1519-1555), who united to the Empire the entire possessions of the kingdom of Spain. At the Diet of Worms in 1521 he took up the defense of the Church, and condemned Luther as a heretic. At the same Diet an Imperial Administrative Council was established, and a "Matricula" drawn up, settling the contingents of troops to be raised by the States, both of which existed until the fall of the Empire. The Reformation now made irresistible progress; a common name, "Protestants," was acquired by the Reformers at the Diet of Speyer in 1529, and in common statement of doctrines, the "Augsburg Confession," was drawn up in 1530.

Thirty Years' War.—The new and the old religions were put upon an equality by the Religious Peace of Augsburg in 1555, in which, however, the Calvinistic or Reformed Faith was not included. In the fearful struggle which followed the Reformation the Imperial authority was completely ruined. The reaction against the new doctrines, due mainly to the zeal of the Jesuits, gave fresh strength to the Catholic party, the Reformation was stamped out in Bohemia, and complete toleration was not acquired by Protestants (including both Lutherans and Calvinists) until the Peace of Westphalia in 1648.

This was at the close of the disastrous and merciless struggle known as the Thirty Years' war. The result of the confused period commencing with the abdication of Charles V. in 1555 must be briefly summed up. The Empire in Germany was practically ended and was now attached to the hereditary dominions of the house of Hapsburg in Austria. The population of Germany was reduced by more than one-half, industry and trade had almost ceased to exist; enormous territorial losses had been suffered, and France and Sweden had made great acquisitions. Switzerland and the United Provinces were severed from the Empire, and had acquired complete independence. Germany emerged from the war a mere lax confederation of states, whose rulers—a race of absolute and, in most cases, coarse and selfish despots—were recognized by the Peace of Westphalia as independent. Even in the cities government had passed into the hands of local oligarchies. The only bond of union was the nominal authority remaining to the emperor, and now transferred to the Diet, of passing laws, concluding treaties, and making war and peace. One completely good result of the war was that amid the prevailing anarchy were laid, by Grotius, the foundations of a system of International Law.

Rise of Prussia to Power.—The Thirty Years' war was followed by the rise of Prussia. Brandenburg had in 1611 become united to the Duchy of Prussia, part of the possessions of the Teutonic Order, which was in 1657 declared independent of Poland, of which it had been a fief, and received further accessions under the Great Elector, Frederick William. It grew steadily in power during the long struggle against the unscrupulous aggressions of Louis XIV., and in 1701 the son of the Great Elector, Frederick I., obtaining from the Emperor the recognition of the Prussian Duchy as a kingdom. In 1713 a "Pragmatic Sanction" was drawn up by the Emperor Charles VI. (1711-1740), providing for the inheritance of the Austrian dominions by his daughter, Maria Theresa, and this was ultimately guaranteed by the leading powers.

Frederick the Great and the Seven Years' War.—But his death in 1740 was the opportunity of Prussia, where Frederick II., better known as Frederick the Great, had just ascended the throne. He immediately occupied Silesia. Maria Theresa met with enthusiastic support in Hungary, and in 1745 her husband was elected emperor as Francis I. (1745-1765). An interval of peace was followed by the Seven Years' war, at the conclusion of which, in 1763, Prussia was confirmed in the possession of Silesia, took rank as a great Power, and became definitely the rival of Austria in German politics.

In 1765 Joseph II. succeeded to the imperial crown, becoming at the same time co-regent with his mother of the Austrian hereditary dominions. He joined with Russia and Prussia in the first partition of Poland (1772). He was succeeded by his brother Leopold, who, having died in 1792, was succeeded by his son, Francis II., who joined in 1793 in the second partition of Poland. He took the command of his army against the French in 1794, concluded the peace of Campo Formio with Bonaparte (1797); joined the second coalition against France in 1799, and concluded the treaty of Lunéville (1801).

In 1804 Francis took the title of hereditary emperor of Austria, renouncing two years later that of head of the German Empire, which, indeed, had ceased to exist, owing to the conquests of Napoleon. The latter's secularization of the ecclesiastical states, overthrow of Austria at Austerlitz (1805) and of Prussia at Jena and Auerstädt (1806), and formation of the Confederation of the Rhine, completed the extinction of the Holy Roman Empire.

The German Confederation.—The states of Germany were again united by the treaty of Vienna (1815), in a confederation called the German Confederation (*der Deutsche Bund*). In 1818 a general commercial league, called the Zollverein was projected by Prussia, and was gradually joined by most of the German states, exclusive of Austria. Revolutionary outbreaks caused great disturbances in various German states in 1830 and 1848, particularly the latter. The German Diet was restored in 1851 by the efforts of Prussia and Austria, who were latterly rivals for the supremacy in the confederation.

Beginning of Bismarck's Power.—In 1861 William I. succeeded to the throne of Prussia, and the conflicts between the liberals and his ultra-reactionary government led in 1863 to the entrance into the ministry of Otto von Bismarck, who soon after became its president and the minister of foreign affairs. On the death of Frederick VII. of Denmark, Prussia and Austria disputed the claims of Christian IX., his successor, to the duchies of Schleswig and Holstein, and the war which followed (1864) resulted in the cession of Schleswig-Holstein, and Lauenburg to those powers jointly.

By the treaty of Gastein, Austria and Prussia agreed to a joint occupation of the Elbe duchies; but to prevent collision it was judged prudent that Austria should occupy Holstein, and Prussia Sleswick.

Contest Between Prussia and Austria.—Already a difference of policy had begun to show itself. Prussia was believed to have the intention of annexing the duchies; while Austria began to favor the claims of Prince Frederick of Augustenburg. In the meantime, both nations were making ready for the struggle; and Italy, looking upon the quarrel as a precious opportunity to strike a blow for the liberation of Venetia, had secretly entered into an alliance with Prussia.

On July 3, 1866, was fought the decisive battle of Sadowa, in which the Austrians were routed. Not till the victorious Prussians had pushed forward towards Vienna was a truce obtained through the agency of the Emperor of the French, the Peace of Prague (August 20). Italy, though more than half-inclined to stand out for the cession by Austria of the Trentino, as well as Venetia, reluctantly agreed to the armistice (August 12).

A brief campaign sufficed for the defeat of the minor states of Germany that had joined Austria, viz.: Bavaria, Württemberg, Baden and Hesse-Darmstadt; and, after peace had at last been arranged, some of them were forced to submit to a certain loss of territory.

Independence of Austria and Union of Germany.—The war completed the dissolution of the Confederation, and secured the reconstruction of Germany on an entirely new basis. Austria was excluded from Germany, and a new confederation, the North German, was formed of the states north of the Main, under the headship of the king of Prussia. Schleswig-Holstein, Hanover, Hesse-Cassel, Nassau, and Frankfort were incorporated with that kingdom. Efforts to secure a further consolidation were opposed by the South German states, but the final solution of the question was at length brought about by France, whose demands resulted in the War of 1870. (See under [France](#).)

In this war Germany acquired Alsace and a part of Lorraine, and south Germany now waived any further opposition to a consolidation of all the German states under the leadership of Prussia.

Restoration of the German Empire.—On December 3 the king of Bavaria invited the king of Prussia to restore the dignity of German emperor. Most of the other states gave their assent and the North German Reichstag on December 10 adopted a motion for the establishment of the German empire under the king of Prussia. On January 18, 1871, the restoration of the imperial dignity was solemnly proclaimed by William I. at Versailles.

Subsequently the empire was largely organized under the vigorous administration of Prince Bismarck. The parliament of the new empire soon met at Berlin, and adopted the new constitution. The main result of his foreign policy was a cordial alliance with Austro-Hungary; an alliance, in 1872, between the emperors of Germany, Austria and Russia, in which, subsequently, Italy took the place of Russia, forming what is known in European politics as the Triple Alliance.

In domestic affairs many difficulties were encountered. With the birth of the new Empire commenced the long struggle of Prince Bismarck with the Papacy. The Jesuits were expelled in 1872, and in 1873 the famous "Falk Laws" imposed secular restrictions on all ecclesiastical appointments. The strict enforcement of these laws led to intense discontent and ill-feeling among Catholics. The contest ended with the grant of many concessions and the confession by Prince Bismarck in 1887 that his policy was practically changed. The democratic movement known as Socialism, aiming at the regulation and organization by the State of labor and production, grew rapidly in strength and importance, and inaugurated an era of "labor policy" by legislation compelling employers to institute a system of insurance in favor of their work-people, since followed by the adoption of an important state-aided scheme of insurance against death and old age.

In 1888 Emperor William I. died, and the premature death, after a reign of three months, of the beloved Crown Prince, who succeeded him as Frederick III., disappointed the hopes of those who had anticipated a Liberal policy on the part of the Crown.

Accession of William II.—His son and successor, William II., took a strong view of his functions as emperor and king. His reign was immediately characterized by the further development of the labor policy inaugurated by Prince Bismarck. The emperor was not, however, generally in accord with the views of the great Chancellor, whose resignation was accepted in 1891.

Caprivi now became chancellor, and managed to negotiate a series of commercial treaties, in 1892-1894, with the countries of Central Europe (Austria, Belgium, Switzerland, Italy), and later with Servia and Roumania, the purpose of which was to lower the import-duty on corn on condition that the foreign states favored German manufactures. These treaties at once induced the peasants to combine and in 1893 a great agricultural union was formed, called the *Bund der Landwirte*, with which an older association, the *Deutsche Bauernbund*, almost immediately coalesced.

Commercial and Colonial Expansion.—But the great features of recent German history have been the growth of German trade and commerce, the great colonial expansion in Africa and Polynesia, and the rapid increase of her navy.

MONUMENT OF VICTORY, BERLIN

Erected in the Königs Platz at the conclusion of the Franco-Prussian war of 1871. It consists of a circular temple surrounded with a colonnade of sixteen pillars, standing upon a square base or pedestal, and surmounted by a cylindrical shaft bearing a colossal gilt bronze Victory, winged and holding a wreath. The total height is one hundred and ninety-four feet. It may be ascended by an interior staircase. Upon the base are elaborate reliefs of the various campaigns commemorated.

In 1905 Germany intervened to disturb the French policy in Morocco, resulting in a conference of the powers interested at Algeciras. In 1911 Germany again intervened by sending a warship to Agadir for the protection of German property and German subjects. The action occasioned a complication of the European situation, and all but resulted in war. Germany's claim for territorial compensation was not entertained by France, and Great Britain, as ally of France, claimed the right to be consulted if territory were to be conceded. The net result, after months of diplomatic intercommunication, was a readjustment of frontiers. (See [German Colonial Possessions](#).)

The history of the German Empire since 1914 is chiefly that of the leading Teutonic power in the great European war of 1914-1917.

ST. PETER'S, ROME

St. Peter's is the largest church in the world, covering two hundred and forty thousand square feet. It cost over sixty million dollars, took one hundred and seventy-six years to build, contains many vast and beautiful chapels, tombs of the popes, many paintings by great masters, and sculptures by Bernini, Michaelangelo, Canova and Thorwaldsen.

KINGDOM OF ITALY

Modern Italy occupies the central of the three great peninsulas of southern Europe, together with Sicily, Sardinia, and some smaller islands. The peninsula, which at the Strait of Otranto approaches within less than fifty miles of Albania, is bounded west and south by that portion of the Mediterranean known as the Tyrrhenian Sea, east by the Adriatic, and north by the Alps, separating it from France, Switzerland and Austro-Hungary. The frontier with France is estimated at three hundred and seven miles; with Switzerland at four hundred and seven miles; and with Austria at four hundred and sixty-six miles. Its greatest length is seven hundred and ten miles; the breadth ranges from three hundred and fifty-one miles in the north to about twenty between the Gulfs of St. Eufemia and Squillace, but in most places is about ninety or one hundred miles. The seaboard of the peninsula extends to two thousand two hundred and seventy-two miles.

Mountains and General Configuration.—On the northern frontier the Alps sweep round in a mighty arc from Nice to Trieste, running out in places into Piedmont, Lombardy, and Venice. For the most part they rise steep and abrupt, except where their wall is pierced by long, deep valleys; and some of the loftiest peaks in the system, including Mont Blanc and Monte Rosa, belong to this mountain-girdle.

The highest mountain entirely within the kingdom is Gran Paradiso, the culminating point of the Graian Alps, in Piedmont. Between the Alps and the Apennines spreads the broad fertile Lombardo-Venetian plain, a nearly level country, which differs altogether in character from the peninsula to the south, and for a long period was politically distinct from it. Most of this great alluvial tract, which fills nearly the whole of northern Italy, belongs to the basin of the Po; it is irrigated by numerous streams and canals, and is one of the most fruitful and flourishing districts of Italy.

[509]

[510]

[511]

This great northern plain—generally but a few feet above sea-level—round which the Alps rise like a wall, is believed to have been at one period an extension of the Adriatic Gulf, which has been gradually filled up with rich alluvial soil worn down from the steep sides of the mountains by the snow-fed torrents.

The Apennines.—The form of all the more strictly peninsular part of Italy is given by the central range of the Apennines, which extends continuously through its length from the maritime Alps of France, round the head of the Gulf of Genoa, down to Cape Spartivento in the extreme south. The Apennines have their highest part, called the Gran Sasso d'Italia, "the great rock of Italy," near the center of the long range. The slopes of these heights to the sea, northeast and southwest, are so short as to allow of only small rivers.

Nearly parallel with the southern part of the Apennine range, and westward of it, there appears a more recent chain of isolated volcanic heights. Chief of these, on the peninsula, is the cone of Vesuvius, which rises abruptly from the Campagna of Naples, above the old cities of Herculaneum and Pompeii, buried by its lava streams and ashes. North of Rome, in this volcanic region, the round lakes of Bolsena and Bracciano occupy the craters of old volcanoes. Carrying the line southward, across the Tyrrhenian Sea, we come to the volcanic group of the Lipari Islands, with the ever-active volcano of Stromboli; and farther on to Mount Etna, in Sicily, the highest of European volcanoes. Almost all the rest of Sicily, not volcanic, is covered with mountains of moderate elevation, the main line of which extends along the northern side of the island from east to west as if in continuation of the course of the Apennines across the narrow Strait of Messina.

Islands and their Surface.—The island of Sardinia, separated from Corsica by the Strait of Bonifacio, one hundred and fifty miles long from north to south, is for the most part mountainous, especially along the eastern side, in the middle of which rises the granitic Mount Gennargentu.

The island of Elba, famous as the place of Napoleon's exile, between Corsica and the peninsula, eighteen miles long, is high, its western part being formed by Mount Capanne, which rises to three thousand three hundred and twenty-three feet. Capri, south of the Bay of Naples, where the Emperor Tiberius passed the last ten years of his life, and Caprera, Garibaldi's home, on the north coast of Sardinia, are other noteworthy islands.

Rivers and Coast Waters.—The principal rivers are fed from the Alpine lakes. The Po, which descends from Monte Viso, on the western frontier, and, as it sweeps across the plain, receives the contributions of numerous important streams, ranks for its volume of water among the notable rivers of Europe. It is navigable for three hundred and twenty out of its four hundred and twenty miles, and several of its tributaries are also navigable. Many of the Po's tributaries spread out at the foot of the Alps.

The province of Venice, to the north and east of the Po, is traversed by the Adige, Brenta, Piave and Tagliamento.

Along the coast of the Adriatic, north and south of the Po delta, there exist large tracts of salt water, known as lagoons, in a flat and marshy district. They are separated from the sea by narrow banks of sand in which are inlets, so that the lagoons serve as harbors. The chief of these is that in which Venice is situated. It extends over nearly forty miles from Torcello in the north to Chioggia and Brondolo in the south. The other coast-line of northern Italy is formed by a narrow strip of land, closed in by the steep, abrupt rocks of the Apennines, and known as the Italian Riviera.

The Arno, next to the Tiber the most considerable river of central Italy, rises on Mount Falterona, an offset of the Apennines, at four thousand four hundred and forty-four feet above sea-level, and twenty-five miles north of Arezzo. It flows one hundred and forty miles westward to the sea, eleven miles below Pisa. At Florence it is four hundred feet wide, but is fordable in summer.

The Tiber, the chief river of central Italy, and the most famous in the peninsula, rises in a dell of the Tuscan Apennines, eleven miles north of the village of Santo Stefano, whence it winds two hundred and sixty miles, and enters the Mediterranean by two branches, which enclose the Isola Sacra. Towns on or near its banks are Perugia, Orvieto, Rome and Ostia. It is navigable for boats of fifty tons to the confluence of the Nera, one hundred miles from its mouth. The Tiber is supplied mainly by turbid mountain-torrents, whence its liability to sudden overflows. Its waters, too, are still discolored with yellow mud, as when the poet Horace described it.

Lakes.—To the south of the Alps, in the north of Lombardy and Venice, lie the beautiful Italian lakes, Lago di Garda, Maggiore, Como, Lugano, and Orto.

LAKE OF COMO, the Lacus Larius of the Romans, is generally considered the most beautiful of the group. It is about thirty-six miles long, and its greatest width is three miles. Its shores are studded with picturesque villages and charming villas, with a background of forest and mountains, some of which are seven thousand feet high. The loveliest point is Bellagio, where the lake divides into two arms. Cadenabbia, on the western shore opposite Bellagio, is also a pleasant place.

Como, at the other extremity, is a thriving town of twenty-five thousand inhabitants, the birthplace of Pliny the Younger and of Volta. The cathedral is one of the best in Northern Italy.

LAKE OF LUGANO, between Como and Maggiore, though much smaller than either, is scarcely their inferior in the loveliness of its scenery. It lies at the southern foot of the Alps, eight hundred and eighty-nine feet above sea-level. Its length is fourteen and one-half miles; average breadth one and one-quarter miles; area nineteen and one-half square miles; maximum depth nine hundred and fifteen feet, and average depth two hundred and forty-six feet.

LAKE MAGGIORE (*Madjō'ray*), the largest of the Italian lakes, is about forty-five miles in length, averages three miles in breadth, lies six hundred and forty-six feet above sea-level, and has a maximum depth of one thousand two hundred and fifty feet. The river Ticino flows through it. In a southwestern expansion of the lake are the Borromeo Isles. On the Isola Bella is the large palace built by Count Vitaleo Borromeo about a century ago, with terraced gardens, fountains, grottoes, etc., all very elaborate and artificial.

LAKE GARDA, a beautiful, clear lake, lies between Lombardy and Venetia, its northern end extending into the Austrian Tyrol. Situated two hundred and twenty-six feet above sea-level, it has an area of one hundred and fifteen square miles, a greatest length of thirty-five miles, a breadth of two to eleven miles, and a maximum depth of nine hundred and sixty-seven feet. The surface is studded with many islands. It is drained by the Mincio, a tributary of the Po. The mild climate and the beauty of the vicinity have caused its shores to be lined with villas.

Climatic and Landscape Features.—The north of Italy has the excessive climate of the temperate region of continental Europe; in the central parts of the peninsula the climate becomes more genial and sunny, and to the south almost tropical. The plain of Lombardy, with an average temperature of fifty-five degrees Fahrenheit, has winters which are as cold as those of the Scottish lowlands, and the lagoons of Venice have been frozen over; but its summers are as hot as those of Rome or Nice. The changes are few; rain lasts for weeks together in autumn, but in summer the blue sky is never clouded except when a violent thunder and hailstorm occurs.

Above Florence the winters are much milder, with the same summer heat, and this difference between the seasons decreases still more to southward.

The summer of the Campagna of Rome, when a heat mist rises over the plain, is almost unbearable; in January the sky is blue, the mornings may be frosty, and fresh spring air blows over the land; in March the trees are already leafy, and in June the harvest begins; in July everything withers under the excessive heat, till the autumn rains revive the land.

In Naples and South Italy the sky is cloudless for months together, and the air is so pure that distant plains appear to be close at hand.

The chief faults of the Italian climate are the cold mountain winds called the Tramontana, like the mistral of south France, and the Bora of the north Adriatic, and, in contrast, the hot Sirocco, which occasionally blows from the African deserts, besides the malaria of the western coast marshes and of the Venetian lagoons.

Round the lakes at the base of the steep southern slope of the Alps, Mediterranean forms of vegetation appear; the chestnut reaches up to two thousand five hundred feet; above that comes the belt of beeches and oaks, still higher the pine woods, then the pretty alpine plants and high pastures. Scarcely any part of the world is so covered with irrigating canals as the highly cultivated plain of Lombardy, so that the whole of it appears like a great garden. At the northern base of the Apennines the Mediterranean flora of laurels and myrtles, cork oak and cypress, covers the first slopes; above that groups of oaks appear, then beech woods and the extensive summer pastures which reach all over the Apennine range. The Apennines have no permanent snows, but their highest summits are frequently snow-clad between October and May, and send down cold breezes into the warm valleys.

In Sicily the vegetation takes an African character, and many tropical forms flourish; it is not a well-wooded island, but forests occur here and there.

Riviera (*Ree-vee-ay'ra* "seashore"), is a term applied to the narrow strip of coast-land bordering the Gulf of Genoa, strictly from Nice to Spezzia, but generally understood to include the whole coast of the Alps Maritimes, and the Italian coast as far as Leghorn.

West of Genoa, and extending into France, it is called the Riviera di Ponente, or western coast, and beyond Genoa the Riviera di Levante, or eastern coast. From Hyères to Genoa is two hundred and three miles; from Genoa to Leghorn one hundred and twelve miles. Sheltered on the north by mountains, the district enjoys an exceptionally favored climate, no other region north of Palermo and Valencia being so mild in winter.

The western section is the mildest and most frequented. It abounds in the most striking and beautiful scenery, and is planted with numerous health and fashion resorts—Nice, Monaco, Mentone, Ventimiglia, San Remo, Bordighera, etc.; and west of Nice are Hyères, Fréjus, Cannes, Gresse, Antibes.

The famous Corniche (Ital. *Cornice*) road, widened by Napoleon I., leads along the Mediterranean coast from Nice to Genoa, and commands magnificent views.

Products and Industries.—Of the whole surface of Italy it is estimated that eighty-three per cent is suitable for cultivation. The greatest proportion of agricultural land, however, lies in the great plain of Lombardy and the Campagna Felice of Naples. Notwithstanding this, the supply of corn grown in Italy is not sufficient for its wants, and more is imported from Russia, Egypt and North America. Maize and wheat afford the staple food of the lower classes, as polenta and macaroni.

Agriculture and Stock-Raising.—A sixth of the area of the kingdom is covered with wood or bush, the island of Sardinia having the largest forests of all the kingdom—the districts of Lake Como, of southern Tuscany, and Genoa, being the best wooded parts of the mainland. The olive grows all over peninsular Italy, and enormous quantities of oil are produced, much being exported.

All parts of the country are suited to vine-growing. Most wine, however, is made in south Italy and Sicily. Most horses are bred in Lombardy, where cattle are also numerous on the dairy farms, which supply enormous quantities of cheese. Tuscany has most sheep; Sicily the finest mules and asses; Umbria the greatest number of swine. Coral fishers go out from Naples, Leghorn (Livorno), and Genoa to the coasts of the Balearic Isles and of Algeria and Tunis in large numbers.

Minerals.—The most important mineral product of Italy is the sulphur of Sicily; iron is widely distributed, but is obtained in most considerable quantity in Lombardy and Liguria; lead is an important product of Tuscany; sea salt of the vicinity of Cagliari, the chief town of the island of Sardinia. Famous pure white marble is quarried at Carrara and Massa, on the northwest coast-land of Tuscany.

Manufactures.—The zenith period of Italian manufactures, when Milan was famous for its wool-workers, Venice for its dyes, Florence for its cloth, has long since passed away, and in this respect Italy now occupies a low position.

Silk-growing, spinning, and weaving it, is now the most important branch, and in this the towns of Lombardy—Bergamo, Como, Milan, Turin—take the lead, followed by those in the plain round Naples, and by Catania and Palermo in Sicily. Glass-making has also fallen from its old position; the works at Intra, on Lake Maggiore, and the manufacture of beads and mosaics at Venice, are, however, still very important. Porcelain is made chiefly at Milan and Florence; straw hats at Vicenza, in Venetia, and in Tuscany, whence they come to us as Leghorn hats, from the port at which they are shipped.

People and Language.—The present Italian people have arisen from a perfect chaos of races. The ancient Ligurians of Iberian race and the Umbrians of the north were joined, from an unknown quarter, by the strange people called Etruscans or Tuscans by the Romans, who exercised such an immense influence on European civilization. The Greeks peopled the south, and held Sicily along with the Phoenicians; the Romans spread out from the center of the peninsula to extend their conquests far beyond its limits; then the Goths and Franks poured in from the north, and after them the Longobards, who gave their name to Lombardy. The Savoyards and Waldenses of the valleys of Piedmont along the French border appear to be of Gallic descent. Insular Sardinia was free from the irruptions of the northern people, but came under the influence of the Greeks, the Arabs, and then of the Spaniards.

Here, as in France and Spain, the Roman language endured and prevailed over all others, and now the people of Italy have one language and literature, the Italian, descended from the Latin. Its dialects show traces of the mixture of nationalities, but the Tuscan has now become classic, for the great writers, like Dante and Boccaccio were Tuscans.

Religion.—The Roman Catholic Church is reorganized as the state church, but toleration is granted to all creeds. Over ninety-seven per cent of the population is Roman Catholic. By the Act of 1871 the rank of the Pope as a sovereign prince is recognized, the Vatican and Lateran palaces and the papal villa at Castel Gandolfo having the privilege of extraterritoriality. Protestants number about sixty-six thousand, which include some twenty-two thousand Waldensians; and there are about thirty-eight thousand Jews, and about two thousand five hundred members of the Greek Orthodox Church.

Education is controlled by the state under a minister of public instruction, assisted by a council. Primary education is free and compulsory, and the state also maintains, partly or wholly, secondary, technical schools, and the universities. There are thirteen universities. Private schools may not be opened without state authorization.

Cities.—The largest city is Naples. Rome is the capital. Milan, Turin, Palermo, Genoa, Florence, rank next. There are four others with about one hundred and fifty thousand, and twenty-three towns over fifty thousand.

ROME, the "city of the seven hills," contains more objects of interest than any other city in the world. It is situated mainly on the left or east bank of the Tiber, about fifteen miles from its mouth. The river, which has here an average breadth of two hundred feet, is spanned by eleven bridges in its course from north to south through the city.

The Seven Hills.—On the left bank rise the famous seven hills of ancient Rome, which, from north to south, are the Aventine, Coelian, Palatine, Capitoline, Esquiline, Viminal, and Quirinal. These hills rise from eighty to one hundred and twenty feet above the river and the intervening valleys.

[512]

[513]

[514]

VIEW OF ROME FROM ST. PETER'S

The Royal Palace and chief public offices are upon, or adjoin, the Quirinal Hill. The Aventine and the Coelian are, in large part, not built upon. The Esquiline and Viminal are modern industrial quarters. The Palatine, with the Forum below it on the east, are covered with important ancient ruins. The Capitoline, crowned by the Capitol, the most imposing of the hills, the center of ancient life and worship, has, apart from the new monument of Victor Emmanuel, suffered little change since the sixteenth century.

Mediæval and Rome occupies chiefly the plain, known as the Campus Martius of ancient times, nearer the river, and on the slopes of the Pincian Hill, to the north, extending thence eastward to the Quirinal and Viminal. The smaller part of Rome, on the right or west bank, comprises the Borgo, or district, containing St. Peter's, the Vatican, the Castle of St. Angelo, and the Janiculum Hill, to the north, with the Trastevere quarter, to the south.

The entire city is surrounded by a wall fourteen miles in circuit, with thirteen gates, the wall on the left bank being substantially identical with Aurelian's Wall, built in the third century, while the Leonine Wall round the Borgo was extended in the early sixteenth century.

Modern Features and Districts.—The business part of the city occupies the plain on the bank between the hills and river, traversed by the Via del Corso, the principal thoroughfare in Rome, about a mile in length, leading from the Porto del Popolo to the foot of the Capitoline Hill, where is situated the great National Monument to Victor Emmanuel. From the Piazza del Popolo two great streets diverge on either side of the Corso, the Via di Ripetta to the right, skirting the Tiber, and to the left the Via del Babuino, leading to the Piazza di Spagna, whence the Scala di Spagna, the resort of artists' models, ascends to the Pincian Gardens, on the site of the gardens of Lucullus, which command a splendid view of the city, and form the fashionable drive and promenade.

Of the new streets the most important are the Via Venti Settembre, the Via Cavour, and the Via Nazionale. The older foreign quarter lay at the foot of the Pincian, around the Piazza di Spagna, but the healthier sites on the slopes and summits of the Quirinal and Esquiline are now more frequented.

Rome abounds in open Squares (*Piazze*) adorned with fountains, obelisks, or statues. Eleven Egyptian obelisks still ornament the gardens and piazzas of Rome, brought by Augustus and others. That in the Piazza of St. John Lateran, one hundred and four feet in height, is the largest in existence. It was erected at Thebes by Thothmes III., and removed by Constantine to the Circus Maximus. The triumphal arches of Septimius Severus, of Titus, and of Constantine are still conspicuous. Of the bridges over the Tiber, three are ancient.

The antiquities are legion, some of the most interesting are clustered within the area from the Colosseum to the crest of the Capitoline Hill.

SITE OF THE FORUM OF TRAJAN

The Forum consisted of three parts: the forum proper, the huge Basilica Ulpia, and the temple of Trajan, with its colonnaded inclosure. It was once the grandest building in Rome. Trajan's Column, still standing, is a Roman Doric column of marble, on a square basement, the total height, exclusive of the present statue of St. Peter, being one hundred and twenty-seven and one-half feet. The entire shaft is occupied by vigorous and lifelike reliefs ascending in a spiral, representing Trajan's campaigns. The reliefs contain about two thousand five hundred human figures, besides those of animals and inanimate objects.

Famous Architectural Edifices, Ancient and Modern.—The remains of ancient Rome have suffered severely from the vandalism and the neglect of past centuries, but they are now carefully preserved. The Forum, in some places nearly forty feet below the present street level, has been in great part excavated, and near it are many vestiges of by-gone Roman splendor, including columns, arches and ruins of temples. [515]

ROMAN FORUM.—In remote times, the marshy ground which later became the site of this famous Forum served as *neutral territory* whereon both the Romans (who occupied the Palatine Hill), and the Sabines (who occupied the Capitoline Hill) could meet. Gradually it became a market-place and an exchange, till, at length, all the important business of Rome and of the Empire came to be concentrated in and about the Forum.

A portico was built around the Forum, the first story being devoted to shops and the second to offices for the collection of taxes. After some centuries, these were destroyed by fire, when various basilicas and temples were erected in their places. The Forum existed as such till the eleventh century, A. D., when it was totally destroyed by Robert Guiscard. Becoming then a waste, the rubbish of the city was thrown there until the entire space was filled to the depth of twenty-four feet and the location and names of the ancient buildings lost. In the revival of learning, in the sixteenth century, interest began to be awakened in the ruins of ancient Rome, and, in 1547, excavations of the Forum were commenced, under Paul III., which, with much irregularity have continued to the present day.

ARCH OF SEPTIMIUS SEVERUS

An arch in the Roman Forum, dedicated 203 A. D., in commemoration of victories over the Parthians. It is of Pentelic marble, with a central arch and two side arches, flanked by four Corinthian columns on each face. There are panels over the side arches and a frieze above all with reliefs of Roman triumphs.

ARCH OF CONSTANTINE

Built in 312 A. D. in honor of Constantine's triumph over Maxentius. Much of its abundant sculpture was taken from the destroyed church of Trajan.

The most conspicuous remains of the Forum are the columns of the Temple of Saturn, the temples of Castor and Pollux and of Vesta, and on its northern side the arch of Septimius Severus, the Curia, the Basilica Æmilia, and the temples of Antoninus and Faustina and of Romulus. In the middle of the eastern part rose the temple and forum of Julius Cæsar. The more ancient and famous forum from which Cicero spoke was at the western end.

The latest excavations in the Roman Forum, including the stele and black stone of Romulus, the Basilica Æmilia, the Chapel of Santa Maria Antiqua, and the House of the Vestal Virgins, are of extraordinary interest.

It was traversed by the *Via Sacra*, a winding road which led from the southern gate of Rome to the Capitol, and was the route by which triumphal processions passed to the Temple of Jupiter. The Arch of Titus was at its summit. The great blocks of lava with which this road was paved still, for the most part, remain.

Beyond it stands the great Column of Trajan, one hundred and twenty-four feet in height, with spiral bas-reliefs representing scenes from Trajan's campaigns against the Dacians, forming the most instructive historical monument in Rome.

Palaces and Art Collections.—THE VATICAN PALACE, the residence of the pope, adjoining St. Peter's, enjoys along with the Lateran the privilege of "exterritoriality." The massive building, said to include eleven thousand apartments, contains the finest extant collection of ancient sculpture, with many celebrated statues, a rich gallery of paintings, a famous library, and other collections, besides the Sistine Chapel, adorned with frescoes by Michaelangelo and other masters, and the Stanze and Loggie, with paintings by Raphael and his contemporaries.

[516]

VATICAN PALACE AND GARDENS

THRONE ROOM OF THE POPE, VATICAN PALACE

THE QUIRINAL PALACE, another huge pile on the hill of that name, is occupied by the king. In the Piazza del Quirinale are two famous marble groups of Horse-Tamers.

THE VILLA UMBERTO PRIMO, formerly Borghese, outside the Porta del Popolo, is noted for its beautiful grounds, which are a favorite promenade connecting with that on the Pincian Hill by an embankment and bridge opened in 1908. The Casino contains the picture-gallery formerly in the Palazzo Borghese. It is now an important National Museum, and is arranged according to schools. Among the masterpieces are Titian's Sacred and Profane Love, Raphael's Entombment, Correggio's Danaë, etc.

THE PALAZZO BARBERINI, built by Urban VIII., is a large and magnificent structure, but chiefly notable for a small picture-gallery, the gems of which are Raphael's Fornarina, and Guido's Beatrice Cenci. The library contains seven thousand manuscripts, many of which are rare.

VILLA MEDICI (*ma de-che*), was built in 1540, south of the Pincio, for Cardinal Ricci. About 1600 it came into the possession of the Medici family, and afterward into that of the grand dukes of Tuscany. Galileo was confined there 1630-1633. The French Academy of Art, founded by Louis XIV., was transferred to it in 1801, and it has a fine collection of casts.

PALACES OF THE EMPERORS.—On the western side of the Forum Romanum rises the Palatine Hill, its summit covered with the substructures of the Palaces of the Emperors, the Houses of Augustus, of Tiberius, of Livia, of Caligula, of Domitian, and of Hadrian. Most magnificent of all is the Palace of Septimius Severus, rising in seven stages of massive masonry, which form a southern extension of the Palatine Hill.

Besides these imperial palaces, the Palatine included a magnificent Stadium, the most perfect in existence, imperial reception halls, several temples, with gardens, baths, barracks for soldiers, and a basilica or hall of justice, in which St. Paul must have pleaded before the emperor.

The Golden House of Nero, built on the opposite side of the Forum, and occupying the greater portion of the Oppian Hill, was demolished to make room for the Colosseum and the Baths of Titus.

THE COLISEUM (or Colosseum), originally called the Flavian Amphitheatre, was begun by Vespasian in A. D. 72, and dedicated by Titus eight years later. It was built for gladiatorial exhibitions and for the combats of wild beasts. It is the largest structure of the kind ever built, being capable of seating from forty to fifty thousand spectators. Though scarcely a third of the original edifice remains, it is by far the most imposing monument of antiquity that the Imperial City has to show.

THE PANTHEON is the most perfect of the ancient buildings in Rome. It was built B. C. 27 by M. Agrippa, and restored by Septimius Severus and Caracalla about A. D. 202, and has suffered much since. The vast round walls of brick, twenty feet thick, were once covered with marble. The portico (now below, but once above, the square) has sixteen huge monolithic columns of Oriental granite, thirty-nine feet high, with Corinthian capitals of famed beauty. Statues of Augustus and Agrippa once stood here. The circular interior is very impressive, and is lighted from a place twenty-eight feet across in the center of the dome, open to the sky.

This unrivalled dome is one hundred and forty feet high and one hundred and forty feet across. The gilded bronze roof-tiles were carried to Constantinople in 655; and all the other bronzes were used in making cannon for the citadel and the canopy in St. Peter's. The seven niches in which statues of the gods stood are now occupied by altars. Raphael is buried here, near his betrothed, Cardinal Bibiena's niece; and here is the tomb of King Victor Emmanuel of Italy.

THE CAPITOL, which is one hundred and sixty feet above the sea level and is best approached by the grand staircase known as La Cordonnata. At its foot are two lions of Egyptian porphyry; at its head the ancient colossal statues of Castor and Pollux. Beyond these on either side are the sculptures misnamed "the Trophies of Marius" and the statues of Constantine and his son from the Baths of Constantine on the Quirinal. The open space here is the Piazza del Campidoglio, the ancient Intermontium, where Brutus harangued the people after the murder of Cæsar. In the center is the celebrated statue of Marcus Aurelius, "the only perfect ancient equestrian statue in existence." It owes its preservation to the fact that it was long supposed to be a statue of Constantine. On the right is the Palace of the Conservatori, on the left the Museum of the Capitol, both designed by Michaelangelo; between the two, occupying the third side of the square, is the Palace of the Senator, on the site of the ancient Tabularium. The fountain at the foot of the stairs is adorned with statues of river-gods, the Tiber and the Nile. The tower contains the great bell which is rung only to announce the opening of the carnival or the death of a pope.

THE CAPITOLINE MUSEUM contains some of the most famous sculptures extant, as the Dying Gladiator, the Venus of the Capitol, the Faun of Praxiteles, the Antinous, etc. There is also the rich collection of busts and statues of Roman emperors and empresses, statesmen, philosophers, etc., "perhaps the most interesting portrait gallery in the world."

[517]

VILLA UMBERTO PRIMO (FORMERLY VILLA BORGHESE),
ROME

Has art collections considered only second in importance to that of the Vatican, and, despite the removal of many works, the number of really great paintings retains for the collection its old pre-eminence.

THE MAGNIFICENT VILLA MEDICI, ROME

Famous Churches.—Ancient Rome contained about three hundred temples, and modern Rome has about as many churches, eighty of which are dedicated to the Virgin. St. Peter's, St. John Lateran, S. Maria Maggiore on the top of the Esquiline, S. Paolo fuori le Mura ("outside the walls"), perhaps the most gorgeously decorated church in Rome, and S. Lorenzo fuori le Mura are the five Patriarchal churches, to one or other of which all believers throughout the world are supposed to belong. With Santa Croce in Gerusalemme and S. Sebastiano, they make up the famous "Seven Churches of Rome" frequented by pilgrims. They are also unsurpassed in their rich architectural and art interests.

ST. PETER'S, adjoining the Vatican, perhaps the most famous and certainly the largest church in the world, has an area nearly twice that of St. Paul's in London, while its dome rises to the height of four hundred and three feet.

Many architects were concerned in the building of the Cathedral of St. Peter, but the principal credit is assigned to Bramante, the creator of the design, and to Michaelangelo, whose chief work is the dome. To the spectator, approaching from the Piazza di San Pietro, the majesty of the dome is lost behind the façade, erected at the instance of Pope Paul V. at the end of the nave lengthened by him in order to work out the idea of a Latin cross; the design of Bramante was a Greek cross.

[518]

CHURCH OF ST. JOHN LATERAN, ROME, THE MOTHER
CHURCH OF CHRISTENDOM

The building was commenced in 1506, but was not completed until 1626; the total cost of erection was about fifty million dollars, and its maintenance absorbs annually about forty thousand dollars.

It covers about eighteen thousand square yards; the length is two hundred and thirty-two yards, of the transept one hundred and fifty yards; height of the nave one hundred and fifty-one feet; height of the dome from the pavement to the summit of the lantern four hundred and four feet; to the summit of the cross four hundred and thirty-four feet.

Besides the high altar there are twenty-nine other altars; the high altar being immediately over the Tomb of St. Peter. Round the Confessio are ninety-five lamps, always lighted. The bronze statue of St. Peter, on white marble, under a canopy, is by a pillar; the right foot of which is worn smooth by the kisses of worshippers.

ST. JOHN LATERAN. (It. *San Giovanni in Laterano*), adjoining the papal palace of the Lateran, claims to be the mother-church of all Christendom. It was originally named from the Roman family Lateranus. Beside it are its ancient Baptistery and a building enclosing the Scala Santa, brought from Pilate's palace in Jerusalem in 326.

Many other of the Roman churches contain treasures of art or are interesting for their structure or history. S. Maria Sopra Minerva is the only ancient Gothic church in the city. S. Pietro in Vincoli contains Michaelangelo's famous statue of Moses; and S. Maria delle Pace Raphael's beautiful frescoes of the Sibyls. The Gesù is the chief church of the Jesuits. San Carlo al Corso is the fashionable church.

Roads.—The roads leading out of Rome beyond the Servian Walls were bordered by tombs, many of which, on the erection of the Aurelian Wall, were included within the city. The most famous of these celebrated roads was the:

APPIAN WAY (called *Regina Viarum*) was begun B. C. 312 by Appius Claudius, and ran to Capua, and afterwards to Brindisi, forming main route to southern Italy, Greece and Egypt. There are beautiful views all along, of Campagna, aqueducts, and Alban Mountains.

APPIAN WAY

A famous Roman military road, the skill with which it is taken through difficult country, over hills, ravines, and marshes, is remarkable. Horace, in his first satire, describes a journey along it, and St. Paul came this way into Rome (Acts xxviii. 15).

On Via Appia are Catacombs of S. Calixtus, with tombs of St. Cecilia and many second and third century popes and martyrs, and seventh-century Byzantine paintings. A quarter of a mile beyond is very ancient S. Sebastiano Church under which are extensive catacombs. On a hill still beyond stands the famous Tomb of Cæcilia Metella, round, sixty-five feet in diameter, and in thirteenth century a tower of now vanished castle of the Gaetani. Beyond, the Way is bordered by ancient tombs on either side, and the old Latin pavement is the road-bed.

POPE PIUS X. IN THE BED IN WHICH HE DIED
(Picture by Cav. G. Felici)

PROCLAMATION OF POPE BENEDICT XV. (Cardinal della Chiesa) IN FRONT OF ST. PETER'S, ROME
(From a Painting)

Florence (Lat. *Florentia* Ital. *Firenze*), one of the most famous of Italian cities, is situated fifty miles from the sea, in the valley of the Arno, and is built on both sides of the river, but chiefly on the north. The outlying suburbs are singularly beautiful, and are surrounded by finely wooded hills, bright with gay villas and charming gardens. The old city itself is characterized by a somber grandness, and is full of fine buildings of historic and artistic interest.

The chief building in the city is the Duomo, or Cathedral, the foundations of which were laid with great solemnity in 1298; but not until 1887 was the completed façade uncovered. The church contains sculptures by Ghiberti, Luca della Robbia, Michaelangelo, Sansovino, Bandinelli, and other famous artists.

At the side of the cathedral springs up the light and elegant Campanile, detached, according to the custom of the times. In front is the Baptistery in the form of an octagon, supporting a cupola and lantern. Three bronze gates in basso rilievo are a great additional adornment of the Baptistery; the two by Ghiberti have been immortalized by Michaelangelo, with the name of Gates of Paradise.

The church of the Santa Croce, the Pantheon of Florence (built in 1294), contains monuments to Galileo, Dante, Macchiavelli, Michaelangelo, Alfieri and others.

Among the numerous palaces Il Bargello, long a prison, but now restored and opened as a national museum, is one of the most ancient.

The Palazzo Vecchio, the seat of the republican government from its establishment till its abolition in 1530, is an imposing mass of building. Adjoining the palace is the Piazza della Signoria, a square containing a fine collection of statues, and a noble arcade, the Loggia dei Lanzi.

The Uffizi Palace is a handsome building adjoining the Palazzo Vecchio, founded by Cosmo I. On the second floor is contained the famous Florentine gallery of art. A splendid apartment, known as the Tribuna, contains the rarest treasures of the collection.

The Pitti Palace, formerly the grand-ducal residence, boasts of a superb gallery of paintings. Behind it are the beautiful Boboli Gardens royal. The Strozzi Palace is a fine type of Tuscan architecture.

Florence is the city of Dante, Petrarch, Michaelangelo, Leonardo da Vinci, Boccaccio, Machiavelli, Galileo and many more of Italy's great men, and has a history of exceptional interest. It is an educational center, and carries on a trade in straw-plaiting and silk, sculptures, jewelry, and exquisite mosaics in rare stones.

Genoa (Ital. *Genova*), is situated on the Mediterranean gulf of the same name, at the foot of the Apennines, and is an important seaport. By rail it is eight hundred and one miles southeast of Paris, one hundred and seventy-one miles northeast of Marseilles, and ninety-three miles southwest of Milan. The slopes of the hills behind the city down to the shore are covered with buildings, terraced gardens, and orange and pomegranate groves; while the bleak summits of the loftier ranges, rising still farther back, are capped with strong forts, batteries, and outworks.

While strikingly grand as viewed from the sea, and so far worthy of being entitled "Genoa the Superb," is in reality built awkwardly on irregular rising ground, and consists of a labyrinth of narrow and intricate lanes. Of the palaces the most famous are the former palace of the doges, now the meeting-place of the senate; and the Doria, presented in 1529 to the great Genoese citizen Andrea Doria. Foremost among the churches stands the Cathedral, a grand twelfth-century pile in the Italian Gothic style. The marble Municipal Palace and the palace of the Dogana must also be mentioned.

To Columbus and Mazzini, Genoa's most famous sons, there are fine monuments.

It is the commercial outlet for a wide extent of country, of which the chief exports are rice, wine, olive-oil, silk goods, coral, paper, macaroni and marble. The principal industrial establishments of the city embrace ironworks, cotton and cloth mills, macaroni-works, tanneries, sugar-refineries, and vesta-match, filigree, and paper factories. Genoa benefited greatly by the opening of the St. Gothard Railway.

Milan (*me-lan'*, *mil'an*. Ital. *Milano*, *mee-lah'no*), the capital of Lombardy, is one of the largest and wealthiest cities of Italy. It was an important town under the Romans, was sacked by Attila in 452, totally destroyed by Frederic Barbarossa in 1162, and has figured prominently in more recent history.

The city, nearly circular in shape, is surrounded on three sides by walls, has a circuit of nearly eight miles, and is entered by fourteen gates.

Of the numerous churches the magnificent Gothic Cathedral is the most famous. It is second only to St. Peter's and Seville Cathedrals in size and was built principally during the period 1386-1500. After many delays and interruptions, work was resumed under Napoleon I. in 1805, but is not yet fully completed. The façade has recently been restored. It is cruciform, with double aisles and transept-aisles, separated by fifty-two pillars, each twelve feet in diameter, with niches crowded with statues. Interior four hundred and seventy-seven feet long, one hundred and eighty-three feet wide and one hundred and fifty-five feet high. It contains six thousand statues, a pavement of marble mosaic, vast granite monoliths, superb stained windows, many tombs of magnates, St. Carlo Borromeo's wooden crucifix and gorgeous tomb, and life-size silver statues of saints. The wonderful marble roof is studded with ninety-eight Gothic turrets, hundreds of pinnacles, and over two thousand life-size marble statues.

Of the other churches S. Maria delle Grazie (fifteenth century), partly the work of Bramante, was originally an abbey church, and the refectory in the rear contains Leonardo da Vinci's celebrated fresco of the Last Supper, which, in 1909, was successfully restored.

The Brera Palace (twelfth century), formerly a Jesuit college, has now a great gallery of paintings by Raphael, Da Vinci, Luini, Mantegna, the Bellinis, Titian, Vandyck, and others, an academy of art, a collection of casts, the magnificent monument of Gaston de Foix, the National Library, an archaeological museum, and an observatory.

The colonnade of Victor Emmanuel Gallery is the finest arcade in the world, and was built in 1865-1867 at a cost of one million six hundred thousand dollars. It is nine hundred and sixty feet long, forty-eight feet wide, ninety-four feet high, surrounded by handsome shops, richly frescoed, and adorned with statues of Raphael, Galileo, Dante, Cavour, and twenty other famous Italians. The octagon under the dome (one hundred and eighty feet high) is brilliantly lighted at night, when it forms a favorite promenade.

On the adjacent Piazza della Scala is Leonardo da Vinci's monument, and the massive Municipal Palace. The Arch of Peace, built of white marble, commemorates the exploits of Napoleon. The Della Scala Opera House is the second in size (after San Carlo at Naples) in Italy; and the Milan conservatoire is the most famous school of music in Europe.

Beccaria, Manzoni, the popes Pius IV. and Gregory XIV. were natives of Milan. The city now carries on a vast trade, much increased since the opening of the Gothard railroad, in raw silk, cotton, grain, rice, and cheese, and manufactures silks, velvets, gold, silver, and iron wares, railroad carriages, tobacco, porcelain, electrical apparatus, and is an active center of the printing trade.

Naples (Ital. *Napoli* *nā'pō-lē*).—The capital of the province of Naples has a lovely situation within the bend of Naples Bay, spreading from the foreshore back upon wooded hills and rising terraces, behind which lie the snow-clad Apennines. To the east lies the old town with its historic Via di Roma and narrow crowded thoroughfares; the newer portion to the west is more spaciouly laid out, and much has been done in recent years over the whole city to improve the sanitation and water supply. The National Museum, rich in Pompeii relics, the University, the National Library, the Cathedral and the four mediaeval gateways are the chief architectural features.

Large quantities of wine, olive-oil, chemicals, perfumery, etc., are exported, while woolen, silk, linen, glove and other factories carry on a good home trade.

Naples became incorporated in the kingdom of Italy in 1861 after the Bourbon dynasty had been swept away by Garibaldi.

RUINS OF POMPEII, ITALY

converted into a watering-place, "the pleasure haunt of paganism." The Romans erected many handsome public buildings, and their villas and theaters and baths were models of classic architecture and the scenes of unbounded luxury. The streets were narrow, provided with sidewalks, the walls often decorated with paintings, and the number of shops witnesses to the fashion and gaiety of the town. A terrible earthquake ruined it and drove out the inhabitants in A. D. 63; they returned and rebuilt it, however, in a tawdry and decadent style, and luxury and pleasure reigned as before till in A. D. 79 an eruption of Vesuvius buried everything in lava and ashes. The ruins were forgotten till accidentally discovered in 1748; since 1860 the city has been disinterred under the auspices of the Italian Government, and is now a favorite resort of tourists and archaeologists.

BEAUTIFUL SORRENTO, ITALY

HERCULANEUM, so called from the local worship of Hercules, was situated at the northwestern base of Mount Vesuvius, five miles east of Naples. In 63 A. D. it was seriously injured by a violent earthquake, and, in 79 A. D., buried, along with Pompeii and Stabia, by the memorable eruption of Vesuvius. In 1738 systematic excavations were commenced, the chief building explored being the theater, which has eighteen rows of stone seats, and could accommodate eight thousand persons; part of the Forum with a colonnade, two small temples, and a villa have also been discovered, and from these buildings many beautiful statues and remarkable paintings have been obtained.

In 1880 ruins of extensive baths were brought to light. Among the art-relics of Herculaneum, which far exceed in value and interest those found at Pompeii, are the statues of Eschines, Agrippina, the Sleeping Faun, the Six Actresses, Mercury, the group of the Satyr and the Goat, the busts of Plato, Scipio Africanus, Augustus, Seneca and Demosthenes—mostly now in the National Museum at Naples.

[522]

VIEW OF THE CAMPANILE AND PALACE, VENICE, FROM THE GRAND CANAL

Palermo (*pā-ler'mō*), capital of the province of Palermo, Sicily, a seaport on the Bay of Palermo, at the foot of Monte Pellegrino, is picturesquely situated in the midst of a beautiful and fertile valley called the Golden Shell. It is a handsome town, with many public buildings and nearly three hundred churches in Moorish and Byzantine architecture, a university, art school, museum, and libraries.

The industries are unimportant, but a busy trade is done with Britain, France and the United States, exporting fruits, wine, sulphur, etc., and importing textiles, coal, machinery and grain.

VISTA ON THE GRAND CANAL, VENICE

Sorrento (*sōr-ren'tō*), a town in the province of Naples, beautifully situated on the Bay of Naples, sixteen miles south-southeast of Naples, is a favorite watering-place; was noted in antiquity for its wines; and was the birthplace of Tasso.

Turin (Ital. Torino *tō-re'nō*).—Capital of the province of Turin, Italy, is situated on the Po, near its junction with the Dora Riparia. It is regularly built, with many squares and broad streets; is the seat of important trade for northern Italy; has varied manufactures; and is rapidly growing. It contains a university, cathedral, castle (Palazzo Madama), royal palace (with the royal armory and library), Palazzo Carignano (former seat of Parliament, now containing collections in natural history), palace of the Academy of Sciences (with a museum of antiquities and picture-gallery), monument of Cavour, etc. Victor Emmanuel and Cavour were born there.

[523]

ST. MARK'S CATHEDRAL AND CAMPANILE FROM

Turin was the ancient capital of the Taurini (whence the name); was captured by Hannibal in 218 B. C.; and has played an important part in the history of Europe. It figured prominently in the national movements of the nineteenth century, and was the capital of the kingdom of Italy 1859-1865.

Venice (*ven'is* Ital. *Venezia*), capital of the province of Venice, is situated in the Laguns (lagoons) in a bay of the Adriatic. Now Venice covers more than seventy-two islets, or rather mud-banks, its foundations being piles ("time-petrified") and stone. Through its two unequal portions winds for over two miles the Grand Canal, spanned by the Rialto Bridge (of stone) and two others (of iron), and into it flow one hundred and forty-six lesser canals, all bridged at frequent intervals. This vast network of waterway is patrolled by countless gondolas, while the pedestrian has his choice of innumerable lanes (calli). A railway viaduct, two and one-eighth miles long, connects Venice with the mainland.

The Piazza di San Marco, a square five hundred and seventy-six feet long and one hundred and eighty-five to two hundred and seventy feet wide, paved with gray trachyte and white Istrian marble, surrounded by time-stained marble palaces and St. Mark's Church is the picturesque center of Venetian life, especially at evening, when the bands play, and the cafés are crowded by thousands. Flocks of fat pigeons have been fed here by the city daily for seven hundred years. Palaces enclose three sides and the palace arcades are occupied by cafés and bric-à-brac shops.

Of its public buildings the following are the principal: the Ducal Palace, standing on the site of a former official residence of the Doges, which was burned in 976. Besides its painted ceilings and walls there are many pictures by the Italian masters; the Academy of Fine Arts whose twenty rooms are filled with some of the finest works of the Old Masters. Its principal churches are St. Marco, St. Giorgio Maggiore, and Sta. Maria della Salute, are all most highly decorated with frescoes, mosaics, and carvings, besides containing many world-famed pictures. The Campanile of St. Marco has been rebuilt since its fall, on July 14, 1902, after standing a thousand years. The palaces of the nobility on the Grand Canal and other canals contain priceless collections of pictures. The Arsenal contains many models of the old Venetian ships, armor, collections of weapons, and spoils of war.

Venice was noted for its textile manufactures as early as the fifteenth century; the principal manufactures at the present time are tapestry, brocades, Venetian laces, wood carving, artistic wrought-iron work, jewelry, bronzes, machinery, and clocks, and at Murano glass and glass beads.

Italian Seaports.—The chief seaports of Italy after Genoa, "the Superb," which is the busiest of all, are in order round the coast—Livorno, or Leghorn, the port of Tuscany and Florence; Civita Vecchia, the port of Latium; Naples, with Castellamare on the south side of its bay; Messina, on the Sicilian side of the Strait named after it, with one of the finest harbors in Europe, beside the eddy which was feared as the whirlpool of Charybdis in ancient times; Palermo, "la Felice," in the vale of the Golden Shell, on the north coast of Sicily; Catania, on the east coast of the island. Coming round to the Adriatic coasts we reach the port of Brindisi, a notable point in the most direct route from western Europe to Egypt and the East. The most important line of railway in Italy, that leads from the plain of Lombardy all down the east side of the peninsula, has the port of Brindisi as its objective point. Farther north in the middle of this coast is Ancona, the port of the Marches. Lastly we come to Chioggia and Venice, the city of canals and bridges, described above.

HISTORY OF ITALY

The ancient history of Italy will be found under **Rome**. The modern history begins with 476 A. D., when Odoacer, chief of the Herulians, a German tribe who had invaded the country, was proclaimed king of Italy. After a reign of twelve years he and his followers were overpowered by the Ostrogoths under Theodoric the Great. The Ostrogoths were in turn subdued by Byzantine troops, and Italy came under the dominion of the Eastern emperors, who ruled through an exarch residing at Ravenna.

THE LOMBARDS.—In 568 the Lombards (Langobardi), a German people originally from the Elbe, led by their king, Alboin, conquered the Po basin, and founded a kingdom which had its capital at Pavia. The kingdom of the Lombards included Upper Italy, Tuscany and Umbria, with some outlying districts. But on the northeast coast, the inhabitants of the lagoons still retained their independence, and in 697 elected their first duke, and founded the republic of Venice.

Ravenna, the seat of the exarch, with Romagna, Rimini, Ancona, and other maritime cities on the Adriatic, and almost all the coasts of Lower Italy, remained unconquered, together with Sicily and Rome. The slight dependence of this part of Italy on the court of Byzantium disappeared almost entirely in the beginning of the eighth century.

RISE OF PAPAL POWER.—The power of the pope, though at first recognized only as a kind of paternal authority of the bishop, grew steadily in these troubled times, especially in the struggle against the Lombard kings. In consideration of the aid expected against King Astolphus, Pope Stephen III. (754) not only anointed the king of the Franks, Pepin, but appointed him patrician or governor of Rome. In return Pepin presented the exarchate of Ravenna, with the five maritime cities, to the pope, thus laying the foundation of the temporal power of the Holy See. At the invitation of Pope Hadrian I. Charlemagne made war upon Desiderius, the king of the Lombards, took him prisoner in his capital, Pavia (774), and united his empire with the Frankish monarchy. Italy, with the exception of the duchy of Benevento and the republics of Lower Italy, thus became a constituent part of the Frankish monarchy, and the imperial crown of the West was bestowed on Charlemagne (800).

PORT OF THE HOLY ROMAN EMPIRE.—On the breaking up of the Carolingian empire, Italy became a separate kingdom, and the scene of strife between Teutonic invaders. At length Otto the Great was crowned emperor at Rome (961), and the year after became emperor of what was henceforth known as the Holy Roman Empire.

During the following centuries the towns and districts of North and Middle Italy gradually made themselves independent of the empire, and either formed themselves into separate republics or fell under the power of princes bearing various titles. A large part of Middle Italy at the same time was under the dominion of the popes, including the territory granted by Pepin, which was afterwards enlarged on several occasions.

VICISSITUDES OF SOUTHERN ITALY.—In southern Italy there were in the time of Charlemagne several independent states. In the ninth century this part of the peninsula, as well as Sicily, was overrun by Saracens, and in the eleventh century by Normans, who ultimately founded a kingdom which embraced both Lower Italy and Sicily, and which though it more than once changed masters, continued to exist as an undivided kingdom till 1282. In that year Sicily freed herself from the oppression of the then rulers, the French, by the aid of Pedro of Aragon, and remained separate till 1435. It was again separate from 1458 to 1504, when both divisions were united with the crown of Spain. With Spain the kingdom remained till 1713, when Naples and Sicily were divided by the Treaty of Utrecht, the former being given to Austria, the latter to the Duke of Savoy. In 1720 they were again united under Austria, but in 1734 were conquered from Austria and passed under the dominion of a separate dynasty belonging to the Spanish house of Bourbon.

MEDIAEVAL ITALY.—The history of mediæval Italy is much taken up with the party quarrels of the Guelphs and Ghibellines, and the quarrels and rivalries of the free republics of Middle and Upper Italy. In Tuscany the party of the Guelphs formed themselves into a league for the maintenance of the national freedom under the leadership of Florence; only Pisa and Arezzo remained attached to the Ghibelline cause. In Lombardy it was different, Milan, Novara, Lodi, Vercelli, Asti, and Cremona formed a Guelph confederacy, while the Ghibelline league comprised Verona, Mantua, Treviso, Parma, Piacenza, Reggio, Modena, and Brescia. Commercial rivalry impelled the maritime republics to mutual wars. At Meloria the Genoese annihilated (1284) the navy of the Pisans, and completed their dominion of the sea by a victory over the Venetians at Curzola (1298.)

INFLUENCES OF NAPOLEON.—Up till the time of the Napoleonic wars Italy remained subject to foreign domination, or split up into separate republics and principalities. The different states were banded to and fro by the changes and intrigues of war and diplomacy between Austria, Spain and the House of Savoy. During the career of Napoleon numerous changes took place in the map of Italy, and according to an act of the Congress of Vienna in 1815 the country was parcelled out among the following states:—(1) The Kingdom of Sardinia, consisting of the island of Sardinia, Savoy, and Piedmont, to which the Genoese territory was now added. (2) Austria, which received the provinces of Lombardy and Venetia, these having already been acquired by her either before or during the time of Napoleon. (3) The Duchy of Modena. (4) The Duchy of Parma. (5) The Grandduchy of Tuscany. (6) The Duchy of Lucca. (7) The States of the Church. (8) The Kingdom of the Two Sicilies. (9) The Republic of San Marino. (10) The Principality of Monaco.

STRUGGLE FOR INDEPENDENT NATIONALITY.—The desire for union and independence had long existed in the hearts of the Italian people, and the governments at Naples, Rome, Lombardy, and other centers of tyranny were in continual conflict with secret political societies. The leading spirit in these agitations in the second quarter was Giuseppe Mazzini.

The year of revolutions, 1848, opened with a street massacre by the Austrians in Milan, on January 2. In February, 1849, the French Republic was declared, and then in Italy the party of Mazzini was for a moment supreme, when Charles Albert abdicated in favor of his son Victor Emmanuel. Meanwhile the pope had been driven from Rome, and a Roman republic had been established under Mazzini and Garibaldi, the leader of the volunteer bands of Italian patriots. Rome was, however, captured by the French, who came to the aid of the pope (July, 1849), who resumed his power in April, 1850, under the protection of the French, and the old absolutism was restored. Similar attempts at revolution in Sicily and Naples were also crushed, but the secret societies of the patriots continued their operations.

ESTABLISHMENT OF THE PRESENT KINGDOM.—In 1859, after the war of the French and Sardinians against Austria, the latter power was compelled to cede Lombardy to Sardinia, and in the same year Romagna, Modena, Parma, and Piacenza were annexed to that kingdom, which was, however, obliged to cede the provinces of Savoy and Nice to France. In the south the Sicilians revolted, and supported by a thousand volunteers, with whom Garibaldi sailed from Genoa to their aid, overthrew the Bourbon government in Sicily. Garibaldi was proclaimed dictator in the name of Victor Emmanuel. In August Garibaldi crossed to Naples, defeated the royal army there, drove Francis II. to Gaeta, and entered the capital on the 7th September. Sardinia intervened and completed the revolution, when Garibaldi, handing over his conquests to the royal troops, retired to Caprera. A plebiscite confirmed the union with Piedmont, and Victor Emmanuel was proclaimed king of Italy, thus suddenly united almost in Mazzini's phrase, "from the Alps to the sea."

Only Venice and the Papal State now remained to be joined to the new kingdom. To obtain Venice, Italy joined Prussia in her war against Austria in 1866; and though the Italians were beaten on land at Custoza and on sea at Lissa, the triumph of Prussia was so complete that, by the peace of Prague, Venice was surrendered to Italy.

CONQUEST OF THE PAPAL STATES.—Rome was less easy to secure, because of the opposition of Roman Catholic opinion throughout Europe. French soldiers had protected the pope ever since 1849. In 1862 Garibaldi prepared to make a dash on the Papal States, but the government felt obliged to stop him. He was surrounded on Mount Aspromonte and taken prisoner. The withdrawal of the French troops from Rome (1864) was only procured by a promise to respect the Papal States, and by the transference of the capital from Turin to Florence.

In spite of the prohibition of the government, Garibaldi made another attempt on Rome in 1867; but Napoleon sent more French troops, and Garibaldi was defeated at Mentana, and had to withdraw. It was not till the fall of the French Empire in 1871 that the Italian government could act freely. As Pius IX. refused to give up the temporal power, the Italian government took the capital by force, and Pius withdrew to the Vatican, where he remained in voluntary confinement, a course followed by his successor, Leo XIII. (1878-1903), and by the present Pope, Pius X.

DIFFICULTIES OF CONSOLIDATION.—The consolidation of Italy, since the formation of the kingdom, has been slow and difficult owing to the great social differences between northern and southern Italy. The nation, too, has been ambitious to be recognized as one of the great powers of Europe, which involves a vast outlay in expenditure.

MONUMENT TO VICTOR EMMANUEL II., AT ROME. THIS MEMORIAL IS EMBLEMATIC OF ITALIAN UNITY AND WAS ERECTED AT AN EXPENDITURE OF \$10,000,000.—THE COSTLIEST MEMORIAL IN THE WORLD, AND POSSIBLY THE MOST MAGNIFICENT

In 1878 Victor Emmanuel died, and was succeeded by Humbert I.; Pius IX. being succeeded by Leo XIII. in the same year. Humbert's reign was marked by electoral reform and foreign colonization. Somaliland, along the northeast coast of Africa, was acquired between 1880 and 1890, and the dependency of Eritrea was founded in 1882. Italy's claims to a protectorate over Abyssinia led to war, which ended in an Italian defeat at Adowa, 1896, and the restoration of all land to Abyssinia by the treaty of Adis Abeba.

In 1883 Italy entered the Triple Alliance with Germany and Austria, largely owing to her distrust of France. In 1900 King Humbert was assassinated by an anarchist, and was succeeded by his only son, Victor Emmanuel III. At the beginning of the new century more friendly relations were secured with France, the Triple Alliance being still

maintained.

In the recent dissensions in Morocco (1906-1911) the government gave its support to France against Germany, while France acquiesced in Italian ambitions in Tripoli.

In September, 1911, war broke out between Italy and Turkey in connection with the rights and privileges of Italian subjects in Tripoli. In November of the same year the Italian government formally proclaimed the annexation of Tripoli and Cyrenaica, which was ratified by Turkey in the treaty of Ouchy in October, 1912. In the Balkan war (1912-1913) Italy's sympathies were naturally with the allies against her recent enemies; the royal family, moreover, is connected with that of Montenegro, Queen Elena of Italy being the daughter of King Nicholas of Montenegro.

In May, 1915, Italy renounced the Triple Alliance and entered the European war on the side of Great Britain and France. War was declared upon Austria-Hungary, and Italian forces dispatched to the Trentino. No formal declaration of war was made against Germany until Aug. 27, 1916, subsequently, Italy requisitioned the German steamers interned in Italian ports.

Early in 1917, an important war conference was held in Rome by representatives of the Entente allies.

Books of Reference.—Gregorovius's *History of the City of Rome in the Middle Ages*; Sismondi's *History of the Italian Republics*; Symonds' *Age of the Despots*; Burckhardt's *Civilization of the Renaissance in Italy*; Creighton's *History of the Papacy During the Reformation*; Ranke's *History of the Popes and his Latin and Teutonic Nations*; King's *A History of Italian Unity*; Stillman's *The Union of Italy*; Orsi's *Modern Italy*.

AUSTRIA-HUNGARY

Austria-Hungary belongs to the Germanic group of European states, because the dominant race is German. The Germans, however, do not form so much as a third of its varied population.

The usual name given to this great empire is Austria, a Latinized form of the German *Oesterreich*, meaning "Eastern Kingdom."

Since 1867 the empire is composed of a union of two states under one emperor, but administratively distinct. The one is Austria, or Cisleithania ("on this side the Leitha," a tributary of the Danube); the other, Hungary and the lands of the Hungarian crown, or Transleithania. The present article deals with the empire as a whole.

Location and Extent.—The Austrian dominions form geographically a compact territory with a circumference of about five thousand three hundred and fifty miles. The total area is greater than that of any other European state save Russia, and is nearly twice the area of Great Britain. The body of the empire lies in the interior of Europe, though it has about one thousand miles of sea-coast on the Adriatic. Austria borders on Italy, Switzerland, Bavaria, Saxony, Prussia, Russia, Roumania, Servia and Montenegro. With the sanction of the Berlin Congress of 1878, the small territory of Spizza, on the Montenegrin frontier and formerly Turkish, was incorporated with Dalmatia. The Turkish provinces of Bosnia and Herzegovina, thenceforward occupied and administered by Austria, were annexed by proclamation in 1908, and are now a part of the Austro-Hungarian monarchy.

Surface Features.—Austria-Hungary has been termed the "Empire of the Danube," since it lies for the most part within the basin of that river, and embraces the whole of its upper plain, which lies at an elevation of about three hundred feet above the sea. But it is also, next to Switzerland, by far the most mountainous land in Europe, no less than four-fifths of its area being more than six thousand feet above the sea-level.

On the west, Austria embraces nearly half of the great mass of the Alps between the plateau of Bavaria and the plain of Lombardy, the mountain and valley scenery of Tyrol and Salzburg resembling that of Switzerland on a lesser scale. The highest point of all here is the Ortler Spitze. An eastern spur of these heights, the Bakony Wäld, runs into Hungary, compelling the Danube to form a sharp east-to-south bend or knee in its course. In the northwest the Bohmer Wäld, the Erz, and Riesen Gebirge, the Sudetic Mountains, and the Moravian heights, enclose the high basin of the Upper Elbe in Bohemia. Farther east the wooded Carpathians, with the high outlying granite mass of the Tatra rise round the north of the Hungarian plain. These are continued by the Transylvanian Alps, which form the southeastern frontier, next Roumania, and which, with their northern branch, the Bihar Mountains, enclose the highland of Transylvania or Siebenbürgen on the east of the Hungarian plain.

Rivers and Lakes.—The Danube, entering Austria from Bavaria as a considerable river, and flowing southeastward over the plain of Hungary, grows to more than half a mile in width before it leaves the Hungarian border to descend by the gorge of the Iron Gates into its lower plains. It is the great highway of the kingdom, and the great outlet to the Black Sea on the east. (See further under *Danube*.)

The Save, the southern boundary river of Hungary, and the Drave join the Danube in the south from the Eastern Alps, up to the base of which both are navigable.

The Theiss, winding south through the plain of Hungary from its source in the Carpathians, is its great northern tributary, also navigable, and so full of fish as to be popularly described as "two-thirds water and one-third fish."

The March, from the Sudetic Mountains, corresponds to the Leitha from the south, forming part of the boundary between Austria and Hungary. The high basin of Bohemia, as before said, forms the upper basin of the Elbe, which escapes thence into Saxony.

The head stream of the Oder passes through Austrian Silesia; and the Vistula, draining like these to the Baltic, has its head streams in the northern slopes of the Carpathians in Galicia, the eastern portion of which province, however, drains to the Black Sea by the Dniester.

Lakes.—The two large lake basins of the country, which seem to be remnants of much more extensive inland waters, lie in Hungary between the Danube and the Drave. The larger, the Platten See or Balaton Lake, fifty miles long, shallow and stagnant, overflows into the surrounding marshes only in spring. The Lake of Constance, on the northern margin of the Alps, and Lake Garda, on the southern, touch upon Austrian territory.

Climate and Landscape.—Though from the variations of elevation the climates of different parts of Austria-Hungary are very diverse, three broad divisions may be recognized—(1) the climate of the countries which lie north of the Carpathian heights, in which the winters are long and cold, and in which the vine does not flourish; (2) that of the central plains and slopes of Hungary, favorable to wheat and vines; and (3) the Mediterranean climate of the Adriatic shores, which yield oil and silk.

Generally speaking, all the mountainous borders of Austria-Hungary are forest-covered, the woods occupying a third of the whole surface of those regions; the great plain of Hungary, on the other hand, is an open, treeless steppe.

Peoples and Races.—Austria-Hungary extends over the area in which many different races of Europe meet and interlace. Its population includes Germanic, Slavonic, Magyar, and Romanic elements, with their various tongues and dialects. The Germanic prevails in the Alpine regions and in the valley of the Danube in the west, and is widely mingled with the Slavonic and Magyar in the northern and central parts of the country.

The Slavs, the most numerous branch, forming about forty-five per cent of the whole population, appear in two divisions, a northern and southern; to the northern Slavs belong the Czechs of Bohemia, the Moravians and Slovaks, Poles and Ruthenians, or Russniaks of Galicia and Bukovina; to the southern Slavs belong the Slovenes, Croats and Servians, who occupy the southern border lands of Hungary, between the Drave and Save, westward to the peninsula of Istria and the Dalmatian coasts of the Adriatic. The Romanic element appears in the southeast on the Danube frontier, in southern Transylvania and eastern Bukovina (Wallachians), and in the southwest, where the Italians prevail in numbers on the borders of Venetia. The Magyars occupy the central plains of Hungary. The Szeklers of eastern Transylvania are a branch of the same family, by some believed to be the descendants of the once formidable Huns. Among minor elements of population, Jews are numerous in the northern provinces, Gypsies in Hungary, and Armenians in Transylvania and Galicia.

Religion and Education.—The state religion is the Roman Catholic, and this is professed by two-thirds of the population; a large proportion on the eastern borders next to Russia adhere to the Greek Church; Protestants are most numerous in Hungary and Transylvania, but form only a tenth part. General education, excepting in German Austria, where the compulsory system is enforced, is in a very backward state. There are, however, eleven universities in Austria-Hungary: Vienna, Prague (two), Budapest, Graz, Innsbruck, Cracow, Lemberg, Czernowitz, Klausenburg, and Agram.

Industries and National Resources.—The occupations of the country naturally divide themselves between the mining and pastoral industries of the mountains, and the agricultural and pastoral of the plains.

AGRICULTURE employs by far the largest share of the population; and the lower lands of Austria-Hungary are among the most fertile portions of Europe. Oats, rye, barley, wheat, and maize, are the commonest grains; flax and hemp are widely grown; wines and tobacco chiefly in Hungary; hops in Bohemia.

HORTICULTURE is carried to great perfection; and the orchards of Bohemia, Austria proper, Tyrol, and many parts of Hungary produce a profusion of fruit. Great quantities of cider are made in Upper Austria and Carinthia, and of plum-brandy in Slavonia. In Dalmatia, oranges, lemons and a few olives are produced.

In the production of wine, Austria is second only to France. With the exception of Galicia, Silesia, and Upper Austria, the vine is cultivated in all the provinces; but Hungary stands first, yielding not only the finest quality of wine, but four-fifths the total amount produced in the empire.

ANIMAL PRODUCTS.—The central Hungarian steppes are full of cattle, and those of the Alpine regions are an exceedingly fine breed. Merino sheep are carefully reared, especially in Moravia, Bohemia and Hungary. The river fisheries are important all over the land. The coast fisheries are of the utmost importance in rocky Dalmatia, where there is little cultivable land.

MINERALS.—Its mineral wealth is not surpassed in any European country; it is only lately that Russia has exceeded it in the production of gold and silver. Mining has been an important pursuit in Austria for centuries, and has been encouraged and promoted by the government. Gold is found chiefly in Hungary and Transylvania, and in smaller quantity in Salzburg and Tyrol. The same countries, along with Bohemia, yield silver. Quicksilver is found in Hungary, Transylvania, Styria, and Carinthia. Copper is found in many districts, tin in Bohemia alone. Zinc is mined chiefly in Cracow and Carinthia. The most productive lead mines are in Carinthia. Iron is found in almost every province of the monarchy, though Styria, Carinthia, and Carniola are chief seats. Antimony is confined to Hungary; arsenic, cobalt, sulphur, and graphite are produced in various parts of the empire.

The useful earths and building-stones are to be had in great profusion; likewise marble, gypsum, chalk, etc. Rock-salt exists in immense beds on both sides of the Carpathians, chiefly at Wieliczka and Bochnia in Galicia, and in the county of Marmaros in Hungary, and in Transylvania. Salt is also made at state salt-works by evaporating the water of salt-springs. There are inexhaustible deposits of coal. Austria has abundance of valuable mineral springs; about sixteen hundred are enumerated, some of them of European reputation, as the sulphur baths of Baden in Lower Austria, the saline waters of Carlsbad, Marienbad, Franzensbad, Teplitz, etc., all in Bohemia.

MANUFACTURES are most developed in the German portion of Bohemia, in the districts round Vienna, in Moravia and Austrian Silesia, and in Styria. The Magyar countries are far behind in this respect and Dalmatia and Bukovina have scarcely any manufactures at all. Weaving employs the largest number of hands; next in number come the metal, stone, glass and wood workers, then the workers in leather. Iron and steel goods are made in the Alps of Styria. Bohemia has a world-wide reputation for the manufacture of various kinds of glass, and the Tyrol has long been noted for the production of carved woodwork. Paper is made chiefly in Bohemia and in or near Vienna.

Cities and Towns.—The most important cities are the capital, Vienna, and eight other towns above one hundred thousand (Budapest, Trieste, Prague, Lemberg, Graz, Cracow, Brün, Szegedin), and twenty-two others above fifty thousand.

Vienna (Ger. *Wien*, pron. *Veen*), the capital of the Austrian Empire, and (jointly with Budapest) of the dual monarchy, is situated in Lower Austria, on the Danube Canal, a south branch of the Danube, here joined by the small river Wien.

CHIEF DIVISIONS.—Vienna proper consists of the Inner City and ten suburban districts surrounding it, formerly encircled by fortifications known as the Lines, which in 1892 were replaced by a boulevard, known as the Ringstrasse. The central point of the city is the Graben, a short street in the center of the inner city, a pleasant, well-built avenue, of greater width than usual for streets within the Ring. The Stadt is the fashionable quarter, where are the imperial palace, the residences of many of the nobility, the leading churches, museums, galleries, etc., and the most elegant shops.

PARLIAMENT BUILDINGS, VIENNA

THE RINGSTRASSE is perhaps not surpassed in its architectural magnificence by any other street in Europe. Among the most conspicuous of the public buildings upon it are the Bourse; the University, founded in 1365 and renowned throughout the world as a medical school, has a teaching staff of five hundred and some ten thousand students; the new Rathaus in the Gothic style, with a tower three hundred and twenty-eight feet high; the new Court Theater, the extensive and splendid Houses of Parliament; the Palace of Justice; the twin Imperial Museums of natural history and of art; the Imperial Opera House, sumptuous without and within; the Commercial Academy; the Palace of Archduke William; the Austrian Museum of Art and Industry, and the School for Art Industry.

Other institutions and buildings of interest are the Polytechnic Institute (with a Technological Museum); the Deaf and Dumb Asylum, founded by Maria Theresa; the splendid Public Hospital, the largest in Europe, and the Josephinum, a medical college founded in 1784, containing a large collection of anatomical models, etc.

MONUMENTS AND PARKS.—Of the public monuments the most noteworthy are the equestrian statues of Joseph II., in the Josephsplatz, those of Archduke Charles and Prince

Eugene, and that of Francis I. in the Hofgarten; the monument of Francis II., in the inner court of the Hofburg; the grand Maria Theresa monument; the Beethoven and the Schiller monuments; the Grill-parzer monument, etc. Of the many beautiful fountains the finest is that by Schwanthaler representing Austria, with the four rivers, Danube, Elbe, Vistula, and Po.

In the Volksgarten (bordering on the Ringstrasse) is the Temple of Theseus, modeled after that at Athens, and formerly containing Canova's marble Theseus and the Minotaur, which is now in the Imperial Museum of Art.

[530]

IMPERIAL ART MUSEUM, VIENNA

The great park of Vienna is the Prater (four thousand two hundred and seventy acres), extending for nearly four miles between the Donau Canal (a narrow arm of the Danube) and the main stream of the river. It was the site of the Great Exhibition of 1873, some of the buildings of which are now used for exhibitions, concerts, etc.

GRAND OPERA HOUSE, VIENNA

CHURCHES AND MUSEUMS.—The ecclesiastical center and the historic church of the city, is St. Stephen's Cathedral, adjacent to the Graben.

St. Stephen's is one of the noblest Gothic edifices in Europe. It was founded in 1147, but was burned in 1258. The present edifice was begun soon after, but the tower was not finished until 1433. It has recently undergone extensive restorations, both without and within. The tower is four hundred and forty-nine feet high. The interior is rich in sculpture and in monuments; and the carved stalls in the choir and the stone pulpit are specially to be noted.

The Capuchin Church contains the burial-vault of the imperial family. The Duke of Reichstadt, son of Napoleon I., lies here among his maternal ancestors.

In the Minorite Church there is a fine mosaic copy of Leonardo da Vinci's Last Supper; also the monument of the poet Metastasio.

[531]

THE IMPERIAL UNIVERSITY, VIENNA

The Augustine Church contains Canova's monument of the Archduchess Maria Christina, one of his noblest works; and in the Loretto Chapel are the silver urns that hold the hearts of many members of the imperial family.

The Church of Maria-Stiegen is a Gothic structure of the fourteenth century restored in 1820, and second in beauty only to St. Stephen's.

The elegant Karlskirche, or Church of St. Charles Borromeo, was erected in 1737 in fulfillment of a vow of Charles VI., when the plague raged in Vienna; it is in Italian style, with two slender spires, one hundred and forty-five feet high, near the porch.

The Imperial Museums now contain the Picture Gallery, arranged in schools. It is second only to the Dresden collection, is specially famous for its unrivaled examples of the Venetian school, Rubens, and Dürer, the Antiquities, comprising statuary, mosaics, inscriptions, etc., mostly Austrian; and the Ambras Collection, remarkable for its ancient armor, ivories and other carvings, etc.

INDUSTRIES.—Vienna is the chief industrial city in the empire. Machinery, scientific and musical instruments, artistic goods in bronze, leather, terracotta, porcelain, furniture, meerscham pipes, etc., are among the noted manufactures. As a center of trade and finance Vienna is no less important.

SCHÖNBRUNN, two miles from Vienna, is the seat of the magnificent Summer Palace of the Emperor, with extensive gardens and pleasure-grounds. From the marble colonnade of the Gloriette there is a fine view of the city and its suburbs. In the churchyard is Canova's monument of Baroness Pillersdorf.

Prague (Ger. *Prag*; Czech *Praha*), the capital of Bohemia, is situated at the base and on the slope of the hills which skirt both sides of the isleted Moldau, two hundred and seventeen miles from Vienna and one hundred and eighteen miles from Dresden. It offers a highly picturesque appearance from the beauty of its site, and the numerous lofty towers (more than seventy in number) which rise above the palaces, public buildings, and bridges of the city.

STATUE OF THE POET GRILLPARZER IN VIENNA

The royal Burg, on the Hradschin (two hundred and forty feet), the ancient residence of the Dukes of Bohemia, dates mainly now from the sixteenth and seventeenth centuries, and has four hundred and forty rooms. The neighboring Cathedral of St. Vitus is still unfinished, though building was resumed in 1867. Here are the splendid royal mausoleum and the shrine of St. John of Nepomuk, containing one and one-half tons of silver. Of forty-seven other Catholic Churches the chief are the domed Jesuit Church of

ROYAL PALACE, SCHÖNBRUNN, NEAR VIENNA

Of five bridges and two railway viaducts the most striking is the Karlsbrücke, five hundred and forty-three yards long, with gate-towers at either end, and statues of John of Nepomuk and other saints. Other noteworthy objects are the town hall, the Pulverturm, the new Czech Theatre, the old Jewish graveyard, the vast Czerni Palace and the Picture Gallery.

Prague has numerous public gardens and walks, with several noble parks close by. The manufactures include machinery, chemicals, leather, cotton, linen, gloves, beer and spirits.

SALZBURG, AUSTRIA, ONE OF THE MOST CHARMING TOWNS IN EUROPE, AND BIRTHPLACE OF MOZART AND HAYDN

Salzburg (*sälts'börg*), is in Upper Austria, twenty-eight miles from Linz, near the Bavarian frontier, one thousand three hundred and fifty feet above sea, under some fine hills on the Salzach. It is considered one of the most beautifully situated towns of Europe. At this point the river passes between two extensive but isolated masses of rock, one of which, the Mönchsberg (Monk's Hill), is crowned by the old citadel, dating originally from Roman times, but frequently rebuilt. This portion of the city contains the fine cathedral, with a white marble façade, and built in imitation of St. Peter's at Rome.

Its industries are confined chiefly to the manufacture of musical instruments, marble ornaments.

Budapest (*boo 'da-pest*; Hung. pron. *boo 'do-pest*) is the capital of Hungary, and the second city of the Austrian Empire, consisting of Buda on the west bank of the Danube, and Pest on the opposite bank.

[533]

ROYAL PALACE AND SUSPENSION BRIDGE, BUDAPEST

These twin cities are joined by five bridges: a chain bridge between the two commercial quarters; the Queen Elizabeth Bridge; the Franz Josef Bridge; the Margaret Bridge; and a railway bridge.

Buda, the older and formerly the more important of the two parts, stands on and around two hills. On one stands the royal castle, erected by Maria Theresa, and a fortress, rebuilt after being destroyed by the Hungarians in 1849. The palace chapel of St. Sigismund contains the Hungarian regalia and the hand of St. Stephen. On the Blocksberg, to the south of this hill, stands the old citadel, while on a lower mound to the north is the Turkish mosque, built over the tomb of the saint Sheik Gül-Babas.

Other prominent buildings are the palace of Archduke Joseph, the residence of the Premier, and of the Minister of National Defense, all standing in the Georgsplatz, where is also a monument to General Hentzi, and the thirteenth-century parish church of St. John.

Pest, the more modern city, stands upon a sandy plain with fine quays along the Danube. The main streets radiate from the Belvaros, which is enclosed by boulevards replacing the old city walls.

The most notable buildings are the Houses of Parliament and Palaces of Justice, the Academy of Sciences, containing valuable art collections, and a fine library, the Bourse, and the Redoute buildings, all on the Franz Josef Quay; the National Museum Theatre and University on Museum Street; the Industrial Art Museum, on Ulloi Street; the Royal Military Academy, in the Orczy Gardens; and the Leopold Basilica on Andrassy Street, one of the most handsome thoroughfares in Europe. There are a parish Church, a Greek Church, and a Jewish synagogue, and numerous parks, including one on Margaret Island in the Danube.

Both towns have valuable baths and sulphur springs, and the united cities form a large manufacturing center for machinery, spirits, and tobacco, cutlery and metal-work, glass, etc. The most important industry is milling, the trade in grain and flour being enormous, and there is considerable commerce in cattle and swine, honey, wax, bacon and hides, timber, and coal.

Salzkammergut (*Sahltskammergoot*), called the Austrian Switzerland, one of the most picturesque regions of Europe, lies in a district famous for its salt mines and brine springs, and hence known as the *Salzkammergut* ("Estate of the Salt Office"). The scenery combines in rare beauty the features of valley, mountain and lake. The highest peak is the Dachstein (nine thousand eight hundred and thirty feet); of its lakes the most famous are Hallstatt, Traun or Gmünden, Atter, St. Wolfgang, Aber, Mond, and Zell. The chief seats of the salt-works are Ischl, Hallstatt, and Ebensee.

THE GOTHIC POWDER TOWER,
PRAGUE

Other Important Places.—Trieste, the only great seaport of the Empire, is at the head of its gulf, on the North Adriatic. Pola, near the southern extremity of the peninsula of Istria, is the chief naval station of Austria.

Linz, on the Danube, is the seat of a considerable trade. Steyr, on the river Enns, is noted for its steel and iron industry.

Northern Styria is the center of the Austrian steel and iron industry, carried on more especially around Leoben. The capital, Graz, is a staple place for the manufacture of machinery, and one of the most agreeable of Austrian capitals, and a favorite place of residence.

Semmering, an Austrian Alpine pass (three thousand two hundred and nineteen feet) connecting Vienna with Graz, though the lowest of the Alpine passes, is traversed by the first railway (1854) to be carried across the Alps. The viaducts of the Semmering railway, some of them with several tiers of arches, are among the grandest works of engineering. The Semmering road begins at Gloggnitz, at an elevation of one thousand four hundred and twenty-six feet, and is carried along the face of abrupt precipices over bridges and through tunnels, affording views of the grandest and wildest scenery en route. This part of the road is twenty-five miles long, and cost more than seven millions of dollars.

Innsbruck, on the Inn, is the capital of the Tyrol, the most alpine part of the monarchy. Its principal rivers are the Inn, in the north, and the Etsch or Adige, in the south, the mountain range separating them being crossed by the Pass of the Brenner (five thousand eight hundred and sixty feet). On the Adige are Botzen, Trent, and Roveredo, the two last inhabited by Italians.

Reichenberg, in the north, is the center of the textile trades; Teplitz and Karlsbad, at the foot of the Erzgebirge, are famous watering-places; Pilsen, in the west, is noted for its beer. Königgrätz and Sadowa, where the battle was fought which decided the Seven Weeks' war in 1866, are in the east.

Brünn is the great center of the Austrian woolen trade; near it is the old state prison, Spielberg. Olmütz is a strong fortress on the March.

Lemberg and Cracow (the ancient capital of Poland) are the centers of trade, and the marts for the agricultural produce.

Bukowina is a small duchy at the head of the Sereth and other rivers falling into the Black Sea, with Czernowitz for its capital. About forty per cent of the inhabitants are Roumanians.

Pressburg, near the eastern frontier, is the old coronation city; Komorn, lower down on the Danube, is famous as a fortress; Szegedin, the chief town on the Theiss, was almost wholly destroyed by floods in the year 1878.

Fiume, at the head of the Quarnero Gulf, is the chief seaport of Hungary.

HISTORY OF AUSTRIA-HUNGARY

The empire of Austria arose from the smallest beginnings at the end of the eighth century. In 796 a Margraviate, called the Eastern Mark (i. e. "March" or frontier-land), was founded as an outpost of the empire of Charlemagne, in the country between the Enns and the Raab. The name Oesterreich appears first in 996.

Rise Under the Hapsburgs.—In 1156 the mark was raised to a duchy; and after coming into the possession of the House of Hapsburg in 1282, it began its period of growth toward a powerful state. The princes of that house extended their dominion by marriage, by purchase, and otherwise, over a number of other states, including the crowns of Bohemia and Hungary; and from 1438 down to the nineteenth century they held almost without interruption the throne of the German empire (nominally "the Holy Roman Empire")—the emperor being the most conspicuous, if not always the most powerful personage among the crowned heads of Europe.

Hapsburg Power Through Marriage.—The most pronounced rise of Austria and of the House of Hapsburg to historical eminence may be said to date from the reign of Maximilian I. (1493-1519). By marrying Mary, daughter of Charles the Bold (1477), he acquired possession of the Netherlands. Through the marriage of their son Philip with Joanna of Spain, the Houses of Austria and Spain were united.

Passes to Charles V. of Germany.—As Philip died in 1506, his elder son, the celebrated Charles V., became heir to the united monarchies, and was elected emperor of Germany in 1519. Thus, by a succession of fortunate marriages, the House of Hapsburg became the most powerful dynasty in the world.

Charles V., however, resigned all his German territories to his younger brother, Ferdinand I., who was thus the continuation of the Austrian branch of the line. Under Ferdinand the power of Austria greatly increased.

Division of the Empire.—In the partition of the inheritance that took place among Ferdinand's three sons, the eldest, Maximilian II., received the imperial crown along with Austria, Hungary and Bohemia; the second, Ferdinand, Tyrol and Upper Austria; the third, Charles, got Styria, Carinthia, etc. Maximilian II. was fond of peace, tolerant in religion, and a just ruler. He died in 1576; and of his five sons, the eldest, Rudolf II., became emperor.

Rudolf II. was negligent, leaving everything to his ministers and the Jesuits. His war with the Porte and Transylvania brought him little credit; and the Protestants of Bohemia, oppressed by the Jesuits, extorted from him a charter of religious liberty. In 1608 he was obliged to cede Hungary, and in 1611 Bohemia and Austria, to his brother Matthias.

Matthias, who became emperor in 1612, ceded Bohemia and Hungary to his cousin Ferdinand, son of the Archduke Charles of Styria, third son of Maximilian II. Matthias lived to see the outbreak of the Thirty Years' war, and died in 1619.

Ferdinand II. and the Thirty Years' War.—Bohemia refused to acknowledge his successor, Ferdinand II., to whom all the Austrian possessions had again reverted, and chose the Elector Palatine, Frederick V., the head of the Protestant Union, as king. This election gave the signal for the Thirty Years' war, in which the House of Austria took the lead, both as the champion of Catholicism, and the head of a power which aimed at universal domination in Germany and in the Christian world. The battle of Prague (1620) subjected Bohemia to Ferdinand, who formally set about rooting out Protestantism in that country and in Moravia. The emperor also succeeded in extorting acknowledgment of his sovereignty from the states of Austria; and here, too, Protestantism, which had made great progress since the time of Luther, was mercilessly suppressed.

Under Ferdinand's successor, the Emperor Ferdinand III. (1637-1657), Austria continued to be a theater of war; and at the peace of Westphalia (1648) had to cede Alsace to France.

Leopold I. and the War of the Spanish Succession.—Ferdinand III.'s son and successor, Leopold I., provoked the Hungarians to rebellion by his severity. The struggle between Leopold and Louis XIV. of France for the heirship to the king of Spain led to the War of the Spanish Succession, during which Leopold died, in 1705.

His eldest son and successor, the enlightened Joseph I., continued the war. He died childless in 1711, and was succeeded by his brother, Charles VI.

Hapsburg-Lorraine Line of Rulers.—With the death of Charles VI., in 1740, the male line of the Hapsburgs became extinct, and his daughter, Maria Theresa, who was married to the duke of Lorraine, assumed the government. For many years it had been the aim of Charles to secure the adhesion of the European powers to the Pragmatic Sanction, by which the possessions of the Austrian crown should pass to Maria Theresa. Those powers during his lifetime had promised to second his wishes, but he was no sooner in his grave than nearly all of them sought to profit by the accession of a female sovereign.

War of the Austrian Succession.—A great war arose, in which England alone sided with Maria. Frederick II. of Prussia conquered Silesia. The Elector of Bavaria was crowned king of Bohemia, and elected emperor as Charles VII. in 1742. The Hungarians, however, stood by their heroic queen, who was soon able to wage a fairly successful war against her numerous foes. At the death of the empress in 1780, the monarchy had an extent of two hundred and thirty-four thousand square miles, with a population of twenty-four millions. The administration of Maria Theresa was distinguished by unwonted unity and vigor, both in home and foreign affairs.

Her successor, Joseph II., was an active reformer in the spirit of the enlightened despotism of the times, though often rash and violent in his mode of proceeding. He was succeeded in the government by his brother, the grandduke of Tuscany—as German emperor, Leopold II.—who succeeded in pacifying the Netherlands and Hungary.

Austria and the French Revolution.—At the outbreak of the revolution in France the fate of Leopold's sister, Marie Antoinette, and her husband, Louis XVI. of France, led him to an alliance with Prussia against France; but he died in 1792 before the war broke out. War was declared by France on his son, Francis II., the same year, and by the treaty of Campo Formio, 1797, Austria lost Lombardy and the Netherlands, receiving in lieu the Venetian territory.

In 1795, at the second partition of Poland, it had been augmented by western Galicia.

Francis, in alliance with Russia, renewed the war with France in 1799, which was ended by the peace of Lunéville. It is needless to follow all the alterations of boundary that the Austrian dominions underwent during these wars. The most serious was at the peace of Vienna (1809), which cost Austria forty-two thousand square miles of territory. It was in 1804, when Napoleon had been proclaimed emperor of France, that Francis declared himself hereditary emperor of Austria as Francis I. On the establishment of the Confederation of the Rhine, he laid down the dignity of German emperor, which his family had held for nearly four hundred years.

The humiliating peace of Vienna was followed (1809) by the marriage of Napoleon with the Archduchess Maria Louisa, and in 1812 Austria figured as the ally of Napoleon in his great campaign against Russia, but she did not give much active assistance. In August of the following year Austria joined the grand alliance against France and the Austrian general, Schwarzenberg, was entrusted with the chief command of the allied forces, which at the battle of Leipzig and in the campaign of 1814 broke the power of Napoleon.

Congress of Vienna and Subsequent Period of Metternich.—The sacrifices and great services rendered by Austria in the gigantic struggle received full consideration at the treaty of Vienna (1815). As recompense for the loss of the Netherlands she received Venice and Dalmatia, which afforded an outlet for her foreign trade.

After that time Austria, under the diplomatic guidance of Prince Metternich, exerted a powerful influence in European politics generally, and more especially in the German Confederation, of which her emperor was president. The death of Francis I. in 1835 made little alteration in the policy of Austria; Ferdinand I. trod in his father's footsteps. The political alliance with Russia and Prussia was drawn closer by a personal conference of the emperor with Nicholas I. and Frederick-William III. at Teplitz in 1835.

Revolution of 1848.—In Austria, after the fall of Metternich from power, the revolutionary period of 1848-1849 was one of exceptional severity, the movement for constitutional freedom being complicated by the revival of the national spirit in Hungary, Italy and Bohemia. The time was everywhere ripe for revolt, when the fall of Louis-Philippe of France (February 24, 1848), gave the signal for the outbreak of the revolutionary elements all over Europe. Nowhere was the spirit of change stronger than in Vienna, which for many months became a scene of confusion.

The leaders of the popular movement in Vienna were in sympathy with Hungary, and when the imperial troops were ordered to suppress the national rising there, the citizens again rose in insurrection. In the meantime the military forces had withdrawn from the capital in order to prevent the Hungarians coming to the aid of the Viennese. Vienna was now besieged, and surrendered at the end of October, after a resistance of eight days.

Francis Joseph Emperor.—The reaction was triumphant, and the leaders of revolt severely punished; but as Ferdinand had not shown sufficient vigor in the great crisis, he was persuaded to abdicate, and Francis Joseph was declared emperor at the age of eighteen. Thus restored, the central authority had now to assert itself in Hungary and to complete the reconquest of northern Italy. With the surrender of Venice, which took place in August, the subjugation of Italy was complete.

Conquest of Hungary.—In Hungary, the Magyars, though the Germans and Slavs within the country itself were hostile to them, began the campaign of 1849 with decided success. But the government had already solicited the aid of Russia, whose armies, entering Transylvania and Hungary, added to the imperial cause the irresistible weight of numbers. Surrounded on every side by superior forces, the Hungarians were completely beaten. It was in vain that Kossuth transferred the dictatorship to General Görgei. Görgei, whether from treachery, as the other Magyar leaders maintained, or from necessity, as he himself averred, laid down his arms to the Russians at Vilagos (August 13).

[534]

[535]

[536]

The surrender of Komorn, in September, completed the subjugation of Hungary, which was treated as a conquered country.

The ten years which followed on the revolutionary troubles of 1848 were a period of reaction and of absolutism. A constitution which had been granted in 1849 was soon annulled. The policy pursued was one of strong centralization under a bureaucratic government, by which the claims of nationality and of freedom were alike disregarded. Liberty of the press and trial by jury were set aside. A rigorous system of police was maintained. The aim was to Germanize the whole empire and to crush the aspirations of both Slavs and Hungarians. The Church pronounced against national freedom, and supported the central authority and received great privileges by the Concordat of 1855. The result of all these proceedings was only to irritate the national feeling in Hungary, Italy and Bohemia.

Struggle Between Austria and Prussia.—On the confused arena of German politics, the struggle for ascendancy was kept up between Austria and Prussia. In 1850 the two powers were armed and ready to come to blows with reference to the affairs of Hesse-Cassel; but the bold and determined policy of Schwarzenberg prevailed, and by the humiliating arrangement of Olmütz, Prussia gave way. For a few years longer the preponderance of Austria in the German Confederation was secured.

The rule of Austria in Italy had always been unsatisfactory. From her own provinces in Venice and Lombardy she controlled the policy of the courts of central and southern Italy, and her influence tended invariably towards the suppression of national feeling and popular liberty.

Loss of Italian Possessions.—Sardinia was the only state that worthily represented the spirit of the Italian people. In the spring of 1859 it began to arm against Austrian supremacy. Austria demanded immediate disarmament, on pain of war; but Sardinia refused. Austria accordingly commenced hostilities by crossing the Ticino at the end of April, 1859. Sardinia having secured the aid of France, the Austrians were defeated at Magenta, Solferino and elsewhere, and their emperor was fain to seek an armistice from Napoleon. On July 11 the two potentates met at Villafranca, and concluded a peace, ceding Lombardy to Sardinia. Venice was all that still remained of the Italian possessions of Austria.

Austro-Prussian War.—The rivalry of Prussia and Austria for influence in the Germanic body of states dated from the rise of Prussia to be a leading power. The arrangement of Olmütz in 1850 had left a painful feeling of humiliation in the minds of the Prussian statesmen. The long rivalry was now to be brought to a decisive issue. In 1864 the combined Prussian and Austrian forces drove the Danes out of Sleswick-Holstein, but the two victors quarreled about the subsequent arrangements. War was declared, and in 1866 the Austrian armies in Bohemia were completely beaten by the Prussians, in a campaign of seven days, which closed with the great defeat of Königgrätz or Sadowa.

Period of Reforms.—After the great war of 1866 the history of Austria has been concerned chiefly with two important interests. In the first place, the government had to attempt an arrangement of the conflicting claims and rights of the peoples constituting the empire; in the second place, it has had to establish working relations with the great neighboring powers, Germany and Russia, and especially with the latter, on the Eastern Question.

Union of Austria and Hungary.—Hungary's claims to be recognized as a separate and distinct country were now, with great advantage, pressed forward. In 1867 its political rights were successful in being regarded as justified. This agreement was the famous Ausgleich, which has since been in force, and which has to a sufficient degree justified its adoption.

At the end of 1867 the first parliamentary ministry was formed. The Concordat was set aside. Education was freed from the control of the Church. Marriage was placed under the jurisdiction of the civil power. The press laws were relaxed. Finally, the Prussian system of military organization was introduced.

In the foreign affairs of Austria the chief aim was to arrive at a satisfactory understanding with Germany and Russia. After 1871 Bismarck arranged as between Germany, Austria and Russia a "Three Emperors' Alliance," which after the Russo-Turkish war of 1877-1878 was superseded by an alliance between Germany and Austria. This, by the inclusion of Italy, in 1882, became the Triple Alliance, which remained in full force down to the great European war of 1914.

During the Turkish revolution of 1908 Austria-Hungary annexed the Turkish provinces of Bosnia and Herzegovina, which the Treaty of Berlin had placed under Austro-Hungarian administration and military occupation in 1878.

Racial Difficulties Bearing Upon the European War, 1914-1917.—The multiplicity of races and their mutual jealousies rendered the task of the central government in Austria-Hungary both delicate and difficult. (See *Peoples and Races*.) Russia, as a Slav nation and a great power, had long exercised a predominant influence in the Balkans. Acting under this influence, Serbia secretly fostered aspirations in the direction of a Pan-Slavic propaganda with the apparent object of not only lessening Austrian influence in the Balkans but of breaking up, through internal defections, the Austrian Empire; from the accomplishment of this Serbia hoped to profit.

The Slavs are closely allied with Russia. The spread of Pan-Slavism constituted a menace to the very existence of the Dual Monarchy. The growth of German and Russian aspirations directed at expansion through the Balkan States had, therefore, a direct connection with the racial element of which Pan-Slavism was but one manifestation. As an evidence of the spread of the doctrine of "Pan-Slavic Unity" and of the bitterness of the racial antipathy which it engendered, the Austrian Archduke Francis Ferdinand and his wife, the Duchess of Hohenberg, were assassinated on June 28, 1914, at Sarajevo, the capital of the Austrian province of Bosnia. This act led directly to a declaration of war against Serbia on July 28th, followed by an Austrian invasion on July 30th. (Further causes and details of the war will be found under the [European War](#).)

[537]

SOVEREIGNS OF AUSTRIA-HUNGARY.

The following is a list of the Hapsburg rulers of Austria (Dukes and, from 1453, Archdukes of Austria, from 1526, also Kings of Hungary and Bohemia, from 1804 Emperors of Austria).

HOUSE OF HAPSBURG		
Albert I.		1282
*Rudolf II.		1282
*Rudolf III.		1293
Frederick (III. as rival Imperial claimant)		1307
*Leopold I.		1314
*Albert II.		1314
*Rudolf IV.		1358
*Albert III.		1365
*Albert IV.		1395
Albert V. (II. as Emperor, King of Hungary and Bohemia)		1404
*Ladislaus (King of Hungary and Bohemia)		1439
Fredrick V. (III. as Emperor)		1457
Maximilian I.		1493
Charles I. (V. as Emperor)		1519
Ferdinand I.		1520
Maximilian II.		1564
Rudolf V. (II. as Emperor)		1576
Matthias		1611
Ferdinand II.		1619
Ferdinand III.		1637
Leopold I.		1658
Joseph I.		1705
Charles II. (VI. as Emperor, III. of Hungary)		1711
*Maria Theresa.		1740
HOUSE OF HAPSBURG-LORRAINE		
Joseph II.		1780
Leopold II.		1790
Francis I. (II. as Emperor)		1792
*Ferdinand I. (V. of Hungary)		1835
*Francis Joseph I.		1848
Charles Francis Joseph		1916
* All except those marked with an asterisk likewise filled the throne of the Holy Roman Empire.		

THE RUSSIAN EMPIRE

Russia extends over eastern Europe, the whole of northern Asia, and a part of central Asia. This area, which is more than twice as large as Europe, and embraces one-sixth of the land-surface of the globe, has a population estimated at near one hundred and seventy-four millions. The Russian Empire consists of two well-defined parts: European Russia less than one-fourth of the whole but including nearly three-fourths of its population; and Asiatic Russia. The inhabitants of European Russia mostly belong to the Slavic branch of the human race.

The subdivisions are indicated in the following table:

GOVERNMENTS AND PROVINCES	AREA ENGLISH SQUARE MILES	POPULATION JAN. 1912
<i>European Russia:</i>		
Russia proper (50 Provs.)	1,862,524	122,550,700
Poland (10 Provs.)	49,018	12,776,100
Finland (Grand Duchy)	144,178	3,140,100
<i>Asiatic Russia:</i>		
Caucasia (11 Provs.)	180,703	12,288,100
Central Asia (10 Provs. and Regions)	1,325,530	10,727,000
Siberia (8 Provs. and Regions)	4,786,730	9,577,900
<i>Dependencies:</i>		
Khiva	26,028	800,000
Bokhara	78,524	1,500,000
Inland Lakes	317,468
	8,770,703	173,359,900

The various sections of European Russia differ greatly from one another, and have thereby given rise to certain *popular divisions* that are even better known generally than the strictly governmental provinces. These, with their distinguishing features, may be indicated as follows:

Great Russia (Muscovy).—All the central and northern regions to the Arctic shores. Chief towns: Moscow, Tula.

Except on its outskirts, this region presents everywhere the same aspects, wide, undulating plains covered with cornfields and dotted with small deciduous forests. The soil is of very moderate fertility in the north, but very fertile in the black earth belt of the south.

The Great Russians, numbering about fifty-five millions, are a vigorous and manly stock, usually rather light-haired, with blue or brown eyes, well-formed hands and feet, and a serious, kindly, but somewhat crafty, temperament, an inborn disposition for a wandering life, a very small regard to the value of time, and (especially in the peasantry) an extreme carelessness and slovenliness in all details of daily life.

Little Russia, or the Ukraine.—In the southwest. Chief town: Kieff.

The little Russians, over twenty-two millions in all, are settled in the Ukraine, which contains also in the borderlands some twelve per cent of Jews and six per cent of Poles. Their religion, like their love for music and poetry and their passion for country life, they share with their relations on the north and northeast, but in their developments of folklore and popular song, and in the more feminine character both of their physique and their intellect, they offer marked peculiarities. The Little Russians of the Dnieper basin are closely allied to the Ruthenians of Austria-Hungary.

The Ukraine comprises the governments of Tchernigoff, Kieff, Poltava, and part of Kharkoff, as well as Volhynia and Podolia on the spurs of the Carpathians, the richest and most populous parts of Russia. The soil is mostly a rich black earth, and assumes farther south the aspect of fine grassy steppes, or prairies, yielding rich crops of wheat.

PETER THE GREAT IN HOLLAND

The practical ambition of Peter the Great has probably never been surpassed by any sovereign in history. He began empire building with his travels in 1697. It was an unparalleled step for a young sovereign of twenty-five to take: to withdraw from his kingdom and journey abroad in order to learn the art of government. He was deeply interested in all branches of engineering, especially ship-building, which he first studied in Holland, working as an ordinary laborer in a dockyard. In 1698 Peter went to England to pursue his studies in the theory and practice of ship construction, which he did by visiting the dockyards of Woolwich, Chatham, and Deptford.

Eastern Russia.—Chief towns: Astrakhan, Kazan, Samara, Saratoff.

This part of the country is more elevated, but less effectively drained; and vast forests stretch from the upper Volga to the Urals.

The peoples are of Turkish origin and include the Tartars of Kazan; the Nogai Tartars of the Crimea in the south, and the Kirgiz on the Caspian. The Bashkirs, Chuvash, and others, in the Ural and Volga, are Tartarized Finns. The Kalmucks may be taken as the purest type of the Mongols; they are short, swarthy, broad-shouldered horsemen, black-haired and black-eyed, the eyes slanting down toward the flat nose.

South Russia.—Along the Black Sea. Chief towns: Odessa, Nikolayeff, Kisheneff.

This is chiefly the steppe-region, a belt more than two hundred miles wide along the littoral of the Black Sea and the Sea of Azov, and extends east through the region of the lower Volga and Ural till it meets the steppes of central Asia.

Here are gently undulating plains, clothed with rich grass and coated with a thick layer of fertile black earth.

In order to people Bessarabia after its conquest in the eighteenth century without depriving the Russian landowners of their serfs, several races of foreigners, as Moldavians, Wallachians (Vlachs), Servians, Greeks, Germans, and even Scotch, were freely invited to settle there. The population of the steppe-region exceeds thirteen millions.

Western Russia.—Including the Lithuanian provinces of Kovno, Vilna, and part of Grodno and Vitebsk, drained by the Niemen and the upper Dvina, and other portions of the former kingdom of Poland. Chief town: Vilna.

Here dwell the White Russians, who number about six millions, but they are more mixed with Poles, Jews and Little Russians. In all essentials they are merely "poor relations" of the Great Russian family, living, on the whole, in a more degraded and undeveloped state than any other Russians.

The Baltic Provinces.—The coast-lands of the Gulfs of Finland and Riga. Chief towns: Petrograd (St. Petersburg), Revel, Riga.

These are four Russian governments bordering on the Baltic—viz., Courland, Livonia, Esthonia, and Petrograd; or in a restricted sense, often the first three. The Baltic provinces once belonged to Sweden, except Courland, which was a dependency of Poland. They came into the possession of Russia partly in the beginning of the eighteenth century through the conquests of Peter the Great, partly under Alexander in 1809.

They occupy an undulating plain three hundred to eight hundred feet above the sea. Owing to the influence of the sea, this region enjoys a milder climate than the rest of Russia, and has maintained its excellent forests, chiefly of oak. The soil is of moderate fertility.

The more important non-Slavic peoples of this region are the Lithuanians (one million two hundred and fifty thousand) and Letts (one million five hundred thousand), chiefly in Kovno, Vilna, Grodno, Vitebsk, Courland, and S. Livonia. The Germans (one million five hundred thousand) are mainly descendants of the mediæval conquerors of the east Baltic coasts (Teutonic Knights, Knights of the Sword, and their followers) and of the agricultural colonists brought by Catherine II.

The Grand-Duchy of Finland.—In the northwest, next Scandinavia. Chief towns: Viborg, Helsingfors, Abo.

Finland was ceded by the Swedes in 1809, but still retains an independent administration. The interior, chiefly elevated plateau, consists largely of forest land, and is well supplied with lakes, many of which are united by canals. (See also under Europe.)

Education is highly advanced; Swedish and Finnish are the two languages of the country, Russian being practically unknown. There is an excellent Saga literature, and the beginnings of a modern literature. The Finns came under the dominion of the Swedes in the twelfth and thirteenth centuries, and were by them Christianized.

The Finnish race includes the Finns and the Karelians (two million four hundred thousand in Finland and three hundred and fifty thousand in European Russia); the Estonians, the people of Livonia, and other Western Finns in the Baltic Provinces (about one million); the Lapps and the Samoyedes in the far north; and the Volga Finns and the Ugrians (one million seven hundred and fifty thousand in European Russia and fifty thousand in Siberia). The Eastern Finns are being rapidly absorbed by the Russians; but the Western Finns warmly cherish their nationality.

[7] *Poland.*—In the west, next Germany. Chief town: Warsaw.

[7] Russian Poland was created into an independent kingdom by a joint edict of Germany and Austria-Hungary promulgated at Warsaw November 5, 1916. What its future status may be when the map of Europe is re-adjusted after the close of the European War is uncertain. For the present it is given a place among the independent nations.

Surface Features.—In general these embody the plains of European Russia and the lowlands and plains that extend to the north of the two great plateaus of Asia—the high plateau of East Asia and the western plateau of Persia and Armenia.

In European Russia, apart from the Caucasus, the Urals, and the Crimea, the only districts rising above one thousand feet are the Valdai hills at head of the Volga, the Timan range (over three thousand feet) in the Pechora basin, several heights in Russian Lapland (over one thousand five hundred), and some in Ukraine (over one thousand). The main divisions of its landscape are the treeless northern tundras, frozen in winter, grassy in summer; the rock and lake plateau of Finland; the immense central forest region, the cultivated parts of which supply Europe with grain; and the treeless steppes, which lie across the south of the plain from the saline borders of the northern Caspian toward Roumania on the west.

In Western Asia, the Caucasus is a single chain, so narrow that the same summits may be seen from the steppes which reach out from its northern base, and from the deep valleys which separate it from the heights of Armenia on the south. It has thus no great valleys in the direction of its length. The spurs descending from the main chain have deep gorges or troughs between. The culminating points are the Elbruz peak and Koshtan Tau, towards the western end of the chain; and Mount Kazbek, near the middle of it—all rising grandly from deep valleys.

The two most important passes over it were called in ancient times the Caucasian and Albanian gates. The former, now called the Dariel Pass, lies close to the eastern base of the Kazbek, and is a narrow cleft eight thousand two hundred and fifteen feet above the sea, available for carriages in the summer. The latter skirts the eastern termination of the range on the shores of the Caspian.

Over the whole chain vegetation is vigorous, but more luxuriant on the warmer southern slopes. The valleys opening in that direction are highly fertile, producing rice and cotton and silk, indigo, tobacco, and vines, and luxuriant woods. The northern slopes, exposed to the keen winds of the steppes, are characterized by bare pasture-lands and scattered firwoods.

All Western Siberia, nearest the Ural belt and European Russia, is a vast plain rising almost imperceptibly from the shores of the Arctic Ocean to the Kirghiz steppes and the base of the Altai mountains, which spring up from it like a wall, forming the northern buttress of the great tableland of Central Asia. The northern border of this plain is occupied by the marshy frozen tundras; the broad central belt is covered with forest, in the cleared spaces of which the soil is fertile and well suited to agriculture; all the southern portion of it is occupied by treeless steppes which reach away south towards the Caspian and Aral Seas.

The chief elevation in eastern Siberia is a chain of volcanic mountains running down the center of the peninsula of Kamchatka, some of whose peaks reach an elevation of seventeen thousand feet.

Rivers.—The chief rivers of Russia are the Niemen, the Dvina, the Lovat (continued by the Volkhov and the Neva), the Onega, the Dnieper, the Don and the Volga. By means of three lines of canals and canalized rivers, which connect the upper tributaries of the Volga with the streams that flow into Lakes Onega and Ladoga, the real mouth of the Volga has been transferred from the Caspian to the Gulf of Finland—Petrograd being the chief port of the Volga basin. The upper Volga and the upper Kama are also connected by canals with the North Dvina, and the Dnieper with the Düna, the Niemen, and the Vistula.

The rainfall of Russia is small, and as part of it falls in the shape of snow, the rivers are flooded in spring and in early summer. During the winter navigation of course ceases.

The Lake District.—This region lies in the north, and includes the governments of Petrograd, Novgorod, and Finland. The lakes in the district are well-nigh innumerable, the government of Novgorod alone containing more than three thousand lakes. The chief lakes of Finland are the Enare and Saima. Lake Ladoga is the largest lake in Russian Europe. For a third of the year its surface is frozen. The lake abounds with fish, and has a peculiar species of seal. The Neva flows from the lake into the Gulf of Finland.

Lake Onega is joined up to the White Sea by means of a series of lakes and streams.

Lake Ilmen is formed by the meeting of a number of rivers in a shallow depression; the average depth does not exceed thirty feet.

Lake Peipus, a part of which is called the Lake of Pskov, connects with the Gulf of Riga and with the Gulf of Finland. This lake also is very shallow and does not in any part exceed a depth of ninety feet.

Seaboard and Islands.—The ports on the Arctic coast are of little importance, since for nearly three-quarters of the year the outlets are frozen.

The White Sea with its port, Archangel, had lost much of the importance which it formerly possessed until brought into use during the European war in 1916-1917.

The Bering Sea and the coasts which border on the Sea of Japan lose much of their value because they are bleak and inhospitable. The great gulf which has the town of Vladivostok at its head is separated by miles of waste land from the interior, and the value of one of the most magnificent harbors in the world suffers much from this fact.

The sea which is of most importance to Russia is the Baltic, with its gulfs of Bothnia, Riga, and Finland. The chief Russian ports are to be found situated on its banks, and yet it can in no respect be regarded as a purely Russian sea.

The chief islands of the Baltic are: the Aland Archipelago, Dago, Oesel, Mohn, Hochland, and Kotlin, which contains the fortress of Cronstadt.

The Black Sea is becoming of more and more importance every year. The coast lands are being developed, and as the produce of the interior becomes greater so the importance of the Black Sea increases.

The Sea of Azov is the greatest inlet of this sea, but on the whole the importance of the Black Sea is lessened by the fact that it has so few good ports. The best are those of the peninsula of the Crimea, but these are too remote to be of any great importance.

Odessa is the second port of Russia and the greatest port of the Black Sea. Sebastopol is the great naval station, and Batum owes its importance to the fact that it is the port of the oil fields of the Caucasus.

The great inland sea of Russia, the Caspian, lacks importance chiefly because of the fact that it is an inland sea. It forms a good means of communication from the Transcaucasian provinces to Central Asia, and also between Central Asia and Persia; but although attempts have been made to unite it with the Black Sea, the fact that it lies seventy feet below sea-level prevents any real good from being done. It is, however, of vast importance as a fishing center, and supplies almost the whole of Russia with fish.

Climate.—In European Russia, except in the Baltic provinces, the south of the Crimea, and a narrow strip of land on the Black Sea, the climate is continental. A very cold winter, followed by a spring which sets in rapidly; a hot summer; an autumn cooler than spring; early frosts; and a small rainfall, chiefly during the summer and autumn, are the main features. The winter is cold everywhere. All the rivers are frozen over early in December, and they remain under ice for from one hundred days in the south to one hundred and sixty days in the north.

Products and Industries.—Excepting along the tundra belt on the Arctic coasts, in Finland, and in the saline steppes of the southeast, the cultivation of grain extends all over the great Russian plains.

Agriculture and Forests.—Rye and barley, oats and flax, are the chief crops in the north; wheat and vines, hemp and tobacco, the products of the center and the south. The south central governments, extending from the Upper Oka to the Ukraine on the Dnieper, may be regarded as the granary of Russia, for they produce a third of all its corn supply. Russia is thus most important of all as a grain-producing country.

Its forests extend over about forty per cent of the surface—pine and fir and birch in the north; oak and elm and lime in the center and south. The timber is sent down the

Niemen and Vistula to the Baltic, and to Archangel in the White Sea, in enormous quantities for the supply of western Europe. In Russia itself the larger portion of the houses are built of wood.

Live Stock and Fisheries.—The steppes of the south are the great pastoral lands of Russia, which possess more than forty-five millions of sheep, about twenty-five per cent yielding fine wool; twenty-five millions of cattle; and twenty millions of horses. Russian leather is famous. Swine are also kept in very large numbers all over the land; the export of bristles and brushes from Russia is very large. Reindeer form the wealth of the Lapps and Samoyeds in the north; camels of the Tartars in the southeastern steppes. Hunting the bear, wolf, fox, and deer, and trapping the sable in the forests for their skins, give employment to many. The Caspian, as well as the Sea of Azof, the Black Sea, and the great rivers, are rich in fish—tunny, sturgeon, salmon, anchovy. Most caviare is made at Astrakhan on the Caspian.

MINERALS.—The Obdorsk and Ural Mountains contain very great mineral riches, and, with the Altai range, are the principal seat of mining and metallic industry, producing gold, platinum, copper, iron of very superior quality, rock-salt, marble, and kaolin, or china-clay. Silver, gold, and lead are also obtained in large quantities from the mines in the Altai Mountains. Russia is now the largest producer of petroleum in the world. Great supplies of petroleum and naphtha are found in the Baku, Kerch, and Taman. An immense bed of coal, both steam and anthracite, and apparently inexhaustible, has been discovered in the basin of the Donetz (between the rivers Donetz and Dnieper). Other mineral products are: gold, platinum, pig iron, steel and rails, copper, quicksilver, salt and lead.

Education.—From the close of the sixteenth century onward till 1861, the greater portion of the inhabitants of Russia were serfs, belonging either to the crown or to private individuals. Under these circumstances it is not surprising that the masses of the people in Russia are without education. Finland is in advance of all other parts of the empire in respect of education; it possesses a separate system. Probably not more than ten per cent of the population have received instruction of any kind. The control and maintenance of primary schools is divided between the Ministry of Public Instruction and the Holy Synod. Conditions are, however, improving. Secondary institutions comprise gymnasia and good schools, but numbers and attendances are small. Special schools are increasing in number, especially in the European cities. There are universities at Kazan, Kieff, Kharkoff, Moscow, Odessa, Petrograd, Saratoff, Tomsk, Yurieff and Warsaw.

Religion.—The great bulk of the Russians—excepting a few White Russians professing the Union—belong to the Greek-Russian Church, or to one of its numberless sects of dissenters. The Poles and most of the Lithuanians are Roman Catholics; while the Finns, the Esthonians, and other Western Finns, the Swedes, and the Germans, are Protestant (about four millions).

Cities and Towns.—The largest towns in European Russia are Petrograd (2,018,596), Moscow (1,173,427), Warsaw (756,426), Riga (500,000), Odessa (449,673), Lodz (351,570), Kieff (329,000), Kharkoff (197,405), Vilna (162,633), Saratoff (143,431), Kazan (143,707), Ekaterinoslav (135,552), Rostoff (119,889), Astrakhan (121,580), Tula (109,279), and Kishineff (125,787); while Nijni Novgorod, Nikolaieff, Samara, and Minsk have populations between 90,000 and 95,000. In Asiatic Russia the Caucasus contains two towns with over 100,000 inhabitants: Baku (179,133), and Tiflis (160,645); Turkestan contains five large towns, Tashkend (156,000), Namangan, Samarkand, and Andijan; in Siberia Vladivostok has 90,000 (one-third Chinese), Tomsk, Irkutsk, and Ekaterinburg have each about 50,000 inhabitants. Nijni Novgorod, though small, is a station on the Trans-Siberian Railway, and has annually the largest fair in the world.

PALACE OF PETER THE GREAT, FOUNDER OF PETROGRAD

Petrograd, the splendid looking metropolis of the Russian Empire, is situated on the River Neva, near its entrance into the Gulf of Finland. The flat and low marshy ground upon which the city is built only recently emerged from the sea. The mighty Neva, which flows thirty-six miles from Lake Ladoga, subdivides into many branches, thus forming some one hundred islands.

VIEW OF PETROGRAD, RUSSIA, FROM THE ISLAND

Peter the Great began to build, in 1703, a small hut for himself, and some wooden hovels near the old fort. Now the quays form noble uninterrupted walks for several miles on each side of the broad, deep, rapid, and clear river. The climate is cold, damp, and changeable with a mean summer temperature of sixty-four degrees, mean winter temperature of fifteen degrees.

THE IMPERIAL WINTER PALACE, PETROGRAD

GENERAL ASPECT AND DIVISIONS.—The main body of the city stands on the mainland, on the left bank of the Neva; and a beautiful granite quay, with a long series of palaces and mansions, stretches for two and one-half miles. Only three permanent bridges cross the Neva; a bridge of boats is constructed each spring and removed each autumn.

The island Vasilievsky, between the Great and Little Nevas, contains the Stock Exchange, the Academy of Sciences, the University, the Philological Institute, the Academy of Arts, and various schools and colleges.

On the Petrogradsky Island, between the Little Neva and the Great Neva, stands the old fortress and prison of St. Peter and St. Paul, facing the Winter Palace, and containing the mint and the cathedral wherein the members of the imperial family are buried, also the arsenal.

THE CHIEF CENTER.—The main part of Petrograd has for its center the Old Admiralty. Its lofty gilded spire and the gilded dome of St. Isaac's Cathedral are among the first sights caught on approaching Petrograd by sea. Three streets radiate from it, the first of them, the famous Nevsky Prospect. The street architecture, with its huge brick houses covered with stucco and mostly painted gray, is rigid and military in aspect.

A spacious square, planted with trees, encloses the Old Admiralty on three sides. To the east of it rise the magnificent mass of the Winter Palace, the Hermitage Gallery of Art, and the semicircular buildings of the general staff.

In the Petrogradsky Square is the well-known statue of Peter I. on an immense block of Finland granite. The richly decorated cathedral of St. Isaac of Dalmatia, erected by Nicholas I., is an almost cubic building (three hundred and thirty feet long, two hundred and ninety feet broad, and three hundred and ten feet high), surmounted by one large and lofty and four small gilded domes.

In Nevsky Prospect are the Kazan Cathedral, the Public Library, the square of Catherine II., and the Anitchkoff Palace.

The aristocratic quarter lies between the line of the Nevsky Prospect and the River Neva.

The principal places of interest are: the Imperial or Winter Palace, the Hermitage, St. Isaac's Cathedral, the Kazan Cathedral, the Cathedral of Saints Peter and Paul, the Smolnoi Church, the Academy of Science, the House of Peter the Great; and, in the environs, Tsarskoe Selo, and Peterhof. For most travelers the greatest attraction in Petrograd is:

THE HERMITAGE.—It is connected with the Winter Palace, and was originally built by the Empress Catherine II. as a retreat. The present building, erected 1840-1852, by Klenze, is in the Greek style; it is a parallelogram, five hundred and twelve feet by three hundred and seventy-five feet, and for elegance of form as well as for beauty and costliness of materials employed has scarcely a rival in Europe.

Baedeker says: "The gallery of the Hermitage unquestionably stands among the first in Europe, not on account of its numbers (it boasts over one thousand nine hundred

pictures) or on account of its completeness—the art of the fourteenth and fifteenth centuries and the entire German school is lacking—but because it possesses such a number of masterpieces from the best periods of the various schools, that for the Spanish masters it ranks next to the Prado and the Louvre, in French masters it is surpassed only by the Louvre, in Flemish artists it stands on a level with the principal galleries, and it is the premier collection of the Dutch school, especially Rembrandt.”

CATHEDRAL OF ST. PETER AND ST. PAUL is in the fortress. It was erected 1714-1733, and was several times damaged by lightning. It has a beautiful spire, three hundred and two feet, the loftiest in Russia, except that at Reval. All sovereigns of Russia, including and since Peter the Great, except Peter II., who was interred at Moscow, lie buried here. The tomb of Peter the Great is near the south door. On the walls are many military trophies, keys of fortresses, flags, weapons, shields, etc. Nearby the Cathedral, in a brick building, is the boat of Peter the Great, preserved exactly as when it engaged the curious attention of Peter and so led to the creation of the Russian navy, of which it is facetiously called the “Grandfather.”

THE CATHEDRAL OF ST. ISAAC

The largest in Petrograd, was begun a century ago by Catherine II.; but was rebuilt in 1819-1858, by Montferrand, in the shape of a Greek cross. It is a simple but massive pile, with one hundred and twelve pillars in the four fronts. Those at the chief entrance are sixty feet high, and seven feet diameter—all round and highly polished granite monoliths from Finland. The dome, two hundred and ninety-six feet high, is surmounted by a golden cross and covered with copper, overlaid with gold. The Altar screen is of immense value and the entire edifice cost about fifty million dollars.

THE KAZAN CATHEDRAL is situated upon the Nevsky Prospect, and is approached by a circular colonnade, in imitation of St. Peter's at Rome. In front are fine statues of Smolenskoi and de Tolly. The interior corresponds in its magnificence and display to St. Isaac's. The special object of interest is the image of “Our Lady of Kazan,” which is covered with gems, the diamonds of the crown being of exceeding value. Around the cathedral are banners of important victories won by Russian arms and valor.

STATUE OF PETER THE GREAT, PETROGRAD

A very striking equestrian statue, erected by Catherine II. in 1782. It is of colossal size, by Falconet, and stands on a huge pedestal of granite, between St. Isaac's Church and the River Neva.

THE SMOLNOI CHURCH, at the eastern extremity of the city, is peculiarly rich in its effects, the entire structure and all its decorations being of the purest white. In connection with this church is a celebrated seminary for young ladies of noble birth.

[544]

CATHEDRAL AND MONASTERY OF ST. ALEXANDER NEVSKY is at the extreme east end of the Nevsky Prospect. The buildings cover much ground, and include twelve churches, the monastery, and gardens. The Cathedral, which is that of the Metropolitan, dating from 1790, is enriched with marble and agate and paintings—the altarpiece, the Annunciation, is by Raphael Mengs. On pillars opposite the altar are large portraits of Peter the Great and Catherine II. The shrine of St. Alexander Nevsky is of silver, about two thousand pounds of the metal being used in the whole; near the tomb are suspended the keys of Adrianople. The Monastery has a rich collection of jeweled mitres, gold brocaded vestments, and a mass of valuables, also many objects of interest, including the crown of St. Alexander and the bed on which Peter the Great died.

TSARSKOE SELO (*tsār'kō-ye sālō*), about fifteen miles south of St. Petersburg, contains a famous imperial palace, a favorite summer residence of the court. The Old Palace, begun in 1744, is richly decorated, the walls of one room are incrustured with amber, those of another with lapis lazuli. The magnificent marble gallery, two hundred and seventy feet long, connects the palace with a detached building. The park is full of caprices, such as a Chinese tower and village, an Egyptian pyramid, a Turkish kiosk, and the so-called doll-houses of the royal princesses.

MONUMENT TO NICHOLAS I., PETROGRAD

PETERHOF (*pā' ter-hōf*), near Oranienbaum, was begun in 1720, and built by Leblond for Peter the Great. A marine palace, with a long front, made to retain its original appearance, even its ancient yellow color has been continually renewed. It contains porcelain, malachite, tapestry, paintings of victories in the reign of Catherine II., and a collection of three hundred and sixty-eight portraits of women, painted by Count Rosali for the empress during a journey. All are in the national costume. The gardens are full of Neptunes and Tritons and good fountains. The well-wooded park has many curiosities:—Marii, a favorite resort of Peter the Great; the cottage of the Empress Catherine, brilliant with gold and mirrors; the Palais de Paille; the English Garden, with a ball-room.

THE HERMITAGE OR MUSEUM OF ART,
connected with the Winter Palace, is one of most famous in Europe and contains one thousand seven hundred paintings of all schools, among them being some by Murillo, Velasquez, Rubens, Van Dyke, Rembrandt, and Ruysdael.

Moscow (*mōs'kō*), the ancient capital of the Russian Empire, is one of the most magnificent and interesting cities of the world. The city is gathered in a semi-circle around the citadel, or Kremlin, which stands immediately upon the river bank. The streets are exceedingly irregular, though generally presenting the appearance of broad, well-paved avenues of a modern European city. The innumerable white, semi-oriental structures which greet the vision from every commanding point, with their unnumbered domes, spires, belfries, towers, and minarets, give to the city a magnificence of beauty scarcely to be found elsewhere in the great cities of Europe.

The **KREMLIN**.—The historic, as well as the most interesting part of the city, is within the walls of the Kremlin. It is associated with much that is held in deepest reverence by Russians—here the imperial power receives religious consecration, and the great bell of Ivan Veliky proclaims the new monarch. The Kremlin is an assemblage of many buildings, covering quite a section of the city—churches, palaces, arsenals, barracks, monuments—enclosed within a brick wall about a mile and a half in circuit. Upon the wall, which is sixty feet high, are twenty-one towers. The principal gate, the Gate of the Saviour, is on the east side. Over the passage of the gate is the venerated "Saviour" brought from Smolensk in 1685, and it is the custom for the passer-by to uncover his head.

The **TOWER OF IVAN VELIKY**, or John the Great, built in 1600, and three hundred and twenty feet high, contains thirty-four bells, the largest of which weighs sixty-four tons. When all these bells are rung together at Easter the effect is wonderful. At the foot of this tower is the vast Tsar Kolokol, or Monarch of Bells. It once hung in a tower (burned in 1737), weighs four hundred and forty-four thousand pounds, and is twenty feet high and sixty feet round. The value of the metal in the bell is nearly two million dollars.

Outside the Kremlin is the Chinese town, so-called, founded by Helena. Here are the Romanoff Palace, the Iberian Gate and Chapel, the University, the great Riding School, the Theaters, and the largest Bazaar in Russia, except that of Nijni-Novgorod.

The **CHURCH OF THE SAVIOUR**, is conspicuous near the river, a quarter mile southwest of the Kremlin. This beautiful church, by the architect Thon, was erected 1837-1883, at a cost of more than eight million dollars. It has five cupolas, the principal being about one hundred feet in diameter; many figures in relief of patriarchs and saints upon the facade. The interior is elaborately decorated with marble and gilding; upon the walls are tablets relating to military events, admirable paintings and sculpture.

The **CATHEDRAL OF ST. BASIL**, erected 1554-1557, is a remarkable edifice, consisting of eleven chapels with as many cupolas, all different, but wonderfully proportioned.

Vladivostok (*vlā-dē-vōs-tok*), capital (since 1903) of the vice-royalty of Eastern Asia, Siberia, is situated on the east shore of Amur Gulf. It has one of the finest harbors in the world, is a naval station, has an arsenal, and is a terminus of the Siberian railroad. It escaped attack during the Russo-Japanese war, but suffered from naval mutiny and unrest in the Russian disturbances of 1905-1906. Its climate is severe—the average annual temperature being only forty degrees Fahrenheit.

HISTORY OF RUSSIA

The races who peopled Russia were vaguely known to the ancients as Scythians, and their country as Sarmatia. It received its name from the *Ruotsi* or *Russ*, a tribe of Norse "rovers" or freebooters, who entered the country from the west about the eighth century. The name was later applied to the realm of Moscow, and modified to Russia.

Early Traditions.—Three brothers, Rurik, Sineus, and Truvor, Scandinavians, were invited, according to tradition, to come and protect territory in northwest Russia against the Finns and the Lithuanians. They and their successors built new forts, and took part in wars. The times of the "Sunny Vladimir" (980-1015) are the "heroic" epoch of early Russian history, and the feats and feasts of Vladimir and his "war companions" have been handed down through ages in legend and song; while his conversion to Christianity made him the hero of the annals written by monks.

Kieff the First Historic Center.—The first half of the eleventh century, during which Yaroslaff the Wise was grand prince at Kieff, was the most brilliant time for Kieff, then the "mother of the Russian towns." The great cathedral of St. Sophia was built at that time; schools were opened, and the first written Russian law was compiled. At his death (1054) Yaroslaff was ruling over most of the Russian towns.

The next two centuries of Russian history correspond to the feudal period of Western Europe. The Russians at that time were steadily extending their territory toward the east; they colonized the Oka, the Don, and the Finnish territories in the northeast.

Settlements in and about Moscow.—Owing to the gradual colonization of the basin of the Oka and the upper Volga, a new Russian territory had grown in importance in the meantime. Suzdal and Rostoff were its chief centers. It differed from southwest Russia in many respects. Its inhabitants were Great Russians—a hard-working race, less poetical and less gifted, but more active than their southern brethren. Besides, a good many of its inhabitants were peasants, settled on the lands of the boyars, and the cities themselves, being of recent creation—like Vladimir and, later on, Moscow—had not those traditions of independence which characterized Kieff or Novgorod. It was therefore easier for the authority of the prince to develop in the northeast, under the guidance of the church and the boyars.

The first Suzdal prince, Andrei Bogolubsky (1157-1174), was the first representative of that policy. He invited many Kieff boyars to settle in the land of Suzdal, and finally he took and burnt Kieff (1169).

The supremacy of Kieff was thus destroyed, and the land of Suzdal became the Ile-de-France of Russia—the nucleus of the future Russian state. The Suzdal land continued to grow and to enjoy prosperity during the next fifty years; economical, educational and literary progress were marked, and the Russian territory extended farther eastward.

Tartar Invasion.—But in the thirteenth century a great calamity visited Russia: a Mongol invasion suddenly put a stop to the development of the country and threw it into a totally new direction.

The Tartars first appeared in 1224, but their real conquest, under Batu Khan, was made in 1238 and the years immediately following. They subdued all the little Slav states except the republic of Novgorod. Latterly the rulers or princes of Moscow gained an ascendancy over the other states, and formed the nucleus of a central sovereignty.

Ivan III. Expels the Tartars.—The Tartar supremacy lasted till about 1480, when Ivan III. (1462-1505) succeeded in throwing off their yoke. He did much to consolidate and extend his kingdom, and conquered Novgorod in 1478. The reign of Ivan IV. "The Terrible" (1533-1584) is of great importance. In 1547 he assumed the title of Czar or Tsar, a variant of Cæsar. He conquered Kazan and Astrakhan, and the conquest of Siberia was begun in his reign. The epithet "terrible" has reference to his cruel persecution of the boyars, a kind of powerful baronial class.

House of Romanoff Established.—The accession of the still-reigning Romanoff house took place in 1613 when the States-General elected Michael Romanoff as ruler. Under Alexei (1645-1676), son of Michael, territory was won from Poland, the Cossacks of the Ukraine had to submit, and the power of Russia greatly increased. The reign of Alexei's son, Feodor III. (1676-1682), witnessed a war with Turkey, but was signalized by many important reforms. His imbecile brother Ivan was heir apparent, but Feodor willed the throne to his half-brother Peter, known in history as the Great, but Peter only obtained sole power in 1689 after overthrowing Sophia, Ivan's sister.

Under Peter the Great.—Peter the Great opened what may be called the European period of Russian history. (See Peter the Great.) He made his country a European state. He gave it a standing army, a navy on the Baltic, the embryo of a modern administration, a diplomatic service, and a financial organization. He made canals, encouraged industry, literature and art. The heart of Russia might remain at Moscow, but henceforth it was to have also a head that looked out westward from the Neva.

On the other hand, Peter increased taxation; his cruelty was oriental, and serfdom under him became more and more extensive.

He completed the conquest of Siberia, waged successful war with Charles XII. of Sweden, and by the treaty of Nystad in 1721 obtained Esthonia, Livonia, Ingermannland, and part of Finland, thus gaining a large maritime territory on the Baltic Sea. He founded Petrograd in 1703, and made it the capital in place of Moscow.

The Eighteenth Century in Russian history is a century of empresses. Peter the Great was succeeded by his wife, Catherine I. (1725-1727). A grandson of Peter the Great, Peter II., followed Catherine, reigning from 1727 to 1730. The next sovereign was Anna (1730-1740), whose reign was a period of German influence. Ivan VI. (1740-1741) was soon displaced by the anti-German party, and Elizabeth (1741-1762), daughter of Peter the Great, ascended the throne. A part of Finland was obtained by the treaty of Abo, and Russia took part against Prussia in the Seven Years' war. The first Russian university, that of Moscow, was founded in 1755.

The death of Elizabeth and the accession of Peter III., in 1762, greatly relieved the hard-pressed Frederick the Great, because Peter at once reversed the Russian policy.

Catherine II.—In July, 1762, he was deposed by his wife, Catherine II. (1762-1796), whose reign is of great importance in the progress of Russian power.

Under Catherine II. successful wars were carried on against Turkey, Persia, Sweden and Poland, which largely extended the limits of the empire. The acquisition of the Crimea, which gave Russia a firm footing on the Black Sea, and the first partition of Poland, were two most important steps toward the consolidation of the empire.

Napoleonic Period.—Catherine's son and successor, Paul I. (1796-1801), at first, through apprehension of the revolution in France, joined the Austrians and British against France, but soon after capriciously withdrew, and was about to commence war with Great Britain when his assassination took place. A palace conspiracy put an end to his reign and life.

His eldest son, Alexander I. (1801-1825), was at the outset desirous of peace, but was soon drawn into the vortex of the great struggle with France, in which he played a prominent part. (See Alexander I. and Napoleon.) The Holy Alliance and the example of conservative policy set by Austria exercised a pernicious influence on the later part of his reign; and the higher classes, who had looked for the introduction of at least a portion of the liberal institutions they had seen and admired in Western Europe, became so dissatisfied that, when his youngest brother, Nicholas I. (1825-1855), from whom they had nothing to hope, succeeded, they broke out into open rebellion, which was speedily crushed.

The Turkish Wars.—A full stop was now put to the intellectual development of Russia. Wars were declared with Persia and Turkey; and a long and deadly struggle commenced with the Caucasian mountaineers. The cession of Erivan and Nahitchevan by Persia, of the plain of the Kubañ, of the protectorate of the Danubian principalities, and of the free right of navigation of the Black Sea, the Dardanelles, and the Danube by Turkey only induced him to further prosecute his aim of conquering for Russia a free issue from the Black Sea in the Dardanelles.

In 1830 he converted Poland into a Russian province; in 1849 he aided Austria in quelling the insurrection of the Magyars; and in 1853 he began a war with Turkey which became the Crimean war, and in which, though the allies, Great Britain, France and Sardinia, did not obtain any decided success, Russia suffered immense loss.

Alexander II.—The accession of Nicholas' son Alexander II. (1855-1881)—one of whose first acts was the conclusion of the peace of Paris (1856), by which Russia lost the right of navigation on the Danube, a strip of territory to the north of that river, and the right of keeping a navy in the Black Sea—was the signal for a general revival of intellectual life in Russia. Obligatory military service for all Russians was introduced in 1874.

The insurrection in Poland was suppressed with extreme severity, and in 1868 the last relics of Polish independence disappeared in the thorough incorporation of the kingdom with the Russian Empire. The subjugation of the Caucasus was completed in 1859. Russian supremacy was established over all the states of Turkestan. In 1876 the administration of the Baltic provinces was merged in that of the central government; but the autonomy of Finland was respected and even extended.

Russo-Turkish War of 1877-1878.—In 1877 the Russo-Turkish war broke out. At first the Russian progress was rapid; but the energy displayed by the Turks during the summer, and the resolute defense of Plevna by Osman Pasha from July till December, checked the progress of the Russian army. During the winter, however, she crossed the Balkans, and her vanguard, reaching the Sea of Marmora, stood in view of Constantinople. The armistice signed in January, 1878, was followed in March by the treaty of San Stefano; and after diplomatic difficulties that seemed for a time not unlikely to issue in a war between Russia and Great Britain, a Congress of the Great Powers met at Berlin in June, 1878, and sanctioned the cession to Russia of the part of Bessarabia given to Moldavia in 1856, as also of the port of Batoum, of Kars, and of Ardahan.

Rise of Nihilism.—The growth of revolutionary discontent, leading to severe repressive measures, was marked by several murders of high officials, and on March 13, 1881, Alexander II. was killed by the revolutionists.

Reactionary Reign of Alexander III.—The reign of Alexander III. (1881-1894) was in the main characterized, in contrast to the liberal reforms of the last reign, by reactionary steps. Press freedom disappeared completely, and the universities were again suppressed. The Dumas, or representative assemblies, were deprived of all real independence in 1892. Alexander II.'s judicial reforms were partly undone, and the village communities, known as *mir*s, were brought under the more direct control of the land-owners. Russification was vigorously pursued in Poland and the Baltic provinces, and in 1890 the first steps toward the Russification of Finland were taken.

Alexander III. was not friendly to Germany, but avoided hostilities more serious than those of a tariff war, although the Bulgarian crisis of 1885 subjected their relations to

[545]

[546]

[547]

a severe strain. Russia and France now began to draw close together, but a Franco-Russian alliance was not officially admitted till 1896-1897, and its terms were secret. Merv was annexed in 1884, and the occupation of Penjdeh in 1885 nearly led to war with Great Britain. Alexander III. escaped several attempts at assassination, and died of disease in November, 1894.

Russia in the Far East.—After the reign of Alexander III. comes the fateful reign of his son, Nicholas II. In 1896 China granted permission to carry the Siberian railway (begun in 1889) through Manchuria to the far eastern Russian seaport of Vladivostok. In December, 1897, in consequence of the Germans having acquired Kiauchau from China, Russia occupied Port Arthur, and in the following year obtained from China a lease of it and some neighboring territory, although in 1895 she had taken the chief part in preventing Japan from taking it as a prize of victory. She shared in the international expedition to China in 1900, and herself suppressed risings in Manchuria with the utmost cruelty. Professing to be ready, and even anxious to evacuate Manchuria as soon as possible, she was preparing for virtual annexation; but her aggressive action in Korea aroused Japanese opposition, and led to the war of 1904-1905.

By treaty of Portsmouth (1905), which ended this war, Russia lost—for the time being at least—all influence in Manchuria, Korea, and China, and had to cede to Japan Port Arthur and its territory, and also southern Sakhalien.

The Imperial Duma.—In August, 1905, the czar issued a manifesto ordering the election of an Imperial Duma or Parliament. Count Witte was made president of a reorganized Council of Ministers, with instructions to form a reform cabinet. The general strike in Finland compelled the czar to restore Finland's constitution and liberties previously taken away in 1903. The bureaucrats attempted to discredit the reform movement by instigating attacks on Jews, and other outrages, especially in Odessa, where the authorities permitted appalling atrocities.

The Imperial Duma, promised in 1905, was duly elected early in 1906, and held its first meeting on May 10 at Petrograd. It was dissolved later in the year because too liberal, and a second one, elected in 1907, met the same fate. By various devices the government managed to get a less advanced Duma elected late in 1907, which did some useful work in 1908. An important Anglo-Russian convention was signed in 1907, the signatories agreeing to respect the territorial integrity of Tibet and the suzerainty of China. Other conventions were signed (1910) between Russia and Japan respecting the status of Manchuria, and between Russia and Germany in 1911.

After declaration of war by Austria against Serbia in 1914, Russia announced that her support would be given to Serbia. Consequently Russia joined France and Great Britain in the conflict that followed. (See further under European war.)

SOVEREIGNS OF RUSSIA

A long list of dukes and grand dukes preceded the actual foundation of the Russian monarchy under the rule of a czar.

HOUSE OF RURIK

This royal house includes the descendants of Rurik, Grand Prince of Novgorod, the reputed founder of the Russian royalty. It became extinct in the person of Feodor in 1598.

1462-1505.—Ivan (Basilovitch), or John III., took the title of czar, 1482; Grand Duke of Moscow.

1505-1533.—Vasali IV., or Basil V., obtained the title of Emperor from Maximilian I.; son of Ivan the Great.

1533-1584.—Ivan IV. the Terrible; a tyrant; son of Vasily IV.

1584-1598.—Feodor, or Theodor, I.; and his son Demetrius, murdered by his successor; son of Ivan the Terrible; was elected to the throne.

1598-1604.—Boris-Godonof, who usurped the throne.

1605.—Feodor II., murdered.

1606.—Vasali-Chouiski, or Zouinski.

1606-1610.—Demetrius the Impostor, a young Polish monk; pretended to be the murdered prince Demetrius; put to death.

1610-1613.—Ladislaus of Poland; retired 1613.

HOUSE OF ROMANOFF—MALE LINE

1613-1645.—Michael-Feodorovitch, of the house of Romanoff, descended from the czar Ivan Basilovitch; unanimously elected czar.

1645-1676.—Alexis, styled the father of his country; son of Michael Feodorovitch.

1676-1682.—Feodor, or Theodor, II.; eldest son of Emperor Alexis.

1682-1689.—Ivan V.; Peter I., Ivan was the half-brother of Peter the Great, in whose favor he resigned.

1689-1725.—Peter I., the Great, alone; took the title of emperor October, 1721; founded St. Petersburg; son of Alexis.

1725-1727.—Catherine I., his widow, at first the wife of a Swedish dragoon, said to have been killed on the day of marriage; was married to Peter the Great in 1707.

1727-1730.—Peter II., son of Alexis Petrovitch, and grandson of Peter the Great; deposed.

HOUSE OF ROMANOFF—FEMALE LINE

The reign of the next three sovereigns of Russia, Anne, Ivan VI., and Elizabeth, of the female line of Romanoff, formed a transition period, which came to an end with the accession of Peter III., of the house of Holstein-Gottorp.

1730-1740.—Anne, duchess of Courland, daughter of the czar Ivan.

1740-1741.—Ivan VI., an infant, grand-nephew to Peter the Great; immured in a dungeon for eighteen years; murdered in 1764.

1741-1762.—Elizabeth, daughter of Peter the Great reigned during Ivan's captivity.

HOUSE OF ROMANOFF-HOLSTEIN

All the subsequent emperors, without exception, connected themselves by marriage with German families. The wife and successor of Peter III., Catherine II., daughter of the Prince of Anhalt Zerbst, general in the Prussian army, left the crown to her only son Paul, who became the father of two emperors, Alexander I. and Nicholas, and the grandfather of a third, Alexander II. All these sovereigns married German princesses, creating intimate family alliances, among others, with the reigning houses of Württemberg, Baden, and Prussia.

1762.—Peter III., son of Anne and of Charles Frederick, duke of Holstein-Gottorp; deposed, and died soon after; supposed to have been murdered. Son of Charles Frederick, Duke of Holstein.

1762-1796.—Catherine II., a great sovereign; extended the Russian territories on all sides; died 1796; wife of Peter III.

1796-1801.—Paul, her son; murdered, 1801; son of Peter III.

1801-1825.—Alexander I., died 1825; son of Paul.

1825-1855.—Nicholas I.; died 1855; third son of Paul.

1855-1881.—Alexander II., assassinated at St. Petersburg, March, 1881; son of Nicholas I.

1881-1894.—Alexander III.; died 1894; married Mary (formerly Dagmar), princess of Denmark; son of Alexander II.

1894.—Nicholas II., married princess Alix of Hesse-Darmstadt; son of Alexander III.

SECONDARY POWERS OF EUROPE

BELGIUM (Fr. *Belgique*), one of the smaller European states, consists of the southern portion of the former kingdom of the Netherlands (as created by the Congress of Vienna), lying between France and Holland, the North Sea and Rhenish Prussia. Its greatest length from northwest to southeast is one hundred and seventy-three miles; and its greatest breadth from north to south one hundred and five miles.

Surface.—Belgium is, on the whole, a level, and even low lying, country; diversified, however, by hilly districts. The north and west of the country is low and level plain, like Holland, but the undulating forest plateaus of the Ardennes cover all the south and east, rising near the frontier in that direction to a height of two thousand feet above the sea. The Campine, composed of marshes, coal-bearing heaths, and irrigated lands, extends along the Dutch frontier. In Flanders dykes have been raised to check the encroachments of the sea.

Rivers.—The land slopes generally northward, and this is the direction of the numerous rivers and streams which water it. The great river of the country is the Meuse, which enters from France and passes out into Holland, being navigable all through Belgium. Its tributary, the Sambre, from France, which joins it on the left near the center of the country, is also a navigable stream; and the Ourthe, from the frontier of Luxemburg, which joins it lower down on the right, is navigable for half its course. The Escaut or Scheldt is the main river of the lowland in the west, and with its chief tributaries, the Lys on the left and the Rupel on the right, forms the waterway of the plain. These rivers and important tributaries, with canals make up one thousand four hundred miles of waterways.

Climate and Landscape.—Belgium has a climate that resembles that of England, opposite to it in the same latitude, but which is more excessive. The lowland of the north is foggy and damp, like Holland; the higher country south and east has clearer skies.

People.—Belgium is one of the most densely peopled countries of the world, only equaled in this respect by some parts of the plain of China, or of the valley of the Ganges in India, a result which is no doubt due to the combination of natural facilities for agriculture, manufactures, and trade, within its limits. The Flemings (of Teutonic stock) and Walloons (Celtic in origin) speak each their own dialects of Dutch and French; there are also numbers of Germans, Dutch, and French. East and West Flanders, Antwerp, and Limburg are almost wholly Flemish, and Brabant mainly so. The line between the Flemish and Walloon districts is sharply defined, the Flemish part being the richest and most cultivated. The French language has gained the ascendancy in educated society and in the offices of government, but the Flemish dialect prevails numerically in the proportion of nine to eight.

PALACE OF JUSTICE, OR PARLIAMENT BUILDINGS, AT BRUSSELS

Religion and Education.—Almost all the inhabitants of Belgium are Roman Catholics, though complete liberty and social equality is allowed to all religious confessions. Education is not yet generally diffused through the population, and was, until recently, almost entirely in the hands of the Roman Catholic clergy. There are state universities at Ghent and Liège, an independent liberal university at Brussels, and a Catholic university at Louvain.

Products and Industries.—About a fourth of all the inhabitants of Belgium are occupied in agriculture. Besides wheat, rye, and oats, hops are cultivated on a large scale, for export chiefly to France and England. Beetroot for the sugar factories, of which there are over a hundred in the country, is also a large crop, and flax is largely grown in the Flemish lowlands.

Two great coalfields extend across the central part of the country from west to east, along the valleys of the Meuse, but Belgium is essentially a manufacturing country, and it is largely dependent upon foreign supplies for its food. The mineral kingdom yields, beside coal, iron, zinc, lead and copper. The leading industries are collieries, quarries, and metal, glass, textiles, lace, flour and starch mills, sugar, distilleries, breweries, etc.

Government.—On the re-arrangement of European affairs, after the fall of Napoleon, Holland and Belgium were formed into the ill-assorted kingdom of the Netherlands under the family of Orange. The differences between the northern and southern divisions in race and language, in history, religion, and customs, proved too great.

In 1830 Belgium separated from Holland, and her neutrality was guaranteed by a conference of the European Powers, and by a further treaty, in 1839, signed by Austria,

France, Great Britain, Prussia, the Netherlands, and Russia.

The Belgium constitution of 1831 jointly vests the legislative power in the king, the Senate, and the Chamber of Representatives. The one hundred and ten senators (with the exception of twenty-seven elected by the provincial councils) and one hundred and sixty-six representatives are elected by the people, the former for eight, the latter for four years. Universal male suffrage, with plural voting up to three votes by property and educational qualifications, was introduced by the electoral law of 1894, proportional representation being secured by an act of 1900. There are in addition representative Provincial and Communal Councils.

Cities.—Brussels, population, 1910, with suburbs, 720,347 inhabitants, is the capital. Other towns with over 100,000 inhabitants are Antwerp, the chief port (320,650 exclusive of suburbs); Ghent (165,149), the center of the iron industry, which has also large cotton and flax spinning mills, and is the second port of importance after Antwerp, while its flower shows are famous; and Liège (174,768).

Its great harbor and commercial city is Antwerp, a strongly fortified city on the Scheldt. The other harbors are Ghent, Bruges, Ostend, Nieuport, Blankenberg, and Zeebrugge.

Antwerp, the principal fortress, and Liège and Namur, also fortified, were designed to afford military protection on the line of the Meuse against a violation of neutrality by either France or Germany.

Brussels (Fr. *Bruxelles*), the capital of Belgium, is situated in a fertile plain on the ditch-like Senne, twenty-seven miles south of Antwerp, and one hundred and ninety-three miles northeast of Paris. It has a circumference of about five miles, and is built partly on the side of a hill. Though some of the streets are so steep that they can be ascended only by means of stairs, Brussels may on the whole be pronounced one of the finest cities in Europe. [550]

The fashionable Upper Town, in which are the royal palace, public offices, and chief hotels, is much more healthy than the older Lower Town, which is greatly subject to fogs, owing to its intersection by canals and the Senne, although the stream now passes under an arched covering, which supports a boulevard. But the closely built old streets, with their numerous handsome buildings, formerly belonging to the Brabant nobility, and now occupied by successful merchants and traders, have a fine picturesque appearance, while some of the public edifices are unrivaled as specimens of Gothic architecture.

THE TOWN HALL, OR

Hôtel de Ville, in Grande Place, near the center of the city, 1402, is regarded as architecturally one of the finest structures in Europe. Its tower rises to the height of three hundred and seventy feet, and is placed somewhat to one side of the center of the building.

French is spoken in the upper division; but in the lower Flemish is the current language prevalent, and by many the Walloon dialect is spoken.

The walls which formerly surrounded Brussels have been removed, and their place is now occupied by pleasant boulevards extending all around the old town, and shaded by alleys of limes. The *Allée Verte*—a double avenue along the Scheldt Canal—forms a splendid promenade, and leads toward the country palace of Laeken, three miles north of the city.

Besides the fine park of thirty-two acres, in the Upper Town, ornamented with fountains and statues, and surrounded by the palace and other state buildings, Brussels has several other squares or places, among which are: the *Place Royale*, with its colossal monument of Godfrey of Bouillon; the *Grande Place*, in which is the hôtel-de-ville, a splendid Gothic structure of the fifteenth century, with a spire of open stonework three hundred and sixty-four feet high; and the *Place des Martyrs*, where a memorial has been erected to those who fell here in the revolution of 1830. The statue group of the Counts Egmont and Horn is notable. The cathedral of St. Gudule, dating from the thirteenth century, has many richly painted windows, and a pulpit considered to be the masterpiece of Verbruggen. The *Palais des Beaux Arts* contains the finest specimens of the Flemish school of painting and a sculpture gallery. The Royal Library adjoining has half a million volumes.

The *Palais de Justice*, built in 1866-1883 at a cost of more than ten million dollars, is one of the most magnificent buildings in Europe, dominating the lower town from the terraced slope of the upper town. The Royal Palace and the National Palace (for the chambers) are important buildings. Besides the University, there are schools of painting and sculpture, and a conservatory of music.

Brussels lace is particularly famous. Of the so-called Brussels carpets only a few are manufactured here, most of those of Belgian make being produced at Tournai. There are also manufactures of damask, linen, ribbons, embroidery, paper, jewelry, hats, soap, porcelain, carriages, etc.

History.—The history of Belgium as a kingdom can be said to date only from the time of the Congress of Vienna, in 1830, but its history as part of the Netherlands goes back to the time of the Romans.

The province of Belgica under the Romans passed under the sway of the Franks, and fell later to the Burgundian princes. On the death of Charles the Bold in 1477 it passed by marriage to the House of Hapsburg. The Spanish Netherlands remained (unlike the northern provinces which rebelled against Spain and became a Protestant republic) under the Spanish branch of the Hapsburgs, till in 1713 they were transferred to Austria. From 1794 Belgium was under French sway, but on the fall of Napoleon was united with the kingdom of the Netherlands. It rebelled in 1830, and since then, as above stated, has had a separate career as a limited constitutional monarchy. Again, in 1838, Holland and Belgium seemed on the brink of war, the cause being that Belgium had treated Lembourg and Luxembourg, which by the convention had been given to Holland, as if they were in reality a part of its territory. The crisis was terminated by the action of the Great Powers, who reduced Belgium's share of the national debt of the Netherlands, and partitioned the territories again in dispute. The tranquillity of the country was again disturbed by the revolutionary spirit of 1848, but after 1850 the constitutional party began that series of reforms which gained for Belgium the position of one of the freest countries in Europe. [551]

The question of Luxembourg threatened in 1861 the peace of Europe, and Belgium took part in the congress which prevented war breaking out. In 1870, on the outbreak of hostilities between France and Germany, Belgium, fearing invasion, mobilized her troops, but her neutrality was recognized and left inviolate by both parties. In 1885 the Congo Free State was acknowledged to be under the presidency of the king of Belgium, Leopold II., who had succeeded his father in 1865. The management of the colony gave cause for much bitterness, and led to a number of scandals. Leopold II. died in 1910, and was succeeded by his nephew, King Albert.

On August 2, 1914, the neutrality of Belgium was violated by the invasion of the German army at Visé, on the ground of *military necessity*. The German forces met with the most stubborn resistance from the valiant though numerically inferior Belgians at Liège and Namur. The country was subsequently completely overrun by German armies and subjected to military control. The Germans are at present (1917) in occupation of practically the whole country, where they are exercising civil government. The Belgian government has withdrawn temporarily to Havre, in France.

COLUMN OF THE CONGRESS, BRUSSELS

It is in Place du Congrès, two squares north from the Cathedral, was erected, 1850, in honor of the adoption, in 1831, of the present Constitution of Belgium. This is surmounted by a statue of the king. At the corners are allegorical figures of Liberty.

BULGARIA, a monarchy in the northeast part of the Balkan Peninsula between the Danube and the Balkans, was created a principality by the treaty of Berlin in 1878, greatly extended by the incorporation of East Rumelia in 1885, and declared an independent kingdom in 1908.

The net result of the wars of 1912-1913 was the increase of Bulgarian territory from 33,600 square miles to about 45,000. The population increased by about 500,000, was in 1910 4,337,513—over three-fourths Bulgarians, 465,000 Turks, 121,000 Gypsies, 80,000 Roumanians, 43,000 Greeks, and 40,000 Jews. The Bulgarians now extend into Macedonia, Bessarabia, etc., their total number being about 8,000,000.

Surface.—The north of Bulgaria is fertile plain and hilly country; the south is wooded and mountainous. The country has a fine waterway on the northern boundary, a Black Sea and Ægean seaboard, a mild climate, an agricultural country capable of much, an abundance of iron and some coal, free institutions, a peasantry possessing the solid qualities and persevering industry of northern races, and an assured economic development.

Productions.—The chief occupation of the people is agriculture, which engages about seventy per cent of the population. Cereals (wheat, maize, rye, barley, oats) are the principal crops, and rank first among the exports. Wine is produced everywhere, especially near the Black Sea. Roses are cultivated to a large extent, especially round Kazanlik and Karlavo and on the north side of the Rhodope Mountains for attar of roses, which is largely exported. Silkworms are bred in Philippopolis and Haskaro. Tobacco is carefully cultivated. There is little industry apart from domestic branches such as native cloth, carpets, trimmings and ribbons; but there is some brewing and distilling, leather work at Sumen, copper work, and pottery-making. The chief exports are grain, live stock, butter, eggs, hides, and attar of roses, sent chiefly to Turkey, France, Great Britain, and Austria-Hungary.

People.—Education has been very zealously and steadily promoted. Elementary education is compulsory. There are few technical schools. Sofia has a university.

The old Bulgarian Slavonic tongue is closely allied to the great Russian, but some Servian, Greek, Romanic, Albanian, and Turkish elements have found their way into the language.

The Orthodox Greek Church counts seventy-seven per cent as its adherents, Islam twenty-one and one-half per cent, and the others are Jews.

Government.—Bulgaria possesses one of the freest and most democratic constitutions in Europe, largely modeled on the lines of the Belgian constitution, except that there is no second chamber; and election of the *Sobranje* or National Assembly is by universal manhood suffrage, in the proportion of one member to every twenty thousand of the population. The executive power is vested in eight ministers nominated by the king. The monarchy, independent since 1908, is hereditary.

[552]

STREET SCENE IN SOFIA CAPITAL OF BULGARIA

This modern city is quite American in its appearance. It typifies to Bulgarians the progress of their nation, and is substantial and practical rather than pleasing. The streets are broad, straight, electrically lighted, and well paved, while the houses in the newer sections are modern structures of dignified architecture. While Sofia may not impress the visitor with its beauty, it does impress him with the fact that there is a good deal of common sense and business efficiency in this part of the Balkans.

Cities.—The chief towns of Bulgaria are Sofia, Philippopolis, Rustchuk and Varna. Varna and Burgas are ports on the Black Sea, Dedeagatch on the Ægean.

Sofia (*sofee 'a*), the capital since 1878 of Bulgaria, stands in a broad valley of the Balkans, on the railway from Constantinople to Belgrade and Vienna. It lies two hundred and six miles northwest of Belgrade, while Constantinople lies three hundred miles southeast. The valley at Sofia is an upland plateau, seventeen hundred feet above sea level, and near the heart of the peninsula, between the Vitosha Mountains and the main Balkan chain. At the end of almost every vista in the city are the distant hill masses, and fringing mountains.

The city early became important as a trade center, and probably would have developed into one of the great cities of Europe had not periodical destruction, almost continual dangers of war, and centuries of misrule held it back.

The rebuilding of Sofia began around 1880. It now has many creditable public buildings, electric lighting, an electric street railway and good sewerage and water systems.

It possesses the largest theater in southeastern Europe. The Bulgarian National Theater, with a competent corps of actors and singers, and offering the best in opera and drama, is a revelation of the strides that have been made in the Balkans since the Turks were driven back a brief generation ago. The theater is a handsome modern structure, planned with greater luxury of detail than most buildings in Sofia, and it cost four hundred thousand dollars.

Sofia has a public bathhouse which is one of the finest buildings of its kind in the world. It was built over a hot mineral spring, famed since the days of the Romans. This building, in Byzantine style, including in its interior appointments all of the most modern luxuries, cost the Bulgarians six hundred thousand dollars.

Their capital city is one of the peculiar prides of the hard-working, long-enduring, persistent Bulgarians. It typifies to them the promise of a great Bulgarian future, and they also look upon it as an earnest of their right to a respected place among the civilized nations of the West.

History.—The country now known as Bulgaria was originally inhabited by Thracians, and under the Romans formed the province of Mœsia. The Bulgars originally came from the banks of the Volga and crossed the Danube in the sixth century, and occupied the East. They overcame the Slavs, adopted their language and customs, and thus became a great Slav power; but by 1186 they had split up into three principalities, and from 1393 fell under the domination of the Turks. For close upon five hundred years the Bulgars were subject to the rule of the Ottoman Empire.

The first national awakening dates from the year 1762, when the monk Paysios, then at Mt. Athos, wrote the national chronicles, and revived memories of ancient glory. A new national literature began; the first Bulgarian school was opened in 1835, and was followed by others. A newspaper appeared in 1844. The Crimean war stirred up Slavonic sympathies which Russia sedulously and naturally cherished. In 1872 the Bulgarian Church and archbishop became again independent of the supremacy of the Greek patriarch.

In 1877 Russia, as guardian of the Slav races of Turkey, declared war. As a result of the war, Bulgaria was created by the treaty of Berlin. July 13, 1878, and in 1885 Eastern Rumelia was added to the newly created principality. In 1908 the country was declared to be an independent kingdom. In 1912-1913 a successful war of the Balkan League against Turkey increased the size of the kingdom, but in August, 1913, a short campaign against the remaining members of the League reduced the acquired area, and led to the surrender of about two thousand square miles to Roumania. In October, 1915, Bulgaria decided to participate in the European conflict, and sided with Germany, Austria-Hungary, and Turkey, and attacked Servia.

[553]

NEW QUARTERS OF COPENHAGEN, CAPITAL OF DENMARK

DENMARK, the smallest of the three Scandinavian kingdoms, consists of the peninsula of Jutland and a group of islands in the Baltic, and is bounded by the Skager-Rak, the Cattegat, the Sound, the Baltic, the Little Belt, Sleswick, and the North Sea.

Surface.—Except in Bornholm, the surface of Denmark is very similar in every part of the kingdom, and is uniformly low, its highest point (in southeast Jutland) being only five hundred and sixty-four feet above sea-level. The coast is generally flat, skirted by sand-dunes and shallow lagoons, especially along the west side. Both the continental portion and the islands are penetrated deeply; by numerous fiords, the largest being Limfiord, which intersects Jutland, and has isolated the northern extremity of the peninsula since 1825, when it broke through the narrow isthmus which had separated it from the North Sea.

Rivers.—Denmark has numerous streams but no large rivers; the principal is the Guden, which flows northeast through Jutland into the Cattegat. It is navigable for part of its course. Less important streams are the Holm, the Lonborg, and the Stor Aa. All the others are insignificant brooks and streamlets.

The lakes are very numerous but not large, none exceeding five and one-half miles in length by about one and one-half miles broad. There are numerous winding inlets of the sea that penetrate far into the land. The largest of these, the Limfiord in Jutland, entering from the Cattegat by a narrow channel, winds its way through to the North Sea, thus making northern Jutland really an island. In this fiord, which widens out greatly in the interior and gives off various minor fiords, there are one large and various small islands.

Climate.—The climate is milder, and the air more humid than in the more southern but continental Germany; it is not unhealthy, except in the low lying islands, such as Laaland, where the short and sudden heat of the summer occasions fevers.

Production and Industry.—The common products are wheat, rye, oats, barley, potatoes, cattle, horses, pigs, sheep, and butter. Its manufactures are, for the most part, for home consumption. Its chief exports are agricultural produce, including wheat and barley, bacon, hams, flour, butter, eggs, hides, skins, corn meal and oil cake, horses and cattle.

People.—The population of Denmark is composed almost exclusively of Danes, with a few thousand Jews and others. The Danes have regular features, fair or brownish hair, and blue eyes. They still maintain their reputation for seafaring skill and hospitable customs. They belong to the Scandinavian branch of the Teutonic peoples, and speak the Danish form of the old Norse, which was fixed in writing about the time of the Reformation.

Since the Reformation the Danes have been adherents of the Lutheran Church. Education is well advanced, and there are very few people in the country who can neither read nor write.

Government.—The present constitution of Denmark dates from 1866. The executive power is vested in the king and his ministers, the legislative in the *Rigsdag* or Diet, comprising the *Landsting* or Upper House, and the *Folkething* or House of Commons, partly nominated by the Crown, partly elected, indirectly, by the people.

Cities.—Copenhagen is the capital, population, 560,000; other chief towns are Odense, Aarhus, Aalborg, Randers and Horsens.

[554]

FREDERICK'S CHURCH, COPENHAGEN

Copenhagen (*kō-pen-hāgen*; Dan. *Kjøbenhavn*, "Merchants Haven"), the capital of Denmark, is situated on the low-lying eastern shore of the island of Zealand, in the Sound, which is here about twelve miles broad. The channel forms a fine and capacious harbor, which is bridged over so as to connect the isolated suburb of Christianshavn and the main part of the city at two points. Copenhagen is still defended by the old citadel of Frederikshavn and by forts on the seaward side.

Among its buildings of historical interest or intrinsic beauty, the Cathedral, rebuilt after the bombardment of 1807, possesses statues of Christ and the Apostles, and a baptismal font, designed and in part executed by Thorwaldsen. Frederick's Church, or Trinitatiskirke, is remarkable for its round tower, which is ascended by a spiral incline instead of steps.

The Royal Palace, called Christiansborg, was rebuilt between 1794 and 1828, but suffered greatly from fire in 1884. In the castle of Rosenborg are kept the regalia; the palace of Charlottenborg, is now used as an Academy of Arts. The University, founded by Christian I. in 1479, has a library of three hundred and fifty thousand volumes; the royal library contains six hundred thousand volumes.

Copenhagen is the center, not only of Danish, but of northern literature and art, and is the seat of the unrivaled Museum of Northern Antiquities, and the Thorwaldsen Museum.

The exports include grain, rape-seed, butter, cheese, beef, cattle, wool, etc.; and porcelain, pianos, clocks, watches, mathematical instruments, chemicals, sugar, beer, and tobacco are manufactured.

History.—The early history of Denmark is lost in the twilight of the Vikings and their valiant deeds. The Danes coming from the islands occupied the lands deserted by the Jutes and Angles who had in the fifth century migrated to England. The Danish monarchy was founded in 936 by Gorm the Old, whose son became a Christian. Waldemar I. (1157-1182) ruled Norway also, and conquered Mecklenburg and Pomerania; under his son Waldemar II. further conquests were made in German and Wendish lands, so that the Baltic became a Danish sea.

By the treaty of Calmar in 1397, Norway, Sweden and Denmark, already under one monarch, Margaret, were formally united into one state. In 1448 the Danes elected as king Christian of Oldenburg, a descendant of their royal family, who was also Duke of Sleswick and Holstein; and his line continued on the throne till 1863.

Sweden became independent in 1523. Lutheranism was introduced into Denmark in 1527. In 1815 Denmark had to cede Norway to Sweden; and in 1848 the Germanic peoples of the duchies Sleswick and Holstein rebelled against Denmark. For the time the Danes succeeded in retaining the duchies, but the controversy, renewed in 1863, led to the defeat of the Danes by Austria and Prussia (1864), followed by the incorporation of the duchies in the Germanic Confederation, and, after the Austro-Prussian war of 1866, in Prussia.

Denmark although reduced to the narrow limits of the islands and Jutland, has greatly prospered, in spite of the spread of socialistic opinions, and political dissensions. Christian IX. died January 29, 1906, and was succeeded by his son, Frederick VIII.

GREECE is a maritime kingdom in the southeast of Europe. The country is composed of a continental portion, almost separated into two parts by the gulfs of Patras and Lepanto on the west, and the gulf of Ægina on the east, the archipelago of the Ægean Sea and the Ionian Islands, and is divided into twenty-six provinces, called nomarchies.

Surface.—The mountain range which cuts off the peninsula from the continent of Europe is an extension of the Balkans. From it run chains from north-northwest to south-southeast, which form the skeleton of Greece. The western boundary of Thessaly is formed by Pindus, the main offshoot of the Balkans. The eastern boundary is also marked not only by the sea but by important mountains derived from the Balkan system. These are Olympus, Ossa, Mavrovuni, and Pelion. Othrys, a branch of Pindus, forms the south boundary of Thessaly. This branch is continued in the celebrated mountains Parmanuss and Helicon, forms the land of Attica, and reappears as the islands of Ceos, Cythnos, Seriphos, and Siphnos. The Peloponnesus, "the island of Pelops," or by its modern name the Morea, is connected with northern Greece merely by the narrow isthmus of Corinth, now pierced by a canal; its highest point is Taygetus.

Rivers.—The rivers of Greece are unimportant. The chief in the Peloponnesus are the Eurotas (Basilipotamo), the Alpheus (Ruphia), draining Arcadia and Elis; and the Peneus draining Elis.

Climate.—The climate is generally mild, in the parts exposed to the sea equable and genial, but in the mountainous regions of the interior sometimes very cold. None of the mountains attain the limit of perpetual snow; but several retain it far into the summer. During summer rain scarcely ever falls, and the channels of the minor streams become dry. Toward the end of harvest rain becomes frequent and copious, and fevers become common.

Production and Industry.—The most important of the fruit trees are the olive, the vine, orange, lemon, fig, almond, citron, pomegranate, and currant grape. Its exports consist of currants, figs, olive oil, wine, cognac, tobacco, hides, lead, iron ore, magnesium, emery, marble, and sponges.

People.—The Greeks called themselves *Hellenes*, and the inhabitants of Italy called them *Graeci*. The modern Greeks are by no means pure-bred descendants of the ancient Greeks. Indeed, it has been maintained that from the seventh century A. D. there have been no pure Greeks in the country, but only Slavs. It is, however, pretty certain that the two and one-quarter million of modern inhabitants are descendants of the three races that occupied the soil at the time of the Roman conquest. They speak the modern Greek tongue, which is a greatly modified form of the old.

Education is free and compulsory, maintained by local taxation supplemented by State grants. Secondary education is somewhat backward, particularly in the country districts. There is a university of some repute at Athens, which is largely attended by Turks.

Government.—According to the constitution, which was framed by an assembly in 1864, the executive power is vested in the king and his responsible ministry; the legislature is a single chamber of deputies called the *Boulé*, elected by the people, and meets at Athens.

Cities.—Athens is the capital, population 167,500; the towns next in size are Patras, Piræus, and Trikhala, all above 20,000; and there are eight others between 20,000 and 10,000.

Athens, in the southeast of Attica, occupies an extensive area round the site and remains of the classical city, four and one-half miles from its harbor of Piræus, on the Gulf of Ægina. The city, which takes its name from Athena, "goddess of science, arts, and arms," and its own patron divinity, was originally built on the Acropolis, a conspicuous limestone rock rising three hundred and twenty feet above the Attic plain, and afterwards spread out on the plain below. The Acropolis became the citadel and subsequently the site of a group of beautiful temples of the time of Pericles (fifth century, B. C.).

The ruins of the Parthenon, the Erechtheum, the temple of Nike Apteros ("Wingless Victory"), and the Propylæa, still remain to testify to the former glory of the Acropolis. Of the other ancient buildings the most notable are the Theseum (also of the Periclean period, and still almost perfect), and the fragments of the vast temple of Zeus (begun in 530 B. C. and finished by the Roman Emperor Hadrian), with the theater of Dionysus and other structures.

Not far from the Acropolis rose the hill Lycabettus (nine hundred and eleven feet), and the hillocks or ridges of the Pnyx and the Areopagus or Mars Hill. At a greater distance the plain is bounded by Hymettus (three thousand three hundred and sixty-eight feet), Pentelicus (three thousand six hundred and forty-one feet), and other ranges.

Athens was fabled to have been founded by the hero Cecrops. The most brilliant period of its history was when, after the Persian wars (fifth century, B. C.), Athens took the lead among the Greek states, became powerful by land and sea, was adorned by Pericles with most glorious buildings, and brought Greek literature and Greek philosophy to their highest development. Its decline dates from the disastrous conclusion of the Peloponnesian war (403 B. C.). It was plundered and ruined by Sulla in 87 B. C.; and neither under Byzantine nor Turkish rule ever attained any prosperity. In the days of its glory Athens had some one hundred thousand free inhabitants and twice as many slaves; when after the liberation of Greece Athens was made the capital of the new kingdom (1834), it was a wretched village of a few hundred houses. Since then it has had a prosperous growth, looks like a well built German town, with a fine royal palace, a marble stadium (restored), a university with over one hundred and fifty professors and lecturers and two thousand five hundred students, and a good deal of miscellaneous trade by the way of the Piræus. It is connected by rail also with Corinth, and the Athens-Larissa line brings Greece into railway communication with the rest of Europe. (See also under *ancient Greece*.)

History.—Modern Greece threw off the Turkish yoke in 1830 and was declared an independent kingdom and the boundaries were defined. The liberated state was at first governed by a national assembly, but the president, Count Capo D'Istria, assumed autocratic powers, and sedition culminated in his assassination. Subsequently the Powers offered the throne to Prince Leopold (afterwards king of Belgium), but the offer was refused. The crown was then given to Otho, son of Louis I. of Bavaria. Throughout his reign discontent was rife, and an insurrection in 1862 resulted in the deposit of the king. George, second son of the king of Denmark, was then chosen king, and the Ionian Islands, at that time under British protection, were ceded unconditionally to the kingdom.

By the Berlin Congress of 1878, Greece was promised a modification of her frontier, and in 1881 a readjustment was accepted. The adjustment proved distasteful to the Hellenes, who demanded Crete, and hostilities commenced with Turkey in 1897. The war was short-lived, and was disastrous to the Greeks, and on the intervention of the Powers an armistice was concluded. By the Treaty of Constantinople Greece was compelled to pay an indemnity to submit to the readjustment of her frontier, and to accept the control of the Powers in financial affairs.

In October, 1912, war broke out in the Balkan states, known as the Balkan war. The permanent effects on the Greek frontier, owing to the Hellenic participation in the victory over the Turks, are not yet determinable, but all deeply affect Greek interests, and depend on the decision of the Great Powers. George, King of the Hellenes, was assassinated in Salonica by a maniac named Schinas in March, 1913. The perpetrator of the crime subsequently committed suicide. The present ruler is the late king's eldest son, who was proclaimed King Constantine XII.

HOLLAND, the popular name of a country officially described as "Netherland," or "The Netherlands," is bounded by the North Sea, Prussia, and Belgium. Its greatest length, north to south, is one hundred and ninety-five miles, and its greatest breadth one hundred and ten miles. Luxemburg was, till 1890, connected with Holland.

Surface.—Almost the whole country is flat and low; the parts of it nearest the coasts are even below the sea level, the waters being kept out by dykes, which are maintained at a great annual cost. One stretch of fifty miles of the coast is guarded by a triple wall of piles driven into the soil, filled up between, and buttressed by huge granite blocks brought from Norway. If it were not for these dykes controlling the rivers and keeping out the sea, nearly half the country would be under water.

All the southern part of Holland belongs to the alluvial delta lands formed at the mouths of the Rhine (the chief branch of which is named the Waal), the Meuse or Maas, and Scheldt. Opening out into broad, shallow estuaries these river mouths form a number of islands, of which Walcheren and Beveland, Schouwen and Tholen, Over Flakkee, Voorne and Beyerland, are the largest.

Toward the north appears the great shallow gulf called the Zuider Zee (or South Sea, in distinction from the North Sea outside), which was formed in the thirteenth century by the bursting of the sea into a former inland lake called "Flevo" by the Roman geographers. Outside of it a chain of islands marks the line of the former coast of the mainland.

Rivers and Canals.—Besides the natural channels formed by the estuaries of the Scheldt, the Maas, and the delta branches of the Rhine (the Waal, Lek, Old Rhine, Vecht, Amstel, and Yssel) the country is intersected in all directions by *Grachts* or larger canals, lined with rows of trees, joining river to river. No country in the world has such a network of waterways; ships' masts, and windmills with large sails, pumping the water from the smaller drainage canals, are seen everywhere.

Climate.—The general climate of Holland resembles that of England, opposite to it, in its rapid variations; but it is more humid. Dense sea fogs from the North Sea drive over it. In most winters the rivers and canals are frozen over for two or three months, when even women skate to market; in summer the thermometer rises to eighty or ninety degrees in the shade.

Production and Industry.—Cattle rearing, butter and cheese making, are the most general industries of the country, for the grazing meadows are far more extensive than the corn lands. In the latter, rye, barley, wheat, and potatoes, are the chief crops. Flax, and beet-root for sugar, chicory, and tobacco, are grown also to a considerable extent.

The principal manufactures are shipping, bricks, margarine, cocoa, chocolate, linen, rich damasks, cottons, woollens, cigars and other manufactured tobacco, candles,

confectionery, earthenware and pottery, glass bottles and ware, chemical and pharmaceutical products, matches, perfumery, sugar, bicycles and automobiles, boots and shoes, starch, potato flour, engines, metal substances, works of art in gold and silver, incandescent lamps, machinery, motors, paper, printing, oils, beer, "geneva" and other liqueurs. Diamond cutting employs numerous hands in Amsterdam.

People.—Of the population, the greater part (seventy per cent) is formed by the Dutch or Batavians, the descendants of the Germanic tribe of the Batavi who occupied the delta of the Rhine in the time of the Roman conquest of the land. Frieslanders (fourteen per cent), descendants of the ancient Frisii, occupy the northern borders of the country, where the peasantry still speak a language closely allied to Anglo-Saxon; the Flemings (thirteen per cent) occupy the southeastern borders of the country. Their language differs little from the Dutch; but the dialects throughout the country are very numerous.

The majority, about three-fifths, belong to the several Reformed Churches; and the remainder are Roman Catholics, with about one hundred and seven thousand Jews.

Private state-aided primary instruction is encouraged rather than public, though the latter is provided, if required, by local taxation. Secondary schools for working classes are numerous, well equipped and attended. The principal universities are at Amsterdam, Groningen, Leiden, Utrecht.

Government.—The government of Holland is a limited constitutional monarchy. The crown is the executive power; legislation is vested in the States-general of two chambers, called the First Chamber and the Second Chamber. A State Council of fourteen members appointed by the Sovereign is consulted on all legislative and on most executive matters.

There is no state religion, but the state gives financial support to the different churches.

Cities.—The capital is The Hague with a population of 300,000; other cities exceeding 50,000 in 1913 were as follows: Amsterdam, 591,053; Rotterdam, 454,135; Utrecht, 123,457; Groningen, 78,670; Haarlem, 70,907; Arnhem, 64,760; Leiden, 59,297; Nymegen, 58,679; Tilburg, 54,216.

The Hague (Dutch *Gravenhagen*, "the count's hedge"), the capital of the Netherlands is two miles from the North Sea and fifteen miles northwest of Rotterdam. It is intersected by canals and shady avenues of lime-trees, and has many fine public buildings and private houses.

In the center of it is the Vijver, or Fish-pond, to the south of which stands the old castle of the Counts of Holland, where the Dutch parliament sits. In its gatetower the brothers De Witt were confined till dragged thence and torn to pieces by the populace (1672). The picture-gallery has a splendid collection of works by native painters (Paul Potter's "Bull" and Rembrandt's "Lesson in Anatomy"); and there are the royal library with five hundred thousand volumes; the municipal and other museums; the Town-House, and the royal palaces.

Among the numerous statues are those of William I. (two in number), William II., Spinoza, Bernhard of Saxe-Weimar, and the monument which commemorates the deliverance from the French. Close to the town is the beautiful pleasure-park called "The Wood" (*Bosch*), in which stands a royal residence with the magnificent so-called "Orange Hall."

[557]

PALACE IN THE WOOD,
or Dutch "White House," is situated in a fine old plantation of beeches and oaks, round ornamental lakes and islands, is a plain building with a grand interior; and has Jordaen's masterpiece, the Apotheosis of Prince Fred. Henry.

The great Peace Conference was held here in 1899; The Hague is the seat of the resulting arbitration courts, for which Mr. Carnegie provided permanent buildings of great architectural beauty. Industries are iron-founding, copper and lead smelting, cannon-founding, printing, furniture and carriage making, and the manufacture of gold and silver lace.

NATIONAL MONUMENT IN THE WILLEMS-PARK, THE HAGUE

History.—The ancient inhabitants of the country, the Batavians and the Frisians, became subjects or allies of the Romans in the first century A. D., and so remained till in the fourth century their territories were overrun by the Saxons and Salian Franks.

At the end of the eighth century the Low Countries submitted to Charlemagne, and various feudal dukedoms, counties, and lordships were gradually established (the countship of Holland in the eleventh century). In 1384 the earldom of Flanders passed to the Dukes of Burgundy, and Philip the Good (c. 1450) made the Low Countries as prosperous as any part of his Burgundian state.

The Emperor Charles V. inherited the Burgundian dominions; and under his son, Philip II. of Spain, broke out the bitter quarrel between Holland and Spain, between Dutch Protestantism and persistence and Spanish tyranny and persecution, which ended in 1581 in the establishment of the Dutch Republic as an independent state under William the Silent (of Orange), though the war continued with intervals till 1648, and the Belgian provinces abode by their allegiance to the kings of Spain.

In the seventeenth century Dutch commerce, especially at sea, Dutch science, Dutch classical scholarship, Dutch literature and Dutch art attained an eminence hardly afterwards equalled. The rivalry of Holland and England at sea led to the unfortunate wars of 1652-1654 and 1664-1667. The accession of William III. of Orange to the Stadtholdership of the United Provinces (1672) proved the salvation of the republic from France; in 1678 Louis XIV. signed the peace of Nymegen.

Ten years later William was hailed as the savior of English liberties, and became king of Great Britain and Ireland. On William's death, the United Provinces became a pure republic once more, the stadtholdership was re-established in 1747 but it made no difference in the downward course.

The National Convention of France having declared war against Great Britain and the stadtholder of Holland in 1793, French armies overran Belgium (1794); they were welcomed by the so-called patriots of the United Provinces and William V. and his family (January 1795) were obliged to escape from Scheveningen to England in a fishing-smack and the French rule began. After several changes Louis Bonaparte, June 5, 1806, was appointed king of Holland, but, four years later, was obliged to resign because he refused to be a mere tool in the hands of the French emperor. Holland was then added to the empire.

The fall of Napoleon I. and the dismemberment of the French empire led to the recall of the Orange family and the formation of the southern and northern provinces into the ill-managed kingdom of the Netherlands, which in 1830 was broken up by the secession of Belgium. In 1839 peace was finally concluded with Belgium; but almost immediately after national discontent with the government showed itself, and William I. in 1840 abdicated in favor of his son.

Holland, being moved by the revolutionary fever of 1848, King William II. granted a new constitution, according to which new chambers were chosen, but they had scarcely met when he died, March, 1849, and William III. (born 1817) ascended the throne.

William III. having no living male issue, the succession to the crown was vested in the princess of Orange, Wilhelmina, the only child of the king's second marriage, born in 1880. For many years the great question of internal politics was the new constitution, which, promulgated November 30, 1887, increased the electorate of Holland by no less than two hundred thousand voters. On the death of the king (November 23, 1890), when Luxemburg ceased to be connected with the crown of Holland, the Princess Wilhelmina became queen.

Queen Wilhelmina married Prince Henry of Mecklenburg-Schwerin, in 1901, and in 1909 a daughter (the Princess Juliana) was born to them.

NORWAY (Norweg. *Norge*), the western division of the Scandinavian peninsula, is one thousand one hundred and sixty miles in length (coast-line three thousand miles) and varies in width from twenty to one hundred miles north of 63° N. lat.; below that line it swells out to two hundred and sixty miles. The coast-line is extensive, deeply indented with numerous fiords, and fringed with an immense number of rocky islands. The surface is mountainous, consisting of elevated and barren tablelands, separated by deep and narrow valleys. The finest of the valleys stretching inland from the fiords is Romsdal, where the rounded pure gneiss mountains tower up to six thousand feet with almost perpendicular walls. The cultivated area is about one-thirtieth part of the country; forests cover nearly one-fourth; the rest consists of highland pastures or mountains.

Norway is separated from Sweden by the Kjolén Mountains (three thousand to six thousand feet), the backbone of the peninsula, which divide south of 63°; the western branch widens out into a broad plateau, undulating between two thousand and four thousand feet and embossed with mountain-knots—Dovre, Jotun, Lang, Fille, Hardanger Fjelde (*fells*)—the separate peaks of which shoot up to six thousand feet and higher.

Rivers.—The few important rivers that Norway can claim as exclusively her own have a southerly direction, and discharge themselves into the Skager-Rack; of these the chief are the Glommen (four hundred miles), and its affluent, the Lougen. The most important river in the north is the Tana, which forms part of the boundary between Russia and Norway, and falls into the Arctic Ocean. Lofty waterfalls are numerous. Lakes are extremely numerous but generally small. The principal is the Miösen Vand. The streams are turned to account in floating down the valuable timber of the forests, and their rapids give abundant mill power.

Production and Industry.—Agriculture, though pursued with some vigor of late, is unable to furnish sufficient products for home consumption; hence it has been necessary to import considerable quantities of corn, meat, and pork. The fisheries give employment to a large part of the population throughout the year. The most important are cod and herring. The mineral products are of late increasing.

The purely industrial establishments are grouped mainly around Christiania, and include textile factories, machine shops, chemical works, flour mills, breweries, etc. The

[558]

use of water power for electrical enterprises is growing. The Norwegians rank among the busiest sea carriers of the world, the Norwegian mercantile marine ranking third among maritime nations, or first in proportion to population.

The chief exports consist of timber, matches, fish, oil, and other products of the fisheries, pulp, paper, skins and furs, nails, minerals, stone, ice, calcium carbide, condensed milk, butter, margarine, tinned goods, etc.

People.—The people of the peninsula are of Germanic race, with the exception of the small number of Finns and the Lapps in the north. The Norsemen of Norway, of middle stature, strong, generally blonde haired and blue eyed, seamen by choice, have adopted the Danish as the language of the towns and of literature, the modernized Old Norse being banished to the outlying country districts and unfrequented fiords.

Education is compulsory and free between the ages of seven and fourteen, schools being maintained by local taxation with state grants in aid. The attendance is high. Secondary schools are provided by the state, by local authorities, and privately. There are a number of special schools and industrial and technical institutes. The University of Christiania is an important institution for higher education.

Except 52,700 persons (including Methodists, Baptists, Roman Catholics, Jews, Mormons), the entire population belong to the Lutheran Church.

Government.—After the crisis of European affairs brought about by Napoleon's wars, Denmark lost her hold over Norway, which had been united to it for more than four centuries, and that country was united to Sweden in exchange for Finland, which then passed under Russian sway. Norway, however, was again separated from Sweden as an independent kingdom under King Haakon VII. in 1905.

The *Storting* or Parliament consists of one hundred and twenty-three members, women being eligible and electors (since 1907); and divides for legislative purposes into two chambers called "*Odelsting*" and "*Lagting*."

The Norwegians share with the Swiss the distinction of being the most democratic people in Europe; all titles of nobility were abolished in 1821. In 1912 practically all offices except in the cabinet, diplomatic service, army, navy, and church, were thrown open to women.

Cities.—The chief cities are the capital, Christiania, and Bergen. Other important towns are Trondhjem, Stavanger, and Drammen.

Christiania, the modern capital and chief commercial town of Norway (the ancient capital is Trondhjem, "home of the throne," where the kings are still crowned), is built on the northern end of the Christiania Fiord. Population, in 1910, 241,834. It is named after Christian IV., who commenced building it in 1624 after the destruction of the ancient city of Oslo by fire. It is the seat of Parliament, of the High Court of Judicature, and of the National University. Connected with this are the students' garden, a library of four hundred and fifty thousand volumes, a botanical garden, zoological and other museums, laboratories, and observatory. The Meteorological Institute was established in 1866. There are two national and historical palaces here, one in the city quite near the university, and one, Oscarshall, beautifully situated two miles from the city on an eminence overlooking the fiord. There is a national picture-gallery, and a very interesting museum of northern antiquities. The *Dom* or Cathedral and Trinity Church are the principal ecclesiastical buildings. The old fortress *Akershus Faestning* still remains, but has little military value.

The staple industry of Christiania is its shipping trade; its chief export is timber. A considerable industry is the brewing of *Christiania öl*, a sort of lager beer, with resinous flavor, largely consumed throughout Norway, and exported. The minor manufactures are cotton, canvas, engine-works, nailworks, paper-mills, and cariole-making. The harbor is closed by ice for three or four months most winters.

History.—It is not until the ninth century that the story of Norway begins to emerge from the obscurities of myth and legend. At first it was occupied by Lapps and by several Gothic tribes, then became an independent kingdom, founded in 872, and was united to Denmark in 1380.

The Napoleonic crisis in Europe may be said to have severed the union, which had existed for more than four hundred years between Norway and Denmark. The latter country after having given unequivocal proofs of adhesion to the cause of Bonaparte, was compelled, after the war of 1813, to sign the treaty of Kiel in 1814, in which it was stipulated by the allied powers that she should resign Norway to Sweden. Charles XIII. was declared joint king of Sweden and Norway in 1818. From that time down to 1905 Norway remained in union with Sweden. In June of that year Norway declared the union dissolved, and the repeal of the union was signed in October of the same year. The throne was offered to and declined by a prince of the reigning house of Sweden, but was afterwards accepted by Prince Carl of Sweden, who was thereupon elected as King Haakon VII. In 1908 a treaty was signed by Great Britain, Germany, France, Russia, and Norway guaranteeing the integrity of the Norwegian kingdom.

Poland (called by the natives *Polska*, a word of the same root as *Pole*, "a plain"), a kingdom of Europe, proclaimed, in 1916, by the governments of Austria-Hungary and the German Empire as the result of conquests by the Central Powers, comprises substantially what is geographically known as Russian Poland (the kingdom of Poland formed in 1815) and Austrian Poland (or the Austrian province of Galicia). The former has an area of about 49,000 square miles, with a population of more than 12,000,000; the latter, an area of 30,300 square miles, and a population of 8,000,000.

Surface.—This extensive tract forms part of the great European central plain, and is crossed by only one range of hills, which run northeast from the Carpathians, forming the watershed between the Baltic and Black Seas.

Its principal streams are the Vistula, the Niemen, and the Dvina, all belonging to the basin of the Baltic; and the Dniester, South Bug, and Dnieper, with its tributary, Pripet, belonging to the basin of the Black Sea.

The physical configuration of the country makes it admirably adapted for agriculture. Next to grain and cattle its most important product is timber.

The soil is mostly a light fertile loam, though there are large barren tracts of sand, heath, and swamp, especially in the east. Much of the fertile soil is rich pasture land, and much is occupied with forests of pine, birch, oak, etc. Rye, wheat, barley, and other cereals, hemp, timber, honey, and wax, cattle, sheep, and horses, vast mines of salt and coal, some silver, iron, copper, and lead constitute the natural riches of the country.

People.—The present population of the provinces, included in the Poland of former days, consists chiefly of Poles, Lithuanians, Germans, Jews, Malo-Russians, Roumanians and Gypsies. The Poles, who number 10,000,000, form the bulk of the population; the Lithuanians, 2,100,000 in number, inhabit the northeast of the country; the Germans, of whom there are 2,000,000, live mostly in the towns; the Jews are very numerous being estimated, at 2,200,000.

Roman Catholics preponderate; then come in order the Greek Church, Protestants, Jews, and Armenians.

Cities.—The following are the populations of the chief cities: Capital, Warsaw, 800,000; Lodz, 400,000; Lemberg, 225,000; Cracow, 160,000; Przemysl, 60,000.

Warsaw (Polish *Warszawa*), the capital of Poland, stands on the Vistula's left bank, three hundred and thirty miles east of Berlin by rail and seven hundred miles southwest of Petrograd. Two iron bridges lead to the suburb of Prague, on the opposite bank. Standing on a navigable river, with great railway lines to Moscow, Petrograd, Vienna, Danzig, and Berlin, Warsaw is one of the most important cities of eastern Europe, being smaller only than Petrograd and Moscow. Corn and flax are largely exported, and coal and manufactured goods imported. Warsaw itself manufactures electroplate, machinery, boots, woollens, pianos, carriages, tobacco, sugar, chemicals, beer, and spirits.

Of over one hundred Catholic churches the cathedral of St. John is the most notable; there are also several Greek churches, two Lutheran ones, and many synagogues. The castle is an imposing building, and there are many fine private palaces. The university, suppressed at various times, was reopened in 1915, and has seventy-five professors who now teach in Polish.

History.—The early history of Poland is legendary and obscure. The Poles, like the Russians, are a Slavonic race, and are first spoken of as the Polani, a tribe or people between the Vistula and Oder. The country was divided into small communities until the reign of Mieczyslaw I. (962-992) of the Piast dynasty, who renounced paganism in favor of Christianity, and was a vassal of the German emperor.

He was succeeded by Boleslaw the Great (992-1025), who raised Poland into an independent kingdom and increased its territories. In succeeding reigns the country was involved in war with Germany, the Prussians, the Teutonic knights, and with Russia. The last of the Piast dynasty was Casimir the Great (1364-1370), during whose reign the material prosperity of Poland greatly increased. He was succeeded by his nephew, Louis of Anjou, king of Hungary, whose daughter, Hedwig, was recognized as "king" in 1384, and having married Jagello, prince of Lithuania, thus established the dynasty of the Jagellons, which lasted from 1386 to 1572.

During this period Poland attained its most powerful and flourishing condition. In 1572 the Jagellon dynasty became extinct in the male line, and the monarchy, hitherto elective in theory, now became so in fact. The more important of the elective kings were Sigismund III. (1587-1637), Wladislaw or Ladislaus IV. (1632-1648), John Casimir, (1648-1669), and the Polish general Sobieski, who became king under the title of John III. (1674-1696). He was succeeded by Augustus II., Elector of Saxony, who got entangled in the war of Russia with Charles XII., and had as a rival in the kingdom Stanislaus Lesczynski. Augustus III. (1733-1763) followed, and by the end of his reign internal dissensions and other causes had brought the country into a state of helplessness.

In 1772 under the last feeble king Stanislaus Augustus (1764-1795), the first actual partition of Poland took place, when about a third of her territories were seized by Prussia, Austria, and Russia, the respective shares of the spoil being Prussia 13,415 square miles, Austria 27,000 square miles, Russia 42,000 square miles.

A second division between Russia and Prussia took place in 1793. Prussia received nearly all the present province of Posen, and the western part of what is now Russian Poland; Russia received all the territory east of about long. 44°. A third division between Russia, Prussia, and Austria occurred in 1795. Prussia took a large part of the present Russian Poland, including Warsaw; Austria received part of the present Russian Poland between the Bug, Vistula, and Pilica; and Russia received all the remainder, situated east of the Niemen and Bug.

An insurrection under Kosciuszko had taken place in 1794, but he was defeated at the battle of Maciejowice and taken prisoner. Suvorov (Suwarrow), the Russian general, took Warsaw, and the Polish monarchy was at an end. King Stanislaus resigned his crown, and died at Petrograd in 1798.

Part of Poland was formed by Napoleon into the duchy of Warsaw. The Congress of Vienna in 1815 made a resettlement of the territory, creating a kingdom of Poland, under Russian rule, with a constitution. An insurrection which began in November, 1830, was suppressed in September, 1831; the constitution was abolished in 1832. From this time the independence of Poland was suppressed, and in 1832 it was declared an integral part of the Russian empire, with a separate administration, headed by a viceroy chosen by the Czar. On November 6, 1848, the republic of Cracow became Austrian; and the subsequent rebellion against Russian rule in 1863 only brought further humiliation on Polish hopes and aspirations.

During the European war Poland, in 1914, first suffered invasion and devastation by the Russian armies, and during the two following years was completely overrun by the Austro-German armies, and placed under the military rule of the latter. The proclamation of Poland as a new independent kingdom took effect in 1916.

PORTUGAL (named from Portus Cale, the Roman name of Oporto), a republic of Europe, lying between Spain and the Atlantic, on the west side of the Iberian Peninsula, is three hundred and fifty miles in length and varies in width from seventy to one hundred and forty miles. The area is 36,038 square miles—a little larger than Ireland.

Surface and Climate.—The coast is mostly low and flat, except immediately north and south of the mouth of the Tagus, and at Cape St. Vincent. The north of Portugal is diversified by spurs (five thousand feet) of the mountains of Spanish Galicia. The Sierra da Estrella (six thousand five hundred and forty feet) is a westward continuation of the Spanish Sierra Guadarrama system. The Sierra Morena is continued westwards in southern Portugal.

The principal rivers of the country—the Guadiana in the south, the Tagus in the center, and the Douro and Minho in the north—are simply the lower courses of Spanish rivers; but the Mondego has its sources in the country.

The vicinity to the ocean tempers the climate and exempts it from the dry heat of Spain. The inequalities of the surface produce, however, diversities of climate; for, while snow falls abundantly on the mountains in the northern provinces, it is never seen in the southern lowlands. Rain falls abundantly throughout the year.

Production and Industry.—The chief products are wheat, barley, oats, maize, flax, hemp, and the vine in elevated tracts; in the lowlands, rice, olives, oranges, lemons, citrons, figs, and almonds. There are extensive forests of oak, chestnut, sea pine, and cork, the cultivation of the vine and the olive being among the chief branches of industry; the rich red wine known to us as "port" is shipped from Oporto. Its mineral products are important—copper, lead, tin, antimony, coal, manganese, iron, slate, and bay salt, which last, from its hardness and purity, is in demand. Its manufactures consist of gloves, silk, woollens, linen, and cotton fabrics, metal and earthenware goods, tobacco, cigars, etc. The exports consist to the extent of fifty per cent of wine, which is the chief industrial product of the country; others are cork, cattle, copper ore, fruits, oil, sardines, and salt.

People.—The Portuguese are a mixed race—original Iberian or Basque, with later Celtic admixture. Galician blood (derived from the ancient Gallaici, presumably Gallic invaders) predominates in the north; Jewish and Arabic blood are strongly present in the center, and African in the south.

The Portuguese differ widely from their Spanish brethren, whom they regard with inveterate hatred and jealousy, mainly on account of their attempts to subvert the independence of Portugal.

Education is free and nominally compulsory between the ages of seven and fifteen, but is not strictly enforced, and over seventy-five per cent of the population above seven years old are illiterate. Secondary education is conducted in state lyciums. There are also military, naval and other special schools. The University of Coimbra is the chief higher institution.

Government.—Portugal was a constitutional monarchy till 1910, when a republic was established. The constitution of 1911 provides a Senate, elected by municipal councils, and a National Council, by direct suffrage. The two chambers united constitute the Congress of the republic. The president of the republic is elected by both chambers for a period of four years. He cannot be re-elected.

Cities.—Capital, Lisbon, on the Tagus, population, 435,359. Oporto had a population (1911) of 194,664. There are no other large towns, but Braga, Loulé, Setubal, and Funchal (Madeira) had populations exceeding 20,000 in 1911.

Lisbon (Port. *Lisboa*), capital of Portugal, stands on the northern shore of a bottle-shaped expansion of the Tagus, nine miles from its mouth; it is four hundred and twelve miles by rail west by southwest of Madrid. The city extends for four or five miles along the shore, and climbs up the slopes of a low range of hills, occupying a site of imposing beauty.

The oldest part of Lisbon is that which escaped the earthquake of 1755; it lies on the east, round the citadel, and consists of narrow, intricate streets, not over clean. It is still known by its Moorish name of Alfama. The western portions were built after the earthquake, with wide and regular streets, fine squares, and good houses. The summits are mostly crowned with what were formerly large monasteries.

The gloomy cathedral of the "patriarch," built in 1147, restored after 1755, has a Gothic facade and choir. The large church of St. Vincent contains the tombs of the former royal (Braganza) family. The church of Estrella is a reduced copy of St. Peter's at Rome. In San Roque is a chapel thickly encrusted with mosaics and costly marbles. But the finest structure in the city is the Gothic monastery and church of Belem, a monument to the great seamen of Portugal; it was begun in 1500 on the spot from which Vasco da Gama embarked (1497) on his momentous voyage. Inside the church are tombs to Camoens and Vasco da Gama, and the grave of Catharine, wife of Charles II. of England.

A fine square facing the bay is surrounded with government offices, the handsome custom-house, and the marine arsenal. There are an academy of sciences, with a library of one hundred and twenty thousand volumes, a polytechnic school, a medical school, a conservatory of music, a public library of four hundred thousand volumes and two observatories.

A magnificent aqueduct brings water to the city from springs nine miles to the northwest.

A series of forts protect the seaward approaches. The harbor is one of the finest in the world, well sheltered, deep close to the quays, and capacious enough to hold all the navies of Europe at once.

[559]

[560]

[561]

History.—Like the rest of Iberia, Portugal (the southern part of which was known to the Romans as Lusitania, often taken as a poetical name for the whole country) was thoroughly Romanized after the conquest of the Carthaginians by the Romans in 138 B. C. Then the peninsula was overrun by the Visigoths, and next by the Saracens. Northern Portugal fell under the influence of Castile; but under Alfonso I. (1143) Portugal became an independent kingdom, though the Saracens were not conquered in the south till 1250. Wars with Castile were frequent.

Under John (1385-1433) began a close alliance between Portugal and England, and the Portuguese king John married John of Gaunt's daughter. With their son, Prince Henry the Navigator, began the most brilliant era of discovery and conquest, including the acquisition of Madeira, the Azores, and the doubling of the Cape of Good Hope (1486), the reaching of India by sea and settlements there (1497), and the discovery and occupation of Brazil (1500).

In the sixteenth century Portugal was one of the most powerful monarchies of Europe, and most prosperous of commercial peoples; but its decline was swift, and Philip II. annexed Portugal to Spain for sixty years. English assistance secured the independence of the kingdom in 1640; but the glory had departed. Portugal shared in the troubles of the French occupation and the Peninsular war; after Napoleon's defeat, the old family, which had taken refuge in Brazil, was restored, but the country was rent by intrigue, dissension, and civil war.

The rush of the European powers to occupy central and southern Africa stirred Portugal to cling tenaciously to her once great colonial empire in Africa; but the march of events has given to Britain, Germany, France, and Belgium much that Portugal once claimed as hers.

Popular discontent culminated in the assassination of King Carlos and his eldest son in the streets of Lisbon in February, 1908. His second son, Manoel, succeeded. In 1910 the murder of Dr. Bombarda, a republican, hastened on a revolution already arranged for. The army and navy assisted in deposing Manoel and setting up a provisional government, with Theophile Braga as provisional president. He retired in 1911, and in August of that year Dr. Manoel Arriaga was elected as the first president of the republic.

The republic was formally recognized by the United States upon the meeting of the Portuguese chambers in June, 1911, and by the other powers on the formation of the cabinet in September, 1911. In 1915 Portugal joined the Entente Allies in the European war.

ROMANIA, a kingdom in southeast Europe, lies mainly between the Carpathians, the Purth, and the Danube (the Dobruja being south of the Danube). It includes the strip added from Bulgaria as "compensation" for changes consequent on the Balkan war of 1912-1913, from a point on the Danube above Silistria to Cape Sabla on the Black Sea. Bordering on Hungary, Russia, Bulgaria, and Servia, its area is 52,000 square miles, and population 7,500,000.

Surface.—Roumania consists for the most part of a great treeless steppe-like plain, occupying nearly the whole of the northern watershed of the Lower Danube; behind this plain rise the wooded Transylvania Alps. Between the northern bend of the river to its marshy delta and the Black Sea there rises the bare plateau called the Dobruja, partly grass-covered, partly swampy, without tree or bush. This famous old battle-ground is crossed by Trajan's double wall or rampart, built to keep the northern barbarians out of the Roman provinces.

Rivers.—All the rivers are tributaries of the Danube, and flow from the Carpathians and the Transylvanian Alps across the level steppe to join its left bank. The chief are the Pruth, which now forms the boundary towards Russia, the Sereth, and the Oltu (Aluta).

People.—Most of the Roumanians are supposed to be descendants of the race formed by the alliance of the Roman colonists with the original inhabitants of Dacia. The Roumanian language is derived mainly from Latin, with Slavonic, Hungarian, and other elements.

They are strong, well-knit men, with black hair, lively, but not very active. The mass of the people live in great poverty; a few thousand Boyars, nobles or landed proprietors, really form the nation. Large numbers of Jews and Gypsies live among the Roumanians. Almost the entire population belongs to the Greek Church, but religious equality prevails.

Government.—The constitution, voted by a popular assembly in 1866, vests the executive authority in the reigning king and his council of ministers; the legislative body consists of a Senate and a Chamber of Deputies.

Production and Industry.—The agricultural products consist of wheat, maize, millet, barley, rye, beans, and peas. Vines and fruits are abundant. The forests are of great extent and importance, but the riches of the country consist mainly in its cattle and sheep. Minerals and precious metals are said to be abundant, but only salt and petroleum are obtained.

Education is free and nominally compulsory, but owing to inadequate provision over sixty per cent of those above seven years of age are illiterate. Secondary education is relatively better, and the schools are well attended. There are also special schools and universities at Bucharest and Jassy. A government high school of commerce was opened in 1913.

Cities.—Capital, Bucharest, has a population (1912) of about 500,000. Other towns are: Jassy, 80,000; Galatz, 66,000; Braila, 60,000; Ploesci, 50,000; Craiova, 46,000.

Bucharest (*Bucuresco*), the "Paris of the East," stands two hundred and sixty-five feet above sea-level, in the fertile but treeless plain of the small, sluggish Dambovitza. By rail it is seven hundred and sixteen miles southeast of Vienna, forty miles north of Giurgevo on the Danube, and one hundred and seventy-nine miles northwest of Varna on the Black Sea. Viewed from the hills which lie to the west and southwest, Bucharest presents a most striking appearance. It is sprawled out on both banks of the river, occupying more than twenty square miles of territory in the slight depression through which the stream makes its way.

Most of its houses are low, not more than two stories, with flat roofs that shimmer in the sun. High above them rise almost innumerable towers, cupolas and minarets of churches, in which the city abounds. The Catholic Cathedral is a fine edifice, built 1875-1884.

Great spots and stretches of greenery mark the spacious parks and gardens and the great boulevards, some of which extend along the river bank, others out to the distant sections of the city.

Three of these thoroughfares skirt the river on the left, where the greater part of the city lies. They are the Plevna, Lipsicani and Vacaresci, in order. From the Lipsicani extend the Elizabeth Boulevard and Calea Victorie, the avenue of Victory, which connect with another broad highway extending nearly around the city on its outskirts.

Parks and drives are frequent. There then are the botanical and zoological gardens, and a racecourse, where meets are held at least twice a year.

In these streets the East meets the West. Women gowned in the latest Paris creations and men in perfect European dress are in contrast with the wandering bands of gypsies, the brilliant-clad Roumanian country folk come in to market, the fez-topped Turk, and the distinctly dressed Russian cabmen.

Besides the parkways and busy thoroughfares there are many beautiful buildings—the National Bank, the Athenaeum, with its collection of rare antiques dating back to the days of the Roman conquest; the National Library and Theater; the University of Bucharest, founded in 1864; the many other schools and academies; the great home for the blind established by the late Queen Elizabeth, better known by her pen name "Carmen Sylvia"; a hundred-and-one other places that go to make the city notable as a center of learning, culture and modern progress.

Nearly all of these institutions have homes that are masterpieces of architecture. The Treasury Building and the Postoffice are notable examples. It is said that the Roumanian government has the finest home for its foreign ministry of any country in Europe.

Bucharest is the center for trade between Austria and the Balkan Peninsula, the chief articles of commerce being textile fabrics, grain, hides, metal, coal, timber, and cattle. It has been several times besieged; and between 1793 and 1812 suffered thrice from earthquakes, twice from inundations, once from fire, and twice from pestilence.

History.—The Roumanians are descended from the ancient inhabitants—probably Thracians or Dacians—of the country, modified by elements derived from the Roman, Gothic, Bulgarian, and Slavonic invaders. Dacia was a Roman colony from 101 A.D. till 274, when it became the prey of successive swarms of wandering tribes.

Out of numerous small states, two, Wallachia and Moldavia, had become dominant, when they had to bow to the Turkish yoke, and became tributary to the Porte. They were governed by rulers nominated by the Porte, who were generally extortionate Greeks of Constantinople. Russian intervention during the eighteenth century somewhat improved the condition of the downtrodden principalities, which at times were wholly under Russian influence. In 1859 they elected the same prince, Couza. He ruled till he was deposed for misgovernment in 1866, and was succeeded by Prince Charles of Hohenzollern.

The Roumanians fought bravely on the Russian side in the Turkish war of 1877-1878, and at the end obtained complete independence, though they had to give Russia part of Bessarabia for the Dobruja. In 1881 the prince was recognized as a king.

Roumania is not a Balkan state, and took no part in the operations of the Balkan League (Bulgaria, Servia, Montenegro, and Greece) against the Ottoman Empire in 1912-1913; but during the second war (1913), when Bulgaria was in opposition to the remaining members of the League, Roumania was able to exact terms from Bulgaria at the Treaty of Bucharest, by which Bulgarian territory amounting to 7,609 square miles, with a population of 285,000, was surrendered to Roumania.

SERVIA (*ser' vi-a*), a kingdom in the Balkan peninsula, southeastern Europe, is bounded by Austria-Hungary (separated by the Save and Danube) on the north, Roumania (separated by the Danube) and Bulgaria on the east, Turkey and Bosnia on the south, and Bosnia (mainly separated by the Drina) on the west.

Surface.—The greater part of the country is mountainous and wooded; it is full of forests and hills, fertile fields, and fresh meadows, forming pretty but never very grand landscapes. The principal river (besides the frontier rivers) is the Morava.

Production and Industry.—Nearly nine-tenths of the land is left under its primitive woods and pastures. The principal crops are maize for home consumption, and wheat for export; flax, hemp, and tobacco are also grown, and silk-culture is carried on to a limited extent. The exports consist of dried prunes, pigs, and wool, besides wheat, wine, hides, cattle, and horses. The bulk of the trade is with Austria. The mineral treasures of Servia are considerable; gold, copper, and zinc occur in the hills which reach towards the "Iron Gates" of the Danube, and coal beds extend along the river.

Fruit trees exist in very great abundance, especially plums, from which the brandy of the Servians (*slovovitzza*) is extensively made.

People.—The Servians are a well-built, stalwart Slavonic (or perhaps in part Slavonized Albanian) race, proud and martial by temperament; the most striking feature of their social life is the family community or *Zadruga*. Their literature is rich in poetry, especially lyrics. The population, about 3,000,000 at the outbreak of the war of 1912-1913, was raised by conquests to about 5,000,000. Besides these the Montenegrins (450,000) are almost all pure Servians by race, as are also the Bosnians and Herzegovinians (2,000,000), not to speak of over 3,700,000 Servians in other parts of Austria-Hungary.

The people of Servia belong to the Greek Catholic Church. Education does not reach a very high standard, although a school exists in every commune. There is a university at Belgrade.

Government.—Servia is a constitutional and hereditary monarchy. The legislative power is vested in the king and the National Assembly. This last, called the *Skupshтина*, consists of one hundred and sixty deputies. Besides this body there is a senate of sixteen members, eight chosen by the king and eight by the National Assembly; this body acts as a permanent state council.

Cities.—Capital, Belgrade (*Biograd*, "White Fortress") at the confluence of the Save and Danube, is now a modern city, with electric railways and light, and wide streets, containing the university, national museum and library, and the old Turkish citadel. Population (1910) 91,000. It lies opposite Semlin, at the confluence of the Save and Danube, two hundred and fifteen miles southeast of Budapest. The walls disappeared in 1862; the last and finest of the five gates was demolished in 1868. Year by year the town is losing its old Turkish aspect, becoming more modern, more European. The royal palace, the residence of the metropolitan, the national theater (1871), and the public offices are the principal buildings. Opposite the theater is a bronze monument to the murdered Prince Michael III.

Belgrade has but trifling manufactures of arms, cutlery, saddlery, silk goods, carpets, etc. It is, however, an entrepôt of trade between Turkey and Austria.

Other towns are Nish, 25,000; Kragojevatz, 19,000; Leskovatz, 15,000; Podjevaratz, 14,000; Shabatz, 12,000; Vrnaya, 11,500; Piro, 11,000; and Krutchevatz, 10,000.

The principal towns in the territories acquired in 1913 are Monastir, 60,000; Prisrend, 42,000; Uskub, 32,000; Prilip, 24,000; Shtip, or Shtip, 21,000; Kalkandelen, or Tetovo, 20,000; Koprili, or Veles, 20,000; Dibra, 16,000; Pristina, 16,000; Kumanovo, 15,000; Ochrida, 15,000; and Novi Bazar, 13,000.

History.—The Servians came from the Carpathians in the seventh century, and founded a great state, which, about 1350, embraced Albania and much of Bulgaria and Macedonia; but at Kossovo in 1389 the Turks crushed the Servian power and made Servia first tributary and then a province of the Ottoman empire.

A national rising had some success under Kara George in 1807-1810 and through Russian influence it was arranged that Servia should have some measure of internal autonomy. Still more successful was a rising in 1815 under Obrenovich. Under his successors there was considerable progress; and after the Russo-Turkish war of 1877-1878 Servia obtained complete independence and became a kingdom. King Milan abdicated in 1889.

In 1903 a party of officers, representing a wide conspiracy, assassinated King Alexander and Queen Draga, and Peter Karageorgevitch was proclaimed king. In 1913 Servia, as a member of the Balkan League (Bulgaria, Greece, Servia, and Montenegro), waged a successful war against Turkey. In August, 1913, Servia and Greece were attacked by Bulgaria, their former ally, owing to disputes concerning the division of the spoils. The second war collapsed in a few weeks through the threatened intervention of Roumania, and ended in the Treaty of Bucharest. Servia also became involved with the Austro-Hungarian monarchy on a question of the Albanian frontier, where desultory fighting had taken place for some months, but eventually the smaller power withdrew from the disputed area. The outcome of the military operations was the inclusion of the whole of "Old Servia" (the greater part of Macedonia) within the Servian boundaries, which thus embrace an area (1914) of close on thirty-four thousand square miles, with a population estimated at five million.

The assassination of the Austrian heir presumptive, in June, 1914, brought about an invasion of Servia by the forces of Austria-Hungary, and started the Pan-European war that is still in progress.

SPAIN (Span. *España*), occupying the larger part of the southwestern peninsula of Europe, is bounded on the south and east by the Mediterranean, on the west by the Atlantic and Portugal, and on the north by the Bay of Biscay and France, from which it is separated by the Pyrenees. Its coast line extends 1,317 miles—712 formed by the Mediterranean and 605 by the Atlantic—and it comprises a total area of 196,700 English square miles, and a population (1910) of 19,588,688.

Surface.—The interior of the peninsula consists of an elevated tableland, surrounded and traversed by mountain ranges. The uniform coast line and the great elevation of its central plateau give Spain a more continental character in its extreme range of temperature than any of the other peninsulas of Europe.

Outside the plateau lie the highest summits in the country, the Pic de Néthou, in the Pyrenees, Mulhacen and Veleta in the Sierra Nevada, while the Picos de Europa in the Cantabrian Range attain over eight thousand feet. The plateau itself is traversed by four mountain ranges which separate the valley of the Ebro from that of the Douro; and the whole of it has a general slight inclination from east or northeast to southwest. Hence all the considerable rivers except the Ebro flow westward to the Atlantic.

These include the Guadalquivir, Júcar, and Segura, important rivers of the eastern watershed. The Minho, Douro, Tagus, Guadiana, and Guadalquivir drain the western valleys, which are formed between the mountain ranges of the Peninsula. The Tagus is the largest river of the Peninsula, the estuary of which forms a magnificent harbor. The Guadalquivir, though the shortest of the larger streams, is the most important on account of its fullness and its course through the most extensive lowland of the Peninsula. The effect of the tide in it is felt for several leagues above Seville, to which city it is navigable, eighty miles from the sea.

The configuration of the country renders the climate very varied. In parts of the northwest the rainfall is among the heaviest in Europe. In the east and southeast occasionally no rain falls in the whole year. The rainfall in the western Pyrenees is very great, yet on the northern slope of the valley of the Ebro there are districts almost rainless. The western side of the great plateau, speaking generally, is more humid and much colder than the eastern, where irrigation is necessary for successful cultivation.

[562]

[563]

[564]

Production and Industry.—Galicia is almost a cattle country; Estremadura possesses vast flocks of sheep and herds of swine. The country is generally fertile, and well adapted to agriculture and the cultivation of heat-loving fruits—as olives, oranges, lemons, almonds, pomegranates, and dates. The agricultural products comprise wheat, barley, maize, oats, rice, with hemp and flax of the best quality. The vine is cultivated in every province; in the southwest, Jerez, the well-known sherry and tent wines are made; in the southeast, the Malaga and Alicante.

Spain is rich in iron, copper and lead, but the mines have been only partially developed.

The seat of the manufacturing industries is chiefly Catalonia. Cotton and woolen manufactures engage many hands, and there are also considerable silk, paper, and cork industries.

The principal exports are wine, copper and copper ores, lead, iron ores, olive oil, raisins, oranges, cork, esparto grass, wool, salt, quicksilver, grapes, etc.

People.—The basis of the population of the whole Peninsula is that of the old Iberians, modified by the admixture of Celtic, Phoenician, Roman, Germanic, and Moorish (Arab) invaders who from time to time gained ascendancy in the land and became intermixed with the ancient inhabitants.

Until lately the only religion tolerated was that of the state, the Roman Catholic; now a certain toleration is allowed to other denominations.

Education varies greatly among different classes and in different provinces. In the large towns and in some of the provinces a great effort is made to keep the higher and the technical schools on a level with the best in other European countries. In other parts the neglect is very great. There are ten universities: Madrid, Barcelona, Granada, Oviedo, Salamanca, Seville, Santiago, Valencia, Valladolid, and Saragossa. Primary education is by law compulsory, but the law is not strictly enforced, which accounts for the large percentage of illiterates.

Government.—The government of Spain is an hereditary monarchy founded on the constitution of 1876. The Cortes consists of two bodies—the Senate, of about three hundred and sixty members (one-half elected), and a Congress of Deputies, elected at the rate of one member to every fifty thousand inhabitants.

Cities.—The principal cities are Madrid, population 597,573; Barcelona, 587,219; Valencia, 233,348; Seville, 155,366; Malaga, 136,192; Murcia, 125,380; Saragossa, 111,701; Carthagena, 96,983; Bilbao, 93,536; and San Sebastian, 92,514; and there are also twelve towns with over 50,000 inhabitants.

THE ROYAL PALACE, MADRID,

one of the finest in Europe, has a frontage of four hundred and seventy feet, is one hundred feet high, and built of white stone. Among the thirty rooms on the first floor, the largest and finest is the Hall of the Ambassadors. The vault was painted by Tiepolo, and represents the exaltation of the Spanish monarchs. The walls are draped with velvet embroidered with gold, and twelve immense mirrors also decorate it. On the right of the throne, which is guarded by four gilded bronze lions, is a statue of Prudence, and on the left that of Justice. The chapel is extremely rich, but not very handsome. There is also a library, a theatre, and the magnificent collection of Flemish tapestries.

Madrid (Span. pron. *Madh-ree-dh*), the capital of Spain, is situated in the department of Madrid (part of the ancient province of New Castile), eight hundred and eighty miles by rail from Paris. It is built on a treeless, ill-watered plateau, on the left bank of the Manzanares, two thousand and sixty feet above the sea-level.

The Manzanares is merely a mountain-torrent falling into the Jarama, a tributary of the Tagus; water is brought from the Guadarrama Mountains by an aqueduct forty-two miles in length.

The general aspect of the city is clean and gay, while the older parts are picturesque; no trace now remains of the mediæval city. The new streets are generally fine, broad, and planted with trees; the houses well built, lofty, and inhabited by several families living in flats. A great feature is the magnificent open spaces, chief of which is the Prado, running north and south through the eastern part of the city, and, with its continuations, three miles long. It contains four handsome fountains with groups of statuary, a fine obelisk to commemorate the gallant struggle with the French (May 2, 1808), monuments to Columbus, Isabel the Catholic, etc.

The picture-gallery here, founded by Charles III., is one of the finest in Europe, and contains many of the masterpieces of Velasquez, Murillo, Raphael, Tintoretto, Rubens, Teniers, and Van Dyck. Two other parks are the Buen Retiro, the fashionable promenade on the east of the city, and the Casa de Campo on the west. Midway between its extremities the Prado is crossed at right angles by the Calle de Alcalá, the finest street in the city, about a mile in length, and leading from outside the fine triumphal arch rebuilt by Charles III. to the Puerta del Sol, the square which is the heart of Madrid; here converge the principal electric lines, and in it and the streets branching off from it are situated the principal shops and places of business.

The finest square is the Plaza Mayor, formerly the scene of bull-fights; it contains a gigantic equestrian statue of Philip III., its founder. On the west of the city are the new cathedral and the royal palace; the latter, commenced in 1738 to replace the ancient Alcazar, which had been burned down, was finished in 1764 at a cost of fifteen million dollars. Other fine buildings are the palace of justice, formerly a convent; the houses of parliament; Buena Vista Palace, now the ministry of war, and the new national bank.

Besides a flourishing university, founded by Cardinal Ximenes, and two high schools, Madrid contains numerous municipal schools. Madrid is well provided with newspapers and public libraries, the chief being the National Library, with more than half a million volumes, and the library of the university.

The opera house is one of the finest in the world; all the theaters must by law be lighted by electricity. The bull ring, situated outside the gates on the east, is a solid structure seating fourteen thousand.

Iron founding and the manufacture of furniture, carriages, and fancy articles are carried on on a small scale. The manufacture of tobacco employs many persons, chiefly women. The publishing trade is important, and books are well printed and cheap. The old tapestry factory still turns out beautiful work, as do the potteries at Moncloa.

THE ESCURIAL

is thirty-two miles from Madrid. It is called by the Spaniards the eighth wonder of the world. Philip II. built it in 1563 to commemorate the taking of St. Quentin, and to accomplish a vow which he made to St. Lawrence. This vast building has fifteen principal entrances, and more than one thousand one hundred windows. It is entirely built of granite, and its appearance is monotonous and cold. It contains a church, the Capilla Mayor, filled with royal monuments, the sacristy, a vast vaulted hall with a marble altar ornamented with bronze, the choir, and the pantheon or vault, where the kings of Spain are buried. The pantheon is reached by a magnificent staircase of colored marbles. The urn containing the remains of Charles V. was opened in 1870, and the body was even then in perfect preservation. The library of books and the manuscript library attracts the attention of scholars. The main entrance to the palace is in the middle of the north façade. The Hall of Battles, is covered with frescos representing Spanish conquests; and the apartments in which Philip II. lived and died. The Pavilion of Charles IV., called the Casa del Principe, is a charming little museum of paintings, sculptures, and mosaics. The King's Seat, where Philip II. came to sit when presiding over the work of the palace, is also to be seen.

History.—Spain was originally occupied by Iberian tribes (akin to the present Basque inhabitants of the north), who were partially overlaid by invading Celts. The Carthaginians established themselves in the south of Spain in the third century B. C. The Romans appeared in force in the next century, but it was not till after a fierce and prolonged resistance from Iberians and Celtiberians that, under Augustus, the Roman conquest was complete. Soon Spain, thoroughly Romanized, was contributing largely to Latin literature and Roman culture.

The Germanic invaders from the north, Suevi, Vandals, and Visigoths, crushed the Roman power in the fifth century A. D., and Spain became a province of the Visigothic kingdom (573 A. D.). Then followed the Moorish conquest, which was very rapid (714-732) and complete, except in the north and northwest. The several Christian kingdoms of Spain: Castile, Leon, Navarre, Aragon, etc., as well as Portugal—were formed by the gradual depression of the Moors; but Moorish Granada was not conquered till 1492, and Spain was not united under one rule till 1512.

Spain became a European state with the union of Ferdinand of Aragon and Isabella of Castile in 1469, and the New World was discovered for them. Under the Emperor Charles V., in the sixteenth century, Spain was the most important country in Europe; but the population was unequal to the drain upon it caused by constant warfare, emigration, and adverse economical and industrial conditions.

With Philip II., Charles's son, the decline of Spain set in, though now for sixty years Portugal was under the Spanish crown. The Bourbon dynasty brought complication in the wars of Louis XIV., and little advantage from the recovery of Naples and Sicily. The nadir of Spanish history is in the time of Napoleon, when Spain, in spite of some national efforts, was nominally a kingdom, but really a mere province of the French empire.

In spite of the valiant patriotism shown in resisting the French, and the ultimate recovery of national independence through the overthrow of Napoleon, the history of Spain in the nineteenth century was in the main inglorious. In Cuba there had been trouble since 1895, the final outcome of which was the disastrous Spanish-American war, leading to the loss of the greater colonies. The twentieth century has seen gradual recovery, growing toleration, a breach with the Vatican, revolutionary and repressive movements, and ambitions in northwest Africa.

In June, 1911, the situation in Morocco led to the dispatch of a Spanish force to Alcazar. But the indignation aroused in France at this action was quite overshadowed by

the sensation caused when it became known that Germany had sent a warship to Agadir. Labor troubles in Spain broke out in September, 1911. Martial law was proclaimed throughout the country, and a royal decree suspended the constitutional guarantees, which were not re-established until October 22. In March, 1912, the ministry was reconstituted, but, in 1916, during the European war, again gave way over grave questions over neutrality and internal conditions.

SWEDEN (Swedish *Sverige*), a kingdom of northern Europe, occupies the eastern side of the Scandinavian peninsula. From 1814 till the amicable but definitive separation in 1905, it was associated with Norway under one crown. Its greatest length, north to south, is close to 1000 miles, its greatest breadth 300; its area 170,970 square miles; and its coast line 1550 miles. Besides many skerry islands, Sweden owns Gothland and Eland.

Surface.—The country may be generally described as a broad plain sloping southeastward from the Kjölen Mountains to the Baltic. The only mountainous districts adjoin Norway; the peaks sink in altitude from seven thousand feet in the north to three thousand eight hundred feet at the southern end of the chain. Immediately south of this point a subsidiary chain strikes off to the southeast, and, threading the lake region of central Sweden, swells out beyond into a tableland with a mean elevation of eight hundred and fifty feet and maximum of twelve hundred and forty feet. Fully two-thirds of the entire surface lies lower than eight hundred feet, and one-third lower than three hundred feet, above sea level.

Sweden is separated popularly and geographically into three great divisions—Norrlund, Svealand, and Gothland. Norrlund, in the north, is a region of vast and lonely forests and rapid mountain streams, often forming fine cascades and ribbon-like lakes before they reach the Gulf of Bothnia.

The central division of Svealand, or Sweden proper, is a region of big lakes, and contains most of the mines. Lakes occupy nearly fourteen thousand square miles, or eight and two-tenths per cent of the total area; several of the largest, as Vener, Vetter, Hjelmar, Mälars, are connected with one another and the sea by rivers and canals. Lake Mälars contains some thirteen hundred islands, many beautifully wooded, with royal palaces or nobleman's castles; and its shores are studded with prosperous towns, castles, palaces, and factories.

Gothland, the southern division, contains a much higher proportion of cultivated land, and its wide plains are all under agriculture.

Climate.—The climate of Sweden is continental in the north, along the Norwegian frontier, and on the southern plateau. The lakes in the colder districts of the north are ice bound for some two hundred and twenty days in the year; in the south only for about ninety days. The rainfall is greatest on the coast of the Cattegat.

Production and Industry.—The principal articles of cultivation are the various cereals—oats, rye, barley, wheat—and potatoes. The forests are very extensive, covering one-half of the surface of the country, and consisting of pine, birch, fir; these are of great importance, supplying timber, pitch, and tar, and also the chief fuel.

The mineral products are extremely rich: iron of excellent quality, that known as the Dannemora iron, being converted into the finest steel; gold and silver in small proportions; copper, lead, nickel, zinc, cobalt, alum, sulphur, porphyry, and marble. There is a railroad opening up the rich iron ore districts of Lapland, and mineral trains run from Gellivare and Kiruna to Lulea on the Gulf of Bothnia and to Narvik on the Atlantic. Considerable mines of coal are worked in Scania.

The chief articles of export are timber, butter, iron, steel, wood pulp, paper, matches, stone, iron and zinc ores, etc.

People.—The Swedes are a Germanic people, tall and strong, but with more variety of characteristics than the Norwegians. The Swedish language, allied closely to Norse and Danish, appears in very many dialects. It has had, especially since the sixteenth century, an extensive literature.

Almost the whole population is Protestant, adhering to the Lutheran Church, members of which alone are permitted to hold public offices. Education is well advanced in both countries, public instruction being gratuitous and compulsory. Sweden has the Universities of Upsala, which dates from 1477, and of Lund, founded in 1668, besides the many scientific and educational institutions of Stockholm.

Government.—The constitution of Sweden dates from 1809, but in 1866, when the separate meetings of the four estates—nobles, clergy, burghers, and peasants—were done away, the legislative system was much modified. The executive power is vested in the king, acting under the advice of a Council of State; the legislative in the two Chambers of the Diet, both of which are elected by the people—the first for nine years from proprietors, the second for three years from a lower class. The administration of justice is entirely independent of the government.

Cities.—The capital, Stockholm, has a population (1913) of 382,085. In addition to the capital, there are fourteen towns with above 20,000 population, viz.: Göteborg, 178,030; Malmö, 95,821; Norrköping, 46,180; Gefle, 35,736; Helsingborg, 37,385; Örebro, 33,182.

Malmö, on the sound opposite Copenhagen, is the outlet of the corn granary of the southern plain; Norrköping, on an inlet of the Baltic, after Stockholm, is the busiest manufacturing town of Sweden, its mills being driven by the rapids of the Motala; Gefle lies north of Stockholm, and is second only to it as a seaport on the Baltic side of the country; and Karlskrona, on the south coast, is the naval arsenal and headquarters of the fleet of Sweden.

PANORAMA OF STOCKHOLM, CAPITAL OF SWEDEN

Within recent years a network of railways has been formed over southern Sweden and Norway, connecting the capital towns with the ports of Göteborg, Malmö, and many other points.

Stockholm (*I* pronounced), stands on several islands and the adjacent mainland, between a bay of the Baltic and Lake Mälars, in a situation that is accounted one of the most picturesque in Europe.

Its nucleus is an island in mid-channel called "the Town"; on it stand the imposing royal palace; the chief church (St. Nicholas), in which the kings are crowned; the House of the Nobles; the town house; the ministries of the kingdom; and the principal wharf, a magnificent granite quay, fronting east.

Immediately west of the central island lies the Knights' Island (*Riddarholm*); it is almost entirely occupied with public buildings as the old Houses of Parliament; the old Franciscan church, in which all the later sovereigns of Sweden have been buried; the royal archives, and the chief law-courts.

North of these two islands lie the handsomely built districts of Norrmalm, separated from them by a narrow channel, in which is an islet with the new Houses of Parliament. In Norrmalm are the National Museum with valuable prehistoric collections, coins, paintings, sculptures; the principal theaters; the Academy of Fine Arts; the barracks; the Hop Garden, with the Royal Library, two hundred and fifty thousand volumes and eight thousand manuscripts, and with the statue of Linnæus; the Academy of Sciences; the Museum of Northern Antiquities; the Observatory, etc.

Ship Island (*Skeppsholm*), immediately east of "the Town" island, is the headquarters of the Swedish navy, and is connected with a smaller island on the southeast, that is crowned with a citadel. Beyond these again, and farther to the east, lies the beautiful island of the Zoological Gardens. Immediately south of "the Town" island is the extensive district of Södermalm, the houses of which climb up the steep slopes that rise from the water's edge. Handsome bridges connect the central islands with the northern and southern districts; quick little steamboats go to the beautiful islands in Lake Mälars on the west, and eastward toward the Baltic Sea, forty miles distant.

Sugar, tobacco, silks and ribbons, candles, linen, cotton, and leather are produced, and there are large iron foundries and machine shops. Though the water approaches are frozen up during winter, Stockholm exports iron and steel, oats and tar.

Stockholm was founded by Birger Jarl in 1255, and grew to be the capital only in modern times.

History.—Sweden was originally occupied by Lapps and Finns, but probably (1500 B. C.) Teutonic tribes drove them into the forests of the north, and at the dawn of history we find Svealand occupied by Swedes (Svea) and Gothland by the Goths.

Gothland was christianized and also conquered by the Danes in the ninth century, while Svealand remained fanatically heathen till the time of St. Eric (twelfth century), who conquered Finland, henceforth a Swedish possession. For a century Goths and Swedes had different kings, but gradually melted into one people toward the end of the thirteenth century.

Now arose bitter feuds between king, nobility, peasants, and universal turbulence prevailed; agriculture, industry, literature and culture progressed not at all or hardly existed. Even after the union of Sweden, Norway, and Denmark under one monarch (1397), Sweden was torn by conflicts which lasted down to the expulsion of Danish oppressors, and the restoration of Swedish autonomy by the national rising under Gustavus Vasa (1524), the ablest prince who had yet ruled the Swedes. Under him the reformation was heartily accepted. Gustavus Adolphus and the Swedes were its bulwark, not merely at home but in Germany in the Thirty Years' war; and by the acquirement of Bremen, Verden, and Pomerania, Sweden became (1648) a member of the empire.

GUSTAVUS ADOLPHUS PLACE AND THE ROYAL THEATER, STOCKHOLM

NEW UNIVERSITY, UPSALA, SWEDEN

Upsala is best reached by boat from Stockholm. Here the celebrated university, founded 1477, by Jacob Ulfson, now magnificently housed, stands in the Drottningatan. Library, the largest in Sweden, with three hundred thousand volumes, including the Codex Argenteus, or Gothic Gospel of Bishop Ulphilas (318-388), written in silver letters on purple vellum, also the Atlantic of Rudbeck, and the sacred book of the Druses, with the Edda Manuscript. An Observatory is attached to the University. The Botanical Garden has many rare plants and a bust of Linnæus (Linné), who was professor and physician here, living at Hammarby.

Under Charles XII. and his successor, the enmity of Denmark, Poland, and Russia wrested her new conquests from Sweden, and gave Livonia, Esthonia, Ingermanland, and Karelia (which had long been Swedish) to Russia; thus reducing Sweden from the rank of a first-rate European power. After a bloody struggle Sweden had to cede Finland (1809) to Russia. Norway was united by a personal union (i. e., by the monarch) with Sweden in 1810; and in 1818 the French general Bernadotte was elected king (as Charles XIV.).

Norway's demand for a larger measure of home rule led in 1905 to a complete separation.

SWITZERLAND (Ger. *Schweiz*, Fr. *Suisse*), is a confederation of twenty-two cantons, lying practically in the very center of Europe, between France, Germany, Austria, and Italy. No part of it is within one hundred miles of the sea. It is also a very small country (sixteen thousand square miles), not much larger than the half of Scotland. The greatest length from east to west is two hundred and sixteen miles, the width from north to south being one hundred and thirty-seven miles. The population in 1910 was 3,741,971.

Surface.—The southern boundary lies for the most part along the highest crests of the Alps, which descend by the Italian valleys to the plain of Lombardy; the summits of the Matterhorn and Monte Rosa rise on the boundary line, which is crossed by the Great St. Bernard, Simplon, and Splügen passes. North of this mass of heights the deep valleys of the Upper Rhone flowing west to the Lake of Geneva, and of the Upper Rhine flowing northeast to that of Constance, mark a deep trench all across the country. In the heart of the country rises the mass of the Bernese Alps or Oberland, the Alps of Uri and Glarus, with the summits of the Finsteraarhorn and Jungfrau. Still farther north the country descends gradually by less elevated mountains and hills to the undulating lowland of Switzerland (still one thousand five hundred feet above the sea), which extends in a curve from the Lake of Constance on the northeast along the Valley of the Aar, by the Lakes of Biel (Bienne) and Neuchâtel to that of Geneva. Beyond this the long parallel ranges of the Jura close in the country on the northwestern frontier.

More than half of the whole country is covered by rocks, glaciers, forest, and mountain pasture, and cannot be permanently inhabited.

Rivers and Lakes.—All the northern part of the country belongs to the basin of the Rhine flowing to the North Sea. That river, having purified its waters in its passage through the Boden-See or Lake of Constance (partly in Switzerland), is joined by the Aar, which rises near the Grimsel, and flows through the lakes of Brienz and Thun. To this basin also belong the lakes of Zürich and Zug, Luzerne, Neuchâtel, and Biel or Bienne. The southwestern district drains by the Rhône to the Mediterranean, through the Lake of Geneva or Leman, which is partly in Switzerland, partly in France.

The smaller part of the southern boundary that laps over the Italian valleys of the Alps includes the head of Lake Maggiore, in Switzerland, and the upper Ticino, which flows through it to the plain of Lombardy and the Adriatic. In the east the boundary embraces only one valley, which drains to the Danube, the Engadine, through which the Upper Inn flows northeastward.

From the elevation at which they rise, and their rapids, the rivers of Switzerland are of no value in navigation. The Rhine only begins to be freely navigable at Basel, where it leaves the country. The larger lakes, however, have little steamers plying from shore to shore; that of Geneva, forty-seven miles long, has a considerable traffic.

Climate and Scenery.—The climate naturally varies with the elevation above the sea level, from that of the perennial snows at an elevation of about nine thousand feet, downward through the pastoral alpine region and the tall pine forests, to the lower lands in which the chestnut flourishes, and where orchard fruits, the vine, mulberry, and wheat can be grown. There is a variation of about thirty-four and one-half degrees in the mean temperature—between fifty-four and one-half degrees Fahrenheit at Bellinzona, and twenty degrees on the Theodule Pass.

Switzerland has been called the playground of Europe, and is visited by large numbers of tourists from all parts of the world, attracted by its magnificent mountain and lake scenery.

The amount of money brought annually by tourists is estimated at twenty million dollars.

STATUE OF TELL, ALTDORF, SWITZERLAND

Altdorf, near the southern end of Lake Luzerne, and capital of the canton of Uri, is in the mountain-walled valley, and is the reputed scene of Tell's shooting the apple. The site is marked by a fountain. The colossal statue of Tell is near by. His birthplace, near Bürglen, is occupied by a frescoed chapel.

Geneva and Lausanne, on the beautiful lake of Geneva, Interlaken (between the lakes of Thun and Brienz), Luzerne and the Rigi, Schaffhausen at the Rhine fall, Zermatt beneath Monte Rosa, Lugano in the heart of the Italian lake district, are notable tourist stations; St. Moritz in the Engadine, and Leuk (Louèche) in the Rhone Valley, Pfäfers in that of the Upper Rhine, are famous for their baths. Switzerland as a whole—with its mountains, lakes, glaciers, waterfalls, valleys and cities—has been described by an American poet as a "cluster of delights and grandeurs."

Production and Industry.—The forests, which cover about a sixth of the surface, are of immense value to the country, where most of the houses are built of wood. The mountain pastures give the characteristic employments of the people of the Alps and Jura, as herdsmen and shepherds, tending their cattle and making cheese in the mountain chalets during summer.

Agriculture is followed chiefly in the valleys, where wheat, oats, maize, barley, flax, hemp, and tobacco are produced.

The textile industries are the most important, the chief centers being Zürich, Basel, Glarus, and St. Gall. The chief are silk, cotton, and linen fabrics, besides raw silk. Next comes the clock and watchmaking industry, established at Geneva in 1587, which spread to the cantons of Neuchâtel, Berne and Vaud.

Wood carving was introduced in the Oberland about 1820. Other manufactures are chemicals, chocolate, and condensed milk.

Salt, obtained on the banks of the Rhine, is the only valuable mineral of the country.

People.—Three-fourths of the population of Switzerland, occupying all the center and north of the country, are Germanic; the remaining fourth belongs to three branches of the Romanic family—the French in the west, the Italian in the south, and the Rhaeto-Romanic in the southeast. A little more than half of the population is Protestant, the remainder, chiefly in the mountain region, Roman Catholic.

Education is widely diffused, especially in the Protestant districts of the northeast, where the law of compulsory education is rigidly enforced. There are universities at Basel, Berne, Zurich, Geneva, and Lausanne.

Government.—At the close of the political storms which raged in Europe from 1789 till 1815, the affairs of Switzerland were re-arranged by the Congress of Vienna, which provided for the perpetual neutrality and independence of Switzerland in its twenty-two cantons. Since 1848 the independent states or cantons of Switzerland have become a united confederacy (Bundesstaat), the supreme legislative and executive authority of which is vested in a parliament of two chambers, sitting at Berne—the Stände Rath or States Council, and the National Rath, the first composed of two members for each canton, the second of representatives of the people according to numbers. The cantons are still, however, in a great measure, independent democracies, each making its own laws and managing its local affairs.

Referendum and Initiative.—These are two political institutions peculiar to Switzerland, the furthest developments of democracy yet attained.

The referendum, which has now spread throughout the whole Confederation, and by means of which all legislative acts passed in the Federal or Cantonal Assemblies may be referred to the people *en masse*, was fully developed in 1874, and it has been put in operation on an average once a year. The decisions have generally shown a conservative rather than a radical tendency on the part of the people.

Initiative is the exercise of the right granted to voters to initiate proposals for the enactment of new laws or for the alteration or abolition of the old ones.

Cities.—The capital of the Swiss Confederation is Berne, population (1910) 85,650. In 1910 there were twelve communes with populations exceeding 20,000: Zürich, 190,733; Bâle, 132,280; Geneva, 123,160; Berne, 85,650; Lausanne, 63,296; St. Gall, 37,657; Chaux-de-Fonds, 37,626; and Luzerne, 39,152.

[570]

[571]

THE BERNE CATHEDRAL

was built in 1421-1573, and restored in 1850, with a richly sculptured portal, some good stained glass of the fifteenth century, and a famous organ. From the Terrace in the rear of the Cathedral, the snowy peaks of the Bernese Alps are seen in a glorious panorama.

Berne, since 1849 the capital of Switzerland, sixty-eight miles by rail southwest of Basel, is situated on a lofty sandstone promontory formed by the winding Aar, which surrounds it on three sides. It is one of the best and most regularly built towns in Europe, as it is the finest in Switzerland. The houses are massive structures of freestone, resting upon shop-lined arcades. Rills of water flow through the streets. The view of the Alpine peaks from the city is magnificent.

The principal public buildings are a Gothic cathedral, the magnificent Federal Council Hall, the mint, the hospital, and the university. Berne has an interesting museum, and a valuable public library of fifty thousand volumes.

It was founded in 1191, was made a free imperial city in 1218, under Frederick II.; and between 1288 and 1339 successfully resisted the attacks of Rudolf of Hapsburg, Albert, his son, and Louis of Bavaria. The "Disputation of Berne" between Catholics and Reformers in 1528 prepared the way for the acceptance of the reformed doctrine.

On account of the traditional derivation of its name (Swabian *bern*, "a bear"), bears are maintained in a public bear-pit.

History.—The original inhabitants of Switzerland were the Celtic Helvetii, and the Rhætii of doubtful affinity. Both were conquered by Julius Cæsar and the generals of Augustus, and Romanized. Overrun by the Burgundians in the west, and their Germanic kinsmen the Alemanni in the east, Helvetia became subject to the Frankish kings and were christianized in the seventh century.

Most of the country was subsequently part of the Holy Roman Empire; and in 1273 a Swiss noble, Rudolf of Hapsburg in Aargau, became German emperor. Soon after his death (in 1291) the inhabitants of Uri, Schwyz, and Unterwalden formed a league to defend their common interests, and in 1315 crushed an Austrian army at Morgarten. In 1332 Luzerne joined the alliance, and in 1353, Berne, Zürich, Glarus, and Zug. The Austrians were again routed in Sempach in 1386, and in 1388 at Näfels.

The Swiss next had a fierce but triumphant struggle with Charles the Bold of Burgundy, whom they routed at Grandson and Morat in 1476, and finally at Nancy (where Charles was slain) in 1477.

When the Reformation began there were thirteen cantons, and the cantons took opposite sides from the beginning, not without serious turmoil and bloodshed. The treaty of Westphalia in 1648 recognized Switzerland as an independent state. Some of the cantons were strictly aristocratic and some highly democratic, and there was much discontent long before the French Revolution, when, in 1798, between civil strife and French armies, the old republic (or rather alliance) came to an end.

The Helvetic Republic of nineteen cantons, under French auspices, endured till 1805; then a new republican constitution was adopted, the Federal Pact of twenty-two cantons. On Napoleon's downfall, Valais, Neuchâtel, and Geneva, which had been incorporated with France, were restored, and Swiss neutrality and inviolability were recognized by the treaty of Vienna in 1815. Religious troubles led to a Catholic league in 1844, which was suppressed by the Federal forces in 1847. The present constitution was adopted in 1848, but revised in 1874. In 1891 a demand for popular initiative for measures was carried. In 1908 Switzerland entered into an international convention for compulsory arbitration at the court of the Hague.

BERNE CLOCK TOWER,

famous for its Bear Chimes—figures which perform every time the clock strikes.

TURKEY, or Ottoman Empire, comprises the wide but heterogeneous territories really or nominally subject to the Osmânli Sultan, in Europe, Asia, and Africa. These territories, which once extended from the Danube to the cataracts of the Nile, and from the Euphrates to the borders of Morocco, have been greatly reduced in the nineteenth and twentieth centuries.

Asiatic Turkey is now the true center of gravity of the empire; it includes Anatolia (the great plateau of Asia Minor), the lowlands of Mesopotamia, the highlands of Kurdistan and Armenia, and the island of Samos. The total area of the empire has been estimated as follows:

Area in Square Miles	
Turkey in Europe	12,000
Turkey in Asia:	
Anatolia	193,800
Armenia and Kurdistan	72,600
Mesopotamia and Syria	244,460
Turkish Arabia	172,000
Total	694,860
Estimated Population	
Turkey in Europe	2,755,000
Turkey in Asia:	
Anatolia	9,175,000
Armenia and Kurdistan	2,500,000
Mesopotamia and Syria	4,650,000
Turkish Arabia	1,100,000
Total	20,150,000

Of the above totals only 700,000 square miles (with a population of 21,000,000) are directly under Turkish government.

European Turkey consists of the provinces of Adrianople, Constantinople and Chatalja, and is separated from Asia by the Bosphorus at Constantinople and by the Dardanelles (Hellespont), the only political neighbor being Bulgaria, on the northwest.

[572]

[573]

PANORAMA OF THE BOSPHORUS AT THE NARROWEST PART

The Bosphorus, the straight connecting the Sea of Azov with the Black Sea, is so-called after Io, who swam over it in the shape of a heifer. On the western shore is the city of Constantinople. The Bosphorus at this point is about five hundred and fifty yards wide.

Physical Features.—Turkey in Europe is a mountainous country and the chief physical features as it is now limited is the strait of Bosphorus and the Dardanelles. The Bosphorus, which guards the approach to the Black Sea from the Sea of Marmora, is at the same time the focus of all maritime trade between the Mediterranean and Russia, etc., as well as of the overland routes from Europe into Asia Minor. It has fitly been likened to a tortuous river valley over whose wooded banks are scattered forts and towers, cities and villages, castles and parks. The southern gate of the Sea of Marmora is the Dardanelles, which gives an opening into the Ægean.

Turkey in Asia is still more mountainous. The two almost parallel ranges, Taurus and Anti-Taurus, which are the basis of its mountain system, cover almost the whole of the peninsula of Asia Minor or Anatolia with their ramifications and offshoots, forming the surface into elevated plateaus, deep valleys, and enclosed plains. From the Taurus chain the Lebanon range proceeds southwards parallel to the coast of Syria, and, diminishing in elevation in Palestine, terminates on the Red Sea coast at Sinai.

The Euphrates, Tigris, Orontes, and Kizil-Ermak are the chief rivers. (See Asia Minor.)

Climate.—The climate of Turkey in Asia is as varied as the physical features. The great plateau on the north has a distinctly continental climate, rigorous severe winters with intense scorching heat in summer; in the eastern part of the plateau region the mountains are covered with snow for two-thirds of the year, and some of the principal ranges are capped with perpetual snow; here the peasants build their dwellings underground to escape the severity of the seasons. Towards the west the winters are not quite so severe, but the variations of temperature are excessive.

Products and Industry.—The soil of European Turkey is for the most part very fertile, and the cultivated products include most of those usual in central and southern Europe—maize, rice, rye, barley, millet, besides tobacco madder, and cotton. The mineral products are iron in abundance, argentiferous lead ore, copper, sulphur, salt, alum, and a little gold; some deposits of coal have been found, but none are worked. Sheep-breeding is largely carried on.

In Asiatic Turkey the mineral wealth is great; coal and iron are found together in considerable quantities; rich mines of copper exist in the mountains on the south of the Black Sea, and in the Taurus near Diarbekir lead and silver are found at intervals along a line connecting Angora, Sivas, and Trebizond in the north, and the eastern Taurus in the south; green, black, and white marble, and the finest quality of granite, are to be had in many parts of the mountain section.

With a fertile arable soil and a suitable climate, nearly every agricultural product flourishes. Oats, barley, and wheat are produced in great abundance. Almost all kinds of garden produce and orchard fruits abound, grapes and oranges are to be had all round the Mediterranean coast, as well as the choicest tobacco, opium, valonia and madder.

The mulberry is everywhere cultivated for feeding the silkworms, and cotton is grown in most of the western valleys. Vast groves of boxwood and other valuable trees clothe the seaward slopes of the hills. Dates are produced for export in the Babylonian plain, where wheat is indigenous. Petroleum and bitumen springs are found in the Euphrates valley.

Angora is famous for its flocks of goats, which produce the mohair of commerce, and enormous quantities of wool come from the countless flocks of sheep tended by the wandering Bedouin and Kurd shepherds.

There are at present no manufactures worth mention. The sponge fisheries of the Mediterranean are a source of great wealth.

Commerce.—The exports include tobacco, cereals, fruits, silk, opium, mohair, cotton, coffee, skins, wool, oil-seeds, valonia, carpets, etc., and are largely derived from the Asiatic provinces. Recently large quantities of wine and of raisins for the manufacture of wine have been exported. Since the establishment of the Anatolian railway by German enterprise the export of cereals, chiefly malting barley, has largely increased.

People.—The population consists of a singular mixture of races. Turks, Greeks, Slavs, and Albanians are largely represented, besides Armenians, Kurds, Arabs, Tartars, Jews, Circassians, and Frank residents. (See *Book of Races*.)

The established religion is Islam or Mohammedanism, but most other creeds are recognized and tolerated. The Protestant religion was for the first time officially recognized in 1845.

Education in all departments has of late been notably improved and has largely contributed to the complete overthrow of the antiquated and despotic system of government.

Government.—Until 1908 the government of Turkey was a pure despotism. An amazing change was swiftly and peacefully carried through in the autumn of that year. In connection with the troubles in Macedonia between Christians and Moslems, Greeks and Bulgarians, a Turkish military revolt took place, which, under the guidance of the "Young-Turkish" party (mostly educated abroad), became a great national movement. The sultan, overawed, had to acquiesce; parliamentary government was planned and carried out; equality before the law proclaimed to all races and religions of the empire; and a large measure of local self-government promised not merely to Turks but to Greeks, Bulgarians, Albanians, Armenians, Syrians, Kurds and Arabs.

The enormous difficulties of the crisis were complicated by Bulgaria proclaiming its independence, and Austria-Hungary annexing the provinces of Bosnia and Herzegovina. But government by a national assembly has taken root in Turkey.

The term "Sublime Porte," sometimes given to the Turkish government, is derived from the name of the chief gate of Constantinople.

Cities.—Of the towns by far the most populous is the capital, Constantinople (1,200,000), while after it come Adrianople (83,000), which by reason of its central position in the Maritza valley, commands an extensive inland commerce, Midia, and Gallipoli, the chief port on the Dardanelles.

The principal towns of Asiatic Turkey are Smyrna, 260,000; Bagdad, 150,000; Damascus, 150,000; Aleppo, 125,000; Beyrout, 120,000; Scutari in Anatolia, 80,000, and Broussa, 80,000.

Constantinople was founded in 330 A. D. by Constantine the Great, from whom it derives its name, on a site partly occupied by the ancient Greek colony of Byzantium. The Turks call it Istambul or Stambol.

The city stands on a hilly promontory of triangular shape, having the Sea of Marmora and the Bosphorus on the south and east, and on the north the Golden Horn, an arm of the Bosphorus. It is thus surrounded by water on all sides but the west, where a strong wall shuts the city off, from the mainland. Like Rome, the city is built on seven hills, six of them being separated portions of one long ridge.

As in the case of all great cities, Constantinople has spread far beyond its original bounds, and may be said to include towns originally quite separate from itself.

Constantinople is excellently situated, more advantageously, perhaps, than any European city but Naples.

From the outside its appearance is most picturesque and imposing. At the taking of the city in the fifteenth century most of the churches were destroyed, and mosques were erected in the most prominent situations. Cupolas and minarets, with graceful curves and soaring spires, combine with lofty cypresses to give the city an air of unique grace, and to invest it with the mysterious glamour of the oriental world.

Within, however, the appearance is not so pleasing. The streets form a labyrinth of dirty, crooked, and ill-paved alleys, while most of the houses are low and are built of wood or rough stone. During the last half century the aspect of things has become much more European. The streets, under western influence, have been widened and improved, lighting at night is common, and a European style of building has been introduced, even for the sultan's palace. Cabs and electric cars are to be seen in most parts, while the old camel service has entirely disappeared. The dress of the people has changed in the same direction. The streets are generally dull in appearance, almost all animation being concentrated in the bazaars.

Constantinople consists of two distinct parts, besides more distant suburbs—Constantinople proper or Stambol, and what may be termed Christian Constantinople because it is there that the Christian colonies chiefly congregate. The two are separated by the Golden Horn, a safe harbor, capable of accommodating twelve hundred vessels, and so deep that the largest ironclads of the Turkish navy find enough water for their draught quite close to the shore.

Stambol or Turkish Constantinople lies on the south side of the Golden Horn, and Christian Constantinople lies on the north side; the two are connected by bridges. Stambol is on the site of Byzantium, and the old walls run a circuit of fourteen miles from the grim but now ruined and disused castle of the Seven Towers—where many sultans met their deaths at the hands of their mutinous soldiery, and where foreign ambassadors were imprisoned upon declaration of war—to the Golden Horn, then along its south shore to Seraglio Point, and so back to the Seven Towers, close along the margin of the Propontis. Here are nearly all the monuments and antiquities worth seeing in Constantinople.

First, next the Seraglio, stands Agia Sophia, Saint Sophia, the church dedicated by Constantine to "Eternal Wisdom," and rebuilt with added splendor by Theodosius and by Justinian, and now converted into a cathedral mosque. Outside it is not worth a second glance, but within, the airy grace of its stupendous dome, and the beauty of its marbles and mosaics fascinate and amaze the vision.

PANORAMA OF CONSTANTINOPLE

As the steamer runs up the Bosphorus, the white buildings and glittering minarets of Constantinople come into view; with the mosque of Santa Sophia, Galata Tower and Pera, the Sultan's Palaces at Beshiktash, with Scutari Suburb on the right, and then, rounding Seraglio Point, it glides at half speed into the Golden Horn, or harbor of Constantinople. At this moment, if the weather be fine and clear, a striking panorama opens to the eye of the voyager. The Golden Horn divides the city into two sections; Stamboul to the left, and Galata and Pera to the right. It is a bay, or amphitheater, surrounded by hills which are covered with buildings, domes, minarets, and palaces, embosomed by cypress groves, with hundreds of vessels and caiques skimming in all directions.

Next, but not less beautiful, is the Suleymaniya, the mosque which the Great Suleyman and his architect Sinan erected on the model of St. Sophia, but with Saracenic ornament and a loftier though not quite so expansive dome. Some of the monolithic columns are remarkable for their size and beauty, and the general effect is even more

imposing than that of St. Sophia.

Scarcely less stately is the Mosque of Sultan Ahmed I. in the Hippodrome; distinguished without by its six minarets (instead of the usual four), and within by the four gigantic columns which support the dome. Here the official celebrations and formal processions take place at the great festivals.

The mosque of the conqueror, Mohammed II., is also notable, though it has been greatly altered in restoration.

There are altogether some eight hundred mosques in Constantinople, and numerous chapels; but very few of them present features of special interest, except sometimes in the beauty of their wall tiles, of the Rhodian style, for the manufacture of which the suburb of Eyyüb was famous.

The remains of the Greek churches are more interesting, and the Fanar, or Greek quarter of Stambol, recall the memories of many distinguished Fanariote statesmen; but among the relics of ancient Constantinople none is more striking than the Hippodrome or "Horse Manège", originally a circus surrounded by marble seats, long since removed, but still showing remains of antiquity, such as the famous column of the Three Serpents which once stood at the Temple of Delphi, and supported a gold tripod made out of the spoils taken by the Greeks at the battle of Plataea, but was removed to his new capital by Constantine.

Christian Constantinople, on the north side of the Golden Horn, comprises Galata, Pera, and Tophâna. Galata is pre-eminently the merchant quarter, founded by a colony of Genoese merchants in 1216. The Tower of Galata, a Genoese erection, serves the same purpose as the Seraskier's Tower on the opposite side in giving alarms of fires. A tunnelled railway drags passengers up the steep ascent to Pera.

Pera is the aristocratic quarter; here are all the embassies and consulates. The steep and badly paved Grande Rue is lined with fair if expensive shops, and has an opera house, many cafés and restaurants, besides most of the principal hotels. Turks preponderate at Tophâna, which is so named from its cannon foundry.

The magnificent palace of Dolmabahçé is on the brink of the Bosphorus. Other suburbs are Kâsim Pasha, on the Golden Horn, the seat of the admiralty; Hasköi, and the picturesque village of Eyyüb.

Along the European shore of the Bosphorus are the summer resorts of Therapia and Biyückeré.

The Asiatic shore is also lined with settlements from Scutari to Candili. The new palace of Yildiz Köshki stands at the top of the hill of Beshiktâsh, beyond Pera.

The commerce of Constantinople is increasing rapidly, though most of it is in the hands of foreigners, especially of Greek and Armenian merchants. Exports are chiefly cereals, carpets, silk, wool, hides, and all kinds of refuse and waste materials such as horns, hoofs, skins, bones, old iron, etc. Several hundreds of tons of the sweetmeat known as "Turkish delight" are also sent yearly to countries of Europe and America.

The manufactures have all taken their rise during the last twenty years or so, and even now only that of cloth making has made much headway.

[576]

ENTRANCE TO DOLMA-BAGTÇHE PALACE

This palace, on the shore of the Bosphorus, was built and inhabited by Abdul-Medjid (1839-1861), is beautifully decorated in the interior and has a splendid throne room.

History.—The Osmanlis or Ottoman Turks sprang from a small clan of the Oghuz, who assisted the Seljûk sultan of Iconium, early in the thirteenth century, to resist the Mongol avalanche.

In the fourteenth century, the Turks under Osmân or Othmân conquered the Seljûk kingdom, and became known as Osmânlis or Ottomans. By 1336 they pushed their way to the Hellespont; under Murâd I. (Amurath) they occupied Adrianople and Philippopolis, received homage from the kings of Servia and Bulgaria, and practically held all the Balkan peninsula except Constantinople, which, after much fighting, fell before Mohammed II. in 1453. In the same century they conquered Albania, Greece, and the Crimea; and in the sixteenth century Syria, Egypt, Tunis, Hungary, and South Russia, and had wars with the Russians, Persians, and Venetians.

Their star began to decline in the seventeenth century; in 1682 they were driven back from Vienna, and lost Hungary, Transylvania, and Podolia. In the eighteenth century the Russians were their most successful enemies, wresting from them the territories from the Dniester to the Caspian. Greece attained independence in 1828, though Egypt failed to throw off its allegiance. The Crimean war (1854-1857) was fought in aid of the Turks against the Russians.

The next great crisis was the Russian war of 1877-1878. The worst Armenian massacres were in 1895-1896. Turkey held her own against Greece in 1897.

Abdul Hamid was deposed and constitutional government nominally established in 1908. But unrest and intrigue still prevent settled conditions.

Until the disastrous war of 1912-1913 with the States of the Balkan League (Bulgaria, Greece, Servia, and Montenegro) the European dominions of Turkey extended westwards to the Adriatic and northwards to Bosnia-Herzegovina (Austria). Under the Treaty of London in 1913 the northwest portion of Turkey was a line drawn from Enos, in the Ægean, to Midia, in the Black Sea, thus excluding Adrianople, which had capitulated to the Bulgarians after a prolonged siege.

During the second Balkan war (Bulgaria against the other members of the Balkan States) Turkey took advantage of the military difficulties of Bulgaria and reoccupied Adrianople, thus recovering a considerable portion of the province of that name. In 1911-1912 Turkey lost the remaining portion of her African possessions through the occupation by Italy of Tripoli and Cyrenaica, which were ceded under the Treaty of Ouchy (1912).

Turkey joined forces with the Austro-Germans in November, 1914, and attacked Russia and invaded Egyptian territory. Far more important than any of the Turkish operations, however, was the attempt of England and France, in 1915, to force the passage of the Dardanelles, so as to take much needed supplies of arms and ammunition to Russia and in turn enable her to export the enormous stocks of wheat which had piled up at her Black Sea ports.

EGYPTIAN OBELISK, CONSTANTINOPLE

This Obelisk from Thebes, of rose colored granite, sixty feet high, was transported hither by Theodosius the Great, A. D. 390-395, and shows traces of bas-reliefs of that date, and Egyptian hieroglyphs thirty centuries old.

A combined English and French fleet, therefore, attempted to force the passage of the Dardanelles, battering at the Turkish forts from February 21 to March 18, when they attempted to force the Narrows, but were repulsed, with the loss of the British battleships *Irresistible* and *Ocean*, and the French battleships *Bouvet* and *Gaulois*, in addition to serious injury to a number of other warships engaged.

[577]

YILDIZ PALACE AND THE BEAUTIFUL HAMIDIEH MOSQUE,
in the Beshiktash suburb, some distance north of Galata. The present Sultan resides in the Palace of Yildiz.

A joint land and sea expedition was subsequently sent to accomplish what the fleets had failed to achieve.

The most desperate fighting continued there from the beginning of May. The allies employed British and French regulars—the famous Foreign Legion of France, British colonials from Australia and New Zealand, and troops from Egypt, the Soudan and North Africa—but they failed to capture the summits of the hills that command the Narrows and the great Turkish forts.

The land forces had the constant support of British and French fleets, which engaged the defenses at close range.

On May 11 the British battleship *Goliath* was sunk, and two weeks later a German submarine made its way through the straits of Gibraltar, succeeded in torpedoing the British battleship *Triumph* and the *Majestic* and *Agamemnon*.

On January 9, 1916, the British and French forces entirely withdrew from the Gallipoli Peninsula, and the attempt to force the Dardanelles was abandoned.

INTERNAL COMMUNICATIONS.—The railways of Turkey have made great strides in recent years. Constantinople is now in direct communication with Salonica and Monastir by means of a coastal line, and with Sophia, Nisch, and Belgrade, by means of a line passing up the Maritza Valley, through Adrianople and Philippopolis, and thence over a pass between the Balkans and Rhodope Mountains. Salonica is further united with Uskub and Mitrevitza.

The postal and telegraphic services are a long way behind those of other European countries, and foreign nations still find it necessary to maintain their own post-offices in the large towns and ports.

BAGDAD RAILROAD.—The most important step in the industrial progress of Turkey in modern times is the concession for the construction of the Bagdad Railroad, which, when completed, will connect the Mediterranean with the Persian Gulf.

By a provisional convention, preference was given to a German company in 1903. England had a particular interest in the proposed scheme, as the line suggested would provide a short route to India; accordingly, in 1903, the British government objected to the railway being placed under German control, and discussion followed with a view to putting the line under international control. By the agreement of 1903 it was decided the German group should control forty per cent of the capital, the French, through the Imperial Ottoman Bank, thirty per cent, the Austrian, Italian, Swiss, and Turkish twenty per cent, and the Anatolian Railway ten per cent. In 1904, one hundred and twenty-four miles of the line were completed, from Konieh, through Ereğli, to Bugurlu. In 1908 sanction was given to extend the line eastwards from Bugurlu across the Taurus to Adana.

The total length of the line will be one thousand five hundred and fifty miles and will run through Aintab and Berejik to Mosul, thence along the right bank of the Tigris to Bagdad.

THE CONTINENT OF NORTH AMERICA

[578]

Since the beginning of the sixteenth century America has been the general name for the two continents and adjacent islands, forming the main body of land found in the western hemisphere.

Position and Extent.—North America forms the northern section of the "New World" discovered by Columbus. It is separated from Europe by a sea nine hundred and thirty miles broad, from Asia by Bering Strait sixty miles across, and extends from the Arctic Ocean nearly to the equator.

The main mass is triangular in shape, and its outline varied by large peninsulas, broad gulfs and numerous inlets. Development of coast-line, twenty-eight thousand one hundred and thirty miles. Length, four thousand five hundred miles; breadth, three thousand one hundred miles. The area of the continental mainland is estimated at seven million one hundred and forty-six thousand six hundred and forty-one square miles; the entire area, including Greenland, the Arctic Archipelago, the West Indies, Newfoundland, and other islands, at over nine million square miles.

Islands.—It is customary to regard Greenland as a part of America, while the adjacent island of Iceland, though partially in the western hemisphere, is usually associated with Europe. The other principal American islands in the Atlantic are Newfoundland, Cape Breton, Anticosti, Prince Edward Island, Long Island, the Bermudas, the Antilles or West Indies, Joannes, Staten Island and South Georgia.

In the Pacific are the Aleutian Islands, Kadiak, the Alexander and Queen Charlotte groups, Vancouver and other British-Columbian Islands, the Santa Barbara group, Beville-Gigedo, the Pearl Islands, and others in the Gulf of Panama, the Galápagos, Juan Fernandez and the associated islets, Chiloe and the Chonos Archipelago. In the Arctic Ocean there are many large but unimportant islands. (See [Map of Comparative Size of Islands](#) and [Table of Areas](#).)

Coast-line.—The coast-line of North America on the west is almost everywhere high and rocky. To the south of Puget Sound good harbors are rare, but British Columbia and Alaska have great numbers of good seaports, the coast-line being, in many places, deeply cut with high-walled fjords, or "canals," and elsewhere sheltered by ranges of high and well-wooded islands. The Atlantic coast, north of New York Bay, is generally rocky and well sheltered with islands, and has abundance of good natural harbors; but south of the parallel of New York the coast of the mainland is almost everywhere low and sandy. Many of the best ports are formed by river-mouths, and have sandbars across their entrances. Nowhere else in the world is there any such extent of low and sandy coast as on the Atlantic and Gulf seaboard of the United States.

Surface.—The western mountain-system of North America comprises a very great number of minor ranges, mostly having a north and south direction. The main chain (Sierra Madre) cannot be said to preserve an unmistakable identity throughout. The Coast Range, the Sierra Nevada, and the Cascade Mountains are the most noted of the western parallel ranges; they all lie on the Pacific slope, and contain some of the highest of North American peaks. The elevated plateau called the Great Basin (chiefly in Utah and Nevada), contains the Great Salt Lake and several smaller bodies of strongly saline water, evidently the remains of a much larger lake which once sent its waters to the sea. The eastern or great Appalachian mountain-system has a general direction nearly parallel with the Atlantic coast-line.

North of the St. Lawrence River is seen the vast and complicated Laurentian mountain-system, which extends from the Atlantic westward to near Lake Superior.

The highest summits are Mt. McKinley, in the north; Mt. Harvard, in the Rocky mountains; Mt. Whitney, in the Sierra Nevadas; and Mt. Popocatepetl or Peak of Orizaba, in Mexico. (See [Tables of Mountain Peaks](#).)

Rivers and Lakes.—In the Rocky Mountain region of Canada, the great rivers, Yukon, Fraser, Columbia, Saskatchewan, and Mackenzie, take their rise. Between these mountains and Hudson Bay, a girdle of vast lakes, or inland seas (Great Bear, Great Slave, Athabasca, Deer Lake, Winnipeg, and others), form a regular succession running from the Arctic Circle to Lake Superior, the first of a wonderful chain of great sea-like expansions of the Upper St. Lawrence (the others being Michigan, Huron, Erie and Ontario). North of the St. Lawrence system almost the whole country is thickly studded with lakes, which, with their connecting streams, form a network of important waterways traversable by canoes and boats.

The Atlantic slope of the United States is well supplied with water, and many of its streams afford extensive navigation. The Hudson is noted for its fine scenery; the Potomac is one of the noblest of American rivers; and important streams flowing to the Atlantic are the St. John, the Penobscot, the Kennebec, the Merrimac, the Connecticut, the Delaware, the Susquehanna, the James, and the St. John's, nearly all navigable in their lower courses.

The chief rivers flowing to the Gulf of Mexico are the Appalachicola, the Mobile, the Pearl, the great Mississippi, the Sabine, the Trinity, the Brazos, the Colorado of Texas and the Rio Grande.

Of the many large Alaskan rivers the principal are the Yukon and the Kuskokwim. The Fraser is a swift and strong river; the great river Columbia is noted alike for its navigation, its salmon fisheries, and its enormous cataracts. The Rio Colorado, whose waters flow to the Gulf of California, traverses a desert plateau. Here nearly every watercourse runs in a deep-walled cañon, a narrow valley with precipitous sides, often of prodigious height.

In the plateau of Central America the largest lake is that of Nicaragua, nearly equal to Ontario in extent, and only one hundred and thirty-one feet above the level of the sea. (See further under the respective countries of North America.)

Climate.—Largely determined by the direction of the mountain ranges. Five climatic regions, viz., an arctic region, whose mean temperature is less than thirty-two degrees Fahrenheit; an Atlantic temperate region, extending as far as the Mississippi, with abundant rains and dense woods; an inland temperate region, dry, with steppes or prairies; a Pacific coast region, and a tropical region.

Political Divisions.—The political divisions of North America are:

(1) Danish America,^[8] which includes Greenland and three small islands of the Virgin group in the West Indies.

[8] The Danish West Indies were transferred to the sovereignty of the United States in 1917 at the purchase price of twenty-five million dollars.

(2) British North America, in which division we may place the Dominion of Canada, Newfoundland, Labrador, the Bermudas, the numerous British West Indian islands, and British Honduras.

(3) The United States, including the detached territory of Alaska.

(4) Mexico.

(5) The Central American republics of Honduras, Guatemala, Salvador, Nicaragua, and Costa Rica, together with Panama—unless its southern part be regarded as belonging to the South American continent.

(6) The West Indian republics of Hayti and San Domingo.

(7) The Dutch West Indies.

(See the articles on the separate states and colonies.)

THE UNITED STATES

The republic of the United States is by far the most populous, wealthy, and progressive country of all the New World.

Location and Extent.—It occupies the most valuable portion of the North American continent, the whole of it (with the exception of the territory of Alaska) lying within the temperate zone, between Canada on the north and Mexico on the south, and reaching across from the Atlantic to the Pacific Ocean.

Its boundary toward the Canadian Dominion passes through the Haro, or northern channel of the Strait of San Juan de Fuca, south of Vancouver Island, and thence along

[579]

the forty-ninth parallel of latitude to Lake Superior; then midway through the center of the Great Lakes to the St. Lawrence, and down that river to the forty-fifth parallel, and an irregular boundary which separates New Brunswick from the States of New York and Maine, terminating at Passamaquoddy Bay.

In the south, the Mexican frontier runs from the Pacific coast, northward of the peninsula of California, to the Rio Grande del Norte, which it follows to the Gulf of Mexico. From Atlantic to Pacific, the breadth of the United States is not less than twenty-five hundred miles; and from north to south the country extends nearly seventeen hundred miles.

Surface.—The surface of the United States from east to west may be divided as follows: (1) The Atlantic Plain, which extends from the coast to the Allegheny Mountains. (2) The Mississippi Valley and Great Central Plain, which extends from the Allegheny Mountains west to the Rocky Mountains. (3) The Western Highlands. (4) The Pacific slope, which extends from the Rocky Mountains to the Pacific Ocean.

Mountains and Plains.—The chief mountain systems are the Appalachian region in the east and the Rocky Mountains in the west.

The APPALACHIAN SYSTEM begins in the northern part of New England (in Maine without the appearance of regular ranges) and New York, and extends southwestward to Alabama and Georgia, being divided by the Hudson River valley and Lake Champlain, and that of the Mohawk River into three distinct sections.

A coast-plain extends from its eastern base to the Atlantic. It is narrow in Maine, where it terminates in a bold rocky coast indented by bays, and broken into projecting promontories and islands. South of Massachusetts the coast becomes lower and more sandy, and the plain grows gradually wider, with the exception of a narrow belt at New York, until in North Carolina it attains a width of two hundred miles.

In the southern part of New England it is characterized by hills, and below New York by a distinct coast region and a more elevated slope. This higher region, which is in Virginia and thence southward, is marked by a somewhat abrupt terrace, varies in altitude from a few hundred to more than a thousand feet, and is known as the Piedmont plateau. The lower coast region is seldom more than one hundred feet above the sea. It has a sandy soil, and in many places there are large swamps near the coast. Much of this swampy country is uninhabitable, but when reclaimed, as it has been in many parts of North and South Carolina, it makes valuable rice-land. Many acres of fertile agricultural land have also been secured in Florida by draining its swamps. The middle elevated region is diversified by hills and valleys, and has a productive soil. The dividing line between it and the low coast-plain marks the head of navigation of most of the streams, and also determines the sites of many important towns.

The surface of this region today is a series of parallel ranges divided by fertile valleys. The various ridges are named as follows: The Blue Ridge, which lies nearest the Atlantic; the Kittatinny Chain; the Allegheny Mountains, which lie in the western part of Virginia and the central part of Pennsylvania; the Cumberland Mountains, on the eastern boundary of Tennessee and Kentucky; the Catskill Mountains, in the State of New York, which are continued in the Sacondago Chain; the Green Mountains, in the State of Vermont; the Hudson River Highlands, and the hills of New Hampshire. There is no peak of marked elevation in the Appalachian region, the highest point being Mt. Washington, in New Hampshire, which reaches a height of nearly seven thousand feet.

GREAT CENTRAL PLAIN.—West of the Appalachian system and lying between it and the western highland is a great central valley, forming part of the continental depression which extends from the Arctic Ocean to the Gulf of Mexico. It is almost an absolute plain, rising gradually from the Gulf toward the chain of Great Lakes in the north, and toward the mountains on the east and west. The only important departure from its uniform level character is an elevation of from five hundred to two thousand feet, running from southern Missouri through northwestern Arkansas into eastern Oklahoma, and known as the Ozark Mountains.

This great valley occupies about one-half the entire area of the United States, and the fertile prairies and bottom-lands of the eastern and central portions make it the most important agricultural basin of the globe. From an irregular line west of the Mississippi River the land rises in an almost imperceptible slope till it reaches the base of the western plateau.

THE ROCKY MOUNTAIN SYSTEM extends a distance of about two thousand miles. The system is continued in Canada. The Rocky Mountains are not a single range, but are double and sometimes threefold. These ranges are the edge of a region of plateaus and hills which extends to the coastal mountains. The chief mountain ranges belonging to the United States Rockies are the Bitter Root Mountains, the Blue Mountains, and the Big Horn Mountains in the north; the Wahsatch Mountains, the Wind River Mountains, and the White Mountains in the center; and the Sierra Madre and the Sangra de Cristo Range in the south. In the western part of the southern Rockies lies the Great Basin of Colorado, with the Wahsatch Mountains on the east and the Sierra Nevada on the west. This basin is extremely arid, has suffered much volcanic action.

THE WESTERN OR PACIFIC SYSTEM forms a part of the vast elevation which extends from the northern to the southern extremity of the western continent. In the United States it is a great plateau of four thousand to ten thousand feet surmounted by a complex system of ranges, in its widest part more than one thousand miles broad. Of this Cordilleran region the Rocky Mountains form the eastern and the Sierra Nevada and Cascade Mountains and the Coast Ranges the western border.

In the ranges of central Colorado alone nearly forty of the summits have an altitude of more than fourteen thousand feet. In the Wind River Mountains, in Wyoming, are the head-waters of the Colorado, the Columbia, and the Mississippi, the three great river-systems of the United States; and in the northwestern corner of the same state is situated the National Park, famous for its hot springs and geysers as well as for its magnificent scenery (see [Yellowstone](#)).

Between the Wahsatch Range and the lofty masses of mountains in Colorado is a region of peculiar interest, consisting of level plateaus in which the changes of elevation from one plain to another are marked by abrupt descents and steep cliffs. It is furrowed by cañons or gorges, whose sides are nearly vertical; and the bed of the Colorado is in some places more than a mile and a quarter below the surface of the plateau. (See [Grand Cañon](#) under [Colorado River](#).)

Between the Wahsatch Range and the Sierra Nevada lies the Great Basin, an immense tract having at best but little rainfall, except upon the summits of the ranges by which it is traversed, and none of whose waters are drained to either ocean. The saline swamps, salt lakes, and sinks of Nevada indicate the former location of one of these lakes; Great Salt Lake is all that now remains of the other.

The Sierra Nevada and the Cascade Range are topographically continuous, and constitute a great mountain-wall, which so far as the height of the peaks and the grandeur of the scenery are concerned, is one of the most striking portions of the Cordilleran system. Most of the peaks of the Sierras are, however, of granite and metamorphic rock, while those of the Cascade Range are volcanic. The greatest altitude is attained with Mt. Whitney as the culminating point. The lofty character of the range is maintained throughout the greater part of California, and the sublimity of the scenery is justly celebrated. (See [Yosemite Valley](#).)

From this point there extends northward one of the most remarkable groups of extinct or faintly active volcanoes to be found anywhere in the world: the lava overflows in this region cover an area of above two hundred thousand square miles. The most prominent peaks are Mt. Shasta, in California, and Mt. Rainier, in Washington. In three separate places rivers have cut a passage through the volcanic portion of the range. The most notable is the passage of the Columbia River in a grand cañon more than three thousand feet in depth.

The Coast Ranges of Washington, Oregon, and northern California consist of numerous and approximately parallel chains, which as a rule pitch off abruptly toward the sea, leaving no coast-plain. Between the Coast Ranges and the Sierra Nevada and Cascade Range is a series of broad valleys, occupied mainly in Oregon by the Willamette River, and in California by the Sacramento and San Joaquin. In southern California the mountains of the Coast Ranges diminish in height, but throughout their whole extent they are interspersed with picturesque and fertile valleys.

Coast.—The Atlantic coast has a length of about twelve thousand three hundred and sixty miles; the Gulf Coast of five thousand seven hundred and fifty miles, and the Pacific Coast of three thousand two hundred and fifty miles.

On the coast of the New England states there are many indentations which, though small, furnish commodious harbors. Long Island Sound adds greatly to the commercial importance of New York harbor, and farther south are Delaware and Chesapeake Bays; Albemarle and Pamlico sounds, and several small indentations, such as those which form the harbors of Charleston and Savannah. The Chesapeake Bay is the largest indentation of the Atlantic Coast and runs inland in a northward direction for more than one hundred and eighty miles, with an average breadth of about fifteen miles. From Cape Hatteras to Cape Sable, however, the coast is swampy, and, especially in Florida, fringed with lagoons. The harbors of this part of the coast are not good naturally. The coast of the Gulf of Mexico is low and very swampy, but is of special climatic and commercial importance.

The Pacific Coast of the United States has a very narrow Continental Shelf, and few bays or capes. With the exception of Puget Sound, the Bay of San Francisco, and the harbor of San Diego, there is scarcely a noticeable break in the continuity of the coast line.

Islands.—There are many small rocky islands along the coast of Maine, and on the southern New England Coast is a group to which belongs Long Island, the largest of the islands of the United States. Farther south, off the Atlantic Coast, and also in portions of the Gulf of Mexico, are many low sand-spits lying parallel to the coast and having behind them shallow channels, lagoons and swamps. On the Pacific Coast there are no islands of importance except the Santa Barbara group off the southern coast of California.

Rivers.—The rivers of the Atlantic Plain rise in the Appalachian system, and are comparatively short. In many cases they are too rapid to be of much value for navigation, but are valuable for supplying water power. These rivers almost without exception have good harbors at their mouths. The chief are: the Hudson, the Delaware, the Susquehanna, the Potomac, the James, and the Savannah.

THE GREAT CENTRAL PLAIN is drained by the Mississippi-Missouri river system, the basin of which covers half the area of the United States, and is equal in area to about one-third the area of Europe.

The Mississippi rises in Lake Itasca, in Minnesota, at about fifteen hundred feet above sea-level. After flowing for about one hundred miles in an easterly direction it turns south, and is joined by numerous tributaries. The chief are: St. Peter's River, which joins the main stream nine miles above St. Anthony's Falls; the Missouri, which enters the Mississippi just above St. Louis; the Ohio, which joins the main river at Cairo; the Arkansas, the Wisconsin, the Illinois, and the Red River.

The Mississippi-Missouri has made a broad flood plain, varying in width from thirty to sixty miles. This plain is subject to severe inundations, for it slopes very gently away from the river bed, which is in many parts of the river above the level of the surrounding plain. The river carries a vast amount of silt, which it deposits at its mouth, thus forming a delta which stretches a series of long, narrow, tentacle-like arms seaward.

Other rivers falling into the Gulf of Mexico are the Mobile and the Rio Grande. The Mobile, which enters the gulf at the town of Mobile, is the union of the Alabama and the Tombigbee. The Rio Grande forms the boundary between Texas and Mexico.

The rivers flowing into the Pacific are comparatively short, owing to the nearness of the coast ranges to the sea. The Colorado River flows into the Gulf of California, after crossing an arid plateau. (See [description](#) below.)

The San Joaquin and the Sacramento rivers unite and flow into the harbor of San Francisco; these and the Columbia are the only important rivers entering the Pacific.

The Great Basin of California is largely an area of inland drainage. The rivers flow into lakes with no outlets to the sea.

Colorado River (Spanish for "red" or "reddish"), is a remarkable river formed by the union of the Grand and Green Rivers, and flowing through the great plateau region. Below the junction of the Green and Grand, the main affluent in Utah is the San Juan, which drains an interesting region in the southwest of Colorado and the northwest of New Mexico. In Arizona the main affluents are the Colorado Chiquito or Flax River, the Bill Williams, and the Rio Gila, all from the left. The only important affluent the Colorado receives from the right is the Rio Virgen. From the junction of the Grand and Green the general course of the stream is to the southwest through the southern part of Utah and northwestern Arizona; and it afterwards separates Arizona from Nevada and California. The lower part of its course is in Mexican territory, where it flows into the northern extremity of the Gulf of California.

The most striking features of the Colorado basin are its dryness, and the deeply channeled surface of the greater part of the country. Almost every stream and watercourse, and most of all the Colorado itself, has cut its way through stratum after stratum of rock, until now it flows in a great part of its course, at the bottom of a deep trench or cañon.

THE GRAND CAÑON.—The main stream, for nearly four hundred miles below the mouth of the Colorado Chiquito, thus makes its way through a great plateau, forming what is called the Grand Cañon of the Colorado, the most extensive and marvelous example of the kind anywhere known.

Throughout the upper part of the great cañon the walls are from four thousand to seven thousand feet in height, and are often nearly perpendicular. Frequently they are terraced and carved into a myriad of pinnacles and towers, tinted with various brilliant colors. At some points the walls on either side rise sheer from the water; at others there is a talus of fallen rock, or occasionally a strip of fertile soil, on one or both banks. There are two main trails by which the bottom of the cañon may be reached. The Bright Angel Trail is seven miles down from the rim to the river and requires three hours for the descent. The Grand View Trail is somewhat longer and more difficult.

This over-drained river basin has an area of two hundred and twenty-five thousand square miles. The whole course of the river below the junction is about nine hundred miles; to its remotest sources it is over two thousand miles. Navigation is possible for light-draft steamers for over six hundred miles. The river is subject to vast and frequent changes of volume, and except where confined by cañon-walls, the river channel shifts to and fro in a very remarkable degree.

Hudson River, one of the most beautiful and important in America, rises in the Adirondack Mountains, four thousand three hundred and twenty-six feet above the level of the sea, where its head-streams are the outlets of many mountain-lakes. At Glens Falls it has a fall of fifty feet, and soon after, taking a southerly course, runs nearly in a straight line to its mouth, at New York City. It is tidal up to Troy, one hundred and fifty-one miles from its mouth, and magnificent steamboats ply daily between New York and Albany.

Below Newburg, sixty miles from New York, the river enters the highlands, which rise abruptly from the water to the height of sixteen hundred feet. Here historical associations add to the interest of varied scenery of singular beauty and grandeur: here was the scene of Arnold's treason and of André's fate; and at West Point, the seat of the United States military academy, eight miles below Newburg, are the ruins of Fort Putnam, built during the War of Independence.

Emerging from the highlands the river widens into a broad expanse called Tappan Bay, which is four and one-half miles wide and thirteen miles long. Below, on the right bank, a steep wall of trap rock, called the Palisades, rises from the river's brink to a height of three hundred to five hundred and ten feet, and extends for nearly twenty miles to the upper portion of the city of New York.

The river from here is known as the North River, and is from one to two miles wide; and after passing between New York and Hoboken and Jersey City, it falls into New York Bay. Its whole length is about three hundred and fifty miles, and its principal tributaries are the Sacondago, Mohawk, and Walkill.

The Hudson has valuable shad and sturgeon fisheries, and has large commercial value. It is connected by the Erie Canal with Buffalo and the Great Lakes, while the Richelieu Canal connects it with Montreal. The Hudson River Railroad, connecting New York with Albany, runs along the east bank.

The river is named for the English navigator who explored it in 1609. Robert Fulton's first successful experiment in steamboat navigation was made on this river in 1807.

The St. Lawrence, issuing from Lake Ontario, flows northeast for some seven hundred and fifty miles—part of the way forming the boundary between Canada and the United States—and falls into the Gulf of St. Lawrence by a broad estuary. But in its widest acceptance the name includes the whole system of the Great Lakes and their connecting streams, with a total length from source to mouth of two thousand miles, and a drainage basin of five hundred and sixty-five thousand two hundred square miles. It pours more fresh water into the ocean than any other river except the Amazon.

This mighty artery rises, under the name of the St. Louis, on the spacious plateau which sends forth also the Mississippi toward the Gulf of Mexico, and the Red River of the North toward Hudson Bay. Lake Superior (six hundred and two feet above sea-level), the next link in the chain, finds its way to Lake Huron through St. Mary's River, whose

[580]

[581]

[582]

rapids have a fall of twenty and one-half feet. Below Lake Huron, which receives Lake Michigan from the south, St. Clair River, Lake St. Clair, Detroit River, and Lake Erie, maintain pretty nearly the same level (there is a fall of some eight feet, however, in Detroit River) till the river Niagara descends three hundred and twenty-six feet to Lake Ontario, which is itself still two hundred and forty-seven feet above the sea-level.

The St. Lawrence proper, with a number of lakelike expansions (such as the Lake of the Thousand Isles, of St. Francis, St. Peter, etc.), presents the character first of a river, and then of an estuary, down to the gulf. What is known as the Lake of the Thousand Islands contains about seventeen hundred islands, big and little, many of them extremely picturesque. This is a famous tourist region, with numerous hotels and other resorts as well as many fine private estates.

Prior to 1858 only vessels drawing not more than eleven feet of water could pass up the river above Quebec, but since then a channel has been made in the shallow parts of the river, three hundred feet wide and twenty-seven and one-quarter deep, which permits the passage up to Montreal of large vessels.

Between Lake Ontario and Montreal there are several rapids, which, however, may be all avoided by means of canals that have been constructed at a very great expense. Immediately above the island of Montreal, the St. Lawrence is joined by its principal auxiliary, the Ottawa, from the northwest; and a little more than half-way between this confluence and Three Rivers, the highest point of tidal influence, the Richelieu from the south brings in the tribute of Lake Champlain. Other principal tributaries are the St. Maurice, the Saguenay, and the Batiscan. The width of the St. Lawrence varies from less than one to four miles; the estuary at its mouth is above one hundred miles across. During winter the river is frozen over and navigation closed.

Lakes.—Of the Great Lakes of North America, Lake Michigan lies within the United States, and the southern shores of Lake Ontario, Lake Erie, Lake Huron, and Lake Superior are United States territory. These lakes were formed by the action of the glacier which once covered the continent as far south as the forty-second parallel, roughly speaking. They are remainders of much larger lakes and are of the utmost importance as waterways.

New England has very many smaller lakes, which are also the result of glacial action. The largest lake of the United States apart from the Great Lakes is the Great Salt Lake of Utah. The extremely low rainfall of this region and the intense evaporation consequent upon the high temperature are responsible for the salinity of the waters of the lake.

The Great Lakes.—The five Great Lakes cover a total area of over ninety thousand square miles, forming the largest collective mass of fresh water in the world.

LAKE SUPERIOR.—The northern shores of Superior are mostly precipitous cliffs ranging from three hundred to one thousand feet in height. On the southeast sandy coasts prevail. The coast on the south and southwest is composed largely of sandstone cliffs, rich in iron and other metal deposits. The bed of Superior is supposed to be an ancient volcanic crater. Its depth of one thousand and eight feet represents a depression extending four hundred feet below sea-level. Superior is, therefore, distinct in origin from the other lakes of the group, whose beds represent ancient river systems and date from the glacial period. The basin of the lake, closely circumscribed by the Mississippi and Hudson Bay watersheds, receives many streams, but all of them short.

LAKE HURON, the second of the Great Lakes, is bounded north, east and south by the Province of Ontario, and south and west by the State of Michigan, including Georgian Bay (five thousand six hundred and twenty-six square miles), and North Passage, one thousand five hundred and fifty-six square miles. It is connected with Lake Michigan by the Straits of Mackinac, three and one-half miles broad and one hundred and thirty-five feet deep.

The discharge of Lake Huron is about two hundred and seventeen thousand cubic feet per second. By reason of evaporation and rainfall, the level of the lake varies annually between four and five feet, but much greater local variation is caused by the strong winds. The densely wooded northeast is broken by many low islands of limestone and glacial debris. Elsewhere the shores are almost unbroken and low, except when cliffs of one hundred or one hundred and fifty feet high rise from the northeast border and afford good sites for the many Canadian towns and villages. Nearly all the harbors on this coast are protected by breakwaters.

LAKE MICHIGAN.—The area of Lake Michigan includes Green Bay on the northwestern shore, and Grand Travers Bay directly on the eastern shore. Many islands lie in the lake between these two breaks in the shore, which elsewhere is low and unbroken.

About the southern and eastern borders are immense heaps of sand which have been piled up by waves and currents, and drift inland by the winds, sometimes, as at Sleeping Bear bluffs, completely burying the heavy forests.

The level of Michigan varies, but not as greatly as does that of Huron, according to the direction and force of the winds, the changes in rainfall, evaporation, atmospheric pressure, etc. Except when caused by protracted gales blowing steadily in one direction, this variation rarely exceeds one and three-tenths feet. The lake has a lunar tide with accompanying variation of from one and one-half inches neap to about three inches spring tide, and the water is warmer than the air in winter and cooler in summer, and visibly ameliorates the climate of the shores, as may be shown in the quantity and rich quality of the Michigan fruits. Like all the Great Lakes, Michigan abounds in fish, such as whitefish and trout.

LAKE ERIE has a northeast and southwest direction, bounded on the entire upper shore by the Province of Ontario, and on the southern and eastern shores by Ohio, Pennsylvania and New York. At its southwestern end it is connected with Lake St. Clair by the Detroit River. At its northwestern end it discharges into Lake Ontario through the Niagara River. It is connected by the Welland Canal with Lake Ontario and by other canals with the Hudson and Ohio Rivers, making it thus a link in the waterway from east to west.

Besides the drainage from the Lake Superior system, Lake Erie receives the Grand River, the Maumee from the west, and the Sandusky and Cuyahoga from the south. The west coast is broken by the islands of Put-in-Bay.

LAKE ONTARIO is the most eastern, with a northeast and southwest direction, like Lake Erie. It is the lowest of the Great Lakes, and has naturally the largest discharge, three hundred thousand cubic feet per second. The shores are flat, except in the Bay of Quinte, which extends on the northeast fifty miles inland. There are many harbors and flourishing ports. The waters have a surface current, due to the fact that the larger axis of the lake coincides with the direction of the prevailing westerly winds. This, added to frequent violent storms, keeps the lake from freezing, except a few miles in width along the shores.

Lake Ontario is connected with the Erie Canal and Hudson River by the Oswego Canal and with the Ottawa River by the Rideau Canal.

Great Salt Lake, in Utah, stretches along the western base of the Wahsatch Mountains, about four thousand two hundred feet above the sea, forming a principal drainage center of the Great Basin. Well-marked shore-lines on the mountains around, reaching one thousand feet higher than the present level, show that the lake had formerly a vastly greater extent; this prehistoric sea has been named Lake Bonneville. Great Salt Lake is over eighty miles long and from twenty to thirty-two broad, but for the most part exceedingly shallow. It contains several islands, the largest Antelope I., about eighteen miles long. Its tributaries are the Bear, Ogden, Jordan and Weber, the Jordan bringing the fresh waters of Lake Utah; but Great Salt Lake has no outlet save evaporation, and its clear water consequently holds at all times a considerable quantity of saline matter in solution. Several species of insects and a brine-shrimp have been found in its waters, but no fishes; large flocks of water-fowls frequent the shores.

The first mention of Great Salt Lake was by the Franciscan friar Escalante in 1776, but it was first explored and described in 1843 by Fremont.

Champlain is a beautiful lake separating the states of New York and Vermont, and penetrating, at its north end, about six miles into the Dominion of Canada. Lying ninety-one feet above sea-level, it is one hundred and ten miles long, by from one to fifteen broad, empties itself into the St. Lawrence by the Richelieu River, and has communication by canal with the Hudson. The lake, now an important trade channel, was the scene of several incidents of the French and Indian revolutionary wars; and here a British flotilla was defeated by the Americans September 11, 1814. It was discovered by Champlain in 1609, and in 1909 tercentenary celebrations of its discovery were held along its shores.

Natural Wonders.—Of the great natural wonders the chief are the Niagara Falls, the Grand Cañon of Colorado, and Yellowstone Park. The Sequoia, General Grant and Calaveras Parks—all reservations of the famous big trees, many thousands of years old, have also great scenic interest. Mt. Ranier Park, in Washington, encloses the noblest and most interesting mountain of our Pacific Coast. The chief feature of Crater Lake Park, in southern Oregon, is a lake two thousand feet deep, occupying the crater of an extinct volcano on the summit of the Cascade Range, with walls one thousand to two thousand feet high. The latest addition is Glacier Park, in northwestern Montana. It is named from its glaciers, of which there are over sixty within an area of five square miles, and contains numerous snow-capped peaks seven thousand to twelve thousand feet high. It also contains Lake McDonald, one of the most beautiful alpine lakes. Among the national monuments are the petrified forests in Arizona.

GARDEN OF THE GODS, COLORADO,

is a tract of land about five hundred acres in extent, thickly strewn with grotesque rocks and cliffs of red and white sandstone. Among the chief features are the Cathedral Spires, the Balanced Rock, etc. The Gateway of the Garden of the Gods consists of two enormous masses of bright red rock, three hundred and thirty feet high and separated just enough for the roadway to pass between.

Garden of the Gods, a region in Colorado, is noted for its view of Pike's Peak, and its weird and grotesque rock pinnacles, needles, etc., some of which receive descriptive names such as Cathedral Spires. The region is about five hundred acres in extent, and in 1908 was presented to Colorado Springs city.

Grand Canyon.—See under [Colorado River](#).

Mammoth Cave, in Kentucky, is eighty-five miles by railroad southwest of Louisville. The cave is about ten miles long; but it is said to require upwards of one hundred and fifty miles of traveling to explore its multitudinous avenues, chambers, grottoes, rivers and cataacts. It is the largest cavern in the world. The main cave is only four miles long, but it is from forty to three hundred feet wide, and rises in height to one hundred and twenty-five feet. Lucy's Dome is three hundred feet high, the loftiest of the many vertical shafts that pierce through all the levels.

It is estimated that there are more than four thousand sink-holes and five hundred open caverns. Some avenues are covered with a continuous incrustation of the most beautiful crystals; stalactites and stalagmites abound.

There are several lakes or rivers connected with Green River outside the cave, rising with the river, but subsiding more slowly, so that they are generally impassible for more than six months in the year. The largest is Echo River, three-fourths of a mile long, and in some places two hundred feet wide. The air of the cave is pure; the temperature keeps at about fifty-four degrees.

Among the most striking facts which exploration has revealed are the following: there is a pit, named the Bottomless Pit, one hundred and five feet deep, besides Scylla, one hundred and thirty-five feet deep. Crevice Pit, with Klett's Dome, which forms a part of it, is one hundred and fifty feet in total vertical measurement. Cleveland Avenue is two miles long, Silliman's one and one-half miles and in places two hundred feet in width. Large stretches of water have been christened Dead Sea, Lake Letha; also there are the Styx, and Roaring and Echo rivers. In the outer galleries of the cave millions of bats are congregated. There are also blind fish, crayfish, crickets, and other abnormal insect inhabitants of the cave.

BIG TREE, CALIFORNIA

The Mariposa Grove of Big Trees (six thousand five hundred feet), so-called from its situation in Mariposa ("butterfly") County, occupies a tract of land four square miles in area, reserved as a State Park, and consists of two distinct groves, one-half mile apart. The Lower Grove contains about two hundred and forty fine specimens of the Sequoia Gigantea, including the "Grizzly Giant," the largest of all, with a circumference of ninety-four feet and a diameter of thirty-one feet. Its main limb, two hundred feet from the ground, is six and one-half feet in diameter. In ascending to the Upper Grove, which contains three hundred and sixty big trees, the road goes through a tunnel, ten feet high and nine and one-half feet wide (at the bottom), cut directly through the heart of a living Sequoia, twenty-seven feet in diameter. (See illustration.) About ten of the trees exceed two hundred and fifty feet in height and about twenty trees have a circumference of over sixty feet, three of these being over ninety feet. The Calaveras Grove has taller trees than any in the Mariposa Grove, but the latter has those of greatest circumference. At Santa Cruz there is a grove which contains about a score of the genuine Redwood with a diameter of ten feet and upwards. The largest is twenty-three feet across; one of the finest, named the Giant, has a circumference of seventy feet. Here is a large hollow tree in which General Fremont camped for several days in 1847. Another stump is covered with a platform, which holds twelve to fourteen people.

Niagara Falls.—See under [Famous Waterfalls](#).

Yosemite Valley is the name of a cleft in the west slope of the Sierra Nevada, about the center of California, and one hundred and forty miles east of San Francisco. The name Yosemite is an Indian word which signifies "large grizzly bear." This celebrated valley, noted for the sublimity and beauty of its scenery, is about six miles long and from one-half to nearly two miles in breadth, and is traversed by the Merced River. The beholder is awed and impressed by the massiveness of its mountain elevations, the nearly perpendicular granite walls, from three thousand to six thousand feet high, by which it is shut in throughout its entire length, and the grandeur of its waterfalls, which are in some respects the most remarkable in the world.

At the lower end of the valley stands the striking cliff known as El Capitan, three thousand three hundred feet high, while from near its lower corner the Virgin's Tears Fall descends one thousand feet. But the eye turns from it to the remarkable fall opposite, happily named the Bridal Veil, which leaps from the brow of a cliff nine hundred feet high, and descends in a broad sheet of spray and finally mist, swaying in the wind and constantly changing its form of fleecy beauty. Farther up the valley are Cathedral Rock (two thousand six hundred and sixty feet), the Three Brothers (three thousand eight hundred and thirty feet), Sentinel Rock (three thousand and forty-three feet), and directly opposite it the grand Yosemite Falls. (See [Famous Waterfalls](#).) Above the falls are the North Dome (three thousand five hundred and sixty-eight feet) and the vast Half Dome, nearly one mile (four thousand seven hundred and thirty-seven feet) high, whose summit can now be reached by a long climb. Two miles above the great falls the stream enters the main valley in two arms, coming out of two canyons. In that of the south fork is the Illilouet Fall, some six hundred feet high; in the main canyon are Vernal Fall and Nevada Fall, the latter one of the finest in the world.

(See [Famous Waterfalls](#).)

The country surrounding the valley and constituting the National Park is a rolling and hilly region varying from eight thousand to ten thousand feet above sea-level. There is little soil or vegetation except a scattered forest growth. Small glaciers still remain near the summits of some of the adjacent mountains. Bare granite peaks rise still higher from this surface.

Yellowstone National Park comprises a tract of land originally comprising three thousand five hundred and seventy-five square miles in northwestern Wyoming, set apart by act of Congress in 1872 as a national park to preserve from destructive molestation the most wonderful group of natural features and phenomena known within the boundaries of the United States. It is readily reached over the Northern Pacific Railroad, which has a branch from Livingston to Gardiner, just outside the north park boundary, thirty-six hours' ride from St. Paul; or it may be reached from the Oregon Short Line R. R. from the west side by a more difficult stage connection.

The whole park plateau lies between six thousand and eight thousand feet above sea-level. The mountains rise in great grandeur upon this plateau, giving evidence of their volcanic origin, though now extinct, by their form, and their rock structure, and the many evidences of pent-up heat that one sees in the hot springs and geysers for which the locality is justly famous. Twenty-four peaks rise over ten thousand feet, several over eleven thousand. Electric Peak on the border is eleven thousand one hundred and fifty-five feet. Many have been glaciated. Just outside the Teton Range peaks rise to nearly fourteen thousand feet. It is a part of the continental divide and from Two-ocean Pond the waters may flow into either the Atlantic or the Pacific. The Yellowstone, Snake and Madison rivers are fed by the waters from this area.

The surface of the park is dotted with lakes, the largest being Yellowstone Lake, standing seven thousand seven hundred and forty-one feet above sea-level, ten by twenty miles in average dimensions, the largest body at so great elevation in the United States.

The streams contain numerous falls and rapids, twenty-five of special interest, some as picturesque as the Falls of the Yellowstone, though not on such a grand scale, and some far removed from the usual routes of travel. The falls and canyons of the Yellowstone are considered among the most wonderful in the world. The canyon is cut more than two thousand feet deep into the lavas and sediments, exhibiting the most fantastic carvings of erosion, modified by an exquisite blending of colors. Into it plunges the river by two great leaps, the Upper and the Lower Falls, one hundred and twelve and three hundred and ten feet high respectively, and then flows on as a narrow ribbon scarcely more than one hundred and sixty to two hundred feet wide for twelve miles of this wonderfully beautiful chasm.

Yellowstone Park includes within its borders the largest geysers in the world. There are about seventy in all, included in six groups or geyser basins. Norris, Upper, Middle and Lower basins, ten to fifteen miles apart, are on the headwaters of the Madison, here called Five Hole River. The Upper is most active and is called the Great Geyser Basin. A group is also found at Shoshone Lake, at the head of Snake River, and another group at Heart Lake. Fifty geysers spout water and steam from thirty to two hundred and fifty feet into the air. Some spout from open bowl-shaped basins, and others have built cones or tubes by their deposits. Extinct geysers are marked by the remains of these cones, among which is Liberty Cap. Excelsior geyser is the largest of all. It has a bowl-shaped opening two hundred by three hundred feet, flows four thousand gallons of boiling hot water per minute, and throws a fifty-foot column of water and steam seventy-five feet to two hundred and fifty feet high. Giant throws a five-foot column over two hundred feet high for an hour. Old Faithful, so named because of its exceptional regularity, every sixty-four to sixty-five minutes without a failure within the memory of the oldest observers, discharges a column one hundred and fifty feet high amounting to one and a half million gallons of water at each eruption. There is every gradation in size and violence and periodicity.

In the Mammoth Hot Springs area, near the northern boundary, where there are fifty active springs within an area of one hundred and seventy acres, there is a travertine accumulation of one thousand feet. Others deposit silica in similar manner, both types aided much by algal plant growth in the mineralized warm waters. In some places sulphur has been deposited.

Nine-tenths of the whole area is forest. The tree limit varies from nine thousand four hundred to nine thousand seven hundred feet. Few of the plateau localities are bare. Pine, poplar, balsam, cedar and spruce grow abundantly and many to large size. In the spring and geyser localities the trees are often covered by deposits and buried. Whole forests have been thus entombed. Petrified trees are common. Wild animals are wholly unmolested. Deer, elk, buffalo and bear may be seen and approached near enough to photograph. Trout abound in the waters throughout.

NATURAL BRIDGE OF VIRGINIA

The Natural Bridge of Virginia (one thousand five hundred feet above the sea) is a huge monolithic limestone arch, two hundred and fifteen feet high, one hundred feet wide, and ninety feet in span, crossing the ravine of the Cedar Creek. It seems to be a remnant of a great horizontal bed of

limestone rock that entirely covered the gorge of the brook, which originally flowed through a subterranean tunnel. The rest of this roof has fallen in and been gradually washed or worn away. The bridge is finely situated in a beautiful amphitheater, surrounded by mountains, on land originally granted by George III. to Thomas Jefferson, who built a cabin here for the use of visitors. Among the names upon the smooth side of the archway is that of George Washington (west side, about twenty-five feet up), which was the highest of all until a student named Piper actually climbed from the bottom to the top of the arch in 1818.

[587]

The first white man to attempt an exploration of the region was a trapper named Coulter, who in 1805 traversed a part of this district. His tales were disbelieved, but were confirmed thirty years later by the discoveries of Bridger. In 1870 the first official survey was made, and in 1871 Hayden's famous expedition revealed the glories of the Yellowstone district.

Climate and Irrigation.—The United States, stretching over such a vast area and having such great tracts of mountain and plain, must necessarily present a great variety of climate. The mean annual temperature ranges from under forty degrees to seventy-five degrees. The isotherm of fifty-five degrees mean annual temperature crosses the center of the country from east to west, passing through St. Louis. The mean annual rainfall for the whole country is about thirty inches, but there is a great difference in this respect between different parts. The rainfall is most abundant on the northwest Pacific Coast, on the Gulf Coast, and on the higher mountain ranges. On the great plains it is only ten to twenty inches, and there are large desert stretches in the Rocky Mountain region with a rainfall of less than ten inches.

Irrigation.—As far as lack of rainfall is concerned in the so-called rainless regions of the United States, this has been notably offset by great works of irrigation that have been steadily going forward. Agriculture, horticulture and viticulture are, therefore, no longer dependent on chance but science, as the National Irrigation Congress expresses it.

Modern irrigation in the United States began in 1750 with the watering of the gardens in the hills and deserts of the coast of California by the adventurous missionaries from Mexico. Irrigation by English-speaking people had its origin in Utah one hundred years later. There the Mormons, separated by one thousand miles of untrodden desert from all cultivated land, found in irrigation their only means of escape from starvation.

In 1870 there were twenty thousand acres under irrigation, followed by a rapid development of small ditches, until in 1880 there were one million acres irrigated. Today (1917) upward of fifty million acres are included in reclamation projects, and it is estimated that there are upward of four hundred and fifty million acres still awaiting the scientific use of water.

The diversity of methods used in irrigation in the United States is remarkable. Practically every system to be found in the world can be seen in some part of the arid west. This is due to the fact that many of the irrigators have come from distant parts of the world and each seeks to introduce on his farm customs and practices of his old environments. This is particularly noticeable in California, where the Chinese irrigate their truck gardens in Chinese fashion, and Italians, Spaniards and Mexicans imitate for a time at least the practices of their forefathers.

Upward of one hundred and fifty thousand miles of irrigation canals, with reservoirs and supplementary works, have been built at a cost of more than six hundred million dollars. These projects are distributed through the States of Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, Washington and Wyoming. The most notable among them are: the Truckee-Carson Canal and Reservoir, in Nevada; the Minidoka project, in southern Idaho; that of the Uncompahgre Valley, in Colorado; the Roosevelt Dam, in the Salt River Valley, Arizona; the Klamath Reservoir, on the Oregon-California boundary; the Boise project, Idaho; that of Yuma, on the Arizona-California boundary; North Platte, on the Nebraska-Wyoming boundary; and the gigantic Elephant Butte Reservoir, in New Mexico—the second largest in the world.

Political Divisions.—Under its present organization the United States comprises fifty-one political divisions. Of these forty-eight are states enjoying the full privileges afforded by the federal constitution. The three territories—Alaska, Hawaii and Porto Rico—all are organized but not yet admitted to statehood. The Philippines have a modified territorial government.

(See [Tables appended.](#))

It is worthy of remark that the center of population advanced westward during the ten decades since 1790 in a nearly uniform line along the thirty-ninth parallel of latitude.

THE CENTER OF POPULATION

CENSUS YEAR	APPROXIMATE LOCATION BY IMPORTANT TOWNS	FROM POINT TO POINT IN DIRECT LINE ^[9]
1790	Twenty-three miles east of Baltimore, Md.	...
1800	Eighteen miles west of Baltimore, Md.	40.6
1810	Forty miles northwest by west of Washington, D. C.	36.9
1820	Sixteen miles north of Woodstock, Va.	50.5
1830	Nineteen miles west by southwest of Moorefield, W. Va. ^[10]	40.4
1840	Sixteen miles south of Clarksburg, W. Va. ^[10]	55.0
1850	Twenty-three miles southeast of Parkersburg, W. Va. ^[10]	54.8
1860	Twenty miles south of Chillicothe, Ohio	80.6
1870	Forty-eight miles east by north of Cincinnati, Ohio	44.1
1880	Eight miles west by south of Cincinnati, Ohio	58.1
1890	Twenty miles east of Columbus, Ind.	48.6
1900	Six miles southeast of Columbus, Ind.	14.6
1910	In the city of Bloomington, Ind.	39.0

[9] Movement in miles during preceding decade.

[10] West Virginia formed part of Virginia until 1860.

Public Lands.—The United States originally owned nearly all the area of the states, with the exception of the original thirteen. Homesteads have been given, or sold at a nominal price, to all bona fide settlers. Vast areas have been given to railroad companies and in aid of education. The country's Indian wards have been provided with ample reservations. The government has established great national parks, and it has reserved more than seventy-two thousand square miles of forest land. The following tabulations give numerous important facts concerning the states and territories:

TABLE OF STATES AND TERRITORIES OF THE UNITED STATES

[588-590]

DATE OF ADMISSION INTO UNION	STATE OR TERRITORY ORIGIN AND MEANING OF NAME AREA AND POPULATION MOTTO AND MEANING	SETTLEMENT WHERE, WHEN, BY WHOM ORIGINAL TERRITORY FROM WHICH DERIVED	CAPITALS AND POPULATIONS CHIEF PRODUCTIONS OF STATE
1819	Alabama (Indian—Here we rest). 51,998 sq. miles. Pop. 2,138,093. Motto: <i>Here we rest.</i>	Mobile Bay, 1702, by the French. From Louisiana, Georgia, Mississippi and Alabama territories.	Montgomery: Pop. 38,136. Corn, oats, wheat, rice, cotton, sugar, iron, lumber, manufactures, potatoes.
1867	Alaska (<i>Al-ay-eska</i> , meaning "the great country"). 590,884 sq. miles. No motto.	Three Saints, 1784, by the Russians. Purchased from Russia in 1867 for \$7,200,000.	Juneau: Pop. 1,864. Seals, salmon, gold, copper, silver, lumber, tin, lead, coal.
1911	Arizona (Indian—Sand Hills). 113,956 sq. miles. Pop. 204,354. Motto: <i>Ditat deus</i> (Founded by God).	Tucson, 1580, by the Spanish. From New Mexico territory.	Phoenix: Pop. 11,134. Copper, gold, silver, alfalfa, fruits, live stock, wheat, barley.
1836	Arkansas (From a tribe of Indians). 53,335 sq. miles. Pop. 1,574,449. Motto: <i>Regnat populi</i> (The people rule).	Arkansas Post, 1685, by the French. From Louisiana, Missouri and Arkansas territories.	Little Rock: Pop. 45,941. Cotton, lumber, corn, oats, wheat, fruits, wool, coal, tobacco.
1850	California (From an old Spanish romance). 158,297 sq. miles. Pop. 2,377,549. Motto: <i>Eureka</i> (I have found it).	San Diego, 1768, by the Spanish. From New Albion, Upper California.	Sacramento: Pop. 44,696. Gold, silver, copper, lead, petroleum, borax, lumber, fruits, wine, olives, beet sugar.
1876	Colorado (Spanish—Red, or Ruddy). 103,948 sq. miles. Pop. 799,024. Motto: <i>Nil sine numine</i> (Nothing without providence).	Aurora, 1859, by the Americans. From Louisiana and Mexican cession. Colorado territory.	Denver: Pop. 213,381. Gold, silver, coal, copper, vegetables, fruits, live stock, wheat, beet sugar, oats, corn.
*1788	Connecticut (Indian—Long River). 4,965 sq. miles. Pop. 1,114,756. Motto: <i>Qui transtulit sustinet</i> (He who transplanted still sustains).	Windsor, 1636, by the English. From North Virginia, New England.	Hartford: Pop. 98,915. Manufactures, woolen, cotton, notions; tobacco, iron, granite, cereals.
*1787	Delaware (In honor of Lord De La Warr). 2,370 sq. miles. Pop. 202,322. Motto: <i>Liberty and independence.</i>	Wilmington, 1637, by the Swedes. From New Sweden, New Netherlands, three lower counties on the Delaware.	Dover: Pop. 3,720. Corn, wheat, tomatoes, fruits, manufactures, leather, iron, steel, machinery.
1791	District of Columbia (In honor of Columbus). 70 sq. miles. Pop. 331,069. Motto: <i>Justitia omnibus</i> (Justice to all).	Rome, 1663, by the English. Ceded to government by Maryland and Virginia.	Washington: Pop. 331,069. Flour mills, manufactures.
1845	Florida (Spanish—Blooming). 58,666 sq. miles. Pop. 752,619. Motto: <i>In God is our trust.</i>	St. Augustine, 1565, by the Spanish. From Florida territory.	Tallahassee: Pop. 5,018. Fruits, vegetables, tobacco, rice, cotton, lumber, turpentine, resin, fish, phosphate.
*1788	Georgia (In honor of George II.). 59,265 sq. miles. Pop. 2,609,121. Motto: Obverse: <i>Wisdom, justice, moderation.</i> Reverse: <i>Agriculture and commerce.</i>	Savannah, 1733, by the English. One of the original thirteen states.	Atlanta: Pop. 154,839. Cotton, corn, rice, oats, tobacco, oysters, peaches, melons, marble, clay; cotton goods, lumber, fertilizers, tar.
...	Hawaii (From the native Owhyhee). 6,449 sq. miles. No motto.	Honolulu, 1820, by the Americans. From Sandwich Islands.	Honolulu: Pop. 52,183. Sugar, fruits, rice, coffee, hides, wool, honey, sisal.
1890	Idaho (Indian—Gem of the Mountains). 84,313 sq. miles. Pop. 325,594. Motto: <i>Salve</i> (Hail).	Coeur d'Alene, 1842, by the Americans. From Oregon, Washington and Idaho territories.	Boise City: Pop. 17,358. Gold, silver, copper, lead, lumber, flour, wheat, oats, barley, live stock.
1818	Illinois (Indian—The Men). 56,665 sq. miles. Pop. 5,638,591. Motto: <i>National union, state sovereignty.</i>	Kaskaskia, 1682, by the French. From Northwest, Indian and Illinois territories.	Springfield: Pop. 51,678. Corn, wheat, oats, potatoes, hay, live stock, wool, meat, manufactures.
1816	Indiana (Indian's Ground). 36,354 sq. miles. Pop. 2,700,876. No motto.	Vincennes, 1702, by the French. From Northwest and Indiana territories.	Indianapolis: Pop. 233,650. Corn, wheat, tobacco, vegetables, fruits, wool, coal, clay, flour, machinery.
1846	Iowa (Indian—Drowsy Ones). 56,147 sq. miles. Pop. 2,224,771. Motto: <i>Our liberties we prize and our rights we will maintain.</i>	Dubuque, 1833, by the Americans. From Louisiana, Missouri, Michigan, Wisconsin and Iowa territories.	Des Moines: Pop. 86,368. Corn, wheat, oats, potatoes, hay, live stock, butter, coal, lumber, poultry.
1861	Kansas (Indian—Smoky Water).	Leavenworth, 1854, by the Americans.	Topeka: Pop. 43,684.

	82,158 sq. miles. Pop. 1,690,949. Motto: <i>Ad astra per aspera</i> (To the stars through difficulties).	From Louisiana, Kansas territory.	Corn, wheat, hay, live stock, fruits, coal, petroleum, salt, meats, Kaffir corn.
1792	Kentucky (Indian—Dark and Bloody Ground). 40,598 sq. miles. Pop. 2,289,905. Motto: <i>United we stand, divided we fall.</i>	Boonesboro, 1769, by the English. From Virginia.	Frankfort: Pop. 10,465. Tobacco, hemp, wheat, cotton, live stock, lumber, coal, sorghum, flour.
1812	Louisiana (In honor of Louis XIV.). 48,506 sq. miles. Pop. 1,656,388. Motto: <i>Union, justice, and confidence.</i>	New Orleans, 1718, by the French. From Louisiana, Territory of Orleans.	Baton Rouge: Pop. 14,897. Cotton, corn, rice, sugar, lumber, oysters, salt, sulphur.
1820	Maine (The Main Land). 33,040 sq. miles. Pop. 742,371. Motto: <i>Dirigo</i> (I direct).	Saco, 1623, by the English. From New England, Laconia and Massachusetts.	Augusta: Pop. 13,211. Hay, grains, dairying, potatoes, wool, granite, ice, lumber, apples, paper.
*1788	Maryland (In honor of Queen Henriette Maria). 12,327 sq. miles. Pop. 1,295,346. Motto: <i>Fatti maschii, parole femine</i> (Manly deeds, womanly words).	St. Mary's, 1632, by the English. From one of the original states.	Annapolis: Pop. 8,609. Wheat, hay, corn, vegetables, fruits, oysters, coal, wool, canned fruits, vegetables.
*1788	Massachusetts (The Place of Great Hills). 8,266 sq. miles. Pop. 3,366,416. Motto: <i>Ense petit placidam sub liberate quietem</i> (With the sword she seeks calm peace under liberty).	Plymouth, 1620, by the English. From North Virginia, New England, Massachusetts Bay.	Boston: Pop. 670,585. Manufactures (woolen, cotton), boots, shoes, fish, tobacco, granite, marble.
1837	Michigan (Indian—Great Lake). 57,980 sq. miles. Pop. 2,810,173. Motto: <i>Si quaeris peninsulam amoenam, circumspice</i> (If you seek a beautiful peninsula, behold it here).	Sault Ste. Marie, 1668, by the French. From Northwest, Indiana and Michigan territories.	Lansing: Pop. 31,229. Corn, wheat, oats, hay, fruits, vegetables, iron, copper, clay, lumber, manufactures.
1858	Minnesota (Indian—Cloudy Water). 84,682 sq. miles. Pop. 2,075,708. Motto: <i>L'étoile du nord</i> (The star of the north).	St. Paul, 1838, by the Americans. From Louisiana and Northwest and Minnesota territories.	St. Paul: Pop. 214,744. Corn, wheat, oats, barley, flaxseed, wool, live stock, flour, iron, lumber, dairying.
1817	Mississippi (Indian—Great River, or Father of Waters). 46,865 sq. miles. Pop. 1,797,114. No motto.	Biloxi, 1699, by the French. From Louisiana and Georgia, Mississippi territory.	Jackson: Pop. 21,262. Cotton, corn, wheat, oats, potatoes, rice, tobacco, oysters, shrimps.
1821	Missouri (Indian—Great Muddy). 69,420 sq. miles. Pop. 3,293,335. Motto: <i>Salus populi suprema lex esto</i> (The welfare of the people is the supreme law).	St. Genevieve, 1755, by the French. From Louisiana and Louisiana and Missouri territories.	Jefferson City: Pop. 11,850. Corn, wheat, oats, rye, cotton, swine, honey, zinc, lead, tobacco, meats.
1889	Montana (Spanish—A Mountain). 146,572 sq. miles. Pop. 375,053. Motto: <i>Oro y plata</i> (Gold and silver).	Yellowstone River, 1809, by the Americans. From Louisiana and Nebraska, Idaho, Dakota and Montana territories.	Helena: Pop. 39,165. Wheat, wool, live stock, fruit, oats, barley, lumber, copper, lead, silver, coal.
1867	Nebraska (Indian—Shallow Water). 77,520 sq. miles. Pop. 1,192,214. Motto: <i>Equality before the law.</i>	Bellevue, 1847, by the Americans. From Louisiana, Nebraska territory.	Lincoln: Pop. 43,973. Corn, wheat, oats, live stock, hay, chicory, sugar beets, fruits, potatoes.
1864	Nevada (Spanish—Snow-covered). 110,690 sq. miles. Pop. 81,875. Motto: <i>All for our country.</i>	Genoa, 1850, by the Americans. From Upper California and Utah and Nevada territories.	Carson City: Pop. 2,466. Gold, silver, copper, zinc, wool, live stock, lumber, borax.
*1788	New Hampshire (Hampshire, England). 9,341 sq. miles. Pop. 430,572. No motto.	Portsmouth, 1623, by the English. From North Virginia, New England, Laconia.	Concord: Pop. 21,497. Hay, corn, potatoes, oats, apples, granite, mica, manufactures.
*1787	New Jersey (In honor of governor of Jersey Island). 8,224 sq. miles. Pop. 2,537,167. No motto.	Elizabethtown, 1617, by the Dutch. From New Netherland.	Trenton: Pop. 96,815. Market garden crops, cereals, fruits, fisheries, manufactures, textiles, machinery.
1911	New Mexico (From Old Mexico). 122,634 sq. miles. Pop. 327,301. Motto: <i>Crescit eundo</i> (It increases by going).	...	Santa Fe: Pop. 5,072. Gold, silver, fruits, vegetables, live stock, wool, lumber, copper, coal, turquoise.
*1788	New York (In honor of Duke of York). 49,204 sq. miles. Pop. 9,113,614. Motto: <i>Excelsior</i> (Higher).	New York, 1614, by the Dutch. From New Netherland.	Albany: Pop. 100,253. Market garden crops, fruits, corn, wheat, dairying, manufactures, clothing, textiles, books, magazines, papers.
*1789	North Carolina (In honor of Charles II.). 52,426 sq. miles. Pop. 2,206,287. Motto: <i>Esse quam videri</i> (To be, rather than to seem).	Albemarle Sound, 1653, by the English. From Albemarle colony.	Raleigh: Pop. 19,218. Cotton, corn, tobacco, wheat, shad, oysters, lumber, mining.
1889	North Dakota (Indian—Allied). 70,837 sq. miles. Pop. 577,056. Motto: <i>Liberty and union, now and forever, one and inseparable.</i>	Pembino, 1859, by the Americans. From Louisiana, Minnesota and Nebraska and Dakota territories.	Bismarck: Pop. 5,443. Wheat, oats, barley, flaxseed, live stock, wool, minerals.
1803	Ohio (Indian—Beautiful River). 41,040 sq. miles. Pop. 4,767,121. No motto.	Marietta, 1788, by the Americans. From Northwest territory.	Columbus: Pop. 181,548. Corn, wheat, oats, hay, potatoes, fruits, tobacco, live stock, wool, dairying, coal, petroleum, salt, iron, steel, machinery, flour.
1907	Oklahoma (Indian—Beautiful Land). 70,057 sq. miles. Pop. 1,657,155. Motto: <i>Labor omnia vincit</i> (Labor conquers everything).	Guthrie, 1890, by the Americans. From Indian and Oklahoma territories.	Oklahoma City: Pop. 64,205. Corn, wheat, oats, cotton, flax, live stock, petroleum, minerals.
1859	Oregon (Spanish—Wild Marjoram). 96,699 sq. miles. Pop. 672,765. Motto: <i>The union.</i>	Astoria, 1811, by the Americans. From Oregon territory.	Salem: Pop. 14,094. Lumber, live stock, wheat, hay, fruits, hops, wool, salmon, gold, silver, paper making.
*1787	Pennsylvania (Latin—Penn's Woods). 45,126 sq. miles. Pop. 7,665,111. Motto: <i>Virtue, liberty and independence.</i>	Chester, 1638, by the Swedes. From original state.	Harrisburg: Pop. 64,186. Manufactures, steel, machinery, textiles, coal, coke, petroleum, natural gas, iron, grains, wool, leather.
...	Philippines (In honor of Philip II.). 115,026 sq. miles.	Cebu, 1565, by the Spanish. From Archipelago de San Lazaro.	Manila: Pop. 250,000. Cocoa, coffee, tobacco, cotton, hemp, coconuts, corn, sugar, rice, timber, dyewoods.
...	Porto Rico (Spanish—Rich Port). 3,435 sq. miles.	San Juan, 1510, by the Spanish. Ceded by Spain.	San Juan: Pop. 50,000. Coffee, sugar, tobacco, cotton, citrus fruits, bananas, pineapples, salt.
*1790	Rhode Island (Rhodes, an island in the Ægean Sea). 1,248 sq. miles. Pop. 542,610. Motto: <i>Hope.</i>	Providence, 1636, by the English. From Providence and Rhode Island plantations.	Providence: Pop. 224,326. Manufactures, worsted, cotton, jewelry, machinery, rubber, minerals.
*1788	South Carolina (In honor of Charles II.). 30,989 sq. miles. Pop. 1,515,400. Motto: <i>Dum spiro, spero. Spes</i> (While I breathe, I hope. Hope).	Ashley River, 1670, by the English. From Carteret colony.	Columbia: Pop. 26,319. Cotton, wheat, corn, oats, tobacco, rice, oysters, turpentine, lumber, phosphates.
1889	South Dakota (Indian—Allied). 77,615 sq. miles. Pop. 583,888. Motto: <i>Under God the people rule.</i>	Southeast part, 1859, by the Americans. From Louisiana, Minnesota and Nebraska and Dakota territories.	Pierre: Pop. 3,656. Corn, wheat, oats, flax, potatoes, live stock, wool, gold, silver, tin, dairying.
1796	Tennessee (Indian—River with the Great Bend). 42,022 sq. miles. Pop. 2,184,789. Motto: <i>Agriculture, commerce.</i>	Fort Loudon, 1757, by the English. From North Carolina, territory south of the Ohio River.	Nashville: Pop. 110,364. Corn, wheat, cotton, potatoes, tobacco, live stock, coal, iron, marble, lumber.
1845	Texas (From tribe of Indians). 265,896 sq. miles. Pop. 3,896,542. No motto.	San Antonio, 1692, by the Spanish. From Mexican cession.	Austin: Pop. 29,860. Cotton, corn, oats, wheat, rice, sugar, live stock, wool, fruits, lumber, petroleum, coal.
1896	Utah (Indian—Mountain Dwellers). 84,990 sq. miles. Pop. 373,351. Motto: <i>Industry.</i>	Salt Lake City, 1847, by the Americans. From Mexican cession, Utah territory.	Salt Lake City: Pop. 92,777. Gold, silver, copper, lead, coal, vegetables, fruits, sugar, wheat, oats, live stock, wool.
1791	Vermont (French—Green Mountain). 9,564 sq. miles. Pop. 355,956. Motto: <i>Freedom and unity.</i>	Fort Dummer, 1724, by the English. From New Netherland, New Hampshire grants.	Montpelier: Pop. 7,856. Hay, cereals, potatoes, lumber, marble, dairying, maple sugar, manufactures, wood pulp.
*1788	Virginia (In honor of Elizabeth, the virgin queen). 42,627 sq. miles. Pop. 2,061,212. Motto: Obverse; <i>Sic semper tyrannis</i> (Ever so to tyrants). Reverse: <i>Perseverando</i> (By perseverance).	Jamestown, 1607, by the English. From South Virginia.	Richmond: Pop. 127,628. Corn, wheat, oats, tobacco, potatoes, cotton, oysters, coal, iron, cotton, manufactures.
1889	Washington (After George Washington, first president). 69,127 sq. miles. Pop. 1,141,990. Motto: <i>Al-Ki</i> (Bye-bye).	Columbia River, 1811, by the English. From Oregon and Washington territories.	Olympia: Pop. 6,996. Lumber, coal, wheat, barley, oats, fruits, salmon, live stock, minerals.
1863	West Virginia (From Virginia). 24,170 sq. miles. Pop. 1,221,119. Motto: Obverse: <i>Montani semper liberi</i> (Mountaineers are always free men). Reverse: <i>Libertas et fidelitas</i> (Liberty and fidelity).	Berkeley County, 1726, by the Americans. From Virginia.	Charleston: Pop. 22,996. Corn, oats, hay, wheat, fruits, cattle, sheep, lumber, coal, petroleum, natural gas, mining.
1848	Wisconsin (Indian—Wild Rushing Channel). 56,066 sq. miles. Pop. 2,333,860. Motto: <i>Forward.</i>	Green Bay, 1745, by the French. From Northwest, Illinois, Michigan and Wisconsin territories.	Madison: Pop. 25,531. Corn, oats, barley, wheat, hay, potatoes, fruits, beet sugar, dairying, iron, lumber.
1890	Wyoming (Indian—Extensive Plain). 97,914 sq. miles. Pop. 145,965. Motto: <i>Equal rights.</i>	Cheyenne, 1867, by the Americans. From Louisiana (chiefly), Nebraska, Dakota, Idaho, and Wyoming territories.	Cheyenne: Pop. 11,320. Wool, lumber, coal, copper, petroleum, minerals.

* Original Thirteen States. † Organized Territories.

Cities.—In January, 1917, three cities of the United States, New York, Chicago and Philadelphia, had a population of over one million. St. Louis, Boston, Cleveland, Baltimore, Pittsburgh and Detroit had each over 500,000. Buffalo, San Francisco, Los Angeles, Milwaukee, Cincinnati, Newark, New Orleans, Washington, Minneapolis and Seattle had over 300,000. Forty-seven others had populations ranging from 100,000 to 300,000; while altogether there were one hundred and ninety-eight above 30,000. The following table gives the approximate population of all cities in excess of 100,000.

POPULATION OF CITIES HAVING OVER 100,000 IN 1917

Cities	Est. Pop. Jan. 1, 1917
Akron, Ohio	106,000
Albany, N.Y.	110,000
Atlanta, Ga.	191,000
Baltimore, Md.	590,000
Birmingham, Ala.	182,000
Boston, Mass.	757,000
Bridgeport, Ct.	150,000
Buffalo, N.Y.	469,000
Cambridge, Mass.	112,000
Camden, N.J.	105,000
Chicago, Ill.	2,498,000
Cincinnati, Ohio	411,000
Cleveland, Ohio	674,000
Columbus, Ohio	215,000
Dallas, Tex.	135,000

Spokane, Wash.	125,000
Springfield, Mass.	102,103
St. Joseph, Mo.	101,800
St. Louis, Mo.	758,000
St. Paul, Minn.	247,000
Syracuse, N.Y.	155,000
Tacoma, Wash.	108,094
Toledo, Ohio	192,000
Trenton, N.J.	110,000
Washington, D.C.	364,000
Worcester, Mass.	164,000
Youngstown, Ohio	118,000

Atlanta (ăt-lăn 'tă), **Ga.** [The "Gate City"; the name Atlanta was suggested by its geographical position, immediately on the dividing ridge, separating the Gulf and Atlantic waters.]

[591]

It is situated at the base of the Blue Ridge, near the Chattahoochee River; has an elevation of over one thousand feet, and a remarkably healthful climate.

Atlanta is laid out in the form of a circle, with the Union Depot as its center. A little to the south of the old Union Station is the State Capitol, which contains a library of about sixty thousand volumes and an interesting geological collection. A little to the northwest is the New Court House; and farther to the north, beyond the railway, are the Custom House and the L. & N. Freight House, an enormous concrete structure. The City Hall, the Chamber of Commerce, the Opera House, the Carnegie Library (of white marble), the Century Building, the Empire Building, the Equitable Building, the Jewish Temple, and the First Methodist Church are notable edifices. Among the chief educational establishments are the Georgia School of Technology, the Atlanta University (for colored students), the Agnes Scott Institute, and the Clark University (colored students). The finest private houses are in Peachtree Street.

Several railroads, converging at Atlanta and leading to other important Southern cities, greatly facilitate the city's extensive and rapidly increasing trade. It has a large export trade in tobacco, cotton, horses, and mules, its mule market being one of the most important in the United States. Its manufactures include implements, fertilizers, cotton goods, other foundry and machine products.

Atlanta was first settled in 1830. In 1843 it was incorporated as a town, and called Marthasville. In 1845 changed its name to Atlanta, and two years later secured a city charter. It was an important city in the Confederacy and the objective point of General Sherman's campaign. The battle of Atlanta (July 22, 1864) was fought southeast of the city. In September the city was made a military camp by Sherman, and in November he left the city in flames, and started on his "march to the sea." The city was almost entirely destroyed, but recovered rapidly after the war, and in 1878 became the capital of Georgia.

Baltimore (bôl 'tî-môr), **Md.** [The "Monumental City"; named for the proprietor of a large tract of land in Maryland, Cecil Calvert, Lord Baltimore, who settled the province in 1635.]

It is situated on an estuary of the Patapsco River, at the head of navigation, about fourteen miles from Chesapeake Bay, and is on the Baltimore and Ohio, the Philadelphia, Baltimore and Washington, and other railroads. A good harbor and fine geographical situation give Baltimore unusual trade advantages, and it has become one of the great export centers of the United States.

The city is roughly divided into two nearly equal parts by a small stream, Jones Falls, which flows entirely through the city. The portion of the city northeast of the stream is called "Old Town." Baltimore Street is the chief longitudinal thoroughfare.

The natural center for the visitor is Mt. Vernon Place, a small square, prettily laid out and suggesting Paris in its tasteful monuments and surrounding buildings. In the middle rises the Washington Monument, a column one hundred and thirty feet high, surmounted by a colossal statue of George Washington.

At the northeast corner of the square is the handsome Mt. Vernon Methodist Episcopal Church; at the southeast corner, Peabody Institute, for the encouragement of science, art, and general knowledge.

On the south side of the square is the house of Henry Walters, connected by an overhead bridge with a new picture-gallery containing the celebrated Walters Collection, one of the finest private collections of art in America.

Charles Street, one of the chief thoroughfares of the city, leads to the north from the Washington Monument past the Union Station, near which, at the north end of the B. & O. tunnel, is the Mt. Royal Station. Following Charles Street to the south we pass (right) the First Unitarian Church and the back of the Roman Catholic Cathedral, which faces Cathedral Street. The latter is surmounted by a dome one hundred and twenty-five feet high, and contains some interesting paintings. Adjacent is the residence of the Cardinal.

Farther on Charles Street passes the Masonic Temple, intersects Baltimore Street, the chief business street of the city, and is continued to South Baltimore. In East Fayette Street, to the left, is the Court House, a handsome white marble building, and the Post Office, in front of which rises the Battle Monument, erected in 1815 in memory of the struggles of the war of 1812-1814. The interior of the Court House is adorned with admirable mural paintings. To the east of the Post Office is the City Hall, a large and handsome building, with a dome two hundred and sixty feet high.

To the south of the City Hall, in Gay Street, between Water and Lombard Streets, is the imposing new Custom House, which was damaged by the fire of 1904, but has since been repaired and completed.

A little to the west of Mt. Vernon Place, between Howard St. and Eutaw St., are the unpretentious buildings formerly occupied by Johns Hopkins University, one of the foremost institutions of learning in the country. It was endowed with over three million five hundred thousand dollars by Johns Hopkins, a Quaker. In 1902 a suburban site about two miles north of the Washington Monument was secured for this famous university, and the first of a fine group of buildings was occupied by it in 1914.

The Johns Hopkins Hospital, opened in 1889, is also due to the liberality of Mr. Hopkins, who bequeathed over three million dollars for its foundation.

Both as a scientific and charitable institution, this hospital is an important adjunct to the University; and in the completeness of its equipment and excellence of its system, it ranks with the foremost hospitals in the world. The buildings of the Medical School of Johns Hopkins University adjoin the hospital.

Druid Hill Park, a pleasure-ground of about seven hundred acres, owes its beauty in great part to the fact that it has been preserved as a private park for one hundred years before passing into the hands of the city. Its hills afford beautiful views. Druid Lake, one-half mile long, is one of the reservoirs of the city waterworks.

Baltimore is an important center of the traffic in breadstuffs, and is also the seat of extensive and varied industries—cotton and woolen goods, flour, tobacco and cigars, beer, glassware, boots and shoes, iron and steel (including machinery, car-wheels, iron bridges, stoves, furnaces, etc.), clothing, pianos, organs, and the canning of oysters. Shipbuilding has become an important development, and Sparrows Point, with its immense Bessemer steel plant, is a place of great industrial activity.

The construction of the first important line of railway in the United States was begun at Baltimore in 1828 and carried on by private enterprise, and the first telegraph line

STATE HOUSE BOSTON COMMON TREMONT STREET

Boston (*bôs'ton*), **Mass.** [Called the "Hub" and "Athens of America"; name is derived from Boston, a seaport in England, originally called Botalf, or Botolph's town.]

The capital of Massachusetts, the chief town of New England, Boston is one of the oldest and most interesting cities of the United States. Whether considered from the point of view of its educational and charitable institutions, its trade, manufactures and public buildings, its influence upon the intellectual life and literary culture of the nation, or its historic part as an inspirational center of political liberty and social reform, its record and position command attention.

In no other American city are the civic and other public buildings more closely associated with events of national importance.

Boston is situated at the head of Massachusetts Bay, about two hundred miles northeast of New York, and occupies a peninsula between the Charles River and the arm of the bay known as Boston Harbor. Originally the town was founded on three hills, Beacon, Copp's and Fort, which, however, have been materially cut down. The metropolitan area now includes also East Boston, on Noddle's or Maverick Island, on the other side of the harbor; South Boston, separated from the old city by an arm of the harbor; Charlestown, on the other side of the river; and the suburban districts of Brighton, Roxbury (or Boston Highlands), West Roxbury (including Jamaica Plain), and Dorchester. Boston is connected with the city of Cambridge by several bridges across the Charles. The old town is cramped and irregular, and its streets are narrow and crooked; but the new parts, especially the so-called Back Bay, formed by filling in the tide-water flats on the Charles, are laid out on a very spacious scale.

The chief retail business streets of Boston are Washington Street and Tremont Street. Among the finest residence streets are Commonwealth Avenue, Beacon Street, Marlborough Street, Mt. Vernon Street, and Bay State Road.

Boston Common, a park of forty-eight acres in the heart of the city, shaded by fine elms and other trees and crossed by many pleasant walks, has been reserved for public use since 1634 and is carefully guarded for this purpose in the charter of 1822. Just across Charles from the Common is the fine Public Garden, reclaimed from what was low-lying waste land.

That part of the Common adjoining Tremont Street and known as the Tremont Street Mall is now occupied by eight small buildings, covering the entrances to the stations of the Boston Subway, a wonderful piece of engineering that facilitates traffic by an underground system of electric cars. The subway was, in part, constructed in 1895-1898, at a cost of about four million one hundred and sixty-five thousand dollars, and since greatly extended by the expenditure of many millions more.

Near the northeast angle of the Common, on Beacon Hill, stands the State House, an imposing building surmounted by a huge gilded dome, and preceded by a Corinthian portico and a flight of steps. On the terrace in front are statues of Daniel Webster and Horace Mann. The dome is illuminated at night.

In Beacon Street, opposite the State House, is the beautiful Shaw Monument, by Saint-Gaudens, erected in honor of Colonel Shaw and his regiment, the first colored regiment raised during the Civil war.

In Pemberton Square is the new County Court House, a massive granite building in the German Renaissance style, with an imposing central hall adorned with emblematic figures. In School Street, to the left, is the City Hall, behind which is the Old Court House. In front of the City Hall are statues of Franklin and Josiah Quincy.

School Street ends at the large Old South Building in Washington Street, the most crowded thoroughfare in Boston, with many of the best shops. Following Washington Street ("Newspaper Row") to the left, we soon reach, at the corner of State Street, the Old State House, dating from 1748 and restored as far as possible to its original appearance, even to the figures of the British lion and unicorn on the roof.

State Street, the center of financial life, leads to the east, past the Exchange Building (with the Stock Exchange) and other large office buildings, to the Custom House, a massive granite building in the shape of a Greek cross, with lofty tower.

Change Alley (now inappropriately styled "Avenue"), diverging to the left from State Street leads to Faneuil Hall, the "cradle of American liberty," originally presented to the city in 1742, by Peter Faneuil, a Huguenot merchant, but rebuilt after a fire in 1761 and reconstructed on the original plan in 1898.

Devonshire Street leads to the right from State Street to the Government Building, a huge edifice occupying the entire block between Milk Street, Devonshire Street, Water Street and Post Office Square. The Post Office occupies the ground floor, the basement, and part of the first floor, while the rest of the building is devoted to the United States Sub-Treasury and the United States Courts.

At the corner of Washington Street stands the Old South Meeting House, built in 1729 on the site of an earlier church of wood, which lay near Governor Winthrop's house.

Boylston Street, another important thoroughfare, diverging from Washington Street to the right, skirts the Common and Public Garden and leads to the Back Bay. At the corner of Berkeley Street (right) stands the Museum of Natural History, with a library of thirty thousand volumes and good zoological, ornithological, entomological and mineralogical collections. Opposite is the Berkeley Building, a structure of a fine commercial type. Adjacent are old buildings of the Massachusetts Institute of Technology, one of the leading institutions of the kind in the world. It now occupies a magnificent group of buildings on the Cambridge side of the Charles River, erected at a cost of ten million dollars.

Boylston Street now reaches Copley Square, which offers perhaps the finest architectural group in Boston, including Trinity Church, the Copley-Plaza Hotel, the Public Library, the New Old South Church, and a number of imposing business structures. (See [illustrations](#).)

Trinity Church, on the east side of the square, the masterpiece of H. H. Richardson and a typical example of "Richardsonian" architecture, is deservedly regarded as one of the finest buildings in America. Its style may be described as a free treatment of the Romanesque of Central France.

The Public Library, on the west side of the square, designed by McKim, Mead & White, and erected in 1888-1895, is a dignified, simple and scholarly edifice which forms a worthy mate to the Trinity Church. Its style is that of the Roman Renaissance.

The New Old South Church, so called as the successor of the Old South Church, is a fine building in the Italian Gothic style, with a tower two hundred and forty-eight feet in height. The marbles and ornamental stone work are very fine.

Huntington Avenue, which diverges to the left from Boylston Street at Copley Square, contains many important buildings. This thoroughfare, and the district known as the Back Bay Fens, is celebrated for its cultural institutions. Among them are Mechanics Hall, Horticultural Hall, the imposing Symphony Hall, the New England Conservatory of Music, and the new Opera House—all in Huntington Avenue. Just beyond this is the New Museum of Fine Arts, a large granite edifice by Guy Lowell, admirably adapted for its ends. Farther out, at the corner of Longwood Avenue, are the extensive new buildings of the Harvard Medical School, erected at a cost of five million dollars, and equipped in the most complete and up-to-date manner.

Commonwealth Avenue, which runs parallel with Boylston Street, is one of the finest residence streets in America, with rows of trees and handsome houses. It is two hundred and forty feet wide and adorned with statues.

Beacon Street, beginning on Beacon Hill, skirting the north side of the Common, and then running parallel with Commonwealth Avenue is the aristocratic street of Boston. Its back-windows command a fine view of the Charles River.

The Back Bay, the fashionable west end district traversed by the above-named streets, was at the beginning of the nineteenth century occupied by dreary mud-flats, salt-marshes and water.

The Back Bay Fens have been skillfully laid out on the site of unsightly swamps and form the first link in the splendid chain of parks and boulevards, of which Franklin Park is the chief ornament. The chief entrances to the Fens are marked by a gateway and a fountain; and at the end of Boylston Street is a fine memorial of John Boyle O'Reilly, by D. C. French.

Fenway Court, the residence of Mrs. John L. Gardner, a building in a Venetian style, enclosing a courtyard and incorporating many original balconies, windows, and other details brought from Italy, contains a choice collection of art, which is open to the public from time to time.

Franklin Park is five hundred and twenty acres in extent and lies in West Roxbury (reached by electric car). It abounds in natural beauty and many of its drives and walks are very attractive.

The Public Park System of Boston, as a whole, is almost unique. The City Park System, with a total area of twenty-four hundred acres, forms an almost unbroken line of parks and parkways from the Public Garden to City Point, in Boston Harbor. The Metropolitan System, forming an outer line of parks, has an area of eleven thousand acres, including two large wooded reservations (Blue Hills, and Middlesex Fells), three beaches (Revere Beach, Nantasket Beach, and Lynn Beach), and the boating section of the Charles River. When completed this system will afford fifty miles of drives.

The North End of Boston, embracing the site of Copp's Hill, now one of the poorer districts and occupied mainly by foreigners, contains some points of considerable historical interest. The Copp's Hill Burial Ground, dating from 1660, contains the graves of Increase, Cotton and Samuel Mather. Adjacent, in Salem Street, is Christ Church, the oldest church now standing in the city (1723), on the steeple of which the signal-lanterns of Paul Revere are said to have been displayed on April 18th, 1775, to warn the country of the march of the British troops to Lexington and Concord. North Square is the center of what is known as "Little Italy." The House of Paul Revere has recently been restored and contains some relics.

Within metropolitan Boston are many famous institutions of learning. At the head of these stand Harvard University, Massachusetts Institute of Technology, and Radcliffe College, the greater part of whose schools are in the adjoining city of Cambridge and the remaining in Boston. Among the institutions of higher education are Boston University, with its affiliated colleges, its schools of law, medicine, and theology, and its post-graduate department in philosophy, science, and language; the medical, dental, and agricultural schools of Harvard University; Boston College; the medical and dental schools of Tufts College; Simmons College for Women; the New England Conservatory of Music; the Massachusetts Normal Art School; the Lowell Institute; and the Massachusetts College of Pharmacy.

Wellesley College is situated in the beautiful village of Wellesley, about fifteen miles from Boston, on Lake Waban.

Besides Trinity Church, already referred to, there are upward of three hundred other edifices. Chief of these are the Cathedral of the Holy Cross, on the corner of Washington and Malden Streets, the largest and most noteworthy Catholic church in New England; Arlington Street Church, corner of Arlington and Boylston Streets; First Church of Christ, Scientist, on Falmouth Street, corner of Norway; and Fremont Temple, a Free Baptist Church.

The beauty of the parks, squares, and of many public buildings is enhanced by monuments and statues, of which the following are the chief: Bunker Hill Monument in Charlestown, two hundred and twenty feet high, built of granite and commemorative of the resistance and heroism of American patriots at the Battle of Bunker Hill; the equestrian statue of Washington in the Public Garden; the monument to Colonel Shaw; the Soldiers' Monument in the Common; the Crispus Attucks monument, a memorial of the Boston Massacre of 1770; statues to General Joseph Warren, Edward Everett, Charles Sumner, Alexander Hamilton, Governor Winthrop, William Lloyd Garrison, Benjamin Franklin, Josiah Quincy, Beethoven, Daniel Webster, Horace Mann, Phillips Brooks and many other notable men.

The principal industries of Boston are the manufacture of food preparations, clothing, building, printing, publishing, and book-binding, distilled liquors, machinery, metals and metallic goods, and furniture. Other important manufactures include musical instruments, woolen goods, boots and shoes, rubber goods, tobacco, and drugs and medicines. As a commercial port, Boston ranks next to New York, the value of foreign trade amounting to two hundred million dollars annually. After London, the city is the leading wool market of the world.

Boston was settled in 1630 by a party of Puritans from Salem. A memorable massacre occurred here in 1770, and in 1773 several cargoes of English tea were thrown overboard in the harbor by citizens. The battle of Bunker Hill was fought on Breed's Hill, within the present city limits, June 17, 1775. The city charter was granted in 1822.

Cambridge (*kām 'brīj*), **Mass.** [So named for the English university town of that name. The English name is supposed to mean "the bridge over the river Cam," the real name of which is the Granta.]

It is virtually a suburb of Boston, from which it is separated by the Charles River, and with which it is connected by several bridges. The city comprises Old Cambridge, the seat of Harvard University, North Cambridge, East Cambridge, Cambridgeport, and Mount Auburn. The streets are broad and shaded with elms, and there are many places of historical and literary interest, among these the Craigie House and "Elmwood," the homes of Longfellow and Lowell, respectively; and Mount Auburn Cemetery, containing the graves of Longfellow, Lowell, Prescott, Motley, Agassiz, Holmes, and other noted men.

The chief interest of Cambridge, however, lies in its educational institutions, which include Harvard University, Radcliffe College (for women), Massachusetts Institute of Technology, Episcopal Theological School, and Andover Theological Seminary. All these institutions are now in close working alliance with Harvard University.

Harvard University, founded in 1636, is not only the oldest but the richest of American universities, and the roster of graduates contains more than twenty thousand names. Massachusetts Hall is the oldest of the present buildings, being built in 1720. The most notable buildings architecturally (besides the fine Medical School group in Boston) are: Austin Hall and Longdell Hall, devoted to the Law School; Widener Memorial Library, a splendid new building dominating the college yard; Busch Hall, devoted to the art collections of the Germanic Museum; Memorial Hall, containing Sanders Theater; and Sever Hall, containing class-rooms.

The activities of the university require upward of sixty other buildings, including laboratories, lecture halls, museums, residence halls, and a number of fine structures devoted to the social, religious, athletic and art life of the student body.

The Massachusetts Institute of Technology, founded in 1861, is located on the Charles River Parkway, and occupies a newly acquired area of about seventy acres. Here has been erected a magnificent group of buildings, unrivaled, perhaps, in design, adaptation for their respective uses, and general equipment. This institution is devoted to the teaching of science as applied to the various engineering professions—civil, mechanical, mining, electrical, chemical, and sanitary engineering—as well as to architecture, chemistry, metallurgy, physics, and geology.

Among the industrial establishments are foundries, machine shops, and extensive manufactories. The Riverside, Athenæum, and University Presses are well-known printing establishments, and the "Bay Psalm Book," the first book printed in America, was published in Cambridge in 1640.

Cambridge was settled in 1630 by Governor Winthrop under the name of Newtowne. In 1636 Harvard College was founded at Newtowne, and in 1638 Newtowne became Cambridge. The Washington elm, under which Washington received command of the American troops, is still standing.

Under this ancient elm near the Cambridge Common, Washington assumed command of the American Continental army July 3, 1775, by order of the Continental Congress. It is therefore one of the landmarks of the greatest historic interest to every liberty-loving American—man, woman, or child.

Chicago (*shī-kā' gō*), III. [The "Windy City"], probably received its name from the Indian *Checagua*, meaning "wild onion" and "pole-cat."

It is the second city and largest railway center of the United States, and is situated on the southwest shore of Lake Michigan, at the mouths of the rivers Chicago and Calumet, five hundred and ninety feet above sea level and fifteen to seventy-five feet above the lake. It is eight hundred and fifty miles from Baltimore, the nearest Atlantic port, and two thousand four hundred and fifteen miles from San Francisco.

Chicago is noted for the magnitude of its commercial enterprises; for the greatness of its financial institutions; for the excellence of its parks and public playgrounds—particularly in the number, equipment, and splendid use of its small parks in congested localities; for its universities, its efficient public-school system, and for other educational, artistic, and morally uplifting institutions that give to it an enlightened, a cultured, and a progressive citizenship.

It is estimated that not more than 350,000 of the inhabitants are of native American parentage; about 550,000 are Germans, 250,000 are Irish, 225,000 Scandinavians, 160,000 Poles, 110,000 Bohemians, 40,000 Italians, 60,000 Canadians, and 100,000 English and Scottish. There are some fourteen languages, besides English, each of which is spoken by ten thousand or more persons.

The city has a water-front on the lake of twenty-six miles and is divided by the Chicago River and its branches into three portions, known as the North, South, and West Sides, to which must be added the "Loop," or business part of the city. The site of the city is remarkably level, rising very slightly from the lake; and its streets are usually wide and straight. Among the chief business-thoroughfares are State, Clark, Madison, Randolph, Dearborn, and La Salle Streets, and Wabash Avenue. Perhaps the finest residence streets are Prairie and Michigan Avenues and Drexel and Grand Boulevards, on the South Side, and Lake Shore Drive, on the North Side.

A splendid bird's-eye view of Chicago is obtained by ascending to the top of the tower of the Auditorium on Congress Street and Michigan Boulevard. This huge building, erected in 1887-1889 at a cost of three million five hundred thousand dollars, includes a large hotel and a handsome theater. The Fine Arts or Studebaker Building, adjoining the Auditorium, on Michigan Boulevard, is one of the show buildings of Chicago, and has deservedly been described as the focus of the artistic and intellectual life of Chicago, containing as it does a theater, concert, assembly, and lecture rooms, studios of leading artists, and the meeting-places of several clubs. The beautiful Romanesque building to the north of the Fine Arts Building is the Chicago Club. A little farther to the north, at the corner of Jackson Boulevard, is the tall Railway Exchange Building, erected in 1903-1904, and cased in tiles. Next to this on the north is the new building of the Chicago Orchestra Association, on the roof of which is the house of the "Cliff Dwellers," a literary and artistic club. A little to the south of the Auditorium, at the corner of Harrison Street, is the Harvester Building, erected in 1907, beyond which is the palatial Blackstone Hotel. A little farther to the south is the Illinois Central Station.

Following Michigan Avenue toward the north from the Auditorium, we reach the Art Institute of Chicago, an imposing building in a semi-classical style, containing a valuable collection of paintings, sculptures, and other objects of art. Opposite is the magnificent People's Gas Building, erected at a cost of eight million dollars.

Farther to the north, on the opposite side of Michigan Avenue, are the buildings of the Illinois Athletic Club, the University Club, and the Chicago Athletic Club. At the corner of Madison Street is the Montgomery Ward Building, with its tower, and a little farther up, at the corner of Washington Street, is the Chicago Public Library, an imposing building in a classical style, erected in 1893-1897, at a cost of two million dollars.

This fine edifice is worthy to rank with the Library of Congress and the Boston Public Library. The main entrances are to the north and south, in Randolph Street and Washington Street. The interior is sumptuously adorned with marble, mosaics, frescoes and mottoes. It contains three hundred and fifty thousand volumes. On the first floor is a large Memorial Hall, used by the Grand Army of the Republic and covered by a dome; it contains an interesting collection of Civil War and other historical relics.

On the north, Michigan Avenue ends at the Chicago River. Fort Dearborn stood to the left, on the river, at the end of the avenue.

The business quarters of Chicago occupy chiefly the great central district called the "Loop," which is bounded by the lines of the Elevated Railway. We may follow Randolph Street to the west to the City Hall and County Building, two large adjoining buildings, in a modern classical style with huge Corinthian columns, built at a cost of five million dollars.

[597]

La Salle Street, leading to the south from the County Building, contains some of the finest office buildings in the city. Among these are the Chamber of Commerce at the corner of Washington Street; the Tacoma Building at the corner of Madison Street; the Y. M. C. A. Building, a little farther to the south; the New York Life Insurance Building; the low but impressive Northern Trust Co. Building, and the oddly shaped Women's Temperance Temple, all three at the corners of Monroe Street; the new granite building of the Corn Exchange National Bank, the Home Insurance Co. Building, and the Rookery, with a very attractive interior lined with white marble. Farther on in La Salle Street, at the corner of Jackson Boulevard, is the Illinois Trust & Savings Bank, a massive two-storied edifice, with a fine central court. At the end of La Salle Street stands the granite building of the Board of Trade.

Jackson Boulevard leads hence to the east to the Federal Building, containing the Post Office and Custom House and occupying an entire city square. It is in the Corinthian style, with a large central dome two hundred feet in height.

Other notable buildings within the "Loop" district include: the Continental and Commercial Bank, Hotel La Salle, First National Bank, and the great department store, office, newspaper, and hotel buildings.

The park system of Chicago is without a parallel in America; it embraces Lincoln Park, on the lake shore to the north, and six others, and is divided into three sections, all connected or nearly so by magnificent boulevards, which, with the park drives, measure over sixty miles. In all, Chicago has ninety-three parks, covering more than four thousand four hundred acres. A characteristic feature of the system is the large number of small "People's Parks" scattered through the poorer districts and provided with baths, gymnasiums and playgrounds. On the north side is Lincoln Park, reached via Lake Shore Drive, one of the finest residence streets in Chicago, containing some very handsome houses. This passes near the Water Works, at the foot of Chicago Avenue, and ends on the north at Lincoln Park, which is at present three hundred acres in area, but is being extended by filling in the adjacent shallows of Lake Michigan.

Among the attractions of this park are the conservatories, palm-house, lily-ponds, and flower-beds; a small zoological collection; a fountain illuminated at night by electric light; the statues of Lincoln (by Saint-Gaudens), Grant (by Rebbisso), Beethoven, Schiller, La Salle, a Mounted Indian, and Linnaeus; and the boating lake. Near the main entrance is the Academy of Sciences, containing admirably arranged and classified collections illustrating the various natural sciences.

Grant Park, consisting of a public pleasure ground of two hundred and ten acres, lies between Michigan Boulevard and Lake Michigan. This park has been improved of late by the depression of the tracks of the Illinois Central Railway and by the construction of massive stone viaducts connecting the park proper with the lake shore. The adjoining part of the lake, between the shore and the breakwater, has been filled in and added to the park. In Grant Park, to the south of the Auditorium and opposite Eldredge Place, is an equestrian statue of General John A. Logan, in bronze, by Saint-Gaudens.

The South Side parks are also fine. They are best reached by Michigan Avenue and Drexel Boulevards, two fine residence streets with tasteful houses and ornamental gardens. Michigan Avenue also contains several churches, the Calumet Club, numerous large hotels and apartment houses, and the First Regiment Armory. In Drexel Boulevard is the handsome Drexel Memorial Fountain.

Washington Park (three hundred and seventy-one acres) and Jackson Park (five hundred and twenty-three acres) are connected by a wide boulevard known as the Midway Plaisance, on which is located the University of Chicago.

The West Side parks, Douglas Park, Garfield Park, and Humboldt Park are little inferior to those of the North and South Sides.

The University of Chicago, between Fifty-sixth and Fifty-ninth Streets, occupies probably the finest group of buildings, architecturally, devoted to higher education in the United States. The total value of buildings and equipment is more than thirty million dollars, one-fourth of which was contributed by citizens of Chicago and the balance by John D. Rockefeller. The ground has an area of sixty-six acres, and the university includes faculties of Arts, Literature, Science, Commerce and Administration, Education, Medicine, Law, and Divinity.

[598]

Above thirty different buildings have already been erected, mainly of limestone and in a Gothic style, from the designs of H. I. Cobb and Mr. Coolidge. Perhaps the most successful group is that at the corner of Fifty-seventh Street and Lexington Avenue, including an Assembly Hall, a Students' Club House, the University Tower, and the University Commons. Other important buildings are the Cobb Lecture Hall, the Kent Chemical Laboratory, the Ryerson Physical Laboratory, the Law School, the Anatomy, Physiology, Zoology, and Botany Buildings, the Walker Museum, the Haskell Oriental Museum, the handsome Bartlett Gymnasium, dormitories for women and dormitories for men. On the south edge of the campus stands the main structure of the Harper Memorial Library, an enormous Gothic building by Shepley, Rutan & Coolidge, erected in memory of President Wm. R. Harper. The Yerkes Observatory, at Williams Bay on Lake Geneva, containing one of the largest refracting telescopes in the world, belongs to the University of Chicago. Connected with the University is the large School of Education, facing the Midway Plaisance, between Monroe and Kimbark Avenues.

Other notable educational institutions include the Lewis Institute, founded and endowed by the late Mr. A. A. Lewis and opened in 1896, comprising a School of Arts and a School of Engineering, tuition in which is furnished at a nominal cost; and the Armour Institute, a well equipped institution for higher technical education, endowed by its founder with three million dollars.

Hull House, at the southwest corner of Polk and South Halsted Streets, is a social settlement of men and women, furnishing a social, intellectual, and charitable center for the surrounding district. It includes a free kindergarten, a coffee-house, a residential boys' club, a theater, a labor-museum, and a free gymnasium, while classes, lectures, and concerts of various kinds are held.

The famous Union Stockyards ("Packingtown") are in South Halsted Street, five and one-half miles to the southwest of the City Hall, and may be reached by the South Halsted Street or Racine Avenue trolley-lines, both running directly to the main entrance at Forty-first Street. The yards proper cover an area of about five hundred acres, have twenty-five miles of feeding-troughs, and twenty miles of water-troughs, and can accommodate seventy-five thousand cattle, three hundred thousand hogs, fifty thousand sheep, and five thousand horses. From two-thirds to three-fourths of the cattle and hogs are killed in the yards, and sent out in the form of meat. About thirty thousand workers are employed by the packing-houses. Chicago is the greatest live stock and grain market in the world.

Among the more important general manufactures of the city may be mentioned those of railway cars, locomotives, agricultural implements, mining appliances, clothing, electrical apparatus, lumber products, furniture, pianos, organs, leather, cigars, chemicals, beer, spirits, and flour. The steel and iron industry is conducted on a large scale, and the city has some large rolling mills. Chicago is also one of the leading publishing centers of the United States, and is an active jobbing center for the book trade.

As a center of railroad industry Chicago takes precedence over all cities of the world. Twenty-six of the principal trunk-line railroads of the United States run trains into Chicago terminals, and in addition to these there are numerous belt transfer, terminal and industrial lines which have either a part or all of their trackage in the city. Within the corporate limits of the city are eight hundred miles of main line railway and one thousand four hundred miles of auxiliary track. The total mileage of the twenty-six roads entering Chicago approximates ninety-seven thousand miles, or about forty-two per cent of the total mileage of the United States. The land occupied by main line property within Chicago represents nine thousand six hundred acres, or eight per cent of the entire area of the city.

There are six principal passenger terminals in Chicago, located as follows:

Baltimore & Ohio Terminal (Grand Central Station), at Fifth Avenue and Harrison Street. Central Station, at Michigan Avenue and Twelfth Street. Chicago & North Western Passenger Terminal, at North Clinton, West Madison, and North Canal Streets. La Salle Street Station, with entrance on Van Buren Street. Dearborn Station, at Dearborn and Polk Streets. Union Passenger Station, at Adams and Canal Streets.

Present plans are under way, however, to concentrate all roads entering Chicago in three great union stations—the North Western Station (already built, at a cost of \$25,000,000), the Illinois Central Station, and the Pennsylvania Station, the two latter involving an expenditure of one hundred and fifty million dollars.

The water carrying trade of Chicago is comparable to that of New York and Boston, and exceeds that of Philadelphia, New Orleans, Baltimore, and San Francisco.

The Chicago Tunnel System involves a labyrinth of small tunnels or subways, six by seven and one-half feet in size, and sixty-two miles long, forty feet under the principal business streets within the Loop district. These tunnels connect with all railway freight depots, passenger stations and, through their sub-basements, with a number of the larger mercantile concerns. They also extend beyond the Loop—north, south, and west—a distance of about two miles. They are not designed for passenger traffic, but are used by cars laden with all sorts of merchandise, coal, ashes, etc.

There are three underground power stations, four universal freight and transfer stations (one of them occupying five floors below the ground), eighty-five ordinary stations, and twelve tunnels, extending sixty feet under the Chicago River or its branches. So far, between thirty million and forty million dollars have been expended on construction and equipment. The bores also contain the cables of the automatic telephone company.

The site of Chicago was first visited by Joliet and Marquette in 1673. The United States Government established there the frontier post of Fort Dearborn in 1804. On October 8 and 9, 1871, occurred the memorable fire which reduced the greater part of the city to ashes. In 1886 occurred the Haymarket riot, in 1893 the World's Columbian Exposition was held in Chicago, and in 1894 the Pullman strike, the greatest in history, centered in Chicago.

Cincinnati (*sin-si-nā' tī*), Ohio. [The "Queen City," named in honor of Cincinnati, the Roman patriot.]

It is the second city of Ohio, on the north bank of the river Ohio, two hundred and seventy miles southeast of Chicago by rail, opposite the cities of Covington and Newport, in Kentucky. Steam ferries and six lofty bridges connect the city with the Kentucky shore; the suspension bridge by Roebing is two thousand two hundred and fifty feet long, and cost one million eight hundred thousand dollars.

Cincinnati occupies an exceedingly broken and irregular site, the more densely built parts being enclosed between the Ohio River and steep hills. The river front is upwards of fourteen miles in length. A second terrace is fifty or sixty feet higher, and a district between the hills and the Miami Canal, known as "over the Rhine," is occupied by the

[599]

large German colony.

The main portion of the city is regularly laid out and its streets are well paved. The chief shopping district is bounded by Fourth, Main, Seventh, and Elm Streets. The best residential quarters are on the surrounding highlands, built on a succession of irregular hills, by whose steepness they are broken into a series of some five and twenty villages, interspersed with parks.

Fountain Square, an expansion of Fifth Street, may, perhaps, be called the business center of the city and from it start most of the street railway lines. In the middle of the square stands the Tyler Davidson Fountain, cast at the Royal Bronze Foundry at Munich. To the north, at the corner of Fifth Street and Walnut Street, is the United States Government Building containing the Post Office, Custom House, and United States Law Courts, erected at a cost of five million dollars. It is of sawed freestone in the Corinthian style.

By following Fifth Street to the west and turning to the left down Vine Street, we pass the entrance to the Emery Arcade and reach, at the corner of the busy Fourth Street, the Chamber of Commerce. Opposite, at the northeast corner of Fourth and Vine Streets, stands the Ingalls Building. On the north side of Fourth Street, between Vine and Race Streets, is the fine Third National Bank.

Following Fourth Street towards the west, we soon reach Plum Street, which we may follow to the right to St. Paul's Protestant Cathedral, at the corner of Seventh Street; the Roman Catholic Cathedral of St. Peter, at the corner of Eighth Street, and the Synagogue, opposite the last. In the block bounded by Central Avenue and Eighth, Ninth and Plum Streets is the City Hall, a large red building in a Romanesque style, with a lofty tower, constructed of brown granite and red sandstone at a cost of one million six hundred thousand dollars. A little to the east, in Vine Street, between Sixth and Seventh Streets, is the Public Library. To the north of this point, "over the Rhine," is Washington Park, with the Springer Music Hall and the Exposition Building.

Among other buildings may be mentioned the County Court House, St. Xavier's College, the Oddfellows' Temple and the Cincinnati Hospital. Recent buildings of the modern type include the Traction Building, the Mercantile Library, the Union Trust Building, and the First National Bank.

The chief park of Cincinnati is Eden Park, which lies on the hills to the east and affords fine views of the city and river. It contains the Art Museum, a storage reservoir for the City Water Works, and the Water Tower. The top of the last affords the best view of the city and its environs, the river, and the Kentucky Highlands.

The Art Museum is a handsome group of buildings on a hill-top, some in a Romanesque, others in a Grecian style. Adjacent is the Art Academy. Both are maintained by a private corporation.

There are more than two hundred and fifty churches, including a Roman Catholic cathedral; besides many handsome theaters, hotels, and public halls, hospitals and asylums, and schools.

The educational institutions are of the highest order. They include the University of Cincinnati, which has associated with it the Cincinnati Hospital and the Cincinnati Observatory, the Ohio and Miami Medical Colleges, St. Joseph's and St. Xavier's Jesuit Colleges, the Law Theological Seminary, Cincinnati Conservatory of Music and the Ohio Mechanics' Institute.

Cincinnati is a center of musical and art culture, and its decorative pottery and wood-carving have a national reputation. It has a large river and canal traffic, and many railways converge here.

Among the factories are clothing factories, foundries, machine shops, coach-works, works for the manufacture of furniture, tobacco, shoes, leather, etc. There is some boat-building and printing; and the slaughter-houses, stockyards, and grain elevators are very extensive.

Cincinnati was settled by white men in 1780, was incorporated as a city in 1819, and early attained the name of "the Queen City of the West," as also that of "Porkopolis," from its great trade in pork. Great riots occurred in 1884, and were with difficulty suppressed by the military.

Cleveland, Ohio. [The "Forest City;" named in honor of General Moses Cleveland of Connecticut, who had charge of the surveying of this region, acting as general agent for the Connecticut Land Company.]

It is the largest city of Ohio, and is situated on the south shore of Lake Erie, three hundred and fifty miles by rail east of Chicago. The city is built mainly upon a plain from sixty to one hundred and fifty feet above the lake, and five hundred and eighty feet above sea-level. It is divided into the East and West Sides by the tortuous valley of the Cuyahoga River, which is crossed by two high-level bridges—one mainly of stone, and one of iron, three thousand nine hundred and thirty-one feet long. The former, one thousand and seventy feet long, was completed in 1878 at a cost of two million two hundred thousand dollars. There are three other similar viaducts in different parts of the city.

The chief business street is Superior Avenue, a really fine and wide thoroughfare, the west end of which is lined with substantial business blocks, such as the Perry-Payne Building. A little farther on the street expands into Monumental Park or the Public Square, containing a Soldiers' Monument and a statue of General Moses Cleveland. The new Federal Building, at the northeast corner of the square, contains the Post Office, the Custom House, and the Court House.

This building is the first of several public buildings comprised in the so-called "Group Plan," the others being the City Hall, County Building, Public Library, and Union Station. A broad mall connects all these buildings.

At the northwest corner is the Old Court House, adjoined by the American Trust Building. On the north side of the square, at the corner of Ontario Street, is the handsome building of the Society for Savings, established in 1849, and now having deposits of upwards of fifty million dollars. Adjacent is the Chamber of Commerce, containing a handsome auditorium, with a library and reading room. In Superior Avenue, beyond the Federal Building, is the massive City Hall, which is adjoined by the temporary building of the Public Library. A little to the north of this point is the huge Central Armory.

Euclid Avenue, which begins at the southeast angle of the Public Square, is, at its east end, also an important artery of business, and farther out becomes one of the most beautiful residence streets in America, with each of its handsome houses surrounded by pleasant grounds and shady trees. At the northeast corner of the Square and Euclid Avenue is the Williamson Building; a little farther on, also on the north side of the Avenue, is the handsome First National Bank; on the right is the tall, narrow building of the Guardian Savings & Trust Co. To the left is the Arcade, four hundred feet long, one hundred and eighty feet wide, and one hundred and forty-four feet high, with a fine five-balconied interior, running through to Superior Avenue; and to the right is the Colonial Arcade, running through to Prospect Avenue. At the corner of East Sixth Street are the tall Garfield and New England Buildings. Nearly opposite the New England Building is the new Taylor Arcade, just east of which is the Hippodrome Building. Farther on, near east Ninth Street, is the Citizens Building, with the offices of the Citizens Savings & Trust Co., and at the corner is the Schofield Building. Directly opposite the latter, at the southeast corner of East Ninth Street and Euclid Avenue, is the Cleveland Trust Co. At the corner of East Twelfth Street is the handsome Union Club. Farther on are several fine churches. About four and one-half miles from the Public Square Euclid Avenue reaches University Circle, with a statue of Senator M. A. Hanna by Saint-Gaudens, and one of Kossuth, erected by the Hungarians of Cleveland. To the right is the building of the Western Reserve Historical Society, to the left is the Elysium, an artificial ice skating rink. Just beyond the Circle is the entrance to Wade Park, which contains statues of Commodore Perry, and a Goethe-Schiller Monument. Opposite the Park are the buildings of the Western Reserve University (including Adelbert College, Woman's College, Law, Medical, and Dental Schools, and a Library School, in addition to the graduate department) and the Case School of Applied Science. About one mile farther on the avenue passes Lake View Cemetery, containing the Garfield Memorial, the Rockefeller Monolith, the graves of Senator Hanna and John Hay, and the Wade Memorial Chapel.

Prospect Avenue, which runs parallel to Euclid Avenue on the south, is little inferior to it in beauty.

Cleveland's rapid growth is due mainly to the fact that nowhere else can the rich iron ores of Lake Superior, the coal of Northern Ohio, and the limestone of the Lake Erie islands, be brought together so cheaply; its position at the north terminus of the Ohio Canal being very advantageous, and seven railroads terminate here.

The chief industries of the city are the various manufactures of iron, including steel rails, forgings, wire, bridges, steel and iron ships, engines, boilers, nails, screws, sewing machines, agricultural implements and machinery of all kinds, the refining of petroleum, wood-work, and other manufactures of endless variety. Cleveland is the greatest iron ore receiving point in America, one of the largest lumber markets and extensively engaged in the automobile industry.

Cleveland was founded in 1796 by General Moses Cleveland, under the direction of the Connecticut Land Company. In 1814 Cleveland was incorporated as a village with less than one hundred inhabitants. The opening of the Ohio land served as an impetus to growth, and in 1836 Cleveland was incorporated as a city. Its great prosperity dates from its connection by rail with the cities of the East and the manufacturing establishments set up during the Civil War.

Des Moines (dē-moin) , Iowa. [This name was applied by the Indians to a place in the form of Moingona, which the French shortened into Moin, calling the river "rivière des Moines." Finally, the name became associated with the Trappist monks, and the river by a spurious etymology was called "la rivière des moines," "the river of the monks."]

The capital and largest city of Iowa, it is an important manufacturing and commercial city, and noted especially for its extensive insurance interests and exceptional railroad facilities. It has many important buildings, among them the Capitol, built at a cost of three million dollars, the United States Government Building, the State Arsenal, a State Historical Building, completed in 1908 at a cost of five hundred thousand dollars, Drake University, Highland Park College, Des Moines College, and a state library. A new city hall at a cost of four hundred thousand dollars, and a great coliseum to seat ten thousand are recent additions.

The city has nearly one hundred churches of all denominations. Half a dozen bridges over the two rivers connect the different parts of the town, and there is a public park, with fine groves of forest trees.

Vast bituminous coal fields have contributed to the growth of the manufacturing industries. These include typewriters, wagons, sleighs, cotton and woolen goods, pottery, furniture, and electrical appliances. The city was one of the first to adopt the electric car system.

Des Moines was settled in 1846, incorporated as the town of Fort Des Moines, 1851, chartered as a city and became the capital of the State in 1857. In 1907 Des Moines adopted the commission form of government and attained wide celebrity as a leader in progressive municipal government.

Denver, Colo. [The "Queen City of the Plains"; named after James W. Denver, ex-Governor of Kansas, upon the consolidation in 1860 of the towns of St. Charles and Aurora.]

The capital of Colorado, it is situated on the South Platte River, nine hundred and twenty-two miles west of St. Louis. It lies on a level plain, five thousand one hundred and ninety-six feet above the sea, beyond which rise the snow-capped peaks and deep blue shoulders of the Rocky Mountains.

The Union Depot lies at the foot of Seventeenth Street, one of the chief business thoroughfares, and electric cars start from here for all parts of the city. Near the station is a large bronze Arch, bearing the work "Welcome." The route up Seventeenth Street and Seventeenth Avenue by electric car to the City Park and then across to Colfax (or Fifteenth) Avenue and return traverses the chief features of the city. On the way out is passed the Equitable Building, the roof of which affords a superb view.

The Rocky Mountains are seen to the west in an unbroken line of about one hundred and seventy miles, extending from beyond Long's Peak on the north to Pike's Peak on the south. Among the loftiest of the intervening summits are Grey's Peak, Torrey's Peak, and Mount Evans. The bird's-eye view of the city in the immediate foreground includes the State Capitol and the fine residences of Capitol Hill on the east.

At the corner of Seventeenth and Glenarm Streets is the Denver Club, and at the corner of Sherman Avenue are the University Club and the Central Presbyterian Church. In returning through Colfax (or Fifteenth) Avenue the following buildings may be observed: the State Capitol, an imposing structure erected at a cost of two million five hundred thousand dollars; the new Public Library, between Acoma and Bannock Streets; the United States Mint, at the corner of Cherokee street, and the West Side Court House. The County Court House occupies the block bounded by Court Place and Fifteenth, Sixteenth and Tremont Streets. The Custom House and Post Office, on Sixteenth Street, is another imposing building. In Fourteenth Street is a handsome Auditorium used by the Democratic Convention in 1908.

The other important buildings of the city include the Denver High School, Stout Street, between Nineteenth and Twentieth Streets; the City Hall, corner Fourteenth and Larimer Streets; the Mining Exchange; the Chamber of Commerce; Baptist College (Montclair); the Tabor Opera House Block; the Broadway Theater; the Denver Athletic Club; Trinity Church, Broadway and Eighteenth Street; the Church of Christ, Scientist, Fourteenth and Logan Avenues; the Y. M. C. A., Lincoln and Sixteenth Avenues; Mystic Shrine Temple, Sherman and Eighteenth Avenues; the Westminster University of Colorado, and the Jesuit College of the Sacred Heart (College Avenue, corner of Homer Avenue). On Capitol Hill are the new buildings of St. Mary's Cathedral (Roman Catholic) and St. John's Cathedral (Episcopalian). The Art Museum, in Montclair, contains a collection of paintings and other objects of art. The Museum in the City Park includes an interesting collection of Colorado animals. In University Park, eight miles to the southeast of the Union Depot, is the University of Denver.

The city is the center of a great agricultural and mining district, and has a large trade in cattle, hides, wool, and tallow. It is chiefly, however, to its position as the center of a great mining region that Denver owes its marvelous progress; the discovery, in 1878, of the fabulous wealth of the Leadville Hills attracted capital and emigration from all parts of the continent. It has a United States assaying mint, is an important ore market, and is noted for its smelting and refining works, foundry and machine shops.

Denver has an abundant water supply, and the clear invigorating air and dry climate of Denver are famous. It was founded on a barren waste, dry and treeless, in 1858, and the following year incorporated as a city by the Provisional Legislature.

Detroit (dē-troit) , Mich. [The "City of the Straits"; named from the river or strait on which the city is built. Derived from two French words, *detroit*, "the narrows."]]

It is situated on the Detroit River, eighteen miles from Lake Erie, at an altitude of six hundred feet. The river, sometimes called the "Dardanelles of the New World," is here the boundary between the United States and Canada. It affords a splendid harbor, with a water-front of about nine miles. Ferries connect with the Canadian side. Many beautiful islands, with those of Lake St. Clair, are popular as places of summer residence and resort.

One of these, Belle Isle, is about seven hundred acres in extent and forms a beautiful public park, with fine trees, and still retaining many of its natural features unimpaired. It contains a statue of Schiller, a small zoological collection, a large aquarium and horticultural building, and a casino.

Woodward Avenue, the principal thoroughfare, divides the city into two very nearly equal parts. It is also the main business street, and at its northern end has many of the city's most prominent buildings. Its expansion, about half a mile from the river, is known as the Campus Martius, adorned with a handsome fountain, from which Michigan and Gratiot Avenues diverge to the left and right. To the left stands the City Hall, the tower of which contains a clock with a dial eight and one-half feet in diameter. In front of the City Hall is the Soldiers' Monument.

In Gratiot Avenue, near the Campus Martius, is the Public Library, containing two hundred and twenty thousand volumes and some historical relics. The Chamber of Commerce, at the corner of Griswold and State Streets, is thirteen stories high. The Post Office, in Fort Street, adjoining the site of the old Fort Lernout, is a handsome building. In the same street, at the southeast corner of Shelby Street, is the State Savings Bank, and adjoining it on the east is the tall Penobscot Building.

Just to the east of the Campus Martius, in Cadillac Square, stands the County Building. It is in a plain renaissance style with a Corinthian portico over the main entrance, sculptures in the pediment, and a tower surmounted by a gilded dome. In front of it is the Cadillac Chair, erected in 1901 to commemorate the two hundredth anniversary of the city's foundation.

A little farther on Woodward Avenue reaches Grand Circus Park, a square with trees, fountains, and a statue of ex-Governor Pingree. To the north, at the corner of Adams Street, is the Central Methodist Church, with a richly decorated interior. One block to the east, between Adams and Elizabeth Streets, is the new building of the Y. M. C. A. At the corner of Edmund Place, one-half mile farther on, are the First Unitarian and First Presbyterian churches, two fine Romanesque buildings of red stone. Between Erskine and Eliot Streets, to the right, is the Temple Bethel, an effective Jewish synagogue. Also to the right, at the head of Martin Place, is the handsome Harper Hospital; and Grace Hospital is also seen to the right (corner of Willis Avenue and John R. Street) a little farther on. To the left, a little higher up, is the Detroit Athletic Club. The north

[600]

[601]

end of Woodward Avenue and the adjoining streets form the principal residence quarter.

Jefferson Avenue, which runs at right angles to Woodward Avenue, crossing it one-fifth mile from the river, contains many of the chief wholesale houses, and toward its northeast end has also many pleasant residences. The site of Fort Pontchartrain was at the corner of Jefferson Avenue and Griswold Street, two squares to the west of Woodward Avenue. To the east, on the left side of the street, are the Roman Catholic Cathedral of Saints Peter and Paul and the Jesuit College, and on the right side the Academy of the Sacred Heart. On the same side, at the corner of Jefferson Avenue and Hastings Street, about one-half mile to the east of Woodward Avenue, stands the Museum of Art, containing paintings, sculptures and oriental curiosities.

The commerce of Detroit is enormous, a number of conditions favoring it as a commercial and industrial center. Its geographical position brings it into relation with an immense lake traffic and with the Canadian trade. About three-fourths of the total trade is with Canada. The principal exports are grain, wool, pork, lard, hides, and copper. It has important lumbering interests and large tanneries.

The manufactures include stoves, freight cars, drugs, varnish, paint, furniture, carriages, cigars, and matches. Other industries are those of iron and steel, foundry and machine shop products, and the manufacture of malt liquors.

The site of Detroit was visited by a party of Frenchmen as early as 1610, and again by La Salle in 1670, but no permanent settlement was made until 1701, when Sieur de la Mothe Cadillac, the first Governor of the French territory in this vicinity, built Fort Pontchartrain and established a small trading village. In 1815 Detroit was incorporated as a village, and in 1824 was chartered as a city by the Legislature of Michigan Territory. It was the capital of the Territory from 1805 to 1837, and of the State from 1837 to 1847.

Hartford, Conn. [Named from Hertford, England.] It is the capital of Connecticut, on the right bank of the Connecticut River, fifty miles from its mouth, and one hundred and twelve by rail northeast of New York. It is a handsome city, finely situated on the navigable Connecticut River, at its confluence with the Park River. The Union Depot is near the center of the town. To the southwest of it, beyond the Park River, lies Bushnell Park, containing the handsome white marble Capitol, a conspicuous object in most views of the town.

The fine sculptural embellishment of the north facade of the Capitol was done under the supervision of Paul W. Bartlett and partly by his own hand. The Senate Chamber contains a good portrait of Washington, by Stuart, and an elaborately carved chair, made from the wood of the "Charter Oak." In the Library are the Charter of Connecticut and portraits of Connecticut governors. In the east wing of the ground floor is a statue of Nathan Hale, and in the west wing are the tombstone of General Putnam and a statue of Governor Buckingham.

The gateway to the park was erected as a Soldiers' Memorial.

Following Capitol Avenue to the east and then turning to the left, along Main Street, is the Wadsworth Athenæum, containing a gallery and libraries with one hundred and fifty thousand volumes, and the collections of the Historical Society. Adjacent are the buildings of the Ætina Life Insurance, the Ætina Fire Insurance, and the Travelers Insurance Co. A little farther on is the Post Office, adjoined by the interesting Old State House, erected by Chas. Bulfinch. Opposite is the Connecticut Mutual Life Insurance Co. The State Arsenal is also on Main Street farther along.

Near the State House are the High School, the Hartford Orphan Asylum, and the Hartford Theological Institute. About a mile to the south is Trinity College, with fine buildings and equally fine location. The Colt Firearms factory is in the southeast part of the city, and near it is the handsome Church of the Good Shepherd, erected in memory of Colonel Colt, inventor of the revolver, by his wife.

A tablet at the corner of Charter Oak Place marks the site of the "Charter Oak," where, in 1687, the charter of Connecticut was concealed to save it from Sir Edmund Andros, a tyrannical British governor. Charter Oak Park is famous for its trotting races. Elizabeth Park has a fine show of flowers.

Among other large buildings are the Retreat for the Insane, the Deaf and Dumb Asylum, the Old Folks Home, the City Hospital, and St. Joseph's Roman Catholic Cathedral. The last is in Farmington Avenue, which, with its continuation, Asylum Street, contains many fine private residences.

Hartford is a prominent commercial and manufacturing city, and is particularly noted for the importance of its insurance companies, rating third in this regard among the cities of the United States. It is the farthest point, at present, to which large steamers can ascend the Connecticut River. Among the manufactures are firearms—the celebrated Colt manufactory is here—typewriters, rubber goods, especially tires, electrical supplies, automobiles, bicycles, sewing-machines, hardware, tools, carriages, silver plate, woven wire mattresses, book binding machinery, cash registers, knit goods, etc.

The site of a Dutch fort in 1633, and of a colony of Massachusetts settlers as early as 1635-1636, Hartford was incorporated as a city in 1784. Here (January 14, 1639) was adopted the first constitution in writing ever proclaimed by a people organizing a government, therefore Hartford is called the birthplace of American democracy. In 1687 occurred the famous attempt of Governor Andros to seize the charter of Connecticut. Hartford was the capital of Connecticut until 1701, thenceforth until 1873 it divided the responsibility with New Haven. Since 1875 it has been sole capital. Here in 1814 took place the famous meeting of New England delegates known as the Hartford Convention.

About 1780 the "Hartford wits," of whom Joel Barlow was one, made the city a literary center. Since that time it has been the residence of a large number of literary men and women; among them Harriet Beecher Stowe, Whittier, Trumbull, Charles Dudley Warner, and Samuel L. Clemens. Noah Webster, Henry Barnard, Frederick Law Olmsted, and John Fiske were born here.

Indianapolis (*in-di-a-nap-o-lis*), **Ind.** [Literally, the City of Indiana, from *Indiana* and *polis*, city.]

It is the capital of Indiana, on the west fork of White River, in a level plain one hundred and ninety-five miles southeast of Chicago by rail. It is a regularly built and beautiful city.

The focus of the city is the circular Monument Place, from which four wide avenues run diagonally to the four corners of the city. The other streets, many of them one hundred feet wide, are laid out at right angles to each other. In the center of this place rises the Soldiers and Sailors' Monument, two hundred and eighty-five feet high, by Bruno Schmitz of Berlin. Round the monument are statues of General G. R. Clark, Governor Whitcomb, President W. H. Harrison, and Governor Morton. A little to the west is the State Capitol, a large building with a central tower and dome, erected at a cost of two million dollars. At the east entrance to the Capitol is a statue of Governor Morton and near by is that of Governor Hendricks. The Marion County Court House, also an imposing edifice, lies to the east of Monument Place, while to the north of it is the United States Court House and Post Office, erected in 1902-1904. To the southwest of the former is a statue of General H. W. Lawton, by A. O'Connor. In University Park is a statue of Benjamin Harrison, erected in 1908.

The John Herron Art Institute, at the corner of Pennsylvania Avenue and Sixteenth Street, contains a School of Art and a collection of modern paintings. Other large and important buildings are the Blind Asylum; the Propylæum, owned and controlled by a stock company of women for literary purposes; the Deaf and Dumb Asylum; the Union Railway Station; the City Hall; the Public Library; the Masonic Temple; the Oddfellows Building; the Deutsche Haus, a German club-house; the Mænnlicher Building, and several churches. The Winona Technical Institute is installed in buildings erected for the United States Arsenal. The Central Hospital for the Insane lies one and one-half miles to the west of the city, beyond the White River. The Riverside, Broad Ripple, Brookside, Fairview, and Garfield Parks deserve mention.

Indianapolis is one of the chief railroad centers of the United States, fifteen main lines converging here. It is also a great center of electric railways, which radiate hence in all directions, two hundred and fifty cars leaving the terminal station daily. The trade in agricultural produce is very considerable. Pork-packing is the leading industry, but there are also large flour and cotton and woolen mills, numerous foundries, and manufactories of furniture, carriages, tiles, etc.

Indianapolis was first settled in 1819, the city founded in 1821, became the seat of the state government in 1825, was incorporated as a town in 1836, and received its city charter in 1847. In the same year the first railroad in the state was opened.

Los Angeles (*los an'je-les*, Sp. pron. *lós äng he-läs*), **Cal.** [Named by the Spaniards Pueblo de la Reina de los Angeles, "The Town of the Queen of the Angels," hence Los Angeles, "the angels."]

It is the metropolis of southern California, lies on the Los Angeles River, twenty miles above its mouth and fifteen miles in a direct line from the Pacific Ocean, and four hundred and eighty-three miles southeast of San Francisco by the Southern Pacific Railroad.

It is a splendid city of wide streets and spacious sidewalks, with an extensive residential quarter, one hundred and thirty churches, over sixty public schools, and about one thousand seven hundred manufactories. It publishes newspapers in seven languages.

The city, especially the residential quarters, is embowered in plants, among the characteristic features of which are the swift-growing eucalyptus, the graceful pepper-tree, many palms, Norfolk Island pines, live-oaks, india-rubber trees, orange trees, roses, geraniums, yuccas, century plants, bananas, calla lilies, and pomegranates. A distinguished French traveler pronounces Los Angeles one of the few really beautiful cities in the United States.

Broadway, running parallel to Main Street, is the dividing line for east and west, as First Street is for north and south. Among the many substantial buildings in Main Street are the City Hall, between Second and Third Streets, and the new Chamber of Commerce. The latter contains an interesting collection of California products, the Palmer collection of Indian antiquities, and the Coronel collection, illustrating the Spanish period. Here is also the first cannon brought to California by Padre Junipero Serra in 1769. In Temple Street, near Broadway, stands the County Court House. The Public Library is at the southeast corner of Broadway and Third Street.

Other edifices worthy of mention are the Women's Club, in the Mission-Renaissance style (940 South Figueroa Street), the State Normal School (corner Grand Avenue and Fifth Street), the Security Savings Bank (corner Spring and Fifth Streets), the Union Trust and Hellman Buildings (opposite corners of Spring and Fourth Streets), the Auditorium (corner Fifth and Olive Streets), the Y. M. C. A. (Hope Street, between Seventh and Eighth Streets), the Y. W. C. A. (corner Hill and Third Streets), the Farmers and Merchants National Bank (corner Fourth and Main Streets), the Grant Building (corner Broadway and Fourth Street), Hamburger's (corner Broadway and Eighth Street), Merchants Trust (207 Broadway), and the International Bank (corner Temple, Spring and Main Streets). The viaduct of the Electric Railway, in San Fernando Street, spanning the railway tracks on the east side of the city, is an interesting piece of engineering.

Los Angeles also contains many parks, including the Griffith Park of three thousand acres, and the Eastlake Park and Westlake Park, each with a small lake. The University of Southern California is situated at Wesley Avenue and Thirty-fifth Street.

The small plaza, with the Old Mission Church, at the north end of the business-town, is interesting as a survival of the ancient settlement. Just beyond is a genuine Chinatown, keeping many of the original adobe structures. An excellent view of the city can be obtained from the tower at "Angel's Flight," corner Hill and Third Streets. Opposite Eastlake Park is an Ostrich Farm, with some two hundred adult birds.

Los Angeles is the center of the orange-growing industry. The residents are principally occupied in the cultivation and export of oranges, grapes, and other fruits, as well as the manufacture of wine. There are rich oil-wells in and near the city and this district now forms part of one of the richest petroleum fields in the world. Many invalids resort to Los Angeles in the winter because of its mild and equable climate. The city has a harbor on the coast, eighteen miles off.

It is one of the oldest towns in the Western states, and was already a thriving place when the Franciscan fathers established a mission there in 1781. Under Mexican rule Los Angeles alternated with Monterey as the capital of California. From 1835 to 1847 it was the capital of the State of California. In 1846 it was occupied by the United States forces. For the first century of its history Los Angeles was only a small pueblo constructed mainly of adobe in the Mexican style, but the advent of the railroad brought a sudden impetus. It was the first city in the United States to be lighted with electricity.

Louisville (*lōō 'l-vīl*, or *lōō 'l-s-vīl*), **Ky.** [The "Falls City"; named by act of the Virginian Legislature in 1780, in honor of Louis XVI. of France, then assisting the American colonies in their revolutionary struggle.]

It is the largest city of Kentucky, and is situated on the Ohio River, one hundred and thirty miles by water southwest of Cincinnati. The river is here crossed by two railroad bridges, and forms a series of rapids—the "Falls of Ohio"—descending twenty-six feet in two miles.

Louisville covers about forty square miles of a plain, and is nearly enclosed by hills. It is handsomely built and extends for nearly eight miles along the river. Its well-shaded streets are from sixty to one hundred and twenty feet wide, and slope up from the river.

Perhaps the most prominent building in Louisville is the Custom House, in Chestnut Street between Third and Fourth Streets. The Court House is in Jefferson Street between Fifth and Sixth Streets, and is adjoined by the City Hall, with its square clock-tower.

The Louisville Public Library, at the corner of Fourth and York Streets, contains also an art gallery and a small museum, including the Troost Collection of Minerals.

The Farmers' Tobacco Warehouse, in Main Street, is the center of the tobacco trade and has a large storage capacity. The University of Louisville, at corner of Eighth and Chestnut Streets, is housed in a handsome building. The Lincoln Bank, corner of Fourth and Market Streets, is fifteen stories high, with a splendid view from upper windows and roof.

Fourth Avenue, with many pleasant residences, leads south, passing the pretty little Central Park, to the Racecourse. Louisville possesses three fine parks: Iroquois Park, Cherokee Park, and Shawnee Park, to the south, east and west of the city. The First Regiment Armory has an enormous drill-hall and can seat fifteen thousand persons.

The Louisville Bridge, one mile long, crossing to the west end of Jeffersonville, was built in 1868-1872 and has twenty-seven iron spans supported by limestone piers. The Kentucky and Indiana Bridge, leading to New Albany, is one-half mile long. A third bridge, also leading to Jeffersonville, was constructed in 1892.

President Zachary Taylor (1784-1850) is buried near his old home, five miles to the east of Louisville.

Louisville is the greatest market for tobacco in the world, and has large pork-packing establishments, distilleries, and tanneries, with manufactories of plows, furniture, castings, gas and water pipes, machinery, flour, cement, cotton seed oil and cake, steam railroad cars, and carriages and wagons.

It was founded in 1778 and in 1780 named in honor of Louis XVI. of France, whose troops were then assisting the Americans. A great part of the town, including the tobacco-market and the city hall, was destroyed by a cyclone in March, 1890. Since the Civil War, Louisville has rapidly grown in importance as one of the chief gateways to the southwest.

Milwaukee (*mīl-wau 'kē*), **Wis.** [Named from the river, called by the Algonquins Minnwaukeee, or Me-ne-wau-kee, "good earth, good country, rich or beautiful country."]

It is the largest city in Wisconsin, and is situated on the west shore of Lake Michigan at the common mouth of three improved and navigable rivers, which, with a canal, supply twenty-four miles of dockage. An excellent harbor has been formed by the erection of huge breakwaters, and the river admits the largest lake-vessels to the doors of the warehouses.

The city is well built, largely of a light-colored brick, and many of its streets are lined with beautiful shade trees, recalling some of the older eastern cities. Among the finest residence streets are Grand Avenue, Prospect Avenue, Waverly Place, Juneau Avenue, Marshall Street and Astor Street. About two-thirds of the inhabitants are Germans, which may account for its successful cultivation of music and art. There are no fewer than seventy-five musical societies in the city.

Grand Avenue, which runs east and west, contains many of the chief buildings and best shops, while Wisconsin Street and East Water Street are also busy thoroughfares. Among the most prominent buildings is the Federal Building, a handsome structure of granite in a turreted baronial style, occupying the block bounded by Jefferson, Jackson, Michigan and Wisconsin Streets, and containing the Post Office, Custom House and United States Court House. The interior is finely finished in marbles, mosaics, mahogany, and oak. The County Court House, a brown sandstone edifice, is in the square bounded by Jefferson, Jackson, Oneida, and Biddle Streets. The tall Wells Building, at the

[602]

[603]

[604]

corner of Milwaukee and Wisconsin Streets; the Chamber of Commerce, Michigan Street; Plymouth Church, a massive building at the corner of Van Buren and Oneida Streets, and St. Paul's Church, Marshall Street, are other important structures. The Auditorium, in Cedar Street, can accommodate ten thousand people.

The Layton Art Gallery, a well-lighted structure at the corner of Jefferson and Mason Streets, has some interesting pictures and statues. The paintings include examples of Rosa Bonheur, Constable, Corot, Millet, Achenbach, Alma-Tadema, Clays, Inness, Kensett, Mauve, Holmberg, Pradilla, Mesdag, Munkácsy, Van Marcke, and other modern masters. In the Sculpture Hall are works by Hiram Powers and Romanelli. The magnificent Public Library in Grand Avenue, between Eighth and Ninth Streets, contains two hundred thousand volumes and a free museum of natural history, palæontology, etc.

The curiously thin looking City Hall, with one of the largest bells in the world and an illuminated clock-dial, visible for two miles at night, occupies a triangular site bounded by East Water, Market and Biddle Streets.

Other notable structures in the business district are the Germania Building, the Evening Wisconsin Building, the Sentinel, the New Insurance Building, the Mitchell Building and the Pabst Building.

Among the public monuments are statues of Washington, near Ninth Street, and the Soldiers' Monument.

Juneau Park, laid out on a bluff overlooking Lake Michigan, contains statues of Solomon Juneau, the earliest white settler, and Leif Ericson; it commands fine views. Lake Park, farther to the north, also overlooks the lake. Near it is the North Point Pumping Station, with a tall and graceful water tower. The Forest Home Cemetery, at the southwest corner of the city, deserves notice. The attractions of Washington Park, on the west limits of the city, include a large herd of deer.

The great breweries, such as Pabst's, which covers thirty-four acres, or Schlitz's, are wonderfully interesting plants, while the grain elevators, the flour mills, the coal docks, the International Harvester Co., and the workshops of the C. M. St. P. Railway are also great concerns. To the south are the rolling mills of the Illinois Steel Co., covering one hundred and fifty-four acres of ground. To the southwest, chiefly in the valley of the Menomonee, are the large brick yards that produce the light colored bricks which give Milwaukee the name of "Cream City." To the north, along the Milwaukee River, are extensive cement works.

Sheridan Drive, skirting the lake to the south for two miles, is intended to be prolonged so as ultimately to meet the boulevard of that name running from Chicago to Fort Sheridan.

The other industries include manufactories of leather, machinery, iron and steel goods, tobacco, clothing, stoves, tinware, brick, furnaces, cars, steel and malleable iron. Pork packing is also carried on extensively.

Milwaukee became a village in 1835 and received a city charter in 1846. Its growth has been rapid, particularly in the last twenty-five years.

Minneapolis (*min-ə-əp ˈɑː-lis*), **Minn.** [The "Flour City"; named from Dakota Indian words, *Minni*, "water," *ha*, "curling," and the Greek word *polis*, "a city," namely "city of the curling water," alluding to the Falls of St. Anthony.]

It is the largest city of Minnesota, adjoins the capital, St. Paul, and is situated on both sides of the Mississippi, which is here crossed by numerous bridges. The Falls of St. Anthony, with a perpendicular descent of sixteen feet, afford a water power which has been a chief source of the city's prosperity.

At the corner of Second Avenue South and Third Street stands the Metropolitan Life Building, erected at a cost of one million six hundred thousand dollars. Adjacent is the Post Office, in a Romanesque style.

On Hennepin Avenue, at the corner of North Fifth Street, is the imposing Lumber Exchange. To the right are the West Hotel and the Masonic Temple. At the corner of Eighth Street is the private art gallery of Mr. T. B. Walker, containing good specimens of British portrait painters and of the Barbison school and also works by or ascribed to Raphael, Michael Angelo, Rubens, Rembrandt, Van Dyck, Holbein, and Murillo.

Farther on, at the corner of Tenth Street, is the Public Library and Art Gallery, an ornate Romanesque structure.

At the corner of Sixteenth Street is the new Roman Catholic Cathedral.

Other prominent churches are the First Unitarian Church, at the corner of Mary's Place and Eighth Street; the Westminster Presbyterian Church, Nicollet Avenue; the Church of the Redeemer; the Fowler Methodist Episcopal Church, on Lowry Hill; the Second Church of Christ, Scientist; Plymouth Church, and St. Mark's Cathedral.

At the other end of Hennepin Avenue is the Union Depot. Among other prominent buildings in the business quarter are the Court House and City Hall, a handsome building in Fourth Street, completed at a cost of three million dollars, with a tower three hundred and forty-five feet high; the New York Life Insurance Building, Fifth Street and Second Avenue, with an elaborate interior; the Northwestern National Bank; the First National Bank; the Andrus Building; Donaldson's Glass Block Store; the Security Bank Building, and the Chamber of Commerce, Fourth Street South and Fourth Avenue.

The University of Minnesota lies on the left bank of the river, between Washington and University Avenues, and occupies various well-equipped buildings.

Other notable institutions are the Augsburg Theological School, Minneapolis Normal School, and a Conservatory of Music.

Within the urban limits of Minneapolis are fourteen wooded lakes, while the gorges of the Mississippi and the Minnehaha Creek are very picturesque. These natural features have been made the basis of a fine system of boulevards. From the southeast side of Lake Harriet the road runs to the east along the Minnehaha Creek, passing Lake Amelia, to Minnehaha Park, containing the graceful Falls of the Minnehaha, fifty feet high and immortalized by Longfellow.

The most delightful resort near Minneapolis or St. Paul is Lake Minnetonka (eight hundred and twenty feet above the sea), which lies fifteen miles to the west. The lake is singularly irregular in outline, and with a total length of twelve to fifteen miles has a shore line of perhaps one hundred and fifty miles.

Minneapolis is the foremost city in the world in flour and lumber products. The flour mills, perhaps its most characteristic sight, are congregated on the banks of the Mississippi, near St. Anthony's Falls. Other important industries are the manufacture of agricultural implements and machinery, bread and baking products, cars and general shop construction, food preparations, foundry products, furniture, fur goods, dressed fur, malt liquors, patent medicines, and printing and publishing.

The Falls of St. Anthony were named in 1680 by Father Hennepin. In 1819 Fort Snelling was built by the United States government. Though a large mill was built as early as 1822, it was not till 1850 that a permanent settlement was made. In 1856 Minneapolis was incorporated as a town on the west bank of the river, and in 1867 it was incorporated as a city. St. Anthony on the east bank was annexed in 1872.

Nashville, Tenn. [The "Rock City"; first named as a settlement, Nashville, in honor of Francis Nash of North Carolina, a brigadier-general in the Continental Army. In June, 1784, changed to Nashville.]

It is the capital of Tennessee, on the navigable Cumberland River, two hundred miles above the Ohio, and one hundred and eighty-five miles by railroad southwest of Louisville. The city, which is one of the principal railroad centers in the Southern states, is built mainly on the left bank of the river, which is crossed by a suspension bridge and a railroad drawbridge to the suburb of Edgefield. Nashville is a handsome, well-built town, and it is, perhaps, the most important educational center in the South.

The most prominent building in the city is the State Capitol, conspicuously situated on a hill. In its grounds are a bronze equestrian statue of Andrew Jackson, and the tomb of President Polk, whose home stood at the corner of Vine and Union Streets. Among the other chief buildings are the Court House, the Custom House, the Parthenon, used for exhibitions of art, Greek plays by students, etc., the Vendome and Bijou Theaters, the Carnegie Library, the Board of Trade, the First National Bank, and the Stahlman Building.

At the head of the educational institutions stands Vanderbilt University, endowed by Cornelius Vanderbilt with one million dollars. In the campus is a colossal statue of the founder, by Moretti. Other well-known institutions are the Peabody Teachers' College, Boscobel College, Belmont College, the Saint Cecilia Academy, Radnor College, Buford College and Ward's Seminary.

There are also several large colleges for colored students.

Among the places of interest near Nashville are the Hermitage, the home of General Andrew Jackson, eleven miles to the east.

Nashville occupies a foremost place among the manufacturing centers of the country. It is the fifth boot and shoe market in the United States, the largest candy and cracker manufacturing city in the South, and does an enormous wholesale dry goods, grocery, and drug business. It carries on an extensive trade in cotton and tobacco; while its manufactures, which are rapidly extending, include cotton, flour, oil, paper, furniture, timber, leather, iron, and spirits. The iron interests of the South are largely controlled here.

Nashville was settled in 1780, received its charter in 1806, and in 1843 was made the permanent capital.

New Haven, Conn. [The "City of Elms"; named by the original settlers the "new haven." The original Indian name was Quinnippac. The present name substituted "by the court" September 5, 1640.]

It is the chief city and seaport of Connecticut, at the head of New Haven Bay, is situated four miles from Long Island Sound, seventy-three miles by railroad northeast of New York and thirty-five miles southwest of Hartford.

The city is situated on a level plain, with a background of hills. Its broad streets are shaded with elms, and the public squares, parks, and gardens, with its handsome public and private edifices, make it one of the most beautiful of American cities.

From the large Union Station, which adjoins the harbor, Meadow Street leads north to the Public Green, on which are the City Hall, three churches, the Second National Bank, and the Free Public Library, United States Court House and Post Office. At the southeast corner of the Green is the Bennett Fountain, designed by John F. Weir after the monument of Lysicrates at Athens.

In College Street are most of the substantial buildings of Yale University, which, besides the Academic Department, has schools of Science, Theology, Medicine, Law, Forestry, Music, and Fine Arts, and also a Graduate School.

From the Public Green the university "campus" or quadrangle is entered by an imposing tower-gateway known as Phelps Hall. Among the buildings in the campus are the Art School, containing a good collection of Italian, American, and other paintings and sculptures; Connecticut Hall, the oldest Yale building (1750); Osborn Hall; Battell Chapel; Vanderbilt Hall; Alumni Hall; Dwight Hall, and the College Library. At the corner of Elm and High Streets is the Peabody Museum of Natural History, in which the mineralogical collections are especially fine.

Other important buildings of the university are the buildings of the Sheffield Scientific School, the Schools of Law, Medicine, and Divinity, the Chemical and Physical Laboratories, Memorial and other large halls.

Hillhouse Avenue is especially noted for its trees, and Chapel Street, the principal promenade, for the gardens surrounding many of the residences.

The parks have an aggregate area of one thousand two hundred acres. Besides the Green are the parks at East Rock (three hundred and sixty feet high) and West Rock (four hundred feet high), two masses of trap rock near the city which afford fine views. East Rock is surmounted by a soldiers' monument. West Rock is famous for a cave in which the regicides Goffe and Whalley were for a time concealed. Savin Rock, Morris Cove, and Momaugin are shore resorts accessible from the city by electric car lines.

The railway lines from New Haven to New York City are the only ones of consequence that have been completely electrified.

New Haven is an important industrial city and has considerable commerce. The harbor has a jetty and a breakwater surmounted by a lighthouse, and the port has a large coasting trade. But it is of more consequence as a manufacturing town, employing many thousands of workers producing hardware, wire, locks, clocks, cutlery, firearms, corsets, india-rubber goods, carriages, furniture, paper, matches, musical instruments, etc.

New Haven was settled in 1638 by a company chiefly from London. In 1639 a government was established under a written constitution, and Theophilus Eaton, the pastor of the colony, was chosen and continued in the governorship until 1658. Church membership was a qualification for suffrage and eligibility to office. The New Haven colony was founded in 1643 by the union of Milford, Guilford and Stamford with New Haven. In the same year it became a member of the confederacy of the United Colonies of New England. The charter of Charles II. for Connecticut (1662) included the New Haven colony, but the latter, supported by Massachusetts and Plymouth, stubbornly opposed absorption and was only forced to accede in 1664. Yale College, founded in Saybrook, was removed to New Haven in 1717. The town was captured by the British under Tryon and Garth, July 5, 1779. It was incorporated as a city in 1784. Joint capital with Hartford from 1701; the government was removed from New Haven altogether in 1873.

New Orleans (*nū őr'lə-ānz*), **La.** [The "Crescent City"; its name is a translation of the French name *Nouvelle Orleans*, given by them in honor of the Duc d'Orleans, then Regent of France.]

It is the chief city of Louisiana, a great port and mart, and is situated on both sides of the Mississippi River—the greater portion on the east bank—one hundred and seven miles from its mouth, and one thousand one hundred and ninety miles southwest of New York. The Mississippi makes two bends here, whence the city was called "The Crescent City," but it is now shaped like the letter S. The river is from six hundred to one thousand yards wide, and sixty to two hundred and forty feet deep. The bar at its mouth was removed in 1874-1879 by the Eads jetties in South Pass, and vessels of thirty feet now easily reach New Orleans.

A great part of the city is below the level of the river during the high flood tides, which last for a few days each year, and is protected by a levee or embankment, fifteen feet wide and fourteen feet high. The city is laid out with considerable regularity, and many of the chief streets are wide and shaded with trees. The most important business thoroughfare is Canal Street, which runs at right angles to the river and divides the French Quarter, or "Vieux Carré" on the northeast, from the New City, or American Quarter, on the southwest. The finest residences are in St. Charles Avenue, and in Esplanada Avenue, where the wealthy Creoles have their homes. Of the total population about one-quarter are negroes, while the remaining three-fourths include large proportions of French, German, Irish, Italian and Spanish blood.

While it possesses few imposing buildings, New Orleans is a picturesque city. There are several parks, little improved, but with handsome monuments or statues of Jackson, Lee, Franklin, and others. The custom house of granite cost four million five hundred thousand dollars, and is the largest and most imposing building in the city. It is a large granite building in Canal Street, near the river, and contains a large Marble Hall.

Just below the Custom House, Canal Street ends at the Levee, which extends along the west bank of the Mississippi for about six miles and presents a very animated and interesting scene. At the left is Jackson Square, the old Place d'Armes, which retains its ancient iron railing, and contains a statue of General Andrew Jackson, by Mills. It is adjoined by the Cathedral of St. Louis, a good specimen of the Spanish-Creole style, built in 1792-1794, on the site of the first church in Louisiana, but altered in 1850. It contains some paintings and interesting tombs.

The buildings to the right and left are Court Houses, that to the south having been built for the Cabildo, or City Council of the Spanish régime. In it and in front of it were held the ceremonies attending the cession of Louisiana by the French Government to the United States in 1803.

In Orleans Street, near the east end of the Cathedral, is a Convent of Colored Nuns, which contains what was formerly the famous Quadroon Ballroom, mentioned by Cable, the scene of many celebrated festivities.

On the Levee, just beyond Jackson Square, is the French Market, which often reveals a scene of the greatest picturesqueness and animation. A little farther on, at the foot of Esplanade Avenue, is the United States Branch Mint, a large building in the Ionic style. In Royal Street, four blocks from Canal Street, is the new Court House, a handsome structure of white marble and terra cotta.

In the fine French Quarter the chief promenades are Esplanade Avenue, Rampart Street and Bourbon, Toulouse, Conti and Royal Streets. At the corner of Chartres and Hospital Streets is the Archbishop's Residence, in the unchanged Ursuline Convent, built in 1730.

Following St. Charles Avenue from Canal Street to the south, is the St. Charles Hotel and the Orpheum and, just beyond, Lafayette Square, around which are grouped the

City Hall, the new Post Office, St. Patrick's Church, the First Presbyterian Church, and the Odd Fellows' Hall. In the square are a statue of Franklin, by Hiram Powers, a monument to John McDonough, and a statue of Henry Clay. Farther on is Lee Circle, with a monument to General Robert E. Lee. At the corner of Camp Street and Howard Avenue, adjoining Lee Circle, stands the Howard Library, the last work of H. H. Richardson, who was a native of Louisiana. Adjacent are Memorial Hall, a museum of Confederate relics, and the new building of the Public Library. To the southwest, in Carondelet Street, is the Jewish Temple Sinai. The monument to Margaret Haughery, the "Orphans' Friend," is said to have been the first statue of a woman erected in the United States.

Tulane Avenue, named in honor of the chief benefactor of Tulane University, and its continuation Common Street, contain the Law Department of Tulane University, the House of Detention, the Jesuit Church of the Immaculate Conception in a singular Moorish style, the Parish Prison and Criminal Courts, the Hôtel Dieu, and the large Charity Hospital, originally established in 1784. The large Cotton Exchange is at the corner of Carondelet and Gravier Streets; the Produce Exchange is in Magazine Street, and the Sugar Exchange is at the foot of Bienville Street. The United States Marine Hospital lies near the river.

St. Charles Avenue, extending in a crescent from Lee Circle past Audubon Park to the river, is lined with oaks and magnolias and contains many old and admirable private residences. Among its public buildings are Christ Church, the New Orleans University, the Academy of the Sacred Heart, the Jewish Orphan Home, and the Harmony Club. At the point where the avenue crosses Audubon Park are the newer buildings of the Tulane University, an important and well-equipped institution. A department of Tulane University is the H. Sophie Newcomb Memorial College for Women, founded in 1886. A legacy of John McDonough has built and equipped thirty handsome school houses in different parts of the city.

The City Park, on the Metairie Ridge, is one hundred and fifty acres in extent. The Audubon Park, in which the Great Exhibition of 1884-1885 was held, and which now holds the "Sugar Experimental Station" of the State of Louisiana, is a long segment extending back from the river, being the ground in which the sugar cane was first grown in this state. Both parks contain fine live-oaks.

New Orleans is the largest cotton market in the world except Liverpool, handling annually two million bales. The manufacturing products include machinery, cotton goods, boots and shoes, and amount in a year to sixty million dollars. As the outlet of the Mississippi Valley it commands a large export trade.

The site of New Orleans was first visited in 1699 by Bienville, who in 1718 laid the foundations of the city, and in 1726 made it the capital. In 1763 it was ceded to Spain by France, with the rest of Louisiana; but when in 1765 the Spanish governor attempted to take possession, he was driven out, and the people established a government of their own till 1769, when the Spaniards occupied it. It was ceded to France in 1802, and transferred to the United States a few days later. Incorporated as a city in 1804, it was divided in 1836-1852 into three separate municipalities, in consequence of the jealousies between the Creoles and the Americans. Other outstanding events have been the defeat of the British by Andrew Jackson in 1815; the capture in 1862 by the Federal fleet; serious political troubles with fighting in 1874 and 1877; and the lynching in 1891 of eleven Italian mafiosi. In 1880 the capital of Louisiana was removed from New Orleans to Baton Rouge.

Newport, R. I. [The "City of Mansions"; named in honor of the English admiral Christopher Newport (under James I.)]

It was, until 1900, one of the capitals of Rhode Island, and lies on the west shore of the island, in Narragansett Bay, five miles from the ocean, and sixty-nine miles by railroad southwest of Boston. It has a deep and excellent harbor, defended by Fort Adams.

The town is noted for fine scenery, and is one of the most fashionable watering-places in America, containing some of the finest mansions in the United States. Bathing facilities are unrivaled, and there are many fashionable promenades.

The chief attractions are Touro Park, and the Old Mill, Cliff Walk, Bailey's Beach, and the Ocean Drive.

The central point of Old Newport is Washington Square, or the Parade, within a few minutes' walk of the railway station and steamboat wharf. Here are the State House, with portrait of Washington, by Stuart; the old City Hall (new one in Broadway, corner of Bull Street); a statue of Commodore O. H. Perry, the hero of Lake Erie; the Perry Mansion, and the Roman Catholic Church, with an Ionic portico.

Following Touro Street, to the southeast, is the Synagogue built in 1762 and the oldest in the United States; the Newport Historical Society; and, a little beyond, the picturesque Hebrew Cemetery. Touro Street ends here and Bellevue Avenue, the fashionable promenade, begins, running to the south.

The fine Fern-leaf Beech is at the corner of Bellevue Avenue and Redwood Street. Nearly opposite this is Touro Park, containing the Round Tower or Old Stone Mill, the origin of which is still somewhat of a mystery. Some authorities believe that it was built by Governor Arnold in the seventeenth century as a wind-mill, while others regard it as very possibly the central part of a church built by the Norsemen in the eleventh century. Longfellow mentions it in his *Skeleton in Armor*. The park also contains statues of M. C. Perry and W. E. Channing; and opposite its south side stands the Channing Memorial Church.

A few hundred paces farther on, Bath Road leads to the left from Bellevue Avenue to the First Beach.

Bellevue Avenue soon passes the Casino, a long, low, many-gabled building, containing a club, a theater, etc. The Lawn Tennis Championship of America is decided in the courts attached to the Casino. Farther on, the avenue passes between a series of magnificent villas, and then turns sharply to the right and ends at Bailey's Beach.

First or Easton's Beach, a strip of smooth hard sand, three-fourths mile long, affords some of the best and safest surf-bathing on the Atlantic coast. From the east end of the beach a road leads round Easton's Point to Purgatory, a curious fissure in the conglomerate rocks, one hundred and fifty feet long, seven to fourteen feet wide, and fifty feet deep.

At the west end of Easton's Beach begins the famous Cliff Walk, which runs along the winding brow of the cliffs for about three miles, with the ocean on one side and the smooth lawns of handsome homes on the other. Here are summer residences, owned by the wealthiest society people of Boston, New York, and other cities.

Across the hill is Bailey's Beach, a small bay with a long row of bathing-houses, which has become the fashionable bathing-resort of the Newport cottagers.

From Bailey's Beach begins the beautiful Ocean or Ten Mile Drive, which skirts the coast of the peninsula to the south of the town for about ten miles, commanding magnificent views.

The locality of Newport has many natural curiosities, including the Hanging Rocks, Spouting Cave, and the Glen, or "Purgatory," already referred to. Newport is the seat of the United States Naval War College, United States Training Station, Torpedo Station, Naval Hospital, Newport Hospital, and Hazard Memorial School.

The manufactures are flour, cotton goods, copper, brass, oil, etc.

Newport was settled in 1638 by eighteen adherents of Roger Williams, and was an important commercial town prior to the Revolutionary war, which effected its ruin and transferred its trade to New York. During the war it was occupied for three years by the British, and for a while by the French under Rochambeau. It was the birthplace of Commodore Perry and William Ellery Channing, and for a while the place of residence of Bishop Berkeley, the English philosopher.

New York City, N. Y. [The "Empire City"; also "Gotham"; named from the State which was named in honor of James, Duke of York, afterwards James II.]

It is the largest and most important city on the American continent, the second wealthiest on the globe, and, next to London, the most populous in the world. Situated on New York Bay at the confluence of the Hudson and East Rivers, about twelve miles from the Atlantic Ocean, it consists of the boroughs of Manhattan, The Bronx, Brooklyn, Queens, and Richmond, which have a joint area of three hundred and twenty-six square miles. Its extreme length, north and south, is thirty-five miles, its extreme width nineteen miles.

Manhattan, or New York proper, consists mainly of Manhattan Island, a long and narrow tongue of land bounded by the Hudson or North River on the west and the East River (part of Long Island Sound) on the east and separated from the mainland on the north and northeast by the narrow Harlem River and Spuyten Duyvil Creek; but also includes several small islands in New York Bay and the East River.

Manhattan Island is thirteen and one-half miles long, with an average breadth of one and three-fifths miles, and with the exception of a small, wild, and rocky portion, which is utilized for ornamental purposes, the entire island is laid out in avenues and streets. It includes several greens and parks, and its area has been considerably extended by filling in on the two river-sides.

The strikingly beautiful landlocked harbor of New York includes the lower bay, the upper bay, the East River, and the North, or Hudson River. Ocean steamships enter it from the sea by Sandy Hook through the Narrows, and coasting ships from the north through Long Island Sound. The North River averages a mile wide; the East River is not so wide, but both are deep enough for the largest ships, and furnish many miles of wharfage. The Harlem River, at the north end of Manhattan Island, connects the two great rivers.

The bar at Sandy Hook, eighteen miles south of the city, which divides the Atlantic Ocean from the outer or lower bay, is crossed by two ship-channels, from twenty-one to thirty-two feet deep at ebb-tide. The lower bay covers eighty-eight square miles. The Narrows, through which all large ships pass on their way to the inner harbor, is a strait between Long Island and Staten Island, about a mile in width, and like other approaches is defended by forts. New York's harbor or inner bay covers about fourteen square miles; it is one of the amplest, safest, and most picturesque on the globe, open all the year round.

Liberty Island, for a long time known as Bedloe's Island, is situated in the harbor, about one and three-fourths miles from the lower end of the city. In 1886 the famous Bartholdi statue was erected on this spot, and occupies its central surface. It is a colossal bronze female figure one hundred and fifty-one feet in height, on a pedestal one hundred and fifty-five feet high, and holding aloft a torch which is lit by electricity at night.

Immense bridges span the East River and Harlem River, and there are some thirty steam-ferries.

The New York and Brooklyn Suspension Bridge, opened in 1883, which cost twenty million dollars, was soon found inadequate for the enormous traffic, and a second bridge from Canal Street to Brooklyn was opened in 1909.

The Williamsburg Suspension Bridge, between Manhattan and Williamsburg, was opened in 1903. It cost twelve million dollars.

The Queensboro Bridge, of cantilever type, between Long Island and Fifty-ninth Street, was opened in 1909. Its cost was twenty million dollars.

In 1909 another bridge from Manhattan to Brooklyn, built at a cost of twenty-six million dollars, was completed.

The Harlem River is crossed by several bridges, of which the Washington is noteworthy as being one of the finest in America.

Hell Gate Arch Bridge spans the East River at Hell Gate, between Ward's Island and Astoria, Long Island. It was designed and built by Gustav Lindenthal for the New York Connecting Railroad to connect the Pennsylvania and New York, New Haven systems, at a cost, including approaches, of twenty-five million dollars. It is the longest arch in the world. The span is one thousand and sixteen feet ten inches between tower faces. The upper chord of the arch is three hundred feet above mean high water at the center and one hundred and eighty feet at the ends of the span; the lower chord is two hundred and sixty feet above mean high water at the center and forty feet at the ends; the roadway is one hundred and forty feet above mean high water.

Old New York is laid out very irregularly. Here the money interests and wholesale traffic are centered; Wall, New, and Broad Streets being the great centers of banking and speculative enterprises.

The newer part of the city, from Fourteenth Street to the end of the island, northward, is divided into twelve great avenues and several smaller ones, from seventy-five to one hundred and fifty feet in width, running north and south. These are crossed at right angles by streets, mostly sixty feet in width, running from river to river.

Fifth Avenue, the great modern central thoroughfare, divides the city into eastside and westside. Here or hereabout are the largest banks, churches, museums, libraries, shops, palaces, and tenements in America.

Fifth Avenue below Fifty-ninth Street is now largely occupied by store and office buildings where once were palatial private houses; and between Madison Square and Fifty-ninth Street contains many hotels and clubs, and the New York Public Library.

The original great thoroughfare, Broadway, runs a northwesterly course through the regular cross street arrangement, making some slight deflections, quite through the middle of the island.

For a distance of two and one-half miles from Fifty-ninth to One Hundred and Tenth Street, Central Park divides the city into two parts.

Other parks are Van Cortlandt, one thousand and sixty-nine acres; Pelham Bay, one thousand seven hundred acres; and Bronx Park, six hundred and sixty-one and sixty-one hundredths acres, containing the Botanical and Zoological Gardens. Prospect Park, Brooklyn, contains five hundred and sixteen and one-quarter acres. A recreation course, skirting the Harlem River, and reserved for fast driving, is the "Speedway," and extending along the Hudson for three miles is Riverside Drive, with its striking views of the Palisades. On an abrupt elevation is Morningside Park, on which are located the new buildings of Columbia University, St. Luke's Hospital, and the Cathedral of St. John the Divine. Beyond Morningside Park is a rocky ridge known as Washington Heights.

The most thickly settled part of Brooklyn borough is in the north, and the business portion is that part fronting on East River and the upper harbor. The southern part is largely marshland. At the southwestern extremity of Long Island, in this borough, stretches a sandbar known as Coney Island, on which are the widely-known popular summer resorts. Queensboro has several large population centers, among them Long Island City and Flushing. Richmond borough (Staten Island) contains numerous villages.

Communication throughout the city is afforded by an extensive system of electric surface, electric elevated roads, the great subway railroad system, and by ferries plying between the boroughs.

The subway has, for part of its course, four tracks, two of which are for express trains. It begins at the City Hall and traverses the whole length of Manhattan Island. The first length of eight miles to Washington Heights was opened in 1904. The following year the line was extended to the Battery, and also under the Harlem River into Bronx. In 1908 a further extension was opened between the Battery and Brooklyn by way of a tunnel. In 1909, a double-tube tunnel, the McAdoo, connected the city at Sixth Avenue and Twenty-third Street with Hoboken, N. J.

In 1910 several tunnels under the Hudson and East Rivers were opened. Other great works of development are almost constantly in progress to deal with the traffic requirements, including further subways, a number of river tunnels, and additional railroad terminals. A recent gigantic railway enterprise is the construction of the Pennsylvania tunnel under the Hudson River.

Some of the larger features of New York call for more detailed notice.

The architecture of New York exhibits great contrasts, including styles as diverse as the quaint old Dutch houses, and skyscrapers of twenty-five and thirty stories.

At the extreme south end of the island is the Custom House, a large quadrangular granite building, in the French Renaissance style, which occupies the site of Fort Amsterdam. The facade toward Bowling Green is adorned with colossal groups of Europe, Asia, Africa, and America, and with twelve heroic figures representing the great sea-powers.

In Whitehall Street, opposite the Custom House, is the Produce Exchange, a huge brick and terra cotta structure in the Italian Renaissance style, containing numerous offices and a large hall. The tower, two hundred and twenty-five feet high, commands a fine view of the city and harbor.

Broadway begins at the Bowling Green, extending hence all the way to Yonkers, a distance of nineteen miles. Up to Thirty-third Street, Broadway is the scene of a most busy and varied traffic, which reaches its culminating point in the lower part of the street during business-hours. This part of the street is almost entirely occupied by wholesale houses, insurance offices, banks, and the like; but farther up are numerous fine shops. Broadway is no longer the broadest street in New York, but it is still the most important. The number of immensely tall office buildings with which it is now lined give it a curiously canyon-like appearance.

No. 1 Broadway, to the left, is the Washington Building, which is adjoined by the Bowling Green Building (sixteen stories), designed by English architects. Other conspicuous business buildings in the lower part of Broadway are the large Welles and Standard Oil Co. Buildings, Nos. 18, 26, the 42 Broadway Building, twenty stories, and

[607]

[608]

[609]

Aldrich Court, on the site of the first habitation of white men on Manhattan Island. At Nos. 64-68 is the Manhattan Life Insurance Co., the tower of which is three hundred and sixty feet high. To the left, at the corner of Rector Street, is the imposing Empire Building, twenty stories, the hall of which forms a busy thoroughfare between Broadway and the Rector Street "L" station.

FAR-FAMED BROADWAY AT NIGHT

Wall Street diverging from Broadway to the right, at this point, is the great financial street of New York, the financial barometer of the country. On this street stands the United States Sub-Treasury, a marble structure with a Doric portico, occupying the site of the old Federal Hall, in which the first United States Congress assembled, and Washington was inaugurated as President; the Drexel Building, a white marble structure in the Renaissance style, occupied by J. Pierpont Morgan & Co.; the National City Bank, largest in the country, occupying the old Custom House.

Trinity Church, on the west side of Broadway, is a handsome Gothic edifice of brown stone, with a spire two hundred and eighty-five feet high. The present building dates from 1839-1846, but occupies the site of a church of 1696. The church owns property to the value of at least twenty million dollars used in the support of several subsidiary churches and numerous charities.

Just above Trinity Church are the enormous Trinity and United States Realty buildings, two dignified structures, the former with an admirable facade in a modified Gothic style, and nearly opposite are the Union Trust Co. and the twenty-three story building of the American Surety Co., the latter containing the United States Weather Bureau ("Old Probabilities"). On the same side, between Pine Street and Cedar Street, is the office of the Equitable Life Insurance Co.

The block to the left, between Liberty Street and Cortland Street, is occupied by the buildings of the Singer Manufacturing Co., the City Realty Co., and the City Investing Co. The tower of the Singer Building, with its forty-one stories, rises to a height of six hundred and twelve feet. Between Broadway and Park Row is the Post Office, a large Renaissance building.

City Hall, containing the headquarters of the Mayor of Greater New York and other municipal authorities, is a well-proportioned building of marble in the Italian style, with a central portico, two projecting wings, and a cupola clock tower.

To the north of the City Hall is the Court House, a large building of white marble, with its principal entrance, garnished with lofty Corinthian columns, facing Chambers Street. The interior, which contains the State Courts and several municipal offices, is well fitted up. This building, one of the "Tweed ring" structures, is said to have cost twelve million dollars. Opposite the Court House, in Chambers Street, are various City Offices. These include the new Register Office or Hall of Records, a handsome building in the French Renaissance style, erected at a cost of six million dollars and faced with granite. The facade is adorned with sculptures, and the interior is also elaborately decorated. To the southwest of the City Hall, facing Broadway, is a statue of Nathan Hale.

Park Row, bounding the southeast side of the City Hall Park, contains the offices of many of the principal New York newspapers, the Pulitzer Building, with the World office, Tribune Building, New York Press, and Park Row Building with its lofty towers. Opposite the newspaper offices, in Printing House Square, is a bronze statue of Benjamin Franklin, and in front of the Tribune Building is a seated bronze figure of its famous founder, Horace Greeley.

Beyond Astor Place, Broadway passes the large building occupied by John Wanamaker, but originally erected for A. T. Stewart & Co. With its new annexes, it is heralded as the largest department store in the world.

Broadway now inclines to the left. At the bend rises Grace Church, which, with the adjoining rectory, chantry, and church-house, forms one of the most attractive ecclesiastical groups in New York. The church is of white limestone and has a lofty marble spire. The interior is well-proportioned, and all the windows contain stained glass.

At Fourteenth Street Broadway reaches Union Square, which is beautified with pleasure grounds, statues, and an ornamental fountain. At the corner of East Sixteenth Street is the massive office building of the Bank of Metropolis. Near the southeast corner is a good equestrian statue of Washington, in the center of the south side is a bronze statue of Lafayette, in the southwest corner is a statue of Abraham Lincoln, and on the west side is the James Fountain.

Broadway, between Union Square and Madison Square, is one of the chief shopping-resorts of New York, containing many fine stores for the sale of furniture, dry goods, etc. At Twenty-third Street it intersects Fifth Avenue and at the point of intersection stands the daring Fuller Building, generally known as the "Flat-iron Building" on account of its strange triangular shape. It is two hundred and ninety feet high, has twenty stories, and cost four million dollars.

Broadway now skirts the west side of Madison Square, a prettily laid out public garden, containing a bronze statue of Admiral Farragut, an obelisk to the memory of General Worth, a statue of Roscoe Conkling, a statue of President Arthur, and a statue of William H. Seward. The statue of Farragut is among the finest in New York, and the imaginative treatment of the pedestal is very beautiful. On the west side of the square is the new Fifth Avenue Building.

On the east side is the new Appellate Court House, a handsome building, perhaps somewhat overloaded with ornamentation.

On the east side of the square, between Twenty-third and Twenty-fourth Streets, is the enormous building of the Metropolitan Life Insurance Co., the tower of which has fifty stories and reaches a height of six hundred and ninety-three feet. Two elevators run to a height of five hundred and forty-four feet. Adjacent is the Madison Square Presbyterian Church, with its massive dome. At the southeast corner of Twenty-sixth Street stands the Manhattan Club, and at the northeast corner is the huge Madison Square Garden, with its Moorish tower capped by a fine statue of Diana.

The Herald Office, a Venetian palace, stands at Broadway and Thirty-fifth Street, in Herald Square.

West of Herald Square, at Seventh Avenue and Thirty-third Street, is the magnificent station of the Pennsylvania Railroad Company, covering an area four hundred and fifty by one thousand eight hundred feet, the largest structure of the kind in the world, connected by tunnels under the Hudson River with New Jersey, and under the East River with Long Island. The tracks are forty feet below the level of the city streets.

The Metropolitan Opera House, opened in 1883 and rebuilt ten years later, after a fire, stands between Thirty-ninth and Fortieth Streets.

At Forty-second Street and Broadway is the Times Building, an ornamental structure sixteen stories high, upon a triangle of ground.

To the east of Madison Avenue is the Grand Central Station, the terminus of the New York, New Haven and Hartford, and the Harlem Railways. Opposite the station is the Belmont Hotel, twenty-two stories high.

The corner at Broadway and Forty-second Street is the recent heart of the theatrical and hotel district, for clustered there are a dozen hotels, the immense Astor and Knickerbocker among them, and there are twenty theaters within half a mile, six of them almost side by side on Forty-second Street.

Beyond Times Square, Broadway is rather uninteresting, but there are some lofty specimens of apartment houses or French flats farther up. From Forty-fifth Street on, Broadway is largely occupied by automobile stores and garages. At the corner of Fifty-sixth Street is the new Broadway Tabernacle and at Fifty-ninth Street Broadway reaches the southwest corner of Central Park and intersects Eighth Avenue.

At the intersection, the so-called Circle, stands the Columbus Monument by Gaetano Russo, erected in 1892, and consisting of a tall shaft surmounted by a marble statue, in all seventy-seven feet high. Beyond Seventy-eighth Street, Broadway, now a wide street with rows of trees, is usually known as the Boulevard. From One Hundred and Eighth Street to One Hundred and Sixty-second Street it coincides with Eleventh Avenue, at One Hundred and Sixteenth Street it passes Columbia University, and from One Hundred and Sixty-second Street it, as Kingsbridge Road, runs on to Yonkers.

Fifth Avenue, the chief street in New York from the standpoint of wealth and fashion, begins at Washington Square to the north of West Fourth Street and a little to the west of Broadway, and runs north to the Harlem River, a distance of six miles. Below Forty-seventh Street the Avenue has now been largely invaded by shops, tall office buildings, and hotels. The avenue has been kept sacred from the marring touch of the street railway or the elevated railroad, and is traversed by a line of motor omnibuses. The avenue is wide and well-paved, and many of the buildings are of brown sandstone. On a fine afternoon Fifth Avenue is alive with carriages and horsemen on their way to and from Central Park and it is, perhaps, seen at its best on a fine Sunday.

At Twenty-third Street the Avenue intersects Broadway and skirts Madison Square. To the right is the Flat-iron Building. At Twenty-sixth Street is the Café Martin.

The whole block between Thirty-third and Thirty-fourth Streets, to the left, is occupied by the Waldorf-Astoria Hotel, a huge double building of red brick and sandstone in a German Renaissance style. The restaurants and other large halls in the interior are freely adorned with mural paintings by American artists.

The Union League Club, the chief Republican club of New York, is a handsome and substantial building at the corner of Thirty-ninth Street.

Between Fortieth Street and Forty-second Street, to the left, on the site of the old reservoir of the Croton Aqueduct, stands the New York Public Library, a very dignified and imposing structure of white marble, built at a cost of ten million dollars.

A little to the east of this point, in Forty-second Street, is the Grand Central Station already referred to. At the southeast corner of Forty-second Street rises the tasteful Columbia Bank. The Temple Emanu-El, or chief synagogue of New York, at the corner of Forty-third Street, is a fine specimen of Moorish architecture with a richly decorated interior.

At the northeast corner of Forty-fourth Street is Delmonico's Restaurant, a substantial building with elaborate ornamentation; and at the southwest corner is Sherry's, a rival establishment, equally patronized by the fashionable world.

The Collegiate Church of St. Nicholas (Dutch Reformed), at the corner of Forty-eighth Street, is one of the handsomest and most elaborately adorned ecclesiastical edifices in the city. It is in decorated Gothic style and has a spire two hundred and seventy feet high. Just below Fiftieth Street, on the right, is the Democratic Club, the stronghold of Tammany and popularly known as "Tamany Hall" or the "Wigwam."

Between Fiftieth and Fifty-first Streets, to the right, stands St. Patrick's Cathedral, an extensive building of white marble in the decorated Gothic style, and the most important ecclesiastical edifice in the United States. It is four hundred feet long, one hundred and twenty-five feet wide and one hundred and twelve feet high, and the two beautiful spires are three hundred and thirty-two feet high. The building, which was designed by James Renwick, was erected in 1850-1879, at a cost of three million five hundred thousand dollars.

Adjoining the cathedral, to the right, is the handsome Union Club, and at the corner of Fifty-fourth Street is the University Club, adorned with carvings of the seals of eighteen American colleges. The library contains admirable mural paintings, adapted from Pinturicchio's work in the Borgia apartments of the Vatican. At the corner of Fifty-fifth Street are the St. Regis Hotel and the Gotham Hotel. The Fifth Avenue Presbyterian Church has one of the loftiest spires in the city.

Between Fifty-ninth and One Hundred and Tenth Streets Fifth Avenue skirts the east side of Central Park, having buildings on one side only. Among these, many of which are very handsome, is the Metropolitan Club.

At Fifty-ninth Street, where Fifth Avenue reaches Central Park, are three huge hotels: the New Plaza, the Savoy, and the Netherland. In the middle of the Plaza rises a bronze-gilt equestrian statue of General Sherman, of fine artistic merit.

Mt. Sinai Hospital is between One Hundredth and One Hundred and First Streets.

In Central Park, close to Fifth Avenue at Eighty-second Street, is the Metropolitan Museum of Art.

At One Hundred and Twentieth Street Fifth Avenue reaches Mount Morris Square, the mound in the center of which commands good views. Beyond Mt. Morris Square the Avenue is lined with handsome villas, some of them surrounded by gardens. It ends in a district of tenements and small shops at the Harlem River.

New York has many public parks, the finest of which is the Central Park. The district in which it is located was once a wilderness of rocks and swamps. Plans by Frederick Law Olmsted and Calvert Vaux were so admirably carried out as to make the Central Park in ten years one of the most beautiful pleasure-grounds in the world.

Of its eight hundred and forty acres, four hundred are wooded. There are nine miles of drives, with thirty miles of paths, several lakes used for boats in summer and for skating in winter, immense lawns for baseball, tennis, etc., a zoological garden, and conservatories.

The chief promenade is the Mall, near the Fifth Avenue entrance, which is lined with fine elms and contains several statues and groups of sculpture, including Shakespeare, Scott, Burns, Halleck, Columbus, and the Indian Hunter. From the Terrace, at the north end of the Mall, flights of steps descend to the Bethesda Fountain and to the Lake,

[610]

[611]

used for boating in summer and skating in winter. The most extensive view in the park is afforded by the Belvedere, which occupies the highest point of the Ramble, to the north of the Lake.

The North Park, beyond the Croton Reservoir, has fewer artificial features than the South Park, but its natural beauties are greater, and the Harlem Mere, of twelve acres, is very picturesque. Near the southeast corner of the park (nearest entrance in Sixty-fourth Street) are the Old State Arsenal and a small Zoological Garden. On the west side of the park is the American Museum of Natural History, and on the east side is the Metropolitan Museum of Art. To the west of the latter museum rises Cleopatra's Needle, an Egyptian obelisk from Alexandria, presented by Khedive Ismail Pasha to the City of New York in 1877. The obelisk is of red syenite, is sixty-nine feet high and weighs two hundred tons. Among the other monuments in the park are statues of Webster, Bolivar, Hamilton and Morse, allegorical figures of Commerce and the Pilgrim, and several busts and animal groups. Just outside the park, beside the Sixth Avenue entrance, is a statue of Thorwaldsen.

In Manhattan Square, on the west side of Central Park, between Seventy-seventh and Eighty-first Streets, stands the American Museum of Natural History, which contains collections of natural history, paleontology and ethnology.

[612]

CENTRAL PARK TERRACE, NEW YORK

The Metropolitan Museum contains paintings, statuary, ivories, tapestries, porcelains, Greek, Roman, and Egyptian antiquities. Beginning with one structure erected by the city at a cost of five hundred thousand dollars in 1880, it now comprises a series of buildings which cost several million dollars. The collections of paintings, sculpture, antiquities, porcelains, jades, armor, etc., are valued at ten million dollars, most of which has been contributed by art lovers of the city. In 1903 the institution received a bequest of six million dollars from the well-known locomotive builder John T. Rogers, which has enabled it to compete with other great museums.

At the corner of Morningside Avenue and One Hundred and Twelfth Street is the new Episcopal Cathedral of St. John the Divine, designed by Heins and La Farge, the corner-stone of which was laid in 1892, but the building of which has not progressed very far. The Crypt, including the curious Tiffany Chapel of mosaic glass, and the Belmont or St. Saviour's Chapel are the only portions completed. To the north of this, in the block bounded by Morningside Avenue, Tenth Avenue, One Hundred and Thirteenth Street, and One Hundred and Fourteenth Street, is the large building of St. Luke's Hospital, constructed of white marble and white pressed brick, with a tower and clock over the main entrance.

To the northwest of this point, on a magnificent site extending from One Hundred and Fourteenth Street to One Hundred and Twenty-first Street, one hundred and ten to one hundred and fifty feet above the Hudson River, are the new buildings of Columbia University, the oldest, largest, and most important educational institution in New York. The finest building in the center of the group is the Low Memorial Library, built at a cost of one million dollars.

On a commanding site bounded by One Hundred and Thirty-eighth Street, Amsterdam Avenue, One Hundred and Fortieth Street, and St. Nicholas Terrace, are the imposing new buildings of the College of the City of New York, erected in 1903-1908 by Mr. George B. Post, in the low-arch Gothic style, at a cost of nearly five million dollars, and notable for their uniformity of design and symmetry of grouping.

Among other educational institutions are the Normal College, at Sixty-ninth Street and Park Avenue; the College of Physicians and Surgeons; the New York University; Cooper Union, in which nearly all the courses are free; St. John's (Fordham), Manhattan, and St. Francis Xavier, Roman Catholic colleges; the National Academy of Design; Society of American Artists; the Art Students' League; Chase Art School; New York Institute of Music, and various theological schools.

Riverside Drive or Park, skirting the hills fronting on the Hudson from Seventy-second Street to One Hundred and Twenty-seventh Street, affords beautiful views of the river and is one of the most striking roads of which any city can boast. It has become, perhaps, the most attractive residential quarter of New York, though a great architectural opportunity has been lost in the buildings that border it, these consisting largely of apartment hotels, remarkable mainly for their size.

Near the north end of the drive, on Claremont Heights (West One Hundred and Twenty-second Street), is the Tomb of General Ulysses S. Grant, a huge and solid mausoleum of white granite, erected in 1891-1897 at a cost of six hundred thousand dollars, from a design by J. H. Duncan. The monument consists of a lower story in the Doric style, ninety feet square, surmounted by a cupola borne by Ionic columns. The total height is one hundred and fifty feet.

John Verrazani, a Florentine navigator, was the first European who entered New York Bay (1525). In 1614 the Dutch built a fort on Manhattan Island, and in 1623 a permanent settlement was made, named Nieuw Amsterdam. In 1674 Manhattan Island came into the possession of Great Britain. At the Revolution the population was less than that of Philadelphia or Boston. It was evacuated by the forces of Great Britain in 1783, and from 1785 to 1789 was the seat of government of the United States. The opening of the Erie Canal in 1825 gave a vast impetus to New York City's growth. The city by 1874 had extended beyond the Harlem River and a part of Westchester County was incorporated in it. In 1896 a law was passed consolidating with New York City, Brooklyn (Kings County), Long Island City, Staten Island, Westchester, Flushing, Newtown, Jamaica, and parts of Eastchester, Pelham, and Hempstead. By the charter adopted in 1897 this territory was divided into the boroughs of Manhattan, Brooklyn, Bronx, Richmond, and Queens. A new charter was secured in 1907 under which the mayor presides over the entire city, with absolute power of appointment and removal of the heads of all city departments. In 1911 a new charter was drawn up which evoked considerable opposition, as it seemed to place still greater powers in the hands of the mayor.

[613]

GRANT'S TOMB, RIVERSIDE DRIVE, NEW YORK

Philadelphia (*fil-à-del'fī-à*). Pa. [The "Quaker City"; named from two Greek words meaning "loved or friendly," and "brother," applied as "brotherly love." The Indian name of the locality was *Coaquannok*, "grove of tall pine trees."] The chief city of Pennsylvania and the third city in population and importance of the United States, it is situated on the Delaware River, about one hundred miles by ship-channel (via Delaware Bay) from the Atlantic Ocean, ninety miles by railroad southwest of New York City, and one hundred and thirty-six miles northeast of Washington.

The city occupies mainly a broad plain between the Delaware and the Schuylkill Rivers. It is twenty-two miles long from north to south and five to ten miles wide, covering one hundred and thirty square miles, and is laid out with chessboard regularity. The characteristic Philadelphia house is a two-storied or three-storied structure of red pressed brick, with white marble steps. The two rivers give it about thirty miles of water-front for docks and wharfage, and it is the headquarters of two of the greatest American railways—the Pennsylvania and the Reading.

The great wholesale business thoroughfare is Market Street, running east and west between the two rivers, while Chestnut Street, parallel with it on the south, contains the finest shops, many of the newspaper offices, etc. Broad Street is the chief street running north and south. Among the most fashionable residence quarters are Rittenhouse Square and the west parts of Walnut, Locust, Spruce, and Pine Streets. Eighth Street is the great district for shops and amusements.

The City Hall (or Public Buildings) is in the center of the city at the intersection of Broad and Market Streets. The structure is the largest exclusively municipal building in the world. It is built of white marble upon a granite base, in French Renaissance style, and covers an area of four hundred and eighty-six by four hundred and seventy feet. The height of the tower and dome is five hundred and thirty-seven feet four and one-half inches; or five hundred and seventy-three feet four and one-half inches with the colossal figure of Penn (thirty-six feet), to surmount the whole. The entire cost, when completely furnished for occupancy, was estimated at twenty-five million dollars.

The broad pavement round the City Hall is adorned with statues of General Reynolds, General McClellan, Stephen Girard, John C. Bullitt, President McKinley, and Joseph Leidy, the naturalist, and with the "Pilgrim" by Saint-Gaudens.

On the west side of City Hall Square, opposite the City Hall, is the enormous Broad Street Station of the Pennsylvania Railroad. The waiting-room contains a large allegorical relief, while one wall is covered with a mammoth railway map of the United States. On the north side of the square, at the corner of Broad Street and Filbert Street, is the Masonic Temple, a huge granite structure with a tower two hundred and fifty feet high and an elaborately carved Norman porch.

On the east side of the square, occupying the block bounded by the square, Market Street, Thirteenth Street, and Chestnut Street, is Wanamaker's Store, one of the largest in the United States. On the south side of the square is the Betz Building, with heads of the Presidents of the United States in the bronze cornice above the third-story windows.

Chestnut Street is the chief street of Philadelphia, containing many of the handsomest and most interesting buildings. To the left, at the corner of Broad Street and adjoining the Betz Building, is the Franklin National Bank, while to the right rises the fine office of the Real Estate Trust Co. At the corner of Twelfth Street is the tall Commonwealth Trust Building, and at the corner of Tenth Street, on the same side, is the New York Mutual Life Insurance Co.

Between Tenth and Ninth Streets, to the left, are the Mortgage Trust Co., the Penn Mutual Life Building, with an elaborate facade, and the office of the *Philadelphia Record*. At the corner of Ninth Street, extending on the north to Market Street, is the Post Office, a large granite building in the Renaissance style, erected at a cost of five million dollars. It also contains the United States Courts and the offices of various Federal officials. In front of the Post Office is a colossal seated figure of Benjamin Franklin. Between Eighth and Seventh Streets is the ornamented front of the Union Trust Co. This neighborhood contains several newspaper offices. At the corner of Sixth Street, on the Public Ledger Building, is another statue of Franklin.

[614]

In Seventh Street, a little to the north of Chestnut Street, is the Franklin Institute with a library, museum and lecture-hall. Between Fifth and Sixth Streets is Independence Hall, or the old State House, a modest brick edifice (1732-1735), which is in some respects the most interesting building in the United States. Here the Continental Congress met during the American Revolution (1775-1781), and here, on July 4th, 1776, the Declaration of Independence was adopted. In 1897-1898 the whole building was restored as far as possible to its original condition.

The Custom House, with a Doric portico, was originally erected in 1819-1824 for the United States Bank. It is copied from the Parthenon, and considered one of the best examples of Doric architecture in the world.

A lane diverging to the right between Fourth and Third Streets, opposite the Fidelity Trust Co., leads to Carpenters' Hall, where the First Colonial Congress assembled in 1774. It contains the chairs used at the Congress, various historical relics, and the inscription: "Within these walls Henry, Hancock, and Adams inspired the delegates of the colonies with nerve and sinew for the toils of war." Chestnut Street ends at the Delaware River.

Walnut Street runs parallel to Chestnut Street, one block to the south. In this street, at the intersection of Dock Street and Third Street, is the Stock Exchange, formerly the Merchants Exchange, with a semi-circular portico facing the river. Near it, in Third Street, is the Girard Bank, built for the first United States Bank and long owned by Stephen Girard. At Fourth Street is the building of the Manhattan Insurance Co.

Walnut Street now crosses Broad Street, to the west of which it consists mainly of private residences. Between Eighteenth and Nineteenth Streets we pass Rittenhouse Square, a fashionable residence quarter.

At the corner of Broad and Chestnut Streets are the white marble building of the Girard Trust Co., with a rotunda, and the tall Land Title Building.

North Broad Street, beginning on the north side of the City Hall Square, a handsome street one hundred and thirteen feet wide, contains in its upper portion many of the finest private residences in Philadelphia. To the right, at the corner of Filbert Street, is the Masonic Temple, which is adjoined by the Arch Street Methodist Episcopal Church. On the opposite side of the street are the tall buildings of the United Gas Improvement Co. and the Fidelity Mutual Life Association. To the right is the Odd Fellows' Temple.

To the left, at the corner of Cherry Street, is the Pennsylvania Academy of the Fine Arts, a building in the Venetian style of architecture. The Academy was founded in 1805. Besides its collections it supports an important art-school, the lecture hall of which is adorned with effective decorations by the pupils. Its collections include five hundred paintings, numerous sculptures, several hundred casts, and fifty thousand engravings. The early American school is especially well represented.

On the west side of Broad Street, between Race and Vine Streets, are the Hahnemann College and Hospital, one of the chief homeopathic institutions of the kind. To the right, at the corner of Spring Garden Street, is the Spring Garden Institute for instruction in drawing, painting, and the mechanic arts. Opposite are the Baldwin Locomotive Works, a highly interesting industrial establishment.

A little farther on is the Boys' Central High School, an unusually large and handsome structure, and the Synagogue Rodef Shalom, in a Moorish style.

Farther up Broad Street are numerous handsome private houses, churches, and other edifices. At the northwest corner of Broad Street and Girard Avenue is the handsome Widener Mansion, presented to the city and used as a branch of the Free Library. Beyond Master Street, to the left, is the elaborate home of the Mercantile Club. Beyond this Broad Street runs out to Germantown, six miles from the City Hall.

Girard Avenue runs west from North Broad Street to Girard College, one of the richest and most notable philanthropic institutions in the United States. It was founded by Stephen Girard, a native of France, for the education of male orphans. The original bequest of over five million dollars has increased to about thirty-five million dollars.

The main building is a dignified marble structure in the Corinthian style, resembling the Madeleine at Paris. In the vestibule are a statue of Stephen Girard, and his sarcophagus. A room on the ground floor contains several relics of him.

Market Street is the chief wholesale business thoroughfare of the city. A little to the east of City Hall Square it passes the Philadelphia & Reading Railway Station, a tall Renaissance building with a train shed little smaller than that of the Pennsylvania Railroad. The department store of Gimbel Brothers, on the south side of the street, between Eighth and Ninth Streets, is one of the largest in the world. The Penn National Bank, at the corner of South Seventh Street, occupies the site of the house in which Jefferson wrote the Declaration of Independence.

South Broad Street leads to the south from City Hall Square. Its intersection with Chestnut Street, just to the south of the City Hall, is environed with tall office buildings. To the right is the annex of the Land Title Building, extending to Sansom Street. Opposite, adjoining the Real Estate Trust Co., is the North American Building, named after the newspaper which occupies it. Below is the Union League Club, the chief Republican club of Pennsylvania. On the same side is the large Bellevue-Stratford Hotel, the leading hotel of Philadelphia, and one of the great hostelries of the country. Farther on, to the right, is the Art Club, in the Renaissance style, in which exhibitions of paintings, concerts, and public lectures are held. At Locust Street, to the right, is the Academy of Music, while to the left is the Pennsylvania School of Industrial Art, incorporated in 1876, with a special view to the development of the art industries of Pennsylvania. A characteristic feature is the department of weaving and textile design. The Industrial Museum Hall is connected with this excellent institution.

Below Pine Street, Broad Street contains few important buildings. Of special note, however, is the Ridgway Library, which stands to the left, between Christian and Carpenter Streets, nearly one mile from the City Hall. This handsome building was erected with a legacy of one million five hundred thousand dollars left by Dr. Rush in 1869, as a branch of the Philadelphia Library. Adjoining the main hall is the tomb of the founder.

Broad Street ends, four miles from the City Hall, at League Island Park, three hundred acres in extent. League Island itself, in the Delaware, contains a United States Navy Yard.

WEST PHILADELPHIA, the extension of the city beyond the Schuylkill, contains many of the chief residence streets and several public buildings and charitable institutions.

The University of Pennsylvania, founded in 1740, and removed to West Philadelphia in 1872, occupies a group of more than thirty buildings scattered over an area of sixty acres bounded by Woodland and Cleveland Avenues and Pine and Thirty-second Streets.

The College, the Medical School, Dental School, and Law School, are all provided with spacious and well-equipped buildings. Houston Hall, behind College Hall, is the social center of the University student life. The Wistar Institute of Anatomy and Biology is recognized as the headquarters of anatomical research in the United States and contains the first museum of human anatomy founded in America. The Morgan Laboratory of Physics, the Harrison Laboratory of Chemistry, the Gymnasium, and the Dormitories are all notable structures. Franklin Field, adjoining Thirty-third Street, is the athletic ground of the University and contains a large stadium.

The Museum of Science and Art occupies a tasteful building in South Street, owing part of its inspiration to the Certosa at Pavia, and is divided into five sections. Its value is largely due to the fact that many of its contents were found by expeditions organized by the University itself.

A little to the northeast, at the corner of Chestnut Street and Thirty-second Street, is the Drexel Institute, founded by A. J. Drexel, and opened in 1892. The total cost of buildings and equipment was four million five hundred thousand dollars.

Fairmount Park, the chief park of Philadelphia, is one of the largest in the world, and covers an area of three thousand three hundred and forty acres. The park proper extends along both banks of the Schuylkill for about four miles, and the narrow strip along the Wissahickon, six miles, and one of the noted drives of the world, is also included in the park limits. The principal entrances are at the end of Green Street, which is connected with the City Hall by the wide Park Boulevard, and at Girard Avenue.

In this park, in 1876 was held the Centennial Exhibition; and in its environs are the Zoological Garden, the Fairmount Waterworks, which supply to the city one hundred million gallons of water daily, the beautiful Horticultural Hall and Memorial Hall, built as part of the Centennial Exhibition of 1876 at a cost of one million five hundred thousand dollars, and now containing a permanent collection of art and industry known as Pennsylvania Museum of Industrial Art.

At Sackamaxon, in Beach Street, is the small Penn Treaty Park, supposed to occupy the spot where Penn made his treaty with the Indians in 1682, under an elm that has long since vanished, a treaty, in the words of Voltaire, "never sworn to and never broken."

In its manufacturing products Philadelphia ranks next to New York. There are upward of twenty thousand manufacturing establishments, the combined output of which amounts to more than eight hundred million dollars. The chief products are locomotives, sugar and molasses, men's clothing, foundry and machine-shop products, carpets and rugs, hosiery and knit goods, woolen and cotton goods, malt liquors, morocco, chemicals, packed meat, refined petroleum and silk, and silk goods. The great Cramp ship-building yards are on the Delaware River. The Baldwin Locomotive Works are the largest in the world.

Philadelphia was founded by William Penn in 1682, the year after was made the capital of Pennsylvania, and soon became a place of importance. It was the central point in the War of Independence, where the first Continental Congress met, September 4, 1774, and where the Declaration of Independence was adopted in 1776. At Philadelphia, also, the Federal Union was signed, in 1778; and here, too, the Constitution of the United States was framed, in 1787. An interest of another kind attaches to the fact that the Protestant Episcopal Church of North America was organized here in 1786. From 1790 to 1800 Philadelphia was the Federal Capital; and the first mint was established here in 1792. Later events have been the holding of the Centennial Exhibition, in 1876, and the commemoration of Penn's landing in 1882.

Pittsburgh, Pa. [The "Smoky City," "Iron City"; named in 1758, when the French had been driven out by Washington; Fort Pitt, after William Pitt, Earl of Chatham, the name Pittsburgh being adopted in 1769.]

It is the second city of Pennsylvania and one of the chief industrial centers of the United States, and occupies the tongue of land between the Monongahela and the Allegheny, which here unite to form the Ohio, and also a strip of land on the south side of the Monongahela. The sister city, Allegheny, situated on the north bank of the Allegheny and extending down to the Ohio, was incorporated with Pittsburgh in 1907 and is now known as the North Side. The rivers are crossed by numerous bridges.

Smithfield Street, diverging from Liberty Avenue, not far from the Union Station, leads to the river Monongahela, on the other side of which, from Washington Heights, may be obtained a fine view of the city. On Liberty Avenue, to the right, is the City Hall a fine structure of white sandstone. A little farther on, to the left, is the Post Office. At the bridge are the Monongahela Hotel and the Baltimore & Ohio Station.

Crossing the Smithfield Street Bridge, Mt. Washington (three hundred and seventy feet) may be ascended by one of the three inclined railways on this side. These interesting, but at first somewhat startling, pieces of apparatus are worked by cables and transport horses and carriages as well as persons.

The finest building in Pittsburgh is the Allegheny County Court House, in Grant Street, a splendid example of H. H. Richardson's treatment of Romanesque, erected in 1888 at a cost of two million five hundred thousand dollars. The massive Prison is connected with the Court House by a finely handled stone bridge. The main tower is three hundred and twenty feet high. The government building cost one million five hundred thousand dollars.

Other buildings of importance are the Frick Building, a granite office structure of twenty stories at the corner of Fifth Avenue and Grant Street; the Carnegie Building and the Farmers' Bank Building (these two also in Fifth Avenue); the Union National Bank Building and the Commonwealth Trust Co. Building, in Fourth Avenue; the First Presbyterian Church, in Sixth Avenue; the Fulton Building, and the Bessemer Building (the last two at the corner of Sixth Street and Duquesne Way).

More to the east are the Academy of Our Lady of Mercy and the new Calvary Episcopal Church (at the corner of Shady Avenue and Walnut Street), a beautiful example of thirteenth century Gothic. The Roman Catholic Cathedral of St. Paul stands in Fifth Avenue, at the corner of Craig Street.

To the east of the city lies Schenley Park, containing the fine Phipps Conservatory and the Hall of Botany. Near the Forbes Street entrance to the Park is the great central building of the Carnegie Library of Pittsburgh, in which are housed not only the main collection of the library, but also two of the three departments of the Carnegie Institute. The structure, originally built in the Italian Renaissance style at a cost of eight hundred thousand dollars, was remodeled and enlarged in 1904-1907 at an additional cost of five million dollars. The city is also the seat of Pittsburgh University, Holy Ghost College, and Penn's College for Women. The great iron and steel works have made the prosperity and reputation of Pittsburgh. Among these are the Edgar Thomson Steel Works, the Homestead Steel Works, the Duquesne Steel Works, the American Bridge Co., the Jones & Laughlin Works, the Oliver Iron & Steel Co., the Crescent Steel Works, and the Pressed Steel Car Co.

Its manufactures include everything, indeed, which can be made of iron, from a fifty-eight-ton gun to nails and tacks; steel in its various applications; electrical machinery and appliances; all descriptions of glass and glassware; silver and nickel-plated ware; Japan and Britannia ware; pressed tin, brass, copper, bronzes; Portland cement, earthenware, crucibles, fire-pots, bricks; furniture, wagons and carriages; brushes, bellows, mechanical supplies of all kinds; natural-gas fittings, and tools for oil and gas wells. Pittsburgh has, also, the largest manufactory of cork, and the largest pickling and preserving establishment in the world.

In 1754 a few English traders built a stockade here, but were driven away by the French. The latter replaced the stockade by a fort, which, in honor of the Governor of Canada, they called Duquesne. In 1758 it was taken by the English, who next year commenced a large and strong fortification, which, in honor of the elder Pitt, then Prime Minister, they called Fort Pitt. The settlement became a borough in 1804, and in 1816 was incorporated as the city of Pittsburgh. In 1872 the limits of the city were extended across the Monongahela, and by 1906 it extended over twenty-eight square miles. In 1907 Allegheny City (in spite of the opposition of a large majority of its inhabitants) was annexed; the Supreme Court of the United States declared the act valid, and thus Allegheny became the North Side of the present Pittsburgh.

Richmond, Va. [Named from Richmond-on-the-Thames, a suburb of London; the name suggested owing to analogy in situation.]

It is the capital of Virginia, on the left bank of the James River, at the head of tide water, one hundred and fifty miles from its mouth, and one hundred and sixteen miles by rail south of Washington. It is a port of entry, and vessels drawing sixteen feet of water can come up to the lower end of the city, where there are large docks. Richmond is picturesquely situated on a group of hills, and fine water power is afforded by the James River, which descends one hundred and sixteen feet in nine miles.

Near the center of the city, on Shockoe Hill, is Capitol Square, a tree-shaded area of twelve acres. The Capitol, or State House, partly designed after the Maison Carrée at Nîmes, France, occupies the highest point of the square and dates from 1785. The wings were added in 1906.

In the Central Hall, surmounted by a dome, are Houdon's statue of Washington (which Washington himself is said to have seen in its present position) and a bust of Lafayette by the same artist. The Senate Chamber, to the right, was used as the Confederate House of Representatives during the Civil War. The House of Delegates, to the left, contains portraits of Chatham and Jefferson, and was the scene of Aaron Burr's trial for high treason in 1807, and of the State Secession Convention in 1861.

Capitol Square also contains a fine equestrian statue of Washington, with figures of Patrick Henry, George Mason, Thomas Jefferson, Thomas Nelson, Andrew Lewis, and Chief Justice Marshall round the pedestal; a statue of Stonewall Jackson; a statue of Hunter Holmes McGuire, the most noted surgeon of the South; and a statue of Henry Clay. At the northeast corner of the square stands the Governor's Mansion.

On the north side, in Broad Street, is the City Hall, a handsome Gothic structure with a clock-tower. To the east of the Capitol is the State Library. In Twelfth Street, at the corner of Clay Street, a little to the north of Capitol Square, is the Jefferson Davis Mansion, or "White House of the Confederacy," occupied by Mr. Davis as President of the Southern Confederacy. It is now fitted up as a Museum of Confederate Relics.

St. John's Church, erected in 1740, but since much enlarged, is at the corner of Broad and Twenty-fourth Streets. The Virginia Convention was held in this church in 1775, and it was here that Patrick Henry made his famous "give me liberty or give me death" speech.

On Monument Avenue (a prolongation of Franklin Street) is the equestrian statue of General Lee. Adjacent is an equestrian statue of General J. E. B. Stuart, and a half mile farther on, at the west end of the avenue, is the Jefferson Davis Monument, consisting of a semi-circular colonnade with a pillar supporting an allegorical female figure and inscribed "Deo Vindice," with a heroic statue of the ex-president in front. A little to the east of the Lee Statue is Richmond College, a leading educational institution of Virginia.

Among other points of interest in Richmond are the Westmoreland Club, at the corner of Grace and Sixth Streets; the Commonwealth Club, at the corner of Franklin and

Madison Streets; the Virginia Club, 2311 East Grace Street; Chief Justice Marshall's House; the Tobacco Exchange, Shockoe Slip; the University College of Medicine; the Medical College of Virginia; the National Cemetery, two miles to the northeast of the city; the Sheltering Arms Hospital, and Idlewood Park, a favorite summer-resort, close to the city on the west.

Hollywood Cemetery is the most interesting of the cemeteries. Near the west gate of the cemetery is the Confederate Monument, a rude pyramid of stone ninety feet high, erected as a memorial to the sixteen thousand Confederate soldiers buried here. On President's Hill, in the southwest corner of the cemetery, overlooking the river, are the graves of Monroe and Tyler, two of the seven presidents born in Virginia. John Randolph, Jefferson Davis, General Pickett, General J. E. B. Stuart and Commodore Maury are also buried here. Patrick Henry is buried in St. John's Churchyard.

During the last three years of the Civil War (1862-1865) battles raged all round Richmond, and remains of the fortified lines constructed to protect the city are visible in various parts of the environs.

The leading industry is the manufacture of tobacco. Other important products are lumber and planing-mill supplies, foundry and machine-shop products (including locomotives), fancy and paper boxes, packing boxes, saddlery and harness, carriages and wagons, confectionery, flavoring extracts, patent medicines and compounds, etc. There are also large railroad repair shops, establishments for grinding and roasting coffee, etc. Richmond was formerly noted as a center of the flour-milling industry.

Richmond was settled in 1733 and incorporated in 1742. Captain John Smith's settlement of "None Such" in 1609 and Fort Charles, erected in 1645, were both near the site of the present city. In 1779 it became the capital of the state. During the American Revolution the place was taken by a British force under Benedict Arnold, January 5, 1781, and the warehouses and public buildings were burned. The following year the city was chartered. Richmond, as the capital of the Confederacy, was the main objective of Federal operations during the Civil War. It was evacuated April 2, 1865. The warehouses and a considerable part of the business section of the city were burned by the Confederates.

[617]

Salt Lake City, Utah. [The "City of the Saints;" named for the famous lake of that state.]

It is the chief town and ecclesiastical capital of the State of Utah, and is situated on the river Jordan, eleven miles from Great Salt Lake. It is built at the base of the Wasatch Mountains, four thousand three hundred and thirty-four feet above sea-level. The valley is world-famed for its beauty, resources, climate, and health-giving properties. By rail it is thirty-six miles south of Ogden, on the Union Pacific Railroad; eight hundred and thirty-three miles from San Francisco, and one thousand and thirty-one miles from Omaha.

The city is regularly laid out and the streets are wide and shaded with trees. Each house in the residence quarters stands in its own garden.

Temple Block, "the sacred square of the Mormons," covering ten acres, is the center of the city. Here are the Great Temple, and the Tabernacle, the latter one hundred and fifty by two hundred and fifty feet, with a self-supporting roof shaped like a tortoise shell, supported by forty-four sandstone pillars, and having a seating capacity of eight thousand, accommodations for twelve thousand, and one of the finest pipe organs in America.

A little to the east of the Tabernacle is the Temple, a large and handsome building of granite, erected at a cost of over four million dollars. At each end are three pointed towers, the loftiest of which, in the center of the east or principal facade, is two hundred and ten feet high and is surmounted by a colossal gilded figure (twelve and one-half feet high) of the Angel Moroni, by C. E. Dallin. The interior is elaborately fitted up and artistically adorned.

The Assembly Hall, to the south of the Tabernacle, is a granite building with accommodation for three thousand people, intended for divine service.

At the corner of North Temple and Main Streets stands the Latter-Day Saints University. At the southeast corner of Temple Square is the Pioneer Monument, surmounted by a copper statue of Brigham Young, which was unveiled in 1897.

On South Temple Street towards the east is the Deseret News Block, a large brown-stone building where the oldest newspaper to the west of the Missouri is published. To the left are the Tithing Office and Tithing Storehouse where the Mormons pay their tithes in kind. A little farther on, also to the left, are the Lion House, one of the residences of Brigham Young; the office of the president of the Mormon Church; and the Beehive House, another of Brigham Young's houses. On the opposite side of the street are the huge shoe-factory and warehouse of Zion's Coöperative Mercantile Institution; the office of the Juvenile Instructor; the office of the Historian of the Mormon Church; and the Gardo House, or Amelia Palace, opposite the Beehive House.

A little farther to the northeast, through the Eagle Gate, is Brigham Young's grave, surrounded by an ornamental iron railing.

The imposing City and County Building is in Washington Square, and the Federal Building is in Main Street, between Third and Fourth South Streets. A new Capitol is in contemplation in Capitol grounds, near Prospect Hill. Among the educational establishments are the Utah State University, to the east of the city, near Fort Douglas, and the High School, in Union Square. The Roman Catholic Cathedral and several other religious edifices also are represented, including Presbyterian, Congregationalist, and Methodist churches. St. Mark's Cathedral is a handsome building. Other noteworthy edifices are those of the museum, the Mining Institute, St. Mary's Hospital, the University of Utah, and the theaters and opera house.

The city is more important as a trading center than for manufactures. The leading industries are beet-sugar refining, smelting, salt making, and the manufacture of boots and shoes, glass, woollens, paper, cutlery, pottery, etc. A large business is done in bullion and mining stocks. The city has a large jobbing trade, being the distributing center for an immense mining agricultural and stock raising region in Utah, West Wyoming, South Idaho, and East Nevada.

Salt Lake City was founded in 1847 by Brigham Young and incorporated in 1851. Until 1870 it was almost wholly a Mormon city.

San Antonio (*sān ān-to n'ō*), **Texas.** [Named for the Roman Catholic mission, San Antonio de Valero, otherwise the Alamo.]

After Dallas it is the largest city in the state, and is located on the San Antonio River, two hundred and ten miles by railroad west of Houston, one hundred and eighty-eight miles west of Galveston, on both banks of the San Antonio Creek, at the mouth of San Pedro River. Built on a level plateau, with an elevation of six hundred and sixty feet above the sea, it includes the old Mexican town of San Fernando, west of San Pedro Creek, inhabited chiefly by Americans and largely rebuilt since 1860. The San Antonio River winds for thirteen miles through the city, and San Pedro Creek for ten miles. These are spanned by numerous little bridges. It is one of the most interesting in the United States.

The first object of interest in San Antonio is the Church of the Mission del Alamo, situated in the Alamo Plaza, in the quarter to the east of the San Antonio River. The church, which seems to have derived its name from being built in a grove of alamo or cottonwood trees, is a low and strong structure of adobe, with very thick walls. It was built in 1744, but has lost many of its original features. It is now preserved as a national monument for its historical interests.

At the north end of the Alamo Plaza, in Houston Street, is the handsome Federal Building. On the west side of the plaza is the building containing the San Antonio Club and the Grand Opera House.

Houston Street towards the west crosses the San Antonio and reaches Soledad Street, which leads to the left to the Main Plaza (Plaza de Las Yslas), pleasantly laid out with gardens. On its south side rises the imposing Court House and on its west side stands the Cathedral of San Fernando, dating in its present form mainly from 1868 to 1873, but incorporating parts of the earlier building, where Santa Ana had his headquarters in 1836. To the west of the Cathedral is the Military Plaza (Plaza de Armas), with the City Hall.

The Military Post (Fort Sam Houston), on Government Hill, one mile to the north of the city, costing over two million dollars, is one of the largest in the United States and deserves a visit. The tower (eighty-eight feet high), in the center of the quadrangle, commands a splendid view of the city and its environs.

The old Spanish Missions near the city most often visited are the First and Second Missions, but, the Third and Fourth Missions have much interest also.

The Mission of the Conception, or First Mission, lies about two and a quarter miles to the south of the city (reached via Garden Street), dates from 1731 to 1752, and is well preserved. The church has two towers and a central dome. The Mission San Jose de Aguayo, or Second Mission, four miles to the south of the city, dates from 1720 to 1731 and is the most beautiful of all.

[618]

OLD SPANISH CHURCH OF THE ALAMO, SAN ANTONIO, TEXAS

During the war of Texan independence, the Alamo, then converted into a fort, was the scene of an extraordinary conflict, the fort being held by Colonel David Crockett and Colonel James Bowie. Though almost continually assailed from February 23 to March 6, 1836, it only yielded when the defenders were all slain but five; these were captured by the Mexicans and cruelly slain. "Remember the Alamo," thereafter became a war cry, and the place itself has been called the "Thermopylae of America."

Among the educational institutions are St. Louis College (Roman Catholic), St. Mary's Hall, St. Mary's College, Wolfe Memorial School, and the Ursuline Convent and School.

San Antonio is the natural trading center for an immense area, its jobbing houses have an extensive trade in Mexico as well as in Texas. The industrial establishments are machine shops, foundries, breweries, flour mills, binderies, cotton presses, ice plants, tanneries, marble works, cement works, and manufactories of brooms, carriages and wagons, candy, soda and mineral waters, mattresses, bricks and tiles. It is a leading cattle, horse, and mule market, ships large quantities of cotton, wool, and hides; and is the financial center of the largest stock raising interests of the Southwest. The surrounding district, irrigated by water, obtained from deep artesian wells, is extensively engaged in truck farming for Northern markets.

Although the Spaniards built a fort at San Antonio in 1689, its real settlement began in 1714. In 1718 the Franciscan mission of San Antonio de Valero was founded, and, about 1722, on another site was built the Alamo, the "cradle of Texans' liberty," in which in 1836 a garrison of about one hundred and eighty men, among them Davy Crockett and James Bowie, for eleven days resisted General Santa Ana's Mexican army, numbering thousands of men. Eight battles for independence were fought in or near San Antonio between 1776 and 1836, successively under Spanish, French, Mexican, and Texan flags. It received a city charter in 1873.

San Francisco, Cal. [The "City of the Golden Gate"; said by some to have been named for the old Spanish mission of San Francisco de Assisi, by others to have been named for the founder of the order to which Father Junipero, the discoverer of the bay, belonged.]

It is grandly situated at the north end of a peninsula thirty miles long, separating the Pacific Ocean from San Francisco Bay, two thousand four hundred and thirty-four miles west of St. Louis, and three thousand four hundred and fifty-two miles from New York. The city lies mainly on the shore of the bay and on the steep hills rising from it, but is gradually extending across the peninsula (here six miles wide) to the ocean. On the north it is bounded by the famous Golden Gate, the narrow entrance (one mile across and about five miles long) to San Francisco Bay. The commercial part of the town is fairly level and lies along the bay. The chief business thoroughfare is Market Street, three and one-half miles long, with which the streets from the north and west hills intersect. This feature gives the city a striking skyline.

San Francisco Bay, a noble sheet of water, gives San Francisco one of the finest harbors in the world and affords numerous charming excursions. It gives the city much of its commercial importance, also, and extends from Fort Point past the city in a southerly direction for about fifty miles, varying in width from six to twelve miles. Northward this bay connects by a strait with San Pablo Bay, ten miles in length, having at its northerly end Mare Island and the United States Navy Yard.

Across the bay are Oakland, Alameda, and Berkeley.

In 1906 a large part of the city was destroyed by earthquake and fire, the estimated loss reaching over three hundred million dollars. The business district has since been largely rebuilt, and many costly buildings of marble, granite, and terra cotta, and iron and steel-framed "skyscrapers" have been constructed. Before the earthquake of 1906 the most conspicuous public buildings were the City Hall, erected at a cost of six million dollars, and which occupied twenty-five years in building; the Post Office, completed at a total cost of five million dollars; the Hall of Justice, the Custom House, a Mint and a Sub-treasury; the building of the Society of California Pioneers, and stock and merchants' exchanges; and the Ferry Building containing a display of the mineral resources of California.

[619]

NIGHT VIEW, SHOWING ILLUMINATION OF SOUTH GARDENS AND MAIN ENTRANCE, PANAMA-PACIFIC INTERNATIONAL EXPOSITION, SAN FRANCISCO, 1915

The Panama-Pacific International Exposition at San Francisco was open from February 20 to December 4, 1915. The total attendance was 18,871,957. The last day made the record, 458,558 persons having passed through the turnstiles. The Fine Arts Palace remained open until May 1, 1916.

Market Street, the chief business thoroughfare, extends to the southwest from the Union Ferry Depot, a handsome structure, with a tower two hundred and fifty feet high, to a point near the twin Mission Peaks, a distance of about three and one-half miles.

Following Market Street towards the southwest, at the intersection with Battery Street is the Labor Monument, a vigorous bronze group dedicated to the memory of Peter Donahue of the Union Iron Works. At the southwest corner of Market and Montgomery Streets stands the Palace Hotel, opposite which is the Union Trust Building, the first of the buildings whose steel and concrete frame withstood the fire. Close by, at the corner of Montgomery and Post Streets, are the Crocker Building, another survivor, and the new stone structure of the First National Bank.

At the corners of Kearney and Third Streets rise the Chronicle Building and the tall Spreckels or Call Building, the top of either of which affords a good bird's-eye view of the city.

Market Street, towards the southwest from the Chronicle Building, contains many large office buildings, including the tall Humboldt Savings Building. At the corner of Fourth Street is the Pacific Building, a huge structure of re-enforced concrete, with a facade of green and brown tiles. In the same block is the Emporium, which has been rehabilitated since the disaster of 1906. On the right, at the corner of Powell Street, is the large Flood Building, another survivor of the fire. It is chiefly occupied by railway offices.

Powell Street leads to Union Square, with the St. Francis Hotel and a Naval Monument commemorating the exploits of the United States fleet in the Philippines during the war with Spain (1898).

At the junction of Market Street with Mason Street is a monument commemorating the admission of California to the Union (1850). To the left, at the corner of Seventh Street, we catch a glimpse of the long frontage of the Post Office with its fine granite carvings. Just beyond this corner, in a small triangular park, is the large Californian Monument, presented to the city by James Lick. The stately monument erected in honor of the achievements of the navy in the Spanish-American war remains uninjured.

The district containing the United States Appraisers Stores and the large new Custom House was spared by the great fire.

The United States Branch Mint, in Fifth Street, at the corner of Mission Street, contains interesting machinery and a collection of coins and relics. The effect of the fire may be clearly seen on the granite at the north end of the building.

Montgomery Street and the southern part of Sansome Street, form the center of the banking district. On the former is the Union Trust Building, and a series of large office buildings, of which the most important are the Mills Building, corner of Montgomery and Bush Streets; the Merchants Exchange, California Street, near Montgomery Street; Kohl Building, corner Montgomery and California Streets; Italian-American Bank, a one-story building with Doric columns, corner Montgomery and Sacramento Streets; and the Bank of Italy, corner Montgomery and Clay Streets. At the northeast corner of Sansome and California Streets rises the tall Alaska Commercial Building, with the handsome Bank of California opposite.

Nob Hill was the name given about 1870 to that section of California Street, between Powell Street and Leavenworth Street, containing many of the largest private residences in San Francisco. Most of these were of wood, and no expense was spared to make them luxurious dwellings, but with unfortunate architectural results. Few relics of these are now extant. The hill is crowned by the huge Fairmont Hotel, opposite which is the Hopkins Institute of Art.

The present fashionable residential quarter is on Pacific Heights, including the western parts of Jackson Street, Washington Street, Pacific Avenue, and Central Avenue.

The educational institutions of San Francisco, include the Academy of Sciences, endowed by James Lick; the Hopkins Art Academy, situated on Nob Hill; Memorial Museum, in Golden Gate Park; Mechanics' Institute, which contains property valued at two million dollars, and a library of seventy thousand volumes. Other fine libraries are the Sutro library of two hundred thousand volumes, the public library of one hundred thousand volumes, while the California Historical Society, San Francisco Medical Society, the San Francisco Law Library; the French and Mercantile libraries all have collections of more than thirty thousand volumes. The California School of Mechanical Arts, Cooper Medical College, Cogswell Polytechnic School, College of Notre Dame, Sacred Heart Academy, Irving Institute, the medical and law faculties of the University of California, are also located here.

The city was always conspicuous for its fine churches. The most prominent of these were the Roman Catholic Cathedral, the Jesuit Church of St. Ignatius, and the Mission Dolores, a survival of Spanish occupation.

The largest of the city parks is Golden Gate Park, covering more than one thousand acres and redeemed from a waste of sand-dunes, now one of the most beautiful in the country. It extends from Stanyan Street to the Pacific Ocean, a distance of three miles. Its fine trees and shrubbery, semi-tropical plants and flowers, artificial lakes and Japanese tea gardens combine to make it a veritable wonderland. Through the park a broad, smooth, and well-kept speedway runs out to the ocean beach, and the famous old Cliff House, the Sutro Heights, on the hills of the west or ocean side, from which is a magnificent view of the Seal Rocks and Pacific Ocean.

To the north of the park, beyond the intervening Richmond district, lies the Presidio, the United States military reservation. Here are the harbor fortifications with their big and powerful rapid fire machine guns, the officers' quarters with picturesque gardens and hedgerows, and the hospital and barracks for the soldiers, while down at the water's edge is old Fort Mason, a circular brick structure now used as a storehouse.

The population is very heterogeneous, every European nationality being represented here, to say nothing of the Mexicans, Chinese, Japanese, Negroes (relatively few), Filipinos, Hawaiians, and other non-European races.

The Chinese Quarter, rebuilt since the fire, is still one of the most interesting and characteristic features of San Francisco. It lies, roughly defined, between Stockton, Sacramento, Kearney, and Pacific Streets, and now consists mainly of large modern store buildings in a modified Oriental style, and of tall tenements, swarming with Chinese occupants. Chinatown contains about ten thousand inhabitants.

To the north of Chinatown, spreading about the base of Telegraph Hill, is the so-named Latin Quarter, peopled by Italians, Greeks and Mexicans. Their houses, shops, and restaurants are most characteristic. The Japanese Quarter is bounded by Van Ness, Fillmore, Geary, and Pine Streets.

In the pretty park that separates busy Kearney Street from Chinatown, the beautiful golden galleon monument to Robert Louis Stevenson still stands.

San Francisco as the western terminus of the great continental railroads and of many short lines, has important steamship communication with the ports of the world. The bay is accessible to the largest vessels. It is one of the most important grain ports in the United States; and gold and silver, wine, fruit, and wool are exported. There are large sugar refineries, foundries, shipyards, cordage works, wood factories, woolen mills, and many others.

A Spanish post and mission station were established on the site of San Francisco in 1776. The mission was secularized in 1834, and a town was laid out in 1835. A United States man-of-war took possession of it in 1846, and it became an important place in 1849 on account of the discovery of gold (1848). It was devastated by fires, 1849-1851. In 1850 it was incorporated as a city. The original name of the place was Yerba Buena (Spanish, "good herb"). It was changed to San Francisco in 1847. In 1869 railway connection was established with the eastern United States. In 1877 Denis Kearney began a violent agitation against the competition of Chinese labor. This was known as the "sand lots" movement, from the name of the place where the meetings were held. On April 18, 1906, the city was visited with a severe shock of earthquake, and the resultant fires destroyed much of the business section and one-third of the residence portion of the city.

Berkeley, across the Bay from San Francisco, is the seat of the Colleges of Letters and Science of the University of California. The University, founded in 1868, has played a very important part in the educational development of California and of the Pacific Slope. Its other departments are at San Francisco and the Lick Observatory, with the great telescope, is at Mt. Hamilton.

A number of the buildings at Berkeley are handsome, and the picturesque grounds, two hundred and fifty acres in extent, command a splendid view of the Golden Gate and San Francisco. The very interesting open-air Greek Theater, built in 1903 on the general type of the theater at Epidaurus, accommodates twelve thousand spectators and is used for university meetings, commencement exercises, and concerts. The museums, the library, and the laboratories are admirably adapted to their uses.

At Palo Alto, thirty-four miles south of San Francisco, one mile from the station is the Leland Stanford, Jr. University, founded by Mr. and Mrs. Leland Stanford in memory of their only son and endowed by them with upwards of thirty million dollars. The buildings were mainly designed by H. H. Richardson, who took the motif of their architecture from the cloisters of the San Antonio Mission. The material is buff, rough-faced sandstone, surmounted by red-tiled roofs, producing brilliant effects of color in conjunction with the live oak, white oak, and eucalyptus trees outside, and tropical plants in the quadrangle, and the blue sky overhead. In the earthquake of 1906 the buildings suffered severely, the damage done being estimated at nearly two million dollars. Much, however, has been restored or rebuilt. The buildings include a low quadrangle, enclosing a court five hundred and eighty-six feet long and two hundred and forty-six feet wide, with a beautiful colonnade on the inner side; an outer, two-story quadrangle, with cloisters on the outside; a Chapel; various dormitories; an Art Museum; a mechanical department; and a village of professors' houses.

Seattle (*se-ät' t' 7*). **Wash.** [Named for the chief of the Duwamish tribe of Indians, *See-aa-thl.*]

It is finely situated on Elliot Bay, an arm of Puget Sound, one thousand eight hundred and twenty-eight miles from St. Paul. It occupies a series of terraces rising from the shore of the Sound, with steep hills rising from the water, the heights commanding superb views of the snow-crowned Olympic Mountains and the Cascades, including Mounts Rainier and Baker.

The residence streets run up the slope of a hill, with the business portion built on the level ground at the foot, stretching along the excellent harbor, with its many wharves.

Among the finest edifices are the Roman Catholic Cathedral, the Union or King Street Passenger Station, with Carnegie Library, the American Bank, and the Alaska, Lowman, White, Central, and Empire Buildings.

Its notable buildings include, also, the County Court House, County Almshouse, Opera House, High School, and Hospital. The city is beautified with monuments and statues, unique among which is the Totem Pole, in Pioneer Square, near the Union Station, which was brought from Alaska and is one of the best examples of its kind. There is a good statue of Wm. H. Seward, by Richard Brooks, and in the campus of the University of Washington is a colossal statue of Washington, by Lorado Taft.

The University has grounds three hundred and fifty-five acres in extent, and furnished the site for the Alaska-Yukon-Pacific Exposition of 1909.

Other leading educational institutions are Seattle Seminary (Methodist), Seattle Female College, College of the Immaculate Conception and Academy of the Holy Name (both Roman Catholic).

There are several fine parks connected, together with the lakes, by a system of boulevards. Fort Lawton, a military post, is within the city limits.

The harbor, which is in Lake Washington and is four miles long and two miles wide, admits the largest vessels at all times. As the terminal of two transcontinental railroads and as an oceanic seaport, Seattle has extraordinary commercial advantages. It has direct steamship lines to Japan, China, the Philippines, and to Honolulu, and is also connected with European and South American ports. It is the chief outfitting port for the Yukon and Alaskan gold fields, and the chief trading center for the numerous ports on the extensive coast-line of Puget Sound. It has abundant electric power generated by falls in the rivers of the Cascades at a very low cost. Snoqualmie Falls, nineteen miles distant, are one hundred and twenty-six feet higher than Niagara, and supply an immense power.

Seattle largely owes its phenomenal growth to the lumber trade. The manufactures include beside, flour, iron and steel products, boots and shoes, beer, etc. Other industries are bridge-works, shipyards, meat-packing, and fish-canning. The city has also smelting and refining works, and a United States assay office. The chief exports are lumber, coal, meats, fruits, wheat, and hops.

Seattle was first settled in 1852. The place was laid out in 1853 and was incorporated in 1865 as a town and in 1880 as a city. In 1889 it was almost wiped out by fire, but one business building escaping destruction. From June 1 to November 30, 1909, the Alaska-Yukon-Pacific Exposition was held here, the average daily attendance being twenty-eight thousand. In the spring of 1910 a Municipal Plans Commission of twenty-one members was created by an amendment to the city charter of Seattle, and in 1911 their report was issued containing sketches and plans illustrating their proposals for the beautification and future growth of the city.

St. Louis (*sant' loo' is' or' loo' 7*). **Mo.** [Named in honor of Louis XV. of France; the name originally applied to a depot established at this point February 15, 1764, by Pierre Laclede Liguest.]

It is the principal city of Missouri, and is located on the west bank of the Mississippi River, twenty-one miles south of the mouth of the Missouri River, and by rail one thousand one hundred and eighty miles southwest of New York, two thousand four hundred and thirty-four miles east of San Francisco, and six hundred and ninety-six miles north of New Orleans. It has a frontage of nearly twenty miles on the river and rises from it in three terraces, the third of which is about two hundred feet above the river level.

The city is regularly laid out, on the Philadelphia plan, Market Street running east and west, being the dividing line between north and south. The streets running north and south are numbered, though many of them are also known by names. Broadway or Fifth Street is the chief shopping thoroughfare, while other important business streets are

[620]

[621]

Fourth Street, Olive Street, Washington Avenue, Third Street, and First Street (or Main) and Second Streets. The city is also divided into a north and south section by the valley of Mill Creek (now filled in), which is spanned by seven bridges. The city has recently extended greatly to the west, and commerce is steadily encroaching on the residential quarters.

The Court House, in Broadway, between Market and Chestnut Streets, is a substantial building in the form of a Greek Cross. It is surmounted by a dome, one hundred and seventy-five feet high, the gallery of which commands an excellent view of the city and river. A little to the east, in Third Street, corner of Chestnut Street, is the Merchants' Exchange, the main hall of which, with a painted ceiling, is two hundred and twenty feet long. The grand hall of the Veiled Prophet is held here. The Cotton Exchange is at the corner of Main and Walnut Streets.

By following Market Street to the west from the Court House, the square, named Washington Park, is reached, and also the City Hall. A little to the south, in the square enclosed by Clark Avenue and Spruce, Eleventh and Twelfth Streets, are the so-called Four Courts, built on the model of the Louvre, in Paris, with a large semi-circular jail at the back. A little to the north of the City Hall runs the busy Olive Street, which toward Broadway, passes the Post Office on the left. Among the numerous substantial business buildings in this part of Olive Street are the Star, Century, Frisco, Chemical, Missouri Trust, Commercial, Laclede, Commonwealth Trust, National Bank of Commerce, and Third National Bank, a large and very fine structure. In Broadway, at the corner of Locust Street, is the Mercantile Library, which contains one hundred and fifty thousand volumes, statues by Harriet Hosmer, and others.

Other important buildings in this business section of the city are the Security Building (at the southwest corner of Fourth and Locust Streets); the Mercantile Trust Co., at the northeast corner of Eighth and Locust Streets (with vaults closed by a circular steel door of marvelous mechanism weighing four and one-half tons); the St. Louis Union Trust Co., at the northwest corner of Fourth and Locust Streets; the Mercantile Club, southeast corner of Seventh and Locust Streets; the Public Library, Locust Street, corner of Ninth Street; the Lincoln Trust and Wainwright Buildings, corner of Seventh and Chestnut Streets; and the Missouri Pacific Building, northwest corner of Market and Seventh Streets.

On the block between Thirteenth, Fourteenth, Olive and St. Charles Streets is the new Carnegie Central Library, erected at a cost of one million dollars.

At the corner of Locust and Nineteenth Streets is the handsome School of Fine Arts, which is connected with Washington University.

The Episcopal Cathedral, the Roman Catholic Cathedral, old and new, and many of the new Protestant churches in the West End are architecturally striking.

The parks of St. Louis are among the most notable in the United States, and their area (two thousand three hundred acres) is exceeded by those of Philadelphia alone. The finest are Forest Park (one thousand three hundred and seventy acres); Tower Grove Park (two hundred and sixty-six acres); Carondelet Park, O'Fallon Park, and the Missouri Botanical Garden, which is one of the foremost in North America.

To the west of Forest Park is the new home of Washington University, forming one of the most successful and appropriate groups of collegiate buildings in the New World. They were designed by Messrs. Cope & Stewardson in a Tudor-Gothic style and enclose several quadrangles. The material is red Missouri granite. Among the buildings already completed are University Hall, the Chemical and Physical Laboratories, the Architectural and Engineering Buildings, the Chapel (resembling King's College Chapel at Cambridge, England), the library (with a fine reading room), various dormitories, and the gymnasium. The university grounds are one hundred and ten acres in extent.

The other institutions of higher education are St. Louis University, the College of the Christian Brothers, Maria Consilia Convent, training school for nurses, several medical colleges, dental college, the theological seminaries, manual training school, the State School for the Blind, and the St. Louis Day School for Deaf Mutes.

In Forest Park, not far from the University, is the handsome Museum of Fine Arts, originally erected as the Fine Arts Building of the Louisiana Purchase Exposition. In front of the entrance is a colossal equestrian bronze statue of St. Louis.

The great St. Louis or Eads Bridge, across the Mississippi, is deservedly one of the monuments of the city. It was designed by Capt. James B. Eads and was constructed in 1869-1874 at a cost of ten million dollars. It consists of three steel spans (center five hundred and twenty feet, others five hundred and two feet each) resting on massive limestone piers. The total length is two thousand and seventy yards. The bridge is built in two stories, the lower for the railway, the upper for the roadway and foot passengers. Trains enter the lower track by a tunnel, one thousand six hundred and thirty yards long, beginning near the corner of Twelfth and Cerre Streets. The highest part of the arches is fifty-five feet above the water.

The Merchants' Bridge, three miles farther up the river, is a steel truss bridge, and was built in 1889-1890, at a cost of three million dollars. It is used by railways only. It has three spans, each five hundred feet long and seventy feet high.

St. Louis ranks fourth among the manufacturing cities of the United States. It is the largest tobacco manufacturing city in the world, and also has a large production of malt liquors, flour, boots and shoes, hardware, stoves, railways and electric cars, woodenware, brick, biscuit, crackers, etc. The city is also the largest mule mart in the world, and noted as a drug market.

Founded from New Orleans in 1764, by Pierre Laclede-Liguest and Auguste Chouteau, St. Louis remained a fur-trading post until the Louisiana Purchase of 1803. Its first era of marked development began with the arrival of the first steamboat, 1817. Steam navigation of its river connection made it the most important point in the settlement of the trans-Mississippi West. It had repeatedly doubled its population before the first period of German immigration, following the German revolution of 1848. In 1875 St. Louis was separated from the County of St. Louis and given an independent government of its own. In 1896 the city was swept by a destructive tornado. In 1903 an exposition was held in St. Louis to celebrate the Louisiana Purchase.

Its population of American birth heavily predominates, but its German population is large and every element of European population is represented, with a recent increase from Southern Europe and Russia in excess of all other elements.

St. Paul, Minn. [Named from the Chapel of St. Paul, a log chapel erected here by Roman Catholics. Indian name, *imnijaska*, "white rock," a reference to the sandstone bluff on which the city stands.]

It is the capital of Minnesota, and located on both banks of the Mississippi River, immediately below Minneapolis, the suburbs of the "Twin Cities" being contiguous.

It has a picturesque site at an elevation of six hundred and seventy to eight hundred and eighty feet above sea level on a series of terraces, the highest of which is two hundred and sixty-six feet above the river. The two divisions of the city are connected by three municipal bridges. In addition to these there are a number of railway bridges and scores of smaller bridges over ravines, valleys, railway crossings, etc. The municipal limits include the suburbs of Merriam, St. Anthony, Union, Groveland, Macalester, and Desnoyer Parks, Arlington Hills, and others.

Of the three plateaus, the first contains the railway yards, Union Station, wholesale houses and factories. Above the flats are the business section and part of the residential district; still higher are the bluffs, the most fashionable residential quarter, with extensive views of the river and the lower terraces.

The business part of the town is well built and regularly laid out, and the suburban quarters contain many fine streets and handsome residences.

The new State Capitol, erected in 1898-1906, at a cost of four million five hundred thousand dollars, is a large and handsome edifice of granite and Georgia marble, with an unusually successful central dome.

The most impressive parts of the interior are the central rotunda, the two great staircases, the Supreme Court, and the Senate Chamber. The dominant note in the color scheme is furnished by Minnesota yellow limestone. The mural paintings are by La Farge, Simmons, Blashfield, Garnsey, Kenyon Cox, and H. O. Walker. In the Governor's reception room are paintings by F. P. Millet, Howard Pyle, Douglas Volk, and others. The State Law Library and that of the State Historical Society are both housed in the Capitol.

Four blocks to the south of the Old Capitol are the Custom House and the City Hall, the latter a handsome building erected at a cost of one million dollars. Among other important buildings in the business quarter are the Public Library; the Auditorium, a hall for meetings and theatrical performances; the new Y. M. C. A. Building; the New York Life Insurance Building, corner Sixth and Minnesota Streets; the Roman Catholic Cathedral of St. Paul, Sixth Street, corner of St. Peter Street; the High School, corner Tenth and Minnesota Streets; the Globe Building, Fourth Street, corner Cedar Street; the Germania Life Insurance Office; the former Bank of Minnesota, now used for various offices; the Manhattan Building, corner of Fifth and Robert Streets; the Gilfillan Building; the Endicott Arcade; the Central Presbyterian Church; the Bethel Hotel, resembling the Mills House of New York; the Minnesota Club House; the People's Church; the Field, Mahler & Co. Building, Fourth Street; and the Great Northern and the Northern Pacific Railway Offices.

The finest residence street is Summit Avenue. It begins at Wabasha Street and runs from Summit Park along a high ridge. The most prominent dwelling is the large brown stone mansion of the late James J. Hill, containing a good collection of paintings by Corot, Delacroix, Courbet, Troyon, Decamps, etc.

A Roman Catholic Cathedral is being erected at Summit Park; and to the west of the town, near the west end of Summit Avenue, by the river, is the extensive Roman Catholic Seminary of St. Thomas Aquinas. On the bluff above, at the end of Grand Avenue (parallel to Summit Avenue) are the various buildings of the Hill Seminary.

It is also the seat of Hamline University (Methodist Episcopal), Concordia College (Lutheran), Macalester College (Presbyterian), several medical colleges, a State Reform School, and an Academy of Natural Sciences.

St. Paul has a park system of remarkable beauty. Como and Phalen Parks have picturesque lakes, and Indian Mound Park is said to have views unsurpassed anywhere else on the Mississippi River. Harriet Island, in the river opposite the business district, is provided with public baths. There are twenty-two miles of park and boulevard driveways, not including the River Boulevard. The total park area is one thousand two hundred and four acres. Fort Snelling, attractively located at the mouth of the Minnesota River, occupies a large tract adjacent to the city on the southwest.

The manufactures of St. Paul include machinery, farming implements, furniture, carriages, boots and shoes, and malt liquors. Here also are located the extensive meat packing plants of Swift & Co., and quarries of fine limestone. It is the center of the wholesale grocery and dry-goods business in Minnesota. It is also an important printing and publishing center, and has large car shops, lumber and planing mills, and breweries.

In 1841 Father Galtier, a French Canadian, induced the settlers, chiefly French Catholic hunters and traders in furs and whiskey, to build a log church which was dedicated to St. Paul. In 1849 the town became the capital of the newly organized territory of Minnesota, and was incorporated. It received its city charter in 1854.

WASHINGTON, AMERICA'S CITY BEAUTIFUL

[622]

[623]

1. THE CAPITOL
2. MEMORIAL TO LINCOLN 3. THE WHITE HOUSE, (SOUTH FRONT)
4. LIBRARY OF CONGRESS

Washington, D. C. [The "City of Magnificent Distances," from its being laid out on a large and regular scale; originally named Georgetown, but when selected in 1790 as the Federal Capital was re-named Washington in honor of the first President of the United States.]

The City of Washington, the Capital of the United States, lies on the left bank of the Potomac River, in the District of Columbia, one hundred and fifty-six miles from Chesapeake Bay, one hundred and eighty-five miles from the Atlantic Ocean, two hundred and twenty-six miles southwest of New York, one hundred and thirty-six miles of Philadelphia, and forty miles of Baltimore.

The city lies on a plain with slight elevations and surrounded by hills, and is generally accepted as the most beautiful in the United States, being finely laid out, with wide asphalted streets, opening up vistas of handsome public buildings, monuments, or leafy squares, with the Capitol and the Washington Monument dominating the entire view.

The original plan of Washington City was made by L'Enfant, a French engineer, who had adopted America as his residence. Based largely upon the topography of Versailles, its characteristic features are the crossing of the rectangular streets by frequent broad transverse avenues, one hundred and twenty to one hundred and sixty feet wide, lined with trees and named for various States of the Union. The streets running north and south are numbered, those running east and west are named by the letters of the alphabet. The circles formed by the intersection of the streets and avenues are one of the most charming features of the city.

Pennsylvania Avenue, between the Capitol and the White House (a distance of one and one-third miles), is the chief thoroughfare, and other important business streets are Seventh Street, Fourteenth Street, Ninth Street, and F Street. Among the finest residence streets are New Hampshire Avenue, Massachusetts Avenue, Vermont Avenue, Connecticut Avenue, and Sixteenth Street.

The new Union Railway Station, completed in 1908 at a cost of fifteen million dollars, including grounds and tunnels, is undoubtedly one of the most successful buildings in the country. It is situated at the junction of Massachusetts and Delaware Avenues, about one-third of a mile, and in full view of the Capitol. In front is a large plaza, embellished with shrubbery, fountains, and the finely sculptured Columbus monument.

The Capitol, splendidly situated on a hill ninety feet above the level of the Potomac, dominates the entire city with its soaring dome and ranks among the most beautiful buildings in the world. It stands in a park of about fifty acres, is seven hundred and fifty-one feet in length and one hundred and twenty-one to three hundred and twenty-four feet wide, and consists of a main edifice of sandstone, painted white, and of two wings of white marble. The building covers an area of three and one-half acres.

The cornerstone was laid by Washington in 1793. The main building, with its original low-crowned dome, was completed in 1827; the wings and the new iron dome were added in 1851-1865. The general style is classic, with Corinthian details. The principal facade looks towards the east, as the city was expected to spread in that direction, and the Capitol thus turns its back upon the main part of the city and on the other government buildings.

A fine marble terrace, eight hundred and eighty-four feet long, approached by two broad flights of steps, has been constructed on the west side of the Capitol and adds great dignity to this view of the building. The dome, which is two hundred and sixty-eight and one-half feet high, is surmounted by a figure of Liberty, nineteen and one-half feet high. The total cost of the building has been sixteen million dollars.

The front or east facade is preceded by three porticos, the main entrance being in the center. To the right of the central portico is the Settlement of America, a marble group by Greenough; to the left is the Discovery of America, a figure of Columbus by Persico. In the pediment above the portico is a relief of the Genius of America, by Persico; and in the pediment above the north portico is a group representing the Civilization of the United States, by Crawford.

The inauguration of the Presidents of the United States takes place on the broad steps in front of the main doorway.

In the interior beside the rotunda with its historical paintings, are the Senate Chamber in the north wing; the House of Representatives in the south wing, the Supreme Court in the central building, and the old Hall of Representatives, now used for historical studies.

To the north and south of the Capitol and connected with it by subways are the Senate and House of Representatives office buildings, two white marble edifices in a classic style, containing offices for senators and representatives.

To the southeast of the Capitol stands the Library of Congress, an enormous structure in the Italian renaissance style, four hundred and seventy feet long and three hundred and forty feet wide, erected in 1888-1897, at a cost of six million one hundred and eighty thousand dollars. It is in the form of a quadrangle, enclosing four courts and a central rotunda surmounted by a flat gilded dome and lantern. The main entrance, on the west side, is preceded by a broad flight of steps and a granite terrace, against the retaining wall of which is an effective fountain.

The interior of the Congressional Library is sumptuously adorned with paintings, sculptures, colored marbles, and gilding. To the right and left are massive marble staircases, richly adorned with sculptures and with bronze figures as lamp-bearers. The ceiling of the hall, seventy-two feet above the marble flooring, is resplendent in blue, green, and yellow.

The reading room rotunda is perhaps the finest and most thoroughly satisfactory part of the whole building. The chamber, which is one hundred feet in diameter and one hundred and twenty-five feet in height, accommodates about three hundred readers, is richly adorned with dark marble from Tennessee, red marble from Numidia, and yellow marble from Siena. The eight massive piers are surmounted by symbolical female figures.

At the foot of the flights of steps descending from the terrace on the west side of the Capitol is an heroic statue of Chief Justice Marshall, by Story. The broad walk to the north leads to the Naval or Peace Monument, by Simmons. The walk to the south leads to the statue of President Garfield, by J. Q. A. Ward.

Diagonally to the southwest and northwest extend two grand avenues as far as eye can see—Maryland Avenue to the left leading down to the Potomac and carrying the line of the Pennsylvania Railroad to the river, where it crosses over the Long Bridge into Virginia; and Pennsylvania Avenue to the right stretching to the distant colonnade of the Treasury Building and the tree covered park south of the Executive Mansion. Between these diverging avenues and extending to the Potomac, more than a mile away, is the Mall, a broad inclosure of lawns and gardens. Upon it in the foreground is the government Botanical Garden, and behind this the spacious grounds surrounding the Smithsonian Institution; and the National Museum; while beyond, near the river bank, rises the tall, white shaft of the Washington Monument with its pointed apex; on either side spreads out the city, the houses bordering the foliage lined streets and having at frequent intervals the tall spires of churches and the massive marble, granite, and brick edifices that are used for government buildings.

The Smithsonian Institution is a red stone building in the late Norman style, erected in 1847-1856 at a cost of four hundred and fifty thousand dollars. The loftiest of the nine towers is one hundred and forty-five feet high. In front of it is a statue of Prof. Joseph Henry, the first secretary of the Institution, by Story.

CORCORAN ART GALLERY, WASHINGTON

New buildings for the National Museum, on the Mall between Ninth and Twelfth Streets, and the new one million five hundred thousand dollar marble building of the Department of Agriculture, west of the Smithsonian grounds, are notable. The former, originally established to exhibit the rich contributions given to the government by various countries from the Centennial at Philadelphia in 1876, has become a most extensive and instructive collection of antiquities, ethnology, geology, and natural history generally; and there are many museums, libraries and art galleries.

The Bureau of Engraving and Printing, where the paper money, bonds and stamps of the United States are printed, is at the corner of B Street and the Mall, southwest.

The national monument to Washington, popularly known as the "Washington Monument," is a towering obelisk of white marble, on the bank of the Potomac, erected at a cost of one million two hundred and thirty thousand dollars. It has a total height of five hundred and fifty-five feet, an area at the foundation of sixteen thousand feet, and a weight of thirty-six thousand nine hundred and twelve gross tons. The apex has an aluminum point, and there is an elevator and an iron stairway of nine hundred steps in the interior of the shaft.

From the Washington Monument the Treasury Department at Pennsylvania Avenue and Fifteenth Street comes into full view. It is an immense edifice, five hundred and ten feet long and two hundred and eighty feet wide, with an Ionic colonnade on the east front and porticos on the other three sides. The materials are freestone and granite, and it cost seven million dollars to erect the edifice. Among the chief objects of interest are the United States Cash Room, in the north corridor; the Redemption Division, in the basement; the Silver Vaults, containing bullion and coin to the value of hundreds of millions of dollars; and the Secret Service Division, with its collection of forged money and portraits of forgers.

On the south, opposite the Treasury, is the fine equestrian monument of General Sherman, by Rohl-Smith, erected in 1903. The pedestal is embellished with bronze reliefs, medallions, and figures of Indian women, and at the corners are four sentinels.

Following Pennsylvania Avenue towards the west, Lafayette Square, is approached. Here are bronze statues of General Andrew Jackson, by Clark Mills; the Rochambeau Monument, by F. Hamar; and the Lafayette Monument, by Falguière and Mercier. On the east side of the square is the Belasco Theater, occupying the site of the house in which an attempt was made to assassinate Secretary Seward in 1865.

Opposite Lafayette Square is the entrance to the White House or Executive Mansion of the President of the United States. The White House is a two-story stone building, painted white, one hundred and seventy feet long and eighty-six feet deep, with an Ionic portico. It was first built in 1792, occupied by President Adams in 1800, burned by the British in 1814, and rebuilt in 1818. In 1902-1903 the whole building was admirably restored, within and without. The esplanade or terrace on the west side connects the house with the new Executive Offices and Cabinet Room. The large East Room (eighty by forty by twenty-two feet) is open to the public from ten to two. The Reception Rooms, which contain portraits of Presidents and valuable gifts, and the handsome Dining Room are shown by special order only. The rest of the house is private. The grounds surrounding the house are seventy-five acres in extent.

[624]

[625]

To the west of the White House is the huge building of the State, War, and Navy Departments, enclosing two courts and measuring five hundred and sixty-seven feet in length by three hundred and forty-two feet in breadth. It is a granite building, in Renaissance style, the largest public edifice in Washington, covering four and one-half acres, has five hundred and sixty-six rooms, and cost eleven million dollars. The north and west wings are occupied by the War Department. The Navy Department is in the eastern part of the building.

The Department of State occupies the southern part of the building. Among the finest rooms are the Diplomatic Reception Rooms, containing portraits of the Secretaries of State from 1789 to the present day, and the Library, with Jefferson's original draft of the Declaration of Independence and other relics.

In Seventeenth Street, to the southwest of the State Building, between New York Avenue and E Street, is the Corcoran Gallery of Art, built and endowed by the late W. W. Corcoran. The present building, erected in 1894-1897, is a handsome white marble structure in a Neo-Grecian style, by Ernest Flagg. The semicircular hall at the north end is used for occasional exhibitions, while the rest of this part of the building is occupied by a School of Art. The steps to the main entrance are flanked by colossal bronze lions, modeled after those by Canova at the tomb of Pope Clement XIII. The Gallery contains more than two hundred paintings, the finest collection of Barye bronzes, Power's Greek Slave, and Vela's Dying Napoleon in marble.

Also in Seventeenth Street, south of the Corcoran Gallery, are the new Continental Hall, built by the Daughters of the American Revolution, and the new building of the International Bureau of the American Republics, erected at a cost of one million dollars by Andrew Carnegie.

The Interior Department occupies an entire square in the heart of the city, and is constructed of white marble in pure Doric, costing three million dollars. The General Land Office opposite is a Corinthian marble edifice.

In Judiciary Square on the north side stands the Pension Office, an enormous structure of brick, four hundred feet long and two hundred feet wide. It is surrounded by a terra cotta frieze illustrating military and naval operations. The interior, with its mammoth columns (seventy-five feet high), can accommodate about twenty thousand people at an inauguration ball, or other occasions.

ST. JOHN'S CHURCH, WASHINGTON

Nearby, in B Street, is the large Census Bureau, in which a large staff is constantly at work. The enumerating machines are especially interesting.

To the northeast of this point, at the corner of North Capitol and H Streets, is the Government Printing Office, a twelve-story building erected at a cost of two million dollars.

Ford Theater, in which President Lincoln was assassinated by Booth on April 14, 1865, is in Tenth Street. A house opposite bears a tablet stating that Lincoln died there, and contains a collection of Lincoln relics.

On the south side of Pennsylvania Avenue, between Eleventh and Twelfth Streets, is the Post Office Department, with a tower three hundred feet high. At the corner of Pennsylvania Avenue and Fourteenth Streets is the new District or Municipal Building, a fine marble structure completed in 1908, and occupied by the District Commissioners and other officials of the local government.

At the intersection of Massachusetts Avenue and New York Avenue is Mt. Vernon Square, containing the Public Library, a white marble building, presented by Mr. Andrew Carnegie.

Beyond the Capitol to the southeast are the Washington Barracks, at the junction of the Potomac and its Eastern Branch, an artillery post, and the War College, a fine brick building, erected 1903-1908. In front of the latter is a statue of Frederick the Great by T. Uphues, presented to the United States by Emperor William II.

About one mile to the northeast, on the Anacostia River, is the Washington Navy Yard, with a museum, an important gun foundry, and manufactories of naval stores.

There are more than two hundred and fifty churches in Washington, of which the more important are St. John's (the "President's Church"), and St. Thomas' Episcopal; the New York Avenue, and Church of the Covenant, Presbyterian; the Metropolitan and Foundry, Methodist; St. Matthew's and St. Aloysius', Roman Catholic; Calvary, Baptist; Garfield Memorial, Christian; and Mount St. Sepulchre, with its reproduction of the sacred places of the Holy Land.

The National Soldiers' Home, two miles above the city, founded in 1851, has six hundred acres of park and forest, which serve as a public driving park and rural resort. To the north lies the National Military Cemetery, with the graves of General Logan, General Kearney, and seven thousand soldiers. On the west this is adjoined by Rock Creek Cemetery, containing Saint-Gauden's beautiful monument to Mrs. Henry Adams. To the east of the Soldiers' Home Park is the important Catholic University of America, around which has grown up a somewhat remarkable group of ecclesiastical establishments, including a Franciscan Convent, houses of the Dominicans, Paulists and Marists, and Trinity College for young women. The university has a number of fine stone buildings of striking architectural effect. The other colleges of note are: George Washington University, with academic, scientific, graduate, medical, and technological departments, and a famous law school; Georgetown University, a Jesuit institution with academic and professional schools; American University, for graduate instruction only; and the National Deaf-Mute College, founded in 1864, a government institution for the education of deaf and dumb pupils from the army, the navy, and the District of Columbia. Its fine stone buildings lie just north of the city.

Among the more important private buildings may be mentioned those of the Washington Post and Evening Star, and the Munsey buildings, all on Pennsylvania Avenue; the Riggs National Bank, American Security and Trust Company, Washington Loan and Trust, Union Trust and Storage Company, and the National Metropolitan Bank. The larger office buildings are the Bond, the Colorado, the Ouray, the Southern, and Woodward buildings. The Masonic Temple, the Scottish Rite Temple, and the Y. M. C. A. buildings, are important structures.

More and more Washington is becoming the home of a class of wealthy Americans, many of whom have erected beautiful residences, and among those of conspicuous architectural value are the Leiter, Townsend, Walsh, McLean, Belmont, Hale, Anderson, Boardman, Patterson, Thomas Nelson Page, Wayne McVeagh, Henderson, and Gale houses. Of similar interest are the embassy buildings of the British, Chinese, French, Russian, and other nations. The Metropolitan, the Cosmos, the Army and Navy, University, National Press, and the Washington (for women) are the principal clubs, and have homes of their own.

An elaborate park system is in course of development, which will ultimately surround the city with parks and connecting boulevards. The principal park is Rock Creek Park, to the north of the city, containing two thousand acres extending along both sides of Rock Creek. Its natural beauties are very great. On Mt. St. Alban, near Woodley, to the northwest of Georgetown, is the Peace Cross, a large Celtic cross erected at the close of the war with Spain (1898) on the grounds of the new Episcopal Cathedral, of which the cornerstone was laid in 1907. It affords a fine view of Washington. On the Chevy Chase Road, to the northwest of the Zoological Park, are the National Bureau of Standards and the Geophysical Laboratory of the Carnegie Institution, the administration building of which latter is in Sixteenth Street.

South of Rock Creek Park, on Rock Creek, lies the National Zoological Park of one hundred and seventy acres, reached from Washington in a half hour.

On a commanding site overlooking Rock Creek, north of Georgetown, in handsome grounds, is the United States Naval Observatory, of white marble, with its twenty-six-inch equatorial telescope.

Scattered throughout the city are numerous squares, circles, and small parks, nearly all of which contain statues.

Of bronze statues erected in honor of famous men, Washington has an abundance—mainly to military characters. Equestrian statues of Washington, Jackson, Greene, Scott, Thomas, and McPherson are erected, besides full-length statues of Lafayette, Luther, Franklin, Chief Justice Marshall, Lincoln, Garfield, Professor Henry Farragut, General Rawlins, and Admiral Dupont.

ARLINGTON HOUSE, HOME OF GENERAL ROBERT E. LEE

At Arlington, across the river from Washington, on commanding heights, is the National Cemetery containing the graves of about sixteen thousand soldiers. Arlington House, in the middle of the grounds, two hundred feet above the river, was once the residence of George Washington Parke Custis (step-grandson of Washington) and afterwards of General Robert Lee, who married Miss Custis. Near the house are the graves of General Sheridan, Admiral Porter, General Lawton, General Wheeler, and other distinguished officers.

To the south is a tomb containing the remains of two thousand one hundred and eleven unknown soldiers. The sailors destroyed by the blowing up of the "Maine" in 1898 and other victims of the war with Spain are buried in the southern part of the cemetery.

The cornerstone of a splendid military memorial or Hall of Fame was laid here in 1916, to be erected in classic style, of marble, and to cost several millions of dollars.

MOUNT VERNON

WASHINGTON'S TOMB, MT. VERNON

MOUNT VERNON, Washington's home and burial place, is in Fairfax County, Va., about fifteen miles below the city. It is in full view, standing among the trees on the top of a bluff rising about two hundred feet above the river. As the steamboat approaches, its bell is tolled, this being the universal custom on nearing or passing Washington's tomb. The estate was originally a domain of about eight thousand acres, and Augustine Washington, dying in 1743, bequeathed it to Lawrence Washington, who, having served in the Spanish wars under Admiral Vernon, named it Mount Vernon in his honor. General Washington, in 1752, inherited Mount Vernon from Lawrence. After his death the estate passed to his nephew, Bushrod Washington, subsequently descending to other members of the family.

Congress repeatedly endeavored to have Washington's remains removed to the crypt under the rotunda of the Capitol, originally constructed for their reception, but the family always refused, knowing it was his desire to rest at Mount Vernon.

In 1856 the mansion and surrounding property were saved from the auctioneer's hammer, and secured as a national possession by the Ladies' Mount Vernon Association, assisted principally by Edward Everett, at a cost of two hundred thousand dollars.

Washington, originally called Federal City, was named after Washington in 1791, and became the capital in 1800. In 1814 the Capitol, White House, and other public buildings, were burned by the British.

LEADING EVENTS IN THE COLONIAL HISTORY OF THE UNITED STATES IN THE FORM OF PARALLEL OUTLINES

[628-629]

I. PERIOD OF AUTHENTIC DISCOVERY AND EXPLORATION, FROM 1492 TO 1607

Preceding this Period there are some legendary accounts of discoveries by Norsemen, Irish missionaries and even Asiatics. Little importance attaches to any except those of the Norse discoverers, chief of which was Lief Ericsson and his brother Thorwald who came upon the mainland of North America about 1000 to 1004. The discoveries of Columbus and Vasco da Gama opened a new era, during which the Spaniards explored and settled the West Indies, Mexico, and the southern part of the present United States; while the English and French explored, claimed, and made unsuccessful attempts at settlement in the North.

Dates	Spanish Explorers and Rulers	Portuguese Explorers and Rulers	English Explorers and Rulers	European Events	Dates
1492	Ferdinand and Isabella, 1474-1516. 1492. CHRISTOPHER COLUMBUS, an Italian, supported by Ferdinand and Isabella, set sail from Palos, Spain (August 3), and discovered America (October 12), landing at one of the Bahamas, which he named San Salvador. During the following three months he visited the islands of Cuba and Hayti.	Emanuel I., the Great, 1469-1521.	Henry VII., 1485-1509	1492. End of the Moorish dominion in Spain. Death of Lorenzo de Medici, the "Magnificent" at Florence. 1494. Beginning of a series of Italian wars, lasting till 1539.	1492
1500	1498. Columbus made a THIRD voyage, discovering the island of Trinidad and the mainland of South America, near the mouth of the Orinoco River. 1499-1507. Amerigo Vespucci wrote a letter to a friend claiming to have discovered a part of the South American coast in 1499, and an account of this voyage was published. The new continent, therefore, was named after him by the German geographer Waldseemüller, who had read the account. 1502. Columbus made a FOURTH voyage. He explored the coast of Central America and Panama, returned to Spain discouraged and died four years later in the belief that he had discovered India by sailing west.	1499. VASCO DA GAMA DOUBLED THE CAPE OF GOOD HOPE AND REACHED INDIA. Another route to India was thus revealed. 1500. Cortereal, a Portuguese, explored the coast from Labrador to Nova Scotia.	1497. JOHN CABOT, an Italian in the service of Henry VII. of England discovered the coast of NORTH AMERICA, probably at Labrador. He was accompanied by his son, Sebastian. 1498. Sebastian Cabot, on a SECOND voyage, probably explored the Atlantic coast from Labrador to Carolina. These voyages were not followed by any attempt at colonization.	1499. The Swiss gain their independence from the Emperor Maximilian. 1502. Outbreak of war between France and Spain in Italy.	1500
1510	1512. PONCE DE LEON, seeking a legendary fountain of youth, DISCOVERED FLORIDA, so named because he landed on Easter Sunday, the Spanish "Feast of Flowers." 1513. BALBOA CROSSED THE Isthmus of Panama and discovered THE PACIFIC, which he took possession of, with its coast and islands, for Spain. Charles I. of Spain and Charles V. of Germany, Emperor. 1516-1556.	French Explorers and Rulers		1511. Pope Julius II. forms the Holy League against France and Spain. 1513. James IV. of Scotland invades England, and is killed at battle of Flodden Field. 1515. Wolsey appointed Chancellor by Henry VIII. of England. 1519. The German Empire, Spain, Netherlands, Two Sicilies and the Spanish Indies united under Charles V.	1510
1520	1519-1521. CORTEZ CONQUERED MEXICO for Spain. This conquest led to the establishment of Spain's Empire in the new world. The mines brought great wealth to Spain and formed the basis of Spanish prosperity in the following years. 1520. MAGELLAN, a Portuguese in Spain's service, discovered the strait named after him. He reached and named the PACIFIC OCEAN. 1521. Magellan discovered the PHILIPPINE ISLANDS. His followers, after his death, continued westward and completed the first circumnavigation of the globe in 1522.	Francis I., 1515-1547.	Henry VIII., 1509-1547.	1521. Beginning of the wars between Charles V. of Germany and Francis I. of France. 1527. Expulsion of the Medici from Florence.	1520
1530	1539. Coronado and a force of Spaniards marched northward from Mexico to Colorado and Kansas and discovered the GRAND CANYON OF THE COLORADO RIVER.	1524. VERRAZANO, sailing in the service of France, traced the American coast northward from Cape Fear, and discovered New York harbor. 1535. Cartier, in search of a northwest passage, ascended the St. Lawrence to Lachine Rapids and Mont Réal	1527. Captain John Rut explores the coast of North America.	1535. Henry VIII. of England assumes the title of supreme head of the Church in England.	1530

1540	De Soto, at the same time, led an army of about a thousand into northwest Florida. HE REACHED THE MISSISSIPPI in 1541.	(Montreal).			1540
1550		1541. Roberval and Cartier made an unsuccessful attempt to establish a French colony on the St. Lawrence.		1543. England enters into an alliance with Charles V. against France.	1550
1560	Philip II., 1556-1598.	Charles IX., 1560-1574. 1562. Jean Ribault establishes a Huguenot settlement at Port Royal.	Elizabeth 1558-1603.	1562. Beginning of the Huguenot wars.	1560
1570	1565. The Spaniards, under MENENDEZ, founded ST. AUGUSTINE, Florida.	1565. The Huguenot settlement destroyed by Menendez.	1576-1578. FROBISHER, in the interest of England, made three attempts to find a northwest passage to Asia. 1578. DRAKE explored the Pacific coast as far north as the state of Washington. He had previously doubled Cape Horn. He claimed the land for England.		1570
1580	1582. Spanish monks planted missions in New Mexico and Arizona.		1583. HUMPHREY GILBERT landed at St. John's, Newfoundland, and took possession of the country for England. 1584. SIR WALTER RALEIGH sent out an expedition under Captain Arthur Barlow. The expedition landed at Pamlico Sound and the region was named VIRGINIA in honor of Elizabeth. 1587. Raleigh despatched another expedition, consisting of two ships with one hundred and fifty men and women, to Roanoke Island. John White was the Governor. Virginia Dare, the first white child born in America, was born here.	1581. Declaration of independence by the Dutch. Queen Elizabeth was financially interested in many of the expeditions which followed, and she knighted most of the men who commanded expeditions. 1587. Execution of Mary, Queen of Scots. 1588. Battle of the Spanish Armada.	1580
1590	1598. A Spanish settlement was planted by ONATE near SANTA FE, New Mexico.	Henry IV., 1589-1610.	1602. GOSNOLD, an English merchant, made a settlement at Buzzard's Bay, R. I. James I., 1603-1625. 1603. Martin Pring enters the present harbor of Plymouth.	1595. France declares war against Spain.	1590
1600		1603. CHAMPLAIN entered the St. Lawrence. THE FRENCH OCCUPATION OF CANADA began with Champlain. His maps, reports, and settlements stimulated French enterprise. 1605. Champlain founded PORT ROYAL (Annapolis, N. S.), and sailed in an exploring expedition as far south as Cape Cod.		1604. Charles IX. ascends throne of Sweden. 1606. In England there was organized the VIRGINIA COMPANY for the purpose of establishing trading colonies in America.	1600

In England there was organized the VIRGINIA COMPANY for the purpose of establishing trading colonies in America.

II. THE COLONIAL PERIOD OF UNITED STATES HISTORY, INCLUDING ITS SETTLEMENT (1607 TO 1689); AND ITS CONSOLIDATION (1689 TO 1763)

The real history of the United States begins with this period. Within it the original Thirteen Colonies were established; New England and Virginia grew in influence and population; the Indian power in the East was subdued; the Colonies increased in strength and self-reliance, and the struggle between England and France for control of the New World was settled in favor of the English.

[630-633]

THE SOUTHERN COLONIES	NEW ENGLAND COLONIES	THE MIDDLE COLONIES	Progress and Population	ENGLISH AND EV
Virginia	Massachusetts	New York		1603-1625 James I 1603. United England Scotland
1607. The London Company made THE FIRST PERMANENT ENGLISH SETTLEMENT IN AMERICA, AT JAMESTOWN, VIRGINIA (MAY 13). Jamestown was named after the English King, James I.	1607. The Plymouth Company established a colony on the Kennebec River, in Maine under Sir Ferdinando Gorges. The colony failed.	1609. HENRY HUDSON, employed by the Dutch East India Company, SAILED UP THE HUDSON RIVER searching for a passage to the Indies. 1614. The DUTCH established trading stations on Manhattan Island and at Fort Orange (Albany) on the Hudson. They called their possessions NEW NETHERLAND.	1616. Tobacco first cultivated by the English in Virginia.	
1619. Virginia settlers establish the <i>FIRST REPRESENTATIVE ASSEMBLY IN AMERICA</i> , called <i>The House of Burgesses</i> . The FIRST SLAVES were sold in Virginia.	1620. The Pilgrim Fathers landed at Cape Cod November 11, and formed the FIRST SETTLEMENT IN NEW ENGLAND AT PLYMOUTH (December 22), under the FIRST REPUBLICAN FORM OF GOVERNMENT IN AMERICA.			
1622. An Indian attack was made on Jamestown.				
1624. Virginia was made into a <i>royal colony</i> .	1628. The permanent settlement of Massachusetts Bay Colony began by the settlement of SALEM under JOHN ENDICOTT.	New Hampshire 1623. First settlement on Piscataqua River, by John Mason.	New Jersey 1623. Ft. Nassau (now Gloucester, N. J.) established by the Dutch.	1625-1649 Charles
	1629-1640. The "Great Migration" of Puritans to Massachusetts.	1626. Peter Minuit, director-general of New Netherland, purchased Manhattan Island from the Indians for \$24.	Delaware 1627. Swaanendael (now Lewis, Del.) founded.	1627. War France, the Hug
	1630. BOSTON WAS FOUNDED by the English Puritans. The first general court in New England met there October 19.	1629. Establishment of the patroon system to encourage settlement in New Netherland.		
Maryland 1632. Lord Baltimore obtained a charter to Maryland. 1634. First permanent settlement made at St. MARY'S by CALVERT.	Connecticut 1633. Settled at Windsor by Pilgrims. 1633-1636. Colonization of Connecticut River valley. Rhode Island 1636. Roger Williams settles at Providence. 1638. Ann Hutchinson settled in Rhode Island. 1639. Newport founded.	1636. Wealthy colonists from Holland settle at Ft. Orange.	1636. First college in America founded by Massachusetts. Two years later it is named HARVARD in honor of John Harvard. 1639. First press in America set up at Cambridge. Stephen Daye was the printer, and THE FIRST	

1642-1652. William Berkeley governor of Virginia, which became a refuge for Cavaliers from England.			1641. Massachusetts Bay Colony adopted laws known as the <i>Body of Liberties</i> .			1640. Provisional government established at Dover.		1640. English settlements begun on Salem Creek.	AMERICAN BOOK was <i>The Bay Psalm Book</i> .	1640. Meeting of the Long Parliament.
		1645. Maryland Catholics and Virginia Puritans engaged in rebellion.								1642. Civil War begins.
1652. Puritan Commissioners with an army compelled Virginia to accept the rule of the Puritan Commonwealth.	Carolinas	1649. The Maryland Assembly passed a TOLERATION Act.					1647-1664. Peter Stuyvesant governor of New Netherland.			1645. Massachusetts established free schools supported by the State.
	1653. Settlement of ALBEMARLE, North Carolina, by Virginia pioneers.									1649. Execution of Charles I.
1660. The restoration of Charles II. in England brought about the return of Berkeley in Virginia. The restoration was welcomed by the Cavaliers of Virginia, but the Massachusetts Puritans delayed a year before proclaiming Charles king. A SECOND INFUX OF PURITAN IMMIGRANTS FOLLOWED THE RESTORATION.	1663. Carolina granted to a company of proprietors.	1661. Charles Calvert appointed governor.	1658. Massachusetts made it a capital offense for Quakers to return to the colony after expulsion.	1663. Charter granted to Rhode Island.	1662. Charter granted to Connecticut.			1655. The Swedish settlements on the Delaware conquered by the Dutch.		1661. Eliot's "Indian Testament" printed at Cambridge.
	1669. John Locke drafts a constitution for Carolina.									1660. Restoration of the Stuart monarchy.
1670. CHARLESTON, S. C., settled and territory divided into North and South Carolina.								1664. Delaware passes under English rule.		1660-1689. Charles II.
1676. BACON'S REBELLION broke out in Virginia.			1675. KING PHILIP'S WAR broke out in New England.				1670. Staten Island purchased from the Indians.	1664. New Jersey granted to Berkeley and Carteret.	1664. Eliot's "Indian Bible" printed at Cambridge.	1668. Trip alliance England Sweden Holland against France.
							Pennsylvania			
		1677. Maine became part of Massachusetts by purchase.							1676. Population of New England estimated at 60,000.	
						1680. New Hampshire declared a royal province.			1680. John Buckner brings a printing press to Virginia and prints the session laws.	
			1684. Massachusetts becomes a royal colony.				1683. First Assembly in New York under English rule.			1685-1689. James I.
			1686-1689. Andros governor of all New England by royal appointment.				1689-1690. Leisler's rebellion in New York.	1682. Delaware becomes part of Pennsylvania.		1688-1689. "Glorious Revolution" William and Mary.
1689-1697. KING WILLIAM'S WAR. The FIRST INTER-COLONIAL WAR. This marked the beginning of a contest which continued with little intermission until the downfall of French power in America.									1689. First American newspaper published in Boston; suppressed by Massachusetts government.	
			1691-1693. Salem witchcraft.							
									1692. THE COLLEGE OF WILLIAM AND MARY was established in Virginia.	
									1700. Population of colonies about 260,000.	
							1701. Penn granted a CHARTER OF PRIVILEGES to Pennsylvania which remained in force until 1776.		1701. YALE COLLEGE was established in Connecticut.	1701. War Spanish success.
1702-1714. QUEEN ANNE'S WAR. The SECOND INTER-COLONIAL WAR began between France and England. This war was confined mainly to the east; the French attacking New England, and the New Englanders retaliating.										
		1702. Joseph Dudley appointed governor.						1703. Delaware is made a separate colony.		1702. Queen Anne's War against Spain.
								1702. New Jersey becomes a royal province under the governor of New York.	1704. Appearance of "The Boston News Letter," the first newspaper in America.	
									1710. First post office in America at New York.	1714-1720. George I.
									1719. First Spinning-wheel and cultivation of potatoes introduced by the settlers of Londonderry, N. H.	1718. War Spain.
									1720. Tea begins	

1728. Boundary established between Virginia and North Carolina.	1721-1729. The Carolinas are royal colonies. 1729. North and South Carolina permanently divided into two provinces. Georgia 1733. Last of the thirteen original colonies settled by Oglethorpe at SAVANNAH. 1742. Spaniards attacked Georgia; defeated by Oglethorpe.	1729. BALTIMORE founded.		1728-1731. Final boundaries established with New York and Rhode Island.			1733. Treaty with the "Six Nations."	1733. Delaware boundaries defined after twenty years' litigation.	1736. Appearance of "The Virginia Gazette," first newspaper in the South.	1727-1760 George
1744-1748. KING GEORGE'S WAR. The THIRD INTER-COLONIAL WAR broke out between England and France. Louisburg was restored to France, much to the dissatisfaction of the New England colonists.		1742. Peter Faneuil builds "Faneuil Hall."	1734. Assembly meets for first time at Greenwich.	1740. Boundaries of New Hampshire determined.	1735. Zenger's trial and acquittal in New York, establishes freedom of the press.	1743. Sir George Clinton, governor.		1738. Separate charter granted to New Jersey.	1740. University of Pennsylvania founded. 1741. Moravians first settle in United States at Bethlehem.	1739. War Spain.
1753. GEORGE WASHINGTON was sent by Governor Dinwiddie to order the French out of the Ohio valley.	1749. First English ship reaches Georgia.	1753. The Potomac River explored to its source.	1749. Famous Indian treaty renewed at Falmouth.	1745. One thousand men sent against Louisburg.	1744. George Whitefield preaches in New Hampshire.		1746. Thomas and Richard Penn sole proprietors of Pennsylvania.	1750. Trenton public library founded.	1746. New Jersey College, afterwards PRINCETON. 1749. White population of the colonies 1,046,000. 1752. <i>English Bible</i> first printed in America. Franklin experiments in electricity.	1744. War between England France & Austria.
1754-1763. THE FRENCH AND INDIAN WAR. The FOURTH and LAST INTER-COLONIAL WAR broke out between the French and English, which was ended by THE TREATY OF PARIS in 1763.			1754. Providence library chartered.		1754. Convention at Albany to consider a colonial confederacy.				1754. King's College (now COLUMBIA), New York City, founded.	1756-1763 Seven Y. war.

THE SOUTHERN COLONIES	
Virginia	
1607. The London Company made THE FIRST PERMANENT ENGLISH SETTLEMENT IN AMERICA, AT JAMESTOWN, VIRGINIA (MAY 13). Jamestown was named after the English King, James I.	
1619. Virginia settlers establish the <i>FIRST REPRESENTATIVE ASSEMBLY IN AMERICA</i> , called <i>The House of Burgesses</i> . The FIRST SLAVES were sold in Virginia.	
1622. An Indian attack was made on Jamestown.	
1624. Virginia was made into a <i>royal colony</i> .	
1642-1652. William Berkeley governor of Virginia, which became a refuge for Cavaliers from England.	
1652. Puritan Commissioners with an army compelled Virginia to accept the rule of the Puritan Commonwealth.	
1660. The restoration of Charles II. in England brought about the return of Berkeley in Virginia. The restoration was welcomed by the Cavaliers of Virginia, but the Massachusetts Puritans delayed a year before proclaiming Charles king. A SECOND INFUX OF PURITAN IMMIGRANTS FOLLOWED THE RESTORATION.	
1676. BACON'S REBELLION broke out in Virginia.	
1689-1697. KING WILLIAM'S WAR. The FIRST INTER-COLONIAL WAR. This marked the beginning of a contest which continued with little intermission until the downfall of French power in America.	
1702-1714. QUEEN ANNE'S WAR. The SECOND INTER-COLONIAL WAR began between France and England. This war was confined mainly to the east; the French attacking New England, and the New Englanders retaliating.	
1728. Boundary established between Virginia and North Carolina.	
1744-1748. KING GEORGE'S WAR. The THIRD INTER-COLONIAL WAR broke out between England and France. Louisburg was restored to France, much to the dissatisfaction of the New England colonists.	
1753. GEORGE WASHINGTON was sent by Governor Dinwiddie to order the French out of the Ohio valley.	
1754-1763. THE FRENCH AND INDIAN WAR. The FOURTH and LAST INTER-COLONIAL WAR broke out between the French and English, which was ended by THE TREATY OF PARIS in 1763.	
	Maryland
	1632. Lord Baltimore obtained a charter to Maryland. 1634. First permanent settlement made at ST. MARY'S by CALVERT.
	1645. Maryland Catholics and Virginia Puritans engaged in rebellion. 1649. The Maryland Assembly passed a TOLERATION Act.
	Carolinas

HISTORY OF THE UNITED STATES

[634]

When first visited by Europeans, the country now comprised within the United States was exclusively inhabited by the race commonly called American Indians.

Period of Discovery.—According to the Scandinavian sagas, Leif, a Norwegian, sailed about 1001 from Iceland for Greenland, but was driven southward by storms till he reached a country called Vinland, which is supposed to have been Rhode Island or some other part of the coast of New England.

It is possible that some vague rumors of the Norse journeys had come to Christopher Columbus when he set out on Friday, August 3, 1492, to discover the western route to India. He sighted one of the Bahama Islands on October 12, and landed the following day. After cruising about for some time, he returned to Spain. He made in all four voyages to the New World for treasure-getting and discovery. His discoveries, it should be remembered, did not extend to the territory now occupied by the United States, but were confined to certain of the West India Islands, and parts of Central, and possibly, South America. (See further, under [Outlines of American History](#).)

Among the earliest of his followers was Amerigo Vespucci, who in 1497-1498 explored the coasts of the Gulf of Mexico, and who has given his name to the whole continent.

In 1497, about five years after the discovery of America by Columbus, John Cabot sailed westward from Bristol, England, and on June 24 discovered land (Labrador), along which he coasted to the southwest nearly one thousand miles. In 1498 his son, Sebastian Cabot, sailed from the same port in search of a northwest passage to China, but finding the ice impenetrable, he turned to the south and coasted as far as Chesapeake Bay.

In 1513 the Spaniard Ponce de Leon discovered Florida. In 1539 took place the expedition of the Spaniard De Soto, who in the course of two years penetrated overland from Tampa Bay on the west coast of Florida to a point two hundred miles beyond the Mississippi.

FOREFATHERS' ROCK, PLYMOUTH, MASS.

Plymouth is of abiding interest as the landing place of the Pilgrim Fathers (December 21st, 1620) and the site of the first settlement in New England. Pilgrim Hall contains numerous interesting relics of the Pilgrims, paintings of their embarkation and landing, old portraits, etc. North Street leads to the so-called Plymouth Rock, a granite boulder enclosed by a railing and covered with a canopy. This, however, is only a fragment (broken off in 1774) of the flat rock where the Pilgrims landed, which lies nearer the sea and is now covered by a wharf. Cole's Hill, opposite the rock, was the burial-place of the early settlers (1620-1621). Leyden Street was the site of the first house. From the Town Square a path ascends to the right to the ancient Burial Hill, with the graves of many of the early settlers, including Governor Bradford. A fortified church was erected here in 1622. To the south is Watson's Hill, where the Pilgrims made a treaty with Massasoit in 1621. The National Monument to the Pilgrims, consisting of a granite pedestal forty-five feet high, surmounted by a figure of Faith, thirty-six feet high, and surrounded by seated figures twenty feet high, representing Law, Morality,

Freedom and Education is about one-fourth mile from the railway station, on Allerton Street. The three hundredth anniversary of the landing of the Pilgrims will be elaborately celebrated here in 1920.

Period of Settlement.—In 1565 the Spaniards founded St. Augustine, the first permanent settlement in the United States. In 1585 an expedition sent by Sir Walter Raleigh made a settlement on Roanoke Island, N. C., which failed. In 1607 the English founded Jamestown on James River, Virginia, their first permanent settlement.^[11] The master spirit of this enterprise was Captain John Smith, Plymouth, Mass., was founded in 1620 by the "Pilgrim Fathers," a body of Puritans led by John Carver and others, who sailed from England in the Mayflower. Salem was settled by John Endicott in 1628. In 1630 John Winthrop settled Boston. In 1692 Plymouth colony was united to Massachusetts. Portsmouth and Dover, in New Hampshire, were settled in 1623. The first permanent English settlements in Maine were made about the same time. These settlements ultimately fell under the jurisdiction of Massachusetts. Connecticut was colonized in 1635-1636 by emigrants from Massachusetts, who settled at Hartford, Windsor, and Wethersfield. Rhode Island was first settled at Providence in 1636 by Roger Williams. In 1623 permanent settlements were made by the Dutch at Fort Orange (now Albany) and at New Amsterdam on the present site of New York. The Swedes settled on the Delaware in 1638, and were expelled in 1655 by the Dutch army. The English seized New Amsterdam in 1664, and with it the whole of New Netherland, which they named New York from the Duke of York, to whom it had been granted by Charles II. New Jersey at this time acquired its distinctive name. In 1681 the territory west of the Delaware was granted to William Penn, who colonized it chiefly with Friends or Quakers, and founded Philadelphia in 1682. Maryland was settled in 1634 by Roman Catholics sent out by Lord Baltimore. The first permanent settlement in North Carolina appears to have been made about 1663, on Albemarle Sound, by emigrants from Virginia. The first permanent settlement in South Carolina was made in 1670 by colonists from England on the Ashley River, near the site of Charleston, which began to be settled about the same time. Georgia was settled by General James Oglethorpe, who in 1733 founded Savannah.

[635]

[11] Jamestown is seven miles from Williamsburg, formerly the ancient capital of Virginia and seat of the colonial governor. The only remains of the ancient town are the tower of the church (in which Pocahontas was married in 1614; church itself rebuilt in 1907) and a few tombstones.

How Europe First Divided the American Colonies.—It will thus be seen that what is now the territory of the United States has been derived from six European nations. Resting on the discovery by Columbus and the bulls of the popes, Spain claimed the whole continent, but has been in actual possession only of the Gulf coast from Florida to Texas, and of the interior from the Mississippi to the Pacific. The Swedes once had settlements on the Delaware. The Dutch, following up the voyage of Hudson to the river bearing his name, claimed and held the country from the Delaware to the Connecticut. The French discovered the St. Lawrence and explored and held military possession of the valleys of the Mississippi and Ohio and the Great Lakes. The English, by virtue of the voyages of the Cabots, claimed the Atlantic coast, and there founded the colonies which grew into the thirteen United States.

In the course of the struggle, sometimes peaceful, often bloody, by which the rule of these nations has been thrown off, the Dutch conquered the Swedes; the English conquered the Dutch and the French; the United States expelled the English, and in time, by purchase or conquest, drove out the Spaniards and the Mexicans.

Struggle of England and France for America.—The first serious struggle for possession occurred in the middle of the eighteenth century, when the English, moving westward, met the French moving eastward at the source of the river Ohio. In that struggle, which has come down to us as the "French and Indian war," France was worsted, and, retiring from this continent, divided her possessions between England and Spain. To England she gave Canada and the islands and shores of the Gulf of St. Lawrence, and, entering what is now the United States, drew a line down the middle of the Mississippi River, and gave all to the east of that line (save the island on which is the city of New Orleans) to Great Britain, and all to the west of it to Spain; Spain at the same time gave Florida to England as the price of Cuba.

Oppression of the Colonies under British Rule.—Having thus come into possession of all the country to the east of the Great River, King George determined to send out an army of ten thousand men to defend the colonies, and have the latter bear a part of the expense. This part he attempted to collect by duties on goods imported, and by a Stamp Tax (1765) on legal documents and printed matter. No tax for revenue had before been laid on America by act of Parliament. The colonists, therefore, resisted this first attempt, and raising the cry, "No taxation without representation," they forced Parliament to repeal the Stamp Tax in 1766. The right to tax was at the same time distinctly asserted, and in 1767 was again used, and duties laid on paints, oils, lead, glass, and tea. Once more the colonists resisted, and, by refusing to import any goods, wares, or merchandise of English make, so distressed the manufacturers of England that Parliament repealed every tax save that on tea. All the tea needed in America was now smuggled in from Holland. The East India Company, deprived of the American market, became embarrassed, and, calling on Parliament for aid, was suffered to export tea, a privilege never before enjoyed.

Selecting commissioners in Boston, New York, Philadelphia, and Charleston, cargoes of tea were duly consigned to them by the East India Company; but the people agreed not to buy any of this tea or allow it to be sold. At Boston men disguised as Indians boarded the tea ships, overcame the guards, and destroyed the tea by throwing the boxes into the harbor. This has gone down in history as the "Boston Tea Party."

The Continental Congress and the Revolution.—As a punishment for this, Parliament shut the port of Boston and deprived the people of Massachusetts of many functions of local government. The Assembly of Massachusetts thereupon called for a General Congress to meet at Philadelphia on September 5, 1774. The colonies gladly responded and this congress, having issued a Declaration of Rights and Addresses to the king, to Parliament, and to the people of England, adjourned to await the result.

The day for the reassembling of Congress was May 10, 1775; but, before that day came, the attempt of General Gage to seize military stores brought on a fight at Lexington, April 19, 1775. The fight at Lexington was followed by the siege of the British in Boston, by the formation of the "Continental Army," by the appointment of George Washington to command it, by the battle of Bunker Hill, June 17, 1775, and by an expedition against Quebec, which came to naught, on the last day of the year.

General William Howe meantime had succeeded Gage in command of the British at Boston, and, finding himself hard pressed by Washington, evacuated the city and sailed for Halifax. Believing New York was to be attacked, Washington now hurried to Long Island, where, August 27, 1776, Howe defeated him, took possession of New York, and drove him first up the Hudson and then southward across New Jersey.

American Independence Declared.—Congress, which, July 4, 1776, at Philadelphia, had declared the colonies to be free and independent states, now fled from that city to Baltimore. But Washington, turning in his retreat, surprised and captured the British outpost at Trenton. Cornwallis instantly hurried toward that town, but Washington, passing around the British rear, attacked and captured at Princeton, January 3, 1777, a detachment on its march to Trenton, and then went into winter quarters at Morristown.

[636]

With the return of spring Howe, finding that he could not reach Philadelphia by land without passing in front of the Continental army stretched out on a strongly entrenched line across New Jersey, went by sea. Washington met him at Chadd's Ford on the Brandywine, was defeated, and on September 25, 1777, Howe entered Philadelphia. In the attempt to dislodge him Washington fought and lost the battle of Germantown, October 4, 1777; the loss of Philadelphia was more than made good by the capture of Burgoyne and his army at Saratoga, October 17, 1777, while on his way from Canada to New York City.

The fruits of this victory were the recognition of the independence of the United States by France, the treaty of alliance with France, February 8, 1778, and the evacuation of Philadelphia by General Clinton, who had succeeded Howe. Washington, who had spent the winter at Valley Forge, instantly followed, and overtaking Clinton at Monmouth fought and won the battle at that place, June 29, 1778. Clinton escaped to New York, and Washington, drawing his army in a circle about the city from Morristown on the south to West Point on the north, awaited further movements.

PRINCIPAL CAMPAIGNS AND BATTLES OF THE AMERICAN REVOLUTION

The leading battles are indicated in **bold-face**; successful commanders in *italics*

Names, Dates and Places of Campaigns and Battles	Commanders		Engaged	
	American	British	Amer.	British
1775-1776				
Campaign in New England				
Lexington, Concord (April 19, 1775)	Barret and Butterick	<i>Smith and Lord Percy</i>	...	1,700
Ticonderoga (May 10, 1775)	<i>Ethan Allen and Eaton</i>	Delaplace	83	48
Bunker Hill (June 17, 1775)	Warren, Prescott and Putnam	<i>Howe and Pigot</i>	3,000	4,500
Quebec (December 6-31, 1775)	Schuyler, Montgomery and Arnold	<i>M'Lean and Carleton</i>	900	1,200
Norfolk, Va. (Dec. 9, 1775)	Woodford	Lord Dunsmore
Boston (March 17, 1776)	The British evacuate the city and harbor.	
Charleston (Ft. Moultrie) (June 28, 1776)	<i>Moultrie, Lee and Armstrong</i>	Clinton	400	4,000
1776-1778				
Campaign in Middle States				
Brooklyn, L. I. (Aug. 26, 1776)	Green and Sullivan	<i>Howe, Clinton, and Cornwallis</i>	10,000	20,000
Harlem Plains, N. Y. (Sept. 16, 1776)	Washington
White Plains, N. Y. (Oct. 28, 1776)	Washington	<i>Howe</i>	1,600	2,000
Fort Washington, N. Y. (Nov. 16, 1776)	Magaw	<i>Howe</i>	3,000	5,000
Trenton, N. J. (Dec. 26, 1776)	<i>Washington</i>	Lord Cornwallis and Rahl	2,400	1,000
Princeton, N. J. (Jan. 3, 1777)	<i>Washington</i>	Mawhood	3,000	1,800
Bennington, Vt. (Aug. 15, 16, 1777)	<i>Stark and Warner</i>	Baum and Beyman	...	1,200
Brandywine, Pa. (Sept. 11, 1777)	Washington	<i>Howe</i>	11,000	18,000
Bemis Heights, N. Y. (Sept. 19, 1777)	<i>Gates</i>	Burgoyne	2,500	3,000
Germantown, Pa. (Oct. 4, 1777)	Washington	<i>Howe</i>	11,000	15,000
Stillwater (Saratoga) (Oct. 7, 1777)	<i>Gates</i>	Burgoyne	8,000	6,000
Monmouth, N. J. (June 28, 1778)	<i>Washington</i>	Sir Henry Clinton	12,000	11,000
1778-1781				
Campaign in the South				
Savannah, Ga. (Dec. 29, 1778)	Robert Howe	<i>Campbell</i>	900	2,000
Brier Creek, Ga. (Mar. 3, 1779)	Ashe	<i>Prevost</i>	1,200	1,800
Stony Point, N. Y. (July 16, 1779)	<i>Wayne</i>	Clinton	1,200	600
Chemung, N. Y. (Aug. 29, 1779)	<i>Sullivan</i>	Brant	4,000	1,500
Savannah, Ga. (Oct. 9, 1779)	Lincoln	<i>Prevost</i>	4,500	2,900
Charleston, S. C. (May 12, 1780)	Lincoln	<i>Clinton</i>	3,700	9,000
Camden, S. C. (Sanders Creek) (Aug. 15, 1780)	Gates	<i>Cornwallis</i>	3,000	2,200
King's Mountain, S. C. (Oct. 7, 1780)	<i>Campbell</i>	Ferguson	900	1,100
Cowpens, S. C. (Jan. 17, 1781)	<i>Morgan</i>	Cornwallis and Tarleton	900	1,100
Guilford C. H., N. C. (Mar. 15, 1781)	Greene	<i>Cornwallis</i>	4,400	2,400
Hobkirk's Hill, S. C. (April 25, 1781)	Greene	<i>Rawdon</i>	1,200	900
New London, Conn., Fort Griswold (Sept. 6, 1781)	Ledyard	<i>Benedict Arnold and Eyre</i>	150	800
Eutaw Springs, S. C. (Sept. 8, 1781)	<i>Greene</i>	Lord Rawdon	2,000	2,800
Yorktown, Va. (Oct. 17-19, 1781)	<i>Washington</i>	Cornwallis	16,000	7,500

Treason of Arnold and Execution of André.—Turning towards the Southern states, the British commander now dispatched an expedition which took Savannah and overran the State of Georgia. The year which followed (1779) is memorable for the capture of Stony Point by Anthony Wayne; for the treason of Benedict Arnold; for the execution of Major John André; for the capture of the "Serapis" by Paul Jones after one of the most desperate naval battles on record, and by the failure of an attempt by the Americans to retake Savannah. In 1780 Clinton led an expedition from New York to Charleston, took the city, swept over South Carolina, and, leaving Cornwallis in command, hurried back to New York. Gates, who now attempted to dislodge the British, was beaten. Greene now succeeded Gates, and Morgan, the commander of his light troops, won the battle of the Cowpens, January 17, 1781. This victory brought up Cornwallis, who chased Greene across the State of North Carolina to Guilford Court House, where Greene was beaten and Cornwallis forced to retreat to Wilmington. Moving southward, Greene was again beaten in two pitched battles, but forced the British to withdraw within their lines at Charleston and Savannah.

[637]

Cornwallis meantime moved from Wilmington into Virginia and took possession of Yorktown. And now Washington, who had long been watching New York, again took the offensive, hurried across New Jersey and Pennsylvania, and, while a French fleet closed the Chesapeake Bay, he besieged Cornwallis by land, till, October 19, 1781, the British general surrendered. This practically ended the war.

The treaty of peace, at Paris, in 1783, actually ended it, secured the independence of the United States, and fixed her boundaries, roughly speaking, as the Atlantic Ocean

on the east, the Mississippi on the west, New Brunswick, the St. Lawrence, and the Great Lakes on the north, and the parallel of thirty-one degrees on the south.

Articles of Confederation and their Weakness.—While the war was still raging Congress had framed an instrument of government, which the states ratified and put in force on March 1, 1781. This instrument of government which bound the thirteen states in perpetual union was known as the Articles of Confederation, and established a government as bad as any yet devised by man. There was no executive, no judiciary, and only the semblance of a legislature. The Congress consisted of not more than seven nor less than two delegates from each state; sat in secret session; was presided over by a president elected from its own members; and could not pass any law unless the delegates of nine states assented. It could wage war, make treaties, and borrow money; but it could not lay a tax of any kind whatsoever; nor regulate commerce between the states, or with foreign powers; and was dependent entirely on the liberality of the states for revenues. This defect proved fatal. Inability to regulate foreign commerce by duties stripped the country of its specie. Lack of specie forced the states to issue paper money. Paper money was followed by tender acts and force acts, and in some places by a violent stoppage of justice to the debtor class. A commercial and financial crisis followed and the people of the states, reduced to desperation, gladly acceded to a call for a national trade convention, which met in Philadelphia in May, 1787. The instructions of the delegates bade them suggest amendments to the Articles of Confederation. But the convention, considering the Articles too bad to be mended, framed the Constitution, which the people, acting through conventions in the various states, ratified during 1787 and 1788.

Adoption of the Constitution and Organization of Parties.—On March 4, 1789, the Constitution became the supreme law of the land. In the first Congress no trace of party lines is visible. But the work of establishing government had not gone far when differences of opinion sprang up; when the cry of partial legislation was raised, and the people all over the country began to divide into two great parties—those who favored and those who opposed a liberal construction of the language of the Constitution and the establishment of a strong national government.

The friends of national government took the name of Federalists, and under the lead of Alexander Hamilton, who as Secretary of the Treasury marked out the financial policy of the administration, they funded the foreign and domestic debt occasioned by the war for independence, assumed the debts incurred by the states in that struggle, set up a national bank with branches, and laid a tax on distilled liquors.

Each one of these acts was met with violent opposition, as designed to benefit a class, as unconstitutional, and as highly detrimental to the interests of the South. Against the Federalists were now brought charges of a leaning towards monarchy and aristocracy. Great Britain, it was said, has a funded debt, a bank, and an excise. These things are, therefore, monarchical institutions. But the Federalists have introduced them into the United States. The Federalists, therefore, are aristocrats, monarchists, and monopolists.

Of all who believed these charges, none believed them more sincerely than Thomas Jefferson, Secretary of State. Seeing in these acts a wide departure from the true principles of democracy, he set himself to work to organize a party of opposition, and was soon looked up to as the recognized leader of the Federal Republicans.

Hardly had the two parties thus been called into existence by difference of opinion on questions of home affairs, when they were parted yet more widely, and the dispute between them intensely embittered by questions of foreign affairs.

Effect of the French and English Affairs Upon the New Nation.—In 1793 the French Republic declared war against England, and sent a minister to the United States. As the United States was bound to France by the treaty of alliance and by a treaty of amity and commerce, and was not bound to Great Britain by any commercial treaty whatever, it seemed not unlikely that she would be dragged unwillingly into the war. But Washington, with the advice of his secretaries, proclaimed neutrality, and from that time every Republican was the firm friend of France and every Federalist the ally of England. Then began a seven years' struggle for neutrality. France threw open her colonial ports to neutral commerce; Great Britain asserting the "Rule of the War of 1756," a rule prescribing that no neutral should have in time of war a trade it did not have in peace, declared this trade was contraband, and seized the ships of the United States engaged in it. The Republicans denounced neutrality and attempted to force a war. The Federalists in alarm dispatched John Jay, the Chief Justice, to London, with offers of a commercial treaty. England responded and on February 29, 1796, the first treaty of amity and commerce between her and the United States became law. At this France took offense, rejected the new minister (C. C. Pinckney) from the United States, and drove him from her soil, suspended the treaties, insulted a special commission (sent out in the interest of peace), with demands for bribes and tribute, and almost brought on war.

Never since the days of Bunker Hill had the country been so stirred as this act of the French Directory stirred it in the summer of 1798. Then was written our national song, "Hail Columbia." Then was established the department of the navy. Then, under the cry, "Millions for defense; not a cent for tribute," went forth that gallant little fleet which humbled the tri-color in the West Indies and brought France to her senses.

Causes and Events of the War of 1812.—With the elevation of Napoleon to the First Consulship came peace in 1800. In that same year the Federalists fell from power, never to return. Once in power, the Republicans began to carry out the principles they had so long preached. They reduced the national debt; they repealed the internal taxes. They sold the navy; boldly assaulted the Supreme Court; and in 1811, when the charter of the National Bank expired, refused to renew it. Their doctrine of strict construction, however, was ruined, when, in 1803, they bought the Province of Louisiana from France and added to the public domain that splendid region which lies between the Mississippi and the Rocky Mountains.

At that moment it seemed as if the people were about to enter on a career of unwonted prosperity. But Napoleon suddenly made war on England, and by 1806 the United States was involved in a desperate struggle of nine years, both with France and England, for commercial independence. Great Britain searched our ships, impressed our sailors, violated the neutrality of our ports, and by the decisions of her admiralty courts and by orders in council sought to ruin our neutral commerce with Europe, unless carried on through her ports and under her license. Napoleon attacked us with his decrees of Berlin and Milan, and sought to ruin our neutral commerce with England. The United States retaliated by means of the embargo and non-intercourse, and, in 1812, declared war.

CAMPAIGNS AND BATTLES OF THE WAR OF 1812-1815

Principal Land Battles

1812.—August 16, the surrender of Detroit by Hull to Brock.

October 13, defeat of Van Rensselaer by Brock at Queenstown.

1813.—January 18-22, the Americans were defeated at Frenchtown by General Proctor, whose Indians massacred the wounded Americans.

April 27, York (Toronto) was captured by the Americans under General Pike.

October 5, General Harrison forced General Proctor to retreat into Canada, and October 5 at the battle of the Thames routed the British and their Indian allies. Tecumseh was killed, the territory lost by Hull regained, and Upper Canada was retained to the end of the war.

November 11, the Americans moved on Montreal, but were defeated at Chryslers Field, and retreated.

1814.—July 25, Winfield Scott again invaded Canada and gained victories at Chippewa (July 5) and at Ludly's Lane.

August 24, capture of Washington and burning of the Capitol, the White House, and other buildings.

1815.—January 8, a large body of English veterans were landed in Louisiana, and attacked New Orleans; in this battle, which took place before the news of the treaty of peace reached the combatants, Jackson won a decisive victory.

Principal Naval Battles

1812.—August 19, the *Constitution* destroys the British *Guerriere*, in the Gulf of St. Lawrence.

October 18, the American *Wasp* captures the *Frolic*.

October 25, Captain Decatur in the *United States* took the *Macedonian*.

December 29, the *Constitution* captures the *Java*.

1813.—February 24, the American *Hornet* captures the *Peacock*.

June 1, the *Chesapeake* is captured by the British *Shannon*.

September 10, Commodore Perry with a fleet of nine vessels destroys the British squadron of six vessels on Lake Erie.

1814.—September 3, naval attack on Fort McHenry by the British fails.

September 11, Captain Macdonough, on Lake Champlain, completely defeated a British fleet stronger than his own; this checked a serious invasion of the enemy.

Treaty and Results of the War

December 24, 1814, a treaty of peace was made at Ghent, the end of the Napoleonic wars having removed the cause for England's offensive policy at sea.

The provisions included:

- (1) A return of captured territory.
- (2) Nothing was said about impressment.
- (3) No compensation was secured by the Americans for ships captured previous to 1812.

The results of the war were:

- (1) An increase of debt.
- (2) An outburst of national patriotism.
- (3) The removal of America from participation in European politics.
- (4) The development of manufacturing.
- (5) The establishment of the protective tariff policy.

With the Cessation of Hostilities Another Epoch in Our History Begins.—From the day when Washington proclaimed neutrality in 1793, to the day when the people celebrated, with bonfires and with fireworks, and with public dinners, the return of peace, in 1815, the political and industrial history of the United States is deeply affected by the political history of Europe. It was questions of foreign policy, not of domestic policy, that divided the two parties, that took up the time of Congress, that raised up and pulled down politicians. But after 1815 foreign affairs sank into insignificance, and for the next thirty years the history of the United States is the history of political and economic development of the country to the east of the Mississippi River.

Fall of the Federalists, or Pro-British Party.—The opposition which the Federalists made to the war completed their ruin. In 1816 for the last time they put forward a presidential candidate, carried three states out of nineteen, and expired in the effort. During the eight years of Monroe's administration (1817-1825) but one great and harmonious party ruled the political destinies of the country. This remarkable period has come down to us in history as the "era of good feelings." It was indeed such an era, and so good were the feelings that in 1820 when Monroe was re-elected no competitor was named to run against him. Every state, every electoral vote save one was his. Even that one was his. But the elector who controlled it threw it away on John Quincy Adams lest Monroe should have the unanimous vote of the presidential electors, an honor which has been bestowed on no man save Washington.

Rise of the Protective Tariff Policy.—In the midst of this harmony, however, events were fast ripening for a great schism. Under the protection offered by the commercial restrictions which began with the embargo and ended with the peace, manufactures had sprung up and flourished. If they were to continue to flourish they must continue to be protected, and the question of free trade and protection rose for the first time into really national importance.

The rush of population into the West led to the admission of Indiana (1816), Mississippi (1817), Illinois (1818), Alabama (1819), and Missouri (1820) into the Union, and brought up for serious discussion the uses to be made of public lands lying within them.

The steamboat, which had been adopted far and wide, had produced a demand for some improved means of communication by land to join the greater water highways of the country and opened the era of internal improvements.

The application of Missouri for admission into the Union brought up the question of the admission of slavery to the west of the Mississippi. A series of decisions of the Supreme Court, setting aside acts of the state legislatures, gave new prominence to the question of state rights.

A Decade of Great Political Contests.—The Missouri question was settled by the famous Compromise of 1820 (the first great political compromise), which drew the line thirty-six degrees thirty minutes from the Mississippi to the hundredth meridian, and pledged all to the north of it, save Missouri, to freedom. But the others were not to be settled by compromise, and in the campaign of 1824 the once harmonious Republican party was rent in pieces. Each of the four quarters of the Republic put a candidate in the field and "the scrub-race for the presidency" began.

The new manufacturing interests of the East put forward John Quincy Adams. The West, demanding internal improvements at public expense, had for its candidate Henry Clay. William H. Crawford of Georgia (nominated by a caucus of Congressmen) represented the old Republican party of the South. Andrew Jackson of Tennessee stood for the new Democracy, for the people, with all their hatred of monopolies and class control, their prejudices, their half formed notions, their violent outbursts of feeling.

Behind none of them was there an organized party. But taking the name of "Adams men" and "Clay men," "Crawford men" and "Jackson men," the friends of each entered the campaign and lost it. No candidate secured a majority of the electoral college, and the House of Representatives chose John Quincy Adams.

The Triumph of Democracy and Industrial Expansion.—Under the administration of Adams (1825-1829) the men who wished for protection and the men who wished for internal improvements at government expense united, took the name first of National Republicans, and then of Whigs, and, led on by Henry Clay and Daniel Webster, carried through the high protection tariffs of 1828 and 1832. The friends of Jackson and Crawford took the name of Democrats, won the election of 1829, and during twelve years governed the country.

In the course of these years the population of the United States rose to seventeen million, and the number of states to twenty-six. Steam navigation began on the ocean; two thousand miles of railroad were built in the land; new inventions came into use; and the social and industrial life of the people was completely revolutionized. The national debt was paid; a surplus accumulated in the Treasury; the sale of public lands rose from three million dollars in 1831 to twenty-five million dollars in 1836; and the rage for internal improvements burned more fiercely than ever. A great financial panic spread over the country; the charter of the National Bank expired, a hundred "wild-cat banks" sprang up to take its place, and the question of the abolition of slavery became troublesome.

Early Troubles in Our System of Public Finance.—On the great questions which grew out of this condition of affairs the position of the two parties was well defined. The Democrats demanded a strict construction of the Constitution; no internal improvements at public expense; a surrender of the public lands to the state in which they lay; no tariff for protection; no National Bank; no agitation of the question of the abolition of slavery; the establishment of subtreasuries for the safe keeping of the public funds, and

[638]

[639]

[640]

the distribution of the surplus revenue. The Whigs demanded a recharter of the National Bank; a tariff for protection; the expenditure of the surplus on internal improvements; the distribution of the money derived from the sale of public lands; a limitation of the veto power of the President; and no removals from office for political reasons.

The Democrats, true to their principles, and having the power, carried them out. They destroyed the Bank; they defeated bill after bill for the construction of roads and canals; they distributed thirty-eight million dollars of the surplus revenue among the states, and by the cartage of immense sums of money from the East to the far distant West, hastened that inevitable financial crisis known as the "panic of 1837."

Andrew Jackson had just been succeeded in the presidency by Martin Van Buren (1837-1841) and on him the storm burst in all its fury. But he stood it bravely, held to a strict construction of the Constitution, insisted that the panic would right itself without interference by the Government, and stoutly refused to meddle. Since the refusal of Congress to recharter the Bank of the United States, whose charter expired in 1836, the revenue of the Government had been deposited in certain "pet banks" designated by the Secretary of the Treasury. Every one of them failed in the panic of 1837. Van Buren therefore recommended "the divorce of Bank and State," and after a struggle of three years his friends carried the "subtreasury" scheme in 1840. This law cast off all connection between the state banks and the Government, put the collectors of the revenue under heavy bonds to keep the money safely till called for by the Secretary of the Treasury, and limited payments to or by the United States to specie.

National Conventions and Rise of Slavery Issue.—The year 1840 was presidential year, and is memorable for the introduction of new political methods; for the rise of a new and vigorous party; and for the appearance of a new political issue. The new machinery consisted in the permanent introduction of the national convention for the nomination of a president, now used by the Democrats for the second time, and by the Whigs for the first; in the promulgation of a party platform by the convention, now used by the Democrats for the first time; and in the use of mass meetings, processions, songs, and all the paraphernalia of a modern campaign by the Whigs.

The new party was the Liberty Party, and the new issue the "absolute and unqualified divorce of the general Government from slavery, and the restoration of equality of rights among men." The principles of that party were: slavery is against natural right, is strictly local, is a state institution, and derives no support from the authority of Congress, which has no power to set up or continue slavery anywhere; every treaty, every act, establishing, favoring, or continuing slavery in the District of Columbia, in the territories, on the high seas, is, therefore, unconstitutional.

The Short-lived Era of the Whigs.—The candidate of this party was James Gillespie Birney. The Democrats nominated Martin Van Buren. The Whigs put forward William Henry Harrison and elected him. Harrison died one month after his inauguration, and John Tyler, the Vice-President and a Democrat of the Calhoun wing, became President.

The Whig policy as sketched by Clay was the repeal of the Subtreasury Act; the charter of a National Bank; tariff for protection; and the distribution of the sales of public lands. To the repeal of the Subtreasury Act Tyler gladly assented. To the establishment of a bank even when called "Fiscal Corporation," he would not assent, and, having twice vetoed such bills, was read out of the party by a formal manifesto issued by Whig congressmen.

It mattered little, however, for the question of the hour was not the bank, nor the tariff, nor the distribution of the sales of lands, but the annexation of the republic Texas. Joined to the demand for the reoccupation of Oregon, it became the chief plank in the Democratic platform of 1844. The Whig platform said not a word on the subject, and the Liberty Party, turning with loathing from the cowardice of Clay, voted again for Birney, gave the State of New York to the Democrats, and with it the presidency.

The Annexation of Texas, and Wilmot Proviso.—Accepting the result of the election as "instruction from the people," Congress passed the needed act and Tyler in the last hours of his administration declared Texas annexed.

The boundary of the new state was ill-defined. Texas claimed to the Rio Grande. Mexico would probably have acknowledged the Nueces River. The United States attempted to enforce the claim of Texas, sent troops to the Rio Grande, and so brought on the Mexican war.

At the close of the Mexican war the boundary of the United States was carried south from forty-two degrees to the Gila River, and what is now California, Nevada, Arizona, New Mexico, Utah, and more than half of Wyoming and Colorado were added to the public domain. While the war was still raging, Polk, who had succeeded Tyler, asked for two million dollars to aid him in negotiating peace. Well knowing that the money was to be used to buy land from Mexico, David Wilmot moved in the House of Representatives that from all territory bought with the money slavery should be excluded. This was the famous Wilmot proviso. It failed of adoption and the territory was acquired in 1848, with its character as to slavery or freedom wholly undetermined.

The Preliminary Struggle over the Slave Problem.—And now the old parties began to break up. Democrats who believed in the Wilmot proviso, and Whigs who detested the annexation of Texas, the war with Mexico, and the extension of slavery went over in a body to the Liberty Party, formed with it the Free-soil Party, nominated Martin Van Buren, and gave him three hundred thousand votes. In their platform they declared that Congress had no more power to make a slave than to make a king; that they accepted the issue thrust on them by the South; that to the demand for more slave states and more slave territories they answered, no more slave states, no more slave territories; and that on their banner was inscribed "Free Soil, Free Speech, Free Labor, and Free Men." As the defection of Whigs to the Liberty Party in 1844 gave New York state to the Democrats and elected Polk, so the defection of Democrats to the Free Soilers in 1848 gave New York to the Whigs and elected Taylor. As Harrison, the first Whig president, died one month after taking office, so Taylor, the second Whig president, died suddenly when a little over one year in office, just as the great Whig compromise of 1850 was closing. The imperative need of civil government in the new territory, the discovery of gold in California, the rush of men from all parts of the earth to the Pacific Coast forced Congress to establish organized territories. The question was: shall they be opened or closed to slavery? But, as the soil had been free when acquired from Mexico, the question really was: shall the United States establish slavery?

THE MEXICAN WAR, 1846-1848

Causes of the War

- (1) Long-standing irritation over claims of American citizens upon Mexico, which the latter refused to pay.
- (2) The annexation by the United States of Texas, which Mexico claimed as still a part of her territory.
- (3) Disputes as to whether the Rio Grande or Nueces River was the boundary of Texas.

Results of the War

The Treaty of Guadalupe Hidalgo, in 1848, closed the war. Its chief provisions were:

- (1) The Rio Grande was made the boundary between Texas and Mexico.
 - (2) California and New Mexico were ceded to the United States.
 - (3) The United States paid Mexico \$15,000,000, and assumed \$3,500,000 due American citizens.
- The slavery question was intensified in American politics.

PRINCIPAL BATTLES

NOTE: The Americans were victorious in every conflict.

Place of Battle	Dates	Commanders		Engaged	
		American	Mexican	American	Mexican

Vera Cruz	Mar. 27, 1847	Scott	Landero	12,000	6,000

The only naval engagements of importance during the war with Mexico were the bombardment of Vera Cruz, by Commodore Conner, which lasted four days, and the bombardment of Monterey, Commodore Sloat, both cities being forced to surrender.

The Democrats, holding that slaves were property, claimed the right to take them into any territory, and asserting the principle of "squatter sovereignty," claimed the right of the people living in any territory to settle for themselves whether it should be slave or free. The Free Soilers demanded that the soil having been free when a part of Mexico, should be free as a part of the United States. Between these two Clay now stepped in to act as pacificator. Taking up the grievances of each side, he framed and carried through the measure known as the Compromise of 1850, the third great political compromise in our history. The fruit of this was the admission of California as a free state; the passage of a more stringent law for the recovery of fugitive slaves; the abolition of the slave trade in the District of Columbia; and the organization of Utah and New Mexico on the basis of "squatter sovereignty."

This done, senators and representatives of all parties joined in a manifesto declaring that the issues resting on slavery were dead issues, and that they would neither vote for, nor work for any man who thought otherwise. But thousands did think otherwise. The action of Clay pleased none. Anti-slavery men deserted him in the North; pro-slavery men deserted him in the South; and in 1852 the Whig party carried but four states out of thirty-one and perished. Even its two great leaders, Clay and Webster, were, by that time, in their graves.

Excited by such success, the Democrats, led on by Stephen A. Douglas, now broke through the compromise of 1820 and in 1854 applied "squatter sovereignty" to the organization of the territories of Kansas and Nebraska. Against this violation state legislatures, the people, the pulpit, and the press protested vigorously, for every acre of Kansas and Nebraska lay to the north of 36° 30' and was solemnly pledged to freedom. But the Democratic leaders would not listen and drove from their ranks another detachment of voters. The effect was soon manifest. The little parties began to unite and when, in 1856, the time came to elect another president, the Republican Party of to-day was fully organized and ready. Once more and for the last time for twenty-eight years the Democrats won.

Buchanan's Administration the Prelude to the Civil War.—The administration of James Buchanan (1857-1861) marks an epoch. The question before the country was that of the extension of slavery into the new territories. Hardly had he been inaugurated when the Supreme Court handed down a decision on the case of Dred Scott, which denied the right of Congress to legislate on slavery, set aside the compromises of 1820 and 1850 as unconstitutional, and opened all the territories to slavery.

Rise of the Republican Party and Election of Lincoln.—From that moment the Whig and Democratic parties began to break up rapidly till, when 1860 came, four parties and four presidential candidates were in the field. The Democratic party, having finally split at the national convention for nominating a president and vice-president, the southern wing put forward Breckenridge and Lane and demanded that Congress should protect slavery in the territories. The northern wing nominated Stephen A. Douglas and declared for squatter sovereignty and the compromise of 1850. A third party, taking the name of "Constitutional Union," declared for the Constitution and the Union at any price and no agitation of slavery, nominated Bell and Everett, and drew the support of the old Whigs of the Clay and Webster school. The Republicans, declaring that Congress should prohibit slavery in the territories, nominated Abraham Lincoln and Hannibal Hamlin and won the election.

Secession, and the Formation of the Confederacy.—The State of South Carolina immediately seceded and before the end of February, 1861, was followed by Georgia, Florida, Alabama, Mississippi, Louisiana, and Texas. Taking the name of the Confederate States of America, they formed first a temporary and then a permanent government, elected Jefferson Davis president, raised an army, and besieged Fort Sumter in Charleston Harbor. The attempt to relieve the fort brought on the bombardment and surrender (April 19, 1861). The Confederate States were now joined by Virginia, North Carolina, Arkansas, and Tennessee. Richmond was made the capital, and the Civil war opened.

Civil War between the Union and the Confederacy.—The line of separation between the states then became the Potomac River, the Ohio River, and a line across southern Missouri and Indian Territory to New Mexico. Along this line the troops of the Union were drawn up in many places under many commanders. Yet there were in the main but three great armies. That of the East or Potomac under General McClellan, that of the Center or the Ohio under General Buell, that of the West or Missouri under General Halleck. In command of all as Lieutenant-General was Winfield Scott. Confronting them were the troops of the Confederacy, drawn up in three corresponding armies: that of North Virginia under Johnston and Lee, that of the Cumberland under Albert Sidney Johnston, and that of the trans-Mississippi under McCulloch and Price.

Yielding to the demand of the North for the capture of Richmond before the Confederate Congress could meet there (July 20, 1861), McDowell went forth with thirty-eight thousand three-months volunteers to the ever memorable field of Bull Run.

The Union Successes in the Southwest.—But the serious campaigning did not begin until January, 1862. Then the whole line west of the Alleghanies (made up of the armies of Ohio and Missouri), turning on Pittsburgh as a center, swept southward, captured Forts Henry and Donelson, defeated the Confederates at Shiloh, captured Corinth, took Island Number 10, and drove them from Fort Pillow. Meantime Farragut entered the Mississippi from the Gulf, passed Forts Jackson and St. Philip, captured New Orleans, and sent Commodore Davis up the river to take Memphis. Memphis fell June 6, 1862, and, save for Vicksburg, the Mississippi was open for navigation. When the year closed the Confederates had been driven to the east into the mountains of Tennessee, where, December 31, 1862 to January 2, 1863, was fought the desperate and bloody battle of Murfreesboro. The Union troops won, and the Confederate army fell back to Chattanooga.

The Peninsular Campaign Favors Confederate Arms.—With the Army of the Potomac meantime all had gone ill. The affair at Bull Run in July, 1861, had been followed by the transfer of the army to McClellan. But McClellan wasted time, wore out the patience of the North, and forced Lincoln to issue General Order Number One for the forward movement of all armies on February 22, 1862. Obedient to this McClellan began his Peninsular Campaign against Richmond, was out-generated by Lee, and in the second

battle of Bull Run suffered so crushing a defeat that Lee ventured to cross the Potomac and enter Maryland, and encountered McClellan, on the field of Antietam. In that battle Lee was beaten and fled across the Potomac. But McClellan failed to follow up the victory and was removed, the command of the Army of the Potomac passing to Burnside. Burnside led it across the Potomac and the Rappahannock and on December 13, 1862, lost the battle of Fredericksburg. For this he was replaced by Hooker, who, May 1-4, 1863, fought and lost the battle of Chancellorsville.

The Turning Point of the War.—Lee now again took the offensive, crossed the Potomac, entered Pennsylvania, and at Gettysburg met the Army of the Potomac under Meade. On that field was fought the decisive battle of the war. Then (July 1-4, 1863) the backbone of the Confederacy was broken, and the two armies returned to their old positions in Virginia.

While Meade was beating Lee at Gettysburg, Grant captured Vicksburg, July 1-3, 1863. For this he was sent to command the army of Rosecrans, then besieged by Bragg at Chattanooga. Again success attended him, and in November he stormed Lookout Mountain, defeated Bragg in the famous "Battle above the Clouds," and drove him in disorder through the mountains. For these signal victories he was raised to the rank of Lieutenant General in 1864, and placed in command of the armies of the United States.

That year is memorable for the great march of Sherman to the east from Chattanooga to the sea, for the victories of Sheridan in the valley of the Shenandoah, for the Wilderness Campaign of Grant, the shutting up of Lee in Richmond, and by the re-election of Lincoln. His competitor was General McClellan, whom the northern Democrats put forward on the platform that the war was a failure, and that peace should be made with the South. In the spring of 1865 came the retreat of Lee from Richmond, and, on April 9, his surrender at Appomattox Court House.

[643]

THE AMERICAN CIVIL WAR, 1861-1865

Causes of the War	Influencing Events	Results of the War
<i>Real, but remote:</i> (1) The doctrine of popular sovereignty. Different constructions of the Constitution.	The invention of the cotton gin, 1793. Fugitive slave laws, 1793 and 1850. Protective tariff laws.	The Union was preserved.
(2) Slavery. Different systems of labor in the North and the South.	Missouri compromise, 1820. Nullification act in South Carolina, 1832. Annexation of Texas, 1845. Omnibus bill, 1850. Kansas-Nebraska bill, 1854 Dred Scott decision, 1857.	Slavery was abolished.
(3) Lack of intercourse between the North and the South.	Personal liberty bills, 1857. John Brown raid, 1859. Anti-slavery papers, books, and speeches. New England Anti-Slavery Society was organized, 1832.	Secession as a working program was shown to be impracticable.
(4) The increase of territory.	Anti-slavery parties: Liberty party, 1840-1848. Free-Soil party, 1848-1856. Republican party, 1854.	The war cost the lives of nearly one million able-bodied men.
<i>Immediate:</i> The secession of the states.		The national debt was increased to \$2,750,000,000. An incalculable amount of property was destroyed.

CAMPAIGNS AND BATTLES

Naval engagements are printed in *italics*; names of victorious commanders in **bold-face** type.

Appomattox , Virginia (April 9)	Gen. Grant vs. Gen. Lee.	203	297	189	386

[644]

Lincoln Assassinated, and Beginning of Reconstruction.—On April 14, 1865, Lincoln was assassinated and Andrew Johnson became president. With the succession of Johnson the era of reconstruction, political and social, begins. The outcome of political reconstruction was the thirteenth, fourteenth, and fifteenth amendments to the Constitution of the United States, the impeachment of Andrew Johnson, and a long list of acts to protect and assist the freedmen of the South. The outcome of social reconstruction was the rise of the Ku Klux Klan, the passage and use of the Force Act, and the dreadful condition of affairs which ruined the South for a decade.

In the North the effect of such measures was to split the Republican party and put seven presidential candidates in the field in 1872. One represented the Temperance party; another the Labor party, denouncing Chinese labor and the non-taxation of Government land; a third was the Liberal Republican, demanding union, amnesty, and civil rights, accusing Grant of packing the Supreme Court in the interests of corporations, and calling for a repeal of the Ku Klux laws. The Liberal Republicans having chosen Horace Greeley as their candidate, the Democrats accepted and endorsed him. But he pleased neither party, and the discontented Liberals and the discontented Democrats each chose a candidate of their own. The Republicans nominated Grant and elected him.

[645]

Election of Hayes Decided by an Electoral Commission.—His second term (1873-1877) was the nadir of our politics, both state and national, and ended with the disputed election and the rise of the Independent or "Greenback party," demanding the repeal of the act for the resumption of specie payments and the issue of the United States "greenback" notes, convertible into bonds, as the currency of the country. Double returns and doubtful returns from the Southern states put the votes of thirteen electors in dispute. As the House was Democratic and the Senate Republican, the joint rule under which the electoral votes had been counted since 1865 could not be adopted. A compromise was necessary, and on January 29, 1877, the Electoral Commission of five Senators, five Representatives, and five judges of the Supreme Court was created to decide on the doubtful returns. Of the fifteen, eight were Republicans and seven Democrats, and by a strict party vote the thirteen electoral votes were given to the Republicans and Rutherford B. Hayes declared elected.

Resumption of Specie Payments by the Government.—The memorable events of his term (1877-1881) were the resumption of specie payments on January 1, 1879; the passage of the Bland Silver Bill, restoring the silver dollar to the list of coins, making it legal tender, and providing for the coinage of not less than two million nor more than four million each month; and the rapid growth of the National or Greenback Labor party. Hayes was followed in 1881 by James A. Garfield, whose contest with the Senators from New York over the distribution of patronage led to his assassination by the hand of a crazy applicant for office. Chester A. Arthur then became President, was followed in 1885 by Grover Cleveland, who was succeeded in 1889 by Benjamin Harrison, who was in turn succeeded in 1893 by Grover Cleveland.

The presidential campaign of 1896 was one of the most exciting and important that has ever taken place. It was a contest respecting principles, and party platforms never

received more attention. The amount of financial and political literature distributed and read was enormous, and political speeches, almost without number, were delivered. The cooperation of very many good standard Democrats greatly increased the Republican strength and McKinley and Hobart were elected by a large majority of the electoral votes and by a plurality of over six hundred thousand of the popular vote.

McKinley and the Spanish-American War.—The administration of President McKinley was notable in many respects, and marked a new era in the foreign policy of the United States. Chief of the events was the Spanish-American war, which was precipitated in 1898, largely through the cruel treatment of the Cuban people by the mother country, Spain. Public opinion in the United States had been much divided in regard to the Cuban difficulties, but the division was in no sense sectional and a majority believed that war was not only justifiable but inevitable.

On February 15, 1898, the United States battleship *Maine* was destroyed in Havana harbor, and many believed this to have been the work of the Spaniards. Thereupon a congress was held, and a resolution passed demanding the withdrawal of Spain from Cuba. But before the message could be delivered, the American minister in Madrid received his passports and the Spanish government declared war. On April 22, Rear-Admiral Sampson began the blockade of Havana and the northern coast of Cuba with his North Atlantic squadron.

Meanwhile Dewey, who had been stationed at Hong-Kong with the American squadron, was ordered to begin operations, and sailed to Manila Bay in the Philippines. He entered Manila Bay early Sunday morning, May 1, 1898. The Spanish fleet lying in the harbor was protected by the guns of the batteries at Cavité, a few miles from Manila.

The Spaniards knew that he had left Hong-Kong, but he came sooner than he was expected and caught them unawares. He had planned to do this so that he might choose his own time for attack. As soon as he reached Manila Bay he opened upon the Spanish fleet a terrible fire of shot and shell. His fire was answered vigorously from the war vessels and the shore batteries, but the guns of the enemy were not well aimed and their shot did little damage. After a sharp fight of about two hours Dewey withdrew his fleet, in order, it is said, to give his men time for breakfast, but more likely to see how his ammunition was holding out.

After three hours he returned to the attack. By this time most of the Spanish vessels were in flames. An hour later the Spanish batteries "were silenced and the ships sunk or burned and deserted." In the conflict the Spaniards lost every vessel and hundreds of men were killed, wounded, and missing. No American was killed and but seven wounded; while no American vessel was seriously damaged.

The battle of Manila is one of the great naval actions of history; never before had so much been won with so little loss of life and ships. Congress made Dewey a Rear Admiral, gave him a vote of thanks, and voted him a sword. Soon after the war he was made Admiral, the highest rank in the navy.

About the same time the Spanish Admiral, Cervera, had left the Cape Verde Islands en route for Santiago, where he arrived on May 19. Strict watch was kept by Sampson to prevent the escape of the enemy, and the *Merrimac* was sunk at night to block the Spanish squadron in the harbor, but the ship drifted too far to prevent Cervera's exit. This difficult feat was intrusted to Ensign Richmond P. Hobson and six men. They performed their dangerous task, notwithstanding a severe fire from the Spanish land batteries. They were captured, but Admiral Cervera was so moved by their bravery that he sent word to the Americans that they were safe and would be well treated.

SUMMARY OF SPANISH-AMERICAN WAR, 1898

Causes

Underlying:

Sympathy for the oppressed Cubans. The "reconcentrados," people driven into the towns by Weyler, died by thousands, and Americans who aided them are arrested and their property destroyed.

The proximity of Cuba and its geographical position make its situation of great importance to the United States.

Destruction of American property.

Publication of a letter of the Spanish Minister, in which he speaks slightly of President McKinley.

Immediate:

The blowing up of the battleship *Maine*.

Treaty and Results

The Treaty of Paris, December 10, 1898, stipulated as follows:

Spain gives up title to Cuba.

Spain cedes Porto Rico, Guam and the Philippines to the United States.

The United States gives Spain \$20,000,000.

The direct cost of the war to the United States is about \$130,000,000.

Soldiers killed, 430. A large number die of disease.

The United States becomes the guardian of Cuba.

An increase in our navy and standing army.

The war in the Philippines.

The question of territorial expansion in our politics.

LAND AND SEA ENGAGEMENTS

THE NAVY					
Manila Bay, Philippine Islands (May 1, 1898).	American Commander: Geo. Dewey. Spanish Commander: Admiral Montijo.	American Casualties: Seven men slightly injured. No damage to ships. Spanish Casualties: All ships destroyed. 450 men killed and wounded.			
<i>Olympia, Baltimore, Raleigh, Boston, Concord, Petrel.</i> <i>Reina Cristina, Castilla, Don Antonio de Ulloa, Isla de Luzon, Isla de Cuba, General Lezo, Marquis de Duero, Cano Velasco, Isla de Mindanao, Sandoval, José Garcia, Leyte</i> and torpedo boat <i>Barcelona.</i>					
Bombardment of Cienfuegos, Cuba (May 11, 1898).	By torpedo boat <i>Winslow.</i>	1	11
Bombardment of San Juan (May 12, 1898)	Admiral Sampson.	1	7
Before Santiago (July 3, 1898)	American Commander: Winfield Schley. Spanish Commander: Admiral Cervera.	American Casualties: One man killed. <i>Brooklyn</i> struck thirteen times, <i>Texas</i> once, but neither badly damaged. Spanish: All ships destroyed, more than 600 men killed and wounded, and rest surrendered.			
American Vessels: <i>Brooklyn, Texas, Oregon, Iowa, Gloucester.</i> Spanish Vessels: <i>Almirante, Oquendo, Christobal Colon, Vizcaya, Infanta Maria Teresa,</i> and torpedo boats <i>Pluton</i> and <i>Furor.</i>					

The total number of vessels captured from Spain during the war of 1898 was 58.

On June 21, Major-General Shafter arrived off Santiago and successfully landed his troops at Baiquiri, and three days later the Spaniards were driven back from Sevilla. General Shafter then began his attack on Santiago, whither the Spaniards had retreated. Operations began on July 1. The severest fighting took place at San Juan Hill and El Caney, a garrisoned post, where a body of five hundred Spaniards offered a desperate resistance for some hours. By sundown the hills on which the enemy were posted, including San Juan, were occupied by the Americans. The attacking force consisted of regular infantry and dismounted cavalry, with an irregular corps of mounted men known as the Rough Riders. The latter, under the command of Colonels Leonard Wood and Roosevelt, took a prominent part in the fight. On July 4 the city was summoned to surrender, but without success. In the meanwhile Admiral Cervera's squadron had been ordered to sea by the Madrid government. He accordingly left Santiago harbor the same day at nine a. m. with the object of effecting its escape by keeping close to the western shore. The American fleet, temporarily under Schley's command, at once engaged the Spaniards, and by two o'clock succeeded in burning, beaching, or capturing all the enemy's vessels. After this Santiago surrendered, July 17, and Spain sued for peace. It was arranged that Spain should evacuate Cuba, should cede Porto Rico to the United States, as well as her islands in the Antilles, and one of the Ladroneas, and should leave the United States in the possession of Manila. In 1899 a treaty was signed, and Spain evacuated Cuba, the Philippines, and other islands for an indemnity of twenty million dollars.

Insurrection in the Philippine Islands.—A day or two after the final vote on the treaty a body of Philippines under Amiljo Aguinaldo, a native of great ability, attacked the American defenses at Manila. The next day the Americans returned the attack, and for nearly a year there was a resistance to the American rule on the part of the tribes which Aguinaldo represented. These tribes belonged to the Tagals, a Malay race. They are in a minority as regards the whole population, but are among the most intelligent. By the close of the year 1899 the organized resistance on the part of the Tagals appeared to be nearly ended, and the army of Aguinaldo reduced to marauders and bandits, and the insurrection against the authority and sovereignty of the United States was ended in July, 1902, after the capture and surrender of the insurgent leader.

Assassination of McKinley and Succession of Roosevelt.—Shortly after his re-election to a second term, on September 6, 1901, the country was shocked by the assassination of President McKinley by an anarchist named Czolgosz. This was the third time in the history of the country that the chief executive was stricken down by the hand of an assassin. The Vice-President, Theodore Roosevelt, then succeeded to the presidency and continued, in all essential details, the policy of his lamented predecessor.

Under President Roosevelt, a champion of administrative reform and the regulation of commercial trusts, the status of Cuba was settled; progress was made in the Philippines; the navy was very greatly strengthened; the Isthmian Canal question was solved in favor of the Panama route, and the Republic of Panama recognized; and the President reasserted with emphasis the Monroe Doctrine as the key to foreign policy. The Alaska boundary was fixed by a mixed commission. The United States took part with the European powers in armed intervention at Peking in 1899, and an arbitration treaty with Great Britain and other countries was arranged for.

In a second term (1905-1909) President Roosevelt maintained his popularity by the same policy. In 1906 an insurrection broke out in Cuba, and in October American troops again took possession of the island. When confidence had been restored the United States authorities withdrew.

President Taft and the Rise of the Progressives.—In 1908 the Republican, Taft, defeated Bryan, the Democratic candidate. Mr. Roosevelt had refused to be a candidate again and was instrumental in securing Mr. Taft's nomination. President Taft was elected on a Rooseveltian programme of anti-trust legislation and promises of a reduced tariff. In 1910-1911 attempts were made at a Reciprocity of Duties Treaty with Canada, so as to establish freer trade between the two countries. The Canadian general election of 1911 gave an emphatic negative to the proposal.

During the latter part of 1912 a renewed insurrection in Mexico brought about strained diplomatic relations with that country.

In Ohio, Minnesota, and Indiana, however, Democratic governors were elected, and these results pointed to a political reaction in the West, largely owing to supposed inequities in the tariff and to the dominance of trusts.

In 1910 an "insurgent" or progressive section, to which Mr. Roosevelt adhered, formed itself within the Republican party; and the state elections in November resulted in a Democratic triumph without a parallel since that of the year 1890.

Democrats Restored to Power under Leadership of Woodrow Wilson.—In 1913 Woodrow Wilson swept the country on a Democratic programme, having a clear majority over the two Republican ex-presidents (Roosevelt and Taft) opposed to him. His election was fought chiefly on the tariff question, his main argument being that some industries were receiving unfair protection at the expense of others.

Shortly after the inauguration of President Wilson (May 31, 1913), the Seventeenth Amendment to the Constitution of the United States, providing for the direct election of Senators by the people of the states, instead of by their respective legislatures, became effective. On October 3, of the same year, the Underwood Tariff Act became a law. Following this, on December 23, the Currency and Banking Bill, providing regional reserve banks throughout the country, was signed.

In 1914 the continued insurrectionary conditions in Mexico led to the seizure of the custom house at Vera Cruz by a United States fleet, resulting in an American loss of eighteen marines killed and seventy wounded. Subsequently diplomatic representatives of the republics of Argentina, Brazil, and Chile (popularly known as the "A B C powers") offered their services as mediators, were accepted by the United States and the troops withdrawn. The temporary lull, however, thus brought about was soon succeeded by a series of struggles between the provisional Mexican government and the insurrectionists, led by Francisco Villa, which have ever since continued with little abatement. In 1916 the border raids of the Mexican bandits resulted in so many outrages upon American lives and property that the President was compelled to order United States troops to the Rio Grande for the protection of our citizens, and finally a detachment under General Pershing was sent into Mexican territory.

The important La Follette Seaman's bill, to promote the welfare of American seamen and provide for their safety at sea, was approved March 4, 1915; and, in the same year (February 20), the Panama-Pacific Exposition was opened at San Francisco. On November 12, the United States assumed a protectorate of the Republic of Hayti.

**PRESIDENT WILSON
LEAVING THE EXECUTIVE
OFFICES**

During 1916 the Republic of Santo Domingo likewise passed under an American protectorate and the Rural Credits Bill became a law, whereby a system of Farm Loan Banks was created.

From the very beginning of the European war the administration of President Wilson was brought face to face with numerous intricate and several critical diplomatic situations growing out of that titanic conflict. The relationship of the United States, as a neutral nation, to the belligerent countries engaged in this war gave rise to more difficult and significant issues than any other president was compelled to meet since the time of Lincoln, if indeed, it has not been unprecedented in our entire history.

President Wilson Re-elected and His Policies Approved.—At the national election, in November, 1916, President Wilson was re-elected over his opponent, Charles E. Hughes. Following his re-election (December, 1916) the President proffered the services of this government to the belligerent powers of Europe in an effort to re-establish peace between these great contending coalitions. In spite of foreign complications, the year 1916 closed a period of unparalleled industrial and commercial prosperity for the United States, and more than ever confirmed its position as a great world power, with an immense field of new possibilities and corresponding duties.

On January 2, 1917, Congress re-assembled and began the consideration of important questions of national defense, railroads, and foreign policy growing out of the European war. In February, diplomatic relations were severed by the United States with Germany, and was succeeded in March by a declaration of armed neutrality on the part of our government.

Meanwhile great activity characterized all departments of the national government along lines of military preparedness, supported by unprecedented appropriations by Congress.

The supreme national industrial event of the Wilson administration, however, was the opening of the Panama Canal for navigation on August 14, 1914, and its use since that time as an instrumentality of world traffic.

PANAMA CANAL.—This gigantic engineering project was designated by Count de Lesseps, of France, in 1879, and actual work began by the French Panama Canal Company, in 1881. Negotiations extending from 1901 to 1904 resulted in the taking over of the holdings of the French company by the United States, and work was started by United States government engineers in May of the latter year. Since that time the project has been steadily carried forward to completion.

The Canal is about fifty miles in length from deep water in the Caribbean Sea to deep water in the Pacific Ocean. The channel ranges in width from three hundred to one thousand feet. The average bottom width of the channel in this project is six hundred and forty-nine feet, and the minimum width is three hundred feet. The Canal has a minimum depth of forty-one feet. The time required for the passage of a ship of medium size through the entire length of the Canal is estimated at from nine and one-half to ten hours, and for larger vessels from ten and one-half to eleven hours.

The actual construction cost at present estimated for completing the Canal is \$325,201,000, which includes \$20,053,000 for sanitation and \$7,382,000 for civil administration. These figures do not include the \$50,000,000 paid to the New French Canal Company and to the Republic of Panama for property and franchises. Hence it is estimated that the total construction cost of the Canal to the United States will approximate \$375,000,000.

CONTOUR MAP OF THE PANAMA CANAL AND CONNECTIONS

This map shows the general direction of the canal to be north and south; how it is brought into direct communication with the ports of the United States; and how it facilitates shipping to all parts of the world.

TABLE OF STATE AND TERRITORIAL GOVERNMENT

In all the States except Arizona, California, Colorado, Idaho, Kansas, Montana, Nevada, Oregon, Utah, Washington and Wyoming and the Territory of Alaska, the right to vote at general elections is restricted to males of twenty-one years of age and upward. Women in Illinois, Iowa and Michigan have a restricted vote and in several States may vote at school elections.

Note.—Residents of the District of Columbia never had the right to vote therein for national officers, or on other matters of national concern after the territory embraced in it was ceded to the United States and became the seat of the general Government.

* Or persons unable to read and write in English. † Or citizens of Mexico who desire to become citizens of Arizona under treaties of 1848 and 1854. ‡ Indians who have not severed tribal relations. (a): Women can vote in school elections. (b): Also soldiers, sailors and marines in United States service. (c): Women taxpayers can vote on tax propositions. (d): Or by Querretaro treaty. (e): Women can vote in all elections except those pertaining to Constitutional officers or Constitutional propositions. (f): Males born in Porto Rico who formally rendered allegiance to a foreign power. (g): One year's residence in the United States prior to election is required. (h): Who has paid six months before election all taxes then due, and can read and write any section of the State Constitution, or can show that he owns and has paid all taxes due the previous year on property in the State assessed at \$300 or more. (i): Failure to pay poll tax. (j): Or those unable to speak, read and write the English or Hawaiian language. (k): Women can vote in school and city elections. (l): Offenders against elective franchise rights, guilty of bribery, betting on elections, and persons convicted of a felony and not restored to citizenship by the Executive. Convicts in House of Refuge or Reformatory not disqualified. (m): All of the States and Territories pay mileage also, except New Jersey, but free transportation is accorded in New Jersey by all railroads to members by law.

GOVERNMENTS OF THE UNITED STATES, BRITISH EMPIRE, GERMANY, AND FRANCE ARRANGED IN PARALLEL COLUMNS

[652-663]

UNITED STATES

Form of Government. Republic. The general plan of the government of the United States is determined by the Constitution. The central government is limited to the exercise of the powers specifically enumerated in the Constitution, or implied therein, while the remaining governmental powers, not denied to the states by the Constitution, are reserved to the states. The general government is in three fairly well defined parts, the legislative, executive, and judicial.

BRITISH EMPIRE

Form of Government.—Monarchy in form, but republic in practice. The monarchy is constitutional and limited.

The British Empire consists of the United Kingdom of Great Britain and Ireland, the Empire of India, and the British Dominions beyond the Seas, including the self-governing Dominions, and the Crown Colonies, Protectorates, and other Dependencies, the whole forming one Empire.

GERMANY

Form of Government.—The Empire, according to the Constitution of April 16, 1871, is a Confederate League, bearing the name German Empire, under the hereditary presidentship of the King of Prussia, who holds the title of German Emperor, and whose eldest son is styled His Imperial and Royal Highness.

FRANCE

Form of Government.—France, since the overthrow of Napoleon III., in 1870, has been a republic governed by a President and two Chambers under the Constitution.

I. Constitution.—The present Constitution was adopted September 17, 1787.

Ratification of the Constitution.—The Constitution was ratified by the thirteen original States in the following order:

Delaware, Dec. 7, 1787, unanimously.
 Pennsylvania, Dec. 12, 1787, vote 46 to 23.
 New Jersey, Dec. 18, 1787, unanimously.
 Georgia, Jan 2, 1788, unanimously.
 Connecticut, Jan 9, 1788, vote 128 to 40.
 Massachusetts, Feb. 6, 1788, vote 187 to 168.
 Maryland, April 28, 1788, vote 63 to 12.
 South Carolina, May 23, 1788, vote 149 to 73.
 New Hampshire, June 21, 1788, vote 57 to 46.
 Virginia, June 25, 1788, vote 89 to 79.
 New York, July 26, 1788, vote 30 to 26.
 North Carolina, Nov. 21, 1789, vote 193 to 75.
 Rhode Island, May 29, 1790, vote 34 to 32.

Amendments.—Congress may, by two-thirds vote of both Houses, propose amendments to the Constitution, or upon application of the Legislatures of two-thirds of the several States, shall call a convention for proposing amendments, which, in either case, must be ratified by the Legislatures of three-fourths of the several States, or by conventions in three-fourths thereof.

II. The President.

How Elected.—The several steps in the election of the President are:

State Electors are chosen at a General Election held on the *Tuesday following the first Monday of November* of every fourth year; the number of Electors of each State being equal to the number of Senators and Representatives to which the State is entitled in Congress.

The Electors meet in their respective States on the *second Monday in January* following their election, and vote by ballot for President and Vice-President; and at the same time make certificates of their vote and transmit the same to the President of the Senate.

I. Constitution.—The British Constitution is mainly unwritten and customary, but its development is marked by certain outstanding and fundamental laws, of which the principal are: Magna Charta, 1215; the Habeas Corpus Act, 1679; the Act of Settlement, 1701; the Act of Union with Scotland, 1707; the Act of Union with Ireland, 1800; and the Parliament Act, 1911. The first secured annual parliaments and the equal administration of justice; the second established the liberty of the person; the third provided for the Protestant succession to the throne; the fourth and fifth created the United Kingdom; and the last enabled the Commons to pass certain Acts without the adherence of the other Chamber.

II. The Sovereign.

How Designated.—The King's legal title rests upon the Act of Settlement, in 1701, under William III., by which the succession to the Crown of Great Britain and Ireland was settled on the Princess Sophia of Hanover and the "heirs of her body, being Protestants." The throne is hereditary in the English house of Saxe-Coburg-Gotha with mixed succession, the sons of the Sovereign and their descendants having precedence of daughters, but daughters and their descendants preference over lateral lines. The Sovereign is

I. Constitution.

Adoption.—Present Constitution adopted April 16, 1871. The Constitution of the German Empire is substantially that of the North German Confederation, which came into force in 1867, and which was adopted by the Empire in 1871, after the southern states of Germany had combined with the northern.

Amendments.

Amendments to the Constitution can be proposed by either of the legislative bodies, are passed by ordinary legislative process, requiring for their passage a majority simply of the votes of the Reichstag, but they fail if fourteen votes are cast against them in the Bundesrath.

II. Chief magistrate, styled the Deutscher Kaiser.

How Designated.—The election of Wilhelm I., King of Prussia, as German Emperor (1871) was by vote of the Reichstag of the North German Confederation, on the initiative of all the reigning Princes of Germany. The Imperial dignity is hereditary in the House of Hohenzollern, and follows

I. Constitution.

Adoption.—Present Constitution adopted February 25, 1875. It has undergone but slight modifications. The present French Constitution remains a mixture of monarchical and republican institutions, and it has fully maintained its strong and old-established centralization. The Constitution of 1875 is based on universal suffrage. It was revised in 1875, 1884, 1885 and 1889.

Amendments.

Whenever the two Houses agree that revision is necessary, and also agree upon particular points that should be revised, the National Assembly, composed of the Senate and the Chamber of Deputies, sitting as one body, convenes at Versailles, and acts upon the amendments proposed, the vote of an absolute majority being decisive. The National Assembly also elects the President of the republic.

II. Chief Magistrate, or President of the Republic.

Term of Office.—Elected for seven years by the National Assembly, and is re-eligible. The National Assembly meets for the purposes of this election, as for the revision of the Constitution, at Versailles. The revision of the Constitution and the election of President are its only functions. *Qualifications.*—Must be a

The Senate and House of Representatives meet together on the second Wednesday of February next ensuing, and count the votes of the State Electors, when, if there is an election, the President of the Senate declares who is elected President and Vice-President.

In case there is no choice by the State Electors, the President is elected by the House of Representatives from the three candidates who received the most electoral votes for President; in which election the vote is taken by States, each State having but one vote, and a majority of all the States being necessary to a choice.

Term of Office.—Four years.

Eligibility.—A natural born citizen; resident of the United States fourteen years; minimum age thirty-five years.

Salary.—Fixed by law at \$75,000 per year.

Powers and Duties of the President.—Commander-in-Chief of the Army and Navy. Communicates with Congress by message. Approves or disapproves Acts of Congress. Makes treaties with advice and consent of the Senate. Appoints Public Officers with the advice and consent of the Senate. Commissions Public Officers of the United States. Grants reprieves and pardons for offenses against the United States.

The Vice-President.—Elected by State Electors the same as the President; or by the Senate, in case there is no choice by the State Electors. Term of office same as for the President. Eligibility same as required of the President. Salary fixed by law at twelve thousand dollars per year.

The Presidential Succession.—In case of the removal, death, resignation, or inability of the President, the Vice-President takes the President's place.

In case of the removal, death, resignation, or inability of both President and Vice-President the heads of the Executive Departments succeed to the Presidency in the order in which the Executive Departments are named below; but such officer must be constitutionally eligible to the Presidency, must have been appointed to the cabinet by the advice and with the consent of the Senate, and be not under impeachment. The Secretary of Agriculture and the Secretary of Commerce and Labor are ineligible to the presidency by reason of the fact that these two cabinet offices were created subsequent to the passage of the act of the forty-ninth Congress in which provision was made for the presidential succession.

designated King (or Queen) of Great Britain and Ireland, and Emperor (or Empress) of India.

Term of Office.—Holds office for life, by hereditary title, and cannot be removed.

Salary or Civil List.—The Civil List Act, 1910, gave the King \$2,350,000. Provision for other members of the Royal Family, \$730,000. The Prince of Wales, as the income of the Duchy of Cornwall, \$435,000. The King in addition to his Civil List receives the revenues of the Duchy of Lancaster amounting to \$320,000.

Powers and Duties.—Has command of army and navy.

Parliament cannot be assembled, prorogued, or dissolved except by the express command of the Sovereign.

At the commencement of a new Parliament must deliver, either in person or by a commission authorized for that purpose, a speech declaring the cause of the summons.

Bills passed by Parliament must receive the assent of the Sovereign in order to become law.

Has legally a veto power; but, because the influence of the Executive over legislation has passed into the hands of the Ministers, the veto of the Crown has been disused since 1707.

Has power to appoint all officers in the army and navy, judges, ambassadors, colonial governors, bishops and archbishops of the Established Church, and grants all degrees of nobility.

May make treaties of any kind.

May grant pardon to any particular offender.

The Privy Council.—The King in Council is the supreme executive authority in the realm. The Privy Council meets as a whole at the beginning of a new reign and on other occasions of state and ceremony, possesses certain administrative powers, and is the Supreme Court of the Empire. Its personnel includes the royal princes and the archbishops, Members of the Cabinet and of the royal household, the Speaker of the House of Commons, the ambassadors, the principal colonial governors, colonial statesmen, certain judges, and members of both political parties who have never been in office.

The important functions of the Council are the bringing into operation by means of orders in council of the provisions of many statutes which Parliament leaves to the executive to enforce, temporarily or permanently, at such time or times as it may deem necessary and desirable. These orders have all the force and validity of law.

the law of primogeniture in the male line. He must be occupant of the throne of Prussia under the provisions of Prussian law.

Term of Office.—Holds office for life, and cannot be removed.

Salary or Income.—Royal Civil List of Emperor, \$3,700,000.

Powers and Duties.—Commander-in-Chief of the imperial army.

Summons, opens, adjourns, and closes the two Houses. He may dissolve the Reichstag upon advice of the Bundesrath.

All measures passed by the Bundesrath are presented to the Reichstag in the name of the Emperor.

Bills passed by the two Houses must be promulgated by the Emperor.

In cases where he regards them as involving a change in the Constitution, he need not promulgate them if fourteen votes have been cast against them in the Bundesrath.

All official acts of the Emperor require the counter-signature of the Chancellor.

Appoints and may, at his pleasure, remove the Imperial Chancellor.

Appoints and may, with the counter-signature of the Chancellor, remove all minor officers in the imperial service.

May declare war if defensive, and make treaties and peace; but for declaring offensive war the consent of the Bundesrath must be obtained.

Has power to grant pardons.

citizen, not a member of any family which has occupied the throne of France.

Salary.—\$140,000.

Responsibilities.—May be impeached by the Chamber of Deputies, and tried by the Senate, in case of high treason.

Powers and Duties.—Has command of the army and navy.

May convene the Chambers on extraordinary occasions.

May adjourn the Chambers at any time for a period not exceeding one month. Can close a regular session of the Chambers at his discretion after it has continued five months; an extra session when he pleases. Can with the consent of the Senate dissolve the Chamber of Deputies even before the expiration of five months. This puts an end to the session of the Senate also, but not to its life. The President must order a new election in case of dissolution.

At the commencement of a new session of the Chambers the President of the republic sends a message, which is read by one of the Ministers.

Bills passed by the Chambers must be signed by the President, and countersigned by one of his Ministers.

Has no veto power, but is authorized to demand a reconsideration of any measure by the Chambers.

Has power to appoint and remove all officers of the public service, subject to the counter-signature of the Minister whose department is affected in each case.

May make treaties of peace, alliance and commerce, but cannot declare war without the advice of the Chambers.

Has power to grant pardons.

Succession.—In case of his death, resignation, or removal, the Council of Ministers act until the National Assembly can meet and elect a new President.

THE EXECUTIVE DEPARTMENTS

Acts of Congress become laws:—When signed (approved) by the President; or, by his failure to make objection in writing (veto) within ten days after any act is submitted to him, unless Congress by adjournment within that time prevents its return; but Congress has power to pass a law over the President's veto by a vote of two-thirds of each House.

THE CABINET

Composed of the heads of the executive departments.

Appointed by the President with the advice and consent of the Senate.

Salary.—Secretary of State, \$12,000; all other cabinet members, twelve thousand dollars annually.

HEADS OF DEPARTMENTS

Department of State.—Has charge of foreign affairs.

Treasury Department.—Has charge of fiscal affairs.

Department of War.—Has charge of the Army and military affairs.

Department of Justice.—Has charge of the legal affairs of the Government.

Post-office Department.—Has charge of postal affairs.

Navy Department.—Has charge of the Navy and naval affairs.

Department of the Interior.—Has charge of domestic affairs, including public lands, pensions, patents, Bureau of Education, etc.

Department of Agriculture.—Has charge of agricultural affairs, including Weather Bureau, etc.

Department of Commerce and Labor.—Has charge of domestic and foreign affairs, relating to commerce, transportation, Department of Labor, etc.

THE EXECUTIVE DEPARTMENTS

THE MINISTRY

The Cabinet, or Inner Council, under the presidency of the Prime Minister, consists of Ministers, drawn from the ranks of the party in power and appointed by the Sovereign on the advice of the Prime Minister.

Members (As reconstituted in June, 1915) and their salaries.

Prime Minister and First Lord of the Treasury \$25,000

Lord High Chancellor (and \$20,000 as speaker of the House of Lords) 50,000

Minister without Portfolio unpaid

Lord President of the Council 10,000

Lord Privy Seal unpaid

First Lord of the Admiralty 22,500

Secretaries of State:

Home Affairs 25,000

Foreign Affairs 25,000

Colonies 25,000

War 25,000

India 25,000

Chancellor of the Exchequer 25,000

Minister of Munitions 25,000

Secretary for Scotland 10,000

Chief Secretary to the Lord Lieutenant of Ireland 21,125

Presidents of Committees of the Council:

Board of Trade 25,000

Local Government Board 25,000

Board of Education 10,000

First Commissioner of Works 10,000

Attorney-General 35,000

Board of Agriculture 10,000

Relations to Parliament.—The Chief of the Cabinet and of the Ministry is called the Prime Minister or Premier. He is the leader of the House of Parliament of which he is a member.

He dispenses the greater portion of the patronage of the Crown. Other members of the Cabinet are the leaders of Parliament, shaping and directing the business of the Houses.

THE EXECUTIVE DEPARTMENTS

Imperial Chancellor.—He has no counterpart in any other constitutional government. He is the Emperor's responsible proxy, controlling the politics of the Empire.

Appointment and Tenure of Office.—Appointed by the Emperor. Must be one of Prussia's seventeen representatives in the Bundesrath. His term is dependent upon the pleasure of the Emperor.

Responsibility.—Does not consist in a liability to be forced to resign, but consists simply in amenability to the laws.

Powers and Duties.—Must give an account of the administration to the Reichstag, and submits the annual budget. He is the center and source of all the administrative departments, dominating the entire imperial service. He superintends the administration of the laws of the Empire by the States. As chairman of the Bundesrath he is simply a Prussian representing the King of Prussia, as the Emperor has no place in the Bundesrath.

The army and navy, however, are not directly controlled by him, but by the General Field-Marshal.

The following are the imperial authorities or Secretaries of State; they do not form a Ministry or Cabinet, but act independently of each other, under the general supervision of the Chancellor:

Chancellor of the Empire.

Secretary for Foreign Affairs.

THE EXECUTIVE DEPARTMENTS

Powers and Duties.—As a Cabinet, the Ministers represent the administration in the Chambers; as a Council, they exercise a general oversight of the administration of the laws, with a view of giving unity of direction to the affairs of the State. The President may be present at all Council meetings.

Cabinet and Council of Ministers.—Both the Cabinet and the Council consist of the same persons. The Cabinet is a political body; the Council, an administrative body.

Appointment.—Chosen by the President, generally from among the members of the Chambers.

Members of the Cabinet.—Membership may vary somewhat: *Premier and Foreign Minister.*

Ministers of State.

Minister of Justice and Vice-President of the Council.

Minister of War.

Minister of Marine.

Minister of the Interior.

Minister of Finance.

Minister of Agriculture.

Minister of Public Works.

Minister of Commerce.

Minister of Colonies.

Minister of Instruction and Minister of Inventions affecting National Defense.

Council of State.—Gives advice on all projects of law which the Chambers or the Government wish to submit to it, and on administrative regulations and by-laws. Its decision is final in all disputes arising in matters of administration.

Is presided over by the Minister of Justice, and is composed of Councillors, Masters of Requests, and Auditors, all appointed by the President of the republic.

Relations to the Chambers.—Are the leaders of the Chambers. Whether members of the Chambers or not, they have as

Tenure of Office.—Dependent upon the will or favor of the President.

Powers and Duties.—As stated above, but under the direction of the President.

III. Congress.—Consisting of both the Senate and the House of Representatives as co-ordinate bodies.

Duration.—The term of each Congress is for two years, commencing March 4th of the odd years.

Regular Sessions.—Annual, beginning the first Monday in December.

Special Sessions.—At the call of the President.

Membership.—Each House is the judge of the elections and qualifications of its own members.

Congress has General Powers of Legislation.—To provide for the raising and disbursement of revenue. To borrow money; to coin money and to regulate its value; and to fix the standard of weights and measures. To regulate foreign and interstate commerce. To declare war, and to maintain an army and navy. To establish post-offices and post roads. To enact patent and copyright laws. To enact uniform naturalization and bankruptcy laws. To provide for the punishment of crimes against the United States. To establish courts inferior to the Supreme Court. To provide for organizing and calling out the militia. To admit new States into the Union. To provide for the governments of the Territories. To exercise exclusive jurisdiction over the District of Columbia, public lands, public buildings, forts, and navy yards. To enact all laws necessary and proper for carrying into execution all the powers vested by the Constitution in the government of the United States.

THE SENATE.—Composed of two Senators from each State (ninety-six in 1917), chosen by popular vote for six years, one-third retiring every two years.

Qualifications.—Must be at least thirty years of age, must have been a citizen of the United States for nine years, and must be an inhabitant of the State which he represents.

Remuneration.—Members receive seven thousand five hundred dollars, with mileage.

Organization.—The Vice-President of the United States is the President of the Senate. Is elected by the Electoral College. Votes only in case of a tie.

Quorum.—A majority of members.

Committees.—Members are divided into standing committees, chosen by the Senate itself, which act in the preliminary examination, and shaping of measures to be voted on.

Powers and Duties.—In concurrence with the House of Representatives, it makes the laws. It also has power to confirm or reject all appointments to office by the President of the United States, and all treaties. The members constitute a high court for the trial of impeachments. Elects Vice-President of the United States if regular election fails.

Tenure of Office.—Dependent upon the favor of the House of Commons; for if not sustained, they must all resign. When a Ministry resigns it is the function of the sovereign to call upon some statesman to form another administration. There is no restriction upon the Royal choice, but the statesman usually selected is the leader of the opposing party in one of the two Houses.

Powers and Duties.—All real authority is with the Cabinet. The executive government is nominally in the Crown, but practically in the Cabinet. The Ministers are at the heads of the administrative departments. The Sovereign does not sit with the Cabinet.

Other Ministers.—The Ministry includes a number of minor posts whose occupants have no seat in the Cabinet.

III. Parliament.—Parliament consists of two Houses, the House of Lords and the House of Commons. The Sovereign alone has the power of summoning or proroguing or dissolving Parliament, and gives the Royal Assent to measures which have passed both Houses.

Unless it be dissolved by the Crown, Parliament exists five years from the date on which it was first to meet. The demise of the Crown does not dissolve Parliament, but, on the contrary, renders an immediate assembling of the two Houses necessary; and if there be no Parliament in existence, the old Parliament must reassemble, and may sit again for six months, if it be not within that time dissolved by the new Sovereign.

All British dominions are subject (except as regards taxation) to the legislation of the British Parliament, but no Act of Parliament affects a colony unless that colony is specially mentioned. If the legislature of a colony enacts a law which is repugnant to an imperial law affecting the colony, it is to the extent to which it is repugnant absolutely void.

THE HOUSE OF LORDS.—The House at present consists of three Princes of the Blood, two Archbishops, twenty-one Dukes, twenty-six Marquesses, one hundred and twenty-one Earls, forty-six Viscounts, twenty-four Bishops, three hundred and fifty-six Barons, sixteen Scottish Representative Peers elected for each Parliament, and twenty-seven Irish Representative Peers elected for life. The members hold their seats by virtue of hereditary title; by creation of the Sovereign; by virtue of office (English bishops); by election for life (Irish peers); by election for duration of Parliament (Scottish peers).

Qualifications.—Must be at least twenty-one years of age.

Remuneration.—Receive no pay.

Organization—Quorum.—Three, including the Lord Chancellor; thirty for final vote on a bill. The Lord Chancellor, who is a member of the Cabinet, presides. He is appointed by mere delivery of the Great Seal to him by the Sovereign and is principal legal adviser of the Crown. His patronage is very extensive. He nominates the puisne judges and county court judges; the holder of the office may not be a Roman Catholic.

Committees.—Special committees are appointed to make investigations, and report on matters which could not be undertaken by the whole House.

Powers and Duties.—In concurrence with the House of Commons, makes the laws, having a revising power over all bills proposed by the House of Commons, except those relating to public revenue and expenditure, which it must pass or reject without amendment.

It is the highest appellate court of the United Kingdom. It may in certain cases try members of its own body; it tries any person who may be impeached by the House of Commons, and it also decides claims to the peerage.

Imperial Home Office and Representative of the Chancellor.

Imperial Admiralty. Imperial Secretary of Justice.

Imperial Treasury. Imperial Post-Office. Secretary for the Colonies.

And, in addition, the following presidents of imperial bureaus:

Railways. Imperial Exchequer. Imperial Bank.

Imperial Debt Commission. Administration of Imperial Railways.

Imperial Court Martial.

Acting under the direction of the Chancellor of the Empire, the Bundesrath represents also a supreme administrative and consultative board, and as such has twelve standing committees—namely, for army and fortifications; for naval matters; tariff, excise and taxes; trade and commerce; railways, posts and telegraphs; civil and criminal law; financial accounts; foreign affairs; for Alsace-Lorraine; for the Constitution; for the standing orders; and for railway tariffs.

III. The Government.

The legislative functions of the Empire are vested jointly in the Bundesrath or Federal Council which represents the several states, and by the Reichstag or Diet of the Realm, which represents the German nation. The Emperor has no veto on laws passed by these bodies. All laws for the Empire must receive the votes of an absolute majority.

The consent of the Federal Council and Reichstag is necessary in regard to certain specified treaties. The Emperor has the right to summon, open, adjourn, and close the Reichstag. The Federal Council and Reichstag must be summoned to meet every year; the Reichstag cannot be summoned without the adherence of the Federal Council.

BUNDESRATH, or Federal Council, is composed of sixty-one votes representing the individual states. They are appointed by the governments (*i. e.* the Executives) of the States for each session.

The apportionments of representation in the Bundesrath among the States of the Empire is as follows: Prussia seventeen votes, Bavaria six, Saxony and Württemberg four each, Baden, Hesse and Alsace-Lorraine each three, Mecklenburg-Schwerin and Brunswick each two, the other States (seventeen) one apiece.

Remuneration.—Receive no pay.

Organization—Quorum.—The Imperial Chancellor or his substitute (at regular meeting). The Imperial Chancellor presides. Votes with the other Prussian representatives, whose votes must be undivided; and, in case of a tie, Prussia's vote decides.

Committees.—There are three standing committees and eight commissions, two of which are appointed by the Emperor, five wholly by the Bundesrath, and one in part by the Bundesrath, being made up principally of members *ex-officio*.

Each commission consists of representatives of at least five States of the Empire.

Powers and Duties.—May originate bills to be sent to the Reichstag. Its consent is indispensable to the validity of all legislation. Members may speak on the floor of the Reichstag. Acting under the direction of the Imperial Chancellor, it is the supreme administrative board. It is in some cases the highest court of the Empire. Is the court of appeal between two or more States of the Empire.

Ministers the right to attend all sessions of the Chambers and take a specially privileged part in the debate.

Tenure of Office.—Dependent upon the favor of the Chambers; for, if not sustained, they must all resign.

III. The Chambers.—Consist of the Senate and House of Deputies.

THE SENATE is composed of three hundred members chosen by the Departments and Colonies for nine years, one-third of the members retiring every three years.

Until 1884 the Senate contained seventy-five life members, the life list having been originally made up by election by the National Assembly of 1875, and vacancies being filled by the Senate itself. In 1884 this arrangement was abolished, and since that year vacancies in the life roll have been filled by ordinary nine-year Senators.

Qualifications.—Must be a Frenchman, and at least forty years of age.

Remuneration.—15,000 francs (\$3,000).

Organization—Quorum.—A majority of members. Elects its own President and Vice-Presidents.

Committees.—Each month the members are divided by lots into "Bureaux." These select all the special committees to which bills are referred, except when the House chooses itself to elect a committee.

Powers and Duties.—In concurrence with the Chamber of Deputies, makes the laws, and has in law-making the same prerogatives as the Chamber, except that bills relating to revenue originate with the Chamber. It is a court of justice for trying the President of the republic and the Ministers. It may originate, and, in concurrence with the Senate, pass resolutions and bills; but bills relating to finance must be originated by the Chamber of Deputies. Has power to bring accusations against the President of the republic and the

HOUSE OF REPRESENTATIVES.—Composed (in 1917) of four hundred and thirty-five members elected every second year for two years by the people of the States in the proportion of one Representative for every 211,877 inhabitants. Each State, however, is entitled to at least one member, whatever its population.

Qualifications.—Must be at least twenty-five years of age, must have been seven years a citizen of the United States, and must be an inhabitant of the State from which he is chosen.

Organization—Quorum.—A majority of members. Elects its own presiding officer, who is called the Speaker, salary twelve thousand dollars per year.

Remuneration.—Members receive seven thousand five hundred dollars and mileage.

Powers of the House of Representatives.—Elects its Speaker (presiding officer) and its other officers. Elects President of the United States if the regular election fails. Prosecutes impeachments before the Senate. Originates all bills for raising revenue.

Committees.—Almost all the acts of the House are under the control of Standing Committees, appointed by the Speaker.

IV. The Judicial Department.

JUDGES OF THE UNITED STATES COURTS

Appointed by the President with the advice and consent of the Senate.

Tenure of Office.—During life or good behavior; but may retire on full salary after reaching the age of seventy years, and after ten years' service on the bench.

THE SUPREME COURT OF THE UNITED STATES

Members.—A Chief Justice and Eight Associate Justices.

Salaries.—Chief Justice, fifteen thousand dollars; Associate Justices, each fourteen thousand five hundred dollars.

Terms of Court.—One each year, beginning on the second Monday in October.

Original Jurisdiction.—In all cases affecting Ambassadors, Ministers, and Consuls. In all cases in which a State is a party.

Appellate Jurisdiction.—In cases of law and equity where the Inferior Courts have original jurisdiction, with such exceptions and regulations as Congress has made.

The Chief Justice.—Presides over the Senate when it sits as a Court of Impeachment for the trial of the President.

INFERIOR COURTS

Jurisdiction.—In cases between citizens of different States. In cases in which the United States is a party. In cases of admiralty and maritime jurisdiction. In trials for crimes against the United States; but the trial of crimes must be by jury, and must be held in the State where the crime was committed.

Appeals to the Supreme Court may be had in all cases of law and equity, with such exceptions and regulations as Congress has made.

KINDS OF INFERIOR COURTS

United States Circuit Courts of Appeals.—Organized in 1891 to relieve the United States Supreme Court in Appellate Cases. Number: One in each Judicial Circuit. Members: Three judges selected from the District Courts.

Number.—One in each Judicial Circuit.

Members.—Three judges selected from the District Courts.

United States Circuit Courts.—

Number of Circuits.—Nine.

Number of Judges.—Each Circuit has two, three, or four Circuit Judges, and a Justice of the Supreme Court is assigned to each Circuit. The District Judge also may sit in a Circuit Court.

Salary of Circuit Judges.—Fixed by law at seven thousand dollars per year.

United States District Courts.—

Number of Districts.—One or more in each State. At present there are seventy-three Judicial Districts.

Salary of District Judge.—Fixed by law at seven thousand dollars per year.

United States Court of Claims.—

Jurisdiction.—Claims against the United States, including all claims which may be referred to it by Congress.

Members.—One Chief Justice and four Associate Justices.

Salaries.—Chief Justice, six thousand five hundred dollars; Associate Justices, each six thousand dollars.

In addition to the above named courts, Congress has established courts of local jurisdiction in the District of Columbia and in the Territories.

HOUSE OF COMMONS.—This body consists of six hundred and seventy elected members representing county, borough, and university constituencies. Roughly speaking, about one-sixth of the population are electors.

Qualifications.—Must be at least twenty-one years of age. Clergymen are disqualified from sitting as members, also English and Scottish peers, government contractors, and sheriffs and returning officers for the localities for which they act.

Organization—Quorum.—Forty members, including the Speaker. Elects its own presiding officer, who is called the Speaker, who has a residence in the Palace of Westminster, and receives a salary of \$25,000 per annum.

Remuneration.—\$2,000 per year (since 1911).

Powers and Duties.—May originate and, in concurrence with the House of Lords, pass resolutions and bills; but bills relating to the imposition of taxes and the granting of supplies for the service of the State must be originated in the House of Commons.

Committees.—The business of the House is almost entirely under the direction of the Ministry; however, commissions and select committees are from time to time appointed to make investigations and report on matters which could not be undertaken by the House.

IV. Judicial Departments, or Courts of Law.

Privy Council.—The Judicial Committee of the Privy Council (which hears appeals from Colonial and Indian Courts, and also from Ecclesiastical Courts) consists of the Lord Chancellor, Lord President, ex-Lords President, the Lords of Appeal in Ordinary, and such other members of the Privy Council as shall from time to time hold or have held "high judicial office." No dissenting judgments are allowed, but the Judicial Committee can grant special leave to appeal.

The English courts of law having jurisdiction in actions between parties are:

HOUSE OF LORDS

Lord High Chancellor and such peers of Parliament as are holding or have held high judicial office. This is the ultimate Court of Appeal from all the courts in the United Kingdom.

There are two Courts of Appeal below these divisions:

Lords of Appeal in Ordinary.—Consisting of six Justices.

Court of Appeal.—Ex-Officio Judges, the Lord High Chancellor, the Lord Chief Justice of England, the Master of the Rolls, and the President of the Probate, Divorce and Admiralty Division.

The High Court comprises the King's Bench, Chancery, and Probate, Divorce and Admiralty Divisions.

High Court of Justice, Chancery Division.—(Administration of trusts, company cases, mortgages, patents, etc.). Consists of the Lord High Chancellor and six other Justices.

High Court of Justice, King's Bench Division.—(Contracts, torts, bankruptcy, etc.). Consists of the Lord Chief Justice of England and fifteen other Justices.

High Court of Justice, Probate, Divorce and Admiralty Division.—(Wills, matrimonial cases, and maritime cases). Consists of two Justices.

Court of Criminal Appeal.—All the Judges of King's Bench Division.

Court of Arches.—An ecclesiastical court unites the powers of the *jus canonicum* with new powers conceded by the Church Discipline Act, 1841, and the similar statute of 1874, exercising authority in both provinces. The Judicial Committee of Privy Council is the Court of Final Appeal in ecclesiastical cases.

Bankruptcy Court.—Consisting of one Justice.

REICHSTAG, or Imperial Diet, is composed (in 1917) of three hundred and ninety-seven members, and elected for five years by universal suffrage.

Qualifications.—Must be at least twenty-five years of age, and have lived at least one year in one of the German States.

Organization—Quorum.—A majority of members. Elects its own presiding officer, who is called the President.

Remuneration.—3,000 marks (\$750) per session, with deduction of twenty marks (\$5.00) for each day's absence; they have free passes over German railways during session.

Powers and Duties.—Has power to originate and, with the advice and consent of the Bundesrath, to enact the laws. It also exerts a controlling influence through its power to give or withhold its sanction to certain ordinances to whose validity the Constitution makes its concurrence necessary, through its right to inquire into the conduct of affairs; and in many other ways not susceptible of enumeration.

Committees.—There are no standing committees, but select committees are occasionally appointed by election from the seven "Sections" into which the members are divided by lot for committee work.

IV. Judicial Department.

The laws of the Empire take precedence of the Federated States within the scope of the Constitution of the Empire; they are compulsory on all Governments of the Empire.

A uniform system of law courts exists throughout the Empire, though, with the exception of the Reichsgericht, all courts are directly subject to the Government of the special State in which they exercise jurisdiction, and not to the Imperial Government. The appointment of the judges is also a State and not an Imperial function. The Empire enjoys uniform codes of commercial and criminal law.

IMPERIAL SUPREME COURT.

Reichsgericht (Imperial Supreme Court), to which there is a right of appeal from all inferior courts, sits at Leipzig, and consists of one hundred judges, appointed by the Kaiser on the recommendation of the Bundesrath.

The Oberlandesgerichte (Supreme Court), which are the first courts of the second instance, have original jurisdiction in serious offenses, and are presided over by seven judges.

The Landgericht (County Courts) have a fairly extensive jurisdiction in civil and criminal cases and in divorce proceedings. There are five judges in the criminal chamber of a Landgericht, four votes being required to make a conviction valid. Three judges from such a court preside at intervals over jury courts (Schwurgerichte), and juries do not, therefore, form a permanent part of the system.

Not the least important work of the Landgerichte is to revise the decisions of the Amtsgerichte, which are the lowest courts of the first instance, being controlled by single judges, who are competent to hear only petty civil and criminal cases.

The Amtsgerichte (Police or District Courts) are the lowest courts, each with a single judge competent to try petty civil and criminal cases, divorce cases, etc.

Ministers.

THE CHAMBER OF DEPUTIES

is composed (in 1917) of five hundred and eighty-four Deputies, distributed among the Departments and certain colonies in the proportion of one Deputy to seventy thousand inhabitants. The Deputies are chosen for a term of four years by universal suffrage, the Arrondissements serving as electoral districts.

Qualifications.—Must be a citizen of France, and at least twenty-five years of age.

Organization—Quorum.—A majority of members. Chooses its own President, Vice-President and other officers.

Remuneration.—15,000 francs (\$3,000).

Powers and Duties.—May originate, and, in concurrence with the Senate, pass resolutions and bills; but bills relating to finance must be originated by the Chamber of Deputies. Has power to bring accusations against the President of the republic and Ministers.

Committees.—Each month the members are divided by lot into eleven "Bureaux," which select all the special committees to which bills are referred, except when the Chamber chooses to appoint a committee directly.

IV. Judicial Department.

The judicial system is under direct control of the government. All Judges are nominated by the President of the republic. They can be removed only by a decision of the Court of Cassation constituted as the *Conseil Supérieur* of the magistracy.

THE COURT OF CASSATION.

The Court of Cassation, which sits at Paris, is the highest court for all criminal cases tried by jury, so far as regards matters of law.

Courts of Appeal.—The highest courts are the twenty-six Courts of Appeal, composed each of one president and a variable number of members, for all criminal cases which have been tried without a jury.

Court of Assizes.—In all cases of a *délit* or a crime the preliminary inquiry is made in secrecy by an examining magistrate (*juge d'instruction*), who may either dismiss the case or send it for trial before a court where a public prosecutor (procureur) endeavors to prove the charge. The Court of Assizes is assisted by twelve jurors, who decide by simple majority on the fact with respect to offenses amounting to crimes.

Justices of the Peace (juges de paix) are the courts of lowest jurisdiction in France. They try small civil cases and act also as judges of Police Courts, where all petty offenses (contraventions) are disposed of. The Correctional Courts pronounce upon all graver offenses (*délits*), including cases involving imprisonment up to five years. They have no jury, and consist of three judges belonging to the civil tribunals of first instance.

For commercial cases there are, in two hundred and twenty-six towns, Tribunals of Commerce and Councils of Experts (*prud'hommes*). In the towns are police courts.

UNITED STATES

Form of Government. Republic. The general plan of the government of the United States is determined by the Constitution. The central government is limited to the exercise of the powers specifically enumerated in the Constitution, or implied therein, while the remaining governmental powers, not denied to the states by the Constitution, are reserved to the states. The general government is in three fairly well defined parts, the legislative, executive, and judicial.

I. Constitution.—The present Constitution was adopted September 17, 1787.

Ratification of the Constitution.—The Constitution was ratified by the thirteen original States in the following order:

Delaware, Dec. 7, 1787, unanimously.
Pennsylvania, Dec. 12, 1787, vote 46 to 23.
New Jersey, Dec. 18, 1787, unanimously.
Georgia, Jan 2, 1788, unanimously.
Connecticut, Jan 9, 1788, vote 128 to 40.
Massachusetts, Feb. 6, 1788, vote 187 to 168.
Maryland, April 28, 1788, vote 63 to 12.
South Carolina, May 23, 1788, vote 149 to 73.
New Hampshire, June 21, 1788, vote 57 to 46.
Virginia, June 25, 1788, vote 89 to 79.
New York, July 26, 1788, vote 30 to 28.
North Carolina, Nov. 21, 1789, vote 193 to 75.
Rhode Island, May 29, 1790, vote 34 to 32.

Amendments.—Congress may, by two-thirds vote of both Houses, propose amendments to the Constitution, or upon application of the Legislatures of two-thirds of the several States, shall call a convention for proposing amendments, which, in either case, must be ratified by the Legislatures of three-fourths of the several States, or by conventions in three-fourths thereof.

II. The President.

How Elected.—The several steps in the election of the President are:

State Electors are chosen at a General Election held on the *Tuesday following the first Monday of November* of every fourth year; the number of Electors of each State being equal to the number of Senators and Representatives to which the State is entitled in Congress.

The Electors meet in their respective States on the *second Monday in January* following their election, and vote by ballot for President and Vice-President; and at the same time make certificates of their vote and transmit the same to the President of the Senate.

The Senate and House of Representatives meet together on the *second Wednesday of February* next ensuing, and count the votes of the State Electors, when, if there is an election, the President of the Senate declares who is elected President and Vice-President.

In case there is no choice by the State Electors, the President is elected by the House of Representatives from the three candidates who received the most electoral votes for President; in which election the vote is taken by States, each State having but one vote, and a majority of all the States being necessary to a choice.

Term of Office.—Four years.

Eligibility.—A natural born citizen; resident of the United States fourteen years; minimum age thirty-five years.

Salary.—Fixed by law at \$75,000 per year.

Powers and Duties of the President.—Commander-in-Chief of the Army and Navy. Communicates with Congress by message. Approves or disapproves Acts of Congress. Makes treaties with advice and consent of the Senate. Appoints Public Officers with the advice and consent of the Senate. Commissons Public Officers of the United States. Grants reprieves and pardons for offenses against the United States.

The Vice-President.—Elected by State Electors the same as the President; or by the Senate, in case there is no choice by the State Electors. Term of office same as for the President. Eligibility same as required of the President. Salary fixed by law at twelve thousand dollars per year.

The Presidential Succession.—In case of the removal, death, resignation, or inability of the President, the Vice-President takes the President's place.

In case of the removal, death, resignation, or inability of both President and Vice-President the heads of the Executive Departments succeed to the Presidency in the order in which the Executive Departments are named below; but such officer must be constitutionally eligible to the Presidency, must have been appointed to the cabinet by the advice and with the consent of the Senate, and be not under impeachment. The Secretary of Agriculture and the Secretary of Commerce and Labor are ineligible to the presidency by reason of the fact that these two cabinet offices were created subsequent to the passage of the act of the forty-ninth Congress in which provision was made for the presidential succession.

THE EXECUTIVE DEPARTMENTS

Acts of Congress become laws.—When signed (approved) by the President; or, by his failure to make objection in writing (veto) within ten days after any act is submitted to him, unless Congress by adjournment within that time prevents its return; but Congress has power to pass a law over the President's veto by a vote of two-thirds of each House.

THE CABINET

Composed of the heads of the executive departments.

Appointed by the President with the advice and consent of the Senate.

Salary.—Secretary of State, \$12,000; all other cabinet members, twelve thousand dollars annually.

HEADS OF DEPARTMENTS

Department of State.—Has charge of foreign affairs.

Treasury Department.—Has charge of fiscal affairs.

Department of War.—Has charge of the Army and military affairs.

Department of Justice.—Has charge of the legal affairs of the Government.

Post-office Department.—Has charge of postal affairs.

Navy Department.—Has charge of the Navy and naval affairs.

Department of the Interior.—Has charge of domestic affairs, including public lands, pensions, patents, Bureau of Education, etc.

Department of Agriculture.—Has charge of agricultural affairs, including Weather Bureau, etc.

Department of Commerce and Labor.—Has charge of domestic and foreign affairs, relating to commerce, transportation, Department of Labor, etc.

Relations to Parliament.—The Chief of the Cabinet and of the Ministry is called the Prime Minister or Premier. He is the leader of the House of Parliament of which he is a member. He dispenses the greater portion of the patronage of the Crown. Other members of the Cabinet are the leaders of Parliament, shaping and directing the business of the Houses.

Tenure of Office.—Dependent upon the will or favor of the President.

Powers and Duties.—As stated above, but under the direction of the President.

III. Congress.—Consisting of both the Senate and the House of Representatives as co-ordinate bodies.

Duration.—The term of each Congress is for two years, commencing March 4th of the odd years.

Regular Sessions.—Annual, beginning the first Monday in December.

Special Sessions.—At the call of the President.

Membership.—Each House is the judge of the elections and qualifications of its own members.

Congress has General Powers of Legislation.—To provide for the raising and disbursement of revenue. To borrow money; to coin money and to regulate its value; and to fix the standard of weights and measures. To regulate foreign and interstate commerce. To declare war, and to maintain an army and navy. To establish post-offices and post roads. To enact patent and copyright laws. To enact uniform naturalization and bankruptcy laws. To provide for the punishment of crimes against the United States. To establish courts inferior to the Supreme Court. To provide for organizing and calling out the militia. To admit new States into the Union. To provide for the governments of the Territories. To exercise exclusive jurisdiction over the District of Columbia, public lands, public buildings, forts, and navy yards. To enact all laws necessary and proper for carrying into execution all the powers vested by the Constitution in the government of the United States.

THE SENATE.—Composed of two Senators from each State (ninety-six in 1917), chosen by popular vote for six years, one-third retiring every two years.

Qualifications.—Must be at least thirty years of age, must have been a citizen of the United States for nine years, and must be an inhabitant of the State which he represents.

Remuneration.—Members receive seven thousand five hundred dollars, with mileage.

Organization.—The Vice-President of the United States is the President of the Senate. Is elected by the Electoral College. Votes only in case of a tie.

Quorum.—A majority of members.

Committees.—Members are divided into standing committees, chosen by the Senate itself, which act in the preliminary examination, and shaping of measures to be voted on.

Powers and Duties.—In concurrence with the House of Representatives, it makes the laws. It also has power to confirm or reject all appointments to office by the President of the United States, and all treaties. The members constitute a high court for the trial of impeachments. Elects Vice-President of the United States if regular election fails.

HOUSE OF REPRESENTATIVES.—Composed (in 1917) of four hundred and thirty-five members elected every second year for two years by the people of the States in the proportion of one Representative for every 211,877 inhabitants. Each State, however, is entitled to at least one member, whatever its population.

Qualifications.—Must be at least twenty-five years of age, must have been seven years a citizen of the United States, and must be an inhabitant of the State from which he is chosen.

Organization—Quorum.—A majority of members. Elects its own presiding officer, who is called the Speaker, salary twelve thousand dollars per year.

Remuneration.—Members receive seven thousand five hundred dollars and mileage.

Powers of the House of Representatives.—Elects its Speaker (presiding officer) and its other officers. Elects President of the United States if the regular election fails. Prosecutes impeachments before the Senate. Originates all bills for raising revenue.

Committees.—Almost all the acts of the House are under the control of Standing Committees, appointed by the Speaker.

IV. The Judicial Department.

JUDGES OF THE UNITED STATES COURTS

Appointed by the President with the advice and consent of the Senate.

Tenure of Office.—During life or good behavior; but may retire on full salary after reaching the age of seventy years, and after ten years' service on the bench.

THE SUPREME COURT OF THE UNITED STATES

Members.—A Chief Justice and Eight Associate Justices.

Salaries.—Chief Justice, fifteen thousand dollars; Associate Justices, each fourteen thousand five hundred dollars.

Terms of Court.—One each year, beginning on the second Monday in October.

Original Jurisdiction.—In all cases affecting Ambassadors, Ministers, and Consuls. In all cases in which a State is a party.

Appellate Jurisdiction.—In cases of law and equity where the Inferior Courts have original jurisdiction, with such exceptions and regulations as Congress has made.

The Chief Justice.—Presides over the Senate when it sits as a Court of Impeachment for the trial of the President.

INFERIOR COURTS

Jurisdiction.—In cases between citizens of different States. In cases in which the United States is a party. In cases of admiralty and maritime jurisdiction. In trials for crimes against the United States; but the trial of crimes must be by jury, and must be held in the State where the crime was committed.

Appeals to the Supreme Court may be had in all cases of law and equity, with such exceptions and regulations as Congress has made.

KINDS OF INFERIOR COURTS

United States Circuit Courts of Appeals.—Organized in 1891 to relieve the United States Supreme Court in Appellate Cases. Number: One in each Judicial Circuit. Members: Three judges selected from the District Courts.

Number.—One in each Judicial Circuit.

Members.—Three judges selected from the District Courts.

United States Circuit Courts.—

Number of Circuits.—Nine.

Number of Judges.—Each Circuit has two, three, or four Circuit Judges, and a Justice of the Supreme Court is assigned to each Circuit. The District Judge also may sit in a Circuit Court.

Salary of Circuit Judges.—Fixed by law at seven thousand dollars per year.

United States District Courts.—

Number of Districts.—One or more in each State. At present there are seventy-three Judicial Districts.

Salary of District Judge.—Fixed by law at seven thousand dollars per year.

United States Court of Claims.—

Jurisdiction.—Claims against the United States, including all claims which may be referred to it by Congress.

Members.—One Chief Justice and four Associate Justices.

Salaries.—Chief Justice, six thousand five hundred dollars; Associate Justices, each six thousand dollars.

In addition to the above named courts, Congress has established courts of local jurisdiction in the District of Columbia and in the Territories.

BRITISH EMPIRE

Form of Government.—Monarchy in form, but republic in practice. The monarchy is constitutional and limited.

The British Empire consists of the United Kingdom of Great Britain and Ireland, the Empire of India, and the British Dominions beyond the Seas, including the self-governing Dominions, and the Crown Colonies, Protectorates, and other Dependencies, the whole forming one Empire.

I. Constitution.—The British Constitution is mainly unwritten and customary, but its development is marked by certain outstanding and fundamental laws, of which the principal are: Magna Charta, 1215; the Habeas Corpus Act, 1679; the Act of Settlement, 1701; the Act of Union with Scotland, 1707; the Act of Union with Ireland, 1800; and the Parliament Act, 1911. The first secured annual parliaments and the equal administration of justice; the second established the liberty of the person; the third provided for the Protestant succession to the throne; the fourth and fifth created the United Kingdom; and the last enabled the Commons to pass certain Acts without the adherence of the other Chamber.

Amendments.—Amendments to the Constitution can be proposed by either of the legislative bodies, are passed by ordinary legislative process, requiring for their passage a majority simply of the votes of the Reichstag, but they fail if fourteen votes are cast against them in the Bundesrat.

II. The Sovereign.

How Designated.—The King's legal title rests upon the Act of Settlement, in 1701, under William III., by which the succession to the Crown of Great Britain and Ireland was settled on the Princess Sophia of Hanover and the "heirs of her body, being Protestants." The throne is hereditary in the English house of Saxe-Coburg-Gotha with mixed succession, the sons of the Sovereign and their descendants having precedence of daughters, but daughters and their descendants preference over lateral lines. The Sovereign is designated King (or Queen) of Great Britain and Ireland, and Emperor (or Empress) of India.

Term of Office.—Holds office for life, by hereditary title, and cannot be removed.

Salary or Civil List.—The Civil List Act, 1910, gave the King \$2,350,000. Provision for other members of the Royal Family, \$730,000. The Prince of Wales, as the income of the Duchy of Cornwall, \$435,000. The King in addition to his Civil List receives the revenues of the Duchy of Lancaster amounting to \$320,000.

Powers and Duties.—Has command of army and navy.

Parliament cannot be assembled, prorogued, or dissolved except by the express command of the Sovereign.

At the commencement of a new Parliament must deliver, either in person or by a commission authorized for that purpose, a speech declaring the cause of the summons.

Bills passed by Parliament must receive the assent of the Sovereign in order to become law.

Has legally a veto power; but, because the influence of the Executive over legislation has passed into the hands of the Ministers, the veto of the Crown has been disused since 1707.

Has power to appoint all officers in the army and navy, judges, ambassadors, colonial governors, bishops and archbishops of the Established Church, and grants all degrees of nobility.

May make treaties of any kind.

May grant pardon to any particular offender.

The Privy Council.—The King in Council is the supreme executive authority in the realm. The Privy Council meets as a whole at the beginning of a new reign and on other occasions of state and ceremony, possesses certain administrative powers, and is the Supreme Court of the Empire. Its personnel includes the royal princes and the archbishops, Members of the Cabinet and of the royal household, the Speaker of the House of Commons, the ambassadors, the principal colonial governors, colonial statesmen, certain judges, and members of both political parties who have never been in office.

The important functions of the Council are the bringing into operation by means of orders in council of the provisions of many statutes which Parliament leaves to the executive to enforce, temporarily or permanently, at such time or times as it may deem necessary and desirable. These orders have all the force and validity of law.

THE EXECUTIVE DEPARTMENTS

THE MINISTRY

The Cabinet, or Inner Council, under the presidency of the Prime Minister, consists of Ministers, drawn from the ranks of the party in power and appointed by the Sovereign on the advice of the Prime Minister.

Members (As reconstituted in June, 1915) and their salaries.

Prime Minister and First Lord of the Treasury 25,000

Lord High Chancellor (and \$20,000 as speaker of the House of Lords) 50,000

Minister without Portfolio unpaid

Lord President of the Council \$10,000

Lord Privy Seal unpaid

First Lord of the Admiralty 22,500

Secretaries of State:

Home Affairs 25,000

Foreign Affairs 25,000

Colonies 25,000

War 25,000

India 25,000

Chancellor of the Exchequer 25,000

Minister of Munitions 25,000

Secretary for Scotland 10,000

Chief Secretary to the Lord Lieutenant of Ireland 21,125

Presidents of Committees of the Council:

Board of Trade 25,000

Local Government Board 25,000

Board of Education 10,000

First Commissioner of Works 10,000

Attorney-General 35,000

Board of Agriculture 10,000

Relations to Parliament.—The Chief of the Cabinet and of the Ministry is called the Prime Minister or Premier. He is the leader of the House of Parliament of which he is a member. He dispenses the greater portion of the patronage of the Crown. Other members of the Cabinet are the leaders of Parliament, shaping and directing the business of the Houses.

Tenure of Office.—Dependent upon the favor of the House of Commons; for if not sustained, they must all resign. When a Ministry resigns it is the function of the sovereign to call upon some statesman to form another administration. There is no restriction upon the Royal choice, but the statesman usually selected is the leader of the opposing party in one of the two Houses.

Powers and Duties.—All real authority is with the Cabinet. The executive government is nominally in the Crown, but practically in the Cabinet. The Ministers are at the heads of the administrative departments. The Sovereign does not sit with the Cabinet.

Other Ministers.—The Ministry includes a number of minor posts whose occupants have no seat in the Cabinet.

III. Parliament.—Parliament consists of two Houses, the House of Lords and the House of Commons. The Sovereign alone has the power of summoning or proroguing or dissolving Parliament, and gives the Royal Assent to measures which have passed both Houses. Unless it be dissolved by the Crown, Parliament exists five years from the date on which it was first to meet. The demise of the Crown does not dissolve Parliament, but, on the contrary, renders an immediate assembling of the two Houses necessary; and if there be no Parliament in existence, the old Parliament must reassemble, and may sit again for six months, if it be not within that time dissolved by the new Sovereign.

All British dominions are subject (except as regards taxation) to the legislation of the British Parliament; but no Act of Parliament affects a colony unless that colony is specially mentioned. If the legislature of a colony enacts a law which is repugnant to an imperial law affecting the colony, it is to the extent to which it is repugnant absolutely void.

THE HOUSE OF LORDS.—The House at present consists of three Princes of the Blood, two Archbishops, twenty-one Dukes, twenty-six Marquesses, one hundred and twenty-one Earls, forty-six Viscounts, twenty-four Bishops, three hundred and fifty-six Barons, sixteen Scottish Representative Peers elected for each Parliament, and twenty-seven Irish Representative Peers elected for life. The members hold their seats by virtue of hereditary title; by creation of the Sovereign; by virtue of office (English bishops); by election for life (Irish peers); by election for duration of Parliament (Scottish peers).

Qualifications.—Must be at least twenty-one years of age.

Remuneration.—Receive no pay.

Committees.—Special committees are appointed to make investigations, and report on matters which could not be undertaken by the whole House.

Powers and Duties.—In concurrence with the House of Commons, makes the laws, having a revising power over all bills proposed by the House of Commons, except those relating to public revenue and expenditure, which it must pass or reject without amendment.

It is the highest appellate court of the United Kingdom. It may in certain cases try members of its own body; it tries any person who may be impeached by the House of Commons, and it also decides claims to the peerage.

HOUSE OF COMMONS.—This body consists of six hundred and seventy elected members representing county, borough, and university constituencies. Roughly speaking, about one-sixth of the population are electors.

Qualifications.—Must be at least twenty-one years of age. Clergymen are disqualified from sitting as members, also English and Scottish peers, government contractors, and sheriffs and returning officers for the localities for which they act.

Organization—Quorum.—Forty members, including the Speaker. Elects its own presiding officer, who is called the Speaker, who has a residence in the Palace of Westminster, and receives a salary of \$25,000 per annum.

Remuneration.—\$2,000 per year (since 1911).

Powers and Duties.—May originate and, in concurrence with the House of Lords, pass resolutions and bills; but bills relating to the imposition of taxes and the granting of supplies for the service of the State must be originated in the House of Commons.

Committees.—The business of the House is almost entirely under the direction of the Ministry; however, commissions and select committees are from time to time appointed to make investigations and report on matters which could not be undertaken by the House.

IV. Judicial Departments, or Courts of Law.

Privy Council.—The Judicial Committee of the Privy Council (which hears appeals from Colonial and Indian Courts, and also from Ecclesiastical Courts) consists of the Lord Chancellor, Lord President, ex-Lords President, the Lords of Appeal in Ordinary, and such other members of the Privy Council as shall from time to time hold or have held "high judicial office." No dissenting judgments are allowed, but the Judicial Committee can grant special leave to appeal.

The English courts of law having jurisdiction in actions between parties are:

HOUSE OF LORDS

Lord High Chancellor and such peers of Parliament as are holding or have held high judicial office. This is the ultimate Court of Appeal from all the courts in the United Kingdom.

There are two Courts of Appeal below these divisions:

Lords of Appeal in Ordinary.—Consisting of six Justices.

Court of Appeal.—Ex-Officio Judges, the Lord High Chancellor, the Lord Chief Justice of England, the Master of the Rolls, and the President of the Probate, Divorce and Admiralty Division.

The High Court comprises the King's Bench, Chancery, and Probate, Divorce and Admiralty Divisions.

High Court of Justice, Chancery Division.—(Administration of trusts, company cases, mortgages, patents, etc.). Consists of the Lord High Chancellor and six other Justices.

High Court of Justice, King's Bench Division.—(Contracts, torts, bankruptcy, etc.). Consists of the Lord Chief Justice of England and fifteen other Justices.

High Court of Justice, Probate, Divorce and Admiralty Division.—(Wills, matrimonial cases, and maritime cases). Consists of two Justices.

Court of Criminal Appeal.—All the Judges of King's Bench Division.

Court of Arches.—An ecclesiastical court unites the powers of the *ius canonicum* with new powers conceded by the Church Discipline Act, 1841, and the similar statute of 1874, exercising authority in both provinces. The Judicial Committee of Privy Council is the Court of Final Appeal in ecclesiastical causes.

Bankruptcy Court.—Consisting of one Justice.

GERMANY

Form of Government.—The Empire, according to the Constitution of April 16, 1871, is a Confederate League, bearing the name German Empire, under the hereditary presidentship of the King of Prussia, who holds the title of German Emperor, and whose eldest son is styled His Imperial and Royal Highness.

I. Constitution.

Adoption.—Present Constitution adopted April 16, 1871. The Constitution of the German Empire is substantially that of the North German Confederation, which came into force in 1867, and which was adopted by the Empire in 1871, after the southern states of Germany had combined with the northern.

Amendments.—Amendments to the Constitution can be proposed by either of the legislative bodies, are passed by ordinary legislative process, requiring for their passage a majority simply of the votes of the Reichstag, but they fail if fourteen votes are cast against them in the Bundesrat.

II. Chief magistrate, styled the Deutscher Kaiser.

How Designated.—The election of Wilhelm I., King of Prussia, as German Emperor (1871) was by vote of the Reichstag of the North German Confederation, on the initiative of all the reigning Princes of Germany. The Imperial dignity is hereditary in the House of Hohenzollern, and follows the law of primogeniture in the male line. He must be occupant of the throne of

Prussia under the provisions of Prussian law.

Term of Office.—Holds office for life, and cannot be removed.

Salary or Income.—Royal Civil List of Emperor, \$3,700,000.

Powers and Duties.—Commander-in-Chief of the imperial army.

Summons, opens, adjourns, and closes the two Houses. He may dissolve the Reichstag upon advice of the Bundesrath.

All measures passed by the Bundesrath are presented to the Reichstag in the name of the Emperor.

Bills passed by the two Houses must be promulgated by the Emperor.

In cases where he regards them as involving a change in the Constitution, he need not promulgate them if fourteen votes have been cast against them in the Bundesrath.

All official acts of the Emperor require the counter-signature of the Chancellor.

Appoints and may, at his pleasure, remove the Imperial Chancellor. Appoints and may, with the counter-signature of the Chancellor, remove all minor officers in the imperial service.

May declare war if defensive, and make treaties and peace; but for declaring offensive war the consent of the Bundesrath must be obtained.

Has power to grant pardons.

THE EXECUTIVE DEPARTMENTS

Imperial Chancellor.—He has no counterpart in any other constitutional government. He is the Emperor's responsible proxy, controlling the politics of the Empire.

Appointment and Tenure of Office.—Appointed by the Emperor. Must be one of Prussia's seventeen representatives in the Bundesrath. His term is dependent upon the pleasure of the Emperor.

Responsibility.—Does not consist in a liability to be forced to resign, but consists simply in amenability to the laws.

Powers and Duties.—Must give an account of the administration to the Reichstag, and submits the annual budget. He is the center and source of all the administrative departments, dominating the entire imperial service. He superintends the administration of the laws of the Empire by the States. As chairman of the Bundesrath he is simply a Prussian representing the King of Prussia, as the Emperor has no place in the Bundesrath.

The army and navy, however, are not directly controlled by him, but by the General Field-Marshal.

The following are the imperial authorities or Secretaries of State; they do not form a Ministry or Cabinet, but act independently of each other, under the general supervision of the Chancellor:

Chancellor of the Empire.

Secretary for Foreign Affairs.

Imperial Home Office and Representative of the Chancellor.

Imperial Admiralty.

Imperial Secretary of Justice.

Imperial Treasury.

Imperial Post-Office.

Secretary for the Colonies.

And, in addition, the following presidents of imperial bureaus:

Railways.

Imperial Exchequer.

Imperial Bank.

Imperial Debt Commission.

Administration of Imperial Railways.

Imperial Court Martial.

Acting under the direction of the Chancellor of the Empire, the Bundesrath represents also a supreme administrative and consultative board, and as such has twelve standing committees—namely, for army and fortifications; for naval matters; tariff, excise and taxes; trade and commerce; railways, posts and telegraphs; civil and criminal law; financial accounts; foreign affairs; for Alsace-Lorraine; for the Constitution; for the standing orders; and for railway tariffs.

III. The Government.

The legislative functions of the Empire are vested jointly in the Bundesrath or Federal Council which represents the several states, and by the Reichstag or Diet of the Realm, which represents the German nation. The Emperor has no veto on laws passed by these bodies. All laws for the Empire must receive the votes of an absolute majority.

The consent of the Federal Council and Reichstag is necessary in regard to certain specified treaties. The Emperor has the right to summon, open, adjourn, and close the Reichstag. The Federal Council and Reichstag must be summoned to meet every year; the Reichstag cannot be summoned without the adherence of the Federal Council.

BUNDESRATH, or Federal Council, is composed of sixty-one votes representing the individual states. They are appointed by the governments (*i. e.* the Executives) of the States for each session.

The apportionments of representation in the Bundesrath among the States of the Empire is as follows: Prussia seventeen votes, Bavaria six, Saxony and Württemberg four each, Baden, Hesse and Alsace-Lorraine each three, Mecklenburg-Schwerin and Brunswick each two, the other States (seventeen) one apiece.

Remuneration.—Receive no pay.

Organization—Quorum.—The Imperial Chancellor or his substitute (at regular meeting). The Imperial Chancellor presides. Votes with the other Prussian representatives, whose votes must be undivided; and, in case of a tie, Prussia's vote decides.

Committees.—There are three standing committees and eight commissions, two of which are appointed by the Emperor, five wholly by the Bundesrath, and one in part by the Bundesrath, being made up principally of members *ex-officio*.

Each commission consists of representatives of at least five States of the Empire.

Powers and Duties.—May originate bills to be sent to the Reichstag. Its consent is indispensable to the validity of all legislation. Members may speak on the floor of the Reichstag.

Acting under the direction of the Imperial Chancellor, it is the supreme administrative board. It is in some cases the highest court of the Empire. Is the court of appeal between two or more States of the Empire.

REICHSTAG, or Imperial Diet, is composed (in 1917) of three hundred and ninety-seven members, and elected for five years by universal suffrage.

Qualifications.—Must be at least twenty-five years of age, and have lived at least one year in one of the German States.

Organization—Quorum.—A majority of members. Elects its own presiding officer, who is called the President.

Remuneration.—3,000 marks (\$750) per session, with deduction of twenty marks (\$5.00) for each day's absence; they have free passes over German railways during session.

Powers and Duties.—Has power to originate and, with the advice and consent of the Bundesrath, to enact the laws. It also exerts a controlling influence through its power to give or withhold its sanction to certain ordinances to whose validity the Constitution makes its concurrence necessary, through its right to inquire into the conduct of affairs; and in many other ways not susceptible of enumeration.

Committees.—There are no standing committees, but select committees are occasionally appointed by election from the seven "Sections" into which the members are divided by lot for committee work.

IV. Judicial Department.

The laws of the Empire take precedence of the Federated States within the scope of the Constitution of the Empire; they are compulsory on all Governments of the Empire.

A uniform system of law courts exists throughout the Empire, though, with the exception of the Reichsgericht, all courts are directly subject to the Government of the special State in which they exercise jurisdiction, and not to the Imperial Government. The appointment of the judges is also a State and not an Imperial function. The Empire enjoys uniform codes of commercial and criminal law.

IMPERIAL SUPREME COURT.

Reichsgericht (Imperial Supreme Court), to which there is a right of appeal from all inferior courts, sits at Leipzig, and consists of one hundred judges, appointed by the Kaiser on the recommendation of the Bundesrath.

The Oberlandesgerichte (Supreme Court), which are the first courts of the second instance, have original jurisdiction in serious offenses, and are presided over by seven judges.

The Landgerichte (County Courts) have a fairly extensive jurisdiction in civil and criminal cases and in divorce proceedings. There are five judges in the criminal chamber of a Landgericht, four votes being required to make a conviction valid. Three judges from such a court preside at intervals over jury courts (Schwurgerichte), and juries do not, therefore, form a permanent part of the system.

Not the least important work of the Landgerichte is to revise the decisions of the Amtsgerichte, which are the lowest courts of the first instance, being controlled by single judges, who are competent to hear only petty civil and criminal cases.

The Amtsgerichte (Police or District Courts) are the lowest courts, each with a single judge competent to try petty civil and criminal cases, divorce cases, etc.

FRANCE

Form of Government.—France, since the overthrow of Napoleon III., in 1870, has been a republic governed by a President and two Chambers under the Constitution.

I. Constitution.

Adoption.—Present Constitution adopted February 25, 1875. It has undergone but slight modifications. The present French Constitution remains a mixture of monarchical and republican institutions, and it has fully maintained its strong and old-established centralization. The Constitution of 1875 is based on universal suffrage. It was revised in 1875, 1884, 1885 and 1889.

Amendments.—Whenever the two Houses agree that revision is necessary, and also agree upon particular points that should be revised, the National Assembly, composed of the Senate and the Chamber of Deputies, sitting as one body, convenes at Versailles, and acts upon the amendments proposed, the vote of an absolute majority being decisive. The National Assembly also elects the President of the republic.

II. Chief Magistrate, or President of the Republic.

Term of Office.—Elected for seven years by the National Assembly, and is re-eligible.

The National Assembly meets for the purposes of this election, as for the revision of the Constitution, at Versailles. The revision of the Constitution and the election of President are its only functions.

Qualifications.—Must be a citizen, not a member of any family which has occupied the throne of France.

Salary.—\$140,000.

Responsibilities.—May be impeached by the Chamber of Deputies, and tried by the Senate, in case of high treason.

Powers and Duties.—Has command of the army and navy.

May convene the Chambers on extraordinary occasions.

May adjourn the Chambers at any time for a period not exceeding one month. Can close a regular session of the Chambers at his discretion after it has continued five months; an extra session when he pleases. Can with the consent of the Senate dissolve the Chamber of Deputies even before the expiration of five months. This puts an end to the session of the Senate also, but not to its life. The President must order a new election in case of dissolution.

At the commencement of a new session of the Chambers the President of the republic sends a message, which is read by one of the Ministers.

Bills passed by the Chambers must be signed by the President, and countersigned by one of his Ministers.

Has no veto power, but is authorized to demand a reconsideration of any measure by the Chambers.

Has power to appoint and remove all officers of the public service, subject to the counter-signature of the Minister whose department is affected in each case.

May make treaties of peace, alliance and commerce, but cannot declare war without the advice of the Chambers.

Has power to grant pardons.

Succession.—In case of his death, resignation, or removal, the Council of Ministers act until the National Assembly can meet and elect a new President.

THE EXECUTIVE DEPARTMENTS

Powers and Duties.—As a Cabinet, the Ministers represent the administration in the Chambers; as a Council, they exercise a general oversight of the administration of the laws, with a view of giving unity of direction to the affairs of the State. The President may be present at all Council meetings.

Cabinet and Council of Ministers.—Both the Cabinet and the Council consist of the same persons. The Cabinet is a political body; the Council, an administrative body.

Appointment.—Chosen by the President, generally from among the members of the Chambers.

Members of the Cabinet.—Membership may vary somewhat:

Premier and Foreign Minister.

Ministers of State.

Minister of Justice and Vice-President of the Council.

Minister of War.

Minister of Marine.

Minister of the Interior.

Minister of Finance.

Minister of Agriculture.

Minister of Public Works.

Minister of Commerce.

Minister of Colonies.

Minister of Instruction and Minister of Inventions affecting National Defense.
Council of State.—Gives advice on all projects of law which the Chambers or the Government wish to submit to it, and on administrative regulations and by-laws. Its decision is final in all disputes arising in matters of administration.
 Is presided over by the Minister of Justice, and is composed of Councillors, Masters of Requests, and Auditors, all appointed by the President of the republic.
Relations to the Chambers.—Are the leaders of the Chambers.
 Whether members of the Chambers or not, they have as Ministers the right to attend all sessions of the Chambers and take a specially privileged part in the debate.
Tenure of Office.—Dependent upon the favor of the Chambers; for, if not sustained, they must all resign.

III. The Chambers.—Consist of the Senate and House of Deputies.
THE SENATE is composed of three hundred members chosen by the Departments and Colonies for nine years, one-third of the members retiring every three years.
 Until 1884 the Senate contained seventy-five life members, the life list having been originally made up by election by the National Assembly of 1875, and vacancies being filled by the Senate itself. In 1884 this arrangement was abolished, and since that year vacancies in the life roll have been filled by ordinary nine-year Senators.
Qualifications.—Must be a Frenchman, and at least forty years of age.
Remuneration.—15,000 francs (\$3,000).
Organization—Quorum.—A majority of members. Elects its own President and Vice-Presidents.

Committees.—Each month the members are divided by lots into "Bureaux." These select all the special committees to which bills are referred, except when the House chooses itself to elect a committee.
Powers and Duties.—In concurrence with the Chamber of Deputies, makes the laws, and has in law-making the same prerogatives as the Chamber, except that bills relating to revenue originate with the Chamber. It is a court of justice for trying the President of the republic and the Ministers. It may originate, and, in concurrence with the Senate, pass resolutions and bills; but bills relating to finance must be originated by the Chamber of Deputies. Has power to bring accusations against the President of the republic and the Ministers.
THE CHAMBER OF DEPUTIES is composed (in 1917) of five hundred and eighty-four Deputies, distributed among the Departments and certain colonies in the proportion of one Deputy to seventy thousand inhabitants. The Deputies are chosen for a term of four years by universal suffrage, the Arrondissements serving as electoral districts.
Qualifications.—Must be a citizen of France, and at least twenty-five years of age.
Organization—Quorum.—A majority of members. Chooses its own President, Vice-President and other officers.
Remuneration.—15,000 francs (\$3,000).
Powers and Duties.—May originate, and, in concurrence with the Senate, pass resolutions and bills; but bills relating to finance must be originated by the Chamber of Deputies. Has power to bring accusations against the President of the republic and Ministers.
Committees.—Each month the members are divided by lot into eleven "Bureaux," which select all the special committees to which bills are referred, except when the Chamber chooses to appoint a committee directly.

IV. Judicial Department.
 The judicial system is under direct control of the government. All Judges are nominated by the President of the republic. They can be removed only by a decision of the Court of Cassation constituted as the *Conseil Supérieur* of the magistracy.

THE COURT OF CASSATION.

The Court of Cassation, which sits at Paris, is the highest court for all criminal cases tried by jury, so far as regards matters of law.
Courts of Appeal.—The highest courts are the twenty-six Courts of Appeal, composed each of one president and a variable number of members, for all criminal cases which have been tried without a jury.
Court of Assizes.—In all cases of a *délict* or a crime the preliminary inquiry is made in secrecy by an examining magistrate (*juge d'instruction*), who may either dismiss the case or send it for trial before a court where a public prosecutor (procureur) endeavors to prove the charge. The Court of Assizes is assisted by twelve jurors, who decide by simple majority on the fact with respect to offenses amounting to crimes.
Justices of the Peace (juges de paix) are the courts of lowest jurisdiction in France. They try small civil cases and act also as judges of Police Courts, where all petty offenses (*contraventions*) are disposed of. The Correctional Courts pronounce upon all graver offenses (*délits*), including cases involving imprisonment up to five years. They have no jury, and consist of three judges belonging to the civil tribunals of first instance.
 For commercial cases there are, in two hundred and twenty-six towns, Tribunals of Commerce and Councils of Experts (*prud'hommes*). In the towns are police courts.

23. Benjamin Harrison	Tues., Aug. 20, 1833	North Bend, Ohio	John Scott	Elizabeth Findlay Irwin	English	Farmer
24. Grover Cleveland	Sat., Mar. 18, 1837	Caldwell, N. J.	Richard Falley	Anne Neale	English	Clergyman
25. William McKinley	Sun., Jan. 29, 1843	Niles, Ohio	William	Nancy C. Allison	Scotch-Irish	Iron Mnfr.
26. Theodore Roosevelt	Wed., Oct. 27, 1858	28 East 20th St., New York City	Theodore	Martha Bullock	Dutch	Merchant
27. William Howard Taft	Tues., Sept. 15, 1857	Cincinnati, Ohio	Alphonso	Louise M. Torrey	English	Lawyer
28. Woodrow Wilson	Sun., Dec. 28, 1856	Staunton, Va.	Jos. Ruggles	Jessie Woodrow	Scotch-Irish	Clergyman

TABLE II. EDUCATION, PROFESSION, RELIGION AND POLITICS

NAMES OF PRESIDENTS	Educational Advantages	Early Vocation	Profession	Religious Connection	Politics
1. George Washington	Common School	Surveyor	Planter	Episcopalian	Federalist
2. John Adams	Harvard College, 1755	Teacher	Lawyer	Unitarian	Federalist
3. Thomas Jefferson	College of William and Mary, 1762	Lawyer	Lawyer	Liberal	Republican ^[12]
4. James Madison	Princeton College, 1771	Lawyer	Lawyer	Episcopalian	Republican
5. James Monroe	Entered College, William and Mary	Lawyer	Politician	Episcopalian	Republican
6. John Quincy Adams	Harvard College, 1787	Lawyer	Lawyer	Unitarian	Republican
7. Andrew Jackson	Self Taught	Lawyer	Lawyer	Presbyterian	Democrat
8. Martin Van Buren	Academy	Lawyer	Lawyer	Reformed Dutch	Democrat
9. William Henry Harrison	Entered Hampden-Sidney College	Medicine	Army	Episcopalian	Whig
10. John Tyler	College, William and Mary, 1806	Lawyer	Lawyer	Episcopalian	Democrat
11. James Knox Polk	University of North Carolina	Lawyer	Lawyer	Presbyterian	Democrat
12. Zachary Taylor	Common School	Soldier	Army	Episcopalian	Whig
13. Millard Fillmore	Public School	Tailor	Lawyer	Unitarian	Whig
14. Franklin Pierce	Bowdoin College, 1824	Lawyer	Lawyer	Episcopalian	Democrat
15. James Buchanan	Dickinson College, 1809	Lawyer	Lawyer	Presbyterian	Democrat
16. Abraham Lincoln	Self Taught	Farmer	Lawyer	Liberal	Republican
17. Andrew Johnson	Self Taught	Tailor	Politician	Liberal	Republican
18. Ulysses Simpson Grant	West Point Military Academy, 1843	Tanner	Army	Methodist	Republican
19. Rutherford Birchard Hayes	Kenyon College, Ohio, 1842	Lawyer	Lawyer	Methodist	Republican
20. James Abram Garfield	Williams College, 1856	Teacher	Lawyer	Disciples	Republican
21. Chester Alan Arthur	Union College, 1848	Teacher	Lawyer	Episcopalian	Republican
22. Grover Cleveland	Common School	Teacher	Lawyer	Presbyterian	Democrat
23. Benjamin Harrison	Miami University, Ohio, 1851	Lawyer	Lawyer	Presbyterian	Republican
24. Grover Cleveland	Common School	Teacher	Lawyer	Presbyterian	Democrat
25. William McKinley	Entered Allegheny College	Lawyer	Lawyer	Methodist	Republican
26. Theodore Roosevelt	Harvard, 1880	Publicist	Publicist	Reformed Dutch	Republican
27. William Howard Taft	Yale, 1878	Lawyer	Lawyer	Unitarian	Republican
28. Woodrow Wilson	Princeton, 1879	Lawyer	Educator	Presbyterian	Democrat

[12] The first Republican party, founded by Jefferson, later developed into the Democratic party of today.

TABLE III. MARRIAGE, CHILDREN AND ELECTION TO THE PRESIDENCY

Terms	Name	Married	Wife's Name	Children		Elected President	Residence When Elected	Age When Inaugurated
				Boys	Girls			
1-2	Washington	1759	Martha (Dandridge) Custis (1732-1802), widow with two children	0	0	1789	Mt. Vernon, Va.	57
3	Adams	1764	Abigail Smith (1744-1818)	3	2	1796	Quincy, Mass.	62
4-5	Jefferson	1772	Martha (Wayles) Skelton (1748-1782), widow of Bathurst Skelton	0	6	1800	Monticello, Va.	58
6-7	Madison	1794	Dolly (Payne) Todd (1772-1849), widow	0	0	1808	Montpelier, Va.	58
8-9	Monroe	1786	Elisa Kortwright (1768-1830)	0	2	1816	Oakhill, Va.	59
10	Adams, J.Q.	1797	Louisa Catherine Johnson (1775-1852)	3	1	1824	Quincy, Mass.	58
11-12	Jackson	1791	Rachel (Donelson) Robards (1767-1828), divorced wife of Captain Robards	3	0	1828	Hermitage, Tenn.	62
13	Van Buren	1807	Hannah Hoes (1783-1819)	4	0	1836	Kinderhook, N. Y.	55
14	Harrison	1795	Anna Symmes (1775-1864)	6	4	1840	North Bend, Ohio	68
14	Tyler	1813	(1) To Letitia Christian (1790-1842)	3	4	...	Williamsburg, Va.	51
		1844	(2) To Julia Gardiner (1820-1889)	4	2			
15	Polk	1824	Sarah Childress (1803-1891)	0	0	1844	Nashville, Tenn.	50
16	Taylor	1810	Margaret Smith (1788-1852)	1	3	1848	Baton Rouge, La.	65

TABLE IV. TERM OF OFFICE, DEATH AND PLACE OF BURIAL

Term of Office	Died	Cause of Death	Age at Death	Place of Death	Place of Burial
April 30, 1789-Mar. 4, 1797	1799	Pneumonia	67	Mt. Vernon, Va.	Mt. Vernon, Va.
Mar. 4, 1797-Mar. 4, 1801	1826	Natural decline	90	Quincy, Mass.	Unitarian ch., Quincy, Mass.
Mar. 4, 1801-Mar. 4, 1809	1826	Chronic diarrhoea	83	Monticello, Va.	Monticello, Albemarle Co., Va.
Mar. 4, 1809-Mar. 4, 1817	1836	Natural decline	85	Montpelier, Va.	Montpelier, Hanover Co., Va.
Mar. 4, 1817-Mar. 4, 1825	1831	Natural decline	73	New York City	Hollywood, Richmond, Va.
Mar. 4, 1825-Mar. 4, 1829	1848	Paralysis	80	Washington, D. C.	Unitarian, Quincy, Mass.
Mar. 4, 1829-Mar. 4, 1837	1845	Consumption	78	Hermitage, near Nashville, Tenn.	Hermitage, near Nashville, Tenn.
Mar. 4, 1837-Mar. 4, 1841	1862	Asthma	79	Kinderhook, N. Y.	Kinderhook, N. Y.
Mar. 4, 1841-April 4, 1841	1841	Pleurisy fever	68	White House, Washington, D. C.	North Bend, Ohio
April 6, 1841-Mar. 4, 1845	1862	Bilious attacks with bronchitis	71	Ballard House, Richmond, Va.	Hollywood, Richmond, Va.
Mar. 4, 1845-Mar. 4, 1849	...	Chronic diarrhoea	53	Nashville, Tenn.	Nashville, Tenn.
Mar. 4, 1849-July 10, 1850	1850	Cholera morbus and typhoid fever	65	White House, Washington, D. C.	Springfield, Ky.

17	Pierce	Mar. 4, 1853-Mar. 4, 1857	1869	Dropsy and inflammation of stomach	64	Concord, N. H.	Concord, N. H.
18	Buchanan	Mar. 4, 1857-Mar. 4, 1861	1868	Rheumatic gout	77	Lancaster, Pa.	Woodward Hill, Lancaster, Pa.
19-20	Lincoln	Mar. 4, 1861-April 15, 1865	1865	Assassinated by Booth	56	Washington, D. C.	Oak Ridge, Springfield, Ill.
20	Johnson	April 15, 1865-Mar. 4, 1869	1875	Paralysis	66	Greeneville, Tenn.	Greeneville, Tenn.
21-22	Grant	Mar. 4, 1869-Mar. 4, 1877	1885	Cancer of the tongue	63	Mt. McGregor, N. Y.	Riverside, New York City
23	Hayes	Mar. 4, 1877-Mar. 4, 1881	1893	Neuralgia of heart	70	Fremont, Ohio	Fremont, Ohio
24	Garfield	Mar. 4, 1881-Sept. 19, 1881	1881	Assassinated by Guiteau	49	Elberon, Long Branch, N. J.	Lake View Cemetery, Cleveland, Ohio
24	Arthur	Sept. 20, 1881-Mar. 4, 1885	1886	Bright's disease	56	New York, N. Y.	Rural Cemetery, Albany, N. Y.
25	Cleveland	Mar. 4, 1885-Mar. 4, 1889
26	Harrison	Mar. 4, 1889-Mar. 4, 1893	1901	Pneumonia	67	Indianapolis, Ind.	Crown Hill Cemetery, Indianapolis, Ind.
27	Cleveland	Mar. 4, 1893-Mar. 4, 1897	1908	Heart failure	71	Princeton, N. J.	Princeton, N. J.
28-29	McKinley	Mar. 4, 1897-Sept. 14, 1901	1901	Assassinated by Czolgosz	58	Buffalo, N. Y.	Cemetery, Canton, Ohio
29-30	Roosevelt	Sept. 14, 1901-Mar. 4, 1909
31	Taft	Mar. 4, 1909-Mar. 4, 1913
32	Wilson	Mar. 4, 1913-...

TABLE V. LATER CAREER, WRITINGS AND SOBRIQUETS

Name	Career After Leaving the Presidency	Writings of the Presidents	Presidential Sobriquets
Washington	Agricultural pursuits; appointed commander-in-chief (1798) because of threatened war with France.	<i>Maxims; Transcripts of Revolutionary Correspondence.</i>	"Father of his Country;" "American Fabius."
Adams	Member of the Massachusetts Constitutional Convention of 1820.	<i>Essay on Canon and Feudal Laws; Defense of the American Constitution.</i>	"Colossus of Independence;" "Son of Liberty."
Jefferson	Retired to his plantation at Monticello, Va.; devoted much time to the University of Virginia.	<i>A Summary View of the Rights of America; The Declaration of Independence; Act for Freedom of Religion.</i>	"Sage of Monticello," "Long Tom."
Madison	Retired to Montpelier, Va.; contributed large service to University of Virginia; served in the Virginia Constitutional Convention, 1829.	<i>Reports of Debates During the Congress, of the Confederation and Federal Congress; Essays.</i>	"Father of the Constitution."
Monroe	Retired to private life in Virginia; served as a member of the Virginia Constitutional Convention in 1830.	<i>A View of the Conduct of the Executive; The People; The Sovereign.</i>	"Last Cocked Hat."
Adams, J.Q.	Was returned to Washington as a member of the House of Representatives; served from 1830 to his death.	<i>Poems of Religion and Society; Lectures on Rhetoric and Oratory; Criticisms of Paine's "Rights of Man;" Defense of Washington's Policy of Neutrality</i>	"Old Man Eloquent."
Jackson	Retired to the "Hermitage," near Nashville, Tenn.; always took a deep interest in public affairs.	...	"Old Hickory;" "Cæsar of the White House."
Van Buren	Was renominated in 1840, 1844, and 1848 for the presidency.	<i>Inquiry Into the Origin and Causes of Political Parties in the United States.</i>	"Little Magician;" "Wizard of Kinderhook."
Harrison	Died in office.	<i>A Discourse on the Aborigines of the Valley of the Ohio.</i>	"Tippecanoe."
Tyler	Retired to his estate in Virginia; presided at the peace convention held in Washington in 1861.	...	"Young Hickory."
Polk	Died in office.	...	Also "Young Hickory,"
Taylor	"Rough and Ready;" "Old Buena Vista."
Fillmore	Was candidate for president in 1852 and in 1856; spent his remaining years at Buffalo, N. Y.	...	"The American Louis Philippe."
Pierce	Traveled in Europe; retired to Concord, N. H.	...	"Purse."
Buchanan	Retired to Lancaster, Pa.; devoted himself to writing defense of his administration.	<i>Résumé of My Administration.</i>	"Old Public Functionary;" "Bachelor President."
Lincoln	Died in office.	<i>Orations.</i>	"Honest Old Abe;" "Rail-splitter;" "Great Emancipator."
Johnson	Retired to home in Greeneville, Tenn.; chosen United States Senator in 1875.	<i>Speeches.</i>	"Sir Veto."
Grant	Made tour of the world and retired to private life in New York.	<i>Shiloh; Vicksburg; Chattanooga; The Wilderness; The Personal Memoirs of U. S. Grant.</i>	"Unconditional Surrender;" "Old Three Stars."
Hayes	Was president of the Board of Freedmen, and president of the National Prison association.	...	"President de Facto."
Garfield	Died in office.	<i>Discovery and Ownership of the Northwestern Territory; Garfield's Words.</i>	"The Martyr President;" "The Dark Horse."
Arthur	Died the year following his retirement.	...	"Our Chet;" "America's First Gentleman."
Cleveland	Retired to New York to practice law; at the end of second term retired to Princeton, N. J.	<i>Writings and Speeches.</i>	"Man of Destiny;" "The Claimant."
Harrison	Professor of International law at Leland Stanford University, California; afterward practiced law.	<i>Speeches; This Country of Ours; Views of an Ex-President.</i>	"Son of His Grandfather;" "Hoosier President."
McKinley	Died in office.	<i>Speeches.</i>	"Prosperity's Advance Agent;" "Bonaparte of Politics."
Roosevelt	In March, 1909, headed a scientific expedition to Africa, organized in the interest of the Smithsonian Institution; resumed literary work and politics.	<i>The Naval War of 1812; Essays on Practical Politics; The Winning of the West; Hero Tales From American History; American Ideals; Life of Oliver Cromwell; African Game Trails.</i>	"Teddy;" "The Rough Rider;" "T. R.;" "Our Strenuous President."
Taft	Kent Professor of Law at Yale University.	...	"The Globe Trotter;" "The Judicial President."
Wilson	...	<i>Congressional Government; The State; An Old Master; and Other Political Essays; Mere Literature and Other Essays; George Washington; A History of the American People.</i>	"The Scholar in Politics."

CANADA.—What is known as the Dominion of Canada is a confederation of the colonies of British North America, constituted in 1867 by the British North America Act of that year. Upper and Lower Canada, Nova Scotia, and New Brunswick were the first to unite under the provisions of that statute, and the Dominion of Canada now includes the whole of the British North American possessions excepting Newfoundland.

Canada is nearly as large as the whole of Europe, and about 750,000 square miles larger than the United States without Alaska. The census figures for 1911 were:

	Area sq. mi.	Population
Prince Edward Island	2,184	93,728
Nova Scotia	21,428	492,338
New Brunswick	27,985	351,889
Quebec	351,873	2,002,712
Ontario	260,862	2,523,274
Manitoba	73,732	455,614
British Columbia	355,855	392,480
Alberta	255,285	374,663
Saskatchewan	251,700	492,432
Yukon (Territory)	207,076	8,512
Northwest Territories	1,921,685	17,196
Total	3,729,665	7,204,838

In 1912 parts of the Northwest Territories were transferred to Manitoba, Ontario, and Quebec.

NEWFOUNDLAND.—The island of Newfoundland, on the northeast side of the Gulf of St. Lawrence, has a total area of 42,750 square miles, with a population (1911) of 238,670. Attached to the government of the island is a coastal strip of the Labrador peninsula 120,000 square miles (population 3,949).

Physical Features.—Both the Atlantic and Pacific shores abound in deep indentations forming magnificent harbors and sheltered bays. On the Atlantic the principal bay is the Bay of Fundy, remarkable for its high and rushing tide, the water rising from twelve to seventy feet. There is also the Hudson Bay, connected with the Atlantic by Hudson Straits, really an inland sea with an area of three hundred and fifty thousand square miles, and the Gulf of St. Lawrence, eighty thousand square miles in extent.

The most striking physical features of Canada are the Rocky Mountains, the Laurentian Range, and the chain of immense fresh water lakes forming part of the boundary with the United States.

The Laurentian Range extends along the north side of the St. Lawrence, the Ottawa River, and then stretches away to Lake Superior and the north, the length of the range being about three thousand five hundred miles. It forms the watershed between Hudson Bay and the St. Lawrence, and varies in height from one to three thousand feet.

The eastern portions of Canada are generally well timbered, and the same is true of British Columbia, and the region north of the Saskatchewan. Westward of the Red River, between the forty-ninth and fifty-fifth parallels, there is an immense fertile plain, suitable for general agriculture and grazing, extending nearly to the Rocky Mountains.

This range consists of triple chains with valleys between; the most easterly has the greatest elevation near the fifty-second parallel, the highest peaks being Mounts Brown, Murchison, Hooker, Columbia, Forbes, Bryce, Alberta, and Freshfield. The average height of the chain is from seven thousand to eight thousand feet. In the north, adjoining Alaska, is Mt. Logan, and, on the dividing line, St. Elias. (See [Mountains of the World](#) for elevations.)

Lakes and Rivers.—Canada is well watered, the country presenting a network of lakes and rivers. The system of the St. Lawrence alone, with the great lakes Superior, Huron, Michigan, Erie, and Ontario (between the last are the celebrated falls of Niagara), drains an area in Canada of three hundred and thirty thousand square miles. (See [North America and United States](#).)

Other important lakes are Winnipeg, Winnipegosis, Manitoba, Lake of the Woods, Great Slave, Great Bear, and Athabasca.

Next to the St. Lawrence the chief rivers are the Saskatchewan and the Winnipeg, flowing into Lake Winnipeg, and the Nelson, flowing from it into Hudson Bay; the Assiniboine and the Red River, which join their waters to flow into Lake Winnipeg; the Albany and the Churchill, emptying into Hudson Bay; the Athabasca and the Peace Rivers, flowing into Lake Athabasca, and the Slave River, from it into Great Slave Lake; the Mackenzie, fed from both the Great Slave and the Great Bear lakes, and emptying into the Arctic Ocean; the Fraser and Thompson, in British Columbia, emptying into the Pacific; and in the eastern provinces, the Ottawa, chief tributary of the St. Lawrence, itself fed by the Gatineau and Matawan; the Saguenay, emptying Lake St. John into the St. Lawrence; and the St. John, which flows into the Bay of Fundy, in New Brunswick, which it partly separates from the State of Maine.

The principal islands of the Dominion are: on the east, Cape Breton, Prince Edward and Magdalen Islands, and Anticosti, in the Gulf of St. Lawrence; and on the west coast,

Vancouver Island and Queen Charlotte Island. Lying along the north in the great Arctic Archipelago are immense islands, all of which, excepting Greenland, belong to Canada.

Climate.—The cold winter and the heat in summer are frequently extreme, but the climate is a healthy one. The winter may be said to continue from the middle of November to the end of March, or about four and a half months. British Columbia probably possesses the finest climate in North America.

In some inland parts of Canada the maximum temperature may be from ninety to ninety-six degrees, and the minimum from twenty to twenty-six degrees below zero. But although there are these extremes, the air is always dry, bracing, and exhilarating.

Products and Industries.—The chief industries of Canada are those of agriculture, stock-raising, dairy-farming, "lumbering" or timber trade and forestry, shipbuilding, fisheries, and mining. An extensive trade is maintained with the United States and England, the exports being timber, fish, and furs, with dairy produce and live stock; wheat and wheat flour, barley, and other agricultural products, cod and other fish, coal, and minerals.

The minerals are chiefly coal, silver, nickel, gold, copper, iron, asbestos, lead, salt, mineral oils and gypsum. Gold is or has been worked in Nova Scotia, Quebec, and Ontario, and largely in Yukon (Klondike) and British Columbia, where there are yet immense fields to open up. Silver mines are worked in Ontario; those at Cobalt (producing also cobalt, nickel and arsenic) have been the richest yet discovered in Canada. Iron ore is found all over the Dominion. Copper has been mined to a considerable extent both in Quebec and Ontario, and the deposits of the ore are of great extent. There are very large coal deposits in Nova Scotia. The coast of British Columbia is rich in coal of a good quality. Coal is known to exist over a vast region, stretching from one hundred and fifty to two hundred miles east of the Rocky Mountains, and north from the frontier for about one thousand miles.

The forest products of Canada constitute one of her most important sources of wealth. They find their way to all parts of the world—to the United States, to the United Kingdom, and to the Australian commonwealth.

Great progress has recently been made in the development of manufactures. The "national policy" comprises a high protective system, but since 1901 gives a preference to Britain.

Quebec has tanning industries and manufactures boot and shoes, the manufactures of woolen and cotton goods are increasing, and there are sugar refineries in Halifax and Montreal. Such wooden articles as doors, window sashes, etc., are manufactured in large numbers.

People.—The province of Ontario is thickly settled on the south, along the river and the lake shores, by a population which is mainly of British descent, with a considerable infusion of Germans. The province of Quebec is peopled in great part by descendants of the original French settlers; they are called *habitans*; many of them speak an archaic French dialect and keep up peculiar manners and customs, and they are Roman Catholic in religion.

The principal nationalities represented are English, Irish, Scotch, French, German and Indian, though there are also some few Dutch, Russian, Chinese, Welsh, Italians, Jews, half-breeds, etc.

Though English is the general language of Canada, the French language is by statute an official language in the Dominion parliament and in Quebec, but not now in any other province. Members of the Quebec and Manitoba parliaments may also address the House in either English or French.

RELIGION AND EDUCATION.—There is no state religion in Canada, and absolute toleration is there an accomplished fact. Roman Catholics, Methodists, Presbyterians, the Church of England, Baptists, Lutherans, and Congregationalists are all represented.

Canada has long been in the enjoyment of free education, and the control of the system is in the hands of the provinces, except where the Act of Confederation secures the permanence of the denominational schools which existed at the time of confederation. Teachers are trained at provincial normal schools.

In Ontario and Quebec there are separate schools for Protestants and Roman Catholics. The principal universities of Canada with the dates of their foundation are as follows:

PRINCIPAL UNIVERSITIES AND COLLEGES OF CANADA

Organized	Colleges	Location	Control	President or Chairman of Faculty	In-structors	Students	Volumes in Library
1881	Alma College	St. Thomas, Ont.	Methodist	Robt. I. Warner, D.D.	21	200	2,500

Government.—Canada is a self-governing dominion created by an Act of the British Parliament in March, 1867, known as the British North America Act. The Act provides that the Constitution of the Dominion shall be similar in principal to that of the United Kingdom; that the executive authority shall be vested in the Sovereign of Great Britain and Ireland, and carried on in his name by a Governor-General and Privy Council; and that the legislative power shall be exercised by a Parliament of two Houses, called the "Senate" and the "House of Commons."

Therefore, the executive government of Canada is vested in the king, who is represented by a Governor-General appointed by him for a term of five years. The emoluments of the Governor-General are, however, paid out of Canadian revenues.

The Governor-General has a right, which is, of course, very seldom exercised, to disallow or reserve bills for imperial consent. The Constitution of Canada cannot be altered save by the Imperial Parliament, but to all intents and purposes Canada has complete autonomy.

The Legislature.—The legislative power is a Parliament, consisting of an Upper House, styled the Senate, and a House of Commons.

The Senate consists at present of eighty-seven members, distributed between the various provinces thus: twenty-four for Ontario, twenty-four for Quebec, ten for Nova Scotia, ten for New Brunswick, four for Prince Edward Island, three for British Columbia, four for Manitoba, four for Alberta, and four for Saskatchewan. The members of the Senate are appointed for life by the Crown on the nomination of the Ministry for the time being; each nominee must be thirty years old, a resident in the province for which he is appointed, a natural born or naturalized subject of the king, and the owner of property amounting to four thousand dollars.

The House of Commons is chosen every five years at longest, and consists of two hundred and thirty-one members, elected as follows: eighty-two being elected for Ontario, sixty-five for Quebec, sixteen for Nova Scotia, eleven for New Brunswick, fifteen for Manitoba, eleven for British Columbia, three for Prince Edward Island, twelve for Alberta, fifteen for Saskatchewan, and one for Yukon. The House of Commons is also composed of natural born or naturalized subjects of the king; no property qualification is necessary, and its members are elected upon a very wide suffrage. The members of the House themselves elect their Speaker, and twenty, including the Speaker, form a quorum.

Each province has also a separate Legislature and administration, with a Lieutenant-Governor, appointed by the Governor-General, at the head of the Executive.

The Judiciary.—Justice is administered, as in England, by judges, police magistrates, and justices of the peace, of whom the first named are appointed by the Governor-General, for life, from among the foremost men at the Bar in the several provinces. The highest court is the Supreme Court of Canada, composed of a Chief Justice and five associate judges, and holding three sessions in the year at Ottawa. The only other Dominion Court, viz., the Exchequer Court of Canada, is presided over by a separate judge, and its sittings may be held anywhere in Canada. The Provincial Courts include the Court of Chancery, Court of King's Bench, Court of Error and Appeal, Superior Courts, County Courts, General Sessions, and Division Courts. The duties of coroners are generally analogous to those in force in England, as are also methods of civil and criminal procedure, while trial by jury prevails.

Cities.—The capital and seat of government of the Canadian Dominion is at Ottawa, population, 1911, 87,062.

Montreal, however, is the largest city of Canada, 470,480. It has extensive trade and manufactures, and from it the magnificent Victoria tubular bridge carries the Grand Trunk Railway of Canada across the St. Lawrence, which is here two miles wide.

Quebec, 79,910, the capital of the lower province, is the great shipping place for the Lower St. Lawrence, and is a picturesque old town, with walls and fortifications. Near it are the memorable Plains of Abraham.

Toronto, 376,538, on the northwest shore of Lake Ontario, is the local capital of the western provinces and the educational center of the Dominion, possessing a university and numerous schools.

Other cities include: Winnipeg, Man., 136,035; Vancouver, B. C., 100,401; Hamilton, Ont., 81,969; Quebec, Que., 78,910; Halifax, N. S., 46,619; London, Ont., 46,300.

Ottawa is situated upon the south bank of the Ottawa River, one hundred and twenty miles from its junction with the St. Lawrence at Montreal. The river here forms the splendid Chaudière Falls (two hundred yards wide and forty feet high), above which a suspension bridge spans the river, and which supply the motive-power for the numerous lumber mills, flour mills and factories.

East of the city the River Rideau forms a second fall. The Rideau Canal passes through the center of the city, and connects with the Rideau Lakes, and so with the great lakes beyond. Opposite the city, to the northeast, the Gatineau River joins the Ottawa.

It is a city of stately public buildings, of turfed drives and wooded pleasure grounds, and there is a constant round of social and official events connected with the meetings of Parliament and other public functions. The Grand Trunk system has added to the attractions of the city by building the Chateau Laurier, which enjoys a continent-wide reputation as being in the first rank of famous hotels.

The parliamentary buildings, constructed in the Italian Gothic style after 1860, are on a bluff on the river bank. They include the handsome library building and the Victoria Tower (one hundred and eighty feet). Adjoining buildings on Parliament Hill are devoted to departments of the Dominion government. The residence of the Governor-General—an old fashioned building, called Rideau Hall—is about a mile from the city. The post-office, city hall, banks and telegraph offices are handsomely built of stone.

Ottawa is the place of residence of the bishop of Ontario (Church of England), and of the Roman Catholic bishop of Ottawa, who has a cathedral here. There are a normal school and a collegiate institute, a very large college conducted by the Oblate Fathers, a ladies' college, a musical academy, an art school, a well-equipped geological museum, and the parliamentary library, with three hundred thousand volumes.

The industries of Ottawa are mostly connected with lumber. In the winter thousands of men are engaged in cutting timber and drawing it to the streams, and in the spring the freshets carry the rafts down to the mills. Flour, iron wares, bricks, leather, and matches are also manufactured.

The city was begun in the last years of the eighteenth century by a settler named Wright, of Boston, Massachusetts, who built a residence near the Chaudière, and called the village which he founded Hull. The construction of the Rideau Canal stimulated the settlement, which was called Bytown. In 1854 its name was changed to Ottawa, and the town was created a city. In 1858 Ottawa was chosen as the administrative capital of Canada. The first parliament met here in 1865.

History.—In 1534 Jacques Cartier landed on the Gaspé coast of Quebec, of which he took possession in the name of Francis I., king of France. Little was done by way of settlement till 1608, when Champlain founded Quebec. From this time till 1763 Canada, from Acadia (Nova Scotia) to Lake Superior and down the Mississippi to the Gulf of Mexico, was held to be French territory.

The struggle between Great Britain and France for supremacy was long and bitter, but ended in 1763 with the treaty of Paris, by which all the French dominions in Canada were ceded to Britain, save the small islands of St. Pierre and Miquelon, retained by France as fishing stations. Hudson Bay territory, Nova Scotia, and Newfoundland had passed to England by the treaty of Utrecht in 1713.

Through the American War of Independence, what is now Minnesota, Wisconsin, Michigan, Ohio, Indiana, and Illinois was lost in 1783 to the United States, no longer British colonies. Quebec was in 1791 divided into Lower and Upper Canada. A rebellion took place in 1837-1838, and the provinces were reunited in 1840. Prince Edward Island and New Brunswick were separated from Nova Scotia in 1770 and 1784. British Columbia was made a crown colony in 1858, and Vancouver Island joined to it in 1866. The confederation of all the British North American provinces—except Newfoundland—took place in 1867-1871, and the prosperity of the Dominion was only temporarily disturbed by the Red River rebellion of 1869.

The fishery rights have repeatedly been a source of controversy between Canada and Great Britain on the one hand and the United States on the other, and the dispute about sealing in Behring Sea and off the Alaskan coasts was only settled by arbitration in 1893. The Alaska boundary dispute was settled in 1903.

A proposed reciprocity agreement with the United States in the year 1911 saw the decisive defeat at the polls of the Laurier policy and the Liberal party. In October Robert L. Borden took over the reins of government, as Premier, and Earl Grey was succeeded as Governor-General by the Duke of Connaught. In 1916 the Duke of Devonshire succeeded as Governor-General.

The great European war of 1914 and following brought Canada to the vigorous support of Great Britain and the Entente Allies, and has done much toward the political, military and economic solidarity of the Dominion.

MEXICO (or *Méjico*; Span. pron. *Meh hē-co*, from a native word), a federal republic of North America, embraces twenty-seven states, a federal district, and four territories. It extends between the United States and Guatemala, with an extreme length of nearly two thousand miles; its breadth varies between one thousand and (in the Isthmus of Tehuantepec) one hundred and thirty miles. It has a coast-line of almost six thousand miles, but with scarcely a safe harbor beyond the noble haven of Acapulco. On the Atlantic side, with its sand banks and lagoons, there are only open roadsteads, or river-mouths generally closed to ocean vessels by bars and shallows; harbor works, however, have been constructed at Vera Cruz and Tampico.

From the southeast and northwest extremities of the republic there extend the peninsulas of Yucatan and Lower California, enclosing the Gulfs of Campeche and California, respectively. In area (751,300 square miles) Mexico almost equals Great Britain and Ireland, France, Germany and Austria-Hungary together.

Surface.—For the most part Mexico consists of an immense tableland, which commences in the United States, and rises to over eight thousand one hundred feet at Marquez, seventy-six miles north by west of Mexico City, at El Paso, on the northern frontier, the elevation is only three thousand seven hundred and seventeen feet. The most important mountain range is the Sierra Madre (over ten thousand feet, and extending from Tehuantepec into the United States); parallel with this run the Sierras of the east coast and of Lower California.

The surface of the country is also much broken up by short cross-ridges and detached peaks. There are numerous volcanoes, but only a few of them are more or less active. The more prominent are Orizaba (Citlaltepētēl, "star mountain"), Popocatepētēl ("smoking mountain"), Ixtaccihuatl ("white woman"); Nevada de Toluca, and Malinche.

On the Atlantic side the plateau descends abruptly to the narrow strip (about sixty miles) of gently sloping coast land; toward the Pacific, where the coast lands vary in width from forty to seventy miles, the descent is more gradual.

Rivers and Lakes.—From their rapid fall the rivers of such a mountainous region could never be of value for transport or communication. The Rio Grande del Norte, the boundary river, is only navigable for sixty miles up from the Gulf of Mexico, and the largest interior river—the Rio Grande de Santiago, flowing west to the Pacific—is barred across by many waterfalls, though its upper course expands to form Lake Chapala, the largest sheet of water in Mexico, fully fifty miles in length.

Climate and Landscape.—Though Mexico lies just on the border of the torrid zone, the climate is governed to a far greater extent by elevation than by position in latitude, and distinct climates are recognized at different stages just as in the plateau of Abyssinia.

The low coast land and the maritime region below an elevation of two thousand feet, called the Tierra Caliente, presents all the characteristics of tropical lands.

Above an elevation of two thousand feet, and up the slopes of the mountains to a height of about five thousand feet, a climate is found in which the landscape takes the aspect of that of the temperate zone.

This stage is known as the Tierra Templada.

[670]

NATIONAL PALACE, CITY OF MEXICO

Still higher, above five thousand feet, a cool region is reached, which is known as the Tierra Fria. This includes the summit of the tableland and the pine covered slopes of the mountains up to the height at which some of the peaks are capped with perennial snows. Much of this high tableland is valuable only for pasture; towards the north and northeast, where the plateau is wider, the landscape becomes bare and dry, and salt lakes like those of the plateau region of the western United States appear. Deeply cut "cañons" or "barrancas," gorges with steep walls furrowed out by the mountain torrents, are characteristic of the plateau.

Production and Industry.—The vegetation of Mexico has the same wide range as the climate. In the lowlands dye woods and valuable timbers abound in the virgin forests, as well as medicinal plants, india rubber, palms, etc.; and oranges and bananas, many varieties of cactus, agave, sisal, olives, sugar, coffee, cocoa, rice, indigo, cotton and tobacco, besides the omnipresent maize, all thrive. The vine flourishes in some districts, especially near El Paso, Durango, and Parras, in Coahuila, where a good wine is made; and mulberry plants have been imported from Europe to develop the silk industry. In Lower California a good deal of archil is collected, and chicle gum is extracted and prepared in the forests along the coast.

Agriculture in Mexico is steadily developing. Silver mining has been an important industry ever since the conquest. Gold is also produced. Copper is largely mined in some sections, being found in a pure state in Chiapas and Guanajuato, and elsewhere associated with gold. Other important minerals are iron, including enormous masses of meteoric iron ore, and the mountain a mile from Durango, the Cerro de Mercado, a solid mass of magnetic iron ore; lead, found associated with silver; and sulphur, zinc, quicksilver, platinum, cinnabar, asphalt and petroleum, besides salt, marble, alabaster, gypsum, and rock salt in great quantities. There are also said to be large deposits of coal, some of excellent quality.

Mexico is the original home of the "cattle range" business, and there vast herds of horses, cattle, and sheep form the principal wealth of the people.

Woolen and cotton spinning and weaving, and other branches of industry are encouraged by high protective duties.

People.—The population of Mexico consists mainly of the indigenous Indian race, and of the dominant Spaniards or their descendants. Spaniards born in Europe are now very few in number, but the government of the country is in the hands of the "Creoles," or people of Spanish descent born in Mexico. They number about twenty per cent, mixed Hispano-Americans, or mestizos, forty-three per cent, and full blood Indians thirty-five per cent of the whole population. The mestizos are the farmers and rancheros, the muleteers and servants. Whites and mestizos speak Spanish.

The Roman Catholic is the religion of the country, but all beliefs are tolerated, and education, now free and compulsory, is making steady progress.

Government.—The Mexican constitution is closely modeled upon that of the United States. The president, who is assisted by secretaries of state, is elected for four years, and can be re-elected for a second term. The legislative power is vested in a Congress, consisting of a Senate of fifty-six members, and a Chamber of Deputies of two hundred and thirty-three members. The judicial system occupies the same position as that of the United States; and the several states have elective governors and legislatures.

Owing to revolutionary conditions the civil government was practically suspended in September, 1914. (See under [History of Mexico](#).)

[671]

THE CATHEDRAL, CITY OF MEXICO

Cities.—The principal cities are Mexico City, the capital, population 470,000. Puebla, east of the capital, among the mountains, is the second town and the most industrious place in Mexico. Guadalajara, northwest, is also a city of magnificent palaces and churches. Vera Cruz, founded by Cortez, is the only port on the Atlantic. On the Pacific side the chief seaports are Mazatlan and Acapulco, with a fine harbor. Other important towns are Oaxaca, Puebla, and Durango.

The railway system joins that of the United States at El Paso on the Rio Grande.

Mexico City is situated seven thousand four hundred and ten feet above the sea at the lowest level of the great basin (fourteen hundred square miles) of the Anahuac plateau.

All the main streets converge on the Plaza Mayor, where the site of the old teocalli is occupied by the no less famous Cathedral. The walls of this imposing building, forming a cross four hundred and twenty-six by two hundred and three feet, alone cost nearly two million dollars, and the interior with its twenty chapels and elaborate ornamentation, much more. Built into the foot of one of the two open towers (two hundred and eighteen feet) is the famous "Aztec" (Toltec) calendar stone.

Facing the cathedral is the Municipal Palace, and on the sides of the plaza are the National Palace (the old vice-regal residence), the national Monte de Piedad, the postoffice, and the national museum.

Other noteworthy buildings are the national picture gallery and library (two hundred and fifty thousand volumes), the national observatory, the school of mines, the mint, the Iturbide hotel, and the former palace of the Inquisition, now a medical college; and, mostly in secularized ecclesiastical edifices, there are also schools of law and engineering, a conservatory of music, and an academy of fine arts.

Among the monuments of the city are the noble Columbus monument, the statue of Cuauhtemotzin, the last of the Aztec emperors, and that of the engineer Martinez.

The principal streets are broad, clean, and well paved and lighted, with houses of stone gaily painted in bright colors. In addition to the alameda, with its stately beaches, Mexico is remarkable for the extent and beauty of its paseos, or raised paved roads, planted with double rows of trees, which diverge far into the country from every quarter; and there are still on Lakes Chalco and Xochimilco, where a line of steamers runs, a few of the floating gardens for which the ancient city was so celebrated.

Attempts had long been made to drain the valley of Mexico. The federal government finally undertook the work, and operations begun in 1890 were completed in 1898 at a cost of about sixteen million dollars. Extensive drainage and sanitation works have since been carried out at a cost of five million seven hundred and fourteen thousand nine hundred and eighty-two dollars.

In 1905 a sumptuous legislative palace, a national Pantheon for the ashes of the great men of Mexico, and a monument to perpetuate the heroes of the independence were under construction, at a cost of thirty million dollars.

The trade of Mexico is chiefly a transit trade, but it has now extensive cotton and linen factories, paper mills, tobacco and cigars, gold and silver work, pottery, silverware, cork, bricks, and soap—many of them due to foreign enterprise.

History of Mexico.—The history of ancient Mexico exhibits two distinct and widely differing periods—that of the Toltecs and that of the Aztecs. Both were Nahua nations, speaking a language which survives in Mexico to this day.

The eighth century is the traditional date when the Toltecs are related to have come from the north, from some undefined locality, bringing to Anahuac, or Mexico, its oldest and its highest native civilization, about 1325. A hundred years later, under the reign of Montezuma II., they had attained a suzerainty over all the tribes from the Atlantic to the Pacific.

On the coming of the Spaniards under Cortez in 1519, Aztec rule was finally overthrown, chiefly by means of the assistance the Spaniards received from those peoples whom the Aztecs had held in cruel bondage.

In 1540 Mexico was united with other American territories—at one time all the country from Panama to Vancouver's Island—under the name of New Spain, and governed by viceroys (fifty-seven in all) appointed by the mother country, Spain. For nearly three centuries it may be said to have lain in sullen submission beneath its cruel conqueror's heel, till in 1810 the discontent, which had been gaining ground against the vice-regal power during the war of Spain with Napoleon, broke into open rebellion under the leadership of a country priest named Hidalgo.

In 1822 General Iturbide had himself proclaimed emperor; but the guerilla leader Guerrero, his former ally, and General Santa Anna raised the republican standard, and in 1823 he was banished to Italy with a pension. Returning the following year he was taken and shot, and the federal republic of Mexico was finally established.

For more than half a century after this (till 1876) the history of Mexico is a record of chronic disorder and civil war. In 1836 Texas secured its independence, for which it had struggled for several years, and which Mexico was compelled to recognize in 1845. In that year Texas was incorporated with the United States, and after the Mexican war of 1848 Mexico ceded half a million square miles to the United States.

The Emperor Napoleon III. declared war against the president, Juarez, in 1862; the Austrian Emperor of Mexico, Maximilian, imposed by the French, was executed in 1867, and the republic re-established. Diaz was re-elected president for the eighth time in 1910, but, being too autocratic, had to resign under pressure of revolution in 1911. In the ensuing welter of revolts and conspiracies President Madero was set aside and killed, and the United States applied pressure to eliminate President Huerta. From this time on the relations of the United States with Mexico became more strained. During 1915-1916, following repeated attacks made by bands of Mexican bandits upon American border towns and assaults by Mexicans upon Americans and other foreigners in Mexico, the relations between the two countries approached a crisis. Early in 1916 nineteen men, nearly all of them Americans, were taken from a train near Chihuahua and killed by a band of bandits.

Conditions became still more tense when, on March 9, several hundred bandits led by Villa raided and burned the town of Columbus, N. M., killing nine American civilians and eight United States soldiers. On March 10 President Wilson ordered five thousand United States troops into Mexico to catch Villa, and two days later the first troops crossed the border. On March 16 the first clash occurred between Villa outposts and the American expeditionary force. On June 18 the war department ordered all the state militia mobilized, and within the next two weeks fifty thousand of the state soldiers had been rushed to the border.

President Wilson later in the year named an American commission at the suggestion of General Carranza, which, jointly with a Mexican commission, began its sessions at New London, Conn. The sessions continued until November 24, when a protocol was signed providing for the withdrawal of the United States troops from Mexico in forty days, conditioned upon the Carranza Government showing within that time that it could protect the border and prevent raids by bandits upon American territory.

Two days before the signing of this protocol Villa, at the head of a strong force, attacked Chihuahua City, and after a battle lasting several days captured the city. Carranza forces regained control of Chihuahua City December 3, and Villa's forces fled to the mountains west of the city, where they were later reported to be gathering new recruits in preparation for more extensive operations.

The year 1917 was ushered in with the struggle between the Carranza and Villa factions still in progress.

LEADING COUNTRIES OF SOUTH AMERICA

ARGENTINA, or ARGENTINE REPUBLIC, takes its name from the river La Plata ("River of Silver"). After Brazil, it is the largest state of South America. Its territory reaches from the Pilcomayo River, on the borders of Bolivia, southward for two thousand four hundred miles to Staten Island, off the southeastern extremity of Tierra del Fuego; and from the slope of the Andes on the west to the Uruguay River and the Atlantic in the east.

Physical Features.—Excepting on the northwest, where the spurs of the Andes reach down into the state, the surface of Argentina presents vast monotonous and level plains, broken only by the detached ridges of Córdoba and San Luis, in the western interior. In the north the portion of the region called the Gran Chaco, within the frontier, is partly forest covered, but all the central and southern region presents only vast treeless plains or "pampas," covered at most seasons with coarse grass, which is green in the winter months, but which dries up in summer so as to give an aspect of aridity to the plains. Some portions of the interior, called "Salinas," are barren and white throughout the year.

Rivers.—The great watercourse of the country is the Paraná, formed by the union of the Upper Paraná and Paraguay rivers near the northeastern corner of the state. This is a noble river, in all parts of its course through Argentine territory scarcely ever less than a mile in width, and in some places spreading out in lateral channels, or "riachos," to a breadth of ten miles.

The Pilcomayo, which forms part of the northern boundary, has now been explored throughout its length, and is navigable at high water; the Vermejo, the next river southward, has of late years become a regularly navigated highway from the Paraguay up to the northeastern provinces; the Salado, farther south, flowing directly to the Paraná, is also an important river; but the remaining streams which tend eastward to the Paraná have not strength of water sufficient to resist evaporation in crossing the dry plains, and terminate for the most part in marshes and salt lakes.

Climate.—The climate in the extreme north is very hot, for it lies north of the tropic of Capricorn. The more remote southern territories have an extremely disagreeable climate, but are not really so cold as might be expected from their relatively high latitude. But the country in general enjoys an equable, temperate, and healthful climate. Stormy southwest winds, called "pamperos," sweep over the plains at times, and raise great clouds of dust, which fly across the plains.

Production and Industry.—The principal productions are wheat, maize, oats, linseed, sugar, wool, hides, cattle, sheep, and horses.

The great wealth of the state, however, lies in its countless herds of cattle and horses and flocks of sheep, which are pastured on the "pampas," and which multiply there very rapidly. The rearing and tending of these herds is the great and characteristic industry of the country; these also yield enormous quantities of hides, horns, and salted beef.

The northwestern provinces of the Argentine Republic, crossed by the lower ramifications of the Andes, are rich in metals, including gold, silver, nickel, copper, tin, lead, and iron, as well as in several kinds of marble, jasper, and precious stones. On the Rio Vermejo petroleum wells have recently been discovered.

The export of frozen beef and mutton is an important industry. The exports are made up entirely of pastoral and agricultural products, with the exception of quebracho, copper, manganese, and wolfram.

People.—The people of the country are mostly Spanish in their language and descent, although there are many Italians, French, Americans, Swiss, and Germans. The Gauchos, or herdsmen of the plains, are a hardy and spirited, but ignorant race, often of partial Indian descent. Some of the Indians of the remote districts have become skilled in the rearing of flocks and herds.

The religion is Roman Catholic. The government is closely modeled upon that of the United States.

Education.—Primary education is secular, free and nominally compulsory from the ages of six to fourteen. Schools are maintained by provincial taxation, and controlled by provincial boards (except in the capital, where there is a National Council), with grants from the Federal Government. Secondary education is controlled by the Federal Government in lycées and normal schools. There are also Special Government Schools—one naval, one military, one mining, and one agriculture. There are National Universities at Córdoba and Buenos Aires, and Provincial Universities at La Plata, Santa Fé, and Paraná.

Government.—The Constitution vests the executive power in the hands of a President, who is also Commander-in-chief of the troops, elected by representatives of the provinces for six years, not being immediately re-eligible; and the legislative authority in that of a Senate of thirty members, two chosen by the capital and two by the legislature of each province, and a House of Deputies of one hundred and twenty members elected for four years by the people, one-third of the Senate retiring every three years, and one-half of the House retiring every two years.

The judicial system consists, like that of the United States, of a Federal Supreme Court and Courts of Appeal, with Provincial Courts in each state for non-national or single state cases.

Cities.—The chief seaport is Buenos Aires, the capital and largest city, with a population of 1,315,000 in 1911. La Plata lies twenty-five miles to the southeast of the Federal capital, and, although founded in only 1882, already numbers 80,000 inhabitants. A canal joins it to the vast docks of Ensenada.

Córdoba (53,000), nearly in the center of the state, is the seat of the chief observatory of the Republic.

Rosario (135,000), on the right bank of the Paraná, more than two hundred miles up from the La Plata inlet, is a substantially built town, and a great outlet of the animal produce of the interior plains.

Tucuman (55,000) and Salta in the northwestern mountain region, and Mendoza (32,000) at the eastern base of the Andes, where they are crossed to enter Chile, with Corrientes (18,000) on the Paraná, are other important places.

Buenos Aires (*bwā' nōs ī'rez*; Sp. pron. *bwā' nōs ī'res*; Eng. pron. usually *Bonos Ai'rez*) stands on the right bank of the Plata, which here, at a distance of one hundred and fifty miles from the open sea, is twenty-eight miles across.

The city is partitioned into blocks of about one hundred and fifty yards square. The streets are regularly laid out at right angles to each other and well lighted. Many are planted with trees, and there are numerous open squares and several fine parks, the most famous being Palermo Park (eight hundred and forty acres). The main buildings are the Roman Catholic Cathedral, the chapel of Santa Felicitas, the Casa Rosada, or Government House, the university, the Opera House, and various government and municipal buildings. Much of the town has lately been rebuilt on European lines. It is the terminus of six railway lines, and has excellent street car, cable, and telephone services. There are manufactories of furniture, machinery, carriages, leather, hats, textiles, boots, tobacco, liquors, etc., and the trade is very large.

An elaborate system of harbor works was carried out between the years 1887 and 1895 at a cost of twenty million dollars; it includes an advanced river wall, a north and south basin, and a series of four docks, which connects two channels of the Rio de La Plata, and so brings large vessels up to the wharfs. About half of the inhabitants are of European birth or descent. Among the Europeans the vast majority are Italian; the rest are principally Spanish, French and British. Newspapers are published in French, English, Italian, and German, as well as in Spanish.

History.—The river La Plata was visited by the Spaniards in 1516, and the country was colonized in 1535, when Buenos Aires was founded. For many years the country was regarded as a part of Peru. The progress of the colony was not more hindered by the bloody wars which prevailed with the natives for a hundred years than by unwise legislation at Madrid.

In 1776 Buenos Aires became the capital of a new viceroyalty. In 1806 that capital was occupied by a British force under General Beresford, but the town was soon besieged and compelled to surrender. In 1808 the British forces under Whitlock assaulted the town, but after very severe loss were themselves compelled to capitulate.

In 1810 the colonists founded a local provisional government. A sanguinary war for independence followed, which did not cease till 1824. Spain acknowledged the independence of the country in 1842. The first half-century of Argentine autonomy was much disturbed by revolutions.

The Brazilian-Argentine war against Paraguay (1865-1870) was interrupted and followed by renewed revolts at home. For a time the great material progress of the country was accompanied by an equally remarkable movement in favor of stability of government and the repression of factions. But once more dissensions and an insurrection in Buenos Aires led to civil war (1890), which again was followed by a disastrous financial panic (1891); and political and commercial crises, with riots and risings in various parts of the country, continued to succeed one another and to prevent progress. In May, 1910, the Argentine celebrated its centenary of independence.

BRAZIL (*brā-zil*; Portuguese pron. *brā-zēl*), a republic of South America, of which it covers nearly half, is little less in area than the whole of Europe, its area being 3,300,000 square miles, including the Acrá territory bought from Bolivia in 1902. It has a length of 2,660 miles, and a breadth of 2,705 miles between extreme points. It borders on every state in South America except Chile. The name was given by early explorers from thinking that the red dyewood (brazil-wood) found here was identical with the East Indian dyewood known to them as Brasil.

Surface.—This vast territory presents two contrasted regions. First, the wide, low lying, and humid forest plain of the Amazon River in the north; second, the uplands in the south, which are traversed by radiating hills and mountain ridges, and which present wide grass plains between woods and bush-covered country.

The northern coast is bordered by low, alluvial bottom lands and sandy plains, full of lakes, and in places very sterile; while the southern angle of the country is rolling campo land, bordered by a low sandy coast. Above its eastern angle a large area of coastlands and neighboring plateau is subject to periodical devastating drought.

The highest mountain ranges of Brazil rise in the center of the southeastern uplands, where the Montes Pyrenéos rise to nine thousand five hundred feet, but the coast range, or Serra do Mar, to the south of the beautiful Gulf of Rio de Janeiro, hardly yield to these, for within it the Itatiaiossu is scarcely six hundred feet lower, while the Organ Mountains, at the back of Rio, have summits which reach up to seven thousand five hundred feet.

Rivers.—Brazil possesses three great river-systems—the Amazon, La Plata, and San Francisco.

The Amazon and its tributaries drain fully a half of the country. To the east of the Madeira these tributaries are tableland rivers, broken by rapids and freely navigable for comparatively short distances. West of the Madeira they are lowland rivers, sluggish, bordered by extensive flood plains, and afford free navigation for long distances. The La Plata system drains nearly one-fifth of the country through its three branches—the Paraguay, Paraná, and Uruguay.

The first of these is a lowland river, freely navigable for a long distance, while the other two are tableland rivers, full of obstructions, and without free outlets for their upper level navigation.

The San Francisco is a tableland river, flowing northeast between the Goyaz and maritime mountains, and then, breaking through the latter, southeast to the Atlantic. It is not freely navigable because of the Paulo Affonso Falls. The other coast rivers are generally short.

Climate.—Brazil lies almost wholly within the tropics, and is still in great part unexplored and unsettled. The climate of Brazil varies greatly—the lowlands of the Amazon and a great part of the coast being hot, humid, and unhealthy, while the tablelands and some districts of the coast swept by the trade winds are temperate and healthy.

Production and Industry.—The minerals are very considerable and valuable, comprising gold, silver, iron, diamonds, topazes, and other precious stones. Its forests are immense, abounding in the greatest variety of useful and beautiful woods adapted for dyeing, cabinet work, or ship-building; among these are mahogany, logwood, rosewood, brazil-wood, etc.

Its agricultural produce is abundant, maize, beans, cassava root, and nuts are very generally cultivated; also, in some parts, wheat and other European cereals.

Cattle raising is an important industry, the number being computed at eighteen million. Cotton is being largely cultivated for export, and is being used for home manufactures. Sugar cane is grown in large and increasing quantities in the northern provinces, Pernambuco being the center of the sugar-producing zone.

India rubber comes from the more northern provinces, especially the valley of the Amazon, and is shipped from Pará and Manaós; and coffee, though also grown in the north, comes chiefly from Rio de Janeiro, Minas, São Paulo, and Esperito Santo. Tobacco and cocoa are grown largely, especially in Bahia. The exports consist solely of the raw produce of the soil.

People.—The inhabitants of Brazil, as of other parts of South America, present three great elements—that of the aboriginal Indians, that of the European conquerors and colonists and their descendants, and that of the Africans introduced as slaves. The most important section of the Brazilians are the descendants of the Portuguese settlers. There are, however, several flourishing German and Italian colonies in the southern states.

[675]

The number of pure white people is very small in proportion to those who have some mixture of Indian or African blood, and the Brazilians themselves have developed into a number of more or less distinct physical types in the widely separated provinces of the republic. Formerly about one-half of the entire population of Brazil was formed of negro slaves.

The Roman Catholic is the established religion, and is supported by the state; but all other sects are tolerated. There are, however, very few Brazilians who are not Roman Catholics.

Education is still in a very backward condition. The language is Portuguese, with dialectal varieties.

Government.—According to the new Constitution of 1890, the empire was abolished and the Brazilian nation is constituted a Federal Republic under the title of the United States of Brazil, each of the twenty provinces forming a separate state with local self-government. At the head of the federation is a president with executive authority, elected by the people for six years. The National Congress with legislative functions comprises a Senate and Chamber of Deputies, the senators being chosen three for each state, for nine years, the deputies for three years in the proportion of one to every seventy thousand of the population. The franchise extends to all citizens not under twenty-one years of age.

Cities.—The capital city is Rio de Janeiro, the second largest in South America. Next in importance is the city and seaport of Bahia (230,000), finely placed on an inlet of the Atlantic, the oldest city of Brazil. Pernambuco, also called Recife from a reef of rock which forms the natural breakwater of its harbor, is the fourth in population, being now surpassed by São Paulo, which ranks next to the capital (332,000). Maranhão, on an island of the north coast; Pará, in the Tocantins estuary; Rio Grande, and Santos are the other notable places along the Atlantic. In the interior the principal towns are Ouro Preto, in the gold mining region, and Diamantina, the center of the diamond fields. Cuyabá, in the interior, is important as being at the head of the regular navigation into Brazil by way of the Paraná and Paraguay rivers.

Rio de Janeiro (*Ree o deh Zha-nay e-ro*) stands on the west side of one of the most magnificent natural harbors in the world. An inlet of the Atlantic, the bay of Rio de Janeiro runs fifteen miles northwards, varying in width from two miles to seven; it is girdled on all sides by picturesque mountains (one thousand five hundred to three thousand feet), covered with tropical vegetation. The entrance, less than a mile wide, passes between two bold headlands, one of them called the Sugar-loaf (one thousand two hundred and seventy feet).

The city and its suburbs stretch nearly ten miles along the shore. About three miles southwest of the city stands the precipitous cone of Corcovado (two thousand three hundred and thirty-six feet), with a cog-railway up to the top. Public institutions are the vast hospital of La Misericordia; the national library with three hundred thousand volumes; the national museum; the large lunatic asylum; the botanical gardens, with a celebrated avenue of palms; the observatory; the Geographical and Historical institute; the former royal palace at São Christovão, the arsenal, the naval dockyards, the academy of fine arts, a cadet-school, a school of medicine, a conservatory of music, a polytechnic school, etc. A good water supply, chiefly by an aqueduct twelve miles long, and a new system of sewage draining, much improved the city health; but surrounding hills shut out the breezes, and the heat grows intense in summer.

The population includes many foreigners; Portuguese, British, French, and Germans.

Rio de Janeiro is also the commercial capital, sending out one-sixth of the total exports of Brazil, and bringing in forty-five per cent of the imports. The chief export is coffee.

The whole sea frontage of the city is lined with quays, and has been improved by extensive new harbor works, embracing a dock of seventy-five acres, a breakwater three thousand two hundred yards long, an elevated railway, hydraulic cranes, warehouses, etc.

The city possesses cotton, jute, and silk mills, tobacco and hat factories, machine shops and tanneries.

History of Brazil.—As early as 1480, expeditions sailed from Europe in search of the island of Brasil, rumored to exist in the western seas. Brazil was discovered on January 26, 1500, by Vincent Yañez Pinzon, who landed at Cape St. Augustine, near Pernambuco, and then followed the coast north to the Orinoco. In the same year a Portuguese expedition to the East Indies, under Pedro Alvarez Cabral, discovered the Brazilian coast near Porto Seguro on April 25 (April 22, Casal). Cabral took formal possession, and named his new discovery "Terra de Vera Cruz." Two Portuguese expeditions were sent out in 1501 and 1503, the first exploring the coast, and the second planting a colony and bringing back a rich cargo of brazil-wood, which gave a name to Portugal's new possession.

In 1530 the Portuguese government resolved upon the definite settlement of Brazil. Many of the earliest colonies failed through lack of means, and from inability to hold their ground against the natives. In 1567 a Huguenot colony, established on the bay of Rio de Janeiro twelve years before, was overthrown by the Portuguese, who then founded the present capital of Brazil.

The discovery of gold in Minas Geraes in 1693, and of diamonds in 1729, gave a new impetus to the growth of the country, one result of which was the removal of the colonial capital from Bahia to Rio de Janeiro. The cultivation of cotton, tobacco, and sugar cane had already attained great prominence and prosperity.

In 1808 the royal family of Portugal was expelled by the French and took refuge in Brazil, and the very first act of Dom João VI. was to open Brazilian ports to foreign commerce. He then removed various restrictions on domestic industries, founded a printing office and library, created new courts, and opened various schools and public institutions. All these acts greatly stimulated the growth of the country.

In 1821 he returned to Portugal, leaving his eldest son in Brazil as prince regent. Personal ambition, and the advice of men opposed to government from Lisbon, led the young prince to declare for Brazilian independence, September 7, 1822. He was proclaimed and crowned emperor as Dom Pedro I. before the end of the year, the small Portuguese force in the country being quickly and easily expelled. The constitution was ratified and sworn to early in 1825, and some amendments were added in 1835.

[676]

The new empire, however, did not start smoothly, nor was the reign of Dom Pedro I. a fortunate one. Vexed with the opposition encountered, he in 1831 voluntarily abdicated in favor of his eldest son, and withdrew to Portugal. During the next nine years Brazil was governed by regencies, but in 1840 a popular agitation led to the declaration of the young prince's majority, at fifteen years of age, and to his coronation the following year as Dom Pedro II. The reign was one of almost unbroken peace, interrupted by two wars—one with Buenos Aires in 1852, and the other with Paraguay in 1865-1870.

At the revolution of November, 1889, the empire became a republic, and Dom Pedro and his family were exiled. Under the new and enlightened constitution and a succession of patriotic presidents, Brazil has enjoyed a season of peace and prosperity such as it has not experienced since its colonial times. In 1904 the third Pan-American congress was held in Brazil, and did much to bind closer the bonds existing between her and the other American republics.

CHILE (*Tchee lee*; Span. *Chile*, pron. *Tchee lay*), is one of the republics of South America, on the west coast, and borders on Peru, Bolivia, and Argentina. It reaches from the southern boundary of the coast line of Peru to the southern extremity of Tierra del Fuego, through a distance of about two thousand eight hundred miles, rising inland to the summits of the Andes, which here form a single chain at a distance of about one hundred miles from the ocean. The Strait of Magellan is by treaty considered neutral as between Chile and Argentina. Its breadth varies from forty to two hundred miles.

Physical Features.—The range of the Andes, visible from the sea all along the coast of Chile, towers up in a series of volcanic cones and snowclad peaks; the loftiest summit, that of Aconcagua, being probably the highest point of all the South American continent.

Numbers of streams descend from the range, and have furrowed deep valleys across the width of the country. The most considerable of these are the Mapú near the center of Chile, and the Maule and Biobío in the south, both of which are to some extent navigable.

In the south are also many deep lakes. Mineral waters, chiefly saline and sulphureous, are abundant. The most important islands are those constituting the southern province of Chiloé; Juan Fernandez also belongs to Chile.

Climate.—This long strip of maritime country presents remarkable gradations of climate from north to south. Nearest the Peruvian frontier the coast-land of Tacna, Tarapacá and Atacama is a hot, rainless, sandy desert without sign of vegetation. Southward is found a temperate climate which enjoys a moderate rainfall. This central belt is the most valuable and the most productive agricultural region of Chile. Farther south the westerly winds blow toward the mountains from over the wide Pacific and bring with them such quantities of moisture that the rainfall is excessive; here, in southern Chile, in consequence of the abundant moisture, the mountain slopes are densely covered with evergreen forest.

Production and Industry.—Agriculture and mining are the principal occupations. Wheat, maize, barley, oats, beans, peas, lentils, wines, tobacco, flax, hemp, Chile pepper, and potatoes are grown extensively; the vine and all fruit trees flourish. The live stock includes cattle, sheep, horses, goats, and pigs. The mineral wealth is considerable, the country being extremely rich in copper ore, and some rich gold mines have been discovered. The rainless north yields more especially nitrate of soda, iodine, borate of soda, gold and silver, a large number of mines yielding both being in actual work in Tarapacá, Guanaco, and Cachalín in Atacama, and Caracoles in Antofagasta; the center, copper and silver; and the south, iron and coal. The nitrate exports are extremely valuable. There are smelting works for copper and silver, tanneries, corn and saw mills, starch, soap, biscuit, rope, cloth, cheese, furniture, candle, and paper factories, breweries and distilleries; and the domestic industry furnishes cloth, embroideries, baskets, and pottery. The many ports favor commerce, and six lines of steamers connect the country with Panama and the Magellan Strait. The staple articles of export are nitrate of soda, iodine, copper bars and ores, silver ores, corn, flour, hides, and guano.

People.—The inhabitants of northern and central Chile are, for the most part, descendants of the intermixed Spaniards and native Indians. In the upper classes the race has been kept more purely Spanish than in any other South American country.

Chile is a Roman Catholic country, but other religions are tolerated. Education receives much attention. There is a first class university at Santiago, and a lyceum in every provincial capital. The language spoken in Chile is Spanish, but with many local words of Indian origin.

Government.—Under the constitution voted in 1833, Chile is governed by a president who is elected for five years by delegates nominated by ballot, who is not re-eligible. A Senate and Chamber of Deputies form the legislature. The Senate, of thirty-two members, is elected by the provinces for six years; the Chamber, of ninety-four members, by the departments for three years, by electors over twenty-one, and able to read and write.

Cities.—Santiago, the capital, has 350,000 inhabitants; Valparaíso, 180,000; Concepcion, Iquique, Talca, Chillan, Antofagasta, over 30,000.

Santiago (*San-tee-áh go*) stands near the western base of the Andes, one thousand seven hundred feet above sea-level, and one hundred and fifteen miles by rail east by southeast of Valparaíso. The snow-capped mountains seem to enclose it on the north and east; while in the east of the city rises the picturesque park, Cerro de Santa Lucia (eight hundred feet above the plain), dotted with grottoes, statues, kiosks, restaurants, an historical museum, and an observatory. The small but turbulent stream, the Mapocho, is crossed by five bridges.

[677]

The city is regularly laid out, lighted with gas and electric light, and has electric railways in all directions. Most of the houses are of one story only, owing to the earthquakes (the most serious occurred in 1575, 1647, 1730, 1822, 1835, 1906).

On the great Plaza Independencia are the government palaces, the Grand English Hotel, the cathedral, and the archbishop's palace. On the site of the Jesuit church, burned down in 1863, a monument was erected in memory of the two thousand worshippers who perished in the fire.

Santiago boasts a noble Alameda, or boulevard, adorned with four rows of poplars and statues. Facing it are the University and the National Institute. The city has also a military school, schools of arts and agriculture, a conservatory, a national library with one hundred and two thousand volumes; botanical and zoological gardens, etc.

The manufactures include cloth, ship's biscuits, beer, brandy, etc., and it has also an ice factory, a fruit-conserving establishment, and copper-smelting works.

Santiago was founded by Pedro de Valdivia in 1541.

History of Chile.—The name Chile is supposed to be derived from an ancient Peruvian word signifying "snow." The first European to land in Chile was the Portuguese discoverer Magellan, after his famous voyage through the strait which now bears his name. He landed at Chiloé in 1520.

After the conquest of Peru by Pizarro, an expedition was made to Chile from that country overland under the leadership of Diego de Almagro in 1535. This expedition penetrated as far as the Rio Claro, but returned unsuccessful. Another was sent under command of Pedro Valdivia in 1540, which succeeded in annexing the territory as far as the River Maipu. Santiago, the capital, was founded by Valdivia in 1542. During the colonial period the governors of Chile were appointed by the viceroys of Peru.

In 1810 a revolt against the Spanish power broke out, in which Don Bernardo O'Higgins, son of one of the last viceroys of Peru, but a native of Chile, played a conspicuous part, and finally became the first dictator of the new republic. The first constitutional president was General Blanco Encalada. The government was unsettled until 1847. A revolution broke out in 1851, but since then there has been no serious attempt to overturn the government by force of arms.

In 1864 Chile gave Peru very valuable support in her war with Spain. Valparaíso was bombarded by the Spaniards in 1866. In 1879 Chile declared war against Bolivia, and immediately thereafter against Peru, with which Bolivia was allied. For a time the Peruvian fleet kept the Chileans in check, but in August, 1879, the Peruvian ironclad *Huascar* was captured by the Chilean men-of-war *Cochrane* and *Blanco Encalada*, both armor plated. After this event the success of the Chileans was uninterrupted—Peruvian towns were bombarded, warships captured, and Lima taken by storm June 21, 1881. The Chileans occupied Lima and Callao until 1883, when a treaty of peace was signed.

President Balmaceda's unconstitutional government led to civil war in 1891, when the congressionalists were victorious. The decisive battle was fought near Valparaíso on August 28, and Balmaceda committed suicide.

In September, 1910, the centennial celebration of the first declaration of independence from the Spanish crown took place, many foreign governments sending special delegations.

CHINA, or more accurately the Chinese Republic, is an extensive dominion of Eastern Asia of which China proper constitutes the principal portion. For centuries this dominion has been known as the Chinese Empire, and it is still frequently referred to as such, although the form of government is now republican. China includes a number of dependencies or subject territories, viz.: Manchuria, Mongolia, Tibet, East Turkestan, and the small territories between Mongolia and Tibet.

By its natives China is never so called, but usually by the Chinese words for "The Middle State," or "The Republic of the Middle Flower." The name China (*Chi-na*, land of Chin) comes to us from India through Buddhism. Various old names are Serica and Cathay, and in the Bible "Land of Sinim."

China and its dependent territories have an area of 4,300,000 square miles. The population of the whole is variously estimated at from 300,000,000 to 440,000,000. The great bulk of this falls to the provinces of China proper: the population of all the dependencies (Manchuria, Tibet, Mongolia, East Turkestan), making but some 16,000,000 or 25,000,000 of the total.

Surface.—Occupying all the central and eastern portion of the continent of Asia, the limits are for the most part very distinctly marked out by great natural features. The boundary with Russian Siberia on the north runs along the Amur River and the crests of the Sayan and Altai Mountains; towards western Turkestan the alpine heights of the Thian Shan and the Pamir form the limit; the snow clad Himalaya range separates China from the hot plains of India in the south, and the mountains of Yunnan continue the natural frontier eastward again to the coasts of the Pacific.

Within these wide exterior limits China includes a number of regions, some of which are strongly contrasted with one another in their natural features and in the character of their population. Along the eastern or maritime border, where the rivers flowing down from the mountain region of the interior have spread out in wide alluvial plains next the sea, lie China proper and Manchuria, filled with a teeming population of busy agriculturists and townfolk. Within, on the high plateau of Central Asia, the region of bare steppes and deserts, and the mountain skirts round it, are the countries of Mongolia, Eastern Turkestan, and Tibet, thinly peopled for the most part by nomadic pastoral tribes.

CHINA PROPER may be described as sloping from the mountainous regions of Tibet and Nepal toward the shores of the Pacific on the east and south. The most extensive mountain range in it is the Nan Ling or Southern Range, a far extending spur of the Himalayas. Commencing in Yunnan, it bounds Kwangsi, Kwangtung, and Fukien, on the north, and, passing through Chekiang, enters the sea at Ningpo.

[678]

HUNCHBACK BRIDGE, NEAR PEKING, CHINA

North of this long range, and west of the one hundred and thirteenth meridian, on to the borders of Tibet, the country is mountainous, while to the east and from the great wall on the north to the Po-yang Lake in the south, there is the Great Plain, comprising the greater part of the provinces of Chihli, Shantung, Honan, Anhui, and Kiangsu. The Great Plain extends on both sides of the lower Hoang-ho, between the great cities of Peking and Nanking, over an area more than three times as extensive as England. Sedulously irrigated or drained, and cultivated in every corner, this great plain supports the densest agricultural population in the world.

BRIDGE AT YUEN-MING-YUEN, CHINA

In the provinces west from Chihli—Shansi, Shensi and Kansu—the soil is formed of what are called the loess beds, which are extremely fertile, the fields composed of it hardly requiring any other manure than a sprinkling of its own fresh loam. The husbandman in this way obtains an assured harvest two and even three times a year. This fertility, provided there be a sufficient rainfall, seems inexhaustible.

Seas, Rivers and Canals.—The semi-mediterranean seas and gulfs of the Pacific along the coasts of China are distinguished by separate names. In the north, between the Korean peninsula and the mainland of China, is the Hoang Hai or Yellow Sea, three hundred miles wide, named from the lemon color of its waters, filled with the alluvium brought down to it by the Hoang-ho, and so shallow that its muddy bed is frequently furrowed by passing vessels. Within or northward lie the Bay of Korea and the Gulfs of Pechihli and Liaotung, the two last separated almost entirely from the outer China Sea by the projecting promontories of Shantung and Liaotung. South of the Yellow Sea, between the mainland and southern Japan, with the chain of the Luchu Islands and Formosa, extends the wider Tunghai or Eastern Sea; and from this the Fukien Channel, between Formosa and the coast of China, one hundred miles wide, leads into the great mediterranean called the Nanhai or South Sea of China, which is almost completely shut in by Borneo and the Philippine Islands. The coasts of the Yellow Sea bordering on the great plain are low and flat; southward thence to the Island of Hainan the shores of China rise steep, and are dotted round with rocky islets.

[679]

GREAT CHINESE WALL

erected to protect the ancient empire from the inroads of nomadic Tartars about 214 B.C. The main substance of the wall is earth or rubbish, retained on each side by a strong casing of stone and brick, and terraced by a platform of square tiles. The thickness of the wall at the base is often as much as twenty-five feet. (See full description [below](#).)

The rivers of China—called for the most part *ho* in the north, and *chiang* (*kiang*) in the south, are one of its most distinguishing features.

Two of them stand out conspicuous among the great rivers of the world: the Ho, Hoang-ho, or Yellow River, and the Chiang, or Yang-tze-kiang. They rise not far from each other among the mountains of Tibet. The Ho pursues a tortuous course seaward through North China; the Chiang or Yang-tze through Central China. The terrible calamities caused by the inundations of the Hoang-ho have procured for it the name of "China's Sorrow." The Ho is not much under the Chiang in length—somewhat over three thousand miles.

Besides these may be noted the Pei-ho, which gathers the waters of the northern portion of the great plain, and forms a highway of communication between the capital city of Peking and the port of Tien-tsin, thirty-five miles above its mouth; the Min, the river of the province of Fukien, by which the Bohea teas are brought down to the port of Fuchou; and the Si-kiang, the largest river of southern China, one of the delta branches of which forms the Chu-kiang, or river of the great port of Canton.

The three largest lakes of China lie immediately south of the course of the Yang-tze. The Tung-ting-hu, seventy miles long, and the Poyang-hu, nearly as large, are expansions of the mouths of the chief southern tributaries of the Yang-tze in Central China; the third, the Tai-hu, lies south of the estuary.

CANALS.—Greatest of all the public works in China is the Grand Canal, which traverses the great plain for a distance of seven hundred miles, passing from Tientsin, on the Pei-ho, in the north, across the course of the Hoang-ho to the lower course of the Yang-tze, connecting a system of water communications which extends from the capital to the chief parts of the empire. It is but the greatest sample of the system of canals, great and small, which form a network over all parts of the lowlands of China. Steam communication, however, all along the eastern seaboard from Canton to Tientsin has now very much superseded its use.

The glory of making this canal is due to Kublai, the first sovereign of the Yüan dynasty.

PAGODA, NEAR PEKING, CHINA

The Pagoda, or "idol temple," in China, usually distinguishes the Buddhist from the Confucian temple. It is a tapering tower, always with an odd number of stories. First-class pagodas have seven, nine, or thirteen stories, minor ones have three or five. The most famous was the Porcelain Tower of Nanking, erected in the beginning of the fifteenth century; only nine of the proposed thirteen stories, cased in white porcelain, were completed, and the height never exceeded about two hundred and sixty feet. It was destroyed by the Taipings in 1856.

After the Grand Canal, as a gigantic achievement, comes the Great Wall, on the north side next Mongolia. Not so useful as the canal, and having failed to answer the purpose for which it was intended—to be a defense against the incursions of the northern tribes, there it still stands, the most remarkable artificial bulwark in the world. [680]

It was in 214 B. C. that Shih Hwang Ti determined to erect a grand barrier all along the north of his vast empire. The wall commences at the Shanhai Pass and extends westward continuously almost into the heart of the continent for a distance of one thousand five hundred miles, over mountain and valley, and across rivers and ravines. It is a rampart of earth, ten to thirty feet high, broad enough at the top to admit of several horsemen passing abreast, and was formerly cased on the sides and top with bricks and stones, and was flanked by numerous projections or towers, gates being left at intervals for the passage of travelers and the collection of customs. Now it has fallen in many places, and its gates are negligently guarded, and northward of Peking the growing Chinese population has spread and settled the country to a considerable distance beyond its barrier.

Climate.—The climatic conditions naturally vary considerably over so large a stretch of country. In the lofty Tibetan plateau and the less elevated plains of Mongolia, the climate is exceedingly dry, and is marked by great extremes of hot and cold. The basins of the two great rivers, being nearer the Pacific, are moister and more equable. In this part of China proper the dry season lasts from November to February, the remaining months, particularly May, being extremely wet. The rainfall is of a copious tropical nature.

Generally speaking, China is a cold country in comparison with other regions in the same latitude. From July to September, however, the weather is intensely hot, and the heat is accompanied by typhoons, which are much dreaded for their violent and devastating effects.

Production and Industry.—Agricultural pursuits occupy the majority of the people, the chief products being tea, silk, indigo, cotton, cereals, rice, and sugar. Agriculture is held in higher estimation here than in any other land in the world. The land is freehold, and is held by families in small holdings.

There is much coal in all the provinces, and iron ore is also plentiful in Shansi. Copper ore is plentiful in Yunnan. Southern Yunnan also furnishes a variety of precious stones—rubies, amethysts, sapphires, topazes, opals, besides malachite, and the steatite or soapstone, in which the Chinese carve figures of all sorts.

The much prized Yu, or *jade*, brought formerly from Turkestan, comes now from the Hoang-ho valley; lapis lazuli (for the preparation of ultramarine) is found in the mountains of Che-kiang, in the east coast region. Large beds of porcelain clay occur in this province also, and in its neighboring one of Kiang-si.

About one-fourth of the world's supply of new silk comes from China. Cotton and wool mills, flour and rice mills are important industries. Before European manufactures had reached their higher development, fine "Nankeen" calico was largely imported from China to Europe. "China ware," or porcelain, was first made by the Chinese, and so ignorant were the early Portuguese traders of its value, that they called it "porcellana," believing it perhaps to be made of shells; the secret of its manufacture was not discovered till the beginning of the eighteenth century. In the province of Kiang-si, not far from Yao-chou, there are porcelain factories which were founded by an emperor in 1004 A. D.

The Chinese also excel in carpentry; paper making from the bamboo was invented among them as early as the second century B. C. They are highly skilled in the use of metals; bronze vases exist which date from 1760 B. C., and the great bells on the towers of Peking, cast during the Ming dynasty, are still perfect; the sonorous gong metal alloy is as yet a Chinese secret; in their delicate embroideries, carvings in ivory, engravings on wood and stone, lacquered wares, and rich silks and satins, they show astonishing handicraft. [681]

VIEW OF THE ROCK-HEWN TEMPLES AT LUNG-MEN

Here, as early as the seventh century, Chinese artists sculptured religious figures in the recesses of precipitous cliffs—similar to those of Upper Egypt—and turned them into hundreds of quarried temples. The huge Buddha and attendant figures in the central recess can be clearly seen. Many smaller figures and decorations in other recesses can also be discerned.

People, Religion and Education.—The Chinese, as we have seen in the *Book of Races*, belong to the Mongolian race. They are stout and muscular as compared with other eastern peoples, temperate, industrious, cheerful, and easily contented; but they are addicted to gambling.

The dress of the poor is very much alike in both sexes; and though it is regulated for all classes by sumptuary laws, it is varied among the wealthy by the richness of the materials and the various ornamentation.

The three chief religions of China are Confucianism, Taoism, and Buddhism. It is difficult to estimate the comparative number of their adherents. To claim a majority for those of any one of them is very absurd. As a matter of fact, Confucianism represents the intelligence and morality of China; Taoism its superstitions; and Buddhism is ritualism and idolatry, while yet it acknowledges no God.

Besides these three national systems, Mohammedanism has numerous adherents in the northern and western provinces.

There are temples of Confucius in every great town, and twice a year, in spring and autumn, sacrifices of animals, fruit, and wine are offered in honor of the sage.

The majority of the Taoists, or followers of Laotse, imitate the Buddhists in their monastic life, and many of them live as hermits in the mountain caves of the upper Yangtze, or in the most romantic spots of the mountains of China.

The Grand Lama of Tibet is the pope of the Buddhist Church, but the priests in China have no political power, and are viewed with contempt by the literary and governing classes. In Peking, however, several large monasteries of Tibetan and Mongolian Buddhists are supported at the expense of the government.

The native Roman Catholics of China are said to number more than a million, but Protestants are very few.

In 1906, after the Russo-Japanese war, a new system of compulsory primary education was established. The curriculum is largely based upon the Japanese. Modern sciences, history, geography, and foreign languages are taught. Special schools have been established (technical, agricultural, normal, language, etc.). Thousands of temples have been converted to educational purposes. Old style examination halls have been pulled down, and colleges built on the sites. The educational facilities are, however, very inadequate. Girls' schools, formerly non-existent, are still very few in number. The only government medical school is an army one, but the government has recognized the Union Medical College, opened in Peking by the Protestant missions there. Many Chinese students have proceeded to Japan, America, and Europe to study there. The government is using the money returned by the American government from the Boxer indemnity to send students to America. [682]

ROYAL OBSERVATORY, PEKING, CHINA

The Chinese were among the very earliest observers of the heavens, though the Hindus, Chinese, Chaldeans, and Egyptians each claim the honor of having been the first students of astronomy. The Chinese have astronomical annals claiming to go back two thousand eight hundred and fifty-seven years B. C. These record little but the appearance of comets and solar eclipses. Professional astronomers were compelled to predict every eclipse under pain of death. The popular idea was that an eclipse was a monster having evil designs on the sun, and it was customary to make a great noise, by shouting, etc., in order to frighten it away. At an early period the Chinese appear to have been acquainted with the luni-solar Metonic cycle of nineteen years, and they had also divided the year into three hundred and sixty-five and one-fourth days. To the burning of all scientific books by one of their princes (Tsin-Chi-Hong-Ti), 221 B. C., the Chinese attribute the loss of many theories and methods previously in use.

There is a university in Peking and a number of colleges under foreign management. In 1911 there were five hundred and forty-five foreigners employed in educational work.

Government.—Until February 12, 1912, China was a monarchy, in practice almost absolute. Since that day it has been a republic under a president who holds office for a term of five years. Many changes were made at the time of the revolution. A cabinet was substituted for the old grand council, grand secretariat, and government council; the cabinet being composed of a prime minister, two associate ministers, the various ministers of state, and the heads of various boards. A privy council was also formed. Administration is carried on by the following ministries: (1) Of Foreign Affairs; (2) Interior; (3) Finance; (4) Education; (5) War; (6) Marine; (7) Justice; (8) Agriculture, Works, and Commerce; (9) Posts and Communications; (10) Colonies. There are also a large number of minor boards and offices, divided into twenty-two provinces for local administration.

Cities.—There were in 1910 about twenty-three towns with populations exceeding 50,000, but all figures are based upon estimates.

Peking	1,000,000
Canton	1,250,000
Hankow	900,000
Tientsin	850,000
Shanghai	700,000
Fuchow	650,000

Niuchwang	50,000

Peking, or Pei-Ching ("Northern Capital") is situated in a sandy plain, and is surrounded by walls with sixteen gates, each surmounted by towers one hundred feet high; and it consists, in fact, of two cities—the inner and the outer—known also as the Manchu or Tartar and the Chinese, the northern and the southern.

The walls of the Manchu city average fifty feet in height, and are fully sixty feet wide at the bottom; those of the Chinese city (rectangular in plan) are thirty feet high and twenty-five feet wide. The circuit of the two cities measures twenty-one miles, including an area of nearly twenty-six square miles.

The Manchu or Inner City is divided into three portions; and at the heart of it are two enclosures, into the innermost of which entrance is forbidden to all except such as have official claims to admission. It is called the "Purple Forbidden City," is very nearly two and one-quarter miles in circuit, and in it are the palaces of the former emperors and other members of the imperial family.

The T'ai Ho, or "Hall of Grand Harmony," is built of marble on a terrace twenty feet high, and rising itself an additional one hundred and ten feet; its principal apartment is two hundred feet long and ninety feet wide. Surrounding the Forbidden City is the "August City," about six miles in circuit, and encompassed by a wall twenty feet high. In the western part of the "August City" is the "Western Park" with a large artificial lake, a summer-house, gardens, the copper statue of Buddha (sixty feet high), and the temple of "Great Happiness."

In the General City are the principal offices of the government, the observatory, the Provincial Hall for literary examinations, the Colonial Office, and the "National Academy." In the northeastern corner is the Russian mission, and west from it the "Palace of Everlasting Harmony," a grand monastery for over a thousand Mongol and Tibetan monks. A little farther west stands, amidst cypresses, the temple of Confucius. To the "Temple of Emperors and Kings," near the south wall, the emperors went to worship the spirits of nearly two hundred predecessors. The great Tutelary Temple of the capital is grimy, and full of fortune-tellers. All the foreign legations and Christian missions are within the Inner City. The new Roman Catholic Cathedral is conspicuous.

The Chinese or Outer City is very sparsely populated; much of the ground is under cultivation or wooded.

The "Altar to Heaven," with its adjunct, the "Altar of Prayer for Grain," and the "Altar of Agriculture," are both near the southern wall. The "Altar to Heaven" stands on a splendid triple circular terrace of white marble, richly carved, in a grove of fine trees. The "Altar of Prayer for Grain," was burned down in 1889.

The principal streets of the Chinese City are more than one hundred feet wide, but the side streets are mere lanes. The streets are seldom paved and are deep either in mud or in dust. In the smaller streets the houses are miserable shanties; in the main streets both private houses and shops are one-story brick edifices, the shops gay with paint and gilding.

There are three Catholic cemeteries (Portuguese, French, and native) and a Russian one; and there are mission buildings, Russian and others, and hospitals.

History.—Chinese historical documents begin with the reigns of Yao and Shun. In 403 B. C. we find only seven great states, all sooner or later claiming to be "the kingdom," and contending for the supremacy, till Ts'in (Ch'in) put down all the others, and in 221 B. C. its king assumed the title of Hwang Ti, or emperor. From that year dates the imperial form of the Chinese government, which thus existed for more than two thousand one hundred years.

The changes of dynasty were many, two or more sometimes ruling together, each having but a nominal supremacy over the whole nation. The greater dynasties have been those of Han (206 B. C.-220 A. D.), T'ang (618-906), Sung (960-1279), Yüan (the Mongol, 1280-1367), the Ming (1368-1643), and the Ch'ing (Manchü-Tartar, from the Manchü conquest of China in 1643 to the 1912 revolution).

It was not till after the Cape of Good Hope had been doubled, and the passage to India discovered by Vasco da Gama in 1497, that intercourse between any of the European nations and China was possible by sea. It was in 1516 that the Portuguese first made their appearance at Canton; and they were followed at intervals of time by the Spaniards, the Dutch, and the English in 1635. The Chinese received none of them cordially; and Chinese dislike of them was increased by their mutual jealousies and collisions with one another. In the meantime trade gradually increased, and there grew up the importation of opium from India. From the measures of the Chinese to prevent the import of opium came the first English war with China in 1840; the result of which was the opening of Canton, Amoy, Fuchü, Ningpo, and Shanghai to commerce, and the cession of Hongkong to Great Britain. A second war, in 1857, France being allied with Great Britain, ended in the opening of five more treaty ports. A third war (1860) and the march on Peking did even more to open China to the world.

After a war in 1884-1885 France secured permanent control of Tongking and Annam.

In 1894 Japan, reviving old claims on Korea, drove the Chinese out of Korea, and after victories on land and at sea, captured Port Arthur and Wei-hai-wei. By the treaty of 1894 Japan secured as indemnity Formosa and the Liao-tung peninsula; but the protests of Russia, Germany, and France made Japan resign Liao-tung. Russia obtained a lease of Port Arthur and Taliennan, with railway and other privileges in Manchuria; Germany obtained Kiaochow and concessions in Shantung; and Great Britain, as an offset, obtained a lease of Wei-hai-wei and sought to secure trading freedom in the Yang-tze-kiang valley.

Russia's refusal to evacuate Manchuria and her movements in Korea led to war with Japan in 1903, the defeat of the Russian armies in Manchuria, the destruction of the Russian fleet, and the fall of Port Arthur (1905). China being nominally neutral. By the peace (1905) Japan secured dominance in Korea, the Russian leases in Liao-tung, and great influence in southern Manchuria and on China generally.

A series of far-reaching reforms, promoted by a nationalist reform party in 1898, were summarily cancelled by the dowager empress, who assumed supreme authority. The reactionary and anti-foreign "Boxer" association ("The Fist of Righteous Harmony"), encouraged by the court, made extermination of foreigners its war cry in that year, and besieged the legislations in Peking. After a two months' siege by an army of Japanese, Russians, British, Americans, French, and Germans this condition was relieved. The constitutional movement began in 1911, followed by a revolution. The leader of the revolt at Han-kau was the able general, Li Yuan-hung, but the inspirer of the revolution was Dr. Sun Yat-sen, at that moment in America.

On October 13 the rebels proclaimed a republic in the province of Hu-peh, with Li Yuan-hung as president, and notified the foreign consuls that the property and persons of foreigners would be respected.

On February 12, 1912, the throne issued three edicts, in which it announced its will to abide by the decision of the National Convention and accept the republic, entrusting Yuan with the task of bringing about the new constitution in conjunction with the Nan-king government, and, after exhorting all to peacefully accept the new order, announced the abdication of the dynasty.

A constitution of seventy clauses was promulgated; the emperor was to retain his title and receive a pension, and be accorded the civility due to a foreign sovereign. On February 27 the Nan-king Assembly endorsed this decision by electing Yuan president, and he was formally installed on March 10.

Yuan's administration was hampered by the movements in Mongolia and Tibet towards autonomy, movements countenanced by Russia and Great Britain respectively. Difficulties were also put in the way of China by the European powers in the matter of a development loan, but President Yuan, supported by Dr. Sun Yat-sen, seems to have laid securely the foundations of the largest republic the world has yet seen.

President Yuan Shi-ki was assassinated in 1916, and succeeded by Li Yuan-hung.

INDIA, the Indian Empire of the British crown, is an extensive region of southern Asia, and next after China the most populous area in the world. It occupies the central peninsula of southern Asia, and has a length of some nineteen hundred miles, a breadth of sixteen hundred, and an area, inclusive of Burma, of 1,766,650 square miles. The natural boundaries of this vast region are, on the north, the range of the Himalaya Mountains, which separates it from Tartary, China, and Tibet; on the west, the mountainous frontiers of Afghanistan and, farther south, of Persia; on the southwest and south the Arabian Sea and the Indian Ocean; on the east the hill ranges which border upon Burma and the Bay of Bengal.

Surface.—The region presents a diversified surface and scenery. It has indeed been called "an epitome of the whole earth," consisting as it does of mountains far above the level of perpetual snow, broad and fertile plains bathed in intense sunshine, arid wastes, and impenetrable forests.

The most prominent feature in the relief of India is the great range of snowy peaks named the *Himalaya*, or "abode of snow," which rises on the edge of the Tibetan plateau, above the northern plains, stretching out in a continuous chain for nearly eighteen hundred miles. The mean height of this portion of the borders of the Tibetan plateau, defined very clearly by the channels of the Indus and the Bramaputra, is estimated at thirteen thousand feet; the mean breadth of its base is about one hundred and fifty miles. Its summits rise to twenty-nine thousand feet, and most of the difficult passes ascending from the valleys and gorges of the Indian side are not lower than about sixteen thousand feet.

Southward from the bases of the Himalaya and the Sulaiman mountains the great plain of northern India spreads out, reaching across the whole breadth of Hindustan from the Arabian Sea to the Gulf of Bengal.

Southward of the great plain the land begins to rise again. The first elevations reached in this direction are those of the long range of the Aravali hills, which extend for four hundred miles from northeast to southwest, marking the edge of the western section of the great plain. It is bold and precipitous on that side which falls toward the Indian desert, but less so on the southeast; its average height is about three thousand feet, Mount Abu, being the highest point.

Behind the Aravali hills lie the plateaus of Malwa and Bundelkhand, extending over the country generally termed central India; These are fertile tablelands of uneven surface elevated from one thousand five hundred to two thousand feet above the sea level, and traversed by a number of minor hill ridges.

The greater part of south India is occupied by the wide tableland of the Deccan. The name *ghat* was originally applied by the natives to the passes in the outer slopes of the ranges which run parallel with the two coasts of the southern portion of the great promontory of India enclosing the Deccan, and which had to be ascended to reach the high interior country from the coast; but this name Ghat has been transferred to these ranges or outer edges of the tableland themselves.

The western Ghats, about eight hundred miles in length, clothed with magnificent teak forests, form by far the boldest and most continuous escarpment of the Deccan plateau, ascending abruptly from a low base, generally at a distance of about thirty miles from the sea.

The eastern Ghats differ from the western in being much lower, in rising at a much greater distance from the coast of the Bay of Bengal, and with a gentle slope, giving access by wide openings to the interior. Their average height is about fifteen hundred feet, the highest point, near Madras, only about three thousand feet above the sea. The Deccan plateau between these supporting buttresses has thus a gradual eastward slope, and is characterized by undulating treeless plains, ridges and isolated flat-topped hills capped with basalt. Large portions of it are also covered with jungle, often overgrowing the ruins of former towns and temples, but there is no extent of forest.

Between the eastern Ghats and the sea lies the extensive maritime plain generally named the Karnatic, reaching back from the Coromandel coast for about fifty miles. The soil of this plain proves abundantly fertile when it is watered, but there are few streams, and a supply of water for irrigation has to be stored in reservoirs.

Rivers.—The river system of India consists of three great rivers: the Indus, the Ganges, the Bramaputra.

The Indus rises on the northern slopes of the Himalayas, sweeps round and enters at the western extremity of the range, and waters the Punjab.

The Ganges is formed by the amalgamation of the streams which drain the southernmost slopes of the Himalayas.

The Bramaputra rises also within easy distance of the Indus in the northern slopes of the Himalayas, flows east for some considerable distance, and then enters India at the extreme eastern point of the Himalayas. It is therefore to be noticed that the river system, of such vast importance to the people of India, is the drainage of both the northern and the southern slopes of the Himalayas.

The Ganges is the sacred river of the Hindus, rises in a snow-field of the southern face of the Himalayas at an elevation of nearly fourteen thousand feet above the sea, rushing down as a torrent to the highest accessible point on its banks (ten thousand three hundred feet), where the temple of Gangotri is built. To the Hindu a bath or a drink of the sacred water at this point has wonderful atoning virtues, and those who cannot themselves make the pilgrimage hither are supplied with flasks of the holy element bottled by the priests of Gangotri. At Allahabad the Jumna, which has followed a parallel course from the mountains, adds its strength; thence, by Benares and Patna, it passes eastward to weave its many mouths with those of the Bramaputra, and to wage a battle twice daily with the inflowing tide among the malarious islands of the Sundarbans. One of the westerly delta branches, the Hugli, on which Calcutta stands, is the most frequented highway to the sea.

Climate.—The whole country has three well-marked seasons—the cool, the hot, and the rainy. The cool months are November, December, January, and a part of February; the dry hot weather precedes, and the moist hot weather follows the periodical rains. The rainy season falls in the middle of summer and is called monsoon. It is the occasional failure of the monsoons that causes the periodical famines to which the country is liable.

The central tableland is cool, comparatively, but the alternations of heat and cold differ greatly elsewhere.

In the northwest there is burning heat with hot winds in summer, and frost at night in winter.

In the south the heat is more tempered, but the winter is cool only, and not cold.

The fall of rain varies greatly in different parts of the country. In the northeastern and other outlying parts it exceeds seventy-five inches. In the Deccan, in the upper basins of the Ganges and the Indus, it is thirty, and in the lower regions of the Indus less than fifteen inches. The remainder of India is placed between the extremes represented by these damp and dry belts.

Production and Industry.—The large majority of the population of India are engaged in agricultural pursuits, nearly 200,000,000 being either engaged in tilling the soil or dependent upon those so engaged. Great irrigation works have been carried out, the area irrigated being 42,486,724 acres.

The principal crops cultivated are rice, wheat, millet, pulse, and other food grains, oil-seeds, tea, cotton, sugar-cane, tobacco, and indigo.

Tea is grown largely under European supervision in the Eastern Himalayas, and already surpasses the China teas. Coffee is grown in the south, but with checkered success. Among the dyes, indigo and lac (red) are noteworthy. The indigenous flowers are not rich, the water lilies being the best; the flowering shrubs are very fine.

Of trees in the plains near the coasts the palm order with its several varieties strikes the observer. Inland the mango fruit-tree and the orange, the umbrageous banyan, the sacred peepul, and the bamboo are features in the landscape. In the hills the teak and other useful timber trees are obtained. In the Himalayas are the cedar, the pine, the fir, the juniper.

The cultivation of opium is a government monopoly and heavy duties are levied on the exports of opium, a duty being also paid to the Indian treasury.

Almost all the metals and minerals are represented in India, but of the useful metals, excepting iron, the quantity is not known to be large. Coal exists in many parts, especially in the northeast—at Bardwan, near Calcutta, and in Assam. Gold is found in Mysore, and in the sands of many streams; copper near Delhi and elsewhere; salt is obtained in large quantity from the mines in the northwest of the Punjab, and by evaporation from the coast lagoons all round India, and from salt lakes in Rajputana. Most of the precious gems, including diamonds, rubies, sapphires, and emeralds, are found, some abundantly, some rarely, though the supply of the once famous diamonds of Golconda seems to have ceased.

Metal and textile workers, glass and pottery workers, with their dependants, number close on twenty millions, and there are large numbers employed in service.

The textile manufactures of India were famous in long past centuries throughout the civilized world; such were the gold brocades of Delhi, brought thence to imperial Rome, the muslins of Dacca, made for the Mongol court, and the pattern colored cloths of Calicut (calico), the shawls of Kashmir, and the silks and carpets of Multan. All these home-made fabrics, however, have declined before the products of the great factories.

Peoples.—The broad division of the peoples of India includes a northern group of Aryan nations, occupying the great plains and the northern seaboard on each side, and the non-Aryan inhabitants of the Deccan plateau in southern India. This division also corresponds to that of the languages of India, separating those related to the Sanscrit, the language of the Aryan conquerors of the north, from the Dravidian and Kolarian of the south. (See Book of Races.)

LANGUAGES.—Though nearly a hundred and fifty languages, derived from nearly twenty linguistic families, are spoken in India, three of those families—the Aryo-Indian, the Dravidian, and the Tibeto-Burman—represent the speech of ninety-seven per cent of the inhabitants.

Hindustani, a dialect of Hindi, has become the literary language of Hindustan, and is the *lingua franca* of India. English is understood by many.

RELIGIONS.—The chief religions are Hinduism (218,000,000 in 1911), Mohammedans (66,000,000), Buddhists (11,000,000), Animists (10,000,000), and Christians (4,000,000).

Government.—India is a dependency of Great Britain, consisting partly of territory under the direct administration of British officials, and partly of native states, all subordinate, in varying degrees of relationship, to British authority.

The nine great provinces are Madras, Bombay, Bengal, the United Provinces of Agra and Oudh, the Punjab, Burma, Eastern Bengal and Assam, the Central Provinces, and the Northwestern Frontier Province.

In accordance with the Royal Titles Act of 1876 the King of Great Britain and Ireland assumes the additional title of Emperor of India. The Parliament of the United Kingdom is supreme over India; but all the statutes relating to India are in the nature of either constitutional enactments or financial provisions.

In India the supreme authority, both executive and legislative, is vested in the governor-general in council. The governor-general, or viceroy, who generally holds office for five years, receives a salary of eighty-five thousand dollars a year, and has power to overrule his council in cases of emergency. The council is composed of six ordinary members, all appointed, like the governor-general himself, by the crown for a period of five years. Since 1909 one of the members has been a native of India.

The work of the council is distributed among the departments of finance, commerce, home and foreign affairs, revenue and agriculture, army, legislation, education, and public works. The foreign department is under the special care of the viceroy.

The seat of the supreme government of India is Delhi, with an annual migration to the hill-station of Simla for the hot season.

Cities.—The capital, Delhi, has a population (1911) of 391,828. The other chief cities are: Calcutta (1,216,514), Bombay (972,930), Madras (517,335), Hyberabad (499,840), Rangoon (293,316), Lucknow (260,621), Lahore (228,318), Ahmedabad (215,448), Benares (204,222). In addition there are twenty cities with populations exceeding 100,000.

Delhi (*Del'lee*), since 1912 the capital of the Indian Empire is located on the right bank of the Jumna, nine hundred and fifty-four miles northwest of Calcutta. It was the capital of the Afghan or Pathan, and afterwards of the Mogul, empire. It is the terminus of the East Indian and Rajputana railways, the former crossing the Jumna by a fine iron bridge.

Delhi is walled on three sides, has ten gates, and stands on high ground, the famous palace of Shah Jehan, now the fort, looking out over the river and a wide stretch of wooded and cultivated country. To the north, about a mile distant, rises the historic "ridge," crowned with memorials of the Indian mutiny, and commanding a fine view of the city, the domes and minarets of which overtop the encircling groves.

The palace buildings comprise the cathedral-like entrance hall, the audience hall, and several lesser pavilions, covering in all an area of one thousand six hundred feet by three thousand two hundred feet, exclusive of gateways. The beautiful inlaid work and carving of these buildings are the admiration of the world, and is worthy of its famous inscription: "If there is a heaven on earth, it is this—it is this!"

In the heart of the city stands the Jama Masjid ("great mosque"), one of the largest and finest structures of the kind in India, which also owes its origin to Shah Jehan. Among the notable monuments in the neighborhood are the imperial tombs, including that of Hamayun, second of the Mogul dynasty; the old Kala Masjid, or black mosque; and the thirteenth century Kutab Minar, ten miles to the south, which is two hundred and thirty-eight feet high, and tapers gracefully from a diameter of forty-seven feet at the base to nine feet at the summit.

Modern Delhi is noted for its broad main streets, the chief being the Chandni Chauk, or Silver Street, with its high clock tower, and the institute and museum.

Delhi has a large trade in wheat and other produce, and its bazaars are noted for gold and silver work, precious stones, shawls, and costly fabrics.

Simla, since 1864 the summer headquarters of the British government in India, stands on the slopes (seven thousand feet) of the Himalayas, in a beautiful situation, one hundred and seventy miles north of Delhi. Its first house was built in 1819, and it was first visited officially by the Indian government in 1827. There are two vice-regal residences, handsome government buildings, and a fine town hall. Population sixteen thousand in winter, and considerably more in summer.

Calcutta, on the left bank of the Hugly, the largest and westernmost branch of the Ganges delta, is about eighty miles from the sea. The government buildings, Bishop's College (now an engineering school), High Court, town hall, bank, museum, university, St. Paul's cathedral, and many other English buildings have earned for it the name "City of Palaces." The native quarters, though improved, are still squalid, the houses of mud or bamboo. An esplanade, numerous quays, an excellent water-supply, gas, and tramway services, add to the amenities. There are extensive dockyards, warehouses, ironworks, timber yards, and jute mills. Extensive railway and steamboat communications make it the chief emporium of commerce in Asia.

Bombay stands on an island, connected with the coast by a causeway, and has a magnificent harbor and noble docks. It is rapidly surpassing Calcutta in trade, and is one of the greatest of seaports; its position promises to make it the most important commercial center in the East, as it already is in the cotton trade of the world. It swarms with people of every clime, and its merchandise is mainly in the hands of the Parsees, the descendants of the ancient fire worshippers. It is the most English town in India. It came to England from Portugal as dowry with Catherine of Braganza, wife of Charles II., who leased it to the East India Company for fifty dollars a year. Its prosperity began when the Civil war in the United States afforded it an opening for its cotton.

Benares, the most sacred city of the Hindus, and an important town in the Northwest Provinces, is on the Ganges, four hundred and twenty miles by rail northwest of Calcutta. It presents the amazing array of one thousand seven hundred temples and mosques with towers and domes and minarets innumerable. The bank of the river is laid with continuous flights of steps whence the pilgrims bathe; but the city itself is narrow, crooked, crowded, and dirty. Many thousands of pilgrims visit it annually. It is a seat of Hindu learning; there is also a government college. The river is spanned here by a magnificent railway bridge. There is a large trade in country produce, English goods, jewelry, and gems; while its brass work "Benares ware," is famous.

Agra, a city in the United Provinces of Agra and Oudh, is on the Jumna, one hundred and thirty-nine miles southeast of Delhi by rail, and eight hundred and forty-one miles

[685]

[686]

[687]

northwest of Calcutta. The ancient walls embrace an area of eleven square miles, of which about one-half is now occupied. The houses are mostly built of red sandstone, and, on the whole, Agra is the handsomest city in upper India.

Some of the public buildings, monuments of the house of Timur, are on a scale of striking magnificence. Among these are the fortress built by Akbar, within the walls of which are the palace and audience hall of Shah Jehan, the Moti Masjid or Pearl Mosque, and the Jama Masjid or Great Mosque.

Still more celebrated is the white marble Taj Mahal, situated without the city, about a mile to the east of the fort. This extraordinary and beautiful mausoleum was built by the Emperor Shah Jehan for himself and his favorite wife, who died in 1629, and is remarkable alike for the complexity and grace of the general design, and the elaborate perfection of the workmanship. In the center, on a raised platform, is the mausoleum, surmounted by a beautiful dome, with smaller domes at each corner, and four graceful minarets (one hundred and thirty-three feet high). Of British edifices the principal are the Government House, the Government College, three missionary colleges, the English church, and the barracks.

The climate, during the hot and rainy seasons (April to September), is very trying; but the average health of the city is equal to that of any other station in the United Provinces.

The principal articles of trade are cotton, tobacco, salt, grain, and sugar. There are manufactories of shoes, pipe stems, and gold lace, and of inlaid mosaic work, for which Agra is famous.

History.—It is impossible to speak positively as to the aboriginal prehistoric populations of India; probably the most primitive peoples now left—the Dravidian hill-tribes—represent waves of invasion from the north. The history of civilization in India may, however, be traced from the invasion—probably one thousand years or more B. C.—of the Aryan race from central Asia, a race of the Indo-Germanic type in physique and speech. Their language was Sanskrit, their religion and civilization that of the Vedas, or ancient Hindu scriptures.

Out of the union of the Aryans with the earlier inhabitants the modern races of India have sprung. Buddhism arose in India with the teaching of Buddha about 500 B. C. and for a while superseded the Vedic faith, corrupted as it had been by the degraded aboriginal superstitions; and India was substantially Buddhist till the revival of Hinduism, in its modern or Brahmanic form (more idolatrous and superstitious than the ancient faith), in the sixth century A. D.

In 1001 A. D. came the first wave of Mohammedanism, and soon all India fell under Mohammedan domination, though the bulk of the people clung to the Hindu religion. By the beginning of the eighteenth century a new Hindu power, that of the Maharrats, arose, and seriously weakened the Moslem emperor, the Grand Mogul. The Dutch, Portuguese, and French, as well as the British, established themselves in the empire; in the eighteenth century the French more than rivaled the British in power. But the power of the British East India Company, originally traders, became dominant after the battle of Plassey in 1757.

Gradually English power as represented by the company, its diplomatists, and its soldiers, extended over a great part of India, and the governors—Clive, Warren Hastings, Wellesley, Amherst, Bentinck, Dalhousie, Canning—consolidated what was really the empire of Great Britain in the East. Then in 1857 came the great mutiny, stamped out in blood, and the government was assumed by the British crown in 1858. British rule in India has been steadily consolidated, but no great annexation has since taken place, except that of Upper Burma in 1886.

After the mutiny, India settled down to a period of peace, broken only by the constant suspicion of Russian intrigue in Afghanistan. This led in 1878 to the second Afghan war. The Amir was deposed, and his successor promised to receive a British resident, who was in a short time murdered, as was also his escort. This resulted in the famous march of General Roberts from Kabul to Kandahar, and eventually an Amir who was favorable to the British was set up. This Amir reigned until 1901, and his successor remained friendly to the British.

Finally, in 1907, a convention between Russia and Britain was signed, and later an agreement as to the line of delimitation of their respective spheres of influence in Persia was arrived at in 1912. Quetta and the southeastern districts of Afghanistan were annexed after the second Afghan war, and the purchase of the Suez Canal was of great use in the defense of India. British supremacy over the Afghan tribes was also recognized.

After his coronation in 1911, George V. of Great Britain visited India and held a Coronation Durbar at the beginning of 1912 in India itself, this being the first visit of an English raj to the Indian empire, and the capital of India was officially proclaimed as Delhi.

JAPAN, an island empire off the east coast of Asia, separated from Siberia by the Sea of Japan. The name Japan is a corruption of *Zipangu*, itself a corruption of the Chinese pronunciation of the native name *Nihon* or *Nippon* ("Land of the Rising Sun").

Japan comprises four large islands, Honshu (the Japanese mainland), Shikoku, Kiushu, and Yezo or Hokkaido; the Luchu Islands, Formosa, divided from China by the Formosa Channel; and Korea (annexed in 1910 and renamed Chosen). A small group of islands, Bonia, six hundred miles southeast of Tokio, also belongs to Japan.

The Kwantung province, including Port Arthur and Darien, was leased to Japan by Russia (with the consent of China) in 1905, while the southern portion of Sakhalin (ceded to Russia in 1875) became once more Japanese.

The empire includes also nearly four thousand small islands.

The islands comprising the Japanese Empire have been likened to the British Isles in their position relative to the Continent, the Sea of Japan and the Strait of Korea resembling the North Sea and Strait of Dover. In their general extent of surface the comparison also holds good. The three contiguous islands of Japan proper are, however, considerably larger than Great Britain, while the northern possession of Yezo is three thousand square miles larger than Ireland.

The empire with its dependencies comprises an area of 235,886 square miles, with a population of 67,142,798.

Surface Characteristics.—The islands are eminently volcanic, and eighteen of the summits are still active; the chief of these, Fuji-san, or Fuji-yama, the loftiest and most sacred mountain of Japan, about sixty miles from Tokio, has been dormant since 1707. Japan is also liable to frequent, and occasionally disastrous, earthquakes.

The country is very mountainous, and not more than one-sixth of its area is available for cultivation. The numerous ranges extend in directions parallel to the length of the group, giving varied and picturesque landscapes of hill and valley. Their irregular coast-line is indented with splendid natural harbors, such as the Bay of Yedo on the southeast coast; the beautiful "inland sea" of Japan, with its intricate channel between hundreds of islets, separates the island of Shikoku from the larger one of Hondo, and the enclosed Suwonada and Bugo Channel, divide the southwestern island of Kiushu from both of these.

Lakes and Rivers.—From the mountainous character of the long narrow islands the rivers are generally impetuous, and of small economic importance, except for irrigation. Among the most important may be noted the Yodo-gawa, which flows from the fiddle-shaped Lake Biwa, the largest fresh water expanse in Japan, thirty-five miles long, to the "inland sea;" the broad and rapid Ten-riu-gawa, or "River of the Heavenly Dragon," which flows south from the central mountains of Nippon; and the Tone-gawa, which enters the Pacific, but sends a branch to the Bay of Yedo, which is crossed within the capital by the Nippon Bassi, or bridge of Japan, from which, as a starting point, all distances throughout the kingdom are measured.

Climate.—The islands of Japan have a climate that may be compared with that of South Britain. The extremes, however, are greater, summer being hotter, and winter colder, than in England, increasing to almost Siberian rigor in the north. June, July, and August form the Satkasi, or rainiest period; the autumn succeeding is the pleasantest and most genial season of the year. Hurricanes, storms, and fogs, are frequent in the seas round Japan, where warm and cold ocean currents also bring about great differences of sea temperature.

Products and Industries.—The islands have a very beautiful flora, including many ornamental plants. The great feature of the vegetation is the intermixture of tropical growths, such as the bamboo, palms, tree-ferns, and bananas, with those of temperate regions, the pine, oak, beech, chestnut and maple. Characteristic are the paper mulberry, the vegetable-wax tree, the camphor and lacquer trees. The cultivated crops are rice, maize, wheat, barley, tobacco, tea, and cotton.

Japan is also very rich in minerals. Gold, silver, and copper are especially abundant in the north, and coal and iron beds seem to extend throughout the group. Petroleum is also being produced in large quantities, especially in the Province of Echigo.

People.—With the exception of the wilds of *Yezo*, peopled by eighteen thousand Ainos, the Japanese islands are inhabited by a single race speaking various dialects of the same tongue. Probably the Japanese are the issue of the intermarriage of victorious Tartar settlers, who entered Japan from the Korean peninsula, with Malays in the south and Ainos in the main island. See Book of Races.

There are two prevailing religions in Japan—Shintoism, the indigenous faith; and Buddhism, introduced from China in 552 and still the dominant religion among the people. Francis Xavier introduced Christianity in 1549, and the Roman Catholic Church and the Greek Church both carry on a flourishing work in Japan. Of the Protestant missions there are also many actively at work.

In education, as well as in matters of religion, enormous changes and advances have been made in recent years. Education is in the lower grades free and compulsory. Secondary schools are state aided, and prepare for a three years' course at the universities, which is largely devoted to the study of European languages. There are high schools for girls, and the technical and special schools are well attended. There are three State Universities, at Tokio, Kyoto, and Tohoku.

Production and Industry.—Agriculture is the chief occupation of the Japanese, and they are excellent and careful farmers. In the mechanical arts also they excel; especially in the use of metals, in the manufacture of porcelain and glass lacquered wares, and silk fabrics. The chief manufactures are silk and cotton, cotton yarn, matches, paper, glass, lacquer ware, porcelain, and bronze, and ship building is an important industry in the yards.

The chief exports are silk, cotton, yarns, rice, tea, fish, copper, matches, coal, camphor, straw plaits, porcelain, earthenware, lacquer-ware, and marine products.

The commercial development of Japan has of late been marvelous. There were five thousand nine hundred and eighty-five miles of railroad open in 1914, in addition to eight hundred and thirty-six miles open in Korea, while the South Manchurian Railway (China) is under Japanese control.

Government and Administration.—The government is an hereditary monarchy, the succession being now exclusively in the male line. The Cabinet consists of ten Ministers of State, presided over by a Minister President.

The Upper House, or House of Peers, consists of about three hundred and thirty members—male members of the royal house, life peers, peers elected either for life or for seven years, and other persons nominated by the emperor. The lower house, or House of Representatives, has three hundred and sixty-nine members, who serve for four years, elected by citizens paying taxes of not less than ten yen (five dollars) per annum. The first general election took place in 1890.

Penal and civil codes have been drafted on a European basis, and with a commercial code were published in 1890, and came into force in 1893.

Cities.—The capital of the Japanese Empire, Tōkiō, formerly called Yedo, is the residence of the emperor; population, 2,186,079. Other cities are: Osaka, 1,226,590; Kiōto, the ancient capital, 442,462; Nagoya, 378,231; Kōbe, 378,197; Yokohama, 394,303; Hiroshima, 142,763; Nagasaki, 176,480; Kanazawa, 110,994; Kure, 100,679. The chief ports are Yokohama, Kōbe, Osaka, Nagasaki, and Hakodate.

Tokio, or Tokei ("Eastern Capital"), is the chief city of the Japanese Empire. Until 1868, when the emperor removed his court thither from Kyōtō, it was known as Yedo ("Estuary Gate"). Its position at the mouth of the rivers which drain the largest plain of Japan, fits it to be a national center. The lower portion of the city, which is flat and intersected by canals, stretches between the two parks of Ueno (north) and Shiba (south), famous for their shrines. Midway rises the castle or palace, a fine structure in Japanese style, furnished in European manner, and lighted with electricity, within a double ring of high walls and broad moats. In spring-time the city is gay with plum and cherry blossoms. The immense enclosures, formerly inhabited by the nobles and their retainers, are gradually disappearing, and handsome modern buildings in brick for the use of the various government departments are taking their place. Of the fifteen city divisions the northern, Hongo and Kanda, are mostly educational, and contain the buildings of the Imperial University, Law School and other institutions. The student population is astonishingly large. The seaward districts of Nihonbashi, Kyobashi, and Asakusa are industrial and commercial, while the government offices are located in Kojimachi ku.

Yokohama is the port of entry (seventeen miles off), and a great harbor scheme to cost twenty million dollars was planned in 1911-1912. The city is subject to disastrous fires; that of April, 1892, burned four thousand houses in one morning. Tokio has three railway termini and a system of electric railways. Almost every phase of modern civilization is to be found within its vast area.

History.—Before 500 A. D. Japanese history is mere legend. Buddhism was introduced from Korea in 552; and in the next century Chinese civilization strongly influenced Japan. About the end of the twelfth century, the weakness of the emperor led the military head (Shogun) to assume a large share of the supreme power, and he handed it on to his descendants. Hence the statement often made that Japan had a Mikado or spiritual emperor who reigned but did not govern, and a "Tycoon" (Shogun) who did govern though he paid homage to the nominal sovereign. The military caste was now dominant until the reign of Iyeyasu (c. 1600), whose descendants reigned till 1868.

Total exclusion of foreigners was the rule till 1543, when the Portuguese effected a settlement; but in 1624 all foreigners were expelled and Christianity interdicted. The policy of isolation was rigidly pursued from 1638 till 1853, when Commodore Perry of the United States Navy steamed into a Japanese harbor, and effected a treaty with the Shogun. Soon sixteen other nations followed the American example, and free ports were opened to foreign commerce.

In 1867-1868 a sharp civil war broke the feudal power of the daimios or territorial magnates, suppressed the Shogunate, and unified the authority under the Mikado. In a very few years Japanese students took a place of their own in western science; and how thoroughly the Japanese had laid to heart what they had learned abroad in the military and naval arts was partially revealed by the swift and complete success of the war with China about Korea in 1894, and more impressively by their amazing triumph over the great military empire of Russia, in 1904-1905, whom they defeated in a succession of bloody battles, took Port Arthur, and utterly destroyed the Russian fleet. By the peace that followed the Russians not only evacuated southern Manchuria, but recognized Japan's preponderance in Korea, and gave up to Japan the "leases" of Port Arthur and the Liao-tung peninsula Russia had wrested from China.

A conspiracy against the life of the emperor was discovered in September, 1910. The same year saw the passing of a bill enabling foreigners to own land in Japan proper, under certain restrictions. But the principal event of 1910 in Japanese history was the formal annexation of Korea, the treaty with the emperor of Korea being promulgated on August 29. According to the new commercial treaty with the United States, ratified by the Senate on February 24, 1911, the clause in the old treaty was omitted, wherein each side reserved the right of regulating immigration from one country to the other. In 1910 and 1911 important agreements were also made with Russia with special reference to Manchuria.

Japan entered the European war on August 23, 1914, on the side of the Entente Allies, and immediately began the blockade and siege of the German colony at Kiao-Chow on the Shantung promontory of China. In November, 1915, the present emperor, Yoshihito, was crowned.

THE COLONIAL DIVISIONS OF THE WORLD

The following tables show how the colonies of the world have been divided among the various nations:

COLONIES IN AFRICA	
Governing Country	

[688]

[689]

[690-692]

Colony	and Form of Government	Area Sq. M.	Population
Algeria	French Colony	184,474	4,739,300
Algerian Sahara	French Possession	123,500	50,000
Angola	Portuguese Possession	484,800	4,119,000
Ascension	British Crown Colony	35	430
Azores and Madeira Islands	Portuguese Province	1,510	407,002
Basutoland	British Crown Colony	10,293	264,100
Bechuanaland	British Protectorate	286,200	100,500
British East Africa	British Protectorate	1,000,000	2,500,000
British Central Africa	British Protectorate	42,217	900,615
British South Africa (Rhodesia)	British Protectorate	425,728	1,075,000
Canary Islands	Spanish Province	2,808	334,521
Cape Colony	British Protectorate	276,775	2,433,000
Cape Verde Islands	Portuguese Province	1,480	147,424
Ceuta	Spanish Province	13	5,090
Comoro Islands	French Protectorate	620	47,000
Congo Inland Straits	Belgian Protectorate	900,000	30,000,000
Dahomey	French Possession	60,000	1,000,000
Egypt	Turkish Tributary	400,000	9,734,405
Eritrea, etc.	Italian Possession	42,000	329,516
Fernando Po, etc.	Spanish Possession	850	23,709
French Congo	French Possession	1,160,000	10,000,000
Gambia	British Crown Colony	69	13,500
German East Africa	German Protectorate	384,180	8,000,000
German Southwest Africa	German Protectorate	322,450	200,000
Gold Coast	British Crown Colony	40,000	1,500,000
Guinea, French	French Possession	95,000	2,200,000
Guinea, Portuguese	Portuguese Possession	4,440	820,000
Ivory Coast	French Possession	116,000	2,000,000
Kamerun	German Protectorate	191,130	3,500,000
Lagos	British Crown Colony	3,460	85,600
Madagascar	French Possession	227,950	2,505,240
Mauritius, etc.	British Crown Colony	729	378,040
Mayotte	French Possession	140	11,640
Military Ter's	French Possession	700,000	4,000,000
Portuguese East Africa	Portuguese Possession	301,000	3,120,000
Natal and Zululand	British Institutions	34,019	902,365
Nigeria	British Protectorate	400,000	25,000,000
Nossi-Be	French Possession	130	9,500
Orange River	British Possession	48,330	207,500
Princes and St. Thomas Islands	Portuguese Possession	360	42,103
Reunion	French Possession	966	173,200
Rio de Oro and Adrar	Spanish Possession	243,000	100,000
Sahara	French Possession	1,544,000	2,550,000
St. Helena	British Crown Colony	47	3,342
St. Marie	French Possession	64	7,670
Senegal	French Possession	80,000	1,800,000
Seychelles	British Crown Colony	148	19,343
Sierra Leone	British Crown Colony	4,000	77,000
Somali Coast, British	British Protectorate	75,000	...
Somali Coast, French	French Possession	45,000	200,000
Somali Coast, Italian	Italian Possession	100,000	400,000
Togoland	German Protectorate	33,700	900,000
Transvaal Colony	British Possession	119,140	1,094,100
Tripoli	Turkish Tributary	398,000	800,000
Tristanda Cuhna	British Crown Colony	45	100
Tunis	French Protectorate	51,000	1,900,000
Uganda	British Protectorate	140,000	3,000,000
Zanzibar and Pemba	British Protectorate	1,020	200,000

COLONIES IN ASIA

Colony	Governing Country and Form of Government	Area Sq. M.	Population
Aden and Perim	British Crown Colony	80	41,222
Anam	French Protectorate	52,100	6,124,000
Bahrein Islands	British Protectorate	273	68,000
Baluchistan	British Protectorate	130,000	500,000
Bokhara	Russian Dependency	92,000	1,250,000
Cambodia	French Protectorate	37,400	1,500,000
Ceylon	British Institutions	25,365	3,578,333
Cochin China	French Possession	22,000	2,968,600
Cyprus	British Administration	3,584	227,900
East Turkestan	Chinese Dependency	550,340	1,200,000
Formosa	Japanese Dependency	13,455	2,745,000
Goa	Portuguese Possession	1,390	494,836
Hong Kong	British Crown Colony	407	386,159
India, British	British Crown Colony	1,087,404	231,898,807
India, French	French Possession	196	273,000
India, Portuguese	Portuguese Possession	1,558	572,290
Jungaria	Chinese Dependency	147,950	600,000
Kiauchau Bay	Japanese Possession	200	60,000
Khiva	Russian Possession	22,320	800,000
Kwang Tung	Russian Possession
Macao	Portuguese Possession	4	78,627
Malay Federated States	British Protectorate	27,500	512,342
Manchuria	Chinese Dependency	363,610	8,500,000
Mongolia	Chinese Dependency	1,367,600	2,580,000
Pescadores Islands	Japanese Dependency	85	52,400
Samos	Turkish Tributary	180	54,830
Sikkim	British Protectorate	2,818	30,458
Straits Settlements	British Crown Colony	1,472	572,249
Tibet	Chinese Dependency	463,200	6,430,000
Tonquin and Laos	French Possession	144,400	7,641,900

COLONIES IN EUROPE

Colony	Governing Country and Form of Government	Area Sq. M.	Population
Bosnia and Herzegovina	Austro-Hungarian Protectorate	23,262	1,568,092
Crete	Turkish Suzerainty	3,326	303,543
Faroe Islands	Danish Colony	512	15,230
Gibraltar	British Crown Colony	2	27,460
Iceland	Danish Province	39,756	78,470
Malta and Gozo	British Institutions	117	188,141

COLONIES IN NORTH AMERICA

Colony	Governing Country and Form of Government	Area Sq. M.	Population
Alaska	United States Territory	599,446	63,592
Bahamas	British Institutions	4,470	54,358
Barbadoes	British Institutions	166	195,600
Bermudas	British Institutions	20	17,535
Canada	British Dependency	3,048,710	5,371,315
Curacao, etc.	Dutch Possession	403	52,301
Danish West Indies	United States Possession	138	32,786
Greenland	Danish Possession	46,740	10,516
Guadeloupe, etc.	French Possession	688	182,110

Honduras, British	British Crown Colony	7,560	37,650
Leeward Islands	British Institutions	700	127,440
Jamaica and Turks Islands	British Crown Colony	4,370	771,900
Martinique	French Possession	380	203,780
Newfoundland and Labrador	British Dependency	162,200	217,100
Porto Rico	United States Possession	3,606	953,243
St. Pierre and Miquelon	French Possession	92	6,250
Trinidad and Tobago	British Crown Colony	1,868	279,700
Windward Islands	British Institutions	500	162,800

COLONIES IN SOUTH AMERICA

Colony	Governing Country and Form of Government	Area Sq. M.	Population
Falkland Islands	British Crown Colony	7,500	2,076
Guiana, British	British Institutions	104,000	294,000
Guiana, French	French Colony	30,500	32,910
Guiana, Dutch	Dutch Possession	46,060	68,968

COLONIES IN OCEANIA

Colony	Governing Country and Form of Government	Area Sq. M.	Population
Bismarck Archipelago	German Possession	20,000	188,000
Borneo, British N.	British Protectorate	31,106	175,000
Borneo, Dutch	Dutch Possession	212,737	1,180,578
Caroline Islands and Palaos	German Possession	810	42,000
Celebes Islands	Dutch Possession	71,470	1,197,860
Fiji and Rotumah Islands	British Crown Colony	7,740	120,950
Guam	United States Possession	150	9,000
Hawaii	United States Territory	6,449	154,000
Java and Madura	Dutch Possession	50,554	28,745,698
Kaiser Wilhelm Land	German Protectorate	70,000	110,000
Marianne Islands	German Possession	250	2,000
Marquesas Islands	French Possession	480	4,280
Marshall Islands	German Possession	150	13,000
New Caledonia	French Possession	7,650	51,415
New Guinea, British	British Crown Colony	90,540	350,000
New South Wales	British Dependency	310,370	1,397,700
New Guinea, Dutch	Dutch Possession	195,653	599,208
New Zealand	British Dependency	104,470	787,660
Philippine Islands	United States Possession	119,542	8,000,000
Queensland	British Dependency	668,500	510,520
Samoa Islands (Savaai and Upolu)	German Possession	1,000	29,100
Samoa Islands (Tutuila and Manua)	United States Possession	79	5,800
Society Islands, etc.	French Possession	1,520	29,000
Solomon Islands	German Possession	4,200	45,000
South Australia	British Dependency	903,700	364,800
Sumatra	Dutch Possession	161,612	3,209,067
Tasmania	British Dependency	26,215	174,230
Timor, Dutch	Dutch Possession	44,374	978,267
Timor, Portuguese	Portuguese Possession	7,458	300,000
Victoria	British Dependency	87,890	1,208,710
West Australia	British Dependency	975,920	194,800

NOTE.—Practically all the German colonial possessions throughout the world are at this date (1917) in military possession of the Entente Allies, and will be so held pending the terms of the final treaty of peace at the close of the present European war.

THE GREAT FOREIGN WARS OF UNIVERSAL HISTORY

In the various wars the victorious contestants are indicated in **bold face** type, as are also the victorious leaders and the battles won by them. The figures prefixed show with which of the warring parties the leaders are identified, and who were the victors in the battles named. Naval battles are shown in *italics*. Consult the [Table of Foreign Battles](#) for details concerning the more important military actions.

TROJAN WAR (Partly mythical).—1193-1184 B. C.

(1) **Greeks** vs. (2) Trojans.

CAUSE: Greeks avenge the abduction of Helen of Troy by Paris.

LEADERS: (1) **Agamemnon, Achilles, Ulysses**; (2) Hector.

CHIEF ACTION: (1) **Siege of Troy**.

RESULTS: Capture and destruction of Troy, or Ilium.

FIRST MESSENIAN WAR.—743-724 B. C.

(1) **Spartans** vs. (2) Messenians.

CAUSE: Spartans covet Messenian land.

LEADER: (2) Aristodemus.

CHIEF ACTION: (1) **Siege of Mount Ithome**.

RESULTS: Messenians become tributary of Sparta and their land is, in part, confiscated.

SECOND MESSENIAN WAR.—645-628 B. C.

(1) **Spartans** vs. (2) Messenians.

CAUSE: Spartan oppression causes Messenian revolt.

LEADERS: (1) **Tyrtæus** (poet); (2) Aristomenes.

CHIEF ACTION: (1) **Eira**.

RESULTS: Greater part of Messenians flee to Sicily. Those remaining become helots (Spartan serfs).

FIRST SACRED WAR.—600-590 B. C.

(1) **Amphictyonic League** vs. (2) Criseans.

CAUSE: People of the city of Crisa (port of Delphi) oppress pilgrims to the oracle.

LEADER: (1) **Cleisthenes of Sicyon**.

CHIEF ACTION: (1) **Siege of Crisa**.

RESULTS: For the first time Greek cities join in an effective league. Crisa destroyed.

PERSIAN WARS.—500-479 B. C.

(1) **Persians** vs. (2) Greeks.

CAUSE: Aid given by Athens and Eretria to revolting Ionic Greek cities, leading to burning of Sardis, 497 B. C.

a. First Persian Expedition—493 B. C.

LEADER: (1) **Mardonius**.

CHIEF ACTION: (1) **Three hundred ships lost by storm off Mt. Athos**.

RESULTS: Partial success against Macedonians and Thracians. Continued plans of Darius for subjugating Greece.

b. Second Persian Expedition—490 B. C.

LEADERS: **Datis**, (1) **Artaphernes**; (2) Miltiades.

CHIEF ACTIONS: (1) **Naxos, Eretria**; (2) Marathon (490 B. C.)

RESULTS: The Athenians are victorious and the Persians retreat to Asia Minor.

c. Third Persian Expedition—481-480 B. C.

Xerxes desires to avenge his father's defeat.

LEADERS: (1) **Xerxes**; (2) Leonidas, Eurybiades, Themistocles.

CHIEF ACTIONS: (1) **Thermopylæ, Salamis, Artemisium, Athens burned**.

RESULTS: Xerxes retreats to Persia after his defeat at Salamis.

d. Fourth Persian Expedition—479 B. C.

War continued by troops which Xerxes left behind.

LEADERS: (1) **Mardonius**; (2) Pausanias, Aristides.

CHIEF ACTIONS: (1) Athens laid waste; (2) **Platæa, Mycæe**.

RESULTS: All Persian invasions and attempts to subjugate Greece cease.

THIRD MESSENIAN WAR.—464-456 B. C.

(1) **Helots of Messenian descent** vs. (2) Spartans.

CAUSE: Confusion following earthquake gives Helots courage to revolt.

CHIEF ACTION: (2) Mt. Ithome besieged. Sparta sent home her Athenian allies.

RESULTS: Messenians capitulate and are allowed to leave the Peloponnesus never to return. Athens retaliates by settling them at Naupactus.

PELOPONNESIAN WAR.—431-404 B. C.

(1) **Sparta and Allies** vs. (2) Athens and Allies.

a. First Period—431-421 B. C.

CAUSE: Envy of Sparta and her allies at Athens' growing power and influence. Discontent among some of the Athenian subject states.

LEADERS: (1) **Archidamus, Agis, Brasidas**; (2) Demosthenes, Cleon, Nicias.

CHIEF ACTIONS: (1) **Invasion of Attica, Plague in Attica, Siege of Platæa, Delium, Amphipolis**. (2) Mitylene, Sphacteria.

RESULTS: By the peace of Nicias (421 B. C.) both sides are to restore conquests and prisoners but terms are imperfectly carried out.

b. Second Period or Decelean War—413-404 B. C.

CAUSE: Sparta takes advantage of Athens' weakness, resulting from the failure of the expedition to Syracuse, to renew the war.

LEADERS: Alcibiades serves Athens, Sparta and Athens in turn. (1) **Lysander**; (2) Conon.

CHIEF ACTIONS: (1) **Decelea occupied, Attica ravaged, Many subject states of Athens revolt, Notium, Ægospotami, Surrender of Athens**; (2) Abydos, Cyzicus, Arginusæ.

RESULTS: The Spartans tear down the walls of Piræus and Athens. Athens loses her foreign possessions and fleet but becomes an independent ally of Sparta. Sparta is now supreme in Greece.

GAULS' INVASION OF ITALY.—390 B. C.

(1) **Gauls** vs. (2) Romans.

CAUSE: Roman people refuse to surrender Roman ambassadors who had aided the Etruscans against the Gauls.

LEADERS: (2) M. Manlius, Capitolinus, Camillus.

CHIEF ACTIONS: (1) **Battle of the Allia, Sack of Rome.**

RESULTS: Gauls retire on payment of ransom. The overthrow of Rome had no permanent effect on her fortunes.

SECOND SACRED WAR.—c. 355-346 B. C.

(1) **Phocians** vs. (2) Amphictyons.

CAUSE: Phocians seize and plunder Delphi because of fine imposed by Amphictyonic Council.

LEADERS: (1) **Onomarchus**; (2) Philip of Macedon.

RESULTS: Thebans and Thessalians invite aid of Philip against Phocians and he takes their place in the Amphictyonic Council.

THIRD SACRED WAR.—339-338 B. C.

(1) **Macedonians** vs. (2) Athenians, Thebans.

CAUSE: Amphictyons call in Philip to punish Amphissa, whereupon he seizes Elatea, thereby threatening Athens. Athenians aroused by Demosthenes.

LEADERS: (1) **Philip of Macedon.**

CHIEF ACTIONS: **Chaeronea.**

RESULTS: Philip gains leadership of Greece. Henceforth Greece is under the control of Macedonia.

SAMNITE WARS.—343-290 B. C.

(1) **Romans** vs. (2) Samnites.

a. First Samnite War—343-341 B. C.

CAUSE: A duel between two rival races for supremacy in Italy. Campanians implore aid of Romans against Samnites who are laying waste their territories in revenge for aid given the Sidicini of Teanum.

LEADERS: (1) **Marcus Valerius Corvus, P. Decius Mus.**

RESULTS: Capua is retained by the Romans and Teanum surrendered to Samnites.

b. Second or Great Samnite War—326-304 B. C.

CAUSE: The occupation of Palaeopolis by the Samnites. In 311 B. C. the Etruscan cities joined in the war against Rome.

LEADERS: (1) **Papirius Cursor**; (2) Fabius Rullianus Gavius Pontius.

CHIEF ACTIONS: (1) **Fregellæ, Sutrium, Lake Vadimonis, Bovianum**; (2) Caudine Forks.

RESULTS: Samnites sue for peace. They resign all their conquests but retain their independence within their native mountains.

c. Third Samnite War—298-290 B. C.

CAUSE: While Romans are engaged with the Gauls the Samnites enter Lucania and refuse to withdraw.

LEADERS: (1) **Q. Fabius Rullianus, P. Decius Mus (son)**; (2) Gellius Egnatius, Gavius Pontius.

CHIEF ACTION: (1) **Sentinum.**

RESULT: Samnites defeated but not crushed.

WARS OF ALEXANDER THE GREAT IN ASIA—334-328 B. C.

(1) **Greeks** vs. (2) Persians, Egyptians, Bactrians, Indians (Hindus).

CAUSE: A war of conquest, a scientific expedition and a journey of discovery.

LEADERS: (1) **Alexander the Great, Nearchus**; (2) Darius III., Memnon.

CHIEF ACTIONS: (1) **Granicus, Issus, Siege of Tyre, Arbela.**

RESULTS: Alexander conquers Asia from the Mediterranean Sea to the Indus River and from the Arabian Sea to the Jaxartes River and begins the Hellenizing of the East. Founds Alexandria in Egypt. The empire breaks up after Alexander's death 323 B. C.

ROMAN WAR WITH TARENTUM AND EPIRUS.—282-272 B. C.

(1) **Romans** vs. (2) Tarentum and King Pyrrhus.

CAUSE: The people of Tarentum capture Roman ships and insult Roman embassy. They call in King Pyrrhus of Epirus.

LEADERS: (1) **Manius Curius**; (2) Pyrrhus.

CHIEF ACTIONS: (1) **Beneventum, Tarentum**; (2) Heraclea, Asculum.

RESULTS: Pyrrhus returns to Epirus and his allies one by one submit to Rome, which is left supreme from Straits of Messina to the River Arno and the headland of Ancona.

FIRST PUNIC WAR.—264-241 B. C.

(1) **Romans** vs. (2) Carthaginians.

CAUSES: A struggle for supremacy in Sicily. Pretext, Campanian mercenaries, having seized Messina, appeal to Rome for aid.

LEADERS: (1) **C. Duilius, M. Attilius Regulus, P. Claudius Pulcher, C. Lutatius Catulus**; (2) Hamilcar Barca, Himilco, Hanno.

CHIEF ACTIONS: (1) **Agrigentum, Mylæ, Ecnomus, Panormus, Ægadian Islands**; (2) Siege of Lilybæum, Drepana.

RESULTS: Carthaginians surrender Sicily and pay a war indemnity. Carthage retains the Western Mediterranean and Rome is launched on her career of conquest.

SECOND PUNIC WAR.—218-201 B. C.

(1) **Romans** vs. (2) Carthaginians.

CAUSES: A duel to the death between East and West. Pretext, Hannibal's attacks on Saguntum in Spain.

LEADERS: (1) **Q. Fabius Maximus, Publius Scipio, P. Cornelius Scipio Africanus**; (2) Hannibal, Hasdrubal.

CHIEF ACTIONS: (1) **Syracuse, Capua, Metaurus, Zama**; (2) Ticinus, Trebia, Trasimene, Cannæ.

RESULTS: Hannibal succumbs as a result of the loyalty of Italy. Carthage forced to give up Spain, to pay an annual tribute, to surrender her fleet, and to agree not to go to war without the permission of Rome.

FOUR MACEDONIAN WARS.—214-146 B. C.

(1) **Romans** vs. (2) Greeks.

CAUSE: Alliance of Philip, King of Macedon with Carthage.

LEADERS: (1) **T. Quinctius Flaminius, L. Aemilius Paulus**; (2) Philip of Macedon, Perseus.

CHIEF ACTIONS: (1) **Cynoscephalæ, Pydna.**

RESULT: Macedonia becomes a Roman province.

THIRD PUNIC WAR.—149-146 B. C.

(1) **Romans** vs. (2) Carthaginians.

CAUSE: War of Carthage with Massinissa gives Rome the pretext for completing the destruction of Carthage.

LEADERS: (1) **Scipio, Æmilianus, Africanus.**

CHIEF ACTIONS: (1) **Siege of Carthage.**

RESULT: Carthage destroyed. Most of her territory becomes a Roman province of Africa.

JUGURTHINE WAR.—111-105 B. C.

(1) **Romans** vs. (2) Jugurtha of Numidia.

CAUSE: Jugurtha, disregarding intervention of Rome, captures Citra and massacres male population.

LEADERS: (1) **C. Marius**; (2) Jugurtha.

CHIEF ACTIONS: (1) **Muthul, Citra.**

RESULTS: Numidia divided. The war reveals the corruption and incapacity of the Senatorial government of Rome.

MARSIAN OR SOCIAL WAR.—90-88 B. C.

(1) **Romans** vs. (2) Italian Allies.

CAUSE: Italian socii (allies) are denied the right of Roman citizenship.

LEADER: (1) **C. Marius, Sulla.**

CHIEF ACTION: (1) **Asculum.**

RESULT: Italians form a Federal republic, Italia, with capital at Corfinium. Roman citizenship granted to all Italian residents.

FIRST ROMAN CIVIL WAR—88-82 B. C.

(1) **Optimates** vs. (2) Democrats.

CAUSE: Reform measures of Sulpicius are carried by means of violence. Command of army of Asia is transferred from Sulla to Marius.

LEADERS: (1) **Sulla, Pompey**; (2) Marius, Cinna, Sertorius, Carbo.

CHIEF ACTIONS: **Sacripontis, Colline, Gate, Sulla's proscriptions**; (2) Marius's Reign of Terror.

RESULT: Sulla is appointed dictator.

THREE MITHRIDATIC WARS—88-63 B. C.

(1) **Romans** vs. (2) Pontines and Armenians.

CAUSES: Ambition of Mithridates VI. and Roman interference.

LEADERS: (1) **Sulla, Lucullus, Pompey**; (2) Mithridates (Pontus), Tigranus (Armenia).

CHIEF ACTIONS: (1) **Chaeronea, Orchomenus, Cabira, Tigranocerta**; (2) Massacre of Italians in Asia.

RESULTS: Reorganization of the East; Pontus, Syria and Cilicia become Roman provinces.

GLADIATORIAL AND THIRD SERVILE WAR.—73-71 B. C.

(1) **Romans** vs. Revolted Gladiators and Slaves.

CAUSE: Uprising of a band of gladiators, escaped from Capua and joined by many slaves of southern Italy.

LEADERS: (1) **Crassus, Pompey**; (2) Spartacus.

CHIEF ACTIONS: (1) **Silarus**; (2) Mt. Vesuvius.

RESULTS: Revolt put down with cruelty, six thousand crucified.

GALLIC WAR—58-51 B. C.

(1) **Romans** vs. (2) Tribes of Gaul.

CAUSE: Desire to extend the Roman empire.

LEADERS: (1) **Julius Cæsar**; (2) Vercingetorix, Ariovistus.

CHIEF ACTION: (1) **Siege of Alesia.**

RESULTS: Conquest and organization of Gaul by Cæsar. Gauls Romanized; boundaries of the old world enlarged (Cæsar's expedition to Britain 55-54 B. C.); means acquired for changing Rome into a monarchy.

SECOND ROMAN CIVIL WAR.—49-31 B. C.

First period, 49-45 B. C.

(1) **Followers of Cæsar (democrats)** vs. (2) Followers of Pompey (republican aristocrats).

CAUSE: Struggle for mastery between Cæsar, conqueror of Gaul, and Pompey, conqueror of the East.

LEADERS: (1) **Cæsar**; (2) Pompey and his sons.

CHIEF ACTIONS: (1) **"Crossing the Rubicon," Pharsalus, Thapsus, Munda.**

RESULT: Cæsar is appointed dictator for life. He is the founder of the new monarchy at Rome.

Second period—43-42 B. C.

(1) **Friends of Cæsar (Second Triumvirate)** vs. (2) Cæsar's Assassins.

CAUSE: Assassination of Cæsar, 44 B. C.

LEADERS: (1) **Antony, Octavius, Lepidus**; (2) Brutus, Cassius, Sextus Pompey.

CHIEF ACTIONS: (1) **New proscription (Murder of Cicero), Philippi.**

RESULT: Brutus and Cassius, defeated, commit suicide.

Third period—31-30 B. C.

(1) **Octavius** vs. (2) Antony.

CAUSE: A continued struggle for supreme power.

LEADERS: (1) **Octavius**; (2) Antony, Cleopatra.

CHIEF ACTIONS: (1) **Actium.**

RESULTS: Triumph of Octavius, grand nephew of Julius Cæsar. End of the republic and beginning of the empire.

JEWISH WAR—A. D. 66-70.

(1) **Romans** vs. (2) Jews.

CAUSE: Revolt of the Jews against Rome.

LEADER: (1) **Titus, son of Emperor Vespasian.**

CHIEF ACTION: (1) **Siege of Jerusalem**.
RESULT: Destruction of Jerusalem and the temple.

DACIAN WARS.—86-90, 101-102, 105-107.
(1) **Romans** vs. (2) Dacians.
CAUSE: Rome desires to extend her conquests.
LEADERS: (1) **Domitian, Trajan**; (2) Decebalus.
RESULTS: Dacia is made a Roman province. Roman conquest and empire reaches its highest point.

CIVIL WARS OF THE ROMAN EMPIRE.—193-284.
CAUSES: Contests for the throne among rival generals (barrack emperors).
RESULT: Reorganization of empire by Diocletian (284-305).

WARS OF CONSTANTINE THE GREAT FOR THE EMPIRE.—310-323.
(1) **Constantine** vs. (2) Others, Augusti.
CAUSES: Confusion following abdication of Diocletian.
LEADERS: (1) **Constantine**; (2) Maxentius, Maximinus, Licinius.
CHIEF ACTION: (1) **Turin**.
RESULTS: Constantine becomes sole ruler of Roman empire. He redistricts the empire, moves the capital to Constantinople and recognizes Christianity.

INVASION OF ROMAN EMPIRE BY NORTHERN BARBARIANS—375-493.
(1) **Romans** vs. (2) Teutons and (Huns), Teutonic Tribes; Visigoths, Vandals, Suevi, Franks, Burgundians, Ostrogoths, Alemanni, Jutes, Saxons, Angles, Lombards.
CAUSES: The Huns (Mongolians) press upon the Teutons, who are forced to seek new lands within the boundaries of the Roman empire.
LEADERS: (1) **Valens, Stilicho/Ætius, Leo (bishop of Rome)**; (2) Alaric; Walja (Visigoth); Genseric (Vandal); Hengist and Horsa (Saxons); Attila (Hun); Theodoric the Great (Ostrogoth).
CHIEF ACTIONS: (1) **Battle near Chalons (451)**; (2) Adrianople, Sack of Rome.
RESULTS: Visigothic kingdom of Tolosa (Toulouse) (415-507). Vandals settle in Africa (429-534). Carthage (439). Burgundians occupy Rhone Valley (443). Angles, Saxons and Jutes invade England (449). Huns and Ostrogoths ravage Gaul. Huns destroy Aquileia and Venice founded (452). Vandals plunder Rome (455). Odoacer gains ascendancy in Rome. The fall of the Roman empire (476). Ostrogothic kingdom in Italy (493-555). Overthrow of the Roman empire in the West, though it continued in the East until 1453. This blending of Roman and Teutonic elements under the influence of the Christian religion and what remained of classic civilization formed the civilization of the middle ages.

WARS OF JUSTINIAN—533-534.
(1) **Eastern Empire** vs. (2) Vandals in Africa and (3) Ostrogoths in Italy—535-555.
CAUSE: Desire to restore West to Eastern empire.
LEADERS: (1) **Belisarius, Narses**; (3) Vitiges Totila.
CHIEF ACTION: (1) **Battle of Taginae (552)**.
RESULTS: Destruction of Vandal power in Africa and of the Ostrogothic kingdom in Italy. Exarchate established at Ravenna.

WARS OF THE FRANKS—486-814.
(1) **Franks** vs. (2) Neighboring Peoples.
CAUSES: Desire to extend the limits of Frankish territory and to ward off attacks from without.
LEADERS: (1) **Clovis (486-511), Charles Martel (814-741), Pepin the Short (751-768), Charlemagne (768-814)**.
CHIEF ACTIONS: (1) **Soissons (486), Clovis conquers Alemanni and becomes a Catholic Christian (496), Battle of Tours (732), Conquest of Burgundy (534), Charlemagne conquers Lombards (774-776), Saxons (772-804), Bavarians (788), Avars (791), Northern Spain (778)**.
RESULTS: Franks become leading power in the West and revive the Western Empire. (Christmas day, 800).

HEPTARCHIC WARS IN ENGLAND—588-828.
CAUSES: Struggle for supremacy among the seven Teutonic kingdoms.
LEADERS: Ethelbert (Kent), Edwin (Northumbria), Offa (Mercia), Egbert (Wessex).
CHIEF EVENTS: The supremacy was successively held by kings of Kent, Northumbria, Mercia, and Wessex, Maserfield (642), Ellandun (825).
RESULT: All England at last united under Egbert, king of Wessex (802-837).

SARACEN OR MOHAMMEDAN WARS—632-1492.
CAUSE: Saracens are ambitious to found a world wide Mohammedan empire.
LEADERS: (1) **Omar, Amru, Hassan, Mousa, Tarik, Abderrahman, Mohammed II., Abdallah**; (2) Yezdegerd (Persia), Leo the Isaurian, Charles Martel, Constantine, Palæologus, Ferdinand of Aragon.
CHIEF ACTIONS: (1) **Yarmouk (Syria), Damascus Jerusalem Cadesia (Persia), Alexandria, Carthage (697), Xeres (Spain), Granada, Toledo**; (2) Constantinople (716), Tours, Jerusalem, Las Navas de Tolosa (1212).
(1) **Constantinople** (1453).
(2) **Granada** (1492).
RESULTS: The Saracens attempted to conquer and convert Europe at three different times between 710 and 1492. Their power began to wane from the latter date.

NORTHMEN INVASIONS—Ninth and Tenth Centuries.
(1) **Northmen** vs. (2) People of Western and Southern Europe.
CAUSES: Opportunity for plunder and conquest and later the driving out of adventurous spirits by the organization of settled kingdoms in the north.
LEADERS: (1) **Hastings, Rolf, Sweyn, Canute**; (2) Alfred (England), Odo (France).
CHIEF EVENTS: In England—Treaty of Wedmore, Massacre of Danes (1002). In France: Siege of Paris. Grant of Normandy to Rolf (977).
RESULTS: The Northmen are the last swarm of Teutonic conquerors. They readily assimilate civilization and infuse new energy into western Europe.

NORMAN CONQUEST—1066.
(1) **Normans** vs. (2) English.
CAUSE: William, duke of Normandy wishes to increase his territory and his power.
LEADERS: (1) **William the Conqueror**; (2) Harold, king of England.
CHIEF ACTION: (1) **Hastings**.
RESULTS: The king received added power and a modified feudalism introduced into England. Southern Italy and Sicily were also conquered by bands of Normans in the eleventh century and the kingdom of Naples founded.

CRUSADES—1096-1270.
(1) **European Christians** vs. (2) Turks and Moslems.
First Crusade—1096-1099.
CAUSES: The appeal of the eastern emperor for aid, the desire to recover the Holy Sepulcher from the infidels, the love of adventure, and hope of gain.
LEADERS: (1) **Peter the Hermit, Godfrey of Bouillon, Bohemond of Tarentum, Robert of Normandy**.
CHIEF ACTIONS: (1) **Nicaea, Antioch, Jerusalem**.
RESULTS: Jerusalem is subdued and a transient kingdom is founded at Jerusalem.
Second Crusade—1147-1149.
CAUSE: The conquest of Edessa by the Moslems threatens Jerusalem. Preaching of Saint Bernard.
LEADERS: (1) **Conrad III of Germany, Louis VII of France**.
CHIEF ACTION: Unsuccessful attack on Damascus.
RESULTS: Armies almost annihilated by hunger, disease and the enemy.
Third Crusade—1189-1192.
CAUSE: Capture of Jerusalem by Saladin.
LEADERS: **Richard I. of England, Philip Augustus of France, Frederick Barbarossa of Germany**; (2) Saladin.
CHIEF ACTIONS: (1) **Acre**.
RESULTS: The Latin Christians secure by treaty the privilege of visiting the tomb of Christ for three years without molestation.
Fourth Crusade—1201-1204.
(1) **Crusaders** vs. (2) Eastern Empire.
CAUSES: Appeals of Innocent III. Through influence of the Venetians the Crusaders turn aside to attack Constantinople.
LEADERS: (1) **Dandolo, Doge of Venice, Baldwin of Flanders**.
CHIEF ACTION: (1) Sack of Constantinople.
RESULTS: Division of eastern empire. The Venetians get the monopoly of trade and most of the islands and coast lands of the Ægean and Ionian seas. The remainder is erected into a feudal state, the Latin empire.
Children's Crusade (legendary)—1212.
CAUSES: Ignorant enthusiasm aroused by visions and miraculous tales.
LEADER: A shepherd lad, Stephen of Vendome.
CHIEF EVENTS: Thousands of children, women and peasants march from France and Germany to the Mediterranean.
RESULTS: Only a small number return home; the others perish on the way or are sold into slavery by French merchants.
Fifth Crusade—1228-1229.
CAUSE: Vow of Frederick II. of Germany. He goes under pope's excommunication.
LEADER: (1) **Frederick II**.
RESULTS: Frederick, by treaty with the sultan, secures a truce for ten years and the restoration of Bethlehem, Nazareth and Jerusalem to the Christians; Jerusalem is finally lost in 1244.
Sixth Crusade—1248-1254.
CAUSE: Louis IX. of France starts on a crusade via Egypt.
LEADERS: (1) **Louis IX., later St. Louis**.
CHIEF ACTIONS: (1) **Damietta**; (2) Expedition to Cairo.
RESULT: Louis is captured in battle and released on payment of heavy ransom and evacuation of Damietta.
Last, Seventh Crusade—1270-1291.
CAUSES: Louis IX. goes against Mohammedans of Tunis, Prince Edward of England to Syria.
LEADER: (1) **Louis IX., Prince Edward**.
CHIEF EVENTS: Death of Louis by the plague; (2) Acre, last Christian stronghold in Syria, falls (1291).
RESULTS: The results of the crusades were development of commerce, introduction of new customs, products and manufactures, increase in freedom of lower classes, especially townsmen, and the power of the crown.

WAR OF THE EMPIRE—1158-1183.
(1) **Empire** vs. (2) Italian Communes.
CAUSE: Frederick Barbarossa's attempt to restore imperial rights over the cities of northern Italy.
LEADERS: (1) **Frederick I. Barbarossa**; (2) Pope Alexander III.
CHIEF ACTIONS: (1) **Milan** (1162); (2) Legnano (1176).
RESULTS: By treaty of Constance (1183) the cities of Lombardy are recognized as practically self-governing republics, the barest overlordship remaining to the emperor.

WARS OF THE BARONS IN ENGLAND—1215-1265.
(1) **Barons** vs. (2) Kings John and Henry III.
CAUSES: Misgovernment of John and Henry III.
LEADERS: (1) **Stephen Langton, Simon de Montfort**;
(2) King John, Prince Edward, later Edward I.
CHIEF EVENTS: (1) **Signing of Magna Charta, Lewes, Simon de Montfort's Parliament**; (2) Evesham.
RESULTS: The beginning of constitutional monarchy—henceforth the king is below the law, not above it.

HUNDRED YEARS' WAR—1337-1453.
(1) **English** vs. (2) French.
CAUSES: The conflict of interests of the French and English kings in Guienne, Flanders and Scotland. Edward III. advances claim by descent to the throne of France.
LEADERS: (1) **Edward III., Edward the Black Prince, Prince Henry V., Duke of Bedford**; (2) Du Guesclin, Charles V., Joan of Arc.

CHIEF ACTIONS: (1) **Crécy, Calais, Poitiers, Peace of Brittany, Agincourt, Treaty of Troyes**; (2) Orleans (1429), Castillon (1453).
RESULTS: England loses all her land in France except Calais. During the earlier stage of this war about one-third of the population of western Europe perished from the Black Death.

AUSTRO-SWISS WAR—1315-1388.

(1) **House of Hapsburg** vs. (2) Swiss Confederation.
CAUSES: Hapsburgs assert feudal rights over the peasants of the Swiss cantons.
LEADERS: (1) **Leopold III. of Austria**; (2) Arnold von Winkelried.
CHIEF ACTIONS: (2) Morgarten, Sempach, Näfels.
RESULT: Independence of Swiss secured.

HUSSITE WAR—1419-1436.

(1) **Bohemian Followers of John Huss** vs. (2) Catholic Europe.
CAUSES: Execution of John Huss, the Bohemian religious reformer, by the council of Constance.
LEADERS: (1) **Ziska, Procopius the Great**; (2) Emperor Sigismund, Cardinal Cesarini, Frederick of Brandenburg.
CHIEF EVENTS: Revolt of Prague. Four crusades repulsed.
RESULTS: After the overthrow of the radical Hussites (Taborites) by the conservative Hussites (Calixtines) in the battle of Lipan a Catholic reaction set in which culminated in 1462 with the revocation of the compacts made by the Council of Basel with the Hussites.

WARS OF THE ROSES—1455-1485.

(1) **Yorkists (White Rose)**; vs (2) **Lancastrians (Red Rose)**.
CAUSES: Misgovernment under Henry VI. encourages Richard, duke of York, representing the second line of descent from Edward III., to claim the throne against Henry VII. (third line).
LEADERS: (1) **Richard, duke of York, Edward IV., Richard III.**; (2) Duke of Somerset, Queen Margaret, Earl of Warwick ("King-maker"), first a Yorkish and then a Lancastrian, Henry VII.
CHIEF ACTIONS: (1) **St. Albans, Northampton, Mortimer's Cross, Towton, Barnet, Tewkesbury**; (2) Wakefield, Bosworth Field.
RESULTS: Henry Tudor (Lancastrian in the female line) secures throne as Henry VII. By his marriage with Elizabeth of York he unites the warring factions and establishes an almost despotic rule in England.

WARS FOR CONTROL OF ITALY—1494-1529.

(1) **French** vs. (2) Spanish.
CAUSES: Conflicting claims to the throne of Naples and to the duchy of Milan.
LEADERS: (1) **Charles VIII., Louis XII., Bayard, Francis I.**; (2) Ferdinand of Aragon, Charles V., duke of Bourbon, Fürstenburg.
CHIEF ACTIONS: Invasion of Italy by Charles VIII. (1494), League of Cambray (1508), Holy League (1511).
(1) **Margiano**; (2) Pavia.
RESULTS: All the leading powers of western Europe were drawn into this struggle. By the peace of Cambraes (1529), France renounced her claims to Italy. One effect of these wars was to tie the hands of Charles V. so as to prevent his putting down Lutheranism in Germany.

SCHMALKALDIC WAR—1546-1547.

(1) **Charles V.** (2) League of Schmalkalden.
CAUSES: Charles V. attempts to crush Protestantism in Germany.
LEADERS: (1) **Emperor Charles V., Duke Maurice of Saxony**; (2) John Frederic, Elector of Saxony, Philip, Landgrave of Hesse.
CHIEF ACTION: (1) **Mühlberg**.
RESULTS: Protestantism temporarily crushed. Its recovery in 1552 was followed by the religious peace of Augsburg 1555.

RELIGIOUS WARS IN FRANCE—1562-1598.

(1) **Catholics** vs. (2) Huguenots (Protestants).
CAUSE: Massacre of Huguenots at Vassy is a signal for uprising.
LEADERS: (1) **Duke of Guise, Henry III.**; (2) Catherine de Medici, Conde, Coligny, Henry of Navarre (Henry IV.)
CHIEF EVENTS: (1) **Massacre of St. Bartholomew** (1572); (2) Siege of Paris, Ivry (1590), Henry of Navarre becomes a Catholic (1593). Riots of Image Breakers. Council of Blood.
RESULTS: By the edict of Nantes (1598) the Huguenots are given equal political rights with Catholics, limited freedom of worship, the possession of La Rochelle and other strong places as cities of refuge.

WAR OF LIBERATION IN THE NETHERLANDS—1568-1648.

(1) **Spain** vs. (2) Revolted provinces in the Netherlands.
CAUSES: Political and religious tyranny of Spain. Duke of Alba enforces the Inquisition.
LEADERS: (1) **Duke of Alba, Alexander of Parma**; (2) William of Orange, Jan van Oldenbarnevelt, Maurice of Nassau.
CHIEF ACTIONS: (1) **Mechlin, Haarlem**; (2) Brill, Siege of Leyden, "Spanish Fury" at Antwerp, Pacification of Ghent (1576), Union of Utrecht (1579), Declaration of Independence (1581).
RESULTS: By the Peace of Westphalia (1648) the independence of the seven northern provinces, the United Netherlands, is recognized. The ten southern provinces continue under Spanish rule until 1713.

THIRTY YEARS' WAR—1618-1648.

(1) **German Protestants and their Allies, England, Holland, Sweden and France** vs. (2) Imperial German Catholics and their Allies, Spain, Italy.
CAUSES: Disputes over interpretation of peace of Augsburg (religious and political disputes leading to the revolt of Bohemia). The war passes through four phases: (1) Bohemian-Palatinate, (2) Danish, (3) Swedish, (4) Swedish-French.
LEADERS: (1) **Frederick, Elector Palatine, Mansfield, Gustavus Adolphus (Sweden), Turenne and Conde (France)**; (2) Emperor Ferdinand II., Maximilian of Bavaria, Tilly, Wallenstein.

CHIEF ACTIONS: (1) **Stralsund, Edict of Restitution, Breitenfeld, Lützen**; (2) White Hill, Magdeburg, Nördlingen.
RESULTS: This war is closed by the peace of Westphalia. Alsace thereby goes to France, Switzerland is separated from the empire and the Palatinate is divided. The secularized lands of northern Germany are secured to Protestantism, while leaving to Catholicism Austria, Bohemia and Bavaria. Germany is left desolate.

CIVIL WAR IN ENGLAND—1642-1649.

(1) **Royalists (Cavaliers)** vs. (2) Parliamentarians (Roundheads) allied with Scots (to 1647).
CAUSES: Charles I. attempts to force a personal government on England. His disputes with Parliament covered (1) taxation, (2) privileges of Parliament, (3) religion, (4) control of the militia.
LEADERS: (1) **Charles I., Prince Rupert, Montrose**; (2) Cromwell, Essex, Fairfax, Leslie.
CHIEF ACTIONS: (2) Marston Moor, Naseby, Preston.
RESULTS: The second civil war (1648) determines the army leaders to bring Charles I. to trial and execution (1649). A Commonwealth was then established without King or House of Lords but with Oliver Cromwell as Protector (1653 to 1659). The son of Charles I. restored in 1660 as Charles II.

FIRST THREE WARS OF LOUIS XIV.—1667-1697.

(1) **France** vs. a. Spanish Netherlands; b. Dutch republic; c. Grand Alliance (German States, England, Holland).
CAUSES: Louis XIV.'s passion for fame and desire to increase French territory in Europe.
LEADERS: (1) **Turenne, Conde, Luxembourg**; (2) William III., De Ruyter.
CHIEF ACTIONS: (1) **Ravaging of Palatinate, Steenkirke, Neerwinden**; (2) Sasbach, La Hogue, Namur.
RESULT: Extension of boundaries of France to the northeast.

SPANISH SUCCESSION (in America), QUEEN ANNE'S WAR—1701-1714.

(1) **France, Spain and Bavaria** vs. (2) Austria, England, Holland, Portugal, Savoy.
CAUSES: Acceptance by Louis XIV. of the bequest of the Spanish dominion to his grandson, Philip of Anjou, in violation of the partition treaty to which he had consented.
LEADERS: (1) **Vendome Villars, Leopold of Dessau**; (2) Duke of Marlborough, Eugene of Savoy, Heinsius.
CHIEF ACTIONS: (2) Gibraltar, Blenheim, Ramillies, Turin, Oudenarde, Malplaquet.
RESULTS: By the peace of Utrecht in 1713 and that of Rastadt in 1714 Spain and the Indies go to Philip of Anjou; Naples, Milan, Sardinia and former Spanish Netherlands to the Austrians. England receives Newfoundland, Acadia and Hudson Bay Territory from France and Gibraltar from Spain.

NORTHERN WAR—1700-1721.

(1) **Sweden** vs. (2) Russia, Poland, Denmark, Saxony.
CAUSES: Peter the Great joins Poland, Denmark and Saxony for the purpose of despoiling Sweden, the first power of the north, of her Baltic ports.
LEADERS: (1) **Charles XII.**; (2) Peter the Great (Russia), Augustus II. of Saxony.
CHIEF ACTIONS: (1) **Invasion of Denmark, Narva, Invasion of Saxony**; (2) Pultava.
RESULTS: By the peace of Nystadt (1721) Sweden cedes large territories to Russia. Russia takes the place of Sweden as the foremost power of the north.

WAR OF THE AUSTRIAN SUCCESSION—1740-1748.

(1) **Austria, supported by Hungary, Bohemia, England, Holland and Saxony** vs. (2) Prussia, France, Spain, Bavaria.
CAUSES: When Maria Theresa succeeded her father, Charles IV. of Austria, Frederick the Great of Prussia seized Silesia. This precipitated a struggle for Austrian territories. At the death of Charles VI. of Austria the right of Maria Theresa to the throne is contested chiefly by Frederick the Great of Prussia, who seizes Silesia.
LEADERS: (1) **Maria Theresa, George II. of England, Charles of Lorraine**; (2) Frederick the Great of Prussia, Emperor Charles VII., Schwerin.
CHIEF ACTIONS: (1) **Dettingen**; (2) Mollwitz, Chotusitz, Prague, Fontenoy, Hohenfriedburg, Soor.
RESULTS: By the treaty of Aix-la-Chapelle Silesia is secured to Prussia, which state now becomes a great European power. This war is one phase of the long rivalry between France and Great Britain for sea power and dominion in America and India.

SEVEN YEARS' WAR, OR THIRD SILESIAN WAR:

In America: **FRENCH AND INDIAN WAR—1756-1763**.
(1) **England, Prussia** vs. (2) France, Austria, Russia and Spain, Sweden.
CAUSES: Maria Theresa wishes to regain Silesia. Hostilities between French and English in America and India. George II.'s concern for his ancestral territory of Hanover.
LEADERS: (1) **Frederick the Great, Duke of Cumberland, Wolfe (America), Robert Clive (India)**; (2) Daun (Austria), Charles of Lorraine, Montcalm (America).
CHIEF ACTIONS: (1) **Dresden, Rossbach, Leuthen, Zorndorf, Minden**; (2) Kolin, Hohenkirche, Kunersdorf.
In America: (1) **Louisburg, Fort Duquesne, Quebec**.
In India: (1) **Plassey, Wandewash**.
RESULTS: The peace of Paris (1763) gives England Canada, the supremacy in India and certain islands, especially in the West Indies. Prussia retains Silesia. This war really founded the British empire which is based on sea power and colonial dominion.

WARS OF THE FRENCH REVOLUTION—1792-1802.

(1) **Revolutionary France** vs. (2) Coalitions of England, Austria, Prussia, Holland and Spain. The Empire, Russia.
a. First Coalition—1792-1797.
CAUSES: Intrigues of emigrés; horror of Europe at the execution of the king; French offer of aid to revolutionists in other countries.
LEADERS: (1) **Dumouriez, Kellermann, Jourdan, Hoche, Pichegru, Napoleon Bonaparte, Moreau**; (2) Duke of Brunswick, Coburg, Charles of Austria.
CHIEF ACTIONS: (1) **Valmy, Occupation of Nice and Savoy, Jemmapes, Execution of king (1793), Annexation of Belgium, Fleurus, Lodi, Siege of Mantua**; (2) Mainz, Neerwinden, Kaiserslautern, Würzburg.
RESULTS: By peace of Campo Formio (1797) the French frontier is advanced to the Rhine, Venice is given to Austria and the Cisalpine and Ligurian republics founded in Italy under French control.
b. Bonaparte's Egyptian Expedition—1798-1799.
CAUSES: Bonaparte aims to prepare the way to attack Great Britain's power in India and dreams of rivaling early conquerors of the east.
LEADERS: (1) **Napoleon Bonaparte**; (2) Nelson (England).
CHIEF ACTIONS: (1) **Battle of the Pyramids**; (2) Battle of the Nile at Aboukir, Acre.
RESULTS: Nelson's victory removes a serious menace to British power in India, cuts off the French in Egypt and deprives France of communication with its best troops and ablest general.
c. Second Coalition—1799-1802.
CAUSES: The mistakes of the government of the Directory and the prestige of Nelson's victory enable Great Britain to form the Second Coalition.
LEADERS: (1) **Napoleon, Joubert, Moreau**; (2) Suvaroff, Melas, Archduke John.
CHIEF ACTIONS: (1) **Marengo, Hohenlinden**; Napoleon's passage of the Alps (Great St. Bernard); (2) Novi.
RESULTS: The Peace of Presburg ends the contest between France and Austria. Much harsher terms are imposed on Austria. Peace of Luneville with Austria (1801); Peace of Amiens with England (1802); Surrender of England's conquests except Trinidad and Ceylon; Malta to be restored to Knights of Malta.

NAPOLEONIC WARS—1802-1815.

(1) **France under Napoleon** vs. (2) European Powers led by England.
a. Third Coalition—1805.
CAUSES: Neither England nor France regarded the peace of Amiens as more than a truce. Among the many causes of friction leading to renewal of war, chief place was given to England's refusal to restore Malta.
LEADERS: (1) **Napoleon**; (2) Nelson, Mack, Alexander I. (Russia), Kutusoff.
CHIEF ACTIONS: (1) **Ulm, Austerlitz**; (2) Trafalgar.

RESULTS: As a result of his brilliant successes, Napoleon, in 1802 becomes consul for life and in 1804 took the title emperor of the French. Confirmation of treaty of Campo Formio, with the recognition of Batavian, Helvetican, Cisalpine and Ligurian republics.

b. (Fourth) War with Prussia and Russia—1806-1807.

CHIEF ACTIONS: (1) **Double battle of Jena and Auerstädt, Berlin decree, Eylau (indecisive), Friedland.**

RESULTS: By the treaties of Tilsit (1807) Russia recognizes Napoleon's relatives as kings of Naples, Holland and Westphalia and consents to the creation of the Confederation of the Rhine and the grand duchy of Warsaw under Napoleon's control. Alexander and Napoleon combine to dominate Europe. Prussia cedes territories containing half her population.

c. Peninsular War—1808-1814.

CAUSES: Rebellion of Spain against Joseph Bonaparte, whom Napoleon had placed on the throne.

LEADERS: (1) **Soult, Massena;** (2) Duke of Wellington.

CHIEF ACTIONS: (1) **Corunna;** (2) Talavera, Lines of Torres Vedras, Albuera, Salamanca, Vittoria, Toulouse.

RESULTS: French expelled from the peninsula.

d. Fifth War with Austria—1809.

LEADERS: (1) **Napoleon;** (2) Archduke Charles.

CHIEF ACTIONS: (1) **Aspern, Wagram.**

RESULTS: Austria cedes thirty-two thousand square miles of territory, containing three and one-half million inhabitants.

e. Invasion of Russia—1812.

CAUSE: Alexander's refusal to enforce Napoleon's continental system, and other causes of dispute.

LEADERS: (1) **Napoleon, Marshal Ney;** (2) Kutusoff, Barclay de Tolly.

CHIEF ACTIONS: (1) **Smolensk, Borodino,** Burning of Moscow, Retreat from Moscow, Passage of the Beresina.

RESULT: Less than twenty thousand of the half million men in Napoleon's army recrossed the Russian frontier.

f. War of Liberation—1813-1814.

CAUSES: The disastrous Russian campaign, together with the steady progress of the British in the peninsular war encouraged the oppressed states of Germany to rise against Napoleon's tyranny, Prussia taking the lead.

LEADERS: (1) **Napoleon, Ney, Macdonald;** (2) Frederick, William III., Francis I., Alexander I., Schwarzenberg, Blücher, Bernadotte.

CHIEF ACTIONS: (1) **Lützen, Bautzen, Dresden;** (2) Dennewitz, Leipzig, (Battle of the Nations). Allies enter Paris.

RESULTS: Driven from Russia in 1812, from Germany in 1813, Napoleon in 1814 was forced to surrender France itself. By the treaty of Fontainebleau he was given the Island of Elba and an annual revenue of two million francs.

g. Waterloo Campaign—1815.

CAUSES: Quarrels among the allies and dissatisfaction of French with Louis XVIII. tempt Napoleon to return from Elba.

LEADERS: (1) **Napoleon, Ney;** (2) Wellington, Blücher.

CHIEF ACTIONS: Napoleon lands at Cannes (March 1); enters Paris March 20.

(1) **Ligny;** (2) Quatre Bras, Waterloo (June 18).

RESULTS: Waterloo marks the final downfall of Napoleon. He is transported to the island of St. Helena, where he died in 1821. In the Congress of Vienna the allies reconstructed Europe, restoring in general the legitimate rulers and erecting barriers against democratic movements and liberal ideas.

WAR OF GRECIAN INDEPENDENCE—1821-1829.

(1) **Greeks, aided by England, Russia and France** vs. (2) Turks.

CAUSES: Revived feeling of Greek nationality, stimulated by a widespread secret society working for a restoration of a Greek empire at Constantinople.

LEADERS: (1) **Ypsilanti, Diebitsch** (Russia), **Codrington** (England), **Byron** (England); (2) Ibrahim, Pasha.

CHIEF ACTIONS: Massacre of Greeks at Chios.

(1) **Navarino, Adrianople;** (2) Missolonghi.

RESULTS: The treaty of Adrianople, 1829, compelled Turkey to acknowledge the independence of Greece, which chose as king the Bavarian prince Otto I.

CRIMEAN WAR—1854-1856.

(1) **Russia** vs. (2) Turkey aided by Great Britain, France and Sardinia.

CAUSES: The question of the political status and future of the lands of the Turkish empire. Immediate cause, the claim of Russia to a protectorate over all Greek Christians living under the sultan's rule.

LEADERS: (1) **Mentchikoff, Gortchakoff;** (2) Canrobert, Pellissier (France), Raglan, Simpson (England).

CHIEF ACTIONS: (1) **Balaclava;** (2) Alma, Siege of Sebastopol, Inkermann.

RESULTS: In the peace of Paris (1856) Russia's claim to a protectorate is disallowed, the Danube is opened to navigation and the Black Sea is closed to war vessels of all powers.

SEPOY MUTINY—1857-1858.

(1) **Sepoys** vs. (2) English.

CAUSES: Uneasiness created by the rapid progress of British ways and rule causes a revolt of native Sepoy troops of India. Immediate cause the rumor that cartridges furnished troops were greased with a mixture of hog and beef fat—the one animal an object of loathing to Mohammedans, the other of religious worship to the Hindu.

LEADERS: (1) **Nana Sahib;** (2) Nicholson, Havelock, Campbell.

CHIEF ACTIONS: Mutiny of Sepoys at Meerut.

(1) **Massacre at Cawnpore;** (2) Delhi, Relief of Lucknow.

RESULTS: Following the suppression of the mutiny the charter of the East India company is revoked and India passes directly under the crown, a secretary of state for India being added to the British ministry.

WAR OF ITALIAN LIBERATION—1859.

(1) **Sardinia-Piedmont and France** vs. (2) Austria.

CAUSES: Since 1848 Sardinia-Piedmont had been the center of the movement for Italian unity. Following promises of aid from Napoleon III. Cavour traps Austria into declaring war over the question of disarmament.

LEADERS: (1) **Victor Emmanuel, Napoleon III., Garibaldi;** (2) Francis Joseph II., Gyulay.

CHIEF ACTIONS: (1) **Montebello, Magenta, Solferino.** Peace signed at Zurich, November 10, 1859.

RESULTS: By this war Victor Emmanuel gained Lombardy. In 1860 Tuscany, Parma, Modena and the papal legations were added. In 1861 he gained Sicily and Naples, together with the title King of Italy. Venetia followed as a result of alliance with Prussia in 1866 and the addition of Rome in 1871 completed the unification of Italy.

DANISH WAR—1864.

(1) **Austria and Prussia** vs. (2) Denmark.

CAUSES: Incorporation of the duchy of Schleswig with Denmark in violation of treaty of 1852.

LEADERS: (1) **Gablenz (Austria), Prince Frederick, Charles (Prussia);** (2) Dermeza, Gerlach.

CHIEF ACTIONS: (1) **Invasion of Jutland, Storming of Düppel.**

RESULTS: Denmark gives up Schleswig-Holstein, which is jointly administered by Austria and Prussia.

AUSTRO-PRUSSIAN WAR—1866.

(1) **Prussia with smaller North German States and Italy** vs. (2) Austria, Hanover, Saxony, and South German States.

CAUSES: Friction over Schleswig-Holstein enables Bismarck to force Austria into a war for supremacy in Germany.

LEADERS: (1) **William I., Prince Frederick, Charles, Moltke, Victor Emmanuel;** (2) Benedek, Archduke Albert, Gablenz, Prince Charles of Bavaria.

CHIEF ACTIONS: In Bohemia: (1) **Soor, Königgrätz or Sadowa;** (2) Trautenu. *In the West:* (1) **Aschaffenburg;** (2) Langensala. *In Italy:* (2) Custoza, Lissa.

RESULTS: Closed with the peace of Prague, August 23, 1866, which authorized the re-establishment of the federated German states, excluding Austria; Austria ceded Venetia to Italy, and her rights in Schleswig-Holstein to Prussia. Hanover, Hesse, Nassau are also annexed to Prussia.

[698]

FRANCO-PRUSSIAN WAR—1870-1871.

(1) France vs. (2) Prussia supported by all German States.

CAUSES: Jealousy of France at Prussian gains and friction over Hohenzollern candidacy for the throne of Spain. Bismarck's falsification of the "Ems dispatch" tricked France into a declaration of war.

LEADERS: Napoleon III., MacMahon, Bazaine; (2) **William I., Moltke, Prince Frederick Charles, Crown Prince Frederic William.**

CHIEF ACTIONS: (1) **Saarbrücken;** (2) Weissenberg, Wörth, Vionville, Sedan, Capitulation of Metz, Orleans, Capitulation of Paris.

RESULTS: Closed in 1871 with the treaty of Versailles with the following results: (1) The French military power was destroyed; (2) the western frontier of Germany was rendered secure; (3) The German empire was established; (4) Germany acquired Alsace and Lorraine. In France Napoleon III. is deposed and the Third Republic established, 1870.

RUSSO-TURKISH WAR—1877-1878.

(1) **Russia** vs. (2) Turkey.

CAUSES: Turkish misgovernment and revolts in her Christian subject provinces, which were barbarously put down ("Bulgarian atrocities") arouse all Europe but Russia alone declares war.

LEADERS: (1) **Grand Duke Nicholas, Gurka, Grand Duke Michael, Alexander II.;** (2) Suleiman Pasha, Osman Pasha, Mukhtar Pasha.

CHIEF ACTIONS: (1) **Passages of the Danube at Shitova, Shipka Pass, Plevna, Storm of Kars.**

RESULTS: By the peace of San Stefano as revised in the congress of the powers at Berlin, Montenegro, Servia and Roumania become independent; Bulgaria remains tributary but receives a Christian prince; Russia obtains large indemnity and part of Armenia and also Bessarabia.

CHINESE-JAPANESE WAR—1894-1895.

(1) **Japan** vs. (2) China.

CAUSES: Rival claims to suzerainty over Korea.

LEADERS: (1) **Itō, Yamagata, Oyama, Nogi;** (2) Tso, Yeh, Wei.

CHIEF ACTIONS: **Yalu River, Port Arthur, Wei-hai-wei, Niuchwang.**

RESULTS: Treaty of Shimonoseki, signed April 17, 1895, removed Korea from Chinese influence; ceded Formosa and the Pescadores to Japan, and awarded to the latter an indemnity of \$180,000,000.

SOUTH AFRICAN OR BOER WAR—1899-1902.

(1) **Great Britain** vs. (2) Transvaal, Orange Free State.

CAUSES: Resistance by the Boers to the British form of government in the Transvaal.

LEADERS: (1) **Sir George White Buller, Methuen, Roberts, Kitchener, French;** (2) Cronje, Botha, De Wet, Delarey.

CHIEF ACTIONS: (1) **Siege of Ladysmith, Paardeberg;** (2) Colenso, Spion Kop, Vaal Krantz, Magersfontein.

RESULT: Boers surrendered May 31, 1902; are granted the right of self-government under British sovereignty, and united with other self-governing British colonies in South Africa, in 1910, to form the Union of South Africa.

RUSSO-JAPANESE WAR—1904-1905.

(1) **Japan** vs. (2) Russia.

CAUSES: Russian encroachments in Manchuria, and their fortification of Port Arthur.

LEADERS: (1) **Togo, Kuroki, Oku, Nodzu, Oyama, Nogi;** (2) Kurapatkin, Alexieff, Makaroff, Stoessel, Stakelberg, Linievitch.

CHIEF ACTIONS: (1) **Port Arthur and Chemulpo, Vladivostok, Yalu River, Dalny, Siege of Port Arthur, Mukden, Sea of Japan.**

RESULTS: Closed September 5, 1905, by treaty of Portsmouth by which Korea passes under control of Japan, China regains Manchuria, and Japan is granted important railroad rights.

BALKAN WAR—1912-1913.

(1) **Montenegro, Bulgaria, Servia and Greece** vs. (2) Turkey.

CAUSES: Discontent with Turkish rule in Macedonia.

LEADERS: (1) **Savoff, Dimitrieff, Putnik, Constantine;** (2) Nazim Pasha, Mukhtar Pasha, Abdullah Pasha.

CHIEF ACTIONS: (1) **Kirk Kilisseh, Lule Burgas, Monastir.**

RESULTS: Turkey appealed to the powers, November 3, 1912, for intervention, and an armistice was signed December 3, 1912, ending one of the shortest and most sanguinary wars in history. The treaty of peace was signed May 30, 1913.

(2) **Servia, Greece, Roumania, Turkey** vs. Bulgaria.

CAUSES: Disputes over the division of Macedonia.

CHIEF ACTIONS: Mainly astounding atrocities and the re-occupation of Adrianople by Turkey.

RESULTS: Reorganization of the Balkan states. Albania was made independent under an international commission of control; Crete was ceded to Greece; Macedonia was divided among Greece, Servia, and Bulgaria; and Roumania gained a strip from the northwest of Bulgaria. On September 17, 1913, an agreement between Bulgaria and Turkey provided that the latter retain Adrianople, Kirk Kilisseh, and Dimotika. September 28 the treaty between Bulgaria and Turkey was signed at Constantinople.

EUROPEAN WAR—1914-1917.

(1) Entente Allies (Great Britain, France, Russia, Italy, Belgium, Servia, Montenegro, Roumania, Portugal, Japan) vs. (2) Teutonic Allies (Germany, Austro-Hungary, Turkey, Bulgaria).

CAUSES: (1) The immediate occasion of this great conflict was the murder of the Crown Prince and Crown Princess of the Austro-Hungarian empire, on June 28, 1914, at Sarajevo, Bosnia, through the alleged instigation of a Servian revolutionary society, called the Narodna Odbrana, which had for its purpose the disrupting of the Austro-Hungarian empire, particularly those parts inhabited largely by Servians and other Slavic races, followed by a demand on the part of the Austro-Hungarian government that Servia suppress the criminal organization and

permit the former to co-operate in the inquiry as to the accomplices on Servian territory in the murders of the Prince and Princess. This demand was refused by Servia, which immediately received the support of Russia, France and Great Britain, while Austria-Hungary received the support of Germany, and, later, of Turkey.

(2) The underlying causes were the following:

(a) The policy of Russia (popularly known as Pan-Slavism), an age-long political creed of Russian ambition, to dominate the Balkan countries and extend her dominions to the Bosphorus, the Ægean and the Adriatic.

(b) The ambition of France to regain Alsace-Lorraine, lost to her by the Franco-Prussian war.

(c) The determination of Great Britain to check the growth of Germany, politically, industrially, and especially commercially.

(3) More remote causes, and more specious ones, are alleged to be:

(a) The European political doctrine of the "Balance of Power," which was the outgrowth of the Napoleonic wars, and received its first stamp of approval at the Congress of Vienna in 1815, which settled the important boundaries of the map of Europe for more than half a century afterward. Subsequently, the "great powers" of Europe assumed the point of view that any acquisition of power, territory or population by any one of them entitled all the others to compensation; so that the relative strength and importance might not be disturbed. This rule has been applied to every important war since Napoleon's time, and any threatened disturbance of this "balance" has always had in it the germ of a general conflict. Hence arose the historic "alliances," known as the Triple Alliance, on the one hand, and the Triple Entente, comprising France, Russia and Great Britain, on the other.

(b) Militarism, so-called, with its attendant jealousies and obstacles to social and economic reforms, and which might be said to be the direct fruits of the "balance of power" doctrine, as is also the doctrine of the "guaranteed neutrality" of certain small countries of Europe, which astute European diplomacy created for the purpose of "buffer" states.

MILITARY LEADERS: (1) Kitchener, French, Haig, Joffre, Grand Duke Nicholas, Kourapatkin, Brusiloff, Admirals Fisher and Jellicoe; (2) Emperor William, Hindenburg, Mackensen, Kluck, Falkenhayn, Archduke Frederick, Hoetzendorf, Crown Prince Frederick William, Admiral Tirpitz, Crown Prince Rupprecht, Enver Pasha.

CHIEF THEATERS OF ACTION: (1) Belgium; (2) Northern France; (3) Poland; (4) Dardanelles; (5) Servia and Balkans; (6) Roumania; (7) Austro-Italian Front; (8) Lithuania; (9) North Sea and Inlets; (10) Mediterranean; (11) German Colonial Possessions throughout the world.

RESULTS: Except for the loss of Germany's Colonial Possessions, the results of the war to date (1917) largely preponderate in favor of the Teutonic Allies—the land campaigns being almost overwhelmingly in their favor. (See further Great Battles of the World.)

CHRONOLOGY OF GREAT EVENTS:

1914

June 28.—Assassination of Archduke Ferdinand and the Duchess of Hohenberg at Sarajevo, Bosnia, by Servian student.

July 28.—Austria declares war on Servia, and hostilities commence, after Germany and Austria refuse England's invitation to a conference.

August 1.—Germany formally declares war on Russia, and troops are ordered mobilized.

France mobilizes.

August 3.—Germany declares war on France. German troops enter Belgium.

August 4.—War declared by England on Germany.

August 6.—Austria declares war against Russia.

August 9.—Servia declares war on Germany.

August 11.—Montenegro declares war on Germany.

August 12.—France declares war on Austria-Hungary.

August 12.—England declares war on Austria.

August 23.—Japan in state of war with Germany.

August 25.—Austria declares war on Japan.

August 29.—Austria declares war on Belgium.

August 30.—Paris prepares for a siege.

September 5.—England, France and Russia agree not to treat for peace separately.

October 30.—Russia declares state of war exists with Turkey.

November 5.—Great Britain officially announces state of war with Turkey.

Servia severs diplomatic relations with Turkey.

1915

February 17.—Germans begin submarine campaign by sinking British collier without warning.

February 24.—Britain closes Irish and North channels to all navigation.

March 1.—Great Britain declares virtual blockade of German coast.

March 15.—British council order prohibits all traffic to and from Germany.

May 23.—Italy declares war on Austria-Hungary.

October 14.—Bulgaria declares war on Servia.

1916

August 27.—Italy declares war on Germany.

Roumania entered the war on the side of the allies.

October 11.—Upon demand of Great Britain and France the entire Greek fleet and sea-coast forts were turned over to the allies or dismantled.

December 7.—David Lloyd George accepted British post of Prime Minister and First Lord of the Treasury.

December 8.—Roumanian army trapped in Prahova Valley, surrendered to General von Mackensen's forces.

December 12.—Chancellor von Bethmann-Hollweg announced to the Reichstag that Germany and her allies proposed to enter forthwith into peace negotiations.

1917

February.—The chief occurrences in the opening months of this year were the blockade declared by Germany against the Entente Allies, and the announcement of unrestricted submarine warfare upon neutral shipping to the nations composing that alliance. This course was justified by the German government as a retaliation against the starvation blockade instituted by Great Britain and her allies.

GREAT AMERICAN AND FOREIGN BATTLES.

This table includes those battles of decisive or far-reaching importance upon the destinies of the contestants. The dates are according to the Old Style, or Julian, calendar down to 1582; after that date, according to the New Style, or Gregorian, calendar. The victors in the various battles are printed in **bold-face** type. Details of minor American battles will be found in connection with the [Outline Tables of American History](#). †Naval battles. *Indecisive results.

Name of Battle; Approximate Location; Date	Contesting Nations or Parties	Results and Marked Features of the Contest
Abensberg (<i>ā-bens-berǵ</i>), Bavaria, April 20, 1809	French and Bavarians vs. Austrians	About 90,000 engaged on each side.
Aboukir (<i>ā-bōō-kēr</i>), Battle of the Nile , Egypt, August 1, 1798	English vs. French	Nelson cut off Napoleon's return to Europe.
Aboukir , Egypt, July 25, 1799	French vs. Turks	Two-thirds of Turkish troops killed.
† Abydos (<i>ā-bī-dōs</i>), Hellespont, B. C. 411	Athenians vs. Peloponnesians	...
Acragas (<i>ak-ra-gas</i>), Siege of , Sicily, B. C. 406	Carthaginians vs. Greeks	The citizens evacuated the fortress.
Acre (<i>ā-ker</i> or <i>ā-ker</i>), Siege of , Syria, 1189-1191	Christians vs. Saracens	Richard the Lion Hearted won renown by this siege.
Acre , Siege of , Syria, March 17, 1799	Turks vs. French	...
† Actium (<i>ak-shi-um</i>), Greece, September 2, B. C. 31	Augustus vs. Antony	At the critical moment Antony and Cleopatra sail away.
Adowa (<i>ā-dō-wā</i>), Northeast Africa, March 1, 1896	Ethiopians vs. Italians	Italians routed with enormous loss.
Adrianople (<i>ad-ri-an-ō-ph</i>), Thrace, July 3, 323	Constantine vs. Licinius	Constantine gained empire.
Adrianople , Thrace, 378	Visigoths vs. Romans	Emperor Valens defeated and slain.
Adwalton (<i>ad-wal-ton</i>) Moor , England, January 30, 1643	Royalists vs. Parliamentarians	...
Ægadian Islands (<i>ē-gā-di-an</i>), Sicily, B. C. 241	Romans vs. Carthaginians	This victory put an end to the first Punic war.
† Ægospotami (<i>ē-gos-pot-a-mi</i>), Thrace, B. C. 405	Spartans vs. Athenians	Virtually ended Peloponnesian war.
Aghrim (<i>ō-grim</i>), Ireland, July 12, 1691	William III. vs. James II.	Irish savagely slaughtered.
Agincourt (<i>ā-zhan-kōōr</i>); E. (<i>aj-in-kōōrt</i>), France, October 25, 1415	English vs. French	Great victory for Henry V.
Agnadello (<i>ā-nyā-del-lō</i>), Italy, May 14, 1509	French vs. Venetians	One of the most disastrous battles in the history of Venice.
Agrigentum (<i>ag-ri-jen-tum</i>), Siege of , Sicily, B. C. 262	Romans vs. Carthaginians	...
Alamo (<i>ā-lā-mō</i>), Storming of the , Texas, U. S., February 22, 1836	Mexicans vs. Texans	Survivors put to the sword.
Albuera (<i>āl-bwā-rā</i>), Spain, May 16, 1811	British vs. French	Heavy losses on both sides.
Aleppo (<i>ā-lep-ō</i>), Syria, 638	Moslems vs. Syrians	Last serious resistance in Syria to the invading Moslems.
Alexandria (<i>ā-leks-ān-dri-ā</i>), Siege of , Egypt, 638	Moslems vs. Egyptians	Left Moslems masters of Egypt.
Alexandria , Bombardment of , Egypt, July 11-12, 1882	English vs. Arabi Pasha	Fort totally destroyed. English occupy Egypt.
Algiers (<i>al-jēr-z</i>), Bombardment of , Algeria, 1816	English and Dutch vs. Dey of Algeria	Dey agreed to total abolition of Christian slavery in his dominion.
Allia (<i>al-i-ā</i>), Italy, B. C. 390	Brennus and his Gauls vs. Romans	Rome left defenseless.
Alma (<i>āl-mā</i>), Crimea, September 20, 1854	English and French vs. Russians	British carried heights at the point of the bayonet.
Almansa (<i>āl-mān-sā</i>), Spain, April 25, 1707	French vs. British and Portuguese	Spain lost to the allies.
Amphipolis (<i>am-fip-ō-lis</i>), Siege of , Thrace, B. C. 422	Spartans vs. Athenians	Both Brasidas and Cleon fell.
Anaquito (<i>ā-nā-kē-tō</i>), Peru, 1546	Pizarro vs. Viceroy Menez	Government of Peru fell into Pizarro's hands.
Angora (<i>an-gō-rā</i>), Asia Minor, 1402	Tartars vs. Turks	Tamerlane said to have had eight hundred thousand men.
Antietam (<i>an-tē-tam</i>), Maryland, U. S., September 17, 1862	* Confederates vs. U. S.	Heavy losses on both sides. Lee's army greatly outnumbered.
Antioch , Siege of , Syria, 1097-1098	Crusaders vs. Saracens	Defenders massacred.
Antwerp (<i>ant-wirp</i>), Belgium, 1576	Spaniards vs. Walloons	Massacre of inhabitants known as the "Spanish Fury."
Appomattox (<i>ap-pō-mat-oks</i>), Virginia, U. S., April 9, 1865	U. S. vs. Confederates	Marked the close of the American Civil war, and surrender of General Lee.

British and French withdrew after a loss of 115,000, killed, wounded or prisoners.

Delhi was the real center of the Indian mutiny.

Decisive and disastrous defeat for Athenians.

Victory of Bernadotte (afterward Charles XIV. of Sweden) over Ney.

Wessex extended to Bristol channel, severing Welsh into two parts.

Wallenstein totally routed Mansfeld.

Last battle in which a British sovereign engaged in person.

French driven out of Oporto.

English fleet took shelter in the Thames; Dutch too crippled to pursue.

This and other defeats led Romans to abandon the sea temporarily.

Napoleon's last great victory on German soil.

Cromwell put the garrison to the sword.

Cromwell's victory followed by the surrender of Edinburgh and Glasgow.

A horrible combat in which thousands were burned in the ruined village.

Romans laid waste Carthaginian territory in Africa.

The first battle of the Civil war. Royalists march on London.

The chief battle of the war in Cuba.

The West Saxon Egbert becomes overlord of all the English.

This defeat ended the war. Simon de Montfort fell.

The bloodiest and most desperate battle of a century.

Edward I. utterly routed Wallace.

The first great victory of Brandenburg, Prussia.

The Scottish king perished, with the bravest of his nobility.

Followed by the famous Partition of Verdun (843).

Last great victory of France under the Old Regime.

Charles VIII. enabled to continue his retreat following his conquest of Naples.

This defeat induced the Czar to conclude the peace of Tilisit.

One of the bloodiest battles of the war, forcing Lee from northern soil.

The last formidable attack upon Gibraltar (British since 1704).

Completes the overthrow of the Moorish power in Spain.

Destroyed the only army opposed to Alexander in Asia Minor.

First of the three great victories of the Swiss over Charles the Bold.

The first great victory of the Prussians in the war.

Called the "Battle of the Spurs" from the French haste in flight.

30,000 Spaniards against 4,000 Dutch; 2,000 Dutch massacred.

Won by combination of archers and dismounted men-at-arms.

After this wooden ships give way to ironclads in naval warfare.

Followed by the convention of Closter-Zeven, which George II. repudiated.

Harold fell; William the Conqueror became king of England.

"One more such victory and I shall be ruined."—Pyrrhus.

The Lancastrian cause was completely crushed by this defeat.

Hamilcar slain. Carthaginians purchased peace for 2,000 talents.

Town sacked and prisoners sacrificed to the shade of Hamilcar.

Practically ends the Bohemian-Palatinate phase of the Thirty Years' war.

One of Frederick the Great's victories; due partly to Austrian overconfidence.

The crowning event of the winter campaign; won by Moreau.

Frederick the Great, though surprised by a night attack, made good his retreat.

Another great victory due to the prowess of the English longbowmen.

The last important battle in the eastward advance of Alexander the Great.

A series of hand-to-hand combats fought in a dense fog.

Power of the Campbells in the Highlands broken for many years.

Chief battle between Alexander's generals over the partition of his empire.

Alexander's brilliant victory over an immense horde of Persians.

Henry IV. gained a complete victory and invested Paris, his capital.

Prince de Condé slain.

Followed by annexation of the Austrian Netherlands to France.

Napoleon advanced thence to Berlin and issued the decree for a continental blockade.

Titus destroyed the city and massacred or sold into slavery its inhabitants.

A terrible massacre; feudal kingdom established under Godfrey of Bouillon.

British admitted the loss of six large cruisers and destroyers, the Germans a battleship, a cruiser, four light cruisers and five destroyers. The loss of life totaled 9,500 and the battle ended with the withdrawal of the German fleet.

Zwingli, the Swiss Protestant reformer, fell in this battle.

Russian success caused angry negotiations between England and Russia.

A decisive victory of Blücher over one of Napoleon's marshals.

"Chinese" Gordon killed; the Soudan evacuated by the Anglo-Egyptian government.

The Jacobite victory was nullified by the fall of their leader, Dundee.

The brilliant defense of Kimberley was a notable feature of the war.

General Oku opened the way for the land investment of Port Arthur.

This victory gave the supremacy in Germany to Prussia, unity to North Germany.

Following this defeat, Frederick the Great evacuated Bohemia.

A battle famed in the history, legend and literature of Serbia.

The hero, John Hunyady, overcome at the cost of 40,000 Turkish lives.

John Chobieski, by sheer personal ascendancy, stems tide of Turkish advance.

7,000 French capitulate; "The Caudine Forks of modern war." Conduces to the defeat at Leipzig.

Inactivity of the allies saved Frederick the Great from annihilation.

This defeat put an end to the Ionian revolt.

Like the siege of Kimberley, a notable incident of the war.

Overthrew the hopes of James II. of recovering his throne.

"We have met the enemy and they are ours."—Perry.

Control of the sea passes for a time to the side of the French.

Huguenots no longer an armed political party but a tolerated sect.

A crushing defeat inflicted on the waning power of the Hungarians.

Tilly mortally wounded.

In the peace of Constance (1183), Frederick renounced all regal privileges over the cities.

Brilliant victory of Gustavus Adolphus saves Protestant cause.

This disaster lost Germany to Napoleon.

French army almost annihilated.

One of the most splendid naval victories ever achieved.

Epaminondas' overthrow of Sparta gives Thebes the hegemony in Greece.

This battle "would alone make Frederick immortal and rank him among the greatest generals."—Napoleon.

Simon de Montfort's victory followed by Parliament, the first to which borough representatives were called (1265).

Prince of Orange cut the dikes to bring the fleet to the relief of the city.

Frederick prevented the union of the Austrians and Russians.

Napoleon's last victory; Blücher joined Wellington at Waterloo on the 18th.

France now lay open to the advance of the allies.

One of the most protracted sieges in history, surrendered only with Sicily at close of war.

Led to perpetual hostility between Sweden and Poland in seventeenth century.

The only battle between ironclads fought in European waters.

18,000 Saxons besieged at Pirna were now forced into the Prussian army.

This success gave the whole of Lombardy to the French.

Prevented the French from relieving Orleans.

Destruction of one of the strongest fortresses in North America.

The turning of the tide; next year the mutiny was totally quelled.

Christian of Denmark, severely defeated, retires into Holstein and Mecklenburg.

Gustavus Adolphus slain in winning his third great victory.

The first battle in the great German War of Liberation.

Followed by French ascendancy in Italy until 1706.

Carmagnola gained a brilliant victory over the famous condottieri, Sforza, Piccinino and Malatesta.

Failure to take Madras was a great blow to French power in India.

Inhabitants and garrison massacred.

Baden Powell's resistance aroused world-wide enthusiasm.

The sack of Magdeburg is one of the darkest spots on the pages of history.

Napoleon III. and Victor Emmanuel entered Milan.

The kingdom of the Seleucidæ dismembered.

The inhabitants were sold into slavery.

French fleet prevented from uniting with Spanish which was besieging Gibraltar.

Loss of this and other earthworks led that night to the evacuation of Sebastopol.

Napoleon was obliged to abandon southerly line of retreat from Moscow.

Bloodiest battle of this war; "carnage, not a battle."

Admiral Dewey totally destroyed the Spanish fleet.

The last of the great pitched battles of the crusaders. Shortly after Louis IX. was captured and ruinously ransomed.

The Spartans regained their supremacy in Peloponnesus.

The death of Epaminondas in this battle ends Theban supremacy.

The close of Napoleon's marvelous first Italian campaign.

Miltiades' victory causes Persians to abandon their first expedition against Greece.

Licinius lost all his European territory except Thrace.

Won for Napoleon largely by General Desaix.

Francis I. reconquered Milan by this brilliant victory.

Germans forced to retreat and capture of Paris averted.

French infantry with bayonets charged the cavalry, a new maneuver.

This victory, due to Cromwell's Ironsides, gave the north to parliament.

Mercia becomes a competitor with Northumbria for English hegemony.

The capitulation of Finck with 12,000 Prussian soldiers disastrous to Frederick.

Established the independence of Chili.

Spaniards mercilessly sabered in the pursuit, losing 18,000.

Antipater, in absence of Alexander, puts down revolted Spartans in a bloody battle.

Garibaldians routed after defeating papal forces.
Charles of Anjou evacuated Sicily, which his descendants never recovered.
Italy saved by preventing the junction of Hasdrubal with Hannibal.
The release of the besieging army for service elsewhere was fatal to the French cause.
This completes the expulsion of the Neapolitans from Sicily.
The French were decisively beaten and driven from Hesse.
Practically ended the war of the Pacific (1879-1884) between Chili, and Bolivia and Peru.
Greek heroism excited sympathy throughout Europe. (Byron died here, 1824.)
Prisoners killed, walls pulled down, fleet forfeited, annual tribute imposed.
Lord Methuen drives Cronje from his intrenchments after a fierce fight.
“Never was a single battle so disastrous to a people.”
Frederick’s victory forces Europe to recognize in Prussia a new power.
Secured the triumph of the Ghibellines over all Tuscany.
Followed by the occupation of the whole of northern Mexico.
Completes the British conquest of Canada from France.
The battle terminated in a horrible butchery of the patriot army.
The first battle fought for Swiss independence.
The Yorkist prince advanced to London and was proclaimed king as Edward IV.
Release of Japanese from before Port Arthur enables Oyama to crush Kuropatkin.
Maurice in 1552 retrieves his treason to Protestantism by driving Charles V. from Germany.
The disputed imperial election, over which this battle was fought, began a new struggle between empire and papacy.
Cæsar’s last battle; it put an end to armed resistance.
Practically ends the Albigensian crusade; Toulousean territories pass ultimately to the French crown.
This battle and that of Plataea end the Persian wars against Greece.
First naval victory of Romans; due to boarding bridges.
Hapsburgs renounced all feudal claims over the Swiss cantons (1389).
Charles was slain, leaving his motley territories a prey to neighboring princes.
Charles XII. won a brilliant victory over the much larger army of Peter the Great.
Complete defeat of Charles I., followed by the general ruin of his cause.
Victory wrested from defeat by the genius of Phormio, the Athenian commander.
Destruction of Turkish naval power; Ibrahim retreats from Morea.
Secured forever the preponderance of Christianity in Spain.
The French won a brilliant but barren victory over William III.
Scots crushed at home, while Edward III. was winning Crécy.
Owing to slowness of communication, Jackson fought this battle after peace had been made.
First conquest of crusaders in the East.
Mithridates’ last fight against the legions of Rome.
One of the most bloody and decisive battles of the war; followed by the peace of Prague.
Capture of Henry VI.; flight of Queen Margaret and her son to Scotland.
City razed by Scipio Æmilianus and its inhabitants sold as slaves.
Over the opening the waters of the Parana to the shipping of all nations.
General Daun forced Frederick the Great to raise the siege and retire.
Joan of Arc saves France by driving back English and crowns Charles VII. at Rheims.
Scarcely a house in the town left standing; Spaniards lost 70,000.
Poland becomes a province of the Russian Empire (1832).
The ballad of Chevy Chase deals with this battle.
Two hundred Spanish horsemen rout an immense army and make good their retreat.
One of the great victories of Marlborough and Prince Eugene over Louis XIV.
Palmyra destroyed and Zenobia taken captive to Rome.
Mexicans completely routed at small cost to the victors.
Brilliant victory restored confidence to Romans; demonstrated value of elephants in warfare.
City reduced to desperate conditions through bombardment, famine and disease.
The capture of Francis was followed by the peace of Madrid, which, however, was soon repudiated.
The West and the new monarchy completely triumphed over the East and the old republic.
Cassius and Brutus committed suicide following their defeat.
Scots thrown into the arms of France and the little queen, Mary, married to the dauphin.
Established English control in Bengal and ultimately in all India.
Won by the discipline and prowess of the Spartan hoplites.
Brilliant defense by Osman Pasha, who surrendered only after four desperate battles.
Brilliant victory by the Black Prince over five times his numbers.
Alaric, attacked by Stilicho on Easter Sunday, was driven out of Italy.
Destroyed French power in India.
Port Arthur, the Sea of Japan and Mukden were turning points in the war.
This battle completely restored to England the lordship of the seas.
Inhabitants and foreign soldiers were allowed to leave the city, which Athens then colonized.
Frederick proved but a “Winter King” of Bohemia.

This second civil war determined the army to put Charles I. to death.

Russia takes the place of Sweden as the leading power of the North.

Brilliant triumphs of Paulus Æmilius over the phalanxes of King Perseus.

The crowning victory of Napoleon in Egypt.

Followed by the fall of San Sebastian and Pampeluna, and expulsion of French from Spain.

The allied success here was rendered fruitless by the Prussian reverse at Ligny.

Wolfe was slain and Montcalm mortally wounded in the battle of the Plains of Abraham (September 13).

Hawke, with a loss of forty men, captured, burned, or drove on shore most of the French vessels.

Followed by French evacuation of the chief towns of the Netherlands.

An attempt of Buckingham to prevent the reduction of the Huguenot stronghold of La Rochelle.

Following the loss of Rhodes the Knights (Hospitallers) retired to Malta.

The defeat of General Pepe enabled Austria to restore the absolute monarchy.

Napoleon's victory, followed by surrender of Mantua, completed the conquest of Lombardy.

This victory, won by Condé, made France the first military power of Europe.

Following the battle of the Allia, the Gauls plundered and destroyed city.

Following the third siege, Alaric sacked city.

For fourteen days Genseric's Vandals plundered Rome.

Marks the end of the artistic, pleasure-loving Rome of the Renaissance.

The republic, founded by Mazzini, overthrown and Pope Pius IX. restored.

Death of Charlemagne's paladin, Roland (Chanson de Roland).

A great triumph for the nobles against the cities.

Makes Frederick the Great a national hero of Germany.

Because of its desperate resistance, Henry V. granted the city honorable capitulation.

Followed by Sulla's reign of terror.

Capture of this city by Hannibal the chief cause of the second Punic war.

The first battle of the wars of the Roses; Yorkists defeated here in a second battle (1460).

This rout of the French lost them all southern Spain.

Themistocles' great victory followed by Xerxes' withdrawal to Asia.

Santa Anna captured by General Houston.

Fleet of Admiral Cervera totally destroyed.

An important success which broke the spell of French invincibility.

Followed (October 17) by the surrender of Burgoyne, which was the turning point of the war.

Russia's naval power destroyed.

Brought to a close the active operations of Crimean war.

Followed by the surrender of Napoleon III. with an army of 84,000 men.

Russians hold this strategic position against blindfold violence of the Turks.

Celebrated for the heroic devotion of Arnold von Winkelried.

Failure of the coalition to crush Rome from the north.

With Bonaparte's failure in Egypt, this battle foils French designs on India.

Defeated in the first day's fighting, Grant turned the tables the next day.

Hotspur defeated and slain.

A brilliant defense conducted by the Turks under three English officers.

Turkish fleet destroyed and crews massacred.

The decisive action in the Servo-Bulgarian war.

Gave English control of the sea for thirty years, enabling them to land troops in France at will.

First stand of the retreating Russians before Napoleon's advance on Moscow.

The first military exploit of Clovis.

The horrors of this battle and Prussia's threatening attitude caused Napoleon III. to make peace.

During this period the Germans were enduring terrific attacks from the Allies, but lost little ground.

A victory gained by the duke of York over De Ruyter's superior numbers.

To the amazement of the Greek world, 292 Spartan hoplites surrendered.

Reveals great superiority of Prussians from the outset of the war.

This diversion of Harold to the North left William to land in England undisturbed.

For 200 years saved Yorkshire from Scottish invasion.

Five English regiments utterly cut to pieces.

Before the end of the year all Scotland threw off the English yoke.

Wallenstein fails to secure this important Baltic port.

The weakening of Athenian resources in this siege was the final cause of their failure in the Peloponnesian war.

The Syracusan tyrant, Dionysius, connives at the escape of the Carthaginian Hamilco.

Syracuse captured and plundered by the Romans.

After this first great pitched battle in the Peninsular campaign Wellesley became commander-in-chief of all the English troops.

The Spartans failing to follow up their victory, Athens conquered Bœotia the following year.

Tarentum, deprived of her army, her ships and her walls, retained the right of local self-government.

At Procop's approach the Imperialists fled in confusion; this was the last effort to crush the Hussites by force of arms.

The annihilation of the Gallic army was followed by the Roman invasion and conquest of Cisalpine Gaul.

Arabi Pasha's army completely broken up; the British entered Cairo the next day.

[708]

[709]

September 13, 1882	Temesvar (<i>tem'esh-vār</i>), Hungary, August 9, 1849	Austrians vs. Hungarians	The last stand made by the Hungarians in the war; their army was totally routed and dispersed.
Tetry (<i>tes-trē</i>), France, 687	Tewkesbury (<i>tūks'ber-i</i>), England, May 4, 1471	Austrasians vs. Neustrians Yorkists vs. Lancastrians	Pippin of Heristal, mayor of the palace, unites the Frankish territories under one rule. Ends armed opposition to Edward IV.; Margaret of Anjou was captured and her son slain.
† Texel (<i>tek'sel</i>), North Sea, June 2, 3, 1653	Thapsus (<i>thap'sus</i>), North Africa, February 6, B. C. 46	British vs. Dutch Cæsar vs. Followers of Pompey	The command of the sea fell into the hands of the English fleet. The battle of Thapsus was the death-knell of the Pompeian cause.
Thermopylæ (<i>ther-mop'ī-lē</i>), Greece, B. C. 480	Tiberias (<i>tī-bē'ri-ās</i>), Palestine, 1187	Persians vs. Spartans and Thespians	Leonidas, with 300 Spartans and 700 Thespians, defended the pass to the last man against overwhelming forces.
Ticinus (<i>tī-sī'nus</i>), Italy, B. C. 218	Ticonderoga (<i>tī-kon-de-rō'gā</i>), New York, U. S. A., July 8, 1758	Saracens vs. Crusaders Carthaginians vs. Romans	Followed by the conquest of Jerusalem by Saladin, which led to the third crusade. Hannibal's success brought in numerous adhesions from Gallic tribes; followed by the battle on the Trebia.
Tigranocerta (<i>tig-rā-no-er'tā</i>), Armenia, October 6, B. C. 69	Tinchebrai (<i>tansh-brā</i>), France, 1106	French vs. British and Americans Romans vs. Armenians	British and Americans displayed in vain prodigies of valor in the rush on Montcalm's almost impregnable position. Lucullus cut to pieces the huge army of Tigranes and secured immense booty.
Tolbiac (<i>tol-bī'āk</i>), Germany, 496		English vs. Normans Franks vs. Alemanni	Henry I. defeated and captured his brother Robert and annexed Normandy to the crown of England. Clovis wins lands of the Alemanni; he and his followers become Roman Christians in fulfillment of a vow taken on the battlefield.
Torgau (<i>tōr'gou</i>), Saxony, November 3, 1760	Torres Vedras (<i>tor'resh vā'drāsh</i>), Lines of, Portugal, October 12, 1810 to March 5, 1811	Prussians vs. Austrians	The last pitched battle of the Seven Years' war, in which the Austrians are said to have lost 20,000 men.
Toulon (<i>tōō-lōn</i>), Siege of , France, Sept. 18 to Dec. 17, 1793		British and Portuguese vs. French	Wellington's defense permanently arrested Napoleon's march of conquest and was thus the turning point of the Peninsular campaign.
Tours (<i>tōr</i>), France, 732	Towton (<i>tou'ton</i>), England, March 28 and 29, 1461	French vs. Garrison of British, Spaniards, Italians and French Royalists	This siege is memorable as the first important appearance of Napoleon, who commanded the artillery.
† Trafalgar (<i>trafal-gār</i>), Spain, October 21, 1805	Trebia (<i>trē'bi-ā</i>), Italy, December, B. C. 218	Franks vs. Saracens Yorkists vs. Lancastrians	Here Charles Martel saved western Christendom from the Moslem invader. This battle, the most obstinate and bloody of the war, secured Edward IV. in his possession of the crown.
Trebia (<i>trē'bi-ā</i>), Italy, December, B. C. 218	Tunis (<i>tū'nīs</i>), Siege of , North Africa, 1270	British vs. French	Nelson's last and greatest victory destroyed all possibility of Napoleon's invading England.
Turin (<i>tū'rin</i>), Italy, September 7, 1706	Tyre (<i>tīr</i>), Siege of , Phœnicia, January to August, B. C. 332	Carthaginians vs. Romans	By this splendid victory Hannibal justified his march into Italy; the way into Etruria was now open to him.
† Ushant (<i>ush'ant</i>), North Atlantic, June 1, 1794	Valmy (<i>vāl-mē</i>), France, September 2, 1792	Moslems vs. French Crusaders	This crusade, in which Louis IX. lost his life, was the last.
Varna (<i>vār'nā</i>), Bulgaria, November 10, 1444	Vercellæ (<i>ver-sel'ē</i>), Italy, July 30, B. C. 101	Prince Eugene vs. French Macedonians vs. Tyrians	The French were permanently excluded from Italy. The greatest of Alexander's triumphs; Alexandria in Egypt takes the place of Tyre as a commercial metropolis. A brilliant victory won by Lord Howe.
Verdun (<i>ver-dun</i>), Siege of , France, from February, 1916, on	Vicksburg , Siege of , Mississippi, U. S. A., May 19 to July 4, 1863	British vs. French	Goethe said that from Valmy dates a new era. It showed that revolutionary France would and could resist Europe.
Vienna (<i>vē-en'ā</i>), Siege of , Austria, July 14 to September 12, 1683	† Vigo (<i>vē'gō</i>) Bay , Spain, October 12, 1702	Turks vs. Hungarians	King Ladislas lost his life and his army was scattered to the winds.
† Vimiero (<i>vē-mā'rō</i>), Spain, August 21, 1813	Vittoria (<i>vē-tō'rē-ā</i>), Spain, June 21, 1813	Romans vs. Cimbri	Marius and Catulus utterly destroyed the vast barbarian horde which had been threatening Italy with invasion.
Wagram (<i>vā'grām</i>), Austria, July 6, 1809	Wakefield , England, December 30, 1460	* Germans vs. French	The powerful attacks of the Germans for almost a year against the fortress of Verdun were without success.
Wandewash (<i>wān-de-wāsh</i>), India, January 22, 1760	Warsaw (<i>wār'sō</i>), Siege of , Poland, August 19 to September 7, 1831	Federals vs. Confederates	Grant's success at Vicksburg, together with the battle of Gettysburg, were the turning points of the war.
Waterloo (<i>wō-ter-lōō</i>), Belgium, June 18, 1815	Wavre (<i>vā'vr</i>), Belgium, June 18, 1815	Austrians vs. Turks	The besieged were reduced to the last extremity when Sobieski intervened and put the invading Turks to flight.
Wei-hai-wei (<i>wā'hī'wā</i>), China, January 30 to February 12, 1894	Worcester (<i>wōōs'ter</i>), England, September 3, 1651	English and Dutch vs. French and Spaniards	The destruction of the Spanish galleons and the protecting French fleet gave a blow to the finances and prestige of the two crowns.
Wörth (<i>vīrt</i>), Bavaria, August 6, 1870	Xerxes (<i>hā-rās</i>), Spain, July 19, 711	British vs. French	Wellesley inflicted a signal defeat on the French, but his senior officer made no use of the victory.
Yalu (<i>yā'lōō</i>) River , Manchuria, September 17, 1894	Yorktown , Siege of , Virginia, U. S. A., Sept. 30 to Oct. 19, 1781	British vs. French French vs. Austrians Lancastrians vs. Yorkists British vs. French	This, the crowning victory of Wellington's peninsular campaign, won Spain from Napoleon. One of the most terrible and least decisive battles of all time. Queen Margaret's army completely defeated that of the duke of York, who was slain on the battlefield. Coote's victory was the death-blow to French power in India.
Ypres (<i>ē'pr</i>), Belgium, October 21-31, 1914 and November 10-12, 1914	Zama (<i>zā'mā</i>), North Africa, B. C. 202	Russians vs. Poles	The fall of Warsaw ends the Polish insurrection and Poland becomes a province of the Russian empire.
Zorndorf (<i>tsōm'dorf</i>), Prussia, Aug. 25, 1758	Zurawno (<i>tsu-raw'no</i>), Siege of , Austria, 1676	British and Prussians vs. French French vs. Prussians	The final overthrow of Napoleon by Wellington and Blücher. Napoleon was transported to St. Helena, where he died in 1821. Grouchy's victory was useless, while he might have saved the day for Napoleon had he arrived at Waterloo when expected.
		Japanese vs. Chinese	The Chinese admiral gave up the remnant of his fleet and killed himself; followed by negotiations for peace. Followed by the submission of Scotland and Charles II.'s adventurous escape to France.
		Cromwellians vs. Scottish Royalists	A bloody contest and a decisive victory, followed by the retreat of the French.
		Prussians vs. French Moors vs. Visigoths Japanese vs. Chinese	Without having to fight any second battle, the Moors under Tarik mastered Spain. This action conferred upon the Japanese the full command of the sea and greatly aided the land power.
		Americans vs. British	The surrender of Cornwallis at Yorktown practically brought to an end the war of the American Revolution.
		Allies vs. Germans	A series of the most desperate struggles of the war. The German attempt to break through to Calais, France, failed.
		Romans vs. Carthaginians Prussians vs. Russians	Scipio defeated Hannibal and annihilated his army, thus ending the second Punic war. A desperate and bloody struggle, after which the Russians retired into Poland.
		Poles vs. Turks	John Sobieski made an heroic defense against numbers and won an honorable peace.

HOW TO SPEAK CORRECT ENGLISH

Correctly spoken English is quite as important as correctly written English. Errors in pronunciation, modulation and general expression are of frequent occurrence, and it sometimes seems that the erroneous utterance of whole classes of words league the tongue and ear against their right use. An improved standard of pronunciation, therefore, is the safest bulwark against a permanent deterioration of our language, as well as a positive influence in advancing individual culture of speech.

Five Fundamental Rules.—The essential steps toward securing the unconscious ability to speak correctly may be set down as follows:

1. To thoroughly study the elementary sounds, and their mode of representation.
2. To observe the current usage of the best speakers with regard to such words as are most liable to be mispronounced.
3. To note the standard of pronunciation and expression of the best dramatic theaters.
4. By forming the habit of frequent reference to the dictionary and learning to interpret at sight the authorized pronunciation.
5. Ample practice in the reading and application of the leading principles of pronunciation that give words their true spoken values.

The Organ of Speech.—The mouth is the organ of speech; and the manner of production of the various sounds is of the first importance in the cultivation of correct pronunciation.

The sound uttered depends upon the form of the mouth. Change the form and you change the sound. Each particular sound is produced from a particular position.

Not more than one sound can be produced from one position of the mouth.

To produce a different sound you must change the position.

Each sound should be clear and precise. There should be no slurring.

The muscles must be under perfect control so that the mouth (lips and tongue included) may readily assume the position necessary for the emission of the required sound.

The proper use of the lips is the great factor in fluent speech.

It is from inability to use or negligence in using the muscles of the organ of speech that Americans are such indifferent linguists and frequently even incapable of distinct utterance of their own language.

The manner of production of the various sounds is of the first importance in the cultivation of correct pronunciation.

Vowels.—Pronounce the following words: moor; meer; merry; marry; mar; more. The whole compass of the mouth is brought into exercise by these words.

The first sound is produced from the lips. The second comes from a point just inside the mouth. The third sound point is farther back still. The last vowel is uttered from the throat.

If the sound *a* (long) as in bare, fair, is included, we have a scale of seven sounds produced by a gradual opening of the mouth, the sound point receding note by note from the front of the lips to the back of the throat, thus: moor, meer, merry, Mary, marry, mar, more.

In cultured English centers and in some parts of New England, the long sound of *ā*, No. 4, appears in such words as dance, France, glass, castle, cast, past, grasp, grant, etc.

In pronouncing the four words—meer merry, marry, mar—the mouth is gradually opened. The four separate "sound points" may be clearly recognized.

Repeat slowly:

1	2	3	4
meer	merry	marry	mar
mee	mé	mā	mā
ee	é	ā	ā

O is a single sound. In conversation, however, it usually becomes double, being combined with the sound—oo (as in too, tooth, woo)—thus:

so is pronounced so-oo
 no is pronounced no-oo
 go is pronounced go-oo

The short *o* sound is pronounced as in hot, pot, nod, God.

O followed by a double consonant is short:

off not awf
 office not awfice
 coffee not cawfee
 cross, dross, loss, toss

The sound *oo* unites with the open sound *ā* to form the double sound in such words as—cow, how, now:

cā-oo cow
 nā-oo now
 dā-oo-n down
 ā-oo-t out

The sound *u* is a peculiar combination of at least three sounds. It is really a continued flow from *ee* to *oo*.

The letter is pronounced exactly as the word *you*. Speak the vowel very slowly.

The intermediate sound of *û* may be represented thus:

u is ee-û-oo
 duke is dee-û-oo-k
 tube is tee-û-oo-b
 mute is mee-û-oo-t

The same sounds occur in such words as few, new, mew.

The middle sound is the most important, and the first and last must be cut very short for a good style.

Ru and *lu*. When *u* is preceded by *r* or *l*, the first portion of the triple sound is omitted and a double vowel sound is heard—the last part also being cut very short.

Consonants.—Speak slowly and pronounce every letter.

INITIAL CONSONANTS.—Of these only two require special attention:

th and *sh* followed by *r*.

Children frequently say:—one, two, *free*; and grown-up people will speak of—shrimps as *srimps*.

[713]

Examples: three, shrimp; thread, shrill; throat, shrink; thrush, shroud; through, shrew.
FINAL CONSONANTS.—The slurring or omission of final consonants is a greater fault than the mispronunciation of vowels, for it points directly to carelessness and indolence on the part of the speaker.
R. It is sometimes stated that there is no *r* sound in English.
 In singing the *r* is always made distinct.
 It should also be apparent in conversation. Thus: *father* and *farther* are quite distinct. So, too, *ma* and *mar*.
 The *t* belongs to the preceding syllable and the words should be pronounced thus: nat-ure, feat-ure, pict-ure, premat-ure, creat-ure, fut-ure, indent-ure, nurt-ure.
 The consonant values of *w* and *y* are never terminal in a syllable, but are followed in the same syllable by a vowel. In attempting, for phonic practice, to sound either of these consonants apart from its vowel, make it continuous, not abrupt.
H cannot be separated from its accompanying vowel. Pronounce *ha, he, hi, ho, hu, hy*. Notice that the office of *h* is to cover the following vowel with breath. It will be seen, on careful examination, that any attempt to sound *h* alone will result in whispering a vowel with it.
Wh has for its initial sound simply unvoiced breath, poured through the lips placed in position for *w*. As a whole the digraph is sounded as it would naturally be if the order of the letters were reversed, thus, *hw*; as, *when, while, whip*, pronounced *hwen, hwile, hwip*.
 Liping children and Germans need to carefully observe the sounds of *s* and *th*.
 The sound of *s* is formed by forcing unvoiced breath between the tip of the tongue and the upper gum.
Th is produced by placing the tip of the tongue between the teeth or against the upper front teeth, and forcing vocal or unvoiced breath between the tongue and the teeth. If vocal breath is used, sonant *th* is heard, as in *this*; if unvoiced breath, then non-sonant *th* is produced, as in *thin*—this last is the sound made for *s* by those who lisp (lithp).

TABLE OF CONSONANTS

Name according to exit of sound		Checks		Spirants, Breathings ^[13]		Liquids Trills	Nasals
Name according to quality of sound		Tenuis Sharp Hard	Mediae Flat Soft	Sharp Hard	Flat Soft		
Or-ganic Names	Labials	p	b	...	w	...	m

	Palatals	sh	j in (Fr.) jour s in pleasure
				ch in church ch in (Germ.) ich ch in Scotch (loch)	j in John y in you g in (Germ.) tage	r	...
	Gutturals	k, q, c	g in go			...	ng

[13] Some of the *Breathings* are often called *Aspirates*.

ACCENT OF WORDS

One syllable of every word with two or more syllables receives, in pronouncing, *more force* than another. This stronger force is called *ACCENT*, and the syllable which receives this force is said to be *accent'ed*.
MARKS OF ACCENT.—The primary accent is marked with a firm oblique stroke, thus: *ob'ject, object', discov'er*. The secondary accent is marked by a similar but lighter stroke, or sometimes by two light strokes, thus: *lem'on-ade'* (or *lem'on-ade'*).
UNACCENTED VOWELS.—Every vowel, when under either the primary or the secondary accent, is distinct; that is, the exact sound of the vowel is evident, as short *a*, long *i*, broad *o*, etc. In an unaccented syllable, the vowel sound is sometimes doubtful; in most instances, however, it is not. For instance, a correct speaker says: ättën'tive, än'ëcdôte, cômpréhënd', ällëgä'tion, chäp'ël, prës'ent, ëm'ïnënt, präi'rië, aü'diënce, cäl'louïs.

[714]

RULES OF PRONUNCIATION

RULE I.—The letter *u* should not be sounded as *öo*, except when immediately preceded by the sound of *r*.
 Exceptions: sure and its derivatives, also sumac, tulle, hurrah, pugh.
 Pronounce rule, fruit, garrulous, ruin, sure, tüne, müle, institúte, constitútion, sítüre, düty, lücid.
RULE II.—*A* constituting or ending an unaccented syllable is short Italian *a*.
 Examples: canine', läpel', ägain', älas', fätal'ity, al'käli, or'näment, pal'ätäble.
 When the *a* of terminal *ary* or *any* is immediately preceded by an accented syllable, it has the sound of short Italian *a*; thus, pri'märy, epiph'äny.
RULE III.—*E* or *o* constituting or ending a syllable is long.
 Examples: évënt, mëmentö, löcömötion, söciety, nötoriety, söbriety, sup'erior, inf'erior, théories, cöterië, löcö-föcö.
RULE IV.—*I* constituting or ending an unaccented syllable not initial, is always short, and is usually short even in initial syllables, if unaccented.
 Examples: Divide, direct, finance, philosophy, imitate, piazza, tirade, intimate, indivisible, nobility.
 In the initial syllables *i, bi, chi, cli, cri, pri, tri*, however, *i* is generally long.
 Examples: idea, idle, isothermal, biology, Chinese, chirurgery, climatic, criterion, primeval, triangular, tripod.
RULE V.—*E* before terminal *n* should always be silent in participles, and also in most other words.
 Examples: given (giv n), taken (tak n), bitten (bit n), broken, spoken, riven, fallen.
 But in the following words *e* must be sounded:
 Aspën, chickën, glutën, kitchën, lichën, lindën, martën, mittën, suddën.
 It must also be sounded in any word (not a participle) in which terminal *en* is immediately preceded by *l, m, n, or r*.
 Examples: womën, lïnen, omën, barrën, Helën, Allën, Ellën, woolën, pollën.
RULE VI.—*E* before terminal *l* should usually be sounded.
 Examples: levël, bevël, novël, nickël, cancell, vessël, chapël, gravël, hovël, camël, channël, kernël, Abël, Mabël, panël, modël, funnël, flannël.
 But in the following words the *e* before terminal *l* must not be sounded:
 Betel (bë'tl), chattel (chat'tl), drivel, easel, grovel, hazel, mantel, mussel, navel, ravel, shekel, shovel, shrivel, snivel, swivel, teasel, weasel, and their derivatives.
RULE VII.—In all but the following words, *i* before terminal *l* or *n* must be sounded: devil, evil, weevil, basin, cousin, raisin.
 Pronounce Latïn, satin, matin, spavin, anvil, civil, cavil, council, peril, javelin, lentil, pistil, resin, fusil, coffin, codicil, axil.
RULE VIII.—The eight words, bath, cloth, lath, moth, mouth, oath, path, wreath, and these only, require sonant *ths* in the plural.
 Pronounce *moths, paths, truths, oaths, heaths, cloths, baths, laths, deaths, wreaths, mouths, Sabbaths, sheaths, piths, plinths, lengths, widths, depths, breadths, earths, myths, Goths, fourths, breaths*.
RULE IX.—*O* in a final unaccented syllable ending in a consonant, frequently verges toward the sound of short *u*; as in custom, felon, bigot, bishop, method, carol, Briton. But it has its regular short sound in pentagon, hexagon, octagon, etc.
 When, however, the termination *on* is immediately preceded by *c, ck, s* or *t*, the *o* is commonly suppressed.
 Examples: bacon, beacon, beckon, benison, button, cotton, crimson, damson, deacon, garrison, glutton, lesson, mason, mutton, parson, person, poison, prison, reason, reckon, season.
RULE X.—*I* accented in most words from the French has the sound of long *e*.
 Examples: pique, caprice, guillotine, quarantine, routine, suite, fatigue, valise, antique, Bastile, critique, palanquin, tambourine, regime (rä-zheem'), cuisïne (kwe-zeen'), unique, intrigue, magazine.
RULE XI.—*Ou* in most words from the French has the value of *öo*, but in Anglo-Saxon words it has the sound of *ow*, as in *cow*.
 Examples: bouquet, contour, croup; out, bound, sound.
 Note.—*Ou* has also other values, as in soul, rough, adjourn, could, ought, hough (hök), trough.
RULE XII.—*X* followed by an accented vowel, or by an unaccented syllable beginning with a silent *h*, has the sound of *gz*.
 Examples: luxu'rious, exam'ple, exhaust', exhale', exhib'it, exam'ine, exalt', exec'utive.
RULE XIII.—The termination *tion* is always *shun*, except when it follows the letter *s* or *x*, as in question (kwestyun), bastion, combustion.
 Examples: notation, completion, equation, relation, suggestion, transition (tranzish'un).
RULE XIV.—The termination *sion* immediately preceded by an accented vowel is *zhun*; when not so preceded it is *shun*.
 Examples: expulsion, immersion, mansion, excursion, diversion, explosion, adhesion, delusion.
RULE XV.—*C* is soft (*s*) before *e, i* and *y*, and hard (*k*) in other positions.
 Examples: *ca, ce, ci, co, cu, cy*.
 Exceptions: *c* is hard (*k*) in sceptic and scirrhous; and in the following words it has the sound of *z*: sacrifice (fiz), sice, suffice, discern, and their derivatives. It is silent in czar, virtuals, indict, and their derivatives, and also in the termination *sicle*, as in *muscle, corpuscle*.
RULE XVI.—*G* is generally soft (*j*) before *e, i* and *y*, and always hard (*g*) before other vowels.
 Examples: *ga, ge, gi, go, gu, gy*.
 Note.—The exceptions to the rule that *g* is usually soft before *e, i* and *y* are many; but they are nearly all common Anglo-Saxon words, such as get, give, girl, gird, girdle, giddy, foggy, gimlet, geese, gig, giggle, gift, gills, begin, gimp, beget, gird, gear, gizzard.
RULE XVII.—In an accented syllable of any primitive word, a vowel before *r* followed by a syllable beginning with a vowel or another *r* has its short sound.
 Examples: Ärab, ärabesque, ärid, Äristotle, Säracen, bëryl, përil, delirious, ärritate, mïracle, delirium, äbhörrence, flörid, cöroner, föreign, tüurret, bürröw, cürry, cöürage, fúrrow, pýrrhic, empýreal.
RULE XVIII.—*N* ending an accented syllable has the sound of *ng*, if immediately followed by hard *g* or *k*, or any equivalent of *k* (*c, q, g, or x*).
 Examples: cön'gress, gan'grene, cön'cord, tran'quil, ün'cle, an'ger, hun'ger, mön'key, san'guine, sin'gle, clän'gor, extïn'guish, blan'ket, twïn'kle, cön'course, Lïp'coln.
 Exceptions: concrete, penguin, mangrove, Mongol, pancreas, and some others.
RULE XIX.—*C, s, or t*, when immediately preceded by an accented syllable and followed by *e, i* or *u*, has usually the force of *sh*, and is said to be

[715]

“aspirated,” as in ocean, nauseate, Asiatic, negotiation.

RULE XX.—In pronouncing the terminal syllables, *ble, cle, dle, fle, gle, kle, ple, stle, tle, and zle*, no vowel sound is heard. Terminal *cre*, however, is pronounced *kêr*. The combination of any of these terminations with *ing* forms but one syllable.

Examples: quibbling, doubling, circling, meddling, huddling, ruffling, shuffling, giggling, struggling, pickling, trickling, coupling, rippling, battling, whittling, whistling, jostling, puzzling, muzzling, massacring.

COMMON ERRORS IN PRONUNCIATION

1. Do not pronounce *ing* like *in*; as *eve 'nin* for *eve 'ning*, *writ 'in* for *writ 'ing*.
Pronounce the following: Speak 'ing, read 'ing, talk 'ing, walk 'ing, stop 'ping, smok 'ing, suppos 'ing, expect 'ing, cel 'ebrating.
2. Do not pronounce *ow* like *ur* or *uh*; as *hol 'ur* or *hol 'uh* for *hol 'low*, *shad 'ur* or *shad 'uh* for *shad 'ow*.
Pronounce the following: Bor 'row, to-mor 'row, nar 'row, yel 'low, fel 'low, wid 'ow, pil 'low, mel 'lowing, swal 'lowing.
3. Do not pronounce *ed* like *id* or *ud*; as *unit 'id* or *unit 'ud* for *unit 'ed*, *provid 'id* or *provid 'ud* for *provid 'ed*.
Pronounce the following: Rest 'ed, resid 'ed, decid 'ed, regard 'ed, exhib 'ited, cel 'ebrated, excit 'ed, delight 'ed, support 'ed.
4. Do not pronounce *ess* like *iss*; as *good 'niss* for *good 'ness*, *bold 'niss* for *bold 'ness*.
Pronounce the following: Hard 'ness, bad 'ness, harm 'less, care 'less, clear 'ness, ful 'ness, seam 'stress, host 'ess, em 'press.
5. Do not pronounce *el* like *il*, nor *et* like *it*, nor *est* like *ist*; as *cru 'il* for *cru 'el*, *bask 'it* for *bask 'et*, for *'ist* for *for 'est*.
Pronounce the following: Fu 'el, du 'el, bush 'el, yet, get, mark 'et, hatch 'et, rock 'et, rack 'et, riv 'ulet, hon 'est, bold 'est, larg 'est, small 'est, young 'est, strong 'est.
6. Do not pronounce *ent* like *unt*, nor *ence* like *unce*; as *si 'unt* for *si 'lent*, *sen 'tunce* for *sen 'tence*.
Pronounce the following: Pru 'dent, de 'cent, mo 'ment, gar 'ment, mon 'ument, gov 'ernment, superintend 'ent, par 'liament (par 'li-ment), pa 'tience, expe 'rience, superintend 'ence.
7. Do not insert the sound of short *u* before a final *m*; as *hel 'um* for *helm*, *chas 'um* for *chasm*.
Pronounce the following: Spasm, rhythm, phan 'tasm, bap 'tism, pa 'triotism, elm, film, overwhelm ' , worm.
8. Do not give the drawing sound *âôô* for *ou* (i. e. *âôô*); as *câôô* for *cow*, *hâôôs* for *house*.
Pronounce the following: How, now, ground, sound, bound, found, town, gown, pound, confound ' , around ' , astound ' .
9. Do not sound *sh* before *r* like *s*; as *srub* for *shrub*, *srink* for *shrink*.
Pronounce the following: Shred, shrine, shriek, shroud, shriv 'el, shrunk 'en.
10. Do not sound *wh* like *w*; as *wen* for *when*, *wat* for *what*.
Pronounce the following: Where, wheat, wharf, whale, whine, white, whim 'per, whis 'per, whip 'ping, whit 'tle.
11. Do not omit to give the sound of *r* after a vowel in the same syllable, as in *arm*, *form*, etc., not *ahm*, *fawum*, etc.
Pronounce the following: Dark, hark, start, chart, are, tar, remark ' , course, for, nor, door, floor, lord, hon 'or, do 'nor, short, support ' , report ' , pa 'per, or 'der, horse, purse, warm, alarm 'ing, return 'ing, reform 'ing.
12. Do not add the sound of *r* to a final vowel or diphthong; as *lawr* for *law*, *ide 'ar* for *ide 'a*.
Pronounce the following: saw, draw, paw, claw, pota 'to, toma 'to, com 'ma, Em 'ma.
13. Do not shorten the sound of long *o* in certain words by leaving off its vanishing element *ôô*.
Pronounce the following: Boat, bone, broke, choke, cloak, colt, comb, dolt, hole, home, home 'ly, hope, jolt, load, on 'ly, road, rogue, smoke, spoke, spok 'en, stone, throat, toad, whole, wrote, yoke, bolster.
14. Do not omit the sound of *d* when preceded by *n*; as *stan* for *stand*, *frenz* for *friends*.
Pronounce the following: Stands, bands, winds, depends ' , defends ' , demands ' , blind 'ness, grand 'mother, grand 'father, hand 'ful.
15. Do not omit the sound of *d* in the terminal letters *lds*; as *wilz* for *wilds*, *fêlz* for *fields*.
Pronounce the following: Folds, holds, scolds, builds, scalds, unfolds ' , child 's.
16. Do not omit the sound of *t* when preceded by *c* *hard* in the same syllable; as *aks* for *acts*, *exak 'ly* for *exact 'ly*.
Pronounce the following: Facts, tracts, com 'pacts, inspects ' , respects ' , inducts ' , instructs ' , correct 'ly, direct 'ly, ab 'stractly, per 'fectly.
17. Do not omit the sound of *t* in the terminal letters *sts*; as *fis 's* for *fists*, *pes 's* for *pests*.
Pronounce the following: Posts, boasts, coasts, hosts, ghosts, accosts ' .
18. Do not improperly suppress the vowel sounds in unaccented syllables; as *ev 'ry* for *ev 'er-y*, *his 'try* for *his 'to-ry*.
Pronounce the following: Belief ' , crock 'ery, fam 'ily, fa 'vorite, des 'perate, des 'olate, nom 'inative, mis 'ery, li 'brary, sal 'ary, com 'pany, com 'fortable, perfum 'ery, mem 'ory, vic 'tory, slip 'pery, part 'iciple, sev 'eral, bois 'terous.
19. Do not suppress the sound of *e* or *i* before *l* or *n* in those words in which it should be articulated; as *lev 'l* for *lev 'el*, *civ 'l* for *civ 'il*, *kitch 'n* for *kitch 'en*, *Lat 'n* for *Lat 'in*.
Pronounce the following: Trav 'el, nov 'el, bar 'rel, par 'cel, hov 'el, chap 'el, quar 'rel, sor 'rel, pen 'cil, chick 'en, lin 'en, sud 'den, mit 'ten, sat 'in.
20. Do not sound *e* or *i* before *n* or *l* in those words in which it is properly silent; as *ven* for *e 'vn*, *heav 'en* for *heav 'n*, *ba 'sin* for *ba 'sn*, *haz 'el* for *ha 'z*, *e 'vil* for *e 'vl*.
Pronounce the following: Ha 'ven, sev 'en, gold 'en, o 'pen, short 'en, wood 'en, wak 'en, wid 'en, fro 'zen.
21. After *r*, *ch*, or *sh* do not give the sound of long *u* when the simple sound of *oo* (long or short) should be heard; as *rule* for *rool*, *fruit*, for *froot*.
Pronounce the following: True, truth, grew, chew, sure, sug 'ar, tru 'ly, crew, brute, bru 'tal, rude, through, cru 'el, ru 'by, ru 'bicund.
22. Do not substitute the sound *oo* for that of long *u*; as *toon* for *tune*, *doo 'ty* for *du 'ty*.
Pronounce the following: Tube, duke, mute, nude, mu 'sic, Tues 'day, du 'bious, lute, blue, illum 'e, illude ' , in 'stitude.
23. The vowel *a*, when unaccented, at the end of a word has the sound of *â* (as in *far*) somewhat shortened; as *com 'ma* not *com 'mi* nor *commâ*.
Pronounce the following: Dra 'ma, da 'ta, pi 'ca, so 'fa, al 'gebra, Chi 'na, Amer 'ica, dilem 'ma, mi 'ca, alpac 'a, a 'rea, neb 'ula.
24. Give to the vowel *a* in the unaccented terminal syllables *al*, *ant*, *ance*, its short sound, but do not make it prominent.
Pronounce the following: Na 'tional, par 'tial, fi 'nal, eter 'nal, ig 'norant, ty 'rant, in 'stant, fla 'grant, vig 'ilance, ig 'norance, in 'stance, fra 'grance.
25. Do not give to the vowel *a* (as in *far*), when unaccented and made brief, the sound of short *u*; as *ûbase* ' for *abase* ' , *ûrouse* ' for *arouse* ' .
Pronounce the following: Abound ' , abate ' , above ' , about ' , abridge ' , amuse ' , fanat 'ic, ag 'gravate, traduce ' .
26. Do not give to long *e*, when unaccented and slightly abridged, the sound of short *u*; as *ûvent* ' for *event* ' , *soci 'ûty* for *soci 'ety*.
Pronounce the following: Emo 'tion, vari 'ety, sobri 'ety, sati 'ety, anxi 'ety, impi 'ety.
27. Do not give to long *o*, when unaccented and slightly abridged, the sound of short *u*; as *ûbey* ' for *obey* ' , *prûpose* ' for *propose* ' .
Pronounce the following: Opin 'ion, obe 'dience, provide ' , promote ' , provoke ' , pota 'to, tobac 'co, posi 'tion, soci 'ety, el 'oquence, disposi 'tion, mel 'ody, composi 'tion.
28. Do not sound short *o*, when unaccented, as short *u*; as *ûbscure* ' for *obscure* ' , *cûmmit 'tee* for *commit 'tee*.
Pronounce the following: Observe ' , oppose ' , command ' , conceal ' , condi 'tion, contain ' , content ' , possess ' .
29. Do not lay too much stress on an unaccented syllable or a syllable having a secondary accent; as *pri 'ma 'ry* for *pri 'mary*, *ex 'act 'ly* for *exact 'ly*.
Pronounce the following: Gigan 'tic, precise 'ly, salva 'tion, loca 'tion, vaca 'tion, ter 'ritory, sec 'ondary, mat 'rimony, prom 'issory, vac 'cinated.
30. In unaccented syllables do not bring out the quality of the vowel too distinctly.
In many words, "there would be pedantry in scrupulously avoiding the short and easier sounds which the organs are inclined to adopt." For instance, *cab 'bage* in common conversation might be *cab 'bij*, *pal 'ace*, *pal 'âs*, etc.

- a. When *a* at the end of an unaccented syllable is followed in the next syllable by *n* or *r*, it has nearly the sound of short *e*, as in *mis 'cel-la-ny*, *cus 'tom-a-ry*.
- b. In the unaccented final syllable *ate*, of adjectives and nouns, the vowel *a* generally has a sound verging toward short *e*, as in *del 'i-cate*, *con-sum 'mate* (adj.).

EXPRESSION

- Speak firmly; take time. Articulate clearly; do not slur.
Correct pronunciation: requires—1. Exact vowel sounds. 2. Distinct terminal consonants.
Read just as you would speak under the same circumstances, so that if you could be heard without being seen, it would be impossible to tell whether you were reading or talking.
Avoid a monotone. Dull repetition of words in the same pitch is disagreeable. Enter into the spirit of what you read, and give expression to your natural feeling.
The simplest way to emphasize a word is to pause after it. The word may be spoken a little louder or may be pronounced more slowly than the other words in the sentence.
When speaking in public, address the person standing just behind the back row.

INFLECTION OF THE VOICE

- Rising inflection is used in incomplete thought, or thought carried through consecutive phrases. It is used to express emotion, surprise, prayer.
Falling inflection denotes complete thought. It expresses command, authority.
The voice has three pitches:—upper, middle, lower.
The upper register is the medium for the expression of excitement and earnestness. It must be used with care and artistic moderation, otherwise it is unpleasant.
Use it rarely. Be careful of straining the voice.
The middle register is used in familiar speaking, and general conversation. It is the most durable, and is the vehicle for everyday use.
The lower register is suited to grave, solemn, impassioned utterances. It should be used cautiously. Practice will mellow the voice.

WRITTEN ENGLISH.

- Written English is the art of putting words together in order to convey our thoughts to others. Good composition conveys our thoughts correctly, clearly, and pleasantly, so as to make them readily understood and easily remembered.
To express ourselves well we must first have something to say. If we have not been able to come to any definite conclusion about a subject, we should be silent.
We must next choose the right names for the things or actions of which we are going to speak. This is not always easy, for we are apt to talk loosely of quantities and qualities; to say there are "thousands" when there are only hundreds, to call an event "marvellous" when it is only unusual, or to refer to "ages" when there are only years.
Again, we must arrange our words in the right way, so that they shall fit one another and combine to make good sense, just as we must put bricks or stones together properly to make a building stand. All language is a construction; it is the building or binding of words.
There are many forms of written English, or composition—from a simple letter to the most elaborate treatise—but all are made up of the same elements, namely: words, sentences and paragraphs. It is essential, therefore, that these elements be thoroughly mastered at the outset. Beyond this comes the matter of style, the essentials of which may be summed up in four words: *Accuracy*, *Clearness*, *Strength* and *Grace*.
Accuracy and *Clearness* are requisite in all kinds of writing to insure the faithful presentation of thought.
Strength and *Grace* are more especially applicable to the higher branches of prose composition and to poetry.
Grammatical Connections.—No expression can form part of a good composition unless it be constructed in accordance with correct grammar. Every sentence is inaccurate which gives wrong forms of the parts of speech, or violates the rules of syntax. The most common errors are of two kinds:
(1) Errors in the use of single words or forms.
(2) False concords, that is, wrong genders, numbers, cases and tenses. (See *Right and Wrong Use of Words*.)

form, *You're not, he's not, etc.*, are preferable to *you aren't, he isn't, etc.* *Am I not* is not contracted, *ain't* being regarded as objectionable for *am I not*, and as a vulgarity for *isn't*. [See *ain't*.]

"He (she or it) *don't*" for He (she or it) *doesn't* is always incorrect. *I don't, you don't, he doesn't, we don't, you don't, they don't*, are in accordance with the conversational employment of the language.

Mayn't I (or *may I not*) is correct in the interrogative form; *you can't* (or *you can not*) in the declarative form. In this connection note that *may* is used when asking and granting permission, and that *can*, which ordinarily expresses ability, is used in the declarative form when denying permission; thus: "*May I go.*" "No, you *can not*."

The contractions *shan't* and *won't* are in accordance with conversational usage.

Conversant.—We are conversant with men and in things. *Conversant about things* is improper.

Converse together.—"They conversed together for more than an hour." Omit *together*.

Copy.—We copy after a person; we copy after actions. We copy from things, as from a picture, or from a statue. In such case, a copy from the work is also said to be a copy after the artist.

Correspond.—*Correspond*, meaning to hold intercourse by means of letters, is followed by *with*. "I have corresponded with him for several years." *With* is also used with *correspond*, to signify *consistent with*. *Correspond* is frequently followed by *to*, when it expresses adaptability or appropriateness. "His style of living corresponded to his means."

Cover over.—"He covered it over." Say "he covered it."

Dead corpses.—"Evil spirits are not occupied about the dead corpses of bad men." Omit *dead*; it is implied in *corpses*.

Dependent.—"He is dependent of his father." Say "dependent on." But with independent say *of*.

Derogate.—Say *derogate from*, *derogatory to*, "derogation from," or *to*.

Depot, Station.—A *depot* is properly a place where goods or stores are kept. The place where a railway train stops for passengers may better be called a *station*.

Did, Done.—"Who done it?" Say "who did it?" "who has done it?"

Differ.—We differ with a person in opinion. One differs from another in other respects. The English barbarism of *differ to, different to*, is intolerable, and reverses the meaning of the word *to*.

Direct, Address.—We *address* a letter to a person. We *direct* it to his post office, to the point at which, or to the person through whom, he will receive it. A letter addressed to the president may be *directed* to his secretary.

Disappointed, Agreeably Disappointed.—It is better to say *agreeably surprised*. The meaning most closely associated with *disappointment* is that it is not agreeable.

Dissent.—We dissent from, not *with*.

Distinct, Distinctly.—"The girl speaks distinct." Say "speaks distinctly."

Divide.—We divide things *between* two, *among* many.

Drank, Drunk.—"He was very thirsty, and drunk eagerly." Say "drank." "He has drunk three glasses of soda water." Say "has drunk." "Drunken," the ancient form of the participle, is not now used.

Drove, Driven.—"They have drove very fast." Say "they have driven." But, using the imperfect, say "They drove the people out, and locked the gates."

Dry.—"I am dry, let me have a glass of water." Say "I am thirsty." Using *dry* in this sense suggests the glass shop.

Each, Either.—"A row of trees stood on either side of the river." The use of *either* in such cases is disapproved by some writers, but it is sanctioned by long and unexceptional usage, and by the deliberate judgment of well-informed critics. The use of *each*—"a row of trees stood on each side of the river" is indisputably correct.

Each, Every, Either are singular, and take the verb in the singular number. Such errors as the following should be guarded against: "Each of the daughters take an equal share." Say "takes." "Every leaf, every twig, every blade, every drop of water, teem with life." Say "teems." Also, instead of "one of those houses have been sold," say "has been sold."

Eat, Ate, Eaten.—"I ate my breakfast at five o'clock this morning," not "I eat it," or "I et it." "I have eaten my dinner," not "I have ate it," or "I have et it."

Either is followed by *or*. "I shall either send it or bring it myself."

Either and Neither are used when two objects are mentioned, or two assertions are made; when there are more than two objects or assertions, they need not be employed. In such case, instead of *either*, no pronoun or conjunction need be used; instead of *neither, no* or *not* may be employed. When two persons are mentioned, "Either you or I must go." In case of three persons, "You or I or John must go." With two assertions, negative, "He will neither do it himself nor let any one else do it." With three negative assertions, "He will not publish the accounts of his office, or allow the public access to them, or permit them to be examined by competent, impartial parties." Usage on the last point is not uniform. Very many good writers use *neither, nor, nor*, with three or more negative assertions.

Emigrant, Immigrant.—An *emigrant* is a person who goes out from a country or a state to reside in another; an *immigrant* is one who comes into the state to live, from abroad.

Equally as.—As should not be used after *equally*. Say *equally high, equally dear, equally handsome, etc.*; not *equally as high, equally as dear, equally as handsome*.

Equally as well as.—"I can do it equally as well as he." Omit *equally*; it is implied in the words *as well as*.

Equally the same.—"It is equally the same." Say "it is the same."

Everybody, Anybody.—Refers to male and female.

For want of a pronoun of common gender, use the masculine—he, his, him—unless the other sex is specified. "They" is plural and must not be used.

Anybody can do what they like. (wrong.)
Anybody can do what he likes.
Everybody will have to make up their minds. (wrong.)
Everybody will have to make up his mind.
Everybody has their faults. (wrong.)
Everybody has his faults.
If anybody calls, let them wait. (wrong.)
If anybody calls, let him wait.

Exceeding, Exceedingly.—"He was exceeding kind to me." Say *exceedingly kind*. "She was exceeding careful." Say *exceedingly careful*.

Except, Unless, are often used confusedly. "I shall go except I am ill." Say "unless I am ill." "I saw them all unless two or three." Say "except two or three." The correct usage is easily learned by observing that *except* should be used as a preposition, *unless* as a conjunction.

Fall.—We fall under reproach, notice, censure, etc. We fall from our friends, from virtue; we fall upon our enemies, among evil associations, into bad habits.

Farther, Further.—*Farther* refers to space; *further*, to time, degree, and extensions of thought. The distinction is not a necessary one, but it is now very generally observed.

Fewer, Less.—*Fewer* relates to numbers, *less* to quantities. "No man had less friends," should be fewer friends. But say *less money, less strength, etc.*

Few, Little, Many, Much.—*Few* and *many* refer to number; *little* and *much* to quantity. In speaking of articles that are rated by counting, use *few* and *many*; in speaking of articles which are rated by measure, use *little* and *much*. "A few potatoes," "so many days."

First.—"The *two first*" should be "the *first two*." There can be only one first.

Fluent, Fluently.—"He speaks very fluent." Say *very fluently*.

Forward, backward, toward, upward, onward, downward, hitherward, thitherward, afterward, heavenward, earthward, etc., should be written without the final *s* which is often added to them.

Funeral obsequies.—Say *obsequies*. The sense of *funeral* is contained in this word. It would be as proper to speak of a "wedding marriage-ceremony" as of "funeral obsequies."

Generally, always, never, often, rarely, seldom, sometimes, are adverbs which generally come before the verb.

Gentleman friend, Lady friend.—"Instead of 'my gentleman friend,' say 'my friend Mr. —.'" Instead of "my lady friend," say "my friend Miss —," or Mrs. —."

Gentleman, Lady.—These titles have been applied without discrimination till they have lost almost all the meaning they once had. Many persons have ceased to use them entirely, and employ *man* and *woman* as good enough titles for anybody. There are no nobler titles than *man, woman*; no higher expressions for qualities of grace or virtue than *manly, womanly*.

Get.—"I am afraid Mary is getting crazy." Say "is growing," or "is becoming crazy." "John got left by the train." Say "was left." We *get* anything that we come in possession of. We may also *get* a disease. But *get* must be followed by a noun as its object.

Good for Well.—"He can do it as good as any one else can." Say *as well*.

Got.—I have a pen. Not I have *got* a pen.

Gratuitous.—"That is a gratuitous assumption." It is better to say "unfounded," "unreasonable," or "unwarranted."

Guess.—*Guess* is commonly used in the United States to mean *think*, as in "I *guess* you are right" for "I *think*," etc.

Had ought.—Provincial and incorrect. *Had* or any form of the verb *to have* cannot correctly be used as an auxiliary with *ought*. Use *should* or *ought not*. Not "He *hadn't ought* to have gone," but "He *should not have gone*."

Hain't.—A vulgarity. There is no such contraction for *have not* or *has not*.

Hang, Hanged.—The verb *hang* has two forms for the past participle, *hanged* and *hung*. *Hanged* is used for persons; *hung* for other objects. "The man was *hanged*." "The coat was *hung* on the rack."

He, Him.—It is him whom.—"It is him whom you said it was." Say "it is he."

Healthy, Healthful.—That is *healthy* which is in good health; that is *healthful* which promotes health. "Bread and milk is a healthful food which makes healthy children."

I and Me.—"They went with James and I." Say "with James and me."

If I was.—Use the subjunctive in all cases where the conditions are contrary to fact. "If I *were* you, I should go." "If I *were* a man, I should practice law." I am not you, and I am not a man. Use the indicative in cases of uncertainty. "If I *was* in town that day, I did not see you." I am uncertain as to whether I was or not.

In, Into.—Use *in* to signify rest in a place; use *into* to signify motion toward a place. "He was standing with his hands *in* his pockets." "I put my hands *into* my pockets." "I came *in* an automobile." "The stranger walked *into* the room."

Indeterminate possessive.—"Every child should obey their parents." Say "his parents." "No one should incur censure for being careful of their good character." Say *his*, or *her* if talking more particularly of women. "Let each of us mind their own business." Say "his own business." *Their* is frequently used improperly, as a substitute. In such cases, *his* or *her* should be used, according as the object most prominent in the expression, or in the speaker's thought, is masculine or feminine. In cases of doubt or indifference, use *his*. In the nominative we may say *one*. But in the possessive and objective we must say *his, him* or *her*.

Indifferent, indifferently.—"He was indifferent honest." Say "indifferently honest."

Infinitive.—See *Split Infinitive*.

Ingenuous, Ingenious.—*Ingenuous* is simple, honest, open, unaffected. *Ingenious* is skillful, versatile, ready in contriving.

Jew, Hebrew, Israelite.—A *Jew* is a member of the Hebraic division of the Semitic race; in consequence *Hebrew* is the linguistic name of the *Jews*. Historically, under the theocracy, they were known as *Hebrews*; under the monarchy, as *Israelites*; and during foreign domination, as *Jews*. The modern representatives of this stock call themselves *Hebrews* in race and language, and *Israelites* in religion, but *Jews* in both senses.

Jewelry, Jewels.—*Jewelry* is a collective noun, and *jewels* is a plural noun. In nice usage the term *jewelry* designates the stock of a jeweler; *jewels*, the articles of adornment worn by a lady.

Join issue and Take issue.—In nice usage, "join issue" means to *admit the right of the denial of a statement*. "Take issue" means merely to *deny*.

Kind of should not be used for *somewhat*. Instead of "I am *kind of* tired," one properly says, "I am *somewhat* tired."

Kind of a.—A is superfluous in such constructions as, "What *kind of* man is he?" (not "kind of a"). The same rule applies to *sart*.

Kind and Kinds.—See *These and This*.

Know, Knew, Known.—"I knew it." Say "I knew it all along." Say "I have known it."

Latter end.—"I expect to get through by the latter end of the week." Say "by the end of the week." "The latter end of that man shall be peace." Say "the end of that man."

Learn, Teach.—These words are often confounded. The pupil *learns*, the instructor *teaches*. One person cannot *learn* another, but must *teach* him.

Leave, Lief.—Say "give me leave to tell you," not *lief*. But "I would as lief do it as not," not *leave*.

Leisure upon one's hands.—"If you have any leisure upon your hands." Say "if you are at leisure."

Lend, Loan.—"Loan me five dollars." Say "lend me five dollars." The money having been lent him, the borrower has obtained a *loan* of that sum, or has borrowed it.

Lengthways, Sideways, Otherways.—These forms are erroneous. Say, and write, *lengthwise, sidewise, otherwise*.

Lie, Lay.—Distinguish between the verbs:—
lie—to tell lies
Present Tense—He lies like truth.
He is lying.
Past Tense—But he lied unto him.
Wherefore have ye lied to me?
Why have you been lying to me?
lie—to lie down

Present—The dog lies under the table.
The dog is lying under the table.

Past—He lay upon the bed.
He has lain there for hours.
He has been lying there for hours.

lay—to put a thing down

Present—The boy lays his books on the table.
The boy is laying his books on the table.

Past—He laid his head upon the block.
The hen has laid an egg.
The hen has been laying all the winter.

Liab, **Apt**.—*Apt* means fit, ready, quick to do a thing, or to be subjected to certain conditions. It generally implies willingness. *Liab* signifies bound to duties, subject or exposed to inconveniences or dangers, and implies no regard to the will of its subject. "John will be apt to catch the fever if he goes into that house," should be "John will be liable," etc. A person who is studious may be spoken of as *apt* to learn, and *liable* to become desyncetic.

Like.—"We don't do that like you do." Say "as you do." This misuse of *like* is common with English women novelists. *As* should be used when a verb follows, or is understood to follow. Where no verb is implied, *like* may be employed.

Like for As.—Like should not be used as a conjunction. Say: "Do as I do," not, "do like I do," or, "do like me."

Like, Love.—*Love* is often used instead of *like*, and is thereby made to lose all its force. We *love* what the heart goes out to, that for which we entertain a fond and lasting affection. We *love* wives, husbands, parents, children, near friends. We *like* what we have a taste for, what pleases us in passing, or what is generally agreeable to us, as acquaintances, sweetmeats, pleasant weather, music, painting, reading. We regret for a long time the loss of what we *love*, we soon cease to be troubled at missing what we *like*.

Limb.—"She fell, and bruised her limb." Say what limb. The arm is a limb, as well as the leg. The foolish shame which avoids mentioning the leg by name, is not modesty, but prudery.

Lit.—Not to be used for *lighted*. Instead of saying "He lit the gas," say "he lighted the gas." Do not say "He lit on his feet," but "he lighted on his feet."

Locate.—"I shall locate in Iowa." Say *settle*. *Locate* has acquired a certain technical currency. The purchaser of land warrants *locates* by selecting a particular tract to claim under it. *Place, settle, fix, establish*, can be substituted for it in most cases, and are better.

Mad.—Should not be used for *angry*.

Mail man.—An inelegant form for *postman*.

Me being.—"Me being absent, the young folks lived high." Say "I being absent," or "while I was absent," or "during my absence."

Me, I.—"Is it me you mean?" Say "is it I?" or "do you mean me?"

Me, My.—"In consequence of me neglecting,"—"The horse got away in consequence of me neglecting to fasten the gate." Say "in consequence of my neglecting," etc.

Monstrous.—*Monstrous* does not mean large. It means *ill-formed, misshapen*, deviating from the course of nature, of a character to inspire unpleasant feelings. But an object so unusually large as to appear terrible may be figuratively styled *monstrous*.

More—than, not *more—as*. "He was *more* beloved than but not so much admired as his brother." This sentence must be recast.
"He was *more* beloved than his brother, but not so much admired." Or,
"Though not so much admired as his brother, he was more beloved."

Mortgagor, Mortgagee.—The *mortgagor* is the debtor, who pledges the property which is in mortgage. The *mortgagee* is the creditor, to whom the mortgage is made.

Most.—Not to be used for *almost*, as "He is here *most* every day."

Mutual.—Does not mean *common*, but *reciprocal*. "We may have a *common* friend, but a *mutual* dislike"; that is, a dislike for each other.

Myself.—Not to be used for *I*. Do not say "John and myself are friends"; but "John and I," etc.

Near, Nearly.—"I lost *near* twenty pounds." Say "*nearly* twenty pounds."

Neither for Either.—"That is not the case, neither." Say "either." The double negative is wrong.

Neither, Nor.—Negatives other than neither may take *or* or *nor* as their correlative. With subjects connected by "either—or," "neither—nor," the verb must be singular:—
Neither he nor his brother were trained for the ministry.
should be
Neither he nor his brother was trained for the ministry.
Either the master or his servant was responsible.
Neither ignorance nor negligence has been the cause of his ruin.

New beginner.—Say *beginner*. When one begins anything, he is new at it of course.

Nice.—A very generally misused word. Properly *nice* means *delicate, discriminating, fastidious*. The works of a watch show *nice* construction; a man may be *nice* in his manners. The word should not be used to mean *agreeable* or *charming* as "I had a *nice* time."

Nicely.—Do not use *nicely* for *well*, as "The sick man is doing *nicely*."

Nobody else.—"There was nobody else but him." Omit *else*.

No for Not.—"I cannot tell whether this is correct or *no*," is wrong. Say, "I cannot tell whether this is correct or *not*."

None, is the same as no one, and is properly singular. It is, however, used in both numbers, according as the context seems to make appropriate.

Not as I know of.—Incorrectly used for *not that I know of*.

Not me.—"Who made that noise?" "Not me." Say "not I." "It wasn't me." Say "it wasn't I." The use of *me* is defended by some writers.

Not only—but also.—Correlatives must be placed immediately before the words connected.
"He *not only* lent me his horse *but also* sent his carriage."
"He lent me *not only* his horse *but also* his carriage."

Number, Quantity.—*Number* should be used in speaking of objects that are counted, *quantity* with those that are measured. *Much, little, and less*, answer to quantity, and *many, few, and fewer*, to numbers; *more* answers to both.

Of.—"A child of four years old." Say "a child four years old," or "a child of four years."

Off of.—"There were ten yards of the cloth before I cut this piece off of it." Say "before I cut this piece off it," or "from it."

One.—*One* is the only singular personal pronoun of common gender.
"One must not forget *one's* duty to *one's* country." This frequent repetition is disagreeable.
"No man must forget his duty to his country."
"A man must not forget his duty to his country."

Only is best placed immediately before the word it modifies. In case there can be no ambiguity it may be placed immediately after the word it modifies.
Only I wrote to him to-day. (No one else wrote.)
I *only* wrote to him yesterday. (I did not telephone.)
I wrote *only* to him to-day. (I wrote to no one else.)
I wrote to him *only* to-day. (No longer ago than to-day.)
I wrote him to-day *only*. (I had not written before.)
This car for members *only*. (For none but members.)

Only, Alone.—"He alone can do it," implies that he can do it without help. It would be better, "He can do it alone." "He only can do it," signifies that he, and no other person, can do it. Using *alone* in the sense of *only* may lead to ambiguity.

Onto.—We get *on* a horse and *on* a chair, *not onto*.

Orate.—An unauthorized form commonly used to mean *to give an oration*.

Over.—Do not use *over* in the sense of *more than*, as, "I have *over* a hundred dollars"; "The stick is *over* a yard long."

Over a bridge.—"He went over the bridge." It is more exact to say, "he went across the bridge." A bird may fly *over* a bridge, if it does not touch the bridge.

Overhead and ears.—"We went in overhead and ears." Say *overhead*. The head carries the ears. But "overhead and ears in debt" is a phrase which it will be hard to abolish.

Partial, Partially.—"This view is partially correct." "Partly correct," or "in part correct," is better. *Partially* means, properly, one sided, with bias.

Persuasion, in the sense of religious denomination or belief, is objectional. *Sect, denomination, belief*, or "school of belief," are proper substitutes.

Plunge down.—"He plunged down into the stream." Omit *down*.

Possessives.—
Rule.—Use the apostrophe and the letter *s* (or change the form) only when the noun (or pronoun) itself represents the possessor.
This is a photograph of *my* uncle.
She is a servant of *my* aunt's.
This is a criticism of *John's*. (Some one else wrote it about John.)
This is an opinion of *John's*. (John's opinion; that is, John uttered it.)
This is an opinion of *John*. (Some one else uttered it.)

Plural and Singular Words.—*Molasses* is singular. The habit of giving it a plural construction is an error. Say "that molasses is souring," not "them molasses are souring." Words like *scissors, snuffers, tongs, trousers*, etc., denoting articles which are paired or coupled, are plural, and take a plural verb. "The scissors are dull," not "is dull."
This is the birthplace of the President. (Not President's.)
This is the private office of the Secretary. (Not Secretary's.)
He is a friend of *the Bank's*. (One of several friends.)
He is an enemy of *mine*. (One or more possessed by me.)
He is a brother of *mine*. (One or more possessed by me.)
He is a friend of *hers*. (One or more possessed by her.)
I cannot endure that rasping voice of *Bridget's*. (One voice.)

Prepositions.—Never use a preposition to end a sentence:
For whom is that? To whom are you writing? The matter to which I am referring.
Two prepositions should not come together, as: "That is the man I went to *for* advice." But, "That is the man to whom I went for advice."

Previous, Previously.—"He wrote me previous to his coming." Say "previously to his coming."

Quantity, Number.—*Quantity* is used of that which can be measured; *number*, of that which can be counted; as, "There is a large *quantity* of sugar on hand"; "There are a large *number* of eggs in the basket."
In connection with the use of the singular or the plural verb with the word *number*, note that the plural verb is used when *number* means *several*; the singular, when *number* is used to stand for a unit, as, "A *number* of persons are going" (several), "The *number* is limited to five."

Quite.—"There are quite a number of Americans here." Say "there are several." One is *quite* a number. It is correct to say "there are quite twenty" to express that the number is completely made up—which is the meaning of *quite*.

Raised.—"I was raised in the South." Say "brought up." "I was raised in Mr. Stephens' family." Say "taken care of," "brought up," "instructed," or "trained." We "raise" horses, cattle, sheep, swine, poultry and crops, but apply a more refining process to human beings.

Ran, Run.—Say "this horse has often run a mile in two minutes and a half; yesterday he ran a mile in two minutes and three-quarters."

Rang, Rung.—"I have rang the bell half a dozen times." Say "have rung." But say in the imperfect, "they rang the bells merrily for Christmas day."

Rather—than, Prefer—to.—"He preferred doing nothing *rather than* run the risk of doing wrong," should be "He preferred doing nothing rather than running the risk of doing wrong"; or "He preferred to do nothing rather than to run the risk of doing wrong."

Receipt and Recipe.—One properly says, "The *receipt* calls for three cupfuls of flour," *recipe* being restricted in its use as a medical term. Century gives the following: *Receipt* is distinguished from *recipe* by the common restriction of that word [*recipe*] to medical and relative uses; as, "A *receipt* for a pudding."

Reckon.—Provincial for *think*. "I *reckon* he will come soon." Say "I *think*" or "I *believe*."

Reference, Recommendation.—A person seeking employment or position, names certain persons who know him as his *references*. They may, if they are so disposed, and can do so with truth, give him their *recommendation*.

Regard.—"In regard of this matter." Say "in regard *to*," or "with regard *to*."
Regarded *from* that standpoint, but looked at *in* that light.

Relations, Relatives, Kin, Kindred.—It is better to speak of ones *relatives* than of his *relations*. *Relations* has other meanings. *Kin* and *kindred* are old English words, which deserve to be more in fashion than they are.

Relative Pronouns.—*Who* is used exclusively with persons, *which* exclusively with things, and *that* with persons and things. In common conversation *that* is more frequently used with persons than *who*. But *who* is considered more elegant.

Examples of the correct use of the relative pronouns, *who*, *which*, *that*, and *what*:
I gave the money to the driver, *who* will give it to his employer.

I brought her a book, from the library, *which* she enjoyed very much.

This is the house *that* she bought.

I do not want you to repeat *what* I have told you.

(1) In the last sentence *what* is equivalent to *that which* or the *thing which*. It differs from the other relative pronouns in that *its antecedent is never expressed*, it being implied in the word itself (that which).

(2) *What* is always of the neuter gender, and is used in only the nominative and the objective case. *Who*, *whose*, and *whom* are either masculine and feminine (common gender) and are used, respectively, in the nominative, the possessive, and the objective case.

(3) *Which* is neuter and may be used in either the nominative or the objective case.

(4) *Whose* is the form of the possessive for either *who* or *which*.

Remarkable, Remarkably.—"She is a remarkable pretty girl." Say *remarkably pretty*.

Reside and Live.—The simple word *live* is preferable to *reside* when referring to one's place of residence, *reside* being reserved for more stately occasions.

Respect.—Instead of "in respect of," say "in respect to," or "with respect to."

Respectfully and Respectively.—*Respectfully* mean in a respectful manner; *respectively* refers to persons or things thought of singly; as, "He behaved *respectfully* toward his parents"; "The names of the boys are, *respectively*, John, Henry, and James."

Rise up.—"He rose up and left the room." Say "he rose"; say also, *raise, lift, hoist*; not *raise up, lift up, hoist up*.

Saw, Seen, See.—"I see him last Monday." Say "I saw him." "I see him yesterday." Say "I saw him." "I haven't saw him for along time." Say "I haven't seen him." *See* is present, *saw* imperfect, *seen* the participle. The habit of confusing them prevails widely.

Section.—"Mr. — does not live in this section." Say "in this neighborhood," "vicinity," or "part of the country." A *section*, in geography, is one square mile, or six hundred and forty acres of land, which has been laid out by the government.

Shall and Will.—*Shall* in the first person and *will* in the second and third persons denote mere futurity.

Will in the first person and *shall* in the second and third denote volition.

In asking questions *shall* must always be used with a subject in the first person. In the second and third persons we use *shall* and *will* according to the answers that we expect. When we expect the answer *shall*, we use *shall* in asking the question. When we expect the answer *will*, we use *will* in asking the question.

Similar statements are true of *should* and *would*.

The proper use of *shall, will, should, and would* in indirect discourse may be determined by turning the sentence into the direct discourse and choosing the proper word according to the rule.

With all three persons, we may use *would* to express a wish. Also we may use *would* without regard to future time, to denote that an action is customary; as, "He would often fish for days in succession."

Should is sometimes used in its original sense of *ought*; as, "You should not do that."

The forms given below are examples of the simple future statement.

Examples:

I shall be happy.	We shall be happy.
You will be happy.	You will be happy.
He will be happy.	They will be happy.

If we wish to add the idea of a compelling force, or of determination or obligation, the proper auxiliary for the first person is *will*; for the second and third persons, *shall*.

Examples:

I will go	means I am determined to go.
You shall go	means You must go.
He shall go	means He must go.
We will go	means We are determined to go.
You shall go	means You must go.
They shall go	means They must go.

I shall have satisfaction means that the satisfaction will come in the course of time.

I will have satisfaction means *I am determined to have it*.

Sink down.—"The stone sunk down in the water." Omit *down*.

Some for Somewhat.—"He is some better today." It is better to say "he is somewhat better."

Split Infinitive.—To explain, to thank (infinitive). These words should not be separated (split). "Have the goodness to clearly explain," should be "Have the goodness to explain clearly."

"I want to personally thank you," should be "I want to thank you personally."

Tenses.—In subordinate clauses the tense of the verb is relative to the tense of the principal verb.

"He intended to have done so," should be "He intended to do so."

The imperfect tense, *I did* is used in speaking of events which took place before a time that is past.

The perfect tense, *I have done*, is used in speaking of events which have been completed before the present time.

Than me.—"He is taller than me." The word after *than* should be in the same case with the word before it.

Than him.—"You are stronger than him." Say "than he."

That.—See [Relative Pronouns](#).

Thee and You.—"I owe thee a heavy debt of gratitude, and you will not permit me to pay it." Avoid such confusion of numbers. Use the same word—either *thee* or *you*—in both clauses.

Them, They.—"It was *them*." Say "it was they."

These, This.—"I don't like *these sort* of folks (this sort).

Those kind of boots—that kind (those kinds).

These kind, Those sort.—*Kind* and *sort* are singular nouns, and should be modified by singular adjectives. Say "*this kind*," "*that sort*."

They, Everyone.—Do not use *they* indefinitely instead of *everyone*, as, "They are always in a hurry in the city"; better say "Everyone is in a hurry in the city."

Though is followed by *yet*. "Though he was rich, yet for our sakes he became poor."

Through.—Often misused in the sense of *finished*. "I am *through* with my breakfast," instead of "I have *finished* my breakfast."

To be.—The verb "to be" takes the same case after it as before it. Example: "Who is there?" "It is I." Say "It was I who rang the bell."

Trousers, Waistcoat, Gown, Petticoat, are good old respectable English words, which point out particular garments without possibility of mistake. They are better than the new ones, *pantaloon, vest, dress, skirt*.

Try and.—"I will try and do it." Say "I will try to do it."

Unique is not properly modified by *very*, *unique* meaning the only one of its kind.

Use to.—*Used to*, not *use to*, is the correct form; as, "*I used to go* there very often." In negative constructions "didn't used to" is always incorrect.

View to and View of.—One properly says, "With a *view to* finding out," or "With the *view of* finding out."

Visit with.—*Visit* is improperly followed by *with* in such constructions as, "I am *visiting with* friends in New York," "I am *visiting* friends," etc., being the correct form.

Vocation.—A man's *vocation* is his calling, his regular business. His *avocation* is something outside of his business with which he occupies himself incidentally. My friend's *vocation* is the practice of law; his *avocation* is photography. Still, while *avocation*, in the sense of *vocation*, is usually avoided by good writers, such use has some sanction of authority.

Want.—Avoid *want* in the sense of "ought" or "had better," as, "You want to hurry if you are going to catch the car"; better say "You had better hurry if you expect to catch the car."

Was, Were.—"Was you?" "You was." Say "were you?" "You were."

Way, Away.—*Way* should not be used for away. "I saw him away (not way) down the road."

What for Who, Which, and That.—See [Relative Pronouns](#).

Where for In which.—"It is a cause where justice is particularly concerned." Say *in which*. "We presented a paper where his case was fully explained." Say "a paper in which." But *where* may be used instead of *which* and a preposition when place is the predominant idea. "The old house where I was born."

Whether is followed by *or*. "Whether he will go or not, I cannot tell."

Which.—See [Relative Pronouns](#).

Who.—See [Relative Pronouns](#).

Without, Unless.—*Without* must not be used for *unless*. "You won't catch the train *without* you run," should be, "You won't catch the train *unless* you run."

"My uncle would not take me *without* my mother wished it," should be "My uncle would not take me *unless* my mother wished it."

Wrong and Wrongly.—*Wrong* is an adverb as well as an adjective. For this reason, *wrong* is often interchangeably used with *wrongly*; as, "The mail was sent off *wrong*" (or *wrongly*). When preceding the verb, *wrongly* is required; as "The letter was *wrongly* addressed."

USE OF CAPITAL LETTERS

The following are the general rules for the use of capitals, together with the abbreviations most commonly used. Many special uses of capital letters are also insisted upon by writers which cannot be reduced to general rules.

Rule I.—The first word of every sentence should begin with a capital letter.

A sentence preceded by an introductory word or clause such as Resolved, Be it enacted, etc., begins with a capital notwithstanding the introductory word.

Rule II.—The first word of a direct quotation, of an important statement, and of a direct question, should begin with a capital.

Examples:

One truth is clear: Whatever is, is right.—*Pope*. Ask yourselves this question: Are you doing right?

Rule III.—The first word of every line of poetry should begin with a capital.

Rule IV.—All proper names begin with capitals. If the proper name consists of several words, all are capitalized except articles, prepositions, and conjunctions.

Examples:—San Diego, Burton-on-Trent, the Grand Army of the Republic.

The words *street, road, lake, river, mountain*, etc., should begin with capitals when used in connection with proper names.

Examples:—Crawford Road, Prospect Street, Lake Erie, Cuyahoga River, Little Mountain.

North, South, East, and West, should begin with capitals when they mean sections of the country and not points of the compass.

Example:—Chicago, the largest city of the West, is south of Lake Michigan.

Capitalize *city* only when part of the corporate name, *New York City, Washington City*.

Rule V.—Names of days and months always take a capital; but the names of seasons of the year are not commonly capitalized.

Rule VI.—Titles of office before personal names, and other titles so placed which are not mere common names of vocation, are written with capitals.

Examples:—*Senator Jones, Doctor (or Dr.) Brown, Aunt Jane, Miss or Master Gray*; but *coachman Smith, barber Harris*, etc.

Titles of dignity are also commonly capitalized when used alone, as in address, or with the definite article.

Examples:—*the President, Senator, Judge, the Judge, District Attorney*.

When title, with or without Christian name, precedes "de," use lower-case "d"; this rule applies also to "la," "di," "von," "van," etc.

Examples:—*Marquis de Lafayette, Di Cesnola, Prince von Moltke, Von Humboldt, Dr. la Mond, De Chaulnes, Mr. van Renssalaer*.

Rule VII.—Many special names of a common kind are, in particular uses, treated as proper nouns and capitalized.

Examples:—*Congress, Parliament, Senate, House of Representatives, State* (for one of the United States), *Hudson River Railroad, Aldine Printing Company*.

Capitalize the names of political parties; as, *Republican Party, Democratic Party, Progressive Party*, etc.

Capitalize *Christmas Day, New Year's Day, Lincoln's Birthday, Washington's Birthday, Good Friday, Decoration Day* or *Memorial Day, Fourth of July, Labor Day, Election Day, Thanksgiving Day*, etc.; a noted day, as *Black Friday*, etc.; but *blue Monday*.

Capitalize *Northerner, Southerner, Northern gentleman, Southern blood*, etc.

Capitalize names of important events and periods: as, *the Creation, the Fall, the Flood, the Reformation, the Revolution* (French or American), *Civil War* (American), *the Middle Ages, the Union, Reconstruction*.

Capitalize religious denominations; as, *Methodist, Episcopal Church, St. Mark's Church, Church and State, etc.*

Church is without the capital always when used alone or when meaning congregation or building; as, a *Methodist church in Hoboken*.

Capitalize *College, Club, Society, etc.*, when referring to that particular body, in by-laws, proceedings, or other publications of a college, club, society, company, etc.

Capitalize *Monsieur, Madame, Signor, etc.*

Capitalize *State* only when referring to one of the United States.

Rule VIII.—Adjectives and nouns derived from proper names are written with capitals.

Examples:—*Jacksonian, New Yorker, Congressman* (if *Congress* has a capital).

Names of countries and places, and adjectives derived from them.

Examples:—a German dictionary. The best Spanish wines.

But such words used in some other common way are not capitalized.

Examples:—morocco leather, russia leather, india rubber, plaster of paris, etc.

Rule IX.—Names of families and larger groups in natural history, and of genera, are written with capitals; also botanical specific names derived from proper names, and those that have formerly been genus-names, though zoological usage gives a small initial to every specific name.

Examples:—*Asplenium Trichomanes* (a fern). *Menticirrhus americanus* (a fish). *Carya alba* (a hickory tree).

Rule X.—In headings the important words only should be capitalized.

Titles of books, newspapers, plays, and the like, are written with capitals beginning the important words, most commonly nouns, principal verbs, adjectives, and adverbs. The word *the* is capitalized as part of the title if the title is quoted exactly.

Examples:—A History of the Rebellion.

Free Trade and Protection.

Put Yourself in his Place.

Milton's Select Poems.

The Beginnings of Poetry.

Rule XI.—The pronoun *I* and the interjection *O* are capitalized.

Rule XII.—All names of God, all words that may be regarded as titles of the Deity, should begin with capitals.

Rule XIII.—In compound words, as vice-president, ex-president, etc., the prefix (vice) should not be capitalized.

Rule XIV.—In personification it is usual to capitalize the personified words.

Examples:—

Vice is a monster; smiling Spring.

The Voice of Nature; but: true to nature.

ABBREVIATIONS, CONTRACTIONS AND DEGREES

Military or naval and some professional titles preceding names are nearly always abbreviated; as *Capt. Jones, Dr. Brown, Rev. Dr. Smith*.

Titles of collegiate degree are abbreviated; as, *William Lee, Ph. D., LL. D.*

In general writing, it is better to avoid abbreviation as far as possible.

A., *a.* Adjective.

A. Alto.

A., *ans.* Answer.

a., @ (Lat. *ad*). To; At.

ā, *āā*. The like quantity of each.

A. A. S. American Association for the Advancement of Science.

[731]

PUNCTUATION

Punctuation is the indication, by means of stops, of the different pauses necessary to show the meaning of a sentence.

Stops, therefore, are used to elucidate the meaning of words in their relation to other words.

The Period [.].—Declarative and imperative sentences, when not connected in construction with what follows, are closed by periods.

Examples:—The child is father of the man.

The king is dead, long live the king.

A period should be placed after every abbreviation. The period thus used is part of the abbreviation.

Examples:—*Wash.*, Washington; *Gen.*, General; *Pro tem.*, pro tempore, for the time being; *Esg.*, Esquire; *Gov.*, Governor.

Such expressions as 3d, 18th, 8mo, are not abbreviations and do not require a period after them.

A period should always be placed after the Roman numerals.

Examples:—I., II., III., IV., V., VI., VII., VIII., IX., X., etc.

Interrogation Point [?].—The interrogation point is used for marking all questions. When the question consists of several parts, or when several questions are contained in one sentence, there is some difficulty in deciding whether there should be one or more interrogation points. The principle is that if one answer is sufficient for all, one point is enough; if different answers are required, a point should be placed after each question.

Examples:—What can I do for you?

Now, you understand?

Exclamation Point [!].—The exclamation point is placed at the end of every sentence, clause, phrase, or word intended to convey strong emotion.

Examples:—Praise be thine, O God!

Lost! Lost! O that I were home!

Colon [:].—Two clauses, one or both of which are subdivided by the semicolon, should be separated from each other by the colon.

Example:—This chapter is divided into two sections: the first, which was written many years since, being a history of the institution; the second, a prophecy as to its future.

The colon is used before all direct quotations, if formally introduced, and after all words which formally introduce a sentence to follow. If the quoted matter begins a new paragraph, the colon should be followed by a dash.

Examples:—Caesar spoke as follows: (His speech to follow.)

He replied in these words: "I shall always be prepared in future."

My dear Friend: (A letter following.)

The colon is sometimes used between complete sentences where the period would indicate too long a pause, and the semicolon too short a pause.

Examples:—It was a dark and dreary night: the wind was blowing in fitful gusts.

It is over: let us go.

Semicolon [;].—When two clauses are united by either of the conjunctions *for*, *but*, *and*, or an equivalent word—the one clause perfect in itself, and the other added as a matter of inference, contrast or explanation—they are separated by a semicolon.

Example:—Economy is no disgrace; for it is better to live on a little than to outlive a great deal.

A semicolon is placed between two or more parts of a sentence when these, or any of them, are divisible by a comma into smaller portions.

Example:—Men are not to be judged by their looks, habits, and appearances; they should be judged by the character of their lives and conversations, and by their works.

When in a series of expressions the particulars depend on a commencing or concluding portion of the sentence, they should be separated from each other by a semicolon if laid down as distinct propositions or of a compound nature.

Example:—Philosophers assert that Nature is unlimited in her operations; that she has inexhaustible treasures in reserve; that knowledge will always be progressive; and that all future generations will continue to make discoveries of which we have not the slightest idea.

When several short sentences follow one another, slightly connected in sense or in construction, they should be separated by a semicolon.

Example:—Stones grow; vegetables grow and live; animals grow, live, and feel.

A semicolon is put before *as*, *viz.*, *to-wit*, *namely*, *i. e.*, or *that is*, when they precede an example or a specification of particulars, or subjects enumerated; and also between these particulars when they consist each of a disjunct pair of words, or of a single word or phrase but slightly connected with the others.

Example:—Many words are differently spelled in English; as, "Inquire, enquire; jail, gaol; skeptic, sceptic."

Comma [,].—Two words belonging to the same part of speech, or used as such, when closely connected by one of the conjunctions *and*, *or*, *nor*, are not separated by a comma from each other.

Example:—Pay supreme and undivided homage to goodness and truth.

Two words of the same part of speech and in the same construction, if used without a conjunction between them, are separated from each other by a comma.

Example:—We are fearfully, wonderfully made.

Two nouns or pronouns in apposition, or a noun and a pronoun, should not be separated by a comma if they may be regarded as a proper name or as a single phrase.

Example:—The poet Milton wrote excellent prose and better poetry.

But a noun or pronoun and a phrase, or two or more phrases, if put in apposition so that they may not be so regarded, are separated by a comma

from each other, and from what follows in the same sentence.

Example:—Homer, the greatest poet of antiquity, is said to have been blind.

Words or phrases contrasted with each other, or having a mutual relation to others that follow them in the same clause, are separated by commas.

Example:—False delicacy is affectation, not politeness.

A comma is put before a relative clause when it is explanatory of the antecedent or presents an additional thought.

Example:—Behold the emblem of thy state in flowers, which bloom and die.

But the point is omitted before a relative that restricts the general notion of the antecedent to a particular sense.

Example:—Every teacher must love a boy who is attentive and docile.

Expressions of a parenthetical or intermediate nature are separated from the context by commas.

Example:—The sun, with all its attendant planets, is but a very little part of the grand machine of the universe.

A word or an expression used independently in addressing a person or an object is separated by a comma from the rest of the sentence.

Example:—Antonio, light my lamp within my chamber.

Adjectival, participial, and absolute phrases are each separated by a comma from the remainder of the sentence.

Example:—Awkward in his person, James was ill qualified to command respect.

Adverbs or adverbial phrases, when used as connectives, or when they modify not single words, but clauses or sentences, are each followed by a comma; and if used intermediately they admit a comma before as well as after them.

Example:—The most vigorous thinkers and writers are, in fact, self-taught.

When a phrase beginning with a preposition, an adverb, or a conjunction relates to or modifies a preceding portion of the sentence, a comma is unnecessary if the parts are closely connected in sense.

Example:—For that agency he applied without a recommendation.

Many phrases which, in their natural or usual order, do not require to be punctuated, are, when placed in some other or unnatural position, set off by a comma from the rest of the sentence.

Example:—By Cowley, the philosopher Hobbes is compared to Columbus.

When one of two clauses depends on the other, they are separated by a comma.

Example:—If you would be revenged on your enemies, let your life be blameless.

Two correlative expressions united by the conjunction *as* or *than* are written without a point between them.

Example:—Men are never so easily deceived as when they plot to deceive others.

But when united by any other word than one of these conjunctions, the correlative expressions are separated by a comma.

Example:—Though learned and methodical, yet the teacher was not a pedant.

Words or phrases in the same construction, forming a series, are separated from each other by commas.

Example:—Scrooge was his sole executor, his sole administrator, his sole assign, his sole residuary legatee, his sole friend, and sole mourner.—*Dickens*.

But when the members of the series are closely connected in sense, the commas should be omitted.

Example:—Government of the people by the people for the people.

When in a compound sentence the clauses have each a different nominative, but have only one verb, expressed in the first clause and understood in the others, the ellipsis, or place of the verb, should be supplied by a comma.

Example:—A wise man seeks to shine in himself, a fool to outshine others.

A short quotation, or any expression that resembles a quotation, is separated by a comma from an introductory clause.

Example:—Dr. Thomas Brown truly says, "The benevolent spirit is as universal in its efforts as the miseries which are capable of being relieved."

Dash —.—The dash denotes an abrupt break in a sentence.

Example:—Here lies the great—false marble, where?

Nothing but sordid dust lies here.

The dash is used to indicate that something is left unfinished.

Example:—We cannot hope to succeed unless—

But we must succeed.

The dash is sometimes used instead of brackets before and after a parenthesis.

Example:—The man actually—this is in the strictest confidence—filled his pocket with my cigars when he thought I was not looking.

The dash is used instead of the colon where the word "namely" is implied but not expressed.

Example:—The sentence should be amended to read "—whenever and wherever the president shall determine."

Parentheses ().—Parentheses are used to inclose an explanation, authority, definition, reference, translation, or any matter not belonging to the grammatical construction of the sentence.

Example:—He gained from heaven ('twas all he wished) a friend.

Brackets [].—The use of brackets is about the same as that of the marks of parenthesis, but is generally confined to words inserted in quotations for the sake of explanation.

Example:—*Dickens* has given a very lively account of this place [the Academy] in his paper entitled "Our School," but it is very mythical in many respects.

Quotation Marks [" "].—Quotation marks are used before and after a passage quoted in the exact words of another.

Example:—"My very dog," sighed poor Rip, "has forgotten me."

Matter quoted indirectly, or given only in substance, is not placed within quotation marks.

A quotation within a quotation is inclosed in single marks.

Example:—"His staff and knapsack, her little bonnet and basket, etc., lie beside him. 'She'll come to-morrow,' he says, when it gets dark, and goes sorrowfully home."

Where a quotation consists of several paragraphs, quotation marks should be used at the beginning of each paragraph, but at the close of the last paragraph only.

Titles of books, essays, newspapers, etc., should be placed within quotation marks, unless in italics or capitals.

Hyphen [-].—The hyphen is used between the parts of certain compound words, and to mark the division of syllables in showing the spelling of words. It is sometimes used in place of the diæresis after a prefix ending in a vowel before a word beginning with a vowel.

Example:—Horse-chestnut, Franco-Prussian, re-edit, de-vi-ate, truth-telling, text-book.

Compound Words.—Rule I.—Compounds made by omitting particles, and used literally, are generally written with a hyphen.

Many such words that coalesce in pronunciation, and have become very familiar, are written continuously.

after-events

almond-oil

arrow-head

battle-ax

broomstick

eyeball

milkman

outlook

Rule II.—Two or more normally separate words are joined with hyphens if used in an adjective sense before a noun.

A sight never to be forgotten.

A never-to-be-forgotten sight.

Rule III.—A full phrase used as the name of something not literally indicated by the phrase is written with a hyphen or hyphens.

Those here given are names of plants:

Aaron's-beard

forget-me-not

Rule IV.—Compound words showing arbitrary application of the literal idea expressed by their separated elements take no hyphen.

blackberry

bluefish

everybody

however

cottonwood (a tree)

pronghorn (antelope)

marrowfat (a pea)

arrowhead (a plant)

matchlock (a gun)

(Care should be taken not to apply this rule in cases where it does not really fit. Thus, *any one, one's self, etc.*, are often wrongly printed as *anyone, oneself, etc.*)

Apostrophe ['].—The apostrophe is used in the possessive case of nouns, to denote the plural of figures and letters, and to mark the elision of letters at the beginning or middle of a word, and the omission of figures in a number or date.

Example:—John's, men's, 2's, 7's, p's and q's, I've, I'll, don't, won't, Po'keepsie, tho', '92, '76.

MISCELLANEOUS MARKS

Ellipsis [* * *] signifies a leaving out, defect, omission.

Leaders [...] serve to carry the eye across the pages of indexes, tables, contents, etc.; thus:

Needle-gun invented.....1856

Brace [{ }].—It is the vertical curved line used to signify that two or more words or lines are to be taken together—thus:

Americans { Aboriginal
Native
Emigrants

Asterisk [*].—It is used in printing or writing as a reference to a passage or note in the margin or at the bottom of a page, and also to supply the omission of letters or words.

Dagger, or Obelisk [†] is so called from its resemblance to a dagger, or inverted obelisk. It is also a mark of reference to a note in the margin or at the bottom of the page.

Double Dagger [‡] is the third reference mark used when there are more than two used on a page.

Parallels [||].—This character is used in writing and printing to call attention to a similarly marked note in the margin or at the foot of the page.

Section Mark [§] is the character often used to denote a division of a writing or subdivision of a chapter; a paragraph.

Paragraph [¶] is the sign which notes the division of a writing into distinct parts, sections or subdivisions.

Index, or Pointer [⇨] is used to direct particular attention to a note or paragraph. It is sometimes called a *list*.

Asterism [✨ or ✨], or cluster of stars, is used as a sign to direct attention to a passage, or paragraph, especially when such attention is deemed very important.

RHETORICAL FIGURES OF SPEECH

Figures of speech, or tropes, are used to make language more effective by adding special strength and beauty. They are words used in meanings not their own designed to secure a peculiarly happy effect. Thus when the poet writes:

"But yonder comes the powerful king of day,
Rejoicing in the East....."

he uses "king of day" for "sun"; and no one can fail to notice the pleasureable effect produced.

Chief Rhetorical Figures of Speech

Resemblance.	Contiguity.	Contrast or Surprise.
a. Comparison or Simile.	a. Autonomasia— Individual for class.	a. Antithesis and Epigram.
b. Metaphor—	b. Synecdoche— Part for whole.	b. Hyperbole.
1. Identification of like qualities.	c. Metonymy— Cause for effect, badge for class, etc.	c. Irony and Euphemism.
2. Identification of like things.		Arrangement. a. Climax. b. Anti-climax. c. Emphasis, or Inversion.
c. Personification.	d. Allegory.	

But the new word images introduced must really be suited to add strength or beauty. Notice the contrast between these two descriptions of morning:

The saffron morn, with early blushes spread,
Now rose refulgent from Tithonus' bed,
With new-born day to gladden mortal sight,
And gild the courts of heaven with sacred light.
—*Pope's Homer.*

The sun had long since in the lap
Of Thetis taken out his nap;
And, like a lobster boiled, the morn
From black to red began to turn.
—*Butler's Hudibras.*

PRINCIPAL FIGURES.—The common figures are metaphor, simile, allegory, personification, apostrophe, euphemism, hyperbole, antithesis, epigram, irony, climax, onomatopœia (*ôn-ôm-a-tô-pœ'-f-a*), and alliteration.

Simile.—A simile is a comparison between objects that are not of the same class, and usually expressed by either *like* or *as*.

Examples:—The warrior fought like a lion.
His spear was like the mast of a ship.
His wrath was as the storm.

Metaphor.—A metaphor is a comparison which is implied between two objects that are not of the same class. Unlike the simile, it does not state the resemblance, it takes that for granted and proceeds as if the two things were one—we no longer say, "He fought *like* a lion," but, "He *was* a lion in the fight."

Allegory.—Under which head fall Fables and Parables, is an extended Metaphor generally accompanied by Personification.

Example:—Bunyan's *Pilgrim's Progress*; Spenser's *Faerie Queene*.

Personification.—Attributes life to inanimate objects. It speaks of "The *childhood* of a nation," of "a *learned age*" of "the *thirsty ground*," of "*eager darts*," of "*winged words*."

Apostrophe.—Is a Personification accompanied by an address, or an address to an absent person.

Example:—
Ye hills and dales, ye rivers, woods, and plains,
And ye that live and move, fair creatures, tell.

Hyperbole is effective exaggeration.

Example:—
Her eye in heaven
Would through the airy region stream so bright,
That birds would sing and think it were not night.

Antithesis is a contrast of words or thoughts.

Examples:—
Better be first, he said, in a little Iberian village
Than be second in Rome.

Epigram is a short antithesis. It is often of the nature of a proverb.

Examples:—
Some are too foolish to commit follies.
The child is father of the man.

Irony is hidden satire.

Example:—
'Tis pretty, sure, and very probable,
That eyes, that are the frail'st and softest things,
Should be called tyrants, butchers, murderers.

Metonymy.—Metonymy is a figure of rhetoric in which the name of one object is put for another, the two being so related that the mention of one recalls the other.

Examples:—
He writes a good hand (handwriting).
Death fell in showers (bullets).
The kettle boils (water).
The pen is mightier than the sword (intelligence vs. force).

Synecdoche occurs where the part is taken for the whole, the species for the genus, the material for the thing made of it, where the person is designated by the most conspicuous trait of his character or the effect he produces.

Thus we may speak of "all hands being at work," of so many "head" of cattle.

Climax.—Climax, or the rhetorical ladder, is the arrangement of a succession of words, or clauses, in such a way that the weakest may stand first; and that each in turn may rise in importance and make a deeper impression on the mind than that which preceded it.

Anti-climax reverses the order: this is often used in humorous writings.

Examples:—
I came, I saw, I conquered.
Since concord was lost, friendship was lost, fidelity was lost, liberty was lost—all was lost.
We have petitioned, we have remonstrated, we have supplicated, we have prostrated ourselves before the throne.—*Patrick Henry.*

Alliteration repeats the same sound in words for the purpose of adding to the euphony.

Examples:—
Silently out of the room there glided the glistening savage,
Bearing the serpent's skin and seeming himself like a serpent,
Winding his sinuous way in the dark to the depths of the forest.

***Onomatopœia** emphasizes the meaning by adapting the sound to the sense.

Example from *Cataract of Lodore*:—
And sounding and bounding and rounding,
And bubbling and troubling and doubling,
And grumbling and rumbling and tumbling,
And clattering and battering and shattering.

* Name-making; the formation of words in imitation of the sounds made by the things signified: as, buzz, hiss, peewit, etc. It is held by some philologists that all language had its origin in onomatopœia, words formed by this principle being the most natural, and readily suggesting the actions or objects producing the sounds which the words are intended to represent.

Euphemism is the form of expression by which bad or dangerous things are spoken of in gracious terms. As an example we say death is "parting" or "falling asleep."

Emphasis, or Inversion, adds greatly to the precision as well as vigor of style when temperately used. That is, when the *predicate* or *object* are much more impressive or mentally prominent than the *subject* they may with advantage precede it.

Any special emphasis may justify inversion. It is frequently used to indicate a swift or abrupt action—Commands frequently assume this form and owe to it half their force.

Examples:—
Great is Diana of the Ephesians,

Sweet is the breath of morn.

Low she lies who blessed our eyes.

Silver and gold have I none.

Go he shall. Stay not here.

Up goes the fool, and gets sent down again.

FORMS OF WRITTEN ENGLISH

All forms of language composition are either Prose or Poetry; and these in turn are subdivided rhetorically into certain well-recognized special forms.

The following classification shows at a glance the most important of these:

I. PROSE

LETTER WRITING.—Business and public letters, social letters, ceremonial letters and notes.
NARRATION.—Letters, journals, memoirs, biographies, history, travel, news, fiction.
DESCRIPTION.—Descriptions of external objects, of character and its development, of intellectual processes.
EXPOSITION.—Essays, treatises, editorials, reviews, criticisms.
ARGUMENT.—Argumentative essays, debates, briefs, etc.
PERSUASION OR ORATORY.—Orations, addresses, lectures, sermons.

II. POETRY

EPIC AND NARRATIVE POETRY.—The great epics, metrical romances, metrical tales, ballads, pastorals, idylls, etc.
DRAMATIC (including all narrative poetry which presents actors as speaking and acting for themselves).—Tragedy, comedy, farce, opera, melodrama, mask, interlude, etc.
LYRIC.—Odes, sacred and secular songs, elegy, sonnets, simple lyrics.
DIDACTIC.—Moral essays in verse, satiric poetry, etc.

LETTER WRITING, OR CORRESPONDENCE.

A *letter* is a written communication on any subject from one person to another. In other words, it is written conversation, or "speaking by the pen." Letters deserve very careful attention, for no species of composition is more generally used by all classes of persons. Remember that the letter "bespeaks the person," and that many will judge of a person's character and attainments from his correspondence.

The first endeavor of a writer should be to express himself as easily and naturally as in conversation, though with more method and conciseness.

So, before you begin to write a letter, arrange in your mind the ideas you wish to convey; then express them as if you were talking to the person to whom you are writing.

Divisions of a Letter.—In every business or social letter there are five things to consider: the *heading*, the *introduction*, the *body of the letter*, the *complimentary close*, and the *signature*. Business letters should have an introductory address before the salutation.

THE HEADING.—The heading consists of the name of the *place* at which the letter is written, and the *date*. If you write from a city like St. Louis, Boston, or New York, give the door number, the name of the street, of the city, and of the state. If you are at a hotel or a school, its name may take the place of the door number and the name of the street. If in a small country place, give your postoffice address, the name of the county, and that of the state.

The date consists of the month, the day of the month, and the year.

Leave at least one inch vacant on the top of the first page.

Put on the first line, and to the right, your own postoffice *address*; and, either on the same line or on the next, the *date*—that is, the month, day, and year, thus:

25 Endicott Street, Boston, Mass.,

August 6, 1904.

THE INTRODUCTION.—The introduction consists of the *address*—the name, the title, and the place of business or the residence of the one addressed—and the *salutation*.

The *Salutation* and the *Complimentary Close* should be appropriate to the person addressed. (See list of forms of *Salutation and Complimentary Close* on page 737).

Titles of respect and courtesy should appear in the address. Prefix *Mr.* to a man's name; *Messrs.* to the names of several gentlemen; *Miss* to that of a young lady; *Mrs.* to that of a married lady. Prefix *Dr.* to the name of a physician, but never *Mr. Dr.*; *Rev.* to the name of a clergyman, or *Rev. Mr.* if you do not know his christian name; *Rev. Dr.* if he is a Doctor of Divinity, or write *Rev.* before the name and *D. D.* after it.

Salutations vary with the station of the one addressed, or the writer's degree of intimacy with him. Strangers may be addressed as *Sir, Rev. Sir, General, Madam, etc.*; acquaintances as *Dear Sir, Dear Madam, etc.*; friends as *My dear Sir, My dear Madam, My dear Jones, etc.*; and near relatives and other dear friends as *My dear Wife, My dear Boy, Dearest Ellen, etc.* Examples:

Mr. William C. Jones,

Washington, D. C.

DEAR SIR:

Your letter, etc.

American Book Co.,

New York City.

DEAR SIRS:

Kindly send, etc.

THE BODY.—Begin the body of the letter at the end of the salutation, and on the *same* line, if the introduction consists of four lines—you may do so even if the introduction consists of but three—in which case the comma after the salutation should be followed by a dash; otherwise, on the line *below*. (See general observations as to subject matter, style, etc.)

THE CONCLUSION consists of the *complimentary close* and the *signature*. The forms of the complimentary close are many, and are determined by the relation of the writer to the one addressed. In letters of friendship may be used *Your sincere friend, Yours affectionately, Your loving son or daughter, etc.* In business letters, use *Yours, Yours truly, Truly yours, Yours respectfully, Very respectfully yours, etc.* In official letters use *I am, with respect, your obedient servant, I have the honor to be your obedient servant, etc.*

The complimentary close often forms part of the last paragraph; at other times it stands separately, and then it usually begins about the middle of the line. Example:

Very sincerely

Mary E. Shattuck.

A married woman should sign her own given name, but indicate her proper title of address; thus:

Mrs. J. F. Martin.

THE SUPERSCRPTION, on the outside of the envelope, is the same as the address, consisting of the name, the titles, and the full directions of the one addressed. It should be written very plainly, and include the town, county, state, and country, if it goes abroad.

The number of the postoffice box, or the door number and the name of the street, or the name of the county, may stand at the lower left-hand corner.

Style of Letters.—It makes a considerable difference in our style whether we write as officials or business men, or as individual members of society.

The style should be determined in some measure by the nature of the subject, but in a still greater degree by the relative positions of the writer and the person addressed. On important subjects, the composition is expected to be forcible and impressive, on lighter subjects, easy and vivacious; in condolence, tender and sympathetic; in congratulation, lively and joyous. To superiors, it should be respectful; to inferiors, courteous; to friends, familiar; and to relatives, affectionate.

We may, therefore, usefully distinguish letters into three kinds—*official or business* letters and *personal or social* letters, and *ceremonial letters or notes*.

Official or Business Letters.—These include all those written by a person in the capacity of an officer, a professional man, a merchant, a tradesman, etc. They are classed together because they are mainly subject to the same rules.

In writing business letters, the following rules should be observed:

1. Be very *clear*, so that your exact meaning cannot fail to be understood at first sight. Read your letter over with close attention to see that all your thoughts are correctly, fully, and clearly expressed.
2. Take care that the *handwriting* be legible, else you may get *boots for books, matches for hatchets or latches, two ponies* instead of *one hundred pansies*.
3. Be *brief* and to the point; business men have no time to waste.
4. Confine yourself to *strict business*. If you wish to add matters of friendship, it is well to write them on a separate leaf, that the business portion may be separately filed.
5. Write *grammatical and idiomatic* English, and paragraph and punctuate as in other kinds of writing.

Personal and Social Letters.—Under this head may be placed those letters written by any person in his private capacity as an individual. Such letters may be dictated by friendship, by charity or kindness, by politeness, by respect, by gratitude, by self-interest, or by any other reasonable motive.

Among these are the following:

LETTERS OF FRIENDSHIP are such as are dictated by mutual affection between relatives and friends. They should be natural, easy, frank, without the least affectation. "I wish you to open to me your soul, not your library," said Mme. de Sévigné, who wrote exquisitely herself. Such letters may treat of any subject of common interest to the parties concerned. Their language is that of the heart. Kindness, affection, charity, good-nature should dictate, prudence and common sense supervise them.

LETTERS OF CONGRATULATION are written on occasion of the New Year, a birthday, a preferment, or when a friend has met with some uncommon good fortune, and should be dictated by genuine friendship and sincere esteem, and expressed modestly without any exaggerated praise.

LETTERS OF CONDOLENCE.—These require great skill and care. Act like the humane surgeon who touches the wound gently, and only to heal it. If your correspondent knows the sad news already, sympathize sincerely with him. If you are to announce the bad news yourself, prepare the way slowly; state the news as delicately as you can. Express your grief again before you conclude.

LETTERS OF INTRODUCTION OR RECOMMENDATION require special prudence. Think first whether it is proper to write such a letter at all for such a person. Avoid two dangers: do not offend the applicant for a recommendation, do not deceive your correspondent by exaggerated praise of the one recommended.

If the applicant is *worthy* state his merits, express reasonable confidence in him. If he is *unworthy* or doubtfully worthy, give him a letter which he will prefer not to present; for every such letter is an open letter, which the bearer is expected to read before delivering.

A letter of introduction or recommendation should never be sealed, as the bearer to whom it is given ought to know the contents.

LETTERS OF PETITION should be modest and every way moderate. Ingratiate yourself in a manly way; state your reasons briefly but forcibly; show your appreciation of the trouble your correspondent may be put to in consequence of the favor; promise gratitude.

In answering such letters favorably be brief and show your pleasure at rendering the little service asked. In refusing show how reluctantly you do so; give good reasons for it. Express your hope of finding, some other time, a better opportunity of showing your affection or esteem.

LETTERS OF THANKS should never be neglected when a favor has been received. Express your appreciation both of the favor and of the kindness with which it was bestowed. Hope for an opportunity, not of repaying the person, but of showing your gratitude.

Ceremonial Letters and Notes.—Under this heading may be classed notes of *invitation, acceptance, and regret*, both formal and informal.

Informal invitations, acceptances, and regrets are simply friendly notes written always in the *first* person. They vary in form to suit the occasion. They should be cordial in tone, but brief, and are in better taste when confined to the subject of the invitation, outside items being permissible only under special circumstances which may require their mention.

An informal invitation should never, under any circumstances, be answered in the third person.

Invitation:—

*30 Rampart St.,
May 4th, 1917.*

Dear Mr. Brooks:

*We would be very pleased to have you dine with us on
Monday next, the 12th, at seven o'clock, if disengaged.*

*Cordially yours,
Helen Clements.*

Acceptance:

*Eastern Point,
April 29th, 1917.*

Dear Mrs. Clements:

*I will be most happy to dine with you on Monday, the
12th, at seven o'clock.*

*Faithfully yours,
Arthur Brooks.*

Formal notes are always expressed in the third person, and all answers to such should correspond in form and style.

Although invitations to large affairs are usually printed from engraved plates, a few forms are here given, principally to show the correct forms of reply to the several kinds of invitation.

Invitation to a reception:

*Mr. and Mrs. Charles L. Harrington
request the pleasure of your company
on Thursday evening, November tenth,*

[735]

[736]

from eight until eleven o'clock,
896 Fifth Avenue.

Acceptance:

Miss Evelyn Hall
accepts with pleasure
Mr. and Mrs. Charles L. Harrington's
invitation for Thursday evening,
November tenth.

Dinner invitation:

Mr. and Mrs. Henry W. King
request the pleasure of
Mr. and Mrs. Mayhew Marbury's
company at dinner
on Tuesday evening, April tenth,
at eight o'clock,
40 Maple Avenue.

Acceptance:

14 West Street,
March 31st, 1917.
Mr. and Mrs. Mayhew Marbury
accept with pleasure
Mr. and Mrs. Henry W. King's
invitation to dinner on
Tuesday evening, April tenth,
at eight o'clock.

Additional Suggestions.—Always use good paper and black ink. Decorated or highly colored writing papers are in poor taste. Plain white or slightly tinted paper of medium weight is best.

All letters and notes should be written legibly and neatly, carefully punctuated, and absolutely correct as to spelling.
All letters and notes, with a few special exceptions, require a prompt acknowledgment of receipt, if not an immediate answer.
This is especially the case in business letters and those containing enclosures of any kind.
All letters and notes should be courteous. To inferiors in station be kindly; to superiors, respectful; and to equals, friendly.
All letters and notes asking information should be re-read immediately before answering.

[737]

OFFICIAL AND TITLED SALUTATIONS

Titles in the United States are either official or academic.

OFFICIAL TITLES

- TO THE PRESIDENT OF THE UNITED STATES, an official letter commences, *Sir*.
Conclusion: *I have the honor to remain your most obedient servant*.
Salutation of a social letter: *My dear Mr. President*.
Conclusion: *I have the honor to remain most respectfully* [or *sincerely*] *yours*.
Inscription on envelope: *President Woodrow Wilson*.
- TO THE VICE-PRESIDENT, an official letter begins, *Sir*, or *Dear Sir*.
Conclusion: *I have, Sir, the honor to remain your most obedient servant*.
Salutation of a social letter: *My Dear Mr. Marshall*.
Conclusion: as given for president.
Inscription on envelope: *The Vice-President, Thomas R. Marshall*.
- TO A JUSTICE OF THE SUPREME COURT, an official letter begins and concludes as in the case of a vice-president.
Salutation of a social letter: *Dear Mr. Justice White*, or *Dear Justice White*.
Conclusion: *Believe me, truly* [or *most sincerely*] *yours*, etc.
Inscription on envelope: *Mr. Justice Edward D. White*.
- TO A SENATOR, an official letter begins and concludes as to a vice-president.
Salutation of a social letter: *My Dear Senator Lewis*.
Conclusion: as given for a justice.
Inscription on envelope: *Senator Hamilton Lewis* or *To the Hon. Hamilton Lewis*.
- TO A MEMBER OF THE HOUSE OF REPRESENTATIVES, an official letter begins as to a senator.
Conclusion: as in the case of a vice-president.
Salutation of a social letter: *My dear Mr. Clark*.
Conclusion: as given for a justice.
Inscription on envelope: *Hon. Champ Clark*.
- TO A MEMBER OF THE CABINET, an official letter begins and concludes as to a vice-president.
The salutation and conclusion of a social letter are as in the case of a member of the House of Representatives.
Inscription on envelope: *Honorable Robert Lansing, Secretary of State*.
- TO THE GOVERNOR OF A STATE, an official letter begins: *Sir*.
Conclusion: *I have the honor, Sir, to remain your obedient servant*.
A social letter begins: *Dear Governor McCall* or *Dear Mr. McCall*.
Conclusion: *Believe me, truly* [or *most sincerely*] *yours*.
Inscription on envelope: *Governor* [or *Hon.*] *Samuel W. McCall*.
- TO A MAYOR, an official letter begins: *Sir* or *Your Honor*.
Conclusion: Same as a governor.
Social letter begins: *My dear Mayor Rockwood* or *Dear Mr. Rockwood*.
Conclusion: Same as a governor.
Inscription on envelope: *His Honor the Mayor of Cambridge, Wendell D. Rockwood*.

CLERICAL TITLES

- THE POPE—*His Holiness Pope Benedict XV*.
- TO A ROMAN CATHOLIC ARCHBISHOP, an official or a social letter begins: *Most Reverend and Dear Sir*.
Conclusion: *I have the honor to remain your humble servant*.
Inscription on envelope: *The Most Reverend John J. Keane, Archbishop of Dubuque, Iowa*.
- TO A CARDINAL, whether official or social, a letter begins: *Your Eminence*.
Conclusion: as to an archbishop.
Inscription on envelope: *His Eminence Cardinal Gibbons*.
- TO A ROMAN CATHOLIC BISHOP, either an official or a social letter begins: *Right Reverend and Dear Sir*.
Conclusion: as to an archbishop.
Inscription on envelope: *To the Right Reverend Philip J. Garrigan, Bishop of Sioux City, Iowa*.
- TO A PROTESTANT BISHOP, an official letter begins as in the case of a Roman Catholic bishop. A social letter begins: *Dear Bishop Lawrence*.
Conclusion: *I have the honor to remain your obedient servant*, or *I remain respectfully* or *sincerely yours*.
Address on envelope: The same as to a Roman Catholic bishop.
- TO AN ARCHBISHOP OF THE ANGLICAN CHURCH, an official letter begins: *My Lord Archbishop, may it please your Grace*.
Conclusion: *I remain, My Lord Archbishop, your Grace's most obedient servant*.
Salutation of a social letter: *My dear Lord Archbishop*.
Conclusion: *I have the honor to remain, my dear Lord Archbishop*.
Inscription on envelope: *The Most Rev. His Grace the Archbishop of York*.
- TO AN ANGLICAN BISHOP, an official letter begins: *My Lord*.
Conclusion: *I have the honor to remain your Lordship's obedient servant*.
Salutation of a social letter: *My Dear Lord Bishop*.
Conclusion: *I have the honor to remain, my dear Lord Bishop, faithfully yours*.
Inscription on envelope: *To the Right Rev. the Lord Bishop of Oxford*.

ENGLISH TITLES OF ROYALTY, NOBILITY AND OFFICE

The following list illustrates the various titles used for the different ranks among individuals either in the complimentary address or superscription on the envelope:

1. *In Letters or Conversation*.
2. *The Directions of Letters*.

THE ROYAL FAMILY

- THE KING—
1. *Sir*; *Most Gracious Sovereign*; *May it please your Majesty*.
2. *To the King's Most Excellent Majesty*.
- THE SONS AND DAUGHTERS, BROTHERS AND SISTERS OF SOVEREIGNS—
1. *Sir*, or *Madam*, *May it please your Royal Highness*.
2. *To His Royal Highness the Prince of Wales*.
To Her Royal Highness the Duchess of Cambridge.
- OTHER BRANCHES OF THE ROYAL FAMILY—
1. *Sir*, or *Madam*, *May it please your Highness*.
2. *To His Royal Highness the Duke of Cambridge*; or, *To Her Highness the Princess Mary of Cambridge*.

THE NOBILITY

- A DUKE, or DUCHESS—
1. *My Lord*, or *My Lady*, *May it please your Grace*.
2. *To His Grace the Duke of Bedford*; or, *To Her Grace the Duchess of Bedford*.
- A MARQUIS, or MARCHIONESS—
1. *My Lord*, or *My Lady*, *May it please your Lordship*, or *May it please your Ladyship*.
2. *To the Most Noble the Marquis*, or *Marchioness, of Westminster*.
- AN EARL or COUNTESS—The same.
To the Right Honorable the Earl, or *Countess, of Shrewsbury*.
- A VISCOUNT or VISCOUNTESS—
1. *My Lord*, or *Madam*, *May it please your Lordship*, or, *May it please your Ladyship*.
2. *To the Right Honorable Viscount*, or *Viscountess, Lifford*.
- A BARON or BARONESS—The same.
To the Right Honorable, the Lord Wensleydale, or *The Lady St. John*.
- THE WIDOW OF A NOBLEMAN is addressed in the same style, with the introduction of the word *Dowager* in the superscription of her letters.
To the Right Hon. the Dowager Countess of Chesterfield.
- THE SONS OF DUKES AND MARQUISES, AND THE ELDEST SONS OF EARLS, have, by courtesy, the titles of *Lord* and *Right Honorable*; and all the daughters have those of a *Lady* and *Right Honorable*.
- THE YOUNGER SONS OF EARLS, AND THE SONS AND DAUGHTERS OF VISCOUNTS AND BARONS, are styled *HONORABLE*.

[738]

A MEMBER OF HIS MAJESTY'S MOST HONORABLE PRIVY COUNCIL—

1. Sir, or My Lord, Right Honorable Sir, or My Lord, as the case may require.
2. To the Right Honorable —, [14] His Majesty's Principal Secretary of State for Foreign Affairs.

AMBASSADORS AND GOVERNORS—

1. Sir, or My Lord, as the case may be; May it please your Excellency.
2. To his Excellency the French (or other) Ambassador.
3. To his Excellency —, [14] Lieutenant General and General Governor of that part of the United Kingdom called Ireland.

JUDGES—

1. My Lord, May it please your Lordship.
2. To the Right Honorable —, Lord Chief Justice of England.

THE LORD MAYOR OF LONDON, YORK, OR DUBLIN, AND THE LORD PROVOST OF EDINBURGH, during office—The same.

1. My Lord, May it please your Lordship.
2. To the Right Honorable —, Lord Mayor of London. To the Right Honorable —, Lord Provost of Edinburgh.

THE LORD PROVOST of every other town in Scotland is styled Honorable.

THE MAYORS OF ALL CORPORATIONS (excepting the preceding Lord Mayors), and the Sheriffs, Aldermen, and the Recorder of London, are addressed Right Worshipful; and the Aldermen and Recorders of other Corporations, and the Justices of the Peace, Worshipful.

[14] Here write the name, and specify the title or rank of the person addressed, as "The Right Honorable the Earl of Wimbourne."

THE PARLIAMENT

HOUSE OF PEERS—

1. My Lords, May it please your Lordships.
2. To the Right Honorable the Lords Spiritual and Temporal, in Parliament assembled.

HOUSE OF COMMONS—

1. May it please your Honorable House.
2. To the Honorable the Commons of the United Kingdom of Great Britain and Ireland.

THE SPEAKER OF DITTO—

1. Sir, or Mr. Speaker.
2. To the Right Honorable James W. Lowther, the Speaker of the House of Commons.

A MEMBER OF THE HOUSE OF COMMONS NOT ENNOBLED—

1. Sir.
2. To Thomas Hughes, Esq., M.P.

NARRATION

Narration is a species of composition which relates the particulars of a real or fictitious event in the order of their occurrence. In a wider meaning, narration is the statement of successive facts. In a story or drama the *plot* is the series of incidents which form the skeleton of the story.

If the subject deals with real facts, as in biography, or history, or news, the rule of *fidelity* to the truth is essential. It requires that not only the main facts shall be true as they are narrated, but also that all the striking and important details be faithfully stated as they are known to have occurred or happened.

Biography.—After the *letter*, the simplest form of composition is biography. The order of events from youth to age is established.

This style of composition is strongly to be recommended for beginners. It affords excellent practice for all. It promotes a habit of putting things in order.

Outline scheme of biography:—

1. When was he born?
2. Where was he born?
3. Who were his parents?
4. Where was he educated?
5. Whom did he marry?
6. What was his profession?
7. What great work did he do?
8. When and where did he die?
9. Where was he buried?

Answer each question in a complete sentence.

You have nine statements in chronological order.

Each of these can be expanded into one or more paragraphs.

Fiction and Drama.—If the composition is a story or drama, the principal requirements involve the following:

The story should develop one or more of the following: plot, situation, character.

The story should have interest.

1. It should begin attractively and as directly as possible.
2. It must move, and not simply "mark time."
3. It may be made effective by dramatic situations and turning points.
4. It may use description, but the description must be closely connected with the story and must not hinder the movement.
5. It should discriminate in the number and the importance of details.
6. It may make effective use of suspense and suggestion.
7. It should have no inconsistency in the speech or the actions of the characters.
8. It should have an effective ending.

News, or the Newspaper "Story," is another very important form of narrative. The newspaper is the great popular educator of the day, and in its columns are found not only excellent examples of vivid and telling narratives, but frequently excellent types of spontaneous writing.

News and news reporting require accuracy, clearness, brevity, and a style that either charms, or compels interest. Indeed, it too frequently happens that to secure the element of interest practically all else is sacrificed.

Reporting and news writing are best learned by careful study of the daily papers, and from constant practice. Shorthand is an invaluable aid in securing the exact words of the speaker if the news takes the form of an interview, or report of a public address or meeting.

The relation of the "facts" and "story" may be illustrated in the following:

Report of exact words of the speaker:—

"I assure you, my friends, that I for my part, will do all I possibly can to resist this measure. You know that I have always been opposed to it; as recently as yesterday I spoke against it here in this very hall. Do you think that the people of this country will tolerate such injustice? I am sure they will not."

How the newspaper report appeared:—

He assured his friends that he for his part would do all he possibly could to resist that measure. They knew that he had always been opposed to it; as recently as the day before he had spoken against it there in that very hall. Did they think, he asked, that the people of this country would tolerate such injustice? He was sure they would not.

EXPOSITION

Exposition is a form of composition designed to explain. Its important characteristic is clearness, and it, therefore, makes large use of illustration.

The main points may be stated in various ways in order to make them clear.

Essays and editorials are among the best known forms of exposition.

Essay.—An essay is a short composition upon any subject. The subject may be of any kind whatever, one fit for treatment, and with great fulness, in any of the species of discourse described above, or one without sufficient dignity for such treatment. No other species of writing ranges over so wide and varied a field of topics—nothing less than that of all others combined—and none other allows such freedom and diversity in the handling.

In *style of thought* the essay may be dreamy and semi-poetical, and charm by its beauty, it may be simply instructive or critical, it may blaze with its brilliancy, sting with its satire, convulse with its humor, convince with its logic, inflame with its appeal and move to instant duty. The author may wander off in leisurely excursions to the right and the left, and load his pages with gleanings by the way; or, like the orator, he may keep his eye on the point he would reach, and move, with the directness of an arrow's flight, toward it.

The *style of expression* should fit the thought, and October woods are not more varied in color than this department of literature in utterance.

Outline of the Essay.—1. Give a clear definition of the subject or proposition to be discussed, amplified, paraphrased, or explained.

2. Set out the reason for, or the truth of, the proposition.
3. Add the confirmation of further proofs, including demonstration of the unreasonableness of the contrary.
4. Illustrate the truth of the proposition by comparison or analogy from nature or art.
5. Give direct examples or instances to corroborate the truth.
6. Quote the testimony of standard authors.
7. Conclude by summing up, with pertinent observations.

Remember that all this working to a formula is only a training in the habit of clear thinking—a mental discipline.

When you can do without the formula, and not till then, you will begin to be a writer.

Editorials are, in point of fact, simply little essays, usually following closely the news or issues of the day. Their function is to elucidate, summarize, inform, persuade, or merely comment. In their highest form they are to prose writing what the sonnet is to verse; but it must be confessed that numerous editorials are so completely dominated by the so-called "editorial policy" of newspaper owners, or colored by one of the various hues of partisanship, that their otherwise beneficent influence and power are largely neutralized.

Description.—We mean by a *description* the delineation of some object or scene. Narration deals with successive facts; description with objects that exist at the same time. We rarely find any literary production of great length which is entirely descriptive; but descriptions are often introduced into narratives with happy effect.

Sometimes they serve the purpose of making the narration impressive, by moving the passions of the reader. At other times they are intended to make the events more intelligible. Thus we have seen that some narratives of battles are hard to follow because the writer has neglected to give us a clear description of the battle-field.

Descriptions frequently serve as ornaments, affording an agreeable variety to the narration, and presenting scenes of striking interest to the imagination.

RULES.—The governing rules in description are the following:

1. In every good description a point of view should be established.
2. The description should be governed by the point of view.
3. The general outline of the picture should, ordinarily, be given first.
4. The number of details should be so few and so insignificant as to make a vivid picture.
5. The order of the details should be determined by the character of the object described.

Argument.—This form of composition is designed to prove the truth or the falsity of a proposition.

A *brief* is a summary of an argument showing the development of the argument by a series of headings and sub-headings.

The first step in the argument should be to define the terms of the proposition or to determine the facts in the case.

State reasons to establish facts.

The conclusion should be warranted by the premises.

Illustrations may be used effectively, but not conclusively.

Analogy should be used for illustration, not as a basis for conclusions.

Arguments should usually be arranged in the order of their strength, the strongest last.

Poetry is usually classified as epic, lyric, dramatic, and didactic.

Epic Poetry is that which deals with the life and adventures of some real or mythic personage, called a hero.

1. The *great epic* is considered the highest effort of poetic talent, on account of the loftiness of its conceptions, the dignity of its character, and the difficulty of its execution. Few epic poems have gained general admiration. Those most highly prized are Homer's *Iliad* and *Odyssey*; Virgil's *Aeneid*; Milton's *Paradise Lost*; and Tasso's *Jerusalem Delivered*.

2. The *Metrical Romance* differs from the great epic in its theme, which is less serious; its metre, which is lighter; and its control of events, which is mainly human; the love element is more prominent in this form of the epic. Examples: Scott's *Marmion* and *The Lady of the Lake*.

3. The *Tale* is a simple form of narrative poetry telling a complete story. Examples: Chaucer's *Canterbury Tales*; Tennyson's *Enoch Arden*.

4. The *Ballad* is a direct, rapid, and condensed story, having peculiarities of phrase and poetic accent. Examples: *Chevy Chase*; Coleridge's *Ancient Mariner*.

5. *Pastorals* and *Idylls* have a great deal of description, often of simple country scenes, mingled with the narrative. Examples: Goldsmith's *Deserted Village*; Tennyson's *Idylls of the King*.

Dramatic poetry tells a story by means of characters speaking and acting in such a way as to develop a plot. The drama is divided into acts, often five, the fifth act showing the results of the plot which has been developing.

The classes of dramatic poetry are tragedy and comedy.

Tragedy deals with the grave situations and problems of life and engenders in the spectator noble emotions.

Comedy deals with the pleasanter and more trivial side of life and chooses its subjects from everyday follies, accidents, or humors.

Lyric poetry expresses the deepest emotions of sentiment of the poet. The lyric, as the word suggests, was originally designed to be sung to the music of the lyre.

Lyric poetry includes five classes, as follows:

Song may be either sacred or secular.

The *Ode* is the loftiest form of lyric, and expresses great range and depth of feeling. This range of emotion often varies the metre. Examples: Tennyson's *Ode on the Death of the Duke of Wellington*; Lowell's *Commemoration Ode*.

The *Elegy* laments the fleeting condition of human affairs. Examples: Gray's *Elegy Written in a Country Churchyard*; Milton's *Lycidas*; Tennyson's *In Memoriam*.

The *Sonnet* is a short poem of fourteen iambic pentameter lines, and had originally a prescribed arrangement of rhyming lines. The great English sonnet writers are Shakespeare, Milton, Wordsworth, and Mrs. Browning.

Many lyrics have none of the special aims already mentioned. These may be called *Simple lyrics*. Example: Burns's *To a Daisy*.

Didactic verse is not the highest type of poetry.

Its aim is not to give pleasure, but to instruct.

Example: Pope's *Essay on Man*.

POETICS

Poetry differs from prose in three particulars: in its *purpose*, in its *style*, and in its *form*.

The chief object of poetry is to give pleasure. Of all literature it is the most spontaneous because addressed particularly to the feelings.

It has its own diction and imagery, conforming to the order, gradations and subtleties of its thought. Like other forms of genius, too, it is permitted certain liberties and variations of language or expressions in order to avoid monotony and maintain the life and music of the verse. These are more strictly rhetorical, however, and next in importance to the poetic *content* is poetic *form*.

By poetic *form* we mean the mould and measure whereby, in English, poetry gets itself into the expression adapted to produce its designed effect.

Metre.—All impassioned language, as in eloquence for instance, tends to fall into a more or less regular rhythmic swing. In poetry, which is both impassioned and imaginative, this rhythm is timed to definite lengths and called *metre*, which is the Greek word for measure.

The unit of poetic measure is the foot. A foot is a combination of syllables, two or three distinguished, after the Greek, as long and short, but more truly accented and unaccented, because our syllabic values, unlike the Greek, are more accentual than quantitative. A variety of poetic feet are employed in English, whose names and values are derived from Greek prosody.

POETIC FEET.—For brevity of description a notation is used to designate the foot: the sign (—) for a long, and (◡) for a short syllable. The kinds of feet in most common English use, here marked by their signs and illustrated by a word, are: Iambic or Iambus, a short and a long (◡ —, e. g. forbid); Trochaic or Trochee, a long and a short (— ◡, e. g. lightly); Spondaic or Spondee, two longs (— —, e. g. all day); Anapestic, two shorts and a long (◡ ◡ —, e. g. arabesque); and Dactylic, a long and two shorts (— ◡ ◡, e. g. silently).

Other feet, such as Tribach, three shorts (◡ ◡ ◡, e. g. rapidly); Amphibrach, short long short (◡ — ◡, e. g. tremendous), and Amphimacer, long short long (— ◡ —, e. g. undismayed), are used less frequently, and only as blends with other measures.

VERSE.—The first combination of poetic feet results in the verse or line, somewhat analogous to the clause in a prose sentence. The word verse means by derivation a *turning*, perhaps because where it reaches a certain designed length the writer turns back and begins a new line. The kinds of verse employed are named by Greek names according to the number of feet they contain; and along with this, if the measure is fully described, is named the kind of foot.

The same notation as given above is kept up through the line, the feet being separated by an upright line. Thus, taking the Iambic foot as unit, we note: Monometer, one-measure, or one foot long (◡ —); Dimeter, two-measure (◡ — | ◡ —); Trimeter, three-measure (◡ — | ◡ — | ◡ —); Tetrameter, four-measure (◡ — | ◡ — | ◡ — | ◡ —); Pentameter, five-measure (◡ — | ◡ — | ◡ — | ◡ — | ◡ —); and Hexameter, six-measure, (◡ — | ◡ — | ◡ — | ◡ — | ◡ — | ◡ —). English names are sometimes used, as 8 and 7, or fourteeners.

A few poetic lines may here be given, with their notation, by way of illustration:

◡ — | ◡ — | ◡ — | ◡ —
I wan | dered lone | ly as | a cloud
(Iambic tetrameter)

— ◡ | — ◡ | — ◡ | — ◡
Heard the | lapping | of the | water
(Trochaic tetrameter)

— ◡ | — ◡ | — ◡ | — ◡ | — ◡ | — ◡
This is the | forest pr | imeval; the | murmuring | pines and the | hemlocks
(Dactylic hexameter)

◡ — | ◡ — | ◡ — | ◡ —
Oh, young | Lochinvar | is come out | of the West
(Anapestic tetrameter)

— ◡ | — ◡ | — ◡ | — ◡
One more un | fortunate
(Dactylic dimeter)

◡ — | ◡ — | ◡ — | ◡ — | ◡ —
This was | the noblest | Ro | man of | them all
(Iambic pentameter)

At some place within a long line, pentameter or hexameter, occurs a natural pause, called the *cæsura*. The continual varying of the place of the *cæsura* is one means of breaking up the monotony to which blank verse (Iambic pentameter unrhymed) tends.

Stanzas.—The next step of procedure as the combination of poetic elements goes on from the single verse, is some form of *stanza* structure.

The simplest approach to the stanza, employed principally in what is called Heroic verse, is the couplet (also called the Heroic couplet), two lines, Iambic pentameter, rhymed, and generally pausing at the end of the second line. They form only partially a stanza, however, because these couplets go on, according to the requirements of the thought, to group themselves in paragraphs after the manner of prose. Pope is the great master of the heroic couplet.

Sometimes, if the lines are long, a poem is made up of couplet stanzas, as in Tennyson's *Locksley Hall*.

There are certain standard stanza structures, such as the Elegiac stanza, four lines Iambic pentameter, rhymed either in pairs or alternately, of which Gray's *Elegy* (rhymed alternately) is the type; the Ballad stanza, four lines Iambic pentameter and trimeter alternating, with second and fourth lines rhymed together, sometimes also first and third; various hymn stanzas, designated Long Metre (L. M.), Common Metre (C. M.), Short Metre (S. M.), 8 and 7, 6 and 4, etc., which can be studied in any hymn-book; and most elaborate of all, the Sonnet, a fourteen-lined stanza which is also a whole poem, with a rather intricate rhyme scheme.

Generally speaking, however, the liberties and varieties of stanza structure, as to kind of measure, length of line and stanza itself, combination of long and short line, and rhyme scheme, is almost unlimited.

RHYME.—A new poetic element enters into the stanza: the element of *rhyme*. The most prominent regulative feature of English lyric verse, perhaps, is the rhyme by which recurring periods are grouped. Technically speaking, there are three kinds of rhyme, only one of which plays an important, or at least essential part, in modern English poetry.

1. *Beginning rhyme*, or alliteration (e. g. the mother of months), which in Anglo Saxon poetry was the main principle of verse, but is now introduced only furtively and delicately.

2. *Middle rhyme*, or assonance, wherein only the vowels rhyme (e. g. blarney, charming), which is introduced with even more caution than alliteration.

3. *End-rhyme*, which is so constant and essential a principle of the stanza that it needs no further definition here.

In the skillful management and disposition of the end-rhymes, to produce its poetic effects without monotony or undue obtusiveness, there is room for the finest poetic taste and workmanship. On single rhymes (e. g. face, embrace), double rhymes (e. g. rally, sally), and triple rhymes (e. g. pentameter, sham metre), which explain themselves, there is no occasion to enlarge.

The arrangement of lines in a stanza is indicated, in brief notation, by letters of the alphabet. Thus *a a b b* indicates a four-line stanza in which the first and second lines rhyme, and the third and fourth; *ab ab*, a stanza in which the rhymes alternate; *a b b a*, a stanza like that of Tennyson's *In Memoriam*, in which this arrangement is reversed.

In this way, with the use of the other notation mentioned, a complete description of poetic construction, from foot to stanza, may be made in very short space.

HOW RHYTHM IS APPLIED.—Lyric poetry, of which the type is the song; was originally designed to be associated with music. It is in this class of poetry, especially, that the stanza form and the rhyme system prevail; but besides the song and the ballad, which most suggest musical accompaniment, there are the ode, the elegy, the sonnet, the didactic poem, and many others, with which music, except in the natural melody of the verse, has little to do.

In epic poetry, the vehicle of great national deeds and ideals, and the enshrining of deep religious and moral truths, the verse employed is generally blank verse (i. e. unrhymed verse), in paragraphs instead of stanzas, and generally Iambic pentameter. For less sublime or universal purposes, however, this epic class has been enlarged to include narrative and romantic poetry, often rhymed, as in Chaucer's *Canterbury Tales* and Scott's *The Lady of the Lake*; and sometimes in stanzas, as in Spencer's *Fairy Queen*.

Dramatic poetry, designed for representation on the stage, and written in blank verse of a less severe and rigid artistic kind than in the epic, is modeled more after the natural rhythm of impassioned speech. The range and tone of such dramatic verse is very generous and elastic; from the free and colloquial, as in Browning's dramatic monologues, up to the so-called closet drama, designed to be read rather than played, wherein the artistic demands are as subtle and exacting as in the epic, and the sentiment generally more intense.

While, therefore, the ancient classification remains fundamental and true, the modern art of printing and the discontinuance of the custom of reading aloud, have operated to enlarge the scope of poetry within these elemental lines till every requirement of impassioned and imaginative utterance is freely open to it, in vital and enduring forms.

WORDS AND PHRASES FROM THE MODERN FOREIGN LANGUAGES.

Including proverbs, maxims, quotations, mottoes, idioms, allusions, references, and numerous terms used in law, literature, cookery, the drama, social life, and everyday affairs.

KEY TO PRONUNCIATION

ā, as in farm, father; *â*, as in ask, fast; *a*, as in at, fat; *â*, as in day, fate; *â*, as in care, fare; *e*, as in met, set; *ē*, as in me, see; *ē*, as in her, ermine; *i*, as in pin, ill; *î*, as in pine, ice; *o*, as in not, got; *ô*, as in note, old; *ô*, as in for, fought; *oo*, as in cook, look; *oo*, as in moon, spoon; *u*, as in cup, duck; *û*, as in use, amuse; *û*, as in fur, urge; *th*, as in the, though; *y*, as in yet, you; *ow*, as in cow, now; *ng*, as in sing, ring; *ch*, as in church, choose.

FOREIGN SOUNDS

ö cannot be exactly represented in English. The English sound of *u* in *burn* is perhaps the nearest equivalent to *ö*. *ü* cannot be exactly represented in English. The English sound of *u* in *lute* and *duke* resembles the original sound of *ü*. *n* represents the nasal tone (as in French) of the preceding vowel, as in encore (*än-kór*). *κ* represents *ch*, as in German *ich*, *ach*, *zh*, sound of *s* in *pleasure*, *j* and *g* before *i* or *e* in Spanish, strongly aspirated *h*.

Phrases not designated are from the French; those from other languages are distinguished thus: (Ger.)—German; (It.)—Italian; and (Sp.)—Spanish.

A

a bas (*à bà*), down.

a bas le traître (*à bã 'le tretr*), down with the traitor.

a beau jeu beau retour (*à bò zhò 'bò retóór*), one good turn deserves another.

a bon chat, bon rat (*à bôn rá*), (to a good cat, a good rat), well matched; set a thief to catch a thief.

a bon marché (*à bôn mār shā*), cheap.

abonnement (*à bôn mǎn*), subscription.

a bras ouverts (*à brázòò ver*), with open arms.

abrégé (*à brā zhā*), abridgment.

absence d'esprit (*áp sǎns des prē*), absence of mind.

a causa persa, parole assai (It.), (*à ká 'òó zǎ per 'sa, pā ró 'láäsá 'è*), when the cause is lost, there is enough of words.

accueil (*à kó 'è*), reception; greeting; welcome.

à charge (*à shárzh*), at expense.

à cheval (*à she vāl*), on horseback.

à compte (*à kónt*), on account.

à corps perdu (*à kór per dù*), headlong; neck or nothing.

à coup sur (*à kóò sūr*), with certainty; surely.

à couvert (*à kóò ver*), under cover, protected, sheltered.

acqua Tofana (It.), (*à kwá tò fā 'nā*), a subtle poison.

à demi (*à de mi*), by halves.

à dessein (*à de sǎn*), designedly.

à deux mains (*à dò mǎn*), (for both hands), having a double office or employment.

adieu (*à dēò*), (I commit you to God), good-bye.

adieu, la voiture, adieu, la boutique (*à dēò ', là vwá tūr ', à dēò 'là bōò tèk*), (good-bye, carriage; good-bye, shop), all is over.

à discrétion (*à dés krā sēón*), at discretion, unrestrictedly.

à droite (*à drwát*), to the right.

affaire d'amour (*à fer dà móör*), a love affair.

affaire d'honneur (*à fer dô nôr*), an affair of honor, a duel.

affaire du coeur (*à fer dù kór*), an affair of the heart, a love affair.

affiche (*à fēsh*), a placard; a notice; bulletin.

affreux (*à frô*), frightful.

à fin (*à fǎn*), to the end or object.

à fond (*à fôn*), to the bottom; thoroughly.

à forfait (*à fór fe*), by contract, by the job.

à gauche (*à gósh*), to the left.

à genoux (*à zhe nôò*), on one's knees.

agneau (*à-nyò*), lamb.

à grands frais (*à grǎn fre*), at great expense.

a haute voix (*à ôt vwá*), loudly; openly.

a huis clos (*à wé kló*), (with closed doors), secretly; in camera.

aide-toi, et le ciel t'aidera (*ed twá ', à le séel ted rá*), help yourself, and Heaven will help you.

air distingué (*er dés táv gā*), a distinguished appearance.

air noble (*er nôbl*), a distinguished, patrician air, manner, or presence.

à la (*à lá*), **au** (*ò*), **aux** (*ò*).—With; according to; after the manner of; as *huitres aux champignons*, oysters with mushrooms.

If a dish is cooked, or served, or made, with anything as an ingredient or garnish, the dish may be said to be "*à la*" that substance. So it may be possible to ascertain the meaning of phrases not given below by looking elsewhere in the vocabulary under the word used with the words "*à la*."

à l'abandon (*à lá bãñ dön*), disregarded, uncared for.

à la béarnaise (*à lá bã-ār-náz*).—With a sauce of tarragon vinegar in which shallots have been boiled till it is reduced, then combined with egg yolks and butter, and beaten in a bain-marie, then seasoned with red pepper and lemon juice.

à la béchamel (*à lá bã-shā-mel*).—After the fashion of Béchamel (a French gastronomer); said of a sauce (see **Bechamel**); also prepared or served with this sauce.

à la belle étoile (*à lá be lá twál*), under the canopy of Heaven; in the open air.

à la Bercy (*à lá bãr-sé*).—Served with béarnaise sauce, stuffed green pepper and stuffed tomato.

à la bigarade (*à lá bê-gā-rád*).—Flavored with (Seville) orange juice or peel.

à la bonne femme (*à lá bôn fām*).—Of, or in the style of, the housewife; specifically said of a kind of maigre soup made with fish, bouillon, legumes, and an assortment of vegetables.

à la bonne heure (*à lá bó nôr*), well-timed, in good time; favorably; good.

à la bordelaise (*à lá bór-de-láz*).—With Bordeaux wine; said of various preparations containing it; as of a sauce, with garlic, shallots, or onions, chopped mushrooms, and a piece of marrow; also with sauce a *la bordelaise*.

à la bourguignotte (*à lá boor-gé-nyòh*).—Generally prepared with the addition of red wine of Burgundy, or of Bordeaux, or of the Midi (*i. e.*, meridional provinces of France). At Bordeaux, or when made elsewhere with Gironde wine, the dish would be *à la bordelaise*.

à la caledo'nian (*à lá*).—Boiled slowly in plain water and then baked with dressing of butter, chopped parsley, and a little lemon juice; said of finnan haddie when so cooked.

à la Camerani (*à lá ká-má-rá 'nē*).—After the fashion of Camerani; said of a kind of rich chicken-liver soup.

à la campagne (*à lá kǎn pāny*), in the country.

à la carte (*à lá kárt*), by the card.

à la Chateaubriand (*à lá shā-tò-brē-ǎn*).—With maitre d'hôtel butter.

à la chevreuil (*à lá she-vrú 'y*).—Served with a savory sauce; said of filets of beef.

à la chipolata (*à lá ché-pó-lá 'tā*).—Containing an addition of the strongly flavored Italian sausages, or the mince with which they are filled.

à la chiffonade (*à lá shé-fo-nād*).—See **chiffonade**.

à la cocotte (*à lá kò-kot*).—Baked (as eggs) in a cocotte, with butter and cream, or with cheese, or the like, and served in a cocotte.

à la crapaudine (*à lá krá-pò-dén*).—Like a crapaudine (the flat piece of iron on which a grate pivot rests); said of grilled chicken, pigeon, etc., when prepared by boning, removing the legs and wings, and pressing flat.

à la Créole (*à lá krá-òh*).—With tomatoes.

à la Croissy (*à lá krwá-sé*).—Containing carrots in quantity, or at least strongly flavored with them; said specifically of a puree of onions, carrots, turnips, and parsnips stewed in coulis. According to others, containing turnips in quantity, or strongly flavored with them.

à la daube (*à lá dòb*).—Stewed in daube; said specifically of dishes cooked with small square pieces of salt pork, the round slices of carrots, glazed onions, and turnips.

à la Dauphiné (*à lá dô-fē-nā*).—With various vegetables, spinach, lettuce, leek, onions, sorrel, beets, etc.; said of a kind of soup.

à la Dauphinoise (*à lá dô-fē-nwáz*).—Generally, sauced over with a thick sauce (or with egg yolk), bread-crumbed, and then fried.

à la dérobee (*à lá dā ró bã*), stealthily.

à la diable (*à lá dē-á 'b*).—Devised.

à la faveur (*à lá fá vör*), by the favor of.

à la financière (*à lá fē-nǎn-syár*).—With extract of truffles (literally, after the style of a financier); said of a variety of espagnole sauce, and of dishes served with it.

à la Flamande (*à lá flá-mǎnd*).—Containing cabbage, but more particularly Brussels sprouts, and, usually turnips and carrots cut in big slices.

à la Florentine (*à lá fló-rǎn-tén*).—See **à l'Italienne**.

à la Française (*à lá frǎn sez*), in French fashion.

à la Génevoise (*à lá zhā-ne-vwáz*).—Cooked with champagne; said of certain dishes of fish.

à la godiveau (*à lá gó-dē-vò*).—With balls made of mincemeat, usually of veal.

à la Grecque (*à lá grek*), after the Greek fashion.

à la Holstein (*à lá hól 'stín*).—Fried, and served with a fried egg, sardelles, capers, pickled beets, and pickles, and sometimes scraped horse-radish.

à la jardinière (*à lá zhár-dé-nyár*).—Made with a typical collection of cooked vegetables, as soups, ragouts, and removes. See **jardiniere**.

à la julienne (*à lá zhü-lyen*).—With various vegetables sliced in strips, as carrots, turnips, leeks, onions, celery, lettuce, tarragon, sorrel; said especially of a kind of rich stock soup. Also said of potatoes cut in very slender slices and fried crisp floating in hot fat.

à l'Algérienne (*à lál-zhá-rē-en*).—Cooked with slices of raw ham; said of a preparation of fowl.

à la Languedoc (*à lá lǎng-dók*).—Cooked with or in olive oil; with olive oil.

à l'Allemande (*à lál-mǎnd*).—Having a German provincial peculiarity of preparation, as a garnish of sauerkraut, prunes stewed in wine, quenelles of potatoes, etc.

à la Loren 'zo (*à lá*).—Made of minced crab meat, put on toast spread with anchovy paste, then all covered with parmesan cheese and bread crumbs, buttered, browned in the oven, and served.

à l'Alsacienne (*à lál-sā-syen*).—With pork and sliced furters; also with onions and pork.

à la lyonnaise (*à lá lē-ò-náz*).—With flaked or flaked fried onions; as, potatoes *à la lyonnaise*, or lyonnaise potatoes; sauce *à la lyonnaise*, or Lyons sauce, that is, espagnole sauce with flaked onions fried in oil.

à la macedoine (*à lá mã-sá-dwǎn*).—Made with or of a typical collection of green vegetables, mostly in white sauce; also applied to collections of ripe fruit imbedded in jellies, etc.

à la Maintenon (*à lá man-te-nôn*).—A term variously used to designate a mode of cooking mutton or lamb chops; as, (a) wrapped in caul; (b) garnished with cockscombs and truffles; (c) served with a soubsise; (d) served with financière sauce; (e) served with d'Uxelles sauce, etc.

à la maître d'hôtel (*à lá mã 'tr dô-tel*).—Prepared by a substantial, but homely, modest sort of cooking. Also served with maitre d'hôtel butter.

à la Marengo (*à lá mã-ren gò*).—With some garlic and oil.

à la Marseillaise (*à lá mār-sây-áz*).—With Marsala wine.

à la Ma ryland (*à lá*).—With a sauce of butter and cream, with or without wine. It is like *à la Newburgh*, but less rich.

à l'Américaine (*à lá mã rē ken*), after the American fashion.

à la Meyerbeer (*à lá mã-ür-bár*).—Shirred and served with broiled kidney and truffle sauce; said of eggs.

à la Milanaise (*à lá mê-lā-náz*).—See **à l'Italienne**.

à la mode (*à lá môd*), in the fashion; according to the custom or fashion.

à la mode de Caën (*à lá môd de kǎn*).—A term used to designate tripe prepared with vegetables, leeks, wine, cognac, etc.

à la Napolitaine (*à lá nā-pò-lé-tán*).—See **à l'Italienne**.

à la neige (*à lá nǎzh*).—In some form that suggests snow, as with white-of-egg froth, or in balls of white boiled rice, or the like.

à la New 'burgh (*à lá*).—With a sauce made of cream, egg yolks, Madeira or sherry wine, and butter shaken in a dish over a slow fire until they thicken. Said also of this sauce.

à l'Anglaise (*à lǎn glez*), after the English fashion.

à la nivernaise (*à lá nē-vár-náz*).—Containing a nivernaise; said of a kind of soup *à la julienne*. See **nivernaise**.

à la Normande (*à lá nôr-mǎnd*).—Generally, with apples in the composition of the dish in some shape or other.

à la Parisienne (*à lá pá-rē-zéen*), after the Parisian fashion.

à la Périgord (*à lá pâ-ré-gór*).—Flavored with, or consisting of, or containing of, truffles—alluding to the circumstance that these mushrooms grow of excellent size and quality in the province

- of Perigord.
- à **la Polonoise** (*â lă pô-lô-nâz*).—Having red beets or red cabbage, so as to have their juice, color, and taste, as Polish ragôut, or borsh, which is the type of dishes à *la Polonoise*.
- à **la poulette** (*â lă poo-let*).—With white velouté sauce.
- à **la printanière** (*â lă pran-tâ-nyâr*).—Made with a typical collection of cooked early or spring vegetables; of a somewhat wider application than à la jardinière.
- à **la Provençale** (*â lă prô-vân-sâl*).—Generally, prepared with more or less of olive oil, and flavored with garlic.
- à **la Reine** (*â lă râ-n*).—Of, or after the style of, the queen; said specifically of a kind of chicken soup [*potage à la reine*, (*pô-tâzh` â lă râ-n*)] containing white meat of chicken pounded and rubbed to a powder.
- à **la Ro'land** (*â lă*).—Made of minced lobster meat in the same manner as à *la Lorenzo* dishes of crab meat. See à *la Lorenzo*.
- à **la Saint Cloud** (*â lă sãn'kloo*).—With sliced truffles; said of a kind of velouté sauce.
- à **la serviette** (*â lă ser-vyet*).—Served in or on a napkin as braised truffles.
- à **la Soubise** (*â lă soo-bêz*).—Generally containing onions in quantity; or, at least, strongly garnished and flavored with them; especially, served with a white onion sauce used with lamb or mutton.
- à **la Sourdine** (*â lă sôor-dên*), silently; with bated breath.
- à **la tartare** (*â lă târ-târ*).—With tartare sauce, or a sauce of similar ingredients. Also, said of a steak chopped and garnished with onions, pickles, pickled beets, sardelles, and yolk of egg, to be eaten raw.
- à **la Tartufe** (*â lă târ-tüf*), like Tartufe, the hypocritical hero of Molière's comedy, Tartufe, hence hypocritically.
- à **la turque** (*â lă türk*).—Shirred and served with chicken livers and mushrooms; said of eggs. Also boiled with rice and saffron; said of chicken.
- à **l'Aurore** (*â lô-rôr*).—With a pink sauce made by coloring velouté sauce with lobster coral or Armenian bole. Also said of sliced hard-boiled eggs put in a dish, covered with velouté, sprinkled with grated egg yolk, and baked.
- à **la vert pré** (*â lă vâ-r-prâ*).—Colored green with vegetables, as with a puree of spinach.
- à **la Viennoise** (*â lă vy-â-nwâz*).—Applied to dishes usually and typically prepared in the Austrian capital, such as the dumplings termed nockerlin, quenelles of potatoes, and others.
- à **la Villeroi** (*â lă vël-rwâ*).—With atelets sauce. Also, said of a poached egg put in a thick white sauce, then covered with egg yolk and bread crumbs, and fried.
- à **la vinaigrette** (*â lă vë-nê-gret*).—With vinaigrette sauce.
- al buon vino non bisogna frasca** (It.), (*âl bwôn vë´ nõ nõn bê zô´ nyâ frâs'kâ*), good wine needs no bush.
- à **l'envi** (*â lân-vë*), with emulsion.
- à **l'espagnole** (*â lâ-spâ-nyôl*).—Made savory with espagnole sauce; specifically, served with a garnish of onions, garlic, green peppers, mushrooms, tomatoes, and minced ham cooked together, and bound with espagnole sauce.
- a **l'extremite** (*â lek-strâ-mê-tâ*), at the point of death; without resource.
- al fresco** (It.), (*âl frâs'kô*), in the open air.
- alguazil** (Sp.), (*âl gwâzêl*), a Spanish constable.
- à **l'huile** (*â-lwêl*).—In olive oil; with olive oil dressing.
- Alici** (*â-lê'chêl*).—Anchovies, or a similar small fish preserved in oil according to the Italian fashion.
- à **l'imperatrice** (*â lân-pâ-rê-três*).—Said of shirred eggs served with a slice of paté de fois gras upon each egg.
- à **l'improviste** (*â lân-prô-vêst*); unawares, on a sudden.
- à **l'Irlandaise** (*â lër-lân-dêz*).—Containing potatoes in some form, and often cabbage, etc., in mass or as a prevailing garnish.
- à **l'Italienne** (*â lê-tâ-lê-en*).—Generally made of, or garnished with, savory macaroni, or paste of that kind, or with ravioli; or made savory with Parma cheese.
- all'alba** (It.), (*âl lâ'â*), at daybreak.
- alla Siciliana** (It.), (*âl lâ sê-chê-lê-â-nâ*), in the Sicilian manner; in shepherd's dress.
- allégresse** (*â lâ-gres*), liveliness; geniality.
- allemande** (*âl-mân-d'*), a kind of German dance.
- Allemande sauce** (*âl-mâns-d'*).—Veloute sauce, with the addition of essence of mushrooms, cream, and a leason, or binding, of yolk of eggs.
- alles hat seine Zeit** (Ger.), (*âl les hât-zine-tsit*), all in good time.
- allez-vous en** (*â lâ-vôô-zân*), away with you, be off.
- allons** (*â lô-n*), come on.
- allons donc** (*â lô-n dô-n*), nonsense.
- allzuviel ist ungesund** (Ger.), (*âl tsôô-fêl'ist-oon'ge-zoont*), too much of a good thing.
- al occorrenza** (It.), (*âl lô-kô-ren'dzâ*), according to circumstances.
- à **l'ordinaire** (*â lô-r-dê-ner*), in the ordinary manner.
- alose** (*â-lôs*).—Shad.
- à **l'outrance** (*â lôô-trân-s*), to the death.
- aloyau** (*â-lwâ-yô*).—Loin of beef; short rib of beef.
- al piu** (It.), (*âl-pyôô*), at most.
- alto rilievo** (It.), (*âl tô-rê-lye-vô*), in high relief.
- à **main armée** (*â mân-âr-mâ*), by force of arms.
- am Anfang** (Ger.), (*âm-ân-fân-g*), at the beginning.
- amar y saber no puede ser** (Sp.), (*â mâr-ê-sâ-vâr'no-pooâthâ-sâr*), no one can love and be wise at the same time.
- âme de boue** (lit., soul of mud), (*âm-de-bôô*), a base minded person.
- amende honorable** (*â mân-dô-nô-râ-bl'*), fit reparation; a satisfactory apology.
- à **merveille** (*â mer-vây*), marvelously, extraordinarily.
- ami du cour** (lit., a friend of the court), (*â mê-dû-kôôr*), a false friend; one who is not to be depended on.
- ami du peuple** (*â mê-dû-pô-pl'*), friend of the people.
- à **moitié** (*â mwâ-têâ*), by halves.
- Amontillado** (*â-môn-têl-yâ-ôô*).—A cheaper variety of wine classed as sherry, but in reality a wine from Sicily or other Mediterranean or Atlantic islands, mixed with a little real sherry.
- amour propre** (*â môôr-prô-pr'*), vanity, self-love.
- ananas** (*â-nâ-nâ*).—Pineapple.
- anchois** (*ân-shwâ*).—Anchovies.
- anchovy** (*ân-chô-vi*).—A small fish of the herring family caught in the Mediterranean, and pickled for exportation.
- ancienne noblesse** (*ân-sê-en-nôbles*), (the old nobility), French families ennobled before the revolution of 1792.
- ancien régime** (*ân-sêân-râ-zhêm*), (the former government or administration), the rulers of the ante-revolution period.
- andouille** (*ân-doo-y*).—Tripe.
- anguilles** (*ân-gê-y*).—Eels.
- anguilles grillées** (*ân-gê-y-grê-yâ*).—Spitch-cocked, or grilled, eels.
- anisette**.—A cordial or liqueur flavored with anise seeds.
- à **outrance** (*â ôô-trân-s*), to the last extremity.
- à **pas de géant** (*â pâd-zhâ-ân*), with a giant's stride.
- à **peindre** (*â pân-dr'*), worth painting.
- à **perte de vue** (*â pert-de-vü*), till out of sight.
- à **peu près** (*â pô-prê*), nearly.
- à **pezzi** (It.), (*â ped-zê*), by the piece.
- à **piacere** (It.), (*â pyâ'châ-râ*), at pleasure.
- à **pied** (*â péâ*), on foot.
- à **plomb** (*â plôn*), perpendicularly; firmly.
- à **point** (*â pwân*), just in time; exactly right.
- appui** (*â pwê*), point of support; prop.
- à **prima vista** (It.), (*â prê-mâ-vês-tâ*), at the first sight.
- à **prix d'or** (*â prê-dôr*), (at price of gold), very costly; fetching a fancy price.
- à **propos** (*â prô-pô*), to the point.
- à **propos de rien** (*â prô-pô-de-rêân*), apropos to nothing; not pertinently.
- arc-en-ciel** (*âr-kân-sêel*), rainbow.
- à **rez de chaussée** (*â râ-d-shô-sâ*), even with the ground.
- argent comptant** (*âr-zhân-kôn-tân*), ready money.
- à **rivederci** (It.), (*â rê-vâ-dâr'chê*), adieu until we meet again.
- à **Rome comme à Rome** (*â rô-m'kô-mâ-rôm*), at Rome do as Rome does.
- arrière pensée** (*â rêer-pân-sâ*), mental reservation; unavowed purpose.
- arroz à la Valencia'na** (*âr-rô-â-lâ*).—Valencia rice, a farinaceous substance in grains like rice.
- artichaut** (*âr-tê-shô*).—Artichoke.
- asperge** (*â-spârzh*).—Asparagus.
- aspic** (*âs-pêk*).—A savory jelly made of calves' feet, etc., or with extract of meat, flavored to suit the fancy, and stiffened with gelatine.
- assignat** (*â sê-nya*).—French paper money issued after the revolution at the end of last century.
- atelier** (*ât-lêâ*), a work-shop; studio.
- à **tort et à travers** (*â tô-r-â-trâ-ver*), at random.
- à **toute outrance** (*â tôô-tôô-trân-s*), desperately; tremendously; with a vengeance.
- à **tout hasard** (*â tôô-â-zâr*), at all hazards; at all events.
- à **tout prix** (*â tôô-prê*), at any price.
- attaché** (*â tâsh*), an official belonging to an embassy.
- au** (*ô*).—See à *la*.
- au beurre roux** (*ô bûr-roo*).—With browned butter.
- au bon droit** (*ô bôn-drwâ*), to the just right.
- au bout de son Latin** (*ô bôôd-sôn-lâ-tân*), at the end of his Latin; to the extent of his knowledge.
- au chingaras** (*ô shân-gâ-râ*).—Sandwiched with ham and grilled; said of ox palates.
- au contraire** (*ô kôn-trer*), on the contrary.
- au courant** (*ô kôô-rân*), fully acquainted with matters.
- au désespoir** (*ô dâ-zes-pwâr*), in despair.
- au fait** (*ô fê*), expert.
- au fond** (*ô fôn*), to the bottom; in the rear (of the stage).
- au four** (*ô foor*).—Baked in the oven, as a stuffed fish.
- au fromage** (*ô frô-mâzh*).—With cheese.
- auf Wiedersehen** (Ger.), (*owf-vê-der-zâ-en*), till we meet again.
- au gras** (*ô grâ*).—Containing meat; said of soups so made.
- au gratin** (*ô grâ-tan*).—With a crust made by browning in the oven; as spaghetti is often served *au gratin*.
- au jus** (*ô zhü*).—In juice; in broth.
- au kirsch** (*ô kêrsh*).—With kirschwasser; as an omelet or a punch containing this liqueur is termed *au kirsch*.

au levant (*ô le vãn*), to the east; eastward.
aumelette (*ôm-let*).—Omelet.
au naturel (*ô nâ-tû-rel*).—In the natural condition; as, anchovies *au naturel*—i. e., without oil or seasoning.
au pis aller (*ô pê zâ lâ*), at the very worst.
au reste (*ô rest*), as for the rest.
au revoir (*ô re vwâr*), till we meet again.
au rhum (*ô rûm*).—With rum.
auro'ra sauce.—Sauce à l'aurore. See à l'*Aurore*.
aussitôt dit, aussitôt fait (*ô sê tô dê', ô sê tô fe*), no sooner said than done.
au supreme (*ô sù-prâm*).—With supreme sauce.
autant d'hommes, autant d'avis (*ô tân dôm', ô tân dà vê*), many men, many minds.
auto da fe (Port.), (*â ôô tô dà fâ*), an act of faith; the burning of Jews and heretics.
autre droit (*ôtre drwâ*), another's right.
autre fois (*ôtre fwâ*), another time.
autre vie (*ôtre vê*), another's life.
aut vincere aut mori (*owt vin 'kârâ owt mô'rê*), victory or death.
au vert pré (*ô vâr prâ*).—With sweet or fresh herbs, especially, when they give a green color to the dish.
au vin blanc (*ô van blân*).—With white-wine sauce, as filets of fish.
aux (*ô*).—See à la.
aux armes (*ô zârm*), to arms.
aux cressons (*ô kres-sôn*).—With watercresses.
aux rognons (*ô rô nyôn*).—With kidneys.
avant-propos (*â vãn prô pô*), preface; introductory matter.
avec permission (*â vek per mê sê ôn*), by consent.
à volonté (*â vô lôn tâ*), at will; at pleasure.
à vostra salute (It.), (*â vôs trà sâ lôô'tâ*), to your health.
à votre santé (*â vôtre sãn tâ*), to your health.
a vuestra salud (Sp.), (*â vwes trà sâ lôôth*), to your health.

B

bal champêtre (*bâl shãn petr*), a country ball.

Bavaroise (*bâ-vâ-rwâz*).—Bavarian. See *Bavarian cream*.
beau-idéal (*bô ê dâ âl*), a model of ideal perfection.
beau monde (*bô môn'd*), the fashionable world.
beaux esprits (*bô zes prê*), men of wit or genius.
beaux yeux (*bô zêô*), handsome eyes; attractive looks.
bécasse (*bâ-kâs*).—Woodcock.
Béchamel (*bâ-shâ-mel*), or more properly, **Béchamelle**.—Velouté white sauce mixed with cream; named after Louis de Béchamel, a French gastronome.
beignet (*bâ-nyâ*).—A fritter.
bel esprit (*be les prê*), a wit, a genius.
bel étage (*be lâ tâzh*), the second story of a house.
belles-lettres (*bel'letr*), refined literature.
benedetto e quel male che vien solo (It.), (*bâ nâ det'tô â kwâl mâ' lâ kî vyân sô'lô*), blessed is the misfortune that comes alone.
bénédictine (*ben-ê-dik'tin*).—A cordial resembling chartreuse.
ben-trovato (It.), (*bân trô vâ'tô*), well invented.
bête noire (lit. a black beast.) (*bet nwâr*), a bugbear.
beurre (*bûr*).—Butter.
beurre frais (*bûr frâ*).—Fresh (unsalted) butter.
beurre lié (*bûr lê-â*).—Dutch sauce with less butter than usual.
beurre noir (*bûr nwâr*).—Butter browned without flour.
beurre roux (*bûr rôo*).—Butter browned with flour.
bienséance (*bêân sâ ân's*), good manners; decorum.
bienvenue (*bêân ve nû*), welcome.
bijou (*bê zhôô*), a jewel; a treasure.
bijouterie (*bê zhoo trê*), jewelry.
billet doux, or **billet d'amour** (*bê ye dôô*), a love letter.
billets-d'état (*bê ye dâ tâ*), a government paper; bank notes.
biscuit (*bê-skwê*).—French sponge cake.
bis'cuit à couper (*â koo-pâ*).—A form of sponge cake to be sliced and glacéed with flavored sugar or sugar mixed with fruit juice.
bis'cuit à la Génoise (*â lâ zhâ-nwâz*).—Sponge cake with anise-seed flavor, to be cut and toasted.
bis'cuit à l'Ursuline (*â lûr-sû-lên*).—A sponge cake with rice and apple or apricot jam mixed into the paste, and grilled orange flower.
bisque (*bisk* or *bêsk*).—A soup of crayfish, made by cooking them in broth with herbs, sliced roots, and seasoning; other similarly prepared shellfish soups or sauces are also called *bisques*.
bizarre (*be zar*), odd; quaint.
blancmanger (*blân-man-zhâ*) or **blamange** (*blâ-mânj*).—A jelly made with calves' feet, or gelatine, and milk of almonds; also, a jelly made of milk and starch, isinglass, or sea moss, with or without added chocolate, grenetine, or the like. This latter dish is more properly called *flummery*.
blanquette (*blân-ket*).—A mince of white meat, as of chicken, warmed in velouté sauce, and pointed with butter and lemon juice. It often has added to it mushrooms, morels, or truffles.
blasé (*blâ zâ*), surfeited.
blond (*blôn*).—Concentrated juice or extract of some viand, used to add to certain sauces to give them body; as *blond de veau* (*de vô*), a rich broth of veal made by slowly stewing veal with accessories of ham, rabbit, or the like, with standard broth, shallots, cloves, etc.
boeuf de chasse (*bûf de shâs*).—The sportsman's round of beef—the biggest joint of the animal.
bombe glacé (*bôn'b glâ-sâ*).—A confection consisting of an ice casing frozen in the form of a truncated cone with cream of some kind, as Bavarian cream, inside.
bon ami (*bô na mi*), good friend.
bon bon (*bôn bôn*), a sweetmeat; confectionery.
bon diable (*bôn dêâbl*), a jolly good fellow.
bon gré, mal gré (*bôn'grâ mal'grâ*), with good or bad grace; willing or unwilling.
bonhomie (*bô nô mê*), good nature; easy temper; credulity.
bon jour (*bôn zhôôr*), good day; good morning.
bon mot (*bôn mô*), a witticism.
bonne (*bôn*), a nurse.
bonne-bouche (*bôn bôôsh*), a luscious morsel; a toothsome tit-bit.
bonne et belle (*bô nâ bel*), good and handsome (said of a woman).
bonne foi (*bôn fwâ*), good faith.
bon soir (*bôn swâr*), good evening.
bon ton (*bôn tôn*), high fashion; first-class society.
bon vivant (*bôn vê vãn*), a good liver; a jolly companion.
bon voyage (*bôn vwâ yâzh*), a pleasant journey.
Bordelaise sauce (*bôr-de-lâz*).—Espagnole sauce with garlic, aromatic herbs, and Bordeaux wine.
boudoir (*bôô dwâr*), a small private apartment.
bouillabasse (*boo-e-yâ-bâs*).—A soup made of fish broiled and seasoned with onion, orange peel, saffron, oil, and other seasoning to suit the taste.
bouilli (*boo-e-yê*).—Beef stewed, generally in one piece, and served with sauce.
boulettes de hachis (*boo-let' de hâ-shê*).—Forcemeat balls.
bouquet garni (*gâr-nê*).—A tied bunch of parsley, onions, bay leaf, and thyme, used to boil in soup to flavor it.
bourgeoisie (*bôôr zhwa zê*), the body of citizens; burgess; the shop-keeping class.
bourguignonnes (*boor-gê-nyon*).—Snails baked with a dressing of shallots, garlic, lemon juice, and butter.
braise (*brâz*), or **braisé** (*brâ-zâ*).—A piece of braised meat, or a dish prepared by braising; also a preparation mixed and prepared of various ingredients in or with which dishes are braised.
braisé de Boulanger (*brâ-zâ' de boo-lân-zhâ*).—A compound sauce in which meat is smothered when being braised.
bretonne sauce (*brâ-ton*).—Espagnole sauce characterized by juice of fried onions or purée of onions.
breveté (*brev tâ*), patented.
Brie cheese, or **Brie** (*brê*).—A soft, white cream cheese.
bris'ket, or **brisquet** (*brê-skâ*).—The breast; the part of the breast next to the ribs.
broccoli (*brok'kô-lî*).—A kind of cabbage resembling the cauliflower.
brochet (*brô shâ*).—Pike; luce—a kind of fish.
brocheton (*brô-she-tôn*).—Pickerel.
brusquerie (*brûs krê*), rudeness.
brut (*brû*).—An effervescent wine.
bückling (*bûk'ling*).—Red herring.
buisson (*bwê-sôn*).—A dish disposed in a pyramid, and having a prickly appearance.
bureau de la guerre (*bû rô dlâ ger*), the war office.
bur'goo.—Oatmeal porridge.
Burgun'dian sauce.—Espagnole sauce flavored with shallots and red Burgundy wine.

C

- cabaretier** (*kā bāre tēā*), an innkeeper.
- cabillaud** (*kā-bē-yō*).—A fresh cod.
- cachot** (*ka shō*), a dungeon.
- café** (*kā-fā*).—Coffee.
- café au lait** (*kā-fā`ō lā*).—Coffee with hot milk; coffee to which milk is added during the process of infusion or boiling.
- café bavaoise** (*kā-fā`bā-vā-rwāz*).—Coffee with whipped cream.
- café noir** (*kā-fā`nwār*).—Black coffee; that is, coffee without milk.
- café parfait** (*kā-fā`pār-fā*).—A form of coffee ice cream.
- café turc** (*türk*).—Turkish coffee; that is, coffee prepared by pouring boiling water on very finely ground coffee in the cup.
- caille** (*kāey*).—Quail.
- calipash**.—A part of a turtle next to the upper shell containing a dull greenish gelatinous substance, esteemed as a delicacy.

- canard** (*kā nār*), a false story.
- canard** (*kā-nār*).—A duck.
- canellons** (*kā-ne-lōn*).—Hollow sticks or rolls of baked puff paste.
- canelons** (*kā-ne-lōn*).—Rugosities of ox palate, or preparations of them, covered with farce, rolled, and gratinated.
- caneton** (*kā-ne-tōn*).—Young duck; duckling.
- cannelon of meat** (*kā-ne-lōn*).—A baked roll of highly seasoned mincemeat.
- cap-à-pié** (*kā pā pēā*), from head to foot.
- capers**.—The pungent, grayish green flower buds of a trailing shrub (*Capparis spinosa*) of southern Europe.
- capilotade of chick'en** (*kā-pē-lō-tād*).—A kind of ragoût made of remains of fowl or game and some simple brown sauce.
- cap'on**.—A castrated cock. It fattens better and is tenderer than the uncastrated ones.
- carbonari** (It.), (*kār bō nā`rē*), members of a secret political society in Italy.
- car'dinal sauce**.—Velouté variously flavored and colored red, as with cochineal.
- carême** (*kārem*), fast; Lent.
- carnichons** (*kār-nē-shōn*).—Gherkins.
- carré** (*kā-rā*).—Breast.
- carrelet** (*kār-lā*).—A fish, the sole or flounder.
- carte blanche** (*kārt blānsh*), full power.
- carte de visite** (*kārt de vē zēt*), visiting card.
- cassareep**.—A brown, slightly sweet, aromatic thick extract made from the juice of the manioc.
- casserole** (*kas`se-rōl*; French pron. *kās-rōl*).—Stewpan.
- cas'serole of rice**.—An ornamental pie case made of paste of prepared rice.
- cassis** (*kā-sēs*).—Black currants; also, a kind of jelly, and a kind of liqueur or cordial, flavored with black currants.
- castello che da orecchia si vuol rendere** (It.), (*kās-tel`lō kā dā`ō rā`kyā sē vwōl rān dā`rā*), the fortress that parleys soon surrenders.
- causerie** (*kō-zrē*), a familiar talk.
- caviare** (*kā-vē-ār*) or **caviar** (*kav`i-ār*).—Roe of sturgeon, and other large fish, prepared and salted, and used as a relish. They often resemble morning-glory seeds in appearance.
- champignons** (*shān-pē-nyōn*).—Mushrooms.
- Champs Elysées** (*shān zā lē zā*), Elysian Fields; a public park in Paris.
- cela va sans dire** (that goes without saying), (*se la vā sās dēr*), that is understood.
- ce n'est que le premier pas qui coûte** (*se ne kle pre-mēā pā`kē-kōōt*), it is only the first step that is difficult.
- cèpes** (*sāp*), or **ceps** (*sā*).—An edible kind of mushroom.
- c'est à dire** (*se tā dēr*), that is to say.
- c'est une autre chose** (*se tū nō tre shōz*), that is quite another thing.
- chacun à son goût** (*shā kon ā sōn gōō*), everyone to his taste.
- chacun tire de son côté** (*shā kōn tēr`de sōn kō tā*), every one inclines to his own side or party.
- chanson** (*shān sōn*), a song.
- chansons à boire** (*shān sōn zā bwār*), drinking songs.
- chapeau** (*shā pō*), a hat.
- chapeau bas** (*shā pō bā*), hats off.
- chapeau de bras** (*shā pō de brā*), a military cocked hat.
- chapelle ardente** (*shā pe lār dānt*), the chamber where a dead body lies in state.
- chapon** (*shā-pōn*).—Capon.
- chapon au gros sel** (*shā-pōn`ō grō sel*).—Plain boiled capon; literally, capon served with a big lump of salt (placed upon it).
- chargé d'affaires** (*shār zhā dā fer*), one intrusted with state affairs at a foreign court.
- charlotte russe** (*shār-lot`rūs*), or **charlotte à la russe** (*shār-lot`ā lā rūs*).—A dish of custard or whipped cream inclosed in a cup of sponge cake.
- chartreuse à la Parisienne** (*shār-trüz`ā lā pā-re-syen*).—A showy entrée, consisting chiefly of quenelles of forcemeat, containing ragoût and kebobs; an entrée de force; entrée à surprise.
- chasse café** (*shās kā-fā*).—A drink of liqueur served after the coffee at dinner.
- château** (*shā tō*), a castle.
- châteaux en Espagne** (*shā tō zān nes pāyn*), castles in Spain.
- châteaubriand sauce** (*shā-tō-brē-ān*).—See **maitre d'hôtel butter**.
- chauffeur** (*shō fōr*), driver of an automobile.
- chaufroid sauce** (*shō-frwā*).—A white or brown jelly containing some sauce; a sauced jelly, or a gelatinized sauce.
- chef** (*shēf*), man cook.
- chef de bataillon** (*shēf dā bā tā yōn*), a major.
- chef-d'œuvre** (*shā dō vr*), a masterpiece.
- chemin de fer** (lit. iron road), (*shē mānt fer*), a railway.
- chemin faisant** (*shē mān fe zān*), by the way; in passing.
- chère amie** (*shē rā mē*), a dear (female) friend, a lover.
- cher'vil**.—A plant (*Anthriscus cerefolium*) with finely divided leaves. Two curly varieties are used in soups and salads.
- che sara, sara** (It.), (*ka sār rā sa rā*), what will be will be.
- cheval de bataille** (lit., a war-horse), (*shē vāl de bā tā`y*) chief dependence or support; one's strong point.
- chic** (*shēk*), stylish, smart.
- chiffonade** (*shē-fō-nād*).—A salad preparation of lettuce, chervil, sorrel, and scallions, with fresh butter, and some bouillon poured over it. When milk or fresh cream is added, it is called *potage à la chiffonade*; otherwise *potage de santé* (*pō-tāzh`de sās-tā*).
- chil`i**.—A kind of red pepper or capsicum.
- chil`i sauce**.—A sauce condiment made with chilis, tomatoes, etc.
- Chinese`stur`geon soup**.—A soup of beef and veal, containing pieces of cartilage from the sturgeon's head boiled tender.
- chi tace confessa** (It.), (*kē tā`chā kōn fes`sā*), he who keeps silent admits his guilt.
- chive**.—A plant allied to the onion, of which the young leaves are used in omelets, etc.
- choucroute** (*shoo-kroot*).—French sauerkraut, or sauerkraut in general.
- chou-fleur** (*shoo-flūr*).—Cauliflower.
- choux** (*shoo*).—(a) Cabbages. (b) See **choux pâtisseries**.
- choux de Bruxelles** (*shoo de brū-sel*).—Brussels sprouts.
- choux de mer** (*shoo de mār*).—Sea kale, a kind of cruciferous pottage root.
- choux pâtisseries** (*shoo pā-tē-syār*).—Soufflés in small molds; small cakes of baked batter.
- ci git** (*sē zhē*), here lies. (A common inscription on tombstones.)
- civet** (*sē-vā*).—A ragoût of hare [civet de lièvre (*lyā`vr*)], deer [*civet de chevreuil* (*shē-vrū`y*)], or other game, into which wine and onions enter as ingredients.
- clare`mont sauce**.—Butter sauce flavored by frying onions in it. The onions are removed after frying.
- cock`a-lee`kie**.—Capon soup, boiled with leeks and prunes—a favorite Scotch dish.
- cock`tail of oysters or clams**.—A dish containing oysters or clams seasoned with ketchup, pepper, etc., and served in a tumbler or glass.
- cocotte** (*kō-kot*).—A kind of iron casserole with two loop handles and a cover.
- cœurs d'artichauts** (*kūr-dār-tē-shō*).—Artichoke heads.
- cognac** (*kō-nyāk*).—A brandy distilled at Cognac, in France; hence, loosely, any French brandy.
- coiffeur** (*kwa-fōr*), a hairdresser.
- coiffure** (*kwa-fūr*), a headdress.
- coïng** (*kwan*).—Quince. A liqueur, or ratafia, is made flavored with quince; and a jelly of quinces is called *coïng de tranches* (*de trānsh*).
- collared**.—This term is loosely used with no apparent definite meaning in the names of various dishes.
- col`lared beef**.—A thin piece of beef, usually from the flank, rolled into a round form.
- col`lops**.—Small pieces or slices.
- com`fit**.—A dry sweetmeat; fruit, seed, or the like, preserved in sugar and dried.
- comme il faut** (*kō mēl fō*), proper, as it should be.
- comment vous portez vous?** (*kō mās vōō pōr tā vōō*), how are you?
- commis voyageur** (*kō mē vwā yā zhōr*), a commercial traveler.
- compagnon de voyage** (*kōn pā nyōn de vwā yāzh*), a traveling companion.
- compiegne cake** (*kōn-pyān*).—A kind of cake intended to be drenched with liqueur, sliced, and sandwiched with apricot jam.
- com`pote** (French pron. *kōn-pōt*).—Cooked fruit; fruit preserved with sugar so as to preserve its form. Also, a savory dish of pigeons, quails or larks, mixed with peas or mushrooms.
- compte rendu** (*kōnt rān dū*), an account rendered, a report.
- comptoir** (*kōn twār*), a counting-house; a counter.
- comte** (*kōnt*), count.
- comtesse** (*kōn tes*), countess.
- con amore** (It.), (*kō nā mō`rā*), with affection, very earnestly.
- conciergerie** (*kōn s erzh*), a door-keeper.
- conciergerie** (*kōn sē er zhrē*), a door-keeper's lodge; a noted prison in Paris.
- concours** (*kōn kōōr*), competition for, or as for, a prize.
- con diligenza** (It.), (*kōn dē lē dshen`dzā*), with diligence.
- con dolore** (It.), (*kōn dō lō`rā*), with grief; sadly.

confit (*kɔ̃n-fɛ*).—A dry sweetmeat; fruit preserved in sugar and dried; a comfit.

confiture (*kɔ̃n-fɛ-tür*).—Preserves.

confrère (*kɔ̃n frer*), a colleague.

conoscante (It.), (*kô nõ shen 'tā*), a connoisseur.

conseil de famille (*kɔ̃s se 'y de fā mē 'y*), a family council or consultation.

conseil d'état (*kɔ̃s se 'y dā tā*), a council of state; a privy council.

consommé (*kɔ̃n-sô-mā*).—Strong broth of meat and vegetables, concentrated till slightly browned; in restaurants applied to thin soups such as would be made by this broth diluted.

cor'dial.—A sweet and aromatic liquor. A *liqueur* is an alcoholic cordial.

contretemps (*kɔ̃n tre tân*), an awkward mishap.

cordón sanitaire (*kôr dôñ sà nē ter*), a line of sentries to prevent, as far as possible, the spread of contagion or pestilence. Used also of other precautionary measures.

corps diplomatique (*kôr dē plô mã tēk*), a diplomatic body.

cortège (*kôr tezh*), a procession.

côte (*kôt*).—A rib.

côtelette (*kôt-let*).—A small rib; part of a rib; a piece of meat with the rib attached; a cutlet.

couleur de rose (*kôô lôr de rôz*), rose color.

coup (*kôô*), a stroke.

coup de grâce (*kôô d grās*), a finishing-stroke. (Formerly applied to the fatal blow by which the executioner put an end to the torments of a culprit broken on the wheel.)

coup de main (*kôô d mân*), a sudden attack, enterprise, or undertaking.

coup de maître (*kôô d metr*), a master-stroke; with consummate skill.

coup de pied (*kôô d pêā*), a kick.

coup de plume (*kôô d plüm*), a literary attack.

coup de soleil (*kôô d só lê 'y*), a sunstroke.

coup d'essai (*kôô de sâ*), a first attempt.

coup d'état (*kôô dā tā*), a stroke of policy; a sudden and decisive blow, usually inflicted by unconstitutional means.

coup de théâtre (*kôô dā tā ātr*), a theatrical effect.

coup d'œil (*kôô dô 'y*), a rapid glance.

courage sans peur (*kôô rāzh sän pôr*) fearless courage.

court bouillon (*boo-e-yôn*).—A very rich bouillon made by braising bouillon vegetables in butter, evaporating down, and then boiling in wine. It is added to sauces.

coute qu'il coute (*kôôt kél kôôt*), cost what it may.

crème (*krām*, or *krām*).—A cordial of the relatively thick or visced kind, such as *crème* de la menth (cream of minth), *crème* de la moka (cream of mocha coffee), *crème* de cocoa (cream of cocoa), etc.

crème bāchique (*krām bā-shēk*).—A custard jelly with wine and egg-froth.

crème brûlée (*krām brū-lā*).—Brown sugar, or caramel, with cream.

crème fouettée à la paysanne (*foo-et-tā 'ā lâ pâ-zān*).—Whipped cream.

créole (*krā-ôl*).—See *à la créole*.

crêpes (*krāp*).—Small fried cakes; a form of French pancake.

ressons (*krā-sôn*).—Cresses.

crève-cœur (*krev kôr*), deep sorrow; grief.

crevette (*krā-vet*).—Shrimp.

croquants (*krô-kāñ*).—A piece of crisp pastry or confection which makes a crunching sound between the teeth, as a macaroon or a nougat.

croûton (*kroo-tôn*).—Small pieces of bread fried in butter or oil, for use as a garnish to salmis, fricassees, etc., or to serve with soups.

croquebouches (*krô-kāñ-boosh*).—Small mounted pieces of crisp pastry, such as macaroons, nougats, gimblettes, etc.

crum'pet.—A kind of large, thin, light cake or muffin cooked on a griddle.

cuisine (*küē-zēn*), a kitchen; cookery.

cuissot (*kwē-sô*).—Haunch.

cul-de-sac (*kül de sāk*), the bottom of the bag; a blind alley.

cyg'net.—A young swan.

D

d'accord (*dā kôr*), agreed; in tune.

dame d'honneur (*dām dô nôr*), a maid of honor.

dantesques (*dāñ-tesk*).—Frozen custards.

dariole (*dā-rê-ôl*).—A piece of pastry consisting of a shallow cup of short paste, filled with a rich compound of cream or custard with macaroons, fruit, or the like.

darne (*dārñ*).—Slice; cut.

das geht Sie nichts an (Ger.), (*dās gāt zē niks ān*), that does not concern you.

de (*de*).—Of.

de bonne augure (*de bô nõ-gür*), of good omen.

de bonne grâce (*de bôn grās*), with good will, willingly.

débris (*dā brē*), refuse.

début (*dā bü*), first appearance.

débutante (*dā bü täñt*), a young lady just entering society.

décolleté (*dā kôl tā*), open-breasted.

dégagé (*dā gā zhā*), free, easy, without constraint.

de gaieté de cœur (*de gā tā d kôr*), in sport, sportively.

de haute lutte (*de ôt lüt*), by a violent struggle.

dehors (*dā ôr*), without; out of; foreign; irrelevant.

déjeuner à la fourchette (*dā zhô nā ā lá fôôr shet*), a cold breakfast.

de mal en pis (*de mã lāñ pē*), from bad to worse.

demeure (*dē môr*), dwelling; residence

demi-jour (*de mē zhôôr*), faint light.

demi-tasse (*dā-mē-tās*).—A small cup for black coffee.

dénouement (*dā nõô mân*), an unraveling or winding up.

dépêche (*dā pesh*), a dispatch; a message.

dernier cri (*der nēā krē*), (the latest cry), the latest fashionable fad.

dernier ressort (*der nēā re sôr*), the last resource.

désagrément (*dā zā grād mân*), something disagreeable or unpleasant.

désorienté (*dā zô rêāñ tā*), confused.

désossée (*dā-sô-sā*).—Boned.

détour (*dā tôôr*), a circuitous march.

de trop (*de trô*), too much or too many; not wanted.

devoir (*de vvār*), duty.

diabolitins (*dē-ab-lô-tāñ*).—(a) Frozen custards. (b) Neapolitan dragées. (c) Chocolate bonbons in paper.

di buona volonta sta pieno all'inferno (It.), (*dē bwô nā vô lôn'tā sta pyā 'nô lēñ fer'nô*), hell is full of good intentions.

Dieu est toujours pour les plus gros bataillons (*dēô e tôô zhôôr' pôôr lâ plüi grô bā tâ yôn*), God is always on the side of the largest battalions; the largest army has the best chance.

Dieu et mon droit (*dēô ā môñ drwā*), God and my right.

Dieu vous garde (*dēô vôô gârd*), God protect you.

di grado en grado (It.), (*dē grā dô āñ grā'dô*), step by step; gradually.

dinde (*dāñd*).—Turkey.

dindonneau (*dāñ-dô-nô*).—Young turkey; turkey pout.

Dios me libre de hombre de un libro (Sp.), (*dē ôs mã lê 'vrā dā ôm'vrā dā ôôn lê vrô*), God deliver me from a man of one book.

di salto (It.), (*dē sāl'tô*), by leaps.

di tutti novello par bello (It.), (*dē tôôt tê nõ vel'lo pâr bel'lô*), everything new seems beautiful.

divertissement (*dē ver tēs mân*), amusement; sport.

di zara (*dē zā 'rā*).—A less common name for maraschino.

doctrinaire (*dôk trē ner*), a theorist.

dolce far niente (It.), (*dôl 'chā fār nyen 'tā*), sweet idleness.

domino (It.), (*dô 'mē nô*), a mask robe.

dorer la pilule (*dô râ lâ pé lül*), to gild the pill.

double entente (*dôô blāñ täñt*), double meaning; a play on words.

douceur (*dôô sor*), a bribe.

doux yeux (*dôô zêô*), soft glances.

drap d'argent (*drā dâr zhāñ*), silver lace.

drap d'or (*drā dôr*), gold lace.

droit des gens (*drwā dā zhāñ*), the law of nations; international law.

drôle (*drôl*), droll; funny.

drôle le corps (*drôl le kôr*), a droll fellow; a punster.

durante vita (Sp.), (*dôô rāñ 'tā vē 'tā*), during life.

Dutch sauce.—Butter emulged with yolk of egg, or a sauce with this as a basis; Hollandaise sauce.

E

eau de cologne (*ô d kô lôn 'y*), Cologne water.

eau de vie (*ô d vê*), the water of life—applied usually to brandy.

ébauche (*ā bōsh*), a rough drawing; a sketch.

éclanche (*ā klāñsh*).—Shoulder of mutton.

éclat (*ā klā*), splendor; brilliancy.

école de droit (*ā kôl de drwā*), law school.

école de médecine (*ā kôl de mãd sēn*), medical school.

école militaire (*ā kôl mē lê ter*), military school.

école polytechnique (*ā kôl pô lê tek nēk*), polytechnique school.

écrevisse (*ā-kr-vēs*).—Crayfish.

édition de luxe (*ā dē sêôn' de lüks*), a splendid edition of a book, handsomely bound, and usually well illustrated.

égal (*ā gāl*), equal.

égalité (*ā gā lē tā*), equality.

égarement (*ā gār mān*), bewilderment.

ehrlich währt am längsten (Ger.), (*ār 'lik vert ām leng 'sten*), honesty is the best policy.

elle mit Weile (Ger.), (*ī le mit vī 'le*), the more haste, the less speed.

eine Schwalbe macht keinen Sommer (Ger.), (*ī ne shwāl 'be mākt kī nen zō 'mer*), one swallow does not make a summer.

ein gebranntes Kind scheut das Feuer (Ger.), (*īn ge brān tes kint ' zhōit dās fōi 'er*), a burnt child dreads the fire.

el corazon manda las carnes (Sp.), (*āl kō rā thōn ' mādā lās kār 'nās*), the heart bears up the body.

élève (*ā lev*), pupil.

élite (*ā lēt*), a select body of persons.

éloge (*ā lōzh*), a funeral oration.

éloignement (*ā lwān ye mān*), estrangement.

embonpoint (*ān bōn pwan*), roundness, good condition.

émigré (*ā mē grā*), an emigrant.

employé (*ān plwā yā*), a person employed; a clerk.

empotage (*ān-pō-tāzh*).—Consommé or gravy broth.

empressement (*ān pres mān*), ardor; zeal; interest.

en ami (*ān nā mē*), a friend.

en arrière (*ān nā rē er*), in the rear; behind.

vive la république (*vēv lā rā pū plēk*), long live the republic.
vive l'empereur (*vēv lān prōr*), long live the emperor.
vive le roi (*vēv le rwā*), long live the king.
voilà (*vwā lā*), see there; there is, there are.
voilà tout (*vwā lā tōō*), that is all.
voilà une autre chose (*vwā lā ū nō tre shōz*), that is quite another thing.
voiture (*vwā tūr*), a carriage.
volaille (*vō-lā 'j*).—Poultry.
vol-au-vent (*vō-lō-vān*). A light puff-paste case baked and then filled with a ragoût, fricassée, or the like.

W

wagon-lits (*vā gō lē*), sleeping cars.
Was fehlt Ihnen? (Ger.). (*vās fālt 'ē nen*), what is the matter with you?
Wie die Arbeit, so der Lohn (Ger.). (*vē dē ār 'bit, zō der lōn*), as the labor, so the reward.
Welsh rare bit, or rab 'bit.—A dish consisting essentially of toasted bread on which is served toasted or melted cheese. The cheese is variously prepared, as with the admixture of ale, or other flavoring material.
white sauce.—Same as velouté, or similar sauce.
wiener schnitzel (*vē 'ner shnits 'el*).—A cut of veal from the leg, fried in batter, and seasoned with paprika, etc., after a style attributed to the Viennese.

Z

Zeitgeist (Ger.). (*tsīt 'gīst*), the spirit of the age.

PRONOUNCING DICTIONARY OF CLASSIC WORDS AND PHRASES

Including legal phrases, maxims, mottoes, quotations, proverbs, Latin abbreviations, classic allusions and references of common occurrence in books, periodicals, newspapers and speech.

KEY TO PRONUNCIATION

The long (marked) vowels are pronounced as in the following words: *fāte, fāre, cāre, mē, mīne, mōte, mūte*. The short vowels, which include all not marked as above, are pronounced as in the following words: *pat; pet; pīt; pot; put*. The accented syllable in each word is indicated by a mark placed immediately after it.

A

Ab extra (*ex 'trā*).—From without.
Ab initio (*in-ish 'i-ō*).—From the beginning.
Ab origine (*or-i 'jīn-e*).—From the commencement.
Ab ovo (*ō 'vō*).—From the egg—*i. e.*, the beginning. The egg in many ancient mythologies was the supposed origin of life.
Ab ovo usque ad mala (*us 'kwe ad mā 'la*).—From the egg to the apples—*i. e.*, from the beginning to the end (the Roman custom being to begin dinner with eggs and end with fruit).
Ab uno disce omnes (*ū 'nō dis 'se om 'nēs*).—From a single instance infer the whole.
Ab urbe condita.—A. U. C. (*ur 'be kon 'di-tā*).—From the (year of) building the city (Rome), 753 B. C.
A capite ad calcem (*ā kap 'i-te ad kal 'sem*).—From head to heel.
Accipe hoc (*ak 'sip-e hock*).—Accept this.
Ac etiam (*ak esh 'i-am*).—And also.
Ad arbitrium (*ar-bit 'ri-um*).—At pleasure.
Ad captandum vulgus (*cap-tan 'dum vul 'gus*).—To catch the rabble.
Ad extremum (*ex-tre 'mum*).—At last.
Ad finem (*fī 'nem*).—To the end.
Ad hominem (*hom 'in-em*).—To the man.
Ad infinitum (*in-fī-nī 'tum*).—To infinity.
Ad interim (*in 'ter-im*).—Meanwhile.
Ad Kalendas Graecas (*kal 'en-das grē 'kas*).—At the Greek kalends—*i. e.*, never (there being no kalends in the Greek year).
Ad libitum (*lib 'it-um*).—At pleasure.
Ad majorem Dei gloriam (*mā-jor 'em Dē 'ī glōr 'i-am*).—For the greater glory of God. The motto of the Order of the Jesuits, founded by Ignatius Loyola (1539).
Ad nauseam (*naw 'se-am*).—To disgust.
Ad quod damnum (*kwod dam 'num*).—To what damage.
Ad referendum (*ref-er-en 'dum*).—For further consideration.
Ad rem.—To the point.
Ad unguem (*un 'gwem*).—To a nail—*i. e.*, to a nicety, exactly. An expression borrowed from sculptors, who in modeling, give the finishing touch with the nail.
Ad unum omnes.—Cicero (*ū-num om 'nēs*).—All to a man.
Ad valorem (*va-lor 'em*).—According to the value.
Ad vivum (*vi 'vum*).—To the life.
Aegrescit medendo (*e-gres 'sit med-en 'dō*).—The disorder increases with the remedy, *i. e.*, the remedy is worse than the disease.
Aequam servare mentem (*ē-kwam ser-vār 'e men 'tem*).—To preserve a well-balanced mind; to be unmoved.
Aequo animo (*ē 'kwo an 'im-ō*).—With resignation, contentedly.
Aetatis suae (*ē-tā 'tis sū 'ē*).—Of his (or her) age.
A fortiori (*fōr-shi-or 'ī*).—With stronger reason.
Alere flammam (*al 'er-e flam 'mam*).—To feed the flame.
Alias (*al 'i-as*).—Otherwise.
Aliibi (*al 'i-bī*).—Elsewhere. Legal phrase implying that the accused in a criminal case was not on the scene of a crime at the time of its committal.
Alma Mater (*al 'ma mā 'ter*).—Benign mother. An expression used by college men, who speak of their college as their Alma mater.
Alter ego (*al 'ter egg 'ō*).—Another self.
Alter idem (*al 'ter i-dem*).—Another exactly similar.
Amantium irae amoris integratio est.—(*am-an 'shi-um ī 'rē a-mor 'iss inte-grā-shi-ō est*).—The quarrels of lovers are renewals of love.
A mensa et thoro (*ā men 'sā et thōr 'ō*).—From table and bed. A legal phrase used by the judge in pronouncing the decree of separation in the Divorce Court.
Amicus humani generis (*am-i-cus hu-mā 'nī gen 'er-iss*).—A friend of the human race.
Amor patriae (*am 'or pat 'ri-ē*).—Love of one's native land.
Anguis in herba.—Virgil (*an 'gwiss in her 'bā*).—A snake in the grass.
Animo et fide (*an 'im-ō et fī 'dē*).—By courage and faith.
Anno aetatis suae (*an 'no ē-tā 'tiss sū 'ē*).—In the year of his (or her) age.
Anno Christi, A. C. (*an 'no kriss 'ī*).—In the year of Christ.
Anno Domini, A. D. (*an 'no Dom 'inī*).—In the year of our lord.
Anno mundi, A. M. (*an 'no mun 'dī*).—In the year of the world. The date of the Creation is given by Bishop Usher as 4004 B. C.
Ante meridiem, A. M. (*an 'te mer-i 'di-em*).—Before noon.
A posse ad esse (*ā poss 'e ad ess 'ē*).—From possibility to actuality.
A posteriori (*ā pos-tē-ri-or 'ī*).—From the effect to the cause; that is, an argument by induction.
A priori (*ā prī-or 'ī*).—From the cause to the effect; that is, an argument by deduction.
Aqua fortis (*ak 'wa for 'tiss*).—Strong water. A common name for nitric acid.
Aqua vitae (*ak 'wa vi 'tē*).—Water of life. Alcohol, brandy.
Arbiter elegantiarum (*ar 'bit-er ele-gan-shi-ar 'um*).—An authority in matters of taste.
Arcana imperii (*ar-kā 'na im-per 'ī*).—Secrets of the state.
Ardentia verba (*ar-den 'shi-a ver 'bā*).—Burning words.
Argumentum ad hominem (*ar-gu-men 'tum ad hom 'i-nem*).—An argument to the man. An argument in refutation drawn from an opponent's own principles.
Argumentum ad invidiam (*ar-gu-men 'tum ad in-vid 'i-am*).—An argument appealing to low passions.
Argumentum ad iudicium (*ar-gu-men 'tum ad ju-dish 'i-um*).—An appeal to the judgment.
Argumentum ad populum (*ar-gu-men 'tum ad pop 'u-lum*).—An appeal to popular prejudice.
Argumentum baculinum (*ar-gu-men 'tum back-u-lī-num*).—The argument of the cudgel; appeal to force. Club-law.
Ars celare artem (*ars sell-air 'e ar 'tem*).—True art is to conceal art.
Ars longa, vita brevis (*ars lon 'ga vi 'ta brev 'iss*).—Art is long, life short.
Artium magister, A. M. or M. A. (*ar 'ti-um ma-jis 'ter*).—Master of Arts.
Audi alteram partem (*aw 'dī al 'ter-am par 'tem*).—Hear the other side.
Aura popularis.—Cicero (*aw 'ra pop-u-lair 'iss*).—The shifting breeze of popular favor.
Aurea mediocritas.—Horace (*aw 're-a med-i-ok 'ri-tass*).—The golden mean.
Aut Cæsar, aut nullus (*awt Cæsar awt nul 'lus*).—Either Cæsar or no one.
Aut vincere aut mori (*awt vin 'ser-e awt mor 'ī*).—Either to conquer or to die.
A verbis ad verbera (*ā ver 'bis ad ver 'ber-a*).—From words to blows.
A vinculo matrimonii (*ā vin 'ku-lo mat-ri-mō 'nī-ī*).—From the bond of marriage.

B

Bis dat, qui cito dat (*biss dat kwī sī 'tō dat*).—He gives twice who gives quickly.
Bona fide (*bō 'nā fī 'dē*).—In good faith.
Brevis esse laboro, obscurus fio.—Horace (*brev 'iss ess 'e lab-or 'ō ob-sku 'rus fīo*).—When I strive to be concise I become obscure.
Brutum fulmen (*Bru 'tum ful 'men*).—A harmless thunderbolt.

C

Cacoethes loquendi (*kak-o-ē 'thēs lo-kwen 'dī*).—An itch for speaking.
Cacoethes scribendi (*skrī-ben 'dī*).—An itch for scribbling.
Capias (*kap 'i-ass*).—You may take. A writ to authorize the seizure of a defendant's person (legal).
Caput mortuum (*kap 'ut mor 'tu-um*).—The dead head—*i. e.*, the worthless remains.
Caret (*care 'et*).—It is wanting.
Casus belli (*kā 'sus bell 'ī*).—A cause for war.

Caveat actor (*kav ˈe-at ak ˈtor*).—Let the doer beware. Law term signifying a notice to stay legal proceedings.
Caveat emptor (*emp ˈtor*).—Let the purchaser beware. Term used to show that the vendor does not hold himself responsible for the condition of the goods.
Cetera desunt (*sē ˈter-a dē-sunt*).—The rest is wanting.
Ceteris paribus (*sē ˈter-is pair ˈi-bus*).—Other things being equal.
Circa—c. (*sir ˈkɑ*).—About, towards (of time).
Circulus in probando (*sir ˈku-lus in pro-ban ˈdō*).—A circle in the proof; using the conclusion as one of the arguments.
Cogito ergo sum (*coj ˈtō er ˈgō sum*).—I think, therefore I exist. The famous dictum of Descartes, the philosopher.
Commune bonum (*com-mū ˈne hō ˈnum*).—A common good.
Compos mentis (*com ˈpos men ˈtiss*).—Of sane mind.
Conscia mens recti (*con ˈshi-a mens rek ˈtū*).—A mind conscious of rectitude.
Contra bonos mores (*con ˈtra bō ˈnōs mor ˈēz*).—Against good manners.
Copia verborum (*cō ˈpi-a ver-bor ˈum*).—Plenty of words.
Coram nobis (*cor ˈam nō ˈbiss*).—In our presence; before us.
Corpus delicti (*cor ˈpus de-lik ˈtū*).—The body, *i. e.* substance, of the offense.
Crimine ab uno discite omnes (*krī ˈmin-e ab ū ˈnō dis ˈse om ˈnēz*).—From one crime learn the nature of all.
Cui bono? (*kī bō ˈnō*).—For whose benefit is it?
Cum grano salis (*cum grā ˈnō sā ˈlis*).—With a grain of salt, *i. e.*, with some allowance.
Cum privilegio (*priv-i-le ˈji-ō*).—By privilege.
Curiosa felicitas (*ku-ri-ō ˈsa fē-lī ˈsi-tas*).—Felicity of expression.

D

Data (*dā ˈta*).—Things given or taken for granted.
De auditu (*dē aw-dī ˈtū*).—By hearsay.
Deceptio visus (*dē-sep ˈshi-ō vī ˈsūs*).—An optical illusion.
De facto (*dē fac ˈtō*).—In point of fact. A legal phrase used to describe that which is fact as opposed to that which is legal.
Dei gratia (*Dē ˈī grā ˈshī-ā*).—By the grace of God. A phrase used in respect to a sovereign, in royal proclamations, and on coins of the realm.
Disjecta membra (*dis-jek ˈta mem ˈbra*).—Scattered remains.
Divide et impera (*dī ˈvi-dē et im ˈper-ā*).—Divide and govern.
Docendo discimus (*dō-sen ˈdō dis ˈsi-mus*).—By teaching we learn.
Dominus providebit (*Dom ˈin-us prō-vid-ē ˈbit*).—The Lord will provide.
Dramatis personæ (*drā ˈma-tiss per-sō ˈnē*).—Characters of a play.
Dulce domum (*dul ˈsē dō ˈmum*).—Sweetly homeward.
Dulce et decorum est pro patria mori—Horace (*dul ˈsē et de-kor ˈum est pro pat ˈri-ā mōr ˈī*).—It is pleasant and befitting to die for one's country.
Dum spiro, spero (*dum spi ˈrō, sper ˈō*).—While I breathe, I hope.
Dum vivimus, vivamus (*vī ˈvim-us, vī-vā ˈmus*).—While we live, let us live—*i. e.*, whilst we have life, let us enjoy it.
Durante vita (*du-ran ˈte vī ˈtā*).—During life.

E

Ecce homo! (*ek ˈsē hom ˈō*).—Behold the man! A name given to representations of the suffering Savior, because Pilate used those words when Christ came forth wearing the crown of thorns and purple robe (St. John xix. 5).
Editio princeps (*e-dish ˈō prin ˈseps*).—Original edition.
Emeritus (*ē-mer ˈitus*).—A soldier who has served his time, a veteran; hence, one retired from active official duties, as an Emeritus professor.
E pluribus unum (*ē plūr ˈi-bus ūnum*).—From many, one. Motto of United States.
Esse quam videri malim (*es ˈsē kwam vī-dē ˈrī mā-lim*).—I prefer to be, rather than seem to be.
Esto quod es (*es-tō quod ēz*).—Be what thou art.
Et cetera (*et sē ˈter-a*), &c., or etc. And so forth.
E tenebris oritur lux (*ē ten ˈe-brīs or ˈi-tur lux*).—Out of darkness there arises light.
Et sequentes (*et se-kwen ˈtēs*).—And those that follow.
Et sequentia (*se-kwen ˈshia*)—*et seq.*—And what follows.
Et sic de ceteris (*et sik dē sē ˈterīs*).—And so of the rest.
Et tu, Brute (*tū Brū ˈte*).—And thou also, Brutus! The words were used by Cæsar when he discovered Brutus among the conspirators who assassinated him in the senate-house, B. C. 44.
Ex æquo (*ē ˈkwo*).—In like manner, equally.
Ex animo (*an ˈimo*).—From the soul, heartily.
Ex cathedra (*kath ˈe-drā*).—From the chair—*i. e.*, with authority. The phrase originally referred to the decisions given by popes and prelates in their pontifical character; it is now used in reference to any decision given with the air of authority.
Exceptio probat regulum (*ex-sep ˈshio prō-bat reg ˈu-lum*).—The exception proves the rule.
Ex curia (*kū ˈriā*).—Out of court. Originally every full Roman citizen belonged to one of the thirty curiæ or divisions of the city, and was entitled to vote on the laws submitted to his curia. The phrase *ex curia* was applied to those who had no right to vote in the curia. It is now used to denote a person who has no *locus standi* before any tribunal.
Ex delicto (*dē-lik ˈtō*).—From the crime.
Exempli gratia—*e. g.* (*ex-em ˈplī grā ˈshia*).—By way of example.
Exeunt (*eks ˈe-unt*).—They go out. Used by the older playwrights to indicate the departure of some of the performers from the stage.
Exit (*eks ˈit*).—He (or she) goes out.
Exitus acta probat (*ex ˈit-us ak ˈta prō ˈbat*).—The event justifies the deed. Motto of George Washington.
Ex nihilo nihil fit (*ex nī ˈhillo nī ˈhill fit*).—Out of nothing nothing comes.
Ex officio (*of-fish ˈō*).—By virtue of his office: *e. g.*, the president of a society is *ex officio* a member of all committees of the society.
Ex parte (*par ˈte*).—On one side only. A phrase indicating an application, concerning a pending action, to a judge by one party in the action in the absence of the other.
Experientia docet sapientiam (*ex-pe-ri-en ˈshia dō ˈset sap-i-en ˈshī-am*).—Experience teaches wisdom.

F

Faber est quisque fortunæ suæ—Sallust (*fab ˈer est kwis ˈkwe for-tū ˈnē sū ˈē*).—Every man is the maker of his own fortune.
Facile princeps (*fas ˈil-e prin ˈseps*).—Easily the chief—*i. e.*, the admitted chief.
Facilis descensus Averno—Virgil (*fas ˈil-iss dē-sen ˈsus av-er ˈnō*).—The descent to Avernus (or hell) is easy: the downward road is an easy one. Avernus was a lake of Campania, near which was the cave through which Æneas descended to the lower world.
Fac simile (*fab sim ˈil-e*).—Do the like. An exact copy.
Factotum (*fab-tō ˈtum*).—Do everything. A man of all work.
Fecit (*fē ˈsit*).—He did it. Generally affixed to the pedestal of a statue by the sculptor who executed it.
Felicitas habet multos amicos (*fē ˈlī ˈsi-tas hab ˈet mul ˈtōs am-ī ˈkōs*).—Happiness has many friends: *i. e.*, friends flock around those who are prosperous.
Feræ naturæ (*fer ˈē nā-tū ˈrē*).—Of the nature of a wild beast.
Festina lente (*fes-tī ˈnā len ˈtē*).—Hasten slowly: *i. e.*, do nothing in a hurry.
Fiat justitia, ruat cælum (*fī ˈat jus-tish ˈi-a rū ˈat sē ˈlum*).—Let justice be done, even though the heavens should fall.
Fiat lux (*fī ˈat lux*).—Let there be light.
Fides Punica (*fī ˈdēs Pū ˈnik-a*).—Punic (*i. e.* Carthaginian) faith: treachery. A proverbial expression among the Romans for faithlessness.
Fidus Achates (*fī ˈdus Akā ˈtēz*).—The faithful Achates: a true friend. Achates was the distinguished companion of Æneas in his wanderings after his flight from Troy.
Fieri facias (*fī ˈerī fas ˈi-ass*).—Cause it to be done. Usually written *fī. fa*. The title of a writ of execution issued to give effect to the judgment of a court of justice.
Finem respice (*fī ˈnem res ˈpiss-e*).—Look to the end.
Finis coronat opus (*fī ˈnis korō ˈnat op ˈus*).—The end crowns the work.
Flagrante delicto (*de-lik ˈtō*).—In the act of committing the crime: *i. e.*, in the very act.
Fortes fortuna juvat (*fōr ˈtēs fortū ˈna ju ˈvat*).—Fortune helps the brave.
Fortis cadere, cedere non potest (*for ˈtiss kad ˈer-e sē ˈder-e non pot ˈest*).—The brave may fall, but cannot yield.
Fortiter et recte (*for ˈtit-er et rek ˈtē*).—Courageously and uprightly.
Fortitudine et prudentia (*forti-tu ˈdin-e et prūden ˈshī-ā*).—By fortitude and prudence.
Fortuna favet fatuis (*fortu ˈna fav ˈet fat ˈuis*).—Fortune favors idiots.
Fortunæ filius (*for-tu ˈnē fil ˈius*).—A son of fortune—*i. e.*, one favored by fortune.
Fortuna sequator (*sekwā ˈtur*).—Let fortune follow.
Frangas non flectes (*fran ˈgas non flek ˈtēs*).—You may break, but you shall not bend, me.
Fronti nulla fides (*fron ˈtī null ˈa fī ˈdēs*).—Do not judge by appearances.
Frustra laborat qui omnibus placere studet (*frus ˈtrā labōr ˈat kwī om ˈnibus pla-sē ˈre stū ˈdet*).—He labors in vain who studies to please all.
Fugit irreparabile tempus—Virgil (*fū ˈjīt ir-rep-ar-ā ˈbil-e tem ˈpus*).—Time, once gone, can never be regained.
Furor arma ministrat—Virgil (*fū ˈrōr ar ˈma min ˈis-tra*).—Rage supplies them with arms.
Furor loquendi (*fū ˈrōr lo-kwen ˈdī*).—A rage for speaking.
Furor poeticus (*po-ēt ˈīk-us*).—Poetical fire.
Furor scibendi (*skri-ben ˈdī*).—A rage for writing.

G

Gaudeamus (*gawdeā ˈmus*).—Let us rejoice.
Gloria in excelsis Deo (*glor ˈi-a in ex-sel ˈsis dē ˈō*).—Glory to God in the highest. The opening words of the greater doxology sung in the ancient Church; chiefly used in the Communion service and private devotion.
Gratis (*grā ˈtiss*).—Free; for nothing.
Gutta cavat lapidem non vi, sed semper cadendo (*gut ˈta kav ˈat lap ˈid-em non vī sed sem ˈper ka-den ˈdō*).—The drop hollows the stone not by force, but by constant falling.

H

Haud passibus æquis—Virgil (*hawd pass ˈi-bus ē ˈkwīs*).—With unequal steps.
Hic et ubique (*hik et ubī ˈkwe*).—Here and everywhere. ("Here, there, and everywhere.")
Hic jacet (*hik ja ˈset*).—Here lies. An inscription frequently carved on monuments dedicated to deceased persons.
Hoc age (*hok aj ˈē*).—Do this.
Homo sum: humani nihili a me alienum puto—Terence (*hom ˈo sum humā ˈnī nī ˈhil ā mē ali-ē ˈnum pū ˈto*).—I am a man: I count nothing human indifferent to me.
Honesta mors turpi vita potior—Tacitus (*hones ˈta maws tur ˈpi vī ˈtā pō ˈshior*).—An honorable death is preferable to a base life.
Honor virtutis præmium (*hon ˈor virtū ˈtiss præ ˈmium*).—Honor is the reward of virtue (or valor).
Humani generis decus (*humā ˈnī jen ˈer-iss dek ˈus*).—The glory of the human race. These words are inscribed on Sir Isaac Newton's monument on the rood-screen in Westminster Abbey.
Humanum est errare (*humā ˈnum est errā ˈre*).—It is human to err. "To err is human, to forgive, divine."—Pope.

I

Ibidem (*ibi dem*).—In the same place.
Idem (*i dem*).—The same.
Id est (*i. e.*).—That is, that is to say.
Ignis fatuus (*ig niss fat u-us*).—A deceiving fire: a Will-o'-the-wisp; an inflammable gas frequently seen over marshes, which leads the traveler who pursues it into the bog.
Ignorantia legis excusat neminem (*ignoran shia lē jis excū sat nem inem*).—Ignorance of the law excuses nobody.
Imo pectore (*i mo pek tor-e*).—From the bottom of the heart.
Impedimenta (*im-pedi-men ta*).—The baggage of an army; luggage in traveling.
Imperium in imperio (*imper ium in imper io*).—One government within another.
Imprimatur (*imprimā tur*).—Let it be printed. The term is used to signify the permission to print a book.
Imprimis (*im-prī miss*).—In the first place, chiefly, especially.
In æternum (*in eter num*).—Forever.
In articulo mortis (*ar-tik ulo mor tis*).—At the point of death.
In capite (*kap i-tē*).—In chief.
In cauda venenum (*kaw dā venē num*).—There is poison in the tail. The sting of the scorpion is at the tip of its tail.
In cœlo quies (*se lo kwī ōs*).—There is rest in heaven.
In commendam (*commen dam*).—In recommendation.
In curia (*kū ri-ā*).—In the court.
Index expurgatorius (*in dex expurgator ius*).—A list of prohibited books. The term employed for the list of books which are allowed to be read after revision by the papal authorities. The I. E. was commenced by Pope Paul IV. (1555), and published by Pope Pius IV. (1559), after organization by the Council of Trent (1545-1563). Press censorship exists in Russia and some other nations.
In esse (*ess e*).—In being.
In extenso (*exten so*).—At full length.
In extremis (*extrē miss*).—At the point of death.
In flagrante delicto (*flā-gran te delik ō*).—In the very act.
In formā pauperis (*for mā paw per-iss*).—As a poor man. A law term denoting the status of a person who, having just cause of action, has no money to pay costs, counsel under these circumstances being appointed by the court.
In foro conscientiæ (*for ō con-shi-en shi-ē*).—Before the tribunal of conscience.
Infra dignitatem (*in frā dignitā tem*).—Beneath one's dignity.
In hoc signo vinces (*in hoc sig nō vin sēs*).—Under this standard (sign) thou shalt conquer. Motto of the Emperor Constantine, who first used it on his standard (*labarum*) in the battle against Maxentius, A. D. 312.
In limine (*li-min-e*).—At the threshold.
In loco parentis (*lō kō paren tiss*).—In the place of a parent. A law term denoting the guardian who takes charge of a child in the event of the death or mental incapacity of its parents.
In medias res (*med i-ass rēs*).—Into the midst of things, *e. g.*, to come to the point at once.
In medio virtus (*med i-o vir tus*).—Virtue lies in the mean.
In memoriā (*memor i-am*).—To the memory of.
In nomine (*nom i-ne*).—In the name of.
In nubibus (*nū bi-bus*).—In the clouds.
In nuce (*nū se*).—In a nutshell.
In pace (*pā se*).—In peace.
In perpetuum (*per-pet u-um*).—Forever.
In posse (*poss e*).—Possible.
In præsentī (*prē-sen tī*).—At present, now.
In propria persona (*prō pri-ā persō nā*).—In person. A law term applied to a litigant who conducts his own case.
In puris naturalibus (*pūr is naturā li-bus*).—Stark naked.
In re (*rē*).—In the matter of (legal).
In rerum natura (*rēr um natū rā*).—In the nature of things.
In situ (*sī tū*).—In its original situation.
In statu pupillari (*stā tū pupillār ī*).—In the state of being a ward (legal).
In statu quo (*kwō*).—In the state in which it was, we were, etc. (legal).
In tenebris (*ten e-brīs*).—In darkness.
Inter alia (*in ter al i-a*).—Among other things (legal).
Inter nos (*nōs*).—Between ourselves.
Inter pocula (*pō ku-la*).—At one's cups.
Inter se (*in ter sē*).—Among themselves.
In toto (*tō tō*).—In the whole; entirely.
Intra muros (*in trā mū rōs*).—Within the walls.
In transitu (*trans i-tū*).—On the passage.
In vacuo (*vak u-ō*).—In a space devoid of air.
In vino veritas (*vī no ver i-tas*).—There is truth in wine—*i. e.*, the truth comes out under its influence.
Ipse dixit (*ip se dix it*).—He himself said it: dogmatic assertion.
Ipsissima verba (*ipsiss i-ma ver ba*).—The very words.
Ipso facto (*ip so fak to*).—In the fact itself.
Ipso jure (*ip so ju re*).—By the law itself.
Ira furor brevis est—Horace (*i ra fū ror brev iss est*).—Anger is a short madness.
Ita lex scripta est (*it a lex scrip ta est*).—Thus the law is written.

J

Jacta alea est (*jak ta ā le-a*).—The die has been cast. Famous phrase said to have been used by Julius Cæsar on crossing (49 B. C.) the Rubicon, the sacred boundary of the domestic Roman Empire, by which act he declared war against Pompey and the Senate.
Jure divino (*jū re divi no*).—By divine law.
Jure humano (*humā no*).—By human law.
Jus civile (*jus sivi le*).—The civil law. The term commonly used to describe the Roman law and the various modern systems based upon it, as contrasted with the English common law.
Jus divinum (*divi num*).—The divine law; the law which is right with respect to things divine.
Jus gentium (*jen shium*).—The law of nations; the law that all nations esteemed to be equitable.

L

Laborare est orare (*laborār e est orār e*).—To labor is to pray (or Work is worship).
Labore et honore (*labōr e et honōr e*).—By industry and honor.
Labor ipse voluptas (*lab or ip se vo-lup tas*).—Labor itself a pleasure.
Labor omnia vincit (*lab or om ni-a vin sit*).—Labor conquers all things.
Lapsus calami (*lap sus cal a-mi*).—A slip of the pen.
Lapsus linguæ (*lin gwē*).—A slip of the tongue.
Lapsus memoriæ (*mem-ōr i-ē*).—A slip of the memory.
Lares et Penates (*Lār-ēs et Penā tēs*).—Household gods.
Latet anguis in herba—Virgil (*la tet an gwis in her bā*).—A snake is concealed in the grass.
Laus Deo (*laws Dē ō*).—Praise to God.
Lex non scripta (*skrip ta*).—The unwritten law—*i. e.*, the common law.
Lex scripta.—The written law—*i. e.*, the statute law.
Lex talionis (*tal-i-ō niss*).—The law of retaliation.
Lex terræ (*ter rē*).—The law of the land.
Loco citato—*loc. cit.* (*lok ō sit-ā tō*).—In the place quoted.
Locus in quo (*kwō*).—The place in which (legal).
Locus sigilli (*si-jill ī*).—The place of the seal.
Lusus naturæ (*lū sus natū rē*).—A freak of nature.

M

Magna est veritas, et prævalebit (*mag na est very tass et prē-val-ē bit*).—Great is truth, and it will prevail.
Magni nominis umbra (*mag ni nom i-niss um bra*).—The shadow of a great name.
Magnum bonum (*mag num bō num*).—A great good.
Magnum opus (*op us*).—A great work. The chief work of a distinguished author is frequently so called.
Mala fide (*mā lā fi dē*).—In bad faith.
Mandamus (*mandā mus*).—We command: a law writ.
Manibus pedibusque—Terence (*man i-bus pedi-bus kwe*).—With hands and feet—*i. e.*, with might and main.
Materia medica (*mā-ter i-a med ic-a*).—Substances used in medicine.
Mea culpa (*mē ā kul pā*).—By my fault.
Medio tutissimus ibis (*med i-o tū-tiss imus i bis*).—The middle is the safest course.
Me judice (*jū di-se*).—I being judge; *i. e.*, in my own opinion.
Memento mori (*me-men tō mor ī*).—Remember that you must die. Words used by Egyptian banquets to remind the guests of their mortality.
Memorabilia (*memorabil i-a*).—Things to be remembered. The name of a work by Xenophon, the Athenian general, historian, and philosopher (c. 445-359 B. C.).
Mensa et thoro (*men sâ et thor ō*).—From bed and board.
Mens conscia recti (*mens con shia rek tī*).—A mind conscious of rectitude.
Mens sana in corpore sano (*mens sâ na in kor por-e sâ no*).—A sound mind in a healthy body.
Meo animo (*mē o an im-o*).—In my opinion.
Meo periculo (*per-i kulo*).—At my own risk.
Meum et tuum (*mē um et tū um*).—Mine and thine.
Mirabile dictu—Virgil (*mi-rā bil-e dik tū*).—Wonderful to tell.
Mirabile visu (*vī su*).—Wonderful to see.
Mirabilia (*mi-ra-bil i-a*).—Wonderful things.
Mittimus (*mit i-mus*).—We send. A writ by which a culprit is committed to jail. A legal phrase for the writ transferring records from one court to another.
Modo et forma (*mod o et for mā*).—In manner and form.

Modus operandi (*mod'us operan'di*).—The manner of operation.
More suo (*sū'ō*).—In his own way.
Mors janua vitæ (*maws jan'ua vī'tē*).—Death the gate of life.
Mors omnibus communis (*om'nibus kommū'nis*).—Death is common to all of us.
Mors ultima linea rerum est—Horace (*ul'tim-a lī'ne-a rēr'um est*).—Death is the boundary line of all things.
Mos pro lege (*mōs pro lē'jē*).—Custom for law (a law phrase).
Motu proprio (*mō'tū prō'priō*).—Of his own accord.
Multum in parvo (*mul-tum in par'vō*).—Much in little.
Mutatis mutandis (*mu-tā'tis mu-tan'dis*).—Things being changed which ought to be changed; *i. e.*, with necessary changes.

N

Necessitas non habet legem (*necess'it-ass non hab'et lē'jem*).—Necessity has no law.
Ne fronti crede (*nē front'ti krē'de*).—Trust not to appearances.
Nem. con.—abbreviation for **nemine contradicente** (*nem'in-e contra-dī-sent'ē*).—No one speaking in opposition: without opposition.
Nem. dis.—abbreviation for **nemine dissentiente** (*dis-sen-shi-en'te*).—No one dissenting: without a dissenting voice.
Ne plus ultra (*nē plus ul'trā*).—No more beyond: *i. e.*, perfection.
Ne quid nimis—Terence (*nē kwid nim'iss*).—Not too much of anything; *i. e.*, shun extremes.
Nescit vox missa reverti—Horace (*nes'sit vox miss'a rever'ti*).—The spoken word cannot be recalled.
Ne sutor ultra crepidam—Pliny (*sū'tor ul'tra crep'ī-dam*).—Let the cobbler stick to his last; *i. e.*, let everyone attend to his own business.
Nihil ad rem (*ni'hil ad rem*).—Nothing to the point.
Nullum quod tetigit non ornavit (*kwod tet'ī-git non ornā'vit*).—He touched nothing which he did not adorn. These Latin words form part of Dr. Johnson's epitaph on Oliver Goldsmith in Westminster Abbey.
Nil conscire sibi—Horace (*con-sī're sib'ī*).—To be conscious of no wrong.
Nil desperandum.—Never despair.
Nisi Dominus frustra (*ni'si dom'in-us frus'trā*).—Unless the Lord be with us, we strive in vain. Motto of the City of Edinburgh.
Nisi prius (*ni'si pri'us*)—literally, Unless previously. A trial at *Nisi Prius* may be defined as a trial, before a judge and jury, of a civil action that has been brought in one of the superior courts.
Nolens volens (*nō'lens vō'lens*).—Whether he will or not.
Noli me tangere (*nō'lī me tan'jer-ē*).—Don't touch me.
Nolle prosequi (*noll'ē prō'sek-wī*).—To be unwilling to proceed (legal term). An undertaking by a plaintiff that he will not proceed with part or the whole of his suit.
Non compos mentis (*kom'poss men'tiss*).—Not sound in mind.
Non constat (*kon'stat*).—It does not appear.
Non est inventus (*inven'tus*).—He has not been found.
Non licet (*liss'et*).—It is not lawful.
Non multa, sed multum (*mul'ta sed mul'tum*).—Not many things, but much.
Non obstante (*ob-stan'te*).—Notwithstanding.
Non omnia possumus omnes—Virgil (*om'ni-a poss'u-mus om'nēs*).—We cannot, all of us, do all things.
Non quo sed quomodo (*kwō sed kwō'mod-ō*).—Not by whom, but in what manner.
Non sequitur (*sek'wit-ur*).—It does not follow.
Non sibi, sed patriæ (*sib'ī sed pat'ri-ē*).—Not for himself, but for his country.
Nosce teipsum (*nos'se tē-īp'sum*).—Know thyself. The Latin form of the Greek inscription over the portico of the Temple of Apollo at Delphi.
Noscitur ex sociis (*noss'ī-tur ex sō'si-is*).—He is known by his companions.
Nota bene (N. B.) (*nō'tā bē'nē*).—Mark well.
Novus homo (*nov'us hom'ō*).—A new man—one who has raised himself from obscurity. Term applied to men who in the days of the Roman Republic and Empire rose to distinction but did not belong to an ancient *gens*.
Nulli secundus (*null'ī se-kun'dus*).—Second to none.
Nunc aut nunquam (*nunk awt nun'kwam*).—Now or never.

O

Obiit (*ob'ī-it*).—He (or she) died. An inscription on tombs, indicating the fact of the death of the person interred.
Obiter dictum (*ob'it-er dik'tum*).—A thing said by the way, incidentally; plural, **obiter dicta**.
Oidium theologicum (*ō'di-um theo-loj'ī-kum*).—Hatred among divines. Theological controversy usually provoking great bitterness on the part of the disputants.
Omnia ad Dei gloriam (*om'ni-a ad Dē'ī glōr'ī-am*).—All things to the glory of God.
Omnia bona bonis (*om'ni-a bō'na bō'nīs*).—To the good all things are good.
Onus probandi (*ō nus pro-ban'di*).—The burden of proving (legal).
Optimates (*op-ti-mā'tēs*).—Aristocrats. Literally, the best. In ancient times the aristocracy was composed of men selected for their superior vigor as the best in the tribe.
Opum furiosa cupido—Ovid (*op'um furi-ō'sa ku-pī'dō*).—The ungovernable greed for wealth.
Ora et labora (*ōr'ā et lab-ōr'ā*).—Pray and work.
Ora pro nobis (*ōr'ā pro nō'bis*).—Pray for us. The words of the refrain of the well-known hymn in the Roman Catholic mass.
Ore rotundo (*ōr'ē rō-tun'dō*).—With round, full voice.
O tempora! O mores!—Horace (*tem'por-a mor'ēs*).—O the times! O the manners!
Otium cum dignitate (*ō'shi-um kum dig-ni-tā'te*).—Ease with dignity.
Otium sine dignitate (*sin'ē*).—Ease without dignity.

P

Pace tua (*pā'se tū'ā*).—With your permission.
Pacta conventa (*pak'ta con-ben'ta*).—Terms agreed on.
Pari passu (*par'ī pass'u*).—With equal pace; in equal proportion.
Pariter pax bello—Cornelius Nepos (*par'it-er pax bell'ō*).—Peace is produced by war: *i. e.* by a show of hostile preparations war is often averted.
Particeps criminis (*par'ti-seps krī'min-iss*).—A sharer in the guilt: an accomplice (legal).
Passim (*pas'sim*).—Everywhere.
Pater noster (*pat'er nos'ter*).—Our father. The two first words at the commencement of the Lord's Prayer.
Pater patriæ (*pat'er pat'ri-ē*).—The father of his country. The name given to Cicero by the Roman Senate. The term was also applied to some other distinguished Romans. In later times Andrea Dorea and George Washington were thus distinguished.
Patres conscripti (*pat'rēs kon-skrip'ti*), *i. e.* **patres et conscripti**.—Fathers and elect—the title of the assembled Senate.
Patria cara, carior libertas (*pat'ri-a cār'a cār'ī-or lib'er-tas*).—My country is dear, but liberty is dearer.
Pax in bello (*bell'ō*).—Peace in war—*i. e.*, a weak prosecution of hostilities.
Pax vobiscum (*vo-bis'kum*).—Peace be with you.
Peccavi (*pek-kā'vī*).—I have sinned.
Pendente lite (*pen-den'te lī'te*).—While the lawsuit is pending (legal).
Peraget angusta ad augusta (*per-ag'et an-gus'ta ad aw-gus'ta*).—Through difficulties to grandeur.
Per annum.—By the year.
Per centum.—By the hundred.
Per contra.—Contrariwise.
Per diem (*dī'em*).—By the day.
Per fas et nefas (*fass et nef'ass*).—Through right and wrong.
Per mare, per terras (*mar'e ter'ras*).—By sea and by land: *i. e.*, everywhere.
Permitte Divis cetera (*per-mitt'ē dī'vis sē'ter-a*).—Leave the rest to the gods.
Per saltum (*salt'um*).—By a leap. A legal phrase frequently used.
Per se.—By itself (legal).
Perseverando (*per-sev-er-an'dō*).—By perseverance.
Petio principii (*pet-ī'shi-o prin-sip'ī-i*).—A begging of the question.
Pinxit (*pinks'it*).—He painted it; word placed in the corner of a canvas after the signature of the artist.
Plebs (*pleb's*).—Common people. The name given to the third and lowest rank of the orders into which the Roman state was divided.
Pleno jure (*plē'no jū're*).—With full authority.
Pluries (*plū'ri ēz*).—Often, frequently.
Poeta nascitur, non fit—Horace (*po-ē'ta nass'it-ur non fit*).—A poet is born, not made.
Pons asinorum (*ass'in-or'um*).—The bridge of asses (applied to Euclid i. 5).
Posse comitatus (*poss'e kom-i-tā'tūs*).—The power of the county. A legal phrase expressing the power of the county or citizens, who are summoned to assist an officer, as the sheriff, in suppressing a riot or executing any legal process.
Post bellum auxilium (*pōst bell'um awx-il'ī-um*).—Help after the war.
Postea (*post'e-ā*).—Afterwards.
Post factum nullum consilium (*fak'tum null'um con-sil'ī-um*).—After the deed is done there is no need for consultation.
Post meridiem—P. M. (*mer-ī'di-em*).—After mid-day.
Post mortem.—After death. Term applied to the examination of a body to discover the cause of death.
Post nubila Phœbus (*nū'bī-l-a fē'bus*).—After clouds the sun shines. Phœbus Apollo, "the radiant Apollo," a god who personified the sun.
Post obitum (*ob'it-um*).—After death. An undertaking given to a usurer to repay a loan on the death of a relative, from whom money is expected, is called a *post obit*.
Post tenebras lux (*ten'e-bras*).—After darkness comes light.
Postulata (*post-u-lā'ta*).—Things demanded.
Prima facie (*prī'mā fā'si-ē*).—On the first view or appearance. A legal term frequently employed to denote that on the evidence already given there is a good case for further investigation.
Primum mobile (*prī'mum mō'bil-ē*).—The source of motion: the mainspring.
Primum inter omnes (*prī'mus in'ter om'nēs*).—The first among all.
Primum inter pares (*par'ēs*).—The first among his equals or peers: *e. g.*, an archbishop among bishops.
Principia, non homines (*prin-sip'ī-a non hom'in-ēs*).—Principles, not men.
Principiis obsta (*prin-sip'ī-is ob'sta*).—Withstand the beginnings (*i. e.* of evil).
Pro aris et focis (*ar'is et fō'sis*).—For our altars and our hearths.
Pro bono publico (*prō bōnō pub'li-kō*).—For the public good.
Pro et con.—For and against.
Profanum vulgus—Horace (*pro-fā'num vul'gus*).—The common herd.
Pro forma (*for'mā*).—For the sake of form.
Pro hac vice (*hak'vī'se*).—For this time.
Pro patria (*pat'ri-ā*).—For our country.

Pro rata (*rā 'ta*).—Proportionally.
Pro rege, lege, et grege (*rē jē lē 'je et grej' e*).—For the king, the law, and the people.
Pro re nata (*rē na 'nā*).—Under the present circumstances, as matters are.
Pro salute animæ (*sal-ū 'te an 'im-ē*).—For the welfare of the soul.
Pro tanto (*tan 'to*).—As far as it goes.
Pro tempore—*pro. tem. (tem 'por-e)*.—For the time being.
Punica fides (*pū 'nik-a fidēs*).—Punic (or Carthaginian) faith, *i. e.* treachery.

Q

Quantum (*kwan 'tum*).—As much, so much.
Quantum sufficit (*kwan 'tum suf-fi 'sit*).—As much as is sufficient. A term frequently used in medical prescriptions, as Q. S.
Quasi (*kwā 'sī*).—As if, just as, as it were.
Quid nunc? (*kwid nunk*).—What now? What news? Also applied as a name to a person who is always seeking to satisfy his curiosity as to current news.
Quid pro quo (*kwid prō kwō*).—One thing for another.
Quoad hoc (*kwō 'ad hoc*).—To this extent.
Quo animo? (*kwō an 'im-o*).—With what purpose or intention?
Quod erat demonstrandum—Q. E. D. (*kwod er 'at dem-on-stran 'dum*).—Which was to be proved. A term used in geometry at the end of propositions, to indicate that the theorem is proved.
Quod erat faciendum—Q. E. F. (*fas-i-en 'dum*).—Which was to be done. A term used in geometry at the end of problems, to show that they have been solved.
Quod scripsi, scripsi (*skrip 'sī*).—What I have written, I have written. Words used by Pilate when he refused to alter the inscription he had written over the crucified Savior.
Quod vide—*q. v. (vī 'de)*.—Which see.
Quo jure (*kwō jū 'rē*).—By what right.
Quomodo (*kwō-mod-o*).—In what manner, how.
Quondam (*kwon 'dam*).—At one time, once, formerly.
Quos Deus vult perdere, prius dementat (*kwōs dē 'us vult per 'der-e, prī 'us dē-men 'tat*).—Those whom God has a mind to destroy, He first deprives of their senses.

R

Rara avis in terris, nigroque simillima cygno—Ovid (*rār 'a av 'iss in ter 'rīs nī-grō 'kwe sim-ill 'im-a sig 'no*).—A rare bird on the earth, and very like a black swan: *i. e.*, a prodigy. This species being almost entirely unknown in the time of the Romans.
Recipe (*res 'ip-e*).—Receive.
Recte et suaviter (*rek 'tē et swa 'vit-er*).—Justly and pleasantly.
Redeunt Saturnia regna (*red 'e-unt sat-ur 'ni-a reg 'na*).—The age of Saturn (*i. e.* the golden age) returns.
Reductio ad absurdum (*re-duk 'shi-o ad ab-surd 'um*).—A reducing a position to an absurdity.
Rem acu tetigitis (*rem ak 'ū teti-gist 'ī*).—You have hit the nail on the head (*lit.* touched the matter with a needle-point).
Requiescat in pace—R. I. P. (*rek-wi-ess 'kat in pā 'se*).—May he (or she) rest in peace. Symbol used on monuments, expressing a prayer for the repose of the soul.
Res gestæ (*rēs jēs 'tē*).—Exploits.
Res judicata (*jūdi-ka 'ta*).—A case or suit already decided.
Respice finem (*res 'piss-e fī 'nem*).—Look to the end.
Respublica (*rēs-pub 'lik-a*).—The common weal; the commonwealth. Name applied to the Roman state prior to the time of the Empire.
Resurgam (*re-sur 'gam*).—I shall rise again. Frequently inscribed on memorials to the dead.
Ride si sapis (*rī 'de sī sap 'iss*).—Laugh if you are wise; *i. e.*, the wise cultivate a cheerful habit of mind.
Ruat cælum (*rū 'at sē 'lum*).—Let the heavens fall.
Rus in urbe (*russ in ur 'be*).—The country in town.

S

Sal atticum (*sal at 'tik-um*).—Attic salt—*i. e.*, wit. Salt was used both by the Greeks and Romans as the common term for wit; Attic (*i. e.* Athenian) wit being especially delicate and elegant.
Salus populi suprema est lex (*sal 'us pop 'ū-li su-prē 'ma est lex*).—The welfare of the people is the supreme law.
Salve (*sal 'vē*).—How are you? I hope you are well. A form of familiar salutation among the Romans.
Salvo jure (*sal 'vō jū 'rē*).—Saving the right.
Sanctum sanctorum (*sank 'tum sank-tor 'um*).—The holy of holies. In ecclesiastical law the church of a church is so called; also frequently applied to a private room or study.
Sartor resartus (*sar 'tor re-sar 'tus*).—The tailor patched. The title of Carlyle's well-known work.
Satis superque (*sat 'iss su-per 'kwe*).—Enough and more than enough.
Satis verborum (*ver-bor 'um*).—Enough of words.
Secundum artem (*sek-un 'dum ar 'tem*).—According to rule.
Secundum naturam (*na-tūr 'am*).—According to nature.
Semper avarus eget—Horace (*sem 'per av-ār 'us ej 'et*).—The covetous man is ever in want.
Semper felix (*fē 'līx*).—Always happy.
Semper fidelis (*fīd-ē 'līss*).—Always faithful.
Semper idem (*ī 'dem*).—Always the same. (This is the masculine form; the feminine form is *e 'a-dem*, and the neuter *id 'em*—all three singular.)
Semper paratus (*par-a 'tus*).—Always ready.
Senatus populusque Romanus—S. P. Q. R. (*sen-ā 'tus popu-lus 'kwe Ro-mā 'nus*).—The senate and the Roman people.
Seniores priores (*sen-i-or 'ēz prī-or 'ēz*).—Elders first. Elderly persons being accorded in ancient times special reverence. Cicero (106-43 B. C.) wrote a work, *De Senectute*, in praise of old age.
Seriatim (*ser-i-ā 'tim*).—In a series.
Servabo fidem (*ser-vā 'bō fid 'em*).—I will keep faith.
Sic (*sīk*).—Thus: so. Generally used ironically to call attention to a literary error.
Sic itur ad astra—Virgil (*sīk it 'ur ad ass 'trā*).—Such is the way to immortality (*lit.*, to the stars).
Sic passim (*pas 'sim*).—So everywhere.
Sic transit gloria mundi (*sīk trans 'it glōr 'i-a mun 'dī*).—Thus passes away earthly glory. Words said to have been used at the inauguration of the early Popes.
Sic vos non vobis—Virgil (*sīk vōs non vō 'biss*).—Thus you toil, but not for yourselves. The poet here refers to bees, who make honey, but not for their own use.
Similia similibus curantur (*sim-il 'i-a sim-il 'i-bus ku-ran 'tur*).—Like things are cured by like. Motto of homœopathic school of medicine.
Sine die (*sin 'e dī 'ē*).—Without a day being appointed: indefinitely.
Sine invidia (*in-vid 'i-ā*).—Without envy.
Sine odio (*ō 'dī-ō*).—Without hatred.
Sine qua non (*sin 'e kwā non*).—An indispensable condition.
Siste, viator (*sis 'te vi-ā 'tor*).—Stop, traveler.
Si vis pacem, para bellum (*sī viss pā 'sem par 'ā bell 'um*).—If you wish for peace, prepare for war.
Sola nobilitas virtus (*sō 'la no-bil 'itas vir 'tus*).—Virtue alone is true nobility.
Sola virtus invicta (*sō 'la vir 'tus in-vik 'ta*).—Virtue alone is invincible.
Spectemur agendo (*spek-tē 'mur a-jen 'dō*).—Let us be tried by our actions.
Spes mea in Deo (*spēs mē 'a in Dē 'ō*).—My hope is in God.
Spes tutissima cœlis (*spēs tu-tiss 'im-a sē 'līs*).—The safest hope is in heaven.
Sponte sua (*spon 'te su 'ā*).—Of one's own accord.
Stat magni nominis umbra—Lucan (*stat mag 'nī nom 'in-iss um 'bra*).—He stands the shadow of a mighty name.
Status quo (*stā 'tus kwō*).—The state in which. A legal term indicating the position in which a case stood before certain action was taken in it.
Status quo ante bellum (*an 'te bell 'um*).—The state in which both parties were before the war.
Stet.—Let it stand—*i. e.*, remain as it was.
Sua cuique voluptas (*sū 'a ku-ī 'kwe vol-up 'tas*).—Every man has his own pleasures.
Suaviter in modo, fortiter in re (*su-ā 'vit-er in mod 'o for 'ti-ter in rē*).—Gentle in the manner, but vigorous in the deed.
Sub iudice (*jū 'diss-e*).—Under consideration. A legal phrase used to indicate that a case is still under consideration, during which time it is held to be contempt of court to comment upon the case in the public press or elsewhere.
Sub pœna (*pē 'nā*).—Under a penalty.
Sub rosa (*rō 'sā*).—Under the rose: privately. The rose in ancient times was the emblem of silence, and was used in decorations to show that anything said during the entertainment was not to be divulged. Cupid presented Harpocrates (the god of Silence) with a rose, not to betray the amours of Venus.
Sub silentio (*sil-en 'shi-o*).—In silence.
Sufficit (*suf-fi 'sit*).—It is enough.
Sui generis (*sū 'ī jen 'er-iss*).—Of its own kind; *i. e.*, not referable to any particular class.
Summum bonum (*sum 'mum bō 'num*).—The chief good.
Suo marte (*sū 'o mar 'te*).—By one's own exertions, without the assistance of others.
Suppressio veri (*sup-press 'i-o vēr 'ī*).—Suppression of the truth.
Suum cuique (*su 'um ku-ī 'kwe*).—Let every man have his own.

T

Tabula rasa (*tab 'ū-la rā 'sa*).—A smooth or blank tablet. From the waxen tablets on which the ancients wrote with a sharp instrument called a *stilus* or style, and with the broad upper end of which writing was erased.
Tanto melior! (*tan 'tō mel 'i-or*).—So much the better! well done! excellent!
Telum imbelles sine ictu—Virgil (*tē 'lum im-bell 'e sin 'e ik 'tū*).—A feeble weapon, thrown without effect.
Tempora mutantur, et nos mutamur in illis (*tem 'por-a mū-tan 'tur et nōs mū-tā 'mur in ill 'īs*).—The times are changed, and we with them.
Tempus fugit (*tū jīt*).—Time flies. A Latin inscription frequently seen upon sun-dials and old church clocks.
Tempus omnia revelat (*om 'nia re-vē 'lat*).—Time unveils all things.
Terra firma (*ter 'ra fīrm 'ā*).—Solid earth; a safe footing.
Terra incognita (*ter 'ra in-kog 'nit-a*).—An unknown country.
Tertium quid (*ter 'shi-um kwid*).—A third something. A logical term.
Toga virilis (*tog 'a vir-ī liss*).—The garb of manhood, assumed by Roman youth in their sixteenth year with considerable ceremony, usually at the feasts of Bacchus in March.
Totidem verbis (*tot 'īd-em ver 'bis*).—In just so many words.
Toto cœlo (*tō 'tō sē 'lō*).—By the whole heavens: diametrically opposite.
Tria juncta in uno (*trī 'a junk 'ta in ū 'no*).—Three joined in one.
Troja fuit (*Trō 'ja fū 'ī*).—Troy was—*i. e.*, exists no longer. Refers to the destruction of Troy by the Greeks (1184 B. C.).
Tu quoque, Brute! (*tū kwō 'kwe Brū 'tē*).—And thou too, Brutus! When Brutus, the friend and favorite of Julius Cæsar, struck the latter at his assassination, he uttered the words *Tu quoque, Brute!* pulled his toga over his face, and sank, pierced with wounds, at the foot of Pompey's statue.

U

Ubique (*ub-i' kwe*).—Everywhere.
Ubi supra (*ub' i su' pra*).—Where above mentioned.
Ultima ratio regum (*ul' tim-a ra' shi-o re' jum*).—The last argument of kings. Louis XIV. placed this inscription on his great guns.
Ultima Thule (*ul' tim-a Thu' le*).—The utmost boundary or limit. *Thule* was an island regarded by the ancients as the most northerly point in the whole earth, and variously supposed to have been Iceland and one of the Shetland group.
Ultimus Romanorum (*ul' tim-us Ro-man-or' um*).—The last of the Romans.
Ultra vires (*ul' tra vi' res*).—Beyond one's powers; beyond the rights possessed (legal).
Uno animo (*u' no an' im-o*).—Of the same opinion.
Usque ad nauseam (*us' kwe ad naw' se-am*).—To utter disgust.
Ut infra (*in' fra*).—As below.
Ut supra (*su' pra*).—As above.

V

Vade mecum (*va' de me' cum*).—Go with me: a constant companion. Title given to medical and other handbooks for convenient reference.
Vale (*val'e*), or **Valeas** (*val' e-ass*).—Farewell, adieu. The usual parting salutation of the Romans.
Valeat quantum valere potest (*val' e-at kwant' um val-er' e pot' est*).—Let it pass for what it is worth.
Valete, ac plaudite (*val-e' te ak plaud' it-e*).—Farewell, and clap. (The concluding words of a Latin comedy.)
Vanitas vanitatum (*van' it-ass van-it-a' tum*).—Vanity of vanities.
Variae lectiones (*var' i-e lek-shi-o' nes*).—Various readings.
Variorum notae (*var-i-or' um no' te*).—The notes of various authors.
Varium et mutabile semper femina—Virgil (*var' i-um et mu-ta' bil-e sem' per fe' min-a*).—A woman is ever changeable and capricious.
Vellis remisque (*ve' lis re-mis' kwe*).—With sails and oars—*i. e.*, with tooth and nail, with might and main.
Veni, vidi, vici (*ve' ni, vi' di, vi' si*).—I came, I saw, I conquered. By these three words—so easy was the victory—Julius Cæsar informed the Senate of his having defeated Pharnaces near Zela, 47 B.C.
Ventis secundis (*ven' tis se-kun' dis*).—With favorable winds.
Verbatim et literatim (*ver-ba' tim et lit-er-a' tim*).—Word for word and letter for letter.
Verba volant, scripta manent (*ver' ba vol' ant, scrip' ta man' ent*).—Words fly, writings remain.
Verbum sat sapienti (*ver' bum sat sap-i-en' ti*).—A word is enough to a wise man.
Veritas odium parit—Terence. Truth procures hatred.
Veritas vincit (*very' tass vin' sit*).—Truth conquers.
Versus (*ver' sus*).—Against. A legal term.
Vestigia (*ves-ti' ji-a*).—Tracks; traces.
Vestigia nulla retrorsum (*ves-ti' ji-a null' a ret-ror' sum*).—No steps backward.
Vetera extollimus, recentium incuriosi—Tacitus (*vet' er-a ex-toll' im-us re-sen' shi-um in-ku-ri-o' si*).—We exalt the deeds of old, being indifferent to those of recent times.
Vexata questio (*vex-a' ta kwes' ti-o*).—A much-debated question.
Via (*vi' a*).—By way of.
Via media (*vi' a med' i-a*).—A middle course.
Vice (*vi' se*).—In the place of.
Vice versa (*vi' se ver' sa*).—The terms being exchanged.
Vide (*vi' de*)—See.
Vide et crede (*vi' de et kre' de*).—See and believe.
Vide ut supra (*vi' de ut su' pra*).—See as above; see the preceding statement.
Videlicet—*viz.* (*vid-e' liss-et*).—To wit; namely.
Vi et armis (*vi' et ar' mis*).—By force and arms—*i. e.*, by main force.
Vincit amor patriæ (*vin' sit am' or pat' ri-e*).—The love of our country prevails.
Vincit omnia veritas (*vin' sit om' ni-a very' tass*).—Truth conquers all things.
Vincit veritas (*vin' sit very' tass*).—Truth conquers.
Vinculum matrimonii (*vin' ku-lum ma-tri-mo' ni-i*).—The bond of marriage.
Vindex injuriæ (*vin' dex in-ju' ri-e*).—An avenger of injury.
Vir sapit qui pauca loquitur (*vir sap' it kwi paw' sa lok' wit-ur*).—He is a wise man who says but little.
Virtus est vitium fugere—Horace (*vir' tus est vish' i-um fu' jer-e*).—It is virtue to avoid vice.
Virtuti nihil obstat et armis (*vir-tu' ti ni' hil ob' stat et ar' mis*).—Nothing can resist valor and arms.
Virtuti non armis fido (*vir-tu' ti non ar' mis fi' do*).—I trust to virtue, and not to arms.
Virtutis amor (*vir-tu' tiss am' or*).—The love of virtue.
Vis inertiae (*viss in-er' shi-e*).—The power of inertia: passive resistance.
Vivat regina! (*vi' vat re-ji' na*).—Long live the Queen! The phrase formerly used at the conclusion of royal proclamations.
Vivat rex! (*vi' vat rex*).—Long live the King!
Viva voce (*vi' va vo' se*).—By the living voice: by oral testimony. That portion of an examination in which the candidate is tested as to his knowledge of the subject by an examiner who personally interrogates him.
Vivida vis animi (*vi' vid-a viss an' im-i*).—The vigorous strength of intellect: the lively vigor of genius.
Vivit post funera virtus (*vi' vit post fu' ner-a vir' tus*).—Virtue survives the grave.
Vox et præterea nihil (*vox et præ-ter' e-a ni' hil*).—A voice and nothing more.
Vox populi, vox Dei (*pop' u-li, De' i*).—The voice of the people is the voice of God. Quoted as a proverb by William of Malmesbury, author of "De Gestis Regum Anglorum," twelfth century.
Vulgo (*vul' go*).—Generally, commonly.
Vultus est index animi (*vul' tus est in' dex an' im-i*).—The countenance is the index of the mind.

LITERATURE

Literature, in the widest sense, is the record of the impressions made by external realities of every kind upon great men, and of the reflections which these men have made upon them.

VAST RANGE OF LITERATURE

The subject matter of literature covers the whole range of human life and activity, as well as every known manifestation of physical nature. For not only are actual events and the doings and sayings of actual persons reproduced in it, but the rules deduced from the observation of the conditions of man's life are included in its records. Similarly it presents to us not merely what individual men found to interest them in particular countries in a particular epoch, but also the general laws which have been gradually formulated by long-continued observation of the processes of nature.

Literature, therefore, plays a very important part in the life of man. It is the greatest of the secondary sources of knowledge, and it makes an immense contribution to the sum total of facts—the joint result of the experience of the individual and of the race—which gives to each one of us a wide outlook upon the world at large. But we must remember that literature—as literature—is concerned solely with the *subjective* outlook upon the world.

WHY WE STUDY LITERATURE

In order to realize to how large an extent the subjective existence of man is made up of the material of books, we will pause a moment to consider what literature does for us. Through literature we converse with the great dead, with Plato, with Buddha, with Montaigne, with Addison; we walk the streets of Babylon, of Athens, of Rome, of Alexandria; we see great monuments, reared ages ago and long since crumbled to the dust; we recreate the life of distant epochs, and thus by comparison gauge the progress achieved by the men of today. Through literature we learn wisdom from Aristotle, geometry from Euclid, law from Justinian, morality from Christ and St. Paul. Literature makes the physical features, the inhabitants, the climate, the products of the antipodes as familiar as those of the neighboring county.

HOW IT HAS CREATED NEW WORLDS AND PEOPLES

More than this, the masters of creative literature have made regions of their own which they have peopled with the children of their genius. Homer has given us an Ægean of sunlit islands and purple seas; Dante, a dark and mysterious Inferno; Milton, a Garden of Eden; Shakespeare, an Elizabethan England, with landscapes more brightly hued, and men and women more finely real, than the landscapes or the people of the England of Elizabeth; Molière, a France more natural and more vivid than the France of the Grand Monarque. And so it is that Odysseus, Antigone, Beatrice, Hamlet, Tartuffe and the rest, these spiritual offspring of great souls, live side by side with Moses, Alexander, Cæsar, Joan of Arc, Henry VIII., and Washington: for literature has made the personalities of each almost as familiar to us as those of our dearest or most intimate friends.

HOW LITERATURE HELPS US INTERPRET LIFE

There is one other important point which must be noticed. It is this: the *subjective* outlook reacts upon the *objective*. The knowledge of the world which we gain through our own previous experiences, and through literature, increases our capacity for understanding the objective world, and heightens and intensifies the pleasure which we derive from the contemplation of works of art or of nature. It is this principle which underlies the truth which Goethe states when he says that a traveler does not take anything out of Rome which he has not first brought into it.

LITERATURE IS THE BRAIN OF HUMANITY

Just as in the individual the brain preserves a record of his previous sensations, of his experience, and of his acquired knowledge, and it is in the light of this record that he interprets every fresh sensation and experience, so the race at large has a record of its past in literature, and it is in the light of this record alone that its present conditions and circumstances can be understood. The message of the senses is indistinct and valueless to the individual without the co-operation of the brain; the life of the race would be degraded to a mere animal existence without the accumulated stores of previous experience which literature places at its disposal.

BOOKS AS LIBERAL EDUCATORS

So great is the part that books play in our life, or, at least, in the formation of our several personalities, that to master the contents of certain books of admitted excellence has always been considered a chief element in a liberal education; that is to say, it is a recognized method of introducing the mind to the world at large. We must, nevertheless, recognize a broad distinction in the manner in which books render us this assistance. In the case of some books the value of the contribution consists mainly, though not exclusively, in the actual facts which they contain; in others, the actual facts are of secondary importance and their chief value consists in the manner in which these facts are brought before our minds. No hard and fast line can be drawn between the two classes, but the difference may be broadly indicated by saying that while the former give us the *facts* of life, the latter give us *pictures* of life.

The distinction may be illustrated by one or two examples. Such works as Locke's *Essay on the Human Understanding*, and Gibbon's *Decline and Fall of Rome*, must obviously be placed under the head of books in which the facts are of first importance. Equally, the novels of George Eliot, in which she gives us a full and truthful picture of English midland life, must be included among those books where the presentation of the facts is of more importance than the facts themselves. And so, too, in the case of *The Story of an African Farm*, where we have a picture of rural life in South Africa, or in *Diana of the Crossways*. Only in the latter work the personality of the central character is so commanding that the book is not so much a picture as a portrait—a portrait of a beautiful and wayward woman exposed to temptation by the very abundance of her own gifts.

Here, then, we have two distinct elements, matter and manner; and it is upon the degree in which these elements are respectively present in any given work that the main divisions of literature—the division which separates works of creative literature from works of literature, simply so-called—is based.

ENGLISH LITERATURE

The English is the most remarkable as well as the most prolific of modern literatures. Before the Saxons invaded Britain there was a Celtic literature of a rhythmic character, preserved, in the main, orally by the Gaelic and Cymric elements of the population. Gaelic literature is associated with Fionn, Ossian, and the battle of Gabhra, alleged to have been fought A. D. 284, while Cymric literature finds powerful utterance in Aneurin's poem, the *Gododin*, which celebrates the battle of Catteraeth, fought, according to tradition, in the year 570. During the fifth and sixth centuries various Teutonic tribes effected a settlement in Britain, and the island was ultimately subjugated by the Saxons. In the middle of the eleventh century it again suffered conquest at the hands of the Normans. The institutions and language of the conquerors were largely imposed upon the natives, and so great has been the vitality of the Saxon speech that about two-thirds of the words now composing the English language are, radically or derivatively, of Saxon origin.

So, the fabric of English literature is colored with the varying tints of racial characteristics—the somber imagination of the Celt, the flaming passion of the Saxon, the golden gaiety of France, and the prismatic fancy of the South. There have been many influences brought to bear upon its speech; yet, in this composite texture, the Anglo-Saxon element is dominant. That is the first outstanding fact of importance.

THE ANGLO-SAXON PERIOD, 449-1066

The existing remains of Anglo-Saxon literature include compositions in prose and poetry, some of which must be referred to a very early period, one or two perhaps to a time before the Angles and Saxons emigrated to England. Gildas, the author of a Latin treatise on British history, is the precursor of the Anglo-Saxon writers, but the earliest author of real distinction is St. Columbanus, an Irish missionary to western Europe, who wrote religious treatises and Latin poetry, and died in 615.

Cædmon, a monk of Whitby, was the first Anglo-Saxon writer of eminence who composed in his native tongue. Encouraged by the Abbess Hilda, he wrote his *Paraphrase*, in which he discoursed of the Creation and the Fall, and other Biblical themes. His verse was constructed neither in measure nor rhyme, but it was differentiated from prose by a kind of rough poetic alliteration.

The most important Anglo-Saxon poem is that called *Beowulf*, after its hero, extending to more than six thousand lines. This poem may be described as the heathen complement to Cædmon's Christian *Paraphrase*. Beowulf is a Scandinavian prince, who slays a fiendish cannibal, after encountering supernatural perils, and is at last slain in a contest with a frightful dragon. Its scene appears to be laid entirely in Scandinavia. Its date is uncertain; parts of it may have been brought over at the emigration from Germany, though in its present form it is much later than this.

The next great name in the early literature is that of the Venerable Bede, who was born at Jarrow, and became the great monastic teacher of Wearmouth, dying in 735. He wrote numerous works in Latin, the chief of which was his famous *Ecclesiastical History of the Anglo-Saxons*.

Alcuin, a native of northern England and an earnest student and teacher, became the chief intellectual light in the court of Charlemagne. John Scotus Erigena wrote, among other things, a work on the *Division of Nature*, which is regarded as laying the foundation of the scholastic philosophy. King Alfred (901), great in arms and noble and enlightened in character, translated into Anglo-Saxon the histories of Bede and Orosius, and Boethius's *Consolations of Philosophy*. Other contributions to literature are likewise attributed to him. Ælfric, the grammarian, who died in 1006, wrote his eighty *Homilies* for the use of the common people.

The well-known *Saxon Chronicle* is a survey of early English history, written by various authors. It began soon after the time of Alfred, and continued to the death of Stephen in 1154. Among its entries in verse is a spirited poem on the battle of Brunanburh, fought victoriously by Athelstan against his combined Danish and Celtic foes in 937. Besides the leading writers above cited, there were others of less importance who graced the Anglo-Saxon period—a period embracing some five hundred years from the time of Columbanus to the Norman Conquest.

THE NORMAN-FRENCH PERIOD, 1066-1400

New conditions were imported into the learning and literature of England by the Norman Conquest. Although the Anglo-Saxon Chronicle, referred to above, was continued until 1154, the native language practically ceased for a time to be employed in literature. For nearly a century and a half the old language was supplanted, Latin being employed in law, history, and philosophy, French in the lighter forms of literature. Monastic chronicles were the order of the day, and these were only of real value as they drew near to, and actually dealt with, contemporary events. The Norman *trouvère* displaced the Saxon *scop*, or gleeman, introducing the *Fabliau* and the Romance.

English literature was not greatly influenced by the *Fabliau* until the time of Chaucer; but the Romance attained an early and striking development in the Arthurian cycle, founded upon the legends of Geoffrey of Monmouth, Bishop of St. Asaph, who wrote the *History of British Kings*.

Much of this Latin chronicle is imaginative. It began with a mythical Brutus of Troy, and ended with Cadwallader. King Arthur was a prominent figure in the book, and from this time the romantic legends concerning him and his court became a prominent feature in the Anglo-Norman literature. Geoffrey of Monmouth's *Chronicle* was abridged by Alfred of Beverley, and rewritten in French verse by Geoffrey Gaimar and "Maistre" Wace, the latter version becoming permanent as the *Roman de Brut*. Wace, who died in 1184, was also the author of the *Roman de Rou*.

Walter Map or Mapes, poet and prose writer, gave form and substance to the Arthurian legends, uniting them into a harmonious whole as the spiritual allegory of the Holy Grail. Map attacked the abuses and corruptions of the Church in a series of witty and vigorous Latin poems. Hitherto there had been no man of such genius among the early writers.

Two of the most important of the monastic chroniclers were Ordericus Vitalis, who wrote the *Ecclesiastical History of England and Normandy*, a conscientious if disorderly record, and William of Malmesbury, who flourished at the same time and wrote a *History of English Kings*. The latter writer has been placed by Milton next to Bede.

Early in the thirteenth century English began to recover its position, and Layamon's *Brut* was the first important piece of literature in transition English. Layamon, who was "a priest of Ernleye-upon-Severne," wrote in English verse, and he interpolated many things into Wace's narrative. His work was completed about 1205. A St. Augustine canon, named Ormin, was the author of *Ormulum*, a metrical paraphrase, with expositions, of the Gospel of the day. To the same period belong the early ballads of the Robin Hood type and the rendering into English verse of *Havelok the Dane* and other metrical romances.

Roger Bacon, the great scientific investigator, was a Franciscan who settled at Oxford. Bacon enshrined the results of his knowledge in his *Opus Majus*, *Opus Minus*, and *Opus Tertium*. Robert of Gloucester was a monk in the time of Henry III. and Edward I. who wrote in English rhyme a chronicle from the siege of Troy to the death of Henry III.

PERIOD OF CHAUCER.—The first great era of English literature may be said to begin about the year 1300, and to extend to the introduction of printing by Caxton in 1477. The overshadowing name in this period is that of Chaucer, who has been styled the Father of English Poetry.

The accounts of Chaucer's early life are uncertain, but he acquired the favor of Edward III. through John of Gaunt. In the reign of Richard II., however, he fell upon evil times, and he died in the year 1400 at the age of seventy-two. His *Canterbury Tales* are immortal, alike for their poetic qualities, their unrivaled delineations of character, and their pictures of the middle-class English life of the period. Although the poet was influenced in his style and choice of subject by Dante and Boccaccio, he infused into his creations a dramatic force and a breath of sympathy which are the characteristics of the highest genius. His earlier and minor poems—such as *The Romaunt of the Rose*, *The Court of Love*, and *The House of Fame*—were the fruit of his French and Italian studies. Hallam classes Chaucer with Dante and Petrarch in the mighty poetic triumvirate of the Middle Ages.

John Gower, next in contemporary importance to Chaucer, wrote the *Confessio Amantis*, an English poem, which included a number of tales that were moralized to illustrate the seven deadly sins.

Langlande, or Longlande, author of *The Visions of Piers Plowman*—a poem which stands out for its graphic force—"sought to animate men to the search for Christ, and battled vigorously with Church corruptions." Langlande is more distinctly English in his language than Chaucer, and his poem was a representative one as showing the workings of the national mind in religion and politics.

James I. of Scotland takes high rank for *The King's Quhair*, and Lawrence Minot for his series of poems on the victories of Edward III. Barbour's heroic poem of the *Bruce* also calls for mention. Thomas Occleve, author of a poem on the duty of kings, and John Lydgate, to whom we owe the *Falls of Princes*, and other compositions, were likewise considerable poets.

For a long period Sir John de Mandeville was regarded as "the father of English prose," but this claim is now abandoned. The larger portion of his *Travels* was borrowed from a worthy Friar Odoric and from other writers, while the whole narrative is more entertaining than veracious. John Wyclif, who gave to his countrymen the first English version of the whole Bible, has been not inaptly styled the "Morning Star of the English Reformation." Sir John Fortescue, Chief Justice in the reign of Henry VI., was the author of a fine legal treatise, *De Laudibus Legum Angliæ*, and of an admirable constitutional work on the *Difference Between Absolute and Limited Monarchy*, in which he contrasted the French rule with the English to the disparagement of the former.

INFLUENCE OF CAXTON.—William Caxton, who introduced the art of printing into England, gave an impetus to literature whose effects have been of incalculable value. The earliest work which can with certainty be maintained to have been printed in England was the *Dictes and Sayings of the Philosophers*, published in 1477. In 1474, however, Caxton had issued at Bruges the first book printed in the English tongue, the *Recuyell of the Histories of Troye*, and soon after this he printed the *Game and Playe of the Chesse*. Caxton was a most assiduous workman, and produced editions of Chaucer, Lydgate, Gower, and Sir Thomas Mallory's *King Arthur*, translations of Cicero's *De Senectute* and *De Amicitia*, and other works.

William Dunbar, the Chaucer of the North, is placed by Sir Walter Scott at the head of the roll of Scottish poets. Dunbar led a checkered life, and his works are remarkable for their strong human lights and shadows. His allegorical poem, *The Thistle and the Rose*, was written in celebration of the marriage of James IV. with Henry VII.'s daughter Margaret. *The Golden Terge*, another of his poems of fantasy, is very descriptive and rhetorical. *The Dance of the Seven Deadly Sins* powerfully depicts—under the lead of Pride—a procession of the seven deadly sins in the infernal regions. Dunbar was equally remarkable in the comic as in the serious vein.

At the close of the fifteenth century many of the best spirits of the age were drawn to Oxford for the study of Greek. It was taught by William Grocyne and the physician Linacre. Erasmus came over from Paris to acquire it, and while at Oxford he made the acquaintance of young Thomas More, who wrote a defense of the new branch of learning. More afterwards entered upon the thorny path of statescraft, and paid for his opposition to Henry VIII. with his head. More was the leading prose writer of his time, and his *Life and Reign of Edward V.*—in which he draws a somber picture of the usurper Richard—is the earliest specimen of classical English prose; but his real fame rests upon the *Utopia*, in which he imagines an ideal commonwealth in the New World, discovered by a supposed companion of Amerigo Vespucci. The root idea was borrowed from Plato.

When William Tyndale completed his famous translation of the New Testament in 1525, More adversely criticized it on the ground of its Lutheran bias in the choice of words. Tyndale replied with spirit, however, and also defended against More the exposition of the Lord's Supper published by John Frith. In 1530 Tyndale completed, with the help of Miles Coverdale, his translation of the Pentateuch, and six years later he was put to death for heresy in Belgium. Coverdale's translation of the whole Bible appeared in 1535.

Many Church writers and reformers flourished at this time. To Cranmer was largely due *The Book of Common Prayer*, a work which contains some of the noblest specimens of English in our literature. He was also responsible for a book of *Twelve Homilies* and a revised translation of the Scriptures, known as *Cranmer's Bible*. The martyr Latimer was the author of sermons which are rare specimens of vigorous eloquence, while Bishop Fisher preached and wrote trenchantly on the other side. John Knox, the great Scottish reformer, wrote a *History of the Scottish Reformation*, and he was so indignant at the fact that three ruling sovereigns were women that just before the accession of Elizabeth he issued from Geneva his *First Blast of the Trumpet against the Monstrous Regiment of Women*. John Foxe, the martyrologist did much for Protestantism by his work on the *Acts and Monuments of the Church*; and Roger Ascham, classical tutor to Queen Elizabeth, and author of *Toxophilus* and *The Schoolmaster*, was the first writer on education in the language. Mention must not be omitted here of the unfortunate Earl of Surrey, who was the first writer of blank verse in England, and who did much to invest English poetry with accuracy, polish, and a general spirit of refinement. Surrey used the medium of blank verse in translating two books of the *Æneid*. With his friend, Sir Thomas Wyatt, he also transplanted the sonnet into the garden of English verse.

THE ELIZABETHAN AND PURITAN PERIODS, 1559-1660

The most brilliant, as well as the most virile, era in English literature was that extending from the accession of Elizabeth in 1558 to the closing of the theaters by the Long Parliament in 1648. No other period of ninety years in English history exhibits such a profusion of literary effort and achievement, especially on the dramatic and imaginative sides. The former portion of this period, however, known as the Elizabethan age—but really extending to the middle of the reign of James I.—was the greater in conception. It witnessed not only the rise but the culminating splendor of the drama. Miracle plays or mysteries were the forerunners of the drama. They were acted in churches and convents, and by their dramatic representations of Biblical episodes it was sought to influence the people in favor of virtue.

There was something grotesque, however, in the choice of Satan as the first comedian, while the general treatment of sacred subjects was most objectionable. In course of time the plays changed into moralities, in which abstract qualities such as Justice and Vice took the place of Scripture characters. Next to these, and before the drama proper, came a series of farcical productions, of which Heywood's *Interludes* may be taken as a type.

EDMUND SPENSER.—One great name interposes between these early plays and the drama, namely, that of Edmund Spenser. He restored the glory of English poetry from the long eclipse it suffered after the death of Chaucer. Spenser's *Shepherd's Calendar* applied pastoral images to the religious conflicts of the time, and under the name of Algrind he introduced Archbishop Grindal, whose firmness in encouraging free search for Scripture truth he applauded. To his master, Chaucer, the poet paid tribute under the name of Tityrus. In 1590 Spenser published his great but unfinished allegorical epic *The Faerie Queene*, in which he depicted man with all his capacity for good striving heavenwards. The work is "an intense utterance of the spiritual life of England under Elizabeth." Spenser's *Colin Clout Come Home Again* was written in memory of his friendship for Sir Walter Raleigh. The purely poetic qualities were redundant in Spenser, and these have made him a favorite with all his singing brethren since his death.

Sir Philip Sidney has gained a reputation as an English classic for his *Defense of Poesie*, but his romance of *Arcadia* is the more widely known, as it was the more warmly appreciated on its publication. Later critics have censured it, but it is rich and highly finished in its phrases, and "full of fine enthusiasm and courtesy of high sentiment, and of the breath of a gentle and heroic spirit."

BEGINNING OF ENGLISH COMEDY AND TRAGEDY.—The first English comedy, *Ralph Roister Doister*, was written by Nicholas Udall, Master of Eton, between 1534 and 1541. It was avowedly modeled upon *Plautus*, and intended for the edification of Eton boys.

The first tragedy was *Gorboduc*, a new rendering of the old British story of Ferrex and Porrex by Thomas Sackville (Lord Buckhurst), and Thomas Norton. It was acted at the Inner Temple in 1561, and also before the queen by command. It substituted English for Latin in a play constructed after the manner of Seneca, and "its grave dwelling upon the need of union to keep a people strong, a truth of deep significance to England at that time, pleased Elizabeth." But nearly twenty years yet elapsed before the drama obtained a stable hold, and theaters began to be built.

John Lyly, author of the *Euphuës*, wrote a number of mythological plays, and George Peele produced *The Arraignment of Paris* and *The Device of the Pageant* in 1584-1585; but Christopher Marlowe, with his "mighty line," was the first great Elizabethan dramatist. His genius was somber, and his tragedies dark and terrible. His *Tamburlaine the Great* was produced in 1587, but his *Doctor Faustus* was not published until ten years after his death, which occurred in 1593.

WILLIAM SHAKESPEARE.—In the latter part of the sixteenth century began the career of the greatest poet the world has ever seen, William Shakespeare. A period of less than twenty-five years covers the production of all those comedies and histories which are the wonder of modern literature. We marvel what kind of man that could be whose intellect could conceive such widely different works as *A Midsummer Night's Dream*, *Venus and Adonis*, *Romeo and Juliet*, *The Rape of Lucrece*, the famous *Sonnets*, *The Merchant of Venice*, *Othello*, *Macbeth*, *King Lear*, and *Hamlet*. Shakespeare seems to sum up within himself the whole of poetry and of human philosophy. His power and universality are unique, and will probably ever remain so.

Ben Jonson, the greatest and most scholarly of his contemporaries, wrote from 1596 to 1637; but he lacked the freedom and naturalness of Shakespeare. Beaumont and Fletcher worked in unison with a success rarely attained by collaborators. Massinger was a dramatist of undoubted power, as his *New Way to Pay Old Debts* testifies; and Dekker, Heywood, Marston, and Middleton would all have taken a higher niche in the temple of fame had they lived in a less prolific age. Ford and Webster produced plays of a dark and terrible cast, and the list of Elizabethan dramatists closes with James Shirley who was purer in thought and expression than any of his predecessors. Other poets of this period were Thomas Tusser, who gave an excellent picture of English peasant life in his *Five Hundred Points of Good Husbandry*, and Michael Drayton described this favored isle itself in his *Polyolbion*. The learned John Donne gave utterance to his metaphysical conceits, while Drummond of Hawthornden attested his claim to the title of the finest Scottish poet of his day. Carew, Herrick, and Suckling produced their exquisite lyrics, and Herbert chanted the solemn strains of *The Temple*.

ELIZABETHAN PROSE WRITERS.—The great prose writers of the period must be headed with the illustrious name of Francis Bacon. The father of the inductive philosophy was regarded by those of his contemporaries who knew him best as "one of the greatest men and most worthy of admiration that had been for ages." His adventurous intellect could not be bound by mere tradition. He brought his keen analytical faculty to bear upon the study of man and nature, so that in his matchless *Essays* we have the result of his penetration into the human mysteries, while his philosophy of nature stands revealed in the two books of the *Advancement of Learning*, in which he laid the basis for his *New Organon*.

"Who is there," Burke demands, "that upon hearing the name of Lord Bacon does not instantly recognize everything of genius the most profound, everything of literature the most extensive, everything of discovery the most penetrating, everything of observation of human life the most distinguishing and refined?"

George Buchanan ranks as the Scottish Virgil from the elegance of his Latin verse, while he exhibited equal command over Latin prose. Richard Hooker gave a new elevation and dignity to English prose by his *Laws of Ecclesiastical Polity*. Sir Walter Raleigh, the admirable Crichton of his age, carried the English name abroad, but returned only to find imprisonment and the scaffold. He glorified his prison life by the production of his great *History of the World*, which is especially memorable for its vivid recital of the histories of Greece and Rome. Camden the antiquary constructed his *Britannia*, and Hakluyt and Purchas indited their wonderful records of travel. James I. threw his ill-digested learning into treatises on Divine Right, Witchcraft, etc.; Burton wrote his quaint and erudite work, *The Anatomy of Melancholy*; Selden, the chief of the learned men of his time, according to Milton, alternated politics with the production of his *Treatise on Titles of Honour* and his *History of Tithes*; Hobbes of Malmesbury, the terseness of whose style is unique, promulgated his theory of action and morals, as well as his absolutism in politics, in *The Leviathan*; Howell first showed what correspondence might become in his *Familiar Letters*, and genial old Izaak Walton wove an immortal spell over all lovers of good literature by his *Lives of Donne, Hooker*, and others, and *The Complete Angler*. Altogether the age was one eminently full of intellectual life.

THE PURITAN PERIOD.—The decline of the drama, and the end of what we may call the Pagan Renaissance, were contemporaneous with the birth of the great constitutional struggle which began with James I. and did not terminate until the English Revolution.

It is strange that such a time of upheaval should have produced the greatest Christian epic, *The Paradise Lost*, and the greatest Christian allegory, *The Pilgrim's Progress*, which are to be found in any literature. Three great men represented the various forms of the religious struggle going forward; the saintly Jeremy Taylor, a poet among preachers, upheld the cause of Episcopacy; Richard Baxter, while desiring the church discipline and the form of belief, advocated a greater liberty for the individual conscience; and John Milton was a type of the religious freedom and toleration which found best exposition in the principles of the Independents. Milton's *Eikonoklastes* broke down the buttresses of kingly authority; his *Areopagitica* was a noble argument in behalf of intellectual liberty; while his *Paradise Lost, Paradise Regained*, and *Samson Agonistes* were not merely magnificently great as poetry, but Christian evidences of the most sublime type.

John Bunyan, a man of the people, came forward with words that burn and images that enthral, to show the way from a world of vice to a pure and Holy City. Thomas Fuller, remembering that "blessed are the peacemakers," sought to heal that strife between king and people which was beyond all healing save that of the sword. Some men held themselves aloof from violent controversy while yet maintaining independence of thought—as, for example, Thomas Browne in the *Religio Medici*, published in 1642.

The anti-Puritans had their champions in Samuel Butler, whose fierce wit blazed forth in *Hudibras*; in the great Royalist writer, Clarendon; and in that staunch Royalist and Churchman, Bishop South, whose antipathy to the Nonconformists may be partly condoned by his brilliant wit. Among other writers of the time may be mentioned the versatile Barrow; the powerful satirists Wither, and Bishop Hall; Harrington, the author of the *Oceana*; the patriotic Algernon Sidney, with his admirable *Discourses on Government*; and those garrulous but inimitable chroniclers, Pepys and Evelyn.

The poets were many and varied, including Waller, Davenant, Denham, Marvell, Lovelace, and Cowley.

PERIOD OF THE RESTORATION TO THE RISE OF THE NOVEL, 1660-1740

Extremes always lead to revulsion, and from Puritanism we pass to the licentious court of Charles II., with the songs of Rochester, and the works of Etherege. The comic dramatists of the Restoration and the period immediately succeeding—Wycherley, Congreve, Vanbrugh, and Farquhar—vividly and wittily reflect the glittering life and base morality of the age. One stronger intellect did bring with it for a time the sense of a fresher and diviner air, when John Dryden sang with vigor and insight, and also produced his best comedies and tragedies. Otway likewise showed a momentary gleam of the old Elizabethan dramatic fire. In the sphere of mental and natural philosophy, Locke, Newton, and Boyle grappled with problems hitherto considered unsolvable, and illumined for the world the devious and mysterious paths of scientific inquiry. The selection of names in every branch of English literature, and in every age, can, of course, only be illustrative, not exhaustive.

PERIOD OF DRYDEN AND POPE.—The eighteenth century witnessed a great revolution in English literature, especially on the poetic side. Imagination, passion, and nature were dethroned, and poetry became didactic, philosophical, and political.

Dryden manifested something of the qualities of both schools, but when Alexander Pope arose the new order triumphed. Everything was sacrificed to precision and artificiality.

Pope was the most brilliant and impressive of the new writers. His *Essay on Man* and his *Essay on Criticism* enshrined many old philosophical truths in epigrammatic form. The heroic couplet became in his hands an instrument for cutting diamonds, but the lover of poetry longs after a time to exchange his dazzling couplets for the flowers of poesy. In all that he did, however, whether the work took the form of satires, essays, epistles, or translations, Pope was the finished artist.

The minor poets of Pope's period included John Philips, known by his *Splendid Shilling*; John Gay, the author of the *Shepherd's Week*, and the *Fables*; Samuel Garth, the writer of the mock heroic poem of *The Dispensary*; and Richard Blackmore, who tried to restore the epic in *Prince Arthur*.

Prose literature had many distinguished exponents. Jonathan Swift looms up before us as a gloomy, overshadowing figure, whose saturnine genius found bitter yet powerful expression in *Gulliver's Travels*, the *Battle of the Books*, and the *Tale of a Tub*. His command of English was mastery, but his wit was coarse, his life hopelessly sad, and his death miserable.

Daniel Defoe was not only one of the most vigorous of political pamphleteers, but practically the father of the English novel by his *Robinson Crusoe*, a work which has surpassed almost every other in its uninterrupted popularity. Defoe invested fictitious events with an unapproachable semblance of truth. Metaphysical literature had its best representative in the philosopher Bishop Berkeley, the founder of Idealism in English philosophy; Bernard de Mandeville unfolded a new satirical philosophy in *The Fable of the Bees*, which was intended to prove that the vices of society are the foundation of civilization; and Bishop Butler sought to reconcile reason and revelation by his closely argumentative work, the *Analogy of Religion*.

RISE OF THE ESSAY AND MODERN NEWSPAPER.—A new and interesting form of literary effort, which popularized letters and criticism, was the periodical essay, instituted by Joseph Addison and Sir Richard Steele.

The latter began the *Tatler*, which dealt in humorous and incisive fashion with the social and political life of the times. Steele was aided by Addison, and they afterwards founded the more famous *Spectator*, which was inimitable in its humor and criticism. The *Guardian* and the *Freeholder* followed, and a higher tone was given to both literature and manners by these admirable publications.

The modern newspaper had its origin in the *Public Intelligencer*, begun in August, 1663, by Sir Roger L'Estrange. The *Oxford Gazette* began in November, 1665, and the *London Gazette* on the 5th of February, 1666. Defoe, while in prison, began the publication of the *Review* (February, 1704).

The drama at the close of the seventeenth century had, besides the greater names already mentioned, Sedley, Shadwell, Mrs. Behn, and Mrs. Centlivre, all of whose comedies, however, were licentious. Nicholas Rowe wrote heavy tragedies, which are no more likely to rise again in popularity than Addison's *Cato*. Foote, Cibber, and Fielding reproduced the follies of the times in their comedies and farces; and the *Beggar's Opera*, by Gay, produced in 1728, was the first specimen of the English ballad opera. Sentimental comedy is associated with Macklin, the Colmans, Murphy, Cumberland, and others; but the two greatest names in English comedy in the eighteenth century are Goldsmith and Sheridan. The delightful humor of *The Good-natured Man* and *She Stoops to Conquer* is only to be matched by the sparkling wit of the *Rivals* and the *School for Scandal*.

Samuel Johnson, born in 1709, began to write in 1744, and from that period until his death in 1784 he was an acknowledged leading power in letters. His *Lives of the Poets*, his *Rasselas*, *The Rambler*, and the great *Dictionary* were remarkable undertakings in various fields; while the world could afford to part with a thousand masterpieces rather than lose that immortal *Biography* by Boswell which has enshrined his master's opinions and conversations. The *Letters of Junius* remind us of the right of criticism over public events and public men, and of the struggle by which the freedom of the press was ultimately won.

RISE OF THE NOVEL AND PERIOD OF ROMANTICISM, 1740-1837

The modern novel of actual life and manners dates from 1740, when Samuel Richardson published his *Pamela*, a story that was the talk and wonder of the town. It was followed by *Clarissa Harlowe*, its author's masterpiece—a book charged with pathos, and instinct with tenderness and morality. Henry Fielding, "the prose Homer of human nature," and, if not so delicate, a more powerful artist than Richardson, issued his *Joseph Andrews* in 1742, and his world-famous *Tom Jones* in 1749. Tobias Smollett wrote his *Roderick Random* in 1748, and this was followed by other stories as realistic as Fielding's but much more marred by caricature. Laurence Sterne's *Tristram Shandy* and the *Sentimental Journey* were novelties in prose writing, and, although they are thin as novels, they will live for their peculiar wit and pathos. Goldsmith's *Vicar of Wakefield*, published in 1766, stands alone for its idyllic beauty and charming simplicity. Fanny Burney's *Evelina* and *Cecilia* were noticeable for invention and observation and skill in portraiture.

The poetry of the second half of the century was varied in character, but it closed with a noble elevation in Burns. To the heavy religious poems of Blair and Young succeeded the more artistic strains of Gray and Collins and Goldsmith, and the mystical yearnings and Elizabethan fervor of Blake. Thomson, one of the most excellent of descriptive poets, had given place to Shenstone, who had less genius but more taste, and a third writer of the Spenserian stanza was found in Beattie. Percy's *Reliques of Ancient English Poetry* brought the ballad again into favor; while Chatterton deceived the very elect by his marvelous imitation of the older forms of poetry.

William Cowper, notwithstanding his fastidiousness and over-refinement, was a poet of a high and genuine order. He let nature have its way in such exquisite poems as the *Lines to His Mother's Picture* and the *Loss of the "Royal George"*, while any humorist might envy the delightful abandonment of *John Gilpin*. His larger poems are severer in style, yet many of their pictures, testifying to a reverent love of nature, remain imprinted on the memory; and they are full of happy phrases and turns of expression.

The new life infused into Scottish poetry was heralded by Michael Bruce, a sweet singer who died at twenty-one, and by Allan Ramsay, whose pastoral drama of the *Gentle Shepherd* affords one of the most beautiful and tender pictures of Scottish rural life. The ballad acquired a new pathos and interest in such productions as Lady Anne Barnard's *Auld Robin Gray*.

But the poetic genius of Scotland found its ripest and fullest expression in Robert Burns. His love songs have the freshness and fervor of the Elizabethan lyrics; his poems of man and of nature, like those of Cowper, reveal the highest aspirations for the welfare of humanity; his humorous compositions are as lifelike in their character-painting as they are full to overflowing of fun; and his serious poems reveal a pathos which has never been excelled. Nature seemed to put on new beauties when Robert Burns chanted her praises, and the daisy can never again seem commonplace since he immortalized it. The poor at length acquired their laureate in this sweet singer of the North.

Historical and philosophical literature attained a high level at this period. Edward Gibbon, though lacking human sympathy, had great creative power and originality, and his *Decline and Fall of the Roman Empire* is one of the most massive of historical conceptions, worked out with stately eloquence. David Hume, whose *History of England* does not take such high rank, was more original in his philosophical speculations, referring all actual knowledge to experience, and making utility the standard of virtue.

Adam Smith, by his *Wealth of Nations*, established his claim to be regarded as the founder of the modern system of political economy, and one of the benefactors of his species. All questions of labor and capital were placed by this work on a scientific basis, and it paved the way for the doctrine of free trade.

Edmund Burke's *Reflections on the French Revolution* caused a revulsion of feeling against France, while his *Letters on a Regicide Peace* increased the war fever in England. The former work was answered by Thomas Paine in his *Rights of Man*, and the latter by Sir James Mackintosh in his *Vindiciæ Gallicæ*. Burke's philosophical works are models of eloquence and construction. William Paley, in his *Evidences of Christianity* and other works, skillfully defended religion against the attacks of its enemies.

Towards the close of the century the newspaper press received a strong impetus by the establishment of the *Times* and other important journals; knowledge likewise began to be condensed and methodized in Cyclopædias; while criticism took a wider as well as a more popular range in the first decade of the nineteenth century by the foundation of

[766]

[767]

[768]

the *Edinburgh* and *Quarterly Reviews*.

We cannot pass from the eighteenth century without noticing the remarkable development in hymnology. George Wither issued the earliest English hymn-book in 1623, *Hymns and Songs of the Church*; but the first hymn-book of the modern type was published by John Wesley for use in the Church of England in 1737. Among the hymnologists of the eighteenth century whose compositions remain in general use until this day may be mentioned A. M. Toplady, John Newton, the Wesleys, Isaac Watts, William Cowper, and Philip Doddridge.

ROMANTICISM AND THE EARLY NINETEENTH CENTURY.—The literature of the nineteenth century is almost overwhelming in its magnitude and variety. In nearly every branch it has attained a higher level than in the preceding century, and in nothing is this more noticeable than in poetry. Although the century opened when Crabbe, the reporter of rural life, was painting his Dutch-like pictures, we soon pass on to higher things. There was a great revival in imaginative poetry before 1820.

Byron, with his precociousness in love and genius, took a high flight in his *Childe Harold*, and although all his works—*Don Juan*, *Manfred*, *Cain*, etc.—were impressed by his own gloomy personality, he yet made living verse.

Shelley, imbued with revolutionary ideas and aspirations after an ideal being, was one of the greatest poets of the age, now Miltonic in his elegiac verse in *Adonais*, and now unapproachable in his lyrics. No singer has ever drawn deeper from the wells of poetic inspiration.

Wordsworth, contemplative and philosophic the patriarch of the Lake School, taught the dependence of the poet on nature, and from the *Lyrical Ballads* to the *Excursion* he illustrated his own saying in his works, that "poetry is emotion recollected in tranquillity." He threw off the conventional, and endeavored to pierce to the heart of things, whether in man or in nature.

Fancy and imagination were made perfect in the exquisite creations and sensuous verse of Keats; wit and pathos abounded in Thomas Hood; while historic and romantic poetry found notable exemplars in Southey, Scott, Rogers, Campbell, and Coleridge. Hannah More and Joanna Baillie sought to galvanize the classical drama; Cunningham sang his Scottish songs; and Keble consecrated sacred hopes in the *Christian Year*.

The historic novel was made memorable by Sir Walter Scott, whose extraordinary fecundity was the wonder of his generation. His novels were the first and greatest prose result of the revived spirit of romanticism. Jane Austen did for the domestic novel what Scott did for the historical. The pictures of English life in *Pride and Prejudice*, *Mansfield Park*, and the remaining stories by this writer, have never been excelled. Her painting of manners was exquisite, and while her characters and incidents were of the most every-day description, she lifted them out of the commonplace by her exquisite touch and her absolute truthfulness to nature.

THE VICTORIAN PERIOD TO THE PRESENT, 1837- —

The Victorian age may justly be called great in history, philosophy, biography, fiction, and poetry. Macaulay, in the earlier half of the Victorian period, illumined history by the brilliant glow of his imagination; while in the latter half Carlyle was not only his equal in history, but the first man of letters of his time. In his prose epic, *The French Revolution*, there was the vigor of a Rembrandt; biography was ennobled by his *Cromwell*; while throughout all his works—from *Sartor Resartus* to the latest of his utterances—he upheld the dignity of labor, and the sacredness of duty.

English history in all periods, and the progress and growth of the constitution, found brilliant chroniclers or scholarly interpreters in Hallam, Freeman, Froude, Green, Stubbs, Brewer, and Gardiner; while the philosophical aspects of history have been vividly presented by Buckle and Lecky. Rome lived again in the pages of Merivale; the Jewish race in those of Milman; and Greece in those of Grote and Thirlwall.

Turning to philosophy and science, John Stuart Mill exercised a profound influence upon the age as metaphysician, logician, politician, and moralist. Charles Darwin revolutionized scientific thought by promulgating the theory of evolution, which Herbert Spencer, its most conspicuous philosophical exponent, applied to psychology, morals, and politics. Logic and science had other exponents in Brewster, Whately, Bain, Hugh Miller, John Tyndall, T. H. Huxley, T. G. Tait, and W. K. Clifford. John Ruskin has eloquently wedded art and morality, while biography and criticism have found representative writers in Lockhart, Forster, De Quincey, Masson, Arnold, "Christopher North," Lewes, Helps, Trevelyan, John Morley, and others. Religious thought was deeply impressed by the school of religious literature which arose with the Oxford movement. In poetry, its greatest result was Keble's *Christian Year*, while its greatest product in prose was the beautiful and haunting style of Cardinal Newman, best shown in his *Apologia*.

Pusey, Arnold, Maurice, Robertson, Stanley, Liddon, Martineau, Gladstone, Spurgeon, and many more of all creeds contributed in a lesser degree.

ALFRED TENNYSON'S BEAUTIFUL "LADY OF SHALOTT"

From the exquisite painting of J. W. Waterhouse, who has interpreted for us in flesh and blood Tennyson's far-famed poem. This is the dramatic moment when the curse is falling upon the lady of the silent isle.

The literature of fiction was surprising in its growth, and practically limitless in its variety. Thackeray showed to what a pitch of literary excellence and finish the novel might attain, and also demonstrated its power as a moral scourge. Dickens, the Hogarth of modern novelists, evoked smiles and tears in myriads of homes by his vivid pictures of life; and George Eliot reflected much of the sadness and unrest of the time in her searching and minutely conscientious works. Charlotte Brontë uttered a passionate note on behalf of her suffering sisters; and Mrs. Gaskell proved herself a genuine artist in the delineation of human life.

[769]

Of later women writers, mention must be made of Mrs. Oliphant, Miss Braddon, Mrs. Henry Wood, and "Ouida"—all different in style, yet all equally prolific. Marryat, James, Ainsworth, Warren, and others still find readers.

Charles Kingsley struck a sympathetic human note in his fictions; Anthony Trollope was the most interesting even of all his brethren; Wilkie Collins was a master of mystery; Richard Jefferies was the interpreter of nature; Charles Reade was an intense moral reformer; George Meredith has delighted and puzzled his admirers by his brilliant powers and genius; Lord Lytton is still read for two or three of his healthiest works; and Lever and Lover for their rollicking Irish wit.

It would be invidious to attempt to give a catalogue of all contemporary novelists worthy of mention; but in addition to those already mentioned the names will occur of R. D. Blackmore, Thomas Hardy, Robert Buchanan, George Macdonald, and William Black—all widely different in their gifts and work, but all imbued with a sense of the dignity of the novelist's art. Newer writers of imaginative and adventurous fiction have sprung up in Hall Caine, J. M. Barrie, Rider Haggard, R. L. Stevenson, and Rudyard Kipling.

TENNYSON AND OTHER POETS.—In poetry two names stand out above the rest through the Victorian age. Tennyson, the most artistic of all poets, deservedly occupies the first place from the breadth of his range. His lyrics are the finest since Shelley; his *Idylls of the King* deserve the name of epic poetry; his dramas are finely conceived; and his *In Memoriam* sums up the religious aspirations of the time.

Robert Browning, massive and profound in thought, was of all modern poets the most full of pith, energy, and moral aspiration. Mrs. Browning may well be called the daughter of Shakespeare, for never did poet play more divinely upon the Æolian harp of the human heart. Walter Savage Landor exhibited the classical spirit, and Matthew Arnold had an unbroken elevation in his verse. Swinburne is a master of music and rhythm, Rossetti is a perfect artist in construction, while William Morris is a Spenserian singer cast upon a later age.

Among later poets of undoubted gifts are Alfred Austin, William Watson, Clough, Christina Rossetti, Coventry Patmore, and Sir Lewis Morris.

The dramas of Talfourd, Sheridan Knowles, R. H. Horne, Lord Lytton, and Sir Henry Taylor exhibited striking but widely varying merits.

The minor poetic singers and writers of fugitive verse of both sexes are too numerous for particularization.

SUMMARY OF ENGLISH LITERATURE

NOTE.—Titles of words in *italics* indicate that they are poetic or dramatic.

I. THE ANGLO-SAXON PERIOD, 449-1066

AUTHOR AND DATES	REPRESENTATIVE WORKS	LITERARY CHARACTERISTICS
Unknown 700	<i>Traveller's Song</i>	Illustrates the sentiment of a wandering singer and the Anglo-Saxon's love of home.
UNKNOWN	<i>Beowulf</i>	An epic song, illustrating the powerful imagination of the race.
UNKNOWN 700-1154	Anglo-Saxon Chronicle	Contains in addition to historical data, one or two war-songs: Battle of Malden, etc.
CAEDMON 600-?	<i>Paraphrase of Scripture</i>	Showing how strong an appeal the Bible Story made to the reverence of the race.
BEDE 673-735	<i>Ecclesiastical History; Poems</i>	Inspired by early Christian sentiment.
Unknown 710-?	<i>Judith</i>	Paraphrase of Bible narrative.
CYNEWULF 750-?	<i>Poems</i>	Serious poems of moral simplicity and power.
Alfred the Great 849-901	<i>Translations</i>	Some original matter interpolated, e. g., narrative of Othere, versified by Longfellow.
Alcuin 735-804	Letters, Biographies; <i>Christ, Elene Andreas, etc.</i>	Friend of Charlemagne. Wrote a comparatively pure Latin.
Ælfric 955-1020	Homilies, Grammar	Writings in Latin; a man of power and sincerity.

II. THE NORMAN-FRENCH PERIOD, 1066-1400

William of Malmesbury 1095-1142	History of Kings of England	Of some value as an original.
Geoffrey of Monmouth 1154	History of English Kings	Largely legendary. The stories are rehashed in subsequent authors down to Spenser, Shakespeare and Milton.
Wace, Richard 1112-1184	<i>Romance of Rollo; Brut d'Angleterre</i>	In reality a French trouvère though a subject of the King of England. First mention of Arthur's Round Table.
Mapes, Walter 1143-1210	<i>De Nugis Curialium; Queste de Saint Graal, etc.</i>	First mention of the Holy Grail.
LAYAMON 1150-1210	<i>Chronicles of Britain</i>	A devout priest and the first to make the new English a literary medium.
Orm 1187-1237	<i>Ormulum (paraphrase)</i>	Also English. Some of the homilies are simple and touching expressions of devotion.
Bacon, Roger 1214-1294	Natural Science Philosophy	A man in advance of his age, he is said to have anticipated Francis Bacon in making experiment the basis of knowledge.
Gloucester, Robert of 13th Century	<i>Chronicle of England</i>	Valuable for giving outlines of history of Norman England.
Mandeville, Sir John 1300-1371	Travels	Possibly a pen-name. His travels are an extraordinary farrago of invention and report.
Barbour, John 1316-1395	<i>The Bruce</i>	Spirited and patriotic, loved by true Scotchmen.
Langland, William 1330-1400	<i>Piers, the Plowman</i>	Extraordinary man of broad humanity. First expression of the voice of the poor.
Wycliffe, John 1324-1384	Translation of Bible	A man of great power and sincerity. A philosopher and scholar.
Gower, John 1325-1408	<i>Ballads; Lover's Confession</i>	Friend of Chaucer. A voluminous poet, not of high rank.
CHAUCER, GEOFFREY 1330-1400	<i>Canterbury Tales; Short poems</i>	A scholar. A poet of chivalry and a witty narrator of stories in verse. Introduced French and Italian metres. Equally eminent in description and characterization.

[770]

III. ENGLISH PERIOD TO THE TIME OF ELIZABETH, 1400-1559

JAMES I. OF SCOTLAND 1394-1437	<i>The King's Quhair, (Choir, etc.)</i>	A decided poetic talent in the chivalric fashion.
MALORY, SIR THOMAS 1430	<i>Morte d'Arthur</i>	Worked over a large part of the Arthurian legends in prose. The original for Tennyson's "Idylls of the King."
Caxton, William 1422-1492	The Game of Chess; Translation of the Æneid	Introduced the Art of printing, brought out Malory's book and made and published many translations and adaptations.
Dunbar, William 1460-1530	<i>Thistle and Rose; Golden Terge</i>	The Scotch Chaucer; much inferior to Chaucer and less of a popular poet.
MOBE, SIR THOMAS 1478-1535	Utopia, Life of Edward V.	A man of fine character. "Utopia" first written in Latin and translated into nervous English. Plan suggested, perhaps, by Plato's "Republic."
TYNDALE, WILLIAM 1484-1536	Translation of Bible	On his translations of the Scriptures, later versions are founded.
Wyntoun, Andrew 15th Century	<i>Chronicle of Scotland</i>	Story of Wallace. Much admired by Walter Scott.

IV. THE ELIZABETHAN AND PURITAN PERIODS, 1559-1660

WYATT, SIR THOMAS 1503-1542	<i>Sonnets and Lyrics</i>	Introduced with Howard the Italian forms; sonnet and madrigal, made Italian literature a new force in England.
HOWARD, HENRY, EARL OF SURREY 1517-1547	<i>Translation of the Aeneid; Songs and Sonnets</i>	Introduced Italian forms and blank verse.
Foxe, John 1517-1587	Book of Martyrs	His book had great influence in strengthening the reformers and was one of the literary influences on the Puritans who came to America.
Sackville, Thomas 1536-1608	<i>Mirror for Magistrate</i>	A poet of force and imagination. Afterwards, as Lord Buckhurst, a courtier and politician, worked in collaboration with others and had a hand in first English Tragedy.
SPENCER, EDMUND 1552-1599	<i>Fairie Queen; Shepherd's Calendar</i>	Called the "poet's poet." Great in romantic allegory, the ode, and the sonnet.
Raleigh, Sir Walter 1552-1618	History of the World	A politician and adventurer; friend of Spenser. Some fine passages in his work.
Hooker, Richard 1553-1600	Ecclesiastical Polity	His prose has dignity and force. His book is the authority for the Church of England.
BACON, FRANCIS 1561-1626	Essays, Novum Organum	Many beautiful and acute things in his essays and his philosophical works.
SHAKESPEARE, WM. 1564-1616	<i>Dramas, Sonnets, (37 plays)</i>	Compounded of all writers best: wit, humor, characterizations, philosophy, musical phrase, power and construction.
Chapman, George 1559-1634	<i>Translation of Homer</i>	Full of vigor and verve, especially his Homer.
JONSON, BEN 1574-1637	<i>The Alchemist; Sejanus; Timber, etc.</i>	A scholar and literary man. A learned constructor of plays, had also the true lyrical faculty.
BEAUMONT, FRANCIS 1584-1616	<i>Dramas: Philaster; Maid</i>	Well constructed plays but of a decidedly low moral tone. Beaumont is supposed to have been the more promising but died before Fletcher, who continued to produce plays alone, about forty.
FLETCHER, JOHN 1579-1625	<i>Tragedy: Woman Hater, etc.</i>	
Burton, Robert 1577-1640	Anatomy of Melancholy	Full of out-of-the-way learning and quotations bearing on the subject.
Herbert, George 1593-1633	<i>The Temple, etc.</i>	Animated by a devotional spirit and an aesthetic spiritualism.
HERRICK, ROBERT 1591-1674	<i>Poems</i>	Lyrics, many of them of charming quality and ingenious construction.
Walton, Isaak 1593-1683	The Compleat Angler	Prose of a delightful character, full of simple piety and love of out-door nature.
Fuller, Thomas 1608-1661	Church History of England, etc.	A chronicle, with passages of wit or natural pathos.
MILTON, JOHN 1608-1674	Areopagitica; <i>L'Allegro and Il Penseroso; Comus; Paradise Lost; Paradise Regained, etc.</i>	A poet, grave, learned, of mental dignity but gifted with musical power as much as Shakespeare.
Taylor, Jeremy 1613-1667	Holy Living, etc.	The "Shakespeare of Divines." Passages of rare poetic beauty and organ-like volume.
Baxter, Richard 1615-1691	Saint's Rest	One of the "Vade mecum" of the later Puritans. Earnest and sincere.

[771]

V. PERIOD OF THE RESTORATION TO THE RISE OF THE NOVEL, 1660-1740

BUNYAN, JOHN 1628-1688	Pilgrim's Progress; Holy War	Simple, idiomatic, with passages of rare beauty. Animated by simple, natural piety. A classic too much neglected.
BUTLER, SAMUEL 1612-1680	<i>Hudibras</i>	A rhyming jingle, destitute of elevation but with here and there a witty couplet. Anti-Puritan throughout—favorite book of Charles II.
DRYDEN, JOHN 1631-1700	<i>Virgil Translated; St. Cecilia's Day, etc.</i>	A fine critic. The father of fluent prose. Many energetic lines of verse, especially in his satires. A man of fine talent but limited genius.
Pepys, Samuel 1633-1703	Diary	His Diary, not intended to be public, throws light on the life and habits of a capable business man of the 18th century.
LOCKE, JOHN 1632-1704	On Human Understanding; Essays; Thoughts on Education, etc.	A sound, practical thinker, whose works illustrate the common sense and unspiritual tone of his age.
NEWTON, SIR ISAAC 1642-1727	Principia, etc.	A great mathematician, he laid the foundation of our understanding of the mechanical structure of the universe.
DEFOE, DANIEL 1661-1731	Robinson Crusoe	A born story-teller and pamphleteer.
SWIFT, JONATHAN 1667-1745	Tale of a Tub; Gulliver's Travels	Unequaled as a satirist, and writer of allegories, in simple, nervous, idiomatic English.
STEELE, SIR RICHARD 1672-1729	Essays (established the Tatler)	A good second to Addison.
ADDISON, JOSEPH 1672-1719	Essays in The Tatler and The Spectator	Originator of the Social essay marked by kindly, gentlemanlike humor in the urbane style.
Berkeley, Bishop 1684-1753	Philosophy	A very acute thinker. English founder of one form of idealism.
Young, Edward 1683-1765	<i>Night Thoughts</i>	Rather a ponderous poet, on semi-doctrinal subjects.
POPE, ALEXANDER 1688-1744	<i>Essays on Man, etc.</i>	The model poet of his time and century. Used the decasyllabic couplet almost exclusively, but imparted to it vigor, pungency and some variety.
Butler, Bishop 1692-1752	Natural and Revealed Religion	The orthodox moralist of his day, ponderous in style and commonplace in method.
Carey, Henry 1700-1743	<i>Sally in our Alley, etc.</i>	A light gift of doggerel satire.
Thompson, James 1700-1748	<i>The Seasons, etc.</i>	A delicate feeling for the quieter aspects of nature, harmoniously expressed.

VI. RISE OF THE NOVEL AND PERIOD OF ROMANTICISM, 1740-1837

RICHARDSON, SAMUEL 1689-1761	Clarissa Harlowe; Pamela; Sir Chas. Grandison	Sentimentally moral, but gifted with the story-telling faculty.
FIELDING, HENRY 1707-1754	Tom Jones; Amelia; Jonathan Wild, etc.	Depicts life broadly and faithfully. The first great realistic novelist.
JOHNSON, SAMUEL 1709-1784	Dictionary; Rasselas; Lives of the Poets	A man of eighteenth century learning and letters. The critical authority of his day.
HUME, DAVID 1711-1776	History of England	The first learned historian of England. A philosopher of acumen.
Sterne, Laurence 1713-1768	Tristram Shandy; Sentimental Journey	A writer in whom affectation becomes an art. Some pathetic passages have become classic.
GRAY, THOMAS 1716-1771	<i>Elegy in Country Churchyard, etc.</i>	A scholar-poet. Production limited, but of fine workmanship.
SMOLLET, T. GEORGE 1721-1771	Humphrey Clinker, Roderick Random, etc.	Originator of the Sea-Story. Inclined to vulgar coarseness.
Akenside, Mark 1721-1770	<i>Pleasures of the Imagination</i>	A man of scholarship and culture, who wrote poetry without a decided gift.
SMITH, ADAM 1723-1790	Wealth of Nations	The first great economist. The moderns hardly equal to him in natural keenness of insight.
GOLDSMITH, OLIVER 1728-1774	Vicar of Wakefield; Essays; <i>She Stoops to Conquer; Deserted Village, etc.</i>	A true and graceful touch both in prose and poetry. Makes hack-work literature. Supposed to be the original compiler of "Mother Goose's Melodies."
BLACKSTONE, SIR WILLIAM 1723-1780	Commentaries on Laws of England	Learned and careful, with conception of the dignity of law.
BURKE, EDMUND 1729-1797	Essays, Orations	Prose, sometimes musical and poetical and at the same time, a statesman's grasp of principle.
GIBBON, EDWARD 1737-1794	Decline and Fall of Roman Empire	A pains-taking and learned historian. Constructive powers of broad scope.
Boswell, James 1740-1795	Life of Samuel Johnson	The true reporter's instinct for the point of a story. Otherwise, a toady.
COWPER, WILLIAM 1731-1800	<i>The Task; John Gilpin, etc.</i>	Divests poetry of the affectations of Pope. Writes on simple themes.
Paley, William 1743-1805	Evidence of Christianity, Natural Theology	A cogent reasoner on the old premises.
More, Hannah 1745-1833	Coelebs in Search of a Wife; <i>Sacred Dramas</i>	Something of a minor poet, something of a dramatist and story-teller.
SHERIDAN, RICHARD B. 1751-1816	Speeches; The Rivals; School for Scandal; Song; etc.	Writer of witty dialogue and constructor of telling stage situations. Comedies still acted.
BURNS, ROBERT 1759-1796	<i>Cotter's Saturday Night, etc.</i>	Lyrics, songs and satires in Scotch dialect, marked by music, pathos and wit.
Edgeworth, Maria 1767-1849	Popular Tales, etc.	Stories of middle-class domestic life of excellent moral tone and some power of characterization.
WORDSWORTH, WM. 1770-1850	<i>The Excursion; Poems</i>	Nature poems and descriptive poems. Many fine sonnets. First expression of modern feeling for nature.
Hogg, James 1770-1835	Shepherd's Calendar; <i>Pastorals</i>	Scotch verses. One or two lyrics of sweetness and simplicity.
Montgomery, James 1771-1854	<i>Hymns, Poems</i>	A man universally esteemed; best remembered now for his hymns of which some hundred are found in our Hymnals.
SCOTT, SIR WALTER 1771-1832	Waverly Novels, etc. <i>Lady of the Lake, etc.</i>	Originator of the historical novel. Tone natural and wholesome. Secure in the estimation of posterity.
Smith, Sidney 1771-1845	Sermons, Essays, etc.	A witty divine. Master of the expository style.
COLERIDGE, SAMUEL T. 1772-1834	Essays; <i>Rhyme of Ancient Mariner, etc.</i>	A man of remarkable gifts, both intellectual and poetic; a natural master of verbal melody.
SOUTHEY, ROBERT 1774-1843	Biographies of Nelson, Wesley; <i>Poems, etc.</i>	A man of industry and worth. Better as a prose stylist than a poet.
LAMB, CHARLES 1775-1834	Essays of Elia, etc.	A quaint and delicate essayist— friend of Coleridge.
LANDOR, WALTER SAVAGE 1775-1864	Imaginary Conversations, etc. <i>Count Julian; Heroic Idyls, etc.</i>	Classic scholar and writer. Reactionary and old-fashioned in his thought but a remarkable stylist.
AUSTEN, JANE 1775-1817	Pride and Prejudice, Emma, etc.	Her novels depicting upper middle-class life are delightfully realistic and full of quiet life.
PORTER, JANE 1776-1850	Scottish Chiefs, Thaddeus of Warsaw	Novels in an antiquated style of exaggerated romance.
CAMPBELL, THOMAS 1777-1844	<i>Pleasures of Hope, Lyrics, etc.</i>	Something of a critic, his lyrics have much vigor and verve.
HALLAM, HENRY 1777-1859	Europe during Middle Ages, Introduction to Literature, Constitutional History of England	Strong, vigorous, historical writing from a standpoint now antiquated.
Hazlitt, William 1778-1830	Table Talk, English Poets, etc.	Critical essays; contain some true eloquence, and many powerful phrases.
Moore, Thomas 1779-1852	Biographies; <i>Lalla Rookh, Irish Melodies, etc.</i>	Songs of much melody, but of an unreal sentimentality.
De Quincey, Thomas 1785-1859	Confessions of an Opium Eater, etc.	Passages of magnificent color. A learned man, lacking in sound realistic judgment.
Hunt, Leigh 1784-1859	Essays, Sketches, Memoirs; <i>Poems</i>	A minor poet. A literateur of appreciation rather than of creative power.
Wilson, John 1785-1854	Noctes Ambrosiannae, etc.; <i>Poems</i>	A virile man. As a writer, "of his age, not for all time" nor indeed for an entire century.
Peacock, Thos. L. 1785-1866	Crotchet Castle, Rododaphne, etc.	A literateur, novel writer, and verse writer of wit and epigrammatic power but no constructor.
Byron, Lord 1788-1824	<i>Poems</i>	Vigorous, eloquent, sardonic, iconoclastic, lacking in divine sympathy. A great satirist, and in many regards a great poet.
SHELLEY, PERCY BYSSHE 1792-1822	<i>Queen Mab, Adonais, The Sky Lark, etc.</i>	A remarkable gift of lyrical melody. Full of generous impulse and the unbalanced judgment of youth. A genius.
Marryat, Capt. Fred 1792-1848	Peter Simple, Jacob Faithful, etc.	Boy's stories but evincing considerable narrative skill.
Hemans, Felicia 1793-1835	<i>Lyrics</i>	A minor poet of grace, sweetness and tenderness.
GROTE, GEORGE 1794-1871	History of Greece	A learned and sound historian, but superseded by modern exact research.
Arnold, Thomas 1795-1842	Roman History, Sermons, Essays	A man of wide influence as head-master of Rugby. An historian of the old school.
KEATS, JOHN 1795-1821	<i>Endymion, Hyperion, etc.</i>	A true poet, dying too young to reach full fruition of his remarkable artistic powers.
Pollock, Robert 1798-1827	<i>Course of Time</i>	A poet, sound, serious and heavy; suits Scotch theologians.
Hood, Thomas 1798-1845	<i>Poems</i>	A humorous poet of the first rank; some pathetic verses of high quality.

VII. THE VICTORIAN PERIOD TO THE PRESENT, 1837- —

Lover, Samuel 1797-1868	Handy Andy, Rory O'More; <i>Songs, Ballads</i>	A writer of slap-dash Irish and other good stories.
CARLYLE, THOMAS 1795-1881	French Revolution, Cromwell, etc.	A very great though one-sided man. A prose poet, an historian of insight and industry, impatient of shams.
MACAULAY, THOMAS B. 1800-1859	Essays, History of England; <i>Lays of Ancient Rome</i>	He makes history alive and readable. A partisan but on the right side.
James, G. P. R. 1801-1860	Novels (historical)	Historical novels of an antiquated pattern, popular in their day for good reasons.
Miller, Hugh 1802-1856	Old Red Sandstone, Schools and Schoolmasters, etc.	A self-made scientific geologist, who did good service in popularizing science.
Praed, Winthrop Mackworth 1802-1839	<i>The Vicar; The Red Fisherman</i>	The best writer of "Society Verse," urbane, cultured, witty. His verses are beautifully finished.
Martineau, Harriet 1802-1876	Political Economy, etc.	A woman of remarkably strong intellect. Her positions well argued but perhaps too radical.
LYTTON, SIR EDWARD BULWER 1803-1873	Last Days of Pompeii, Last of the Barons, etc.	A versatile and successful literateur, successful in several forms of the novel, but pre-eminent in none.
Disraeli, Benjamin 1804-1881	Lothair, Vivian Grey, etc.	Society novels eminently readable but thoroughly artificial.
MARTINEAU, JAMES 1805-1900	Philosophical Works, etc.	A philosophical thinker of insight and honesty.
MILL, JOHN STUART 1806-1873	Political Economy	Of thorough intellectual honesty and diamond-clear intellect, he furthered the cause of political justice and personal freedom.

[772]

[773]

Lever, Charles 1806-1872	Tom Burker, Charles O'Malley, etc.	Irish tales full of pith and spirit.
DARWIN, CHARLES 1809-1882	Origin of Species, Descent of Man	Lucid and attractive in style, and an unflinching lover of truth; he has had a greater influence on thought than any man of his time.
Milnes, Richard Monckton (Lord Houghton) 1809-1885	Life and Remains of Keats; <i>Poems, legendary and historical</i>	A man of culture not without distinction as a minor poet. A true lover of literature.
FitzGerald, Edward 1809-1883	Euphranon, etc.; <i>The Rubaiyat</i>	The Rubaiyat is the only instance where a translation of a classic equals the original.—FitzGerald was one of the last of the "Letter Writers."
BROWNING, ELIZABETH BARRETT 1806-1861	<i>Aurora Leigh, Poems</i>	A pleasing lyrical gift and warm, human sympathy made her a favorite poetess in the Victorian era.
TENNYSON, ALFRED 1809-1892	<i>In Memoriam, Idyls of the King</i>	The national poet of the late 19th century; a painstaking artist and master of verbal melody.
Kinglake, Alex. William 1809-1890	Eothen	A brilliant historian of the Crimean war.
Gaskell, Elizabeth 1810-1865	Cranford, Mary Barton, etc.	A writer of charming quiet feminine humor. One of the first to make the economic problems the basis of a story.
THACKERAY, WILLIAM MAKEPEACE 1811-1863	Vanity Fair, The Newcomes	Satirist and humorist, but with great powers of characterization, especially of the every-day social elements.
DICKENS, CHARLES 1812-1870	David Copperfield, Oliver Twist, etc.	A broader humorist than Thackeray, appealing to the common human sympathies and the ordinary sense of the ridiculous.
BROWNING, ROBERT 1812-1889	<i>Dramatic Lyrics, Poems, The Ring and the Book</i>	A powerful poet, intent more on subtlety than lucidity, intellectual rather than sympathetic.
Reade, Charles 1814-1884	Peg Woffington, Cloister and Hearth, etc.	A vigorous narrator, animated by hatred of injustice. Analysis of human motives, superficial.
Rawlinson, George 1815-1902	Five Great Monarchies	A learned Assyrian and Oriental scholar.
Trollope, Anthony 1815-1882	Barchester Towers, etc.	Admirably realistic presentation of English society, political and ecclesiastical.
Froude, James Anthony 1818-1894	History of England	A brilliant prose writer, makes history human and interesting and suggestive.
KINGSLEY, CHARLES 1819-1875	Hypatia, etc.; <i>Poems</i>	His novels, in spite of slight affectations and a taint of sentimentality, are vigorous and wholesome.
RUSKIN, JOHN 1819-1900	Stones of Venice, Modern Painters	A great stylist. As art-critic too subjective and governed by the moral suggestiveness of the object. As political economist, too idealistic and regardless of human nature.
Bronte, Charlotte 1816-1855	Jane Eyre, The Professor, etc.	Great power in her novels which, however, are based on narrow experience.
SPENCER, HERBERT 1820-1903	First Principles, etc.	Applied principle of evolution to sociology, history, etc. A thinker, but ponderous in style.
ELIOT, GEORGE 1819-1880	Silas Marner, etc.; <i>Spanish Gypsy, Poems</i>	The greatest woman novelist. A realist with insight. Powers of wit and characterization; construction not remarkable.
TYNDALL, JOHN 1820-1893	Scientific Papers	Unsurpassed as a popularizer of Darwin's ideas, unless it be by Huxley.
ARNOLD, MATTHEW 1822-1888	Essays and Criticisms; <i>Sohrab and Rustum, etc.</i>	Critic and poet. Liberal in thought but dominated by aristocratic prejudice on the literary side. As a poet, inclined to despairing pessimism; weak in the power of verbal melody.
Muller, Max 1823-1900	Science of Language, etc.	Did much to spread knowledge of the general facts and principles of philology and Oriental learning.
FREEMAN, EDWARD A. 1823-1892	Histories	A conscientious, honest, painstaking historian, destitute of the power to make his subject interesting except to himself.
Hughes, Thomas 1823-1896	Tom Brown at Oxford, etc.	A manly, breezy person, who wrote one good book for boys.
Collins, Wilkie 1824-1889	Woman in White, etc.	Unsurpassed as a constructor of plots, i. e. born story-teller, not misled by psychological analysis.
Macdonald, George 1824-1905	Sir Gibbie, Alec Forbes, etc.	Wrote many novels showing some power of writing dialogue. Essentially of his day.
HUXLEY, THOMAS HENRY 1825-1895	Man's Place in Nature	A master of exposition and, with Tyndall, very effective in presenting the idea of evolution.
BLACKMORE, R. D. 1825-1900	Lorna Doone, etc.	Infused an element of romance into the modern novel, "Lorna Doone."
Bagehot, Walter 1826-1877	Physics and Politics	Original, sound, and striking on political and economic topics.
Mulock, Dinah Naria 1826-1887	John Halifax, etc.	Author of some twenty novels of which "John Halifax" is the best. Also of pleasing minor verse.
Rossetti, Dante Gabriel 1828-1882	<i>The Blessed Damozel, etc.</i>	A highly imaginative poet; a master of color in verse and on canvas.
Oliphant, Margaret 1828-1897	Chronicles of Carlingford, etc.	Novels of middle-class life, of excellent tone, full of quiet observation. Plots, slight, but hold the attention.
MEREDITH, GEORGE 1828-1910	The Egoist, Diana of the Crossways, etc.	Novels of extraordinary power. Style epigrammatic and not attractive.
McCarthy, Justin 1830-1912	History of our own Times, Novels	A prolific journalist, novelist and historian of modern times.
Ingelow, Jean 1820-1897	<i>Poems, High Tide on Coast of Lincolnshire</i>	A charming lyrical talent, of limited productive power.
Meredith, Owen 1831-1891	Biography of Bulwer Lytton; <i>Lucile</i>	Fluent writer of light verse and society verse.
Arnold, Edwin 1832-1904	<i>Light of Asia, Poems</i>	An able journalist and prolific minor poet.
Seeley, John Robert 1834-1895	Ecce Homo, etc.	An able historical writer, his "Ecce homo" had considerable influence on contemporary philosophies—religious thought.
MORRIS, WILLIAM 1834-1896	Essays on Art, etc.; <i>Poems, Earthly Paradise</i>	Prolific as a narrative poet, fond of classic and medieval legends. As a poet, more fluent than thoughtful.
Hamerton, Philip I. 1834-1894	Intellectual Life	An excellent critic of pictorial art and interpreter of French life and character for Englishmen.
Green, John Richard 1837-1883	History of the English People	Industrious and conscientious, he viewed the "History of the English People" as something more than a record of war and politics. Clear and simple as a stylist.
SWINEBURNE, ALGERNON CHAS., 1837-1909	<i>Poems</i>	A poet of remarkable musical power, a master of headlong but involved prose, a critic of enthusiasm and eloquence, caring little for principles or reasoned judgment.
BRYCE, JAMES 1838-	American Commonwealth, Holy Roman Empire	A writer on politics of great common sense and statesmanlike scope. A trustworthy authority.
Besant, Walter 1838-1901	East London, etc., Novels	A voluminous writer of novels, his History of London is a real contribution of knowledge of the past.
Morley, John 1838-	English Men of Letters	A sound literary historian and critic and a thinker of force and scope.
Pater, Walter Horatio 1839-1891	Marius the Epicurean, etc.	A wonderfully finished prose style which sometimes diverts attention from the justness and beauty of the thought.
Dobson, Henry Austin 1840-	Vignettes in Rhyme, Proverbs in Porcelain	The English Horace. An authority on eighteenth century social and literary life. Charming light verses.
Hardy, Thomas 1840-	Tess of D'Urbeville, etc., Novels	Novels depicting country life. A writer of broad humanity. His books possess at once wit, realism and an idyllic quality.
Black, William 1841-1898	In Silk Attire, etc., Novels	His stories have considerable charm but not much force. They depict Gaelic Scotland pleasantly but unconvincingly.
Buchanan, Robert W. 1841-1901	Alone in London; <i>Poems</i>	A minor poet and dramatist of considerable output. Known for his mistaken attack on Rossetti in "The Fleshy School of Poetry."
Stevenson, Robert Louis 1850-1894	Essays, Novels; <i>Child's Garden of Verses, etc.</i>	Careful and finished as a stylist, an excellent story-teller: "Treasure Island" and his Scottish Tales are true classics.
Zangwill, Israel 1864-	Novels, Dramas, Essays	As Jew, an exponent of the Zionistic movement. Successful in the essay and especially in the novels depicting Jewish scenes and characters.
Kipling, Rudyard 1865-	Stories, Novels, <i>Poems</i>	A vigorous, audacious, efficient writer. The most original genius among English literary men of today.
Phillips, Stephen 1868-	<i>Ulysses, Paolo and Francesca</i>	A writer of lyric tragedies in blank verse, akin in spirit to the French classic drama.

[774]

[775]

AMERICAN LITERATURE

The development of American literature may be treated under three distinctly marked periods: (1) a colonial or ante-revolutionary period (1620-1775), during which the literature of the colonies was closely assimilated in form and character to that of England; (2) a first American period (1775-1865), which witnessed the transition from a style for the most part imitative to one in some degree national; and (3) a second American period from 1865 to the present time, in which the literature of the country has assumed a more decided character of originality.

The literary traditions of the United States were in large part inherited from England. Although from the time of the Stuart restoration in England, in 1660, there are indications of a divergence in social and political temper, which in the long run must find expression in a distinct American literature, yet the literary emancipation of America was much more gradual than the political.

The first literature in America was the product of men educated in other lands, who happened to be drawn to the New World, and who wrote about the new country.

The first work of broad interest concerning the colonies that subsequently became the United States was the famous Captain John Smith's *True Relation of Such Occurrences and Accidents of Note as Hath Happened in Virginia*. This is an interesting and romantic work; but Smith was in America for three years only of his adventurous life, and consequently his narrative is highly colored. *The History of the Plymouth Plantation*, by Governor Bradford, and the *History of New England*, by John Winthrop, are productions of a colder clime than Virginia and of a less glowing imagination than Captain John Smith's.

Aside from such records, more interesting always from the standpoint of history than from that of literature, the sum of colonial production, north or south, is very small. In New England, where most books were written, if not always there published, we find chiefly theological polemics, often presented with attractive titles but rarely with any other power to carry them to posterity.

The *Poems* of Anne Bradstreet were very highly praised in their day, but almost the only book of lasting value and interest written in the century was Cotton Mather's *Magnalia Christi Americana* (1702). Mather was one of a great clerical and literary family. He wrote many other books, but none retains the interest of posterity. The *Magnalia*, however, is still a noble monument of a wonderful generation.

Franklin's *Poor Richard's Almanac*, begun in 1732 and carried on by him for twenty-five years, was a book of almost literary rank. "Poor Richard" was a fictitious character in whose mouth Franklin put a simple philosophy which became as widely popular in its sphere as the more scholarly utterances of the Spectator.

The two great literary figures of the eighteenth century may be properly considered together. Jonathan Edwards (1703-1758) may represent to us the passing domination of theology; Benjamin Franklin, the domination just beginning of politics and secular common sense. They are the first Americans to make a lasting reputation by letters, and, curiously enough, with each literature was but a means to an end.

The remarkable effect of the preaching and writing of Jonathan Edwards came largely from the direct simplicity and clearness which makes his style almost no style at all. As for Franklin, he learned to write systematically, as he did everything else, and regarded his power to express himself chiefly as one of the means whereby he accomplished his purposes for the good of society. Edward's great works on the *Freedom of the Will* and other theological topics are probably read now by few, and the same may be said of much of Franklin's writings. But Franklin's *Autobiography* is still one of the most interesting things of its kind. Both men belonged to the time and place: America was expressing herself, whether in literary form or not.

In the years preceding the Revolution another real opportunity opened, and oratory became one of the genuine modes of national expression. Patrick Henry, James Otis, John Adams, Joseph Warren, Richard Henry Lee, Samuel Adams, spoke under the best conditions for literature, because they had something that had to be said. Yet their eloquence now is more a matter of fame than of fact. Of some, hardly more than a few slight reports remain to give us a notion of the powers that fired an earlier generation. This summary of colonial literature gives an idea of a very meagre literary production that was but natural. There was little written in America, and that little was compelled by the practical issues of the politics or theology of the time.

We shall readily understand that though such a review indicates slight literary appreciation as we understand the term, it does not imply a lack of intelligence. If the colonists had been less intelligent they might have produced more literature. Folk poetry and legend, with which true literature is apt to begin, is not the result of education.

The Americans were, comparatively speaking, a well-educated people. They very early provided for that literary scholarship training which comes from scholastic training. The colleges of the colonies, Harvard (1636), William and Mary (1693), Yale (1701), Princeton (chartered as the College of New Jersey, 1746), Columbia (originally King's, 1754), Brown (College of Rhode Island, 1764), Rutgers (originally Queens, 1766), Dartmouth (1769), and the University of Pennsylvania (founded as an academy by Franklin, 1754; chartered 1779), show a great appreciation of learning on the part of the colonists.

A somewhat wider if less scholastic culture is evidenced by the foundation of libraries, the Library Company of Philadelphia (1731), the Redwood Library of Newport (1747), the Charleston Library (1748), and the New York Society Library (1754), being the earliest.

FIRST NATIONAL PERIOD, 1775-1865

The two decades that brought the eighteenth century to a close were full of exciting political events, but barren of literature. The fathers could make a nation by adopting a constitution and abiding by it, but the creation of a national literature was not so easy a matter. National poetry did not come with national life. The efforts of Trumbull (1750-1831), and Barlow (1754-1812), are as good as the ordinary poetical work of the time in England, but they are not the expression of the soul of the new nation.

The first real literature was in prose, arising from natural imitation of past models under conditions of culture which led to appreciation of such imitation.

Washington Irving, then twenty-four years old, living the pleasant life of a clever young fellow in a small provincial city, joined with his brother William and James Kirke Paulding in one of the periodicals modeled after the Spectator common in the eighteenth century. Their venture was called *Salmagundi*, and although not remarkable in itself, its success gave confidence, so that two years afterward, feeling his own power, Irving wrote *Knickerbocker's History of New York*, one of the first pieces of American *belles-lettres* to become known in Europe as well as America. These productions came naturally from the conditions of Irving's life; so did the *Sketch Book*, with which he became a professed man of letters, the representative, we may say, of the first period of our national literature.

Irving had pre-eminently the gift for literary expression; in his hands everything became literature—history, biography, descriptive as well as satire, story, essay. He showed the possibility of giving literary form to American material.

The same thing was done in a special department of literature by James Fenimore Cooper. Charles Brockden Brown had written novels, but they have not survived. Cooper, on the other hand, so far saw the essential quality of certain elements of American life, that the figures of Leatherstocking, the American pioneer, Harvey Birch, the patriot, and Long Tom Coffin, the sailor, are still living figures.

In fiction also two masters of equal power were shortly to develop a form of literature in which America has produced much of the first order. Nathaniel Hawthorne and Edgar Allan Poe made of the short story a means of artistic presentation, which has been more highly appreciated in our day than it was in their own.

The first true poet was William Cullen Bryant. In the same year with Cooper's first American novel (1821) appeared a volume of Bryant's poems, of which one at least, *Thanatopsis*, had already excited admiring attention. Bryant's long and honorable life was devoted to many interests beside poetry, but he maintained throughout the pure and idealistic touch, and the intimate appreciation of nature that characterized his first work.

The first quarter of the nineteenth century, then, saw a beginning, slight indeed, but such as to endure, of a true literature in the departments of poetry, fiction, *belles-lettres*. The fifty years following saw more substantial production in each direction.

The American poets of the middle of the century are not of the very first rank, but each is genuinely representative of some true poetic quality or way of looking at things.

Henry Wadsworth Longfellow presents the beauty and charm of American life and history in melodious and figured verse; John Greenleaf Whittier expresses the soul of our life and history in lyrics of most sincere human quality; Edgar Allan Poe gives a few most intense emotions in singularly perfect and individual form, while Walt Whitman expresses a certain American idealism in a strange mode of utterance, which despite its faults is characteristically strong.

As a poet Lowell is at his best in satire, Holmes in wit, Emerson in sententious wisdom.

In the field of fiction there was not so much that was good. It was not till he had written short stories for twenty years that Hawthorne found time for the novel for which he had so long felt himself capable. He wrote four, of which three at least are masterpieces. As a novelist he had no rivals; but there were not a few who carried on the tradition of the short story, of whom the most noteworthy were Fitz James O'Brien (1828-1862), Harriet Prescott, 1835 (afterward Mrs. Spofford), and Edward Everett Hale. *The Diamond Lens*, *The Amber Gods*, and *The Man Without a Country* of the latter are very typical works.

In history also there was first-rate expression. George Bancroft, William H. Prescott, John Lothrop Motley, and Francis Parkman, were all original workers and all men of literary power. The first two were rather too much influenced by the literary ideals of the past, but Motley and Parkman attain a perfection of literary history which seems impossible in our day of development and division of labor.

More specifically American, though perhaps more temporary, is the oratory of the period. Political conditions were still such as to encourage eloquence. Three names stand together as representative of American public life: Daniel Webster, Henry Clay, and John C. Calhoun. Their oratory has dignity, representative character and force. Three other orators should be mentioned: Edward Everett, Wendell Phillips, and Henry Ward Beecher, one eminent on great public occasions, one in public discussion and agitation, and the third in the pulpit. And we must add the name of a speaker whose simple sincerity gave him at times a greater power of speech than that of any other man of his day, Abraham Lincoln.

Several other elements of the literature of this time are important. The New England movement of idealistic thought, somewhat expressed by Transcendentalism, is represented by Ralph Waldo Emerson, a figure more thoroughly characteristic of American thinking than any other writer. Singularly individual and different from any other man of his time, he is yet typical of a combination of idealism and common sense thoroughly American.

James Russell Lowell is another important figure of the period: noteworthy as a poet, a critic, a scholar, an essayist, he is especially interesting as the successor of Irving as the representative man of his literary generation. He made literature an active factor in life and yet never allowed it to lose its literary quality.

Oliver Wendell Holmes is best known as a humorist, and perhaps the most American in that field in which America has a very special place. Humor is more than most branches of literature a matter of taste. It must be enough, therefore, to note, without attempting to discriminate or describe, the achievements of Artemus Ward (1834-1867), of Mark Twain and of Frank R. Stockton (1834-1902). In this second period of our literature occurred the Civil war. Such an event could not have been without its effect upon men of letters both South and North. In the North especially do we perceive the strongest influence: the anti-slavery element cannot be dissociated from the work of Lowell or Whittier. Yet in literature the war produced little of permanence. It is the backbone of Mrs. Harriet Beecher Stowe's title to remembrance; but powerfully effective as was *Uncle Tom's Cabin*, it is probable that there was more real genius in those presentations of that old New England life of which she was herself a product.

SECOND NATIONAL PERIOD, 1865- ———

In considering the period from the Civil war to the present, the most remarkable thing is the great increase of production and the slight accession to the rolls of genius. Such is especially the case with fiction; there have been very many good novels and short stories written, but there is no such commanding personality as Hawthorne.

The two chief figures of the seventies and eighties, at least, were Henry James and William Dean Howells. With great differences, they are yet both masters of the realistic school which was dominant in the second half of the century, in Europe as well as in America. Their superiority might remain unquestioned, were it not for the decline of interest in the kind of novel in which they excelled. In the early eighties a change in tone was perceptible.

The first noteworthy American representative of romantic or idealistic fiction which then began to appear was Marion Crawford, who has retained power and popularity for twenty-five years. He and a few other innovators were followed by a number of writers who found and presented the charm and romance of American history. These have now in their turn passed away except Winston Churchill who would seem really to have more enduring power than his companions. But the realistic movement was not without its results, for it directed American novelists, and especially story writers, into an appreciation of the specific qualities of different parts of their country.

The first writer to have this especial flavor was, it is true, the romanticist Bret Harte. His followers were more realistic: George Washington Cable gave a charming presentation of Creole life in New Orleans, and since the *Granddissimes* (1880) there have been a great number who have drawn pictures of the especial life of particular localities. Most noteworthy of these are Miss Mary N. Murfree ("Charles Egbert Craddock"), Miss Mary E. Wilkins (now Mrs. Freeman), James Lane Allen, Thomas Nelson Page, and Hamlin Garland.

If we are to mention any other novelist of the present day whose work seems likely to endure, it must be Mrs. Edith Wharton, who rather continues the traditions of Henry James.

In poetry no one has for forty years appeared who has been considered the equal of the earlier generation. Sidney Lanier and Edmund Clarence Stedman will probably be considered the chief figures of the seventies, while Richard Hovey (1864-1900) and James Whitcomb Riley are superior to their later contemporaries.

There has been much history in recent years, and if there are no historians of the rank of Motley and Parkman, the reason may lie in the difference that has come into the methods of historical study. John Fiske was a philosopher before he became a historian. Justin Winsor was a master of authorities, and his labors as an editor rendered possible one of the characteristic productions of the time, the *Narrative and Critical History of America*, written by a number of special scholars. Of other contemporary writers most noteworthy are probably Henry C. Lea, whose works deal with different phrases of the history of civilization, and Captain A. T. Mahan, whose studies of the influence of sea power on history have attracted the attention of the world.

Coincidentally, a new school of humor has risen in the writing of F. P. Dunne, creator of the sagacious *Mr. Dooley*, and George Ade, author of *Fables in Slang*. Earlier humorists, aside from "Mark Twain" and Charles F. Browne ("Artemus Ward"), are Henry W. Shaw ("Josh Billings") (1818-1885), Joel Chandler Harris (1848-1908), the author of *Uncle Remus' Stories*, amusing dialect fantasies. In the summary of American literature one can hardly omit the names of Sarah Margaret Fuller ("Ossoli"), R. H. Dana, author of *Two Years Before the Mast*, and Donald G. Mitchell, author of *Reveries of a Bachelor and Dream Life*.

Recent and contemporary historians and essayists deserving of mention are T. W. Higginson, C. E. Norton, and William James.

Another form of writing should be mentioned, though its results are perhaps too ephemeral to be called literature. The newspaper is, however, a very important part of everybody's reading. It has been learning, however, to appeal more and more to an enormously wide audience, with the result that whatever literary character it may have had is now hard to find. In the middle of the century certain great editors had very definite literary standing, as Bryant of the New York *Evening Post*, Henry J. Raymond (1820-1869) of the *Times*, Horace Greeley (1811-1872) of the *Tribune*. Later figures must include Charles A. Dana (1819-1897), who gave a very distinctive character to the *Sun*; James Gordon Bennett (1841) of the *Herald*, and E. L. Godkin (1831-1902) of the New York *Evening Post*, and Henry Watterson of the Louisville *Courier-Journal*.

SUMMARY OF AMERICAN LITERATURE

(776)

(777)

(778)

AUTHOR AND DATES	REPRESENTATIVE WORKS	LITERARY CHARACTERISTICS
John Smith Virginia—1580-1631	True Relation of Virginia	A romantic recital of thrilling adventures.
William Bradford Plymouth Col.—1588-1657	History of Plymouth Plantation	A full and clearly written account to 1649.
John Winthrop Massachusetts—1590-1649	History of New England—1630-1649	A simple, personal narrative, with occasional freshness of style.
Anne Bradstreet Massachusetts—1613-1672	<i>Poems; The Tenth Muse</i>	An affected and cumbersome didactic poem.
Henry Norwood Virginia—1628-1670(?)	A Voyage to Virginia	Surprisingly well written in parts, and informative.
William Penn Pennsylvania—1644-1718	Brief Account of Pennsylvania	Confidently religious and philanthropic in tone.
James Blair Virginia—1656-1742	Sermons, No Cross, No Crown	Comparatively modern prose, written with pious zeal.
Cotton Mather Massachusetts—1663-1728	Elegy of Rev. Nathaniel Collins, Sermons, etc.	Voluminous ecclesiastical writings of "pedantic and fantastic quaintness."
William Byrd Virginia—1674-1744	The Dividing Line, and other tracts	Full of fresh, humorous observations on life.
Robert Beverly Virginia—1675-1716	History of Virginia	A straightforward narrative of slightly polemic purpose.
JONATHAN EDWARDS Connecticut—1703-1758	Sermons, Surprising Conversions, etc.	Strong and highly imaginative proclamations of Calvinism.
BENJAMIN FRANKLIN Pennsylvania—1706-1790	Poor Richard's Almanac, Autobiography	Wise and sagacious utterances of a fair, avowed utilitarian.
THOMAS JEFFERSON Virginia—1743-1826	Notes on Virginia, Declaration of Independence	Full of wise foresight and keen acumen.
JOHN MARSHALL Virginia—1755-1835	Life of Washington, Decisions, etc.	Profound and wise, but rather heavy.
ALEXANDER HAMILTON New York—1757-1804	Contributions to the Federalist	Keen and ingenious, full of information.
Alexander Wilson Scotland—1766-1813	American Ornithology	Pioneer investigations of a shrewd observer.
Charles Brockden Brown Pennsylvania—1771-1810	Wieland, Ormond, etc.	Weird and sensational, of the Godwin type.
William Wirt Maryland—1772-1834	Life of Patrick Henry, Letters of a British Spy	Interesting and informative, but also imaginative.
Robert Treat Paine Massachusetts—1773-1811	Adams and Liberty; <i>Poems</i>	Superficial, but of noticeable metrical facility.
HENRY CLAY Kentucky—1777-1852	Speeches, Letters	Attractive because of personality and power.
Washington Allston South Carolina—1779-1843	Art Lectures; <i>Poems</i>	Highly artistic in intent and achievement.
James Kirk Paulding New York—1779-1860	Novels	Romances of little present interest.
FRANCIS SCOTT KEY Maryland—1780-1843	<i>Poems, Star Spangled Banner, etc.</i>	The chief poem is a national song of patriotic ardor.
WILLIAM E. CHANNING Massachusetts—1780-1842	Addresses, Sermons, Essays	Social papers, clear, tolerant, thoughtful.
JOHN JAMES AUDUBON Louisiana—1780-1851	Birds of America, Quadrupeds of America	Marked by keen observation and wide interest.
JOHN C. CALHOUN South Carolina—1782-1850	Speeches, Papers, etc.	Forceful in logical thinking and clear exposition.
DANIEL WEBSTER New Hampshire—1782-1852	Orations	Elevated in thought and eloquent.
Thomas Hart Benton North Carolina—1782-1858	Thirty Years View	Rich and racy observations of wide experience.
WASHINGTON IRVING New York—1783-1859	Knickerbocker's History of New York, Sketch Book, etc.	Humorous, with delicate sentiment and grace.
Richard Henry Dana Massachusetts—1787-1879	<i>Poems, The Buccaneer, etc.</i>	Overambitious and not wholly successful.
JAMES FENIMORE COOPER New Jersey—1789-1851	Leather Stocking Tales, The Spy, etc.	Romantic and overfortunate in coincidence, but readable.
Jared Sparks Connecticut—1789-1866	American Biographies	Commendable efforts of a pioneer biographer.
Fitz Greene Halleck Connecticut—1790-1867	<i>Poems, Marco Bozzaris, etc.</i>	Frankly humorous and delightfully fresh.
George Ticknor 1791-1871	History of Spanish Literature	Scholarly and authentic.
John Howard Payne New York—1792-1852	<i>Home Sweet Home, Poems</i>	Universal in appeal and satisfying in form.
Samuel G. Goodrich Connecticut—1793-1860	Peter Parley Books	Popular introductions with a flavor of fiction.
WILLIAM CULLEN BRYANT Massachusetts—1794-1878	Addresses, Letters; <i>Poems, Thanatopsis</i>	Dignified and poised, serious and helpful.
Joseph Rodman Drake New York—1795-1820	<i>The Culprit Fay, Poems</i>	Cleverly executed, but ingeniously fanciful.
James G. Percival Connecticut—1795-1856	<i>Poems; Prometheus, etc.</i>	Unsustained, though not without positive merits.
John Pendleton Kennedy Maryland—1795-1870	Swallow Barn, Horse Shoe Robinson, etc.	Old-fashioned but interesting pictures of southern life.
WILLIAM H. PRESCOTT Massachusetts—1796-1859	Conquest of Peru, Ferdinand and Isabella, etc.	Excellent history, very interestingly told.
Amos Bronson Alcott Massachusetts—1799-1888	Concord Days, Table Talks; <i>Sonnets and Canzonets</i>	Suggestingly idealistic, but lacking in general interest.
George Bancroft Massachusetts—1800-1891	History of the United States	Faithfully prepared and honestly presented.
Horace Bushnell Connecticut—1802-1876	Nature and the Supernatural, Work and Play	Serious, didactic efforts with spiritual purpose.
George D. Prentice Connecticut—1802-1870	Essays; <i>Poems</i>	Witty, sarcastic, daring and effective.
RALPH WALDO EMERSON Mass.—1803-1882	Conduct of Life, Representative Men, Essays; <i>Poems</i>	The prophet of American culture. Coalesces oriental conceptions and occidental individualism.
Jacob Abbott Maine—1803-1879	Rollo Books	Popular favorites of unsophisticated youth.
NATHAN'L HAWTHORNE Massachusetts—1804-1864	Twice Told Tales, Scarlet Letter, Marble Faun, etc.	Marked by a subtle mastery and the touch of genius.
Charles E. A. Gayarré Louisiana—1805-1895	History of Louisiana, Fernando de Lemos, etc.	Entertaining and scholarly bilingual productions.
Nathaniel P. Willis Maine—1806-1867	<i>Poems; Sketches, Editorials, etc.</i>	Skillfully elaborated but diminishing in fame.
William Gilmore Simms South Carolina—1806-1870	<i>Poems; Novels, Biography, etc.</i>	Versatile, original and artistic.
HENRY W. LONGFELLOW Maine—1807-1882	<i>Outre Mer, Hyperion, Poems, Hiawatha, etc.</i>	Popular in appeal and simple in form.
JOHN G. WHITTIER Massachusetts—1807-1892	Editorials; <i>Household Poems</i>	With Burns' love of nature and human nature.
EDGAR ALLAN POE Maryland—1809-1849	Tales; <i>Poems, Raven, Annabel Lee, etc.</i>	Excellent in artistic "totality of effect."
Albert Pike Massachusetts—1809-1891	<i>Hymns to the Gods, Poems, etc.</i>	Of recognized interest and merit.
OLIVER WENDELL HOLMES Massachusetts—1809-1894	Autocrat of the Breakfast Table, Novels; <i>Poems</i>	Clever, witty, versatile, and skillful.
Margaret Fuller Ossoli Massachusetts—1810-1850	Summer on the Lakes, Papers on Literature and Art	Notable in transcendental aim and in merit of achievement.
Harriet Beecher Stowe Connecticut—1811-1896	Uncle Tom's Cabin, etc.	Far-reaching in its influence.
JOHN LOTHROP MOTLEY Massachusetts—1814-1877	Dutch Republic, United Netherlands	A rapid, easy style in presenting results of research.
Rufus W. Griswold Vermont—1815-1857	<i>Christian Ballads; Poets and Poetry of America, Famous Poets</i>	Valuable critical studies marred by partisany.
John C. Saxe	<i>The Money King, New Rape of the Lock, etc.</i>	Humorous and sprightly.

Vermont—1816-1887	Literature and Authors, etc.	Laborious and valuable.
Samuel A. Allibone Pennsylvania—1816-1889		
HENRY D. THOREAU Massachusetts—1817-1862	Walden, Excursions	Redolent of nature love, and cultured scholarship.
J. G. Holland Massachusetts—1819-1881	Timothy Titcomb's Letters, Katrina	Enjoyed a large popularity.
Edwin P. Whipple Massachusetts—1819-1886	Essays and Reviews, American Literature	Of very distinct cultural value.
JAMES RUSSELL LOWELL Massachusetts—1819-1891	Among My Books, My Study Windows, Biglow Papers, <i>Poems, Sir Launfal, etc.</i>	Keen, sparkling, scholarly, and artistic.
WALT WHITMAN New York—1819-1892	<i>Poems, Leaves of Grass, My Captain, etc.</i>	Unique in claim and form.
Julia Ward Howe New York—1819-1910	Social and Philosophical Papers, <i>Battle Hymn of the Republic</i>	Representative of the spirit of the times.
Margaret J. Preston Virginia—1820-1897	Beechen Brook, Cartoons, <i>Colonial Ballads</i>	Cultured and of human interest.
Richard Grant White New York—1821-1885	Words and Their Uses; Everyday English	Scholarly and suggestive.
Thomas Buchanan Read Pennsylvania—1822-1872	<i>Poems, Drifting, Sheridan's Ride, etc.</i>	Commendable, especially in form.
Edward Everett Hale Massachusetts—1822-1909	The Man Without a Country, His Level Best	Vigorous and pointed, but provincial.
Donald G. Mitchell Connecticut—1822-1909	Dream Life, Reveries of a Bachelor	Attractive in meditation and grace.
FRANCIS PARKMAN Massachusetts—1823-1893	Oregon Trail, Montcalm and Wolfe, etc.	Romantic, picturesque and of real interest.
George W. Curtis New York—1824-1892	Potiphar Papers, Prue and I, etc.	Widely popular and effective.
BAYARD TAYLOR Pennsylvania—1825-1878	Northern Travel, Greece and Russia; <i>Poems of the Orient, Translation of Faust</i>	Too good at many things to be best at any.
Stephen Collins Foster Pennsylvania—1826-1864	<i>Old Folks at Home, Old Uncle Ned, etc.</i>	Popular in vein and melody.
LEW WALLACE Indiana—1827-1905	The Fair God, Prince of India, Ben Hur	Uneven, but at times highly successful.
Chas. Dudley Warner Massachusetts—1829-1900	My Summer in a Garden, Little Journeys, etc.	Catholic in interests and attainments.
John Esten Cooke Virginia—1830-1886	Novels, Survey of Eagle's Nest, etc., Lives of Lee and Jackson	Prime favorites with romantic youth.
Paul Hamilton Hayne South Carolina—1831-1886	<i>Sonnets, Legends, Lyrics</i>	In sonnets excellent, in other poems too prolific.
LOUISA MAY ALCOTT Massachusetts—1832-1888	Little Women, Little Men	Influential in their popular appeal.
Edmund C. Stedman Connecticut—1833-1908	Victorian Poets, Poets of America, Alice of Monmouth	Showing creative power and critical ability.
Chas. Farrar Browne (Artemus Ward), Maine—1834-1867	Artemus Ward, His Book, etc.	Humorous in exaggeration and perversion.
Frank R. Stockton Pennsylvania—1834-1902	Rudder Grange, The Lady or the Tiger	Ingenious in plot, straightforward in style.
Moses Coit Tyler Connecticut—1835-1900	History of American Literature	Accurate and exhaustive.
SAMUEL L. CLEMENS Missouri—1835-1910	Innocents Abroad, Huckleberry Finn, etc.	Thoroughly representative of American humor.
Thomas Bailey Aldrich New Hampshire—1836-1907	Novels, Marjorie Daw, etc.	Cultivated and of literary talent.
WILLIAM DEAN HOWELLS Ohio—1837-	Venetian Life; Rise of Silas Lapham, etc.	Realistic and entertainingly descriptive.
John Burroughs New York—1837-	Wake Robin, Winter Sunshine	Strongly uttering the charms of nature.
Mary Mapes Dodge New York—1838-1905	Hans Brinker	In high favor with children.
Albion W. Tourgee Ohio—1838-1905	A Fool's Errand, Bricks Without Straw	Valuable for the point of view.
Thomas R. Lounsbury New York—1838-1915	Life of Cooper, Studies in Chaucer, etc.	Of recognized scholarship and ability.
Francis Bret Hart New York—1839-1902	Luck of Roaring Camp, Gabriel Controy; <i>Poems</i>	Of international fame. Faithful and skillful character portrayal.
Joaquin Miller Indiana—1841-	<i>The Danites in the Sierras, Surge of the Sierras</i>	With the sweep and breadth of the prairies.
SIDNEY LANIER Georgia—1842-1881	The Boy's Froissart; <i>Tiger-Lilies, Poems</i>	Artistic to a high degree.
John Fiske Connecticut—1842-1901	Myths and Mythmakers, Histories	Scholarly and fairminded.
HENRY JAMES New York—1843-1916	Daisy Miller, Portrait of a Lady, etc.	Of characteristic conception and style.
George W. Cable Louisiana—1844-	Old Creole Days, etc.	Successful in achievement of purpose.
Elizabeth S. Phelps Ward Massachusetts—1844-	Gates Ajar, etc.	Widely read for religious sentiment.
Arthur S. Hardy 1847-	Passe Rose, etc.	Of trained literary ability.
James Lane Allen Kentucky—1849-	Flute and Violin, The Choir Invisible, etc.	Reaching a high standard of excellence.
Francis Marion Crawford New York—1854-1909	Novels, Travel, Descriptive Sketches	Best known for his Saracinesca series, the scenes of which are laid in modern Rome.
JAMES WHITCOMB RILEY Indiana—1852-1916	<i>Poems, Rhymes of Childhood, The Book of Joyous Children, etc.</i>	His combination of humor, pathos, and sentiment appeals to high and low alike.
Mary N. Murfree (Charles Egbert Craddock), Tenn.—1850-	Novels, In the Tennessee Mountains, etc.	Absorbing studies in southern life and character.
Eugene Field Missouri—1850-1895	<i>Poems, Little Boy Blue, A Dutch Lullaby, Love Song of Childhood, etc.</i>	Holds a special place in American literature as the poet of Christmas and childhood.
Amelie Rives Virginia—1863-	Novels, Virginia of Virginia, The Quick or the Dead, etc. <i>Poems</i>	Her later writings show more charity of thought and richness of expression than was characteristic of her earlier productions.
Thomas Nelson Page Virginia—1853-	Novels, On Newfound River, Marse Chan, etc.	An interpreter of local life and color of unusual insight.
Henry J. Van Dyke Pennsylvania—1852-	Novels, The Other Wise Man, etc.; <i>Poems</i>	Keen in observation, healthful in tone, delightful in style.

[781]

PRONOUNCING DICTIONARY OF LITERARY ALLUSIONS

[782]

Concise, explanatory paragraphs concerning Famous Books, Poems and Dramas; Literary Characters, Plots and Scenes; Pen Names of Famous Writers; Soubriquets and Nicknames; Literary Geography, Shrines and Haunts; and numerous other literary references.

KEY TO THE SOUNDS OF LETTERS

ā, as in farm, father; *á*, as in ask, fast; *a*, as in at, fat; *ā*, as in day, fate; *â*, as in care, fare; *a*, as in final; *e*, as in met, set; *ē*, as in me, see; *ē*, as in her, ermine; *i*, as in pin, sin; *ī*, as in pine, line; *o*, as in not, got; *ō*, as in note, old; *ó*, as in for, fought; *ō*, as in sole, only; *ō*, as in fog, orange; *ō*, sound cannot be exactly represented in English. The English sound of *u* in *burn* is perhaps the nearest equivalent to *ō*; *oo*, as in cook, look; *ōō*, as in coon, moon; *u*, as in cup, duck; *ū*, as in use, amuse; *ū*, as in fur, urge; *ū* sound cannot be exactly represented in English. The English sound of *u* in *lute* and *duke* resembles the original sound of *ū*. The letter *ñ* represents the nasal tone of the preceding vowel, as in *encore* (*āñ-kōr*).

A

Aaron (*ā-ron* or *ar'on*).—A character in Shakespeare's *Titus Andronicus*, a Moor of unnatural wickedness beloved by Tamora, queen of the Goths. The character shows originality of conception, but is otherwise repellent.

Abaddon (*a-bad'on*).—The Hebrew name of an evil spirit or destroying angel called Apollyon in Greek. In mediæval literature he is regarded as the chief of the demons of the seventh hierarchy and the one who causes wars and uproars. Klopstock introduced him in his *Messiah* under the name of Abbadona. He represents him as a fallen angel still bearing traces of his former dignity and repenting of his part in the rebellion against God. In Bunyan's *Pilgrim's Progress* he meets and fights with Pilgrim.

Abdalla (*ab-dal'ā*).—(1) The Mufti, a character in Dryden's tragedy *Don Sebastian*. (2) One of Sir Brian de Bois Guilbert's slaves, in Scott's *Ivanhoe*. (3) Brother and predecessor of Gaffer, pasha of Abydos, by whom he was murdered, in Byron's *Bride of Abydos*.

Abdiel (*ab'di-el*).—A seraph in Milton's *Paradise Lost*, the only seraph who remained loyal when Satan stirred up the angels to revolt.

Abonde (*a-bōn-de*).—A character in French literature that corresponds to our Santa Claus, the good fairy who comes at night, especially New Year's night, to bring toys to

children while they sleep.

Abu-Hassan (*ā-bō-hās'an*).—As related in the *Arabian Nights*, Abou Hassan is a merchant of Bagdad who is carried in his sleep to the bed of the Caliph Haroun-al-Raschid and on awaking is made to believe himself the caliph. Twice in this way he was made to believe himself caliph and afterward became in reality the caliph's favorite and companion.

Abalom and Achitophel (*ab'sa-lom and a-kit'ō-fel*).—A poetical satire by John Dryden, directed against the political faction led by the Earl of Shaftesbury. The names in the title are given to the duke of Monmouth and the earl of Shaftesbury. Like Abalom, the son of David, Monmouth was remarkable for his personal beauty, his popularity, and his undutifulness to his father.

Absolute, Captain.—A character in Sheridan's comedy, *The Rivals*. He is distinguished for his gallant, determined spirit, his quickness of speech, and dry humor.

Absolute, Sir Anthony.—An amusing character in Sheridan's *Rivals*. He is represented as testy, positive, impatient, and overbearing, but yet of a warm and generous disposition.

Acadia (*a-kā'di-ā*), **Acadie** (*ā-kā'dē*).—The original, and now the poetic, name of Nova Scotia. In 1755, the French inhabitants were seized, forcibly removed and dispersed among the English colonies on the Atlantic coast. Longfellow has made this event the subject of his poem *Evangeline*.

Acrasia (*a-krā'zī-ā*).—In Spenser's *Faërie Queene*, a witch represented as a lovely and charming woman, whose dwelling is the Bower of Bliss, which is situated on an island floating in a lake or gulf, and is adorned with everything in nature that can delight the senses. The word signifies intemperance. She is the personification of sensuous indulgence and intoxication. Sir Guyon, who illustrates the opposite virtue, is commissioned by the fairy queen to bring her into subjection, and to destroy her residence.

Acres, Bob.—A character in Sheridan's *The Rivals*, celebrated for his cowardice and his peculiar method of allegorical swearing.

Adam.—(1) Adam is a character frequently alluded to in the *Talmud*. Many strange legends are related of him. He was buried, so Arabian tradition says, on Aboncais, a mountain of Arabia. (2) In *As You Like It*, Shakespeare, he is an aged servant to Orlando and offers to accompany Orlando in his flight and to share with him his carefully-hoarded savings of five hundred pounds. (3) In Shakespeare's *Comedy of Errors*, Adam is an officer known by his dress, a skin-coat.

Adamastor (*ad-am-ās'tor*).—The phantom of the Cape of Good Hope in the *Lusiad*: a terrible spirit described by Camoens as appearing to Vasco da Gama and prophesying the misfortunes which should fall upon other expeditions to India.

Adam Bede (*bēd*).—A novel by George Eliot, the chief character of which is a young carpenter, a keen and clever workman, somewhat sharp-tempered and with a knowledge of some good books. He has an alert conscience, good common sense and "well-balanced shares of susceptibility and self-control." He ignores Hetty Sorrel, but finally marries Dinah Morris.

Adams, Parson.—A character in Fielding's story of *Joseph Andrews*, distinguished for his goodness of heart, poverty, learning, and ignorance of the world, combined with courage, modesty, and a thousand oddities.

Adonais (*ad-ō-nā'īs*).—An elegiac poem by Shelley, commemorating the death of Keats. The name was coined by Shelley probably to hint an analogy between Keats' fate and that of Adonis.

Advancement of Learning, The.—A prose treatise by Francis, Lord Bacon, which contains not only the germ of his Latin work, *De Augmentis Scientiarum*, but really the pith and marrow of the Baconian philosophy, if taken in connection with the second book of the *Novum Scientiarum Organum*. An analysis of the work may be read in Hazlitt's *Lectures on the Literature of the Age of Elizabeth*.

Æneid (*ē-nē'id*), or **Æneis** (*-is*).—An epic poem, in twelve books, by Vergil, recounting the adventures of Æneas after the fall of Troy, founded on the Roman tradition that Æneas settled in Latium and became the ancestral hero of the Roman people. The hero, driven by a storm on the coast of Africa, is hospitably received by Dido, queen of Carthage, to whom he relates the fall of Troy and his wanderings. An attachment between them is broken by the departure of Æneas, in obedience to the will of the gods, and the suicide of Dido follows. After a visit to Sicily, Æneas lands at Cumæ in Italy. In a descent to the infernal regions he sees his father, Anchises, and has a prophetic vision of the glorious destiny of his race as well as of the future heroes of Rome. He marries Lavinia, daughter of Latinus, king of the Latini, and a contest with Turnus, king of the Rutuli, the rejected suitor follows, in which Turnus is slain. The poem is a glorification of Rome and of the Emperor Augustus, who, as a member of the Julian gens, traced his descent from Julius (sometimes identified with Ascanius), the grandson of Æneas.

Agamemnon (*ag-ā-mem'non*).—The greatest of the tragedies of Æschylus. The scene is laid in Argos, in the palace of Agamemnon, at the time of the king's return from the capture of Troy; the catastrophe is the murder (behind the scenes) of Agamemnon and Cassandra (whom he has brought captive with him) by the queen Clytemnestra, urged on by her paramour Ægisthus.

Agnes.—(1) A young girl in Molière's *L'Ecole des Femmes*, who affects to be remarkably simple and ingenuous. The name has passed into popular use, and is applied to any young woman unsophisticated in affairs. (2) A strong womanly character in *David Copperfield* who proves a true friend to David's "child-wife," Dora, and to David himself. Later Dora dies and David marries Agnes.

Agnes, The Eve of St.—(1) A poem by John Keats. It is characterized by Leigh Hunt as "the most delightful and complete specimen of his genius; ... exquisitely loving; ... young but full-grown poetry of the rarest description; graceful as the beardless Apollo; glowing and gorgeous with the colors of romance." St. Agnes was a Roman virgin who suffered martyrdom in the reign of Diocletian. (2) A poem by Tennyson, published in 1842.

Agapida (*ā-gā-pē'thā*), **Fray Antonio**.—The fictitious writer to whom Washington Irving originally attributed the authorship of the *Conquest of Granada*.

Agib (*ā'gīb*).—(1) The third Calendar in the story of "The Three Calendars" in the *Arabian Nights' Entertainments*. (2) In the story of Nouredin Ali and Bedredden Hassan in *The Arabian Nights*, a son of Bedredden Hassan and the Queen of Beauty.

Agramant (*ā'grā-mānt*).—In Boiardo's *Orlando Innamorato* and Ariosto's *Orlando Furioso*, the young king of Africa.

Ague-Cheek (*ā'gū-chēk*), **Sir Andrew**. A character in Shakespeare's comedy *Twelfth Night*, a timid, silly but amusing country squire, to whom life consists only of eating and drinking. He is stupid even to silliness, but so devoid of self-love or self-conceit that he is delightful in his simplicity.

Ahasuerus (*a-haz-ū-ē'rus*).—Chief character in Sue's *A Wandering Jew*, the cobbler who pushed away Jesus when, on the way to execution, He rested a moment or two at his door. "Get off! Get away with you!" cried the cobbler. "Truly, I go away," returned Jesus, "and that quickly; but tarry thou till I come." And from that time Ahasuerus became the "wandering Jew," who still roams the earth, and will continue so to do till the "second coming of the Lord."

Ahmed (*ā'h'med*), or **Achmet** (*āch'met*).—In the *Arabian Nights*, noted for a magic tent he possessed which he possessed which would cover a whole army but might be carried in the pocket. He also possessed a magic apple which would cure all diseases.

Aladdin (*a-lad'in*).—In the story of "Aladdin and the Wonderful Lamp," in the *Arabian Nights' Entertainments*, the son of a poor widow in China, who becomes possessed of a magic lamp and ring which command the services of two terrific jinn. Learning the magic power of the lamp, by accidentally rubbing it, Aladdin becomes rich and marries the Princess of Cathay through the agency of the "slave of the lamp" who also builds in a night a palace for her reception. One window of this palace was left unfinished, and no one could complete it to match the others. Aladdin therefore directs the jinn to finish it, which is done in the twinkling of an eye (hence the phrase "to finish Aladdin's window"; that is, to attempt to finish something begun by a greater man). After many years the original owner of the lamp, a magician, in order to recover it, goes through the city offering new lamps for old. The wife of Aladdin, tempted by this idea, exchanges the old rusty magic lamp for a brand new useless one (hence the phrase "to exchange old lamps for new"), and the magician transports both palace and princess to Africa, but the ring helps Aladdin to find them. He kills the magician, and, possessing himself of the lamp, transports the palace to Cathay, and at the sultan's death succeeds to the throne.

Al Araf (*āl ā'raf*).—The Mohammedan limbo, between paradise and jehennam, for those who die without sufficient merit to deserve the former, and without sufficient demerit to deserve the latter. Here lunatics, idiots, and infants go at death, according to the Koran. The subject of an uncompleted poem by Edgar A. Poe.

Alasnam (*a-las'nam*).—The hero of a story in the *Arabian Nights* entitled "The History of Prince Zeyn Alasnam and the Sultan of the Genii," Alasnam has eight diamond statues, but had to go in quest of a ninth more precious still, to fill the vacant pedestal. The prize was found in the lady who became his wife, at once the most beautiful and the most perfect of her race.

Albracca (*āl-brāk kā*).—In Boiardo's *Orlando Innamorato*, a castle of Cathay to which Angelica retires in grief at being scorned and shunned by Rinaldo, with whom she is deeply in love. Here she is besieged by Agricane, King of Tartary, who resolves to win her, notwithstanding her indifference to his suit.

Alceste (*āl-sēst*).—The principal character in Molière's comedy *The Misanthrope*: a disagreeable but upright man who scorns the civilities of life and the shams of society.

Alcina (*āl-che'nā*).—A fairy, the embodiment of carnal delights, in Boiardo's *Orlando Innamorato* and Ariosto's *Orlando Furioso* the sister of Logistalla (reason) and Morgana (lasciviousness). When tired of her lovers she changed them into trees, beads, etc., and was finally, by means of a magic ring, displayed in her real senility and ugliness. Compare *Acrasia*, *Armida*, and *Circe*.

Aldine (*al'din*) **Press**.—The press established at Venice by Aldus Manutius. See *Manutius*.

Aldingar (*al'ding-gār*), **Sir**.—A character in Percy's *Reliques*. This ballad relates how the honor of Queen Elianor, wife of Henry Plantagenet, impeached by Sir Aldingar, her steward, was gambled to the chance of a duel, and how an angel, in the form of a little child, appeared as her champion, and established her innocence.

Alhambra (*al-ham'brā*).—A volume of legends and descriptive sketches by Washington Irving. "The account of my midnight rambles about the old place," says the author, "literally true, yet gives but a feeble idea of my feelings and impressions, and of the singular haunts I was exploring. Everything in the work relating to myself and to the actual inhabitants of the Alhambra is unexaggerated fact; it was only in the legends that I indulged in *romancing*, and these were founded on material picked up about the place."

Ali Baba (*āl'lē bā'bā*).—A character in *The Arabian Nights' Entertainments*, in the story "Ali Baba and the Forty Thieves" a poor wood-cutter who, concealed in a tree, sees a band of robbers enter a secret cavern, and overhears the magic words "open sesame" which opens its door. After their departure he repeats the spell and the door opens, disclosing a room full of treasures with which he loads his asses and returns home. His brother Cassim, who discovers his secret, enters the cave alone, forgets the word "sesame," and is found and cut to pieces by the robbers. The thieves, discovering that Ali Baba knows their secret, resolve to kill him, but are outwitted by Morgiana, a slave.

Alice in Wonderland.—A little girl through whose dream pass the scenes of *Alice's Adventures in Wonderland* and *Behind the Looking-glass*, two popular stories for children by Lewis Carroll (Charles Dodgson). They have been translated into several European languages.

Alice Brand.—In Scott's *Lady of the Lake*, Alice signed Urgan the dwarf thirce with the sign of the cross, and he became "the fairest knight in all Scotland"; when Alice recognized in him her own brother.

Allan-a-Dale.—A friend of Robin Hood's in the ballad. He is introduced into Sir Walter Scott's *Ivanhoe* as Robin Hood's minstrel.

All's Well That Ends Well.—A comedy by Shakespeare. The hero and heroine are Bertram, Count of Roussillon, and Helena, a physician's daughter, who are married by the command of the king of France, but part because Bertram thought the lady not sufficiently well-born for him. Bertram flees to Florence, but, ultimately, Helena wins his love and all ends well.

Allworthy, Mr.—In Fielding's novel of *Tom Jones*, a man of amiable and benevolent character; intended for Mr. Ralph Allen, who was also celebrated by Pope.

Almighty Dollar.—A personification of American worship. Washington Irving originated the phrase in *The Creole Village*.

Alp.—*Siege of Corinth*, Byron. The hero of this poem.

Amadis de Gaul.—The hero of an ancient and celebrated Portuguese romance.

Amanda (*a-man'dā*).—A young woman who impersonates Spring in Thomson's *Seasons*.

Amaryllis, Amarillis (*am-a-rī'lis*).—In Spenser's pastoral *Colin Clout's Come Home Again*, is the countess of Derby. Her name was Alice, and she was the youngest of the six daughters of Sir John Spenser, of Althorpe, ancestor of the noble houses of Spenser and Marlborough. After the death of the earl, the widow married Sir Thomas Egerton, keeper of the great seal (afterward baron of Ellesmere and viscount Brackley). It was for this very lady, during her widowhood, that Milton wrote his *Arcades*.

Ambrose.—A sharper in Lesage's *Gil Blas*, who assumed in the presence of Gil Blas the character of a devotee. He was in league with a fellow who assumed the name of Don Raphael, and a young woman who called herself Camilla, cousin of Donna Mencía. These three sharpers allure Gil Blas to a house which Camilla says is hers, fleece him of his ring, his portmanteau, and his money, decamp, and leave him to find out that the house is only a hired lodging.

Amelia (*a-mē'liā*).—The title of one of Fielding's novels, and the name of its heroine, who is distinguished for her tenderness and affection. The character of Amelia is said to have been drawn from Fielding's wife.

Amine (*ā-mēn*).—In *Arabian Nights* a female character who leads her three sisters by her side as a leash of hounds.

Aminte (*ā-mant*).—*Les Précieuses Ridicules*, Molière. A contradictory character in this comedy. She dismisses her admirers for proposing to marry her, scolds her uncle for not carrying himself as a gentleman, and marries a valet whom she believes to be a nobleman.

Amlet (*am'let*).—The name of a gamester in Vanbrugh's *Confederacy*.

Amoret (*am'ō-ret*).—(1) The name of a lady married to Sir Scudamore, in Spenser's *Faërie Queene*. She is the type of a devoted, loving wife. (2) The heroine of Fletcher's pastoral drama, *The Faithful Shepherdess*.

Amy and Amylion.—Two faithful friends. The Pylasses and Orestes of the feudal ages. Their adventures are the subjects of ancient romances.

Ancient Man.—In Tennyson's *Idylls of the King*, means Merlin, the old magician, King Arthur's protector and teacher.

Ancient Mariner, The.—A poem by Samuel Taylor Coleridge. The hero, an ancient mariner "with a long gray beard and glittering eye," suffers terrible evils, and likewise inflicts them on his companions, from having shot an albatross, a bird of good omen. All his comrades perish of hunger, but, as he repents, he is permitted to regain the land. At intervals his agony returns, and he is driven from place to place to ease his soul by confessing his crime and sufferings to his fellows, and enforcing upon them a lesson of love for "all things, both great and small."
"The Ancient Mariner," says Swinburne, "is perhaps the most wonderful of all poems. In reading it we seem rapt into that paradise revealed by Swedenborg, where music and color and perfume were one, where you could see the hues and hear the harmonies of heaven. For absolute melody and splendor it were hardly rash to call it the first poem in the language."

Andrews, Joseph.—The hero in Fielding's novel by the same name, written to ridicule Richardson's *Pamela*. Fielding presents Joseph Andrews as a brother to the modest and prudish Pamela, and pictures him as a model young man.

Angelica (*an-jel'ī-kā*).—(1) In Boiardo's *Orlando Innamorato*, is daughter of Galaphon, king of Cathay. She goes to Paris, and Orlando falls in love with her, forgetful of wife, sovereign, country and glory. Angelica, on the other hand, disregards Orlando, but passionately loves Rinaldo, who positively dislikes her. Angelica and Rinaldo drink of

[783]

[784]

Froissart (*froi' sãrt*).—*The Chronicles of England, Fraunce, Spayne, Portuygale, Scotlande, Bretaine, Flanders, and other places adjoyninge, translated out of Frenche into our maternalle Englyshe Tonge*, by "John Bourchier, knight, Lord Berners." Printed in 1523. The history extends from 1326 to 1400. Froissart resided in England as secretary to Queen Philippa from 1361 to 1366, and visited it again in 1395, when he paid a visit to Scotland.

Frollo, Archdeacon Claude.—A noted character in Victor Hugo's *Notre Dame de Paris*, absorbed in a bewildering search for the philosopher's stone.

Front de Bœuf.—*Ivanhoe*, Sir Walter Scott. A follower of Prince John of Anjou, and one of the knight's challengers.

Froth, Master.—A foolish gentleman in Shakespeare's *Measure for Measure*. His name explains his character.

Fusbos (*fus' bos*).—*Utopia*, Sir Thomas More. Minister of state to Artaxaminus, king of Utopia.

Fyrapel, Sir.—The Leopard, the nearest kinsman of King Lion, in the beast epic of *Reynard the Fox*.

G

Gadshill.—A companion of Sir John Falstaff, in the first part of Shakespeare's *King Henry IV*.

Galahad (*gal' a-had*), **Sir**.—A celebrated knight of the Round Table who achieved the quest of the Holy Grail. Tennyson has made him the subject of one of his idylls. In Malory he is also represented as the perfect knight, clad in wonderful armor. He was the only knight who could sit in the "Siege Perilous" a seat reserved for the "knight without a flaw," who achieved the quest of the "Holy Grail."

Galapas (*gal' a-pas*).—A giant of marvelous height in the army of Lucius, king of Rome. He was slain by King Arthur.

Galaphrone, or Galafron.—A king of Cathay and father of Angelica in Bojardo's *Orlando Innamorato* and Ariosto's *Furioso*.

Gamp, Mrs..—A nurse who is a prominent character in Dickens' novel of *Martin Chuzzlewit*. She is celebrated for her constant reference to a certain Mrs. Harris, a purely imaginary person, for whose feigned opinions and utterances she professes the greatest respect, in order to give the more weight to her own.

Gan, Ganelone, Ganelon, or Gano.—The character of Sir Ganelon was marked with spite, dissimulation, and intrigue, but he was patient, obstinate, and enduring. He loved solitude, disbelieved in the existence of moral good, and has become a byword for a false and faithless friend. Dante has placed him in his *Inferno*.

Gander-Cleugh.—"Folly-Cliff," that mysterious place where a person make a goose of himself, in *Tales of My Landlord*, Sir Walter Scott.

Garcia, Pedro.—A mythical personage, of whom mention is made in the preface to Gil Bias, in which is related how two scholars of Salamanca discovered a tombstone with the inscription "Here lies interred the soul of the Licentiate Pedro Garcia," and how, on digging beneath the stone, was found a leathern purse containing a hundred ducats.

Gareth.—In *Arthurian Romance* a knight of the Round Table, who was first a scullion in King Arthur's kitchen, but afterward became champion of the Lady Linet, or Lynette, whose sister Lionès, or Lyonors, he delivered from Castle Perilous.

Garganelle (*gãr-gã-nel'*).—The mother of Gargantua in Rabelais' celebrated romance of this name.

Gargantua (*gãr-gãn' tú-ã*).—Rabelais' celebrated romance, the hero of which is a gigantic personage, about whom many wonderful stories are related. He lived for several centuries, and at last begot a son, Pantagruel, as wonderful as himself. The *Pleasant Story of the Giant Gargantua and of his Son Pantagruel*, so satirized the monastic orders of his time that it was denounced by the spiritual authorities. Francis I., however, protected the author, and allowed him to print the third part of it in 1545.

Gargery (*gãr' jër-i*), **Mrs. Joe**.—*Great Expectations*, Dickens. A virago, who kept her husband and Pip in constant awe. Joe Gargery, a blacksmith, married to Pip's sister. A noble-hearted, simple-minded young man, who loved Pip sincerely. Joe Gargery was one of nature's gentlemen.

Gaspar, or Caspar.—(The white one), one of the three magi or kings of Cologne. His offering to the infant Jesus was frankincense, in token of divinity.

Gaunt, Griffith.—Hero of a novel by Charles Reade, of same title.

Govotte.—Name given to a certain dance common among people in the upper Alps.

Gawain, or Gawayne (*gã wãn*), **Sir**.—A nephew of King Arthur, and one of the most celebrated knights of the Round Table; noted for his sagacity and wonderful strength. He was surnamed "the courteous." His brothers were Agravaine, Gaheris, and Gareth.

Gebir (*gã bër*).—A legendary eastern prince, said to have invaded Africa and to have given his name to Gibraltar. He is the subject of a poem of the same name by Walter Savage Landor.

Gellatley (*gel' at-li*), **Davie**.—The name of a poor fool in Sir Walter Scott's novel of *Waverley*.

Genevieve (*zhèn-vyãv'*).—(1) The heroine of a ballad by Coleridge. (2) Under the form *Genevofa*, the name occurs in a German myth as that of the wife of the Count Palatine Siegfried, in the time of Charles Martel. Upon false accusations her husband gave orders to put her to death, but the servant entrusted with the commission suffered her to escape into the forests of Ardennes, where she lay concealed, until by accident his husband discovered her retreat, and recognized her innocence.

Genevra.—A lady in Ariosto's *Orlandos Furiosa*. Her honor is impeached, and she is condemned to die unless a champion appears to do combat for her. Her lover, Ariodantes, answers the challenge, kills the false accuser, and weds the dame. Spenser has a similar story in the *Faërie Queene*, and Shakespeare availed himself of the main incident in his comedy of *Much Ado About Nothing*.

Geraint (*ge-rãnt*), **Sir**.—One of the knights of the Round Table. His story is told in Tennyson's *Idylls of the King* under *Geraint and Enid*.

Geraldine.—A name frequently found in romantic poetry, especially Scott's *Lay of the Last Minstrel*. The name is said to have been adopted from the heroine connected with Surrey, whose praises are celebrated in a famous sonnet.

Gertrude of Wyoming.—Heroine of a poem by Thomas Campbell.

Gesta Romanorum (*jës' tã rô-mã-nõ' rum*).—A collection of old romances compiled by Pierre Bercheure, prior of the Benedictine convent of St. Eloi, Paris. Shakespeare, Spenser, Gower, and many later writers have gone to this source. It took its present form in England about the beginning of the fourteenth century, the foundation coming from Roman writers, to which were added religious and mystical tales.

Giaour (*jour*), **The**.—Byron's tale called *The Giaour* is represented as told by a fisherman, a Turk, who had committed a crime which haunted him all his life. See *Hassan*.

Gibbie, Goose.—A half-witted boy in Scott's *Old Mortality*.

Gibbie, Sir.—A simple-hearted, fine character in George Macdonald's novel by the same name.

Giant Despair.—*Pilgrim's Progress*, Bunyan. A giant who is the owner of Doubting Castle, and who, finding Christian and Hopeful asleep upon his grounds, takes them prisoners, and thrusts them into a dungeon.

Giant Grim.—*Pilgrim's Progress*, Bunyan. A giant who seeks to stop the march of the pilgrims to the Celestial City, but is slain in a duel by Mr. Great-heart, their guide.

Giant Slay-good.—*Pilgrim's Progress*, Bunyan. A giant slain in a duel by Mr. Great-heart.

Gil Blas (*zhël blãs*).—A romance by Le Sage. The hero is the son of Blas of Santillanè squire or "escudero" to a lady, and brought up by his uncle, Canon Gil Perès. Gil Blas went to Dr. Godinez's school of Oviedo and obtained the reputation of being a great scholar. He had fair abilities, a kind heart, and good inclinations, but was easily led astray by his vanity. Full of wit and humor, he was lax in his morals. Duped by others at first, he afterward played the same devices on those less experienced. As he grew in years, however, his conduct improved, and when his fortune was made, he became an honest, steady man.

Glaucus (*glã kus*).—A fisherman of Bœotia who has become the fisherman's patron deity.

Glaucus.—Son of Hippolytus. Being smothered in a tub of honey, he was restored to life by Esculapius.

Gloriana.—In Spenser's *Faërie Queene*, the "greatest glorious queen of Faëry land."

Glumdalca (*glum-dal' kã*).—*Tom Thumb*, Fielding. Queen of the giants, captive in the court of King Arthur.

Glumdalclitch (*glum-dal' klitch*).—*Gulliver's Travels*, Swift. A girl nine years old "and only forty feet high." Being such a "little thing," the charge of Gulliver was committed to her during his sojourn in Brobdingnag.

Glumms.—*Peter Wilkins*, Robert Pullock. The male population of the imaginary country Nosmubdsgrussit, visited by Peter Wilkins. Both males and females had wings which served both for flying and for clothes.

Godiva (*gõ-dí vã*).—A poem by Alfred Tennyson. The story of the lady and *Peeping Tom of Coventry* is told in full by Dugdale. Godiva was the wife of Leofric, earl of Mercia, and undertook to ride naked through the town if he would remit a tax under which the people groaned. The earl consented and the lady kept her word.

Golden Ass, The.—A romance in Latin by Apuleius. It is the adventures of Lucian, a young man who had been transformed into an ass, but still retained his human consciousness. It tells us the miseries which he suffered at the hands of robbers, eunuchs, magistrates, and so on, till the time came for him to resume his proper form. It is full of wit, racy humor, and rich fancy, and contains the exquisite episode of Cupid and Psyche.

Golden Legend, The.—The title of an ecclesiastical work in one hundred and seventy-seven sections, dating from the thirteenth century, written by one James de Voragine, a Dominican monk, and descriptive of the various saints' days in the Roman calendar. It is deserving of study as a literary monument of the period, and as illustrating the religious habits and views of the Christians of that time.

Goneril (*gon' er-il*).—The oldest of the three daughters to King Lear, in Shakespeare's tragedy. Having received her moiety of Lear's kingdom, the unnatural daughter first abridged the old man's retinue, then gave him to understand that his company was not wanted and sent him out a despairing old man to seek refuge where he could find it. Her name is proverbial for filial ingratitude.

Gonzalo (*gon-zã' lõ*).—An honest old counselor in Shakespeare's *Tempest*, a true friend to Prospero.

Goody Blake.—A character in Wordsworth's poem entitled *Goody Blake and Harry Gill*. A farmer forbids old Goody Blake to carry home a few sticks, which she had picked up from his land, and in revenge she invokes upon him the curse that he may "never more be warm;" and ever after "his teeth they chatter, chatter still."

Goody Two-Shoes.—The name of a well-known character in a nursery tale by Oliver Goldsmith. Goody Two-Shoes was a very poor child, whose delight at having a pair of shoes was unbounded. She called constant attention to her "two-shoes" which gave her the name.

Gradgrind (*grad' grind*).—A hardware merchant in Dickens' *Hard Times*. He is a man of hard facts and cultivates the practical. His constant demand in conversation is for "facts." He allows nothing for the weakness of human nature, and deals with men and women as a mathematician with his figures.

Gradgrind, Mrs..—Wife of Thomas Gradgrind. A little, thin woman, always taking physic, without receiving from it any benefit.

Gradgrind, Tom.—Son of the above, a sullen young man, much loved by his sister.

Gradgrind, Louise.—A faithful daughter and sister.

Grandison, Sir Charles.—The hero of Richardson's novel *The History of Sir Charles Grandison*. Designed to represent his ideal of a perfect hero—a union of the good Christian and the perfect English gentleman.

Gratiano (*grã-tẽ-ã' nõ*).—(1) A friend to Antonio and Bassanio in Shakespeare's *Merchant of Venice*. He "talks an infinite deal of nothing, more than any man in Venice." (2) Brother to Brabantio, in Shakespeare's tragedy of *Othello*. (3) A character in the Italian popular theater called *Commedia dell' Arte*. He is represented as a Bolognese doctor, and has a mask with a black nose and forehead and red cheeks.

Great-Heart, Mr..—In Bunyan's *Pilgrim's Progress*, the guide of Christian's wife and children upon their journey to the Celestial City.

Gremio (*grẽ' mi-õ*).—In Shakespeare's *Taming of the Shrew*, an old man who wishes to wed Bianca.

Griffin-feet.—*Fairy Tales*, Comtesse d'Aulnoy. The mark by which the Desert Fairy was known in all her metamorphoses.

Grimalkin.—A cat, the spirit of a witch. Any witch was permitted to assume the body of a cat nine times.

Grimwig.—*Oliver Twist*, Dickens. An irascible old gentleman, who hid a very kind heart under a rough exterior. He was always declaring himself ready to "eat his head" if he was mistaken on any point on which he passed an opinion.

Griselda (*gri-zel' dã*), **The Patient**.—A lady in Chaucer's *Clerk of Oxenford's Tales*, immortalized by her virtue and her patience. The model of womanly and wifely obedience, she comes victoriously out of cruel and repeated ordeals. The story of Griselda is first told in the Decameron. Boccaccio derived the incidents from Petrarch, who seems to have communicated them also to Chaucer, as the latter refers to Petrarch as his authority.

Grub Street, London, is thus described in Dr. Johnson's dictionary: "Originally the name of a street near Moorfields, in London, much inhabited by writers of small histories, dictionaries, and temporary poems, whence any production is called Grub street." The name was freely used by Pope, Swift, and others.

Grundy.—"What will Mrs. Grundy say?" (What will our rivals or neighbors say?) The phrase is from Tom Morton's *Speed the Plough*, but "Mrs. Grundy" is not introduced into the comedy as one of the *dramatis personæ*. The solicitude of Dame Ashfield, in this play, as to "what will Mrs. Grundy say?" has given the latter great celebrity, the interrogatory having acquired a proverbial currency.

Gudrun (*gõ-drõn'*).—*Edda*, Sãmund Sigfusson. A lady, married to Sigurd by the magical arts of her mother and on the death of Sigurd to Atli (Attila), whom she hated for his cruelty, and murdered. She then cast herself into the sea, and the waves bore her to the castle of King Jonakun, who became her third husband.

Gudrun.—North-Saxon poem. A model of heroic fortitude and pious resignation. She was the daughter of King Hettel (Attila), and the betrothed of Herwig, king of Heligoland.

Guendolen (*gwen' dô-len*).—A fairy whose mother was a human being.

GUILDENSTERN.—The name of a courtier in Shakespeare's tragedy *Hamlet*.

Guinevere (*gwin' e-ver*), or **Guenever**.—A corrupt form of **Guanhumara**, daughter of King Leodegrance of the land of Camelyard. She was the most beautiful of women, was the wife of King Arthur, but entertained a *liaison* with Sir Launcelot du Lac. Arthur, when informed of the conduct of Launcelot, went with an army to Brittany to punish him. Mordred, left as regent, usurped the crown, proclaimed that Arthur was dead, and tried to marry Guinevere; but she shut herself up in the Tower of London, resolved to die rather than marry the usurper. When she heard of the death of Arthur, she stole away to Almesbury, and became a nun.

Gulliver, Lemuel.—The imaginary hero of Swift's celebrated satirical romance known as *Gulliver's Travels*. He is represented as being first a surgeon in London, and then a captain of several ships. After having followed the sea for some years he makes in succession four extraordinary voyages.

Gummidge (*gum' j*), **Mrs.**.—In Dickens' novel of *David Copperfield*, described herself as a "lone, lorn, creature, and everythink that reminds me of creatures that ain't lone and lorn goes contrary with me."

Gurton, Gammer.—The heroine of an old English comedy, long supposed to be the earliest in the language.

Guy Mannerling.—The second of Scott's historical novels, published in 1815, just seven months after *Waverley*. The interest of the tale is well sustained; but the love scenes, female characters, and Guy Mannerling himself are quite worthless. Not so the character of Dandy Dinmont, the shrewd and witty counselor Pleydell, the desperate, sea-

beaten villainy of Hatteraick, the uncouth devotion of that gentlest of all pedants, poor Dominie Sampson, and the savage, crazed superstition of the gypsy-dweller in Derncleugh.

Guyon (*gi' on*).—The impersonation of Temperance or Self-government in Spenser's *Faëria Queene*. He destroyed the witch Acrasia, and her bower, called the "Bower of Bliss." His companion was Prudence. Sir Guyon represents the quality of temperance in the largest sense; meaning the virtuous self-government which holds in check not only the inferior sensual appetites but also the impulses of passion and revenge.

Guy, Sir, Earl of Warwick.—The hero of a famous English legend, which celebrates the wonderful achievements by which he obtained the hand of his ladylove, the fair Felice, as well as the adventures he subsequently met with in a pilgrimage to the Holy Land. He is reputed to have lived in the reign of the Saxon King Athelstan. The romance of Sir Guy, mentioned by Chaucer in the *Canterbury Tales*, cannot be traced further back than the earlier part of the fourteenth century. His existence at any period is very doubtful.

H

Hadad.—One of the six wise men led by the guiding star to Jesus.

Hagen.—The murderer of Siegfried, in the German epic, the *Nibelungenlied*. He is a pale-faced dwarf, who knows everything and whose sole desire is mischief. After the death of Siegfried he seized the "Nibelung hoard," and buried it in the Rhine, intending to appropriate it. Kriemhild invited him to the court and had him slain.

Haidee (*hi-dē*).—A beautiful young Greek girl in Byron's poem, *Don Juan*. She is called the "beauty of the Cyclades."

Hakim.—*The Talisman*, Scott. Saladin, in the disguise of a physician, visited Richard Cœur de Lion in sickness; gave him a medicine in which the "talisman" had been dipped, and the sick king recovered.

Hamlet.—A tragedy by Shakespeare. The chief character is Hamlet, prince of Denmark. The ghost of his father appears to him, and urges him to avenge his murder upon his uncle. But the prince feigns madness, and puts off his revenge from day to day by "thinking too precisely on the event." Hamlet's mother had married Claudius, king of Denmark, after the death of her former husband. Claudius prepared poisoned wine, which he intended for Hamlet; but the queen, not knowing it, drank it, was poisoned and died. Hamlet, seeing his mother fall dead, rushed on the king and killed him almost by accident, and is killed himself by a poisoned rapier in the hands of Laertes.

Hanswurst (*hāns' vōrst*).—A pantomimic character formerly introduced into German comedies. It corresponds to the Italian *Macaroni*, the French *Jean Potage*, and the English *Jack Pudding*.

Hardcastle, Mr.—A character in Goldsmith's comedy of *She Stoops to Conquer*, represented as prosy and hospitable.

Hardcastle, Mrs.—A very "genteel" lady indeed. Tony Lumpkin is her son by a former husband.

Hard Times.—A novel by Dickens. Bounderby, a street Arab, raised himself to banker and cotton prince. When past fifty years of age he married Louisa, daughter of Thomas Gradgrind. The bank was robbed, and Bounderby believed Stephen Blackpool to be the thief, because he had dismissed him from his employ. The culprit was Tom Gradgrind, the banker's brother-in-law, who escaped out of the country. In the dramatized version, the bank was not robbed, but Tom removed the money to another drawer for safety.

Harlequin (*hār' le-kin*, or -' *kwino*).—The name of a well-known character in the popular extemporized Italian comedy.

Harlowe, Clarissa.—The heroine of Richardson's novel entitled *The History of Clarissa Harlowe*. In order to avoid a marriage urged upon her by her parents, she casts herself on the protection of Lovelace, who grossly abuses the confidence thus reposed in him. He subsequently proposes to marry her, but Clarissa rejects the offer.

Haroun-al-Raschid (*hā-rōn' āl-rash' id*).—Caliph of the Abbasside race, contemporary with Charlemagne, and, like him, a patron of literature and the arts. Many of the tales in the *Arabian Nights* are placed in the caliphate of Haroun-al-Raschid.

Harpagon (*ār-pā-gōn*).—The hero of Molière's comedy of *L'Avare*, represented as a wretched miser.

Harpier, or *Harper*.—Some mysterious personage referred to by the witches in Shakespeare's tragedy *Macbeth*.

Hassan (*hās' sān*).—*The Giaour*, Byron. Caliph of the Ottoman empire, noted for his hospitality and splendor. In his seraglio was a beautiful young slave named Leila, who loved a Christian called the Giaour. Leila is put to death by an emir, and Hassan is slain by the Giaour. Caliph Hassan has become the subject of popular romance.

Hassan, Al.—The Arabian emir of Persia, father of Hinda, in Moore's *Fire Worshipers*.

Hatto (*hāt' tō*).—In German legend, an archbishop of Mentz in the tenth century, who, for his hardheartedness to the poor in time of famine, was eaten by mice in the "Mouse Tower" on an island in the Rhine near Bingen. Robert Browning has made this legend the subject of a poem.

Havelock the Dane (*hav' e-Jok*).—A fisherman, known as Grim, rescued an infant named Havelock, whom he adopted. This infant was the son of the king of Denmark, and when the boy was restored to his royal sire Grim was laden with gifts. He built the town which he called after his own name. This is the foundation of the mediæval tales about *Havelock the Dane*.

Hazlewood, Sir Robert.—The old baronet of Hazlewood.

Hazlewood, Charles.—*Guy Mannering*, Scott. Son of Sir Robert. In love with Lucy Bertram, whom he marries.

Heart of Midlothian, The.—A novel by Sir Walter Scott, published in 1818. It has for heroines Jeanie and Effie Deans. Among the other characters are Dumbiedykes and Madge Wildfire. It has often been dramatized. "The Heart of Midlothian" was the popular name for the tollbooth at Edinburgh, the capital of the county of Midlothian.

Heep, Uriah.—*David Copperfield*, Dickens. A detestable character, who, under the garb of the most abject humility, conceals a diabolic malignity. Mrs. Heep, Uriah's mother, was a character equally to be despised for her hypocritical assumption of humility.

Helena.—(1) A lady in Shakespeare's *Midsummer Night's Dream*, in love with Demetrius. (2) The heroine of Shakespeare's *All's Well That Ends Well*, in love with Bertram, who marries her against his will and leaves her, but is finally won by the strength of her affection. (3) A character in an old popular tale, reproduced in Germany by Tieck.

Hermann and Dorothea.—The hero and heroine of Goethe's poem of the same name.

Hermengyld (*her' men-gild*).—*Canterbury Tales*, Chaucer. The wife of the lord-constable of Northumberland. She was converted by Constance, but was murdered by a knight. Hermengyld at the bidding of Constance restored sight to a blind Briton.

Hermia (*her' mi-ā*).—A lady in Shakespeare's *Midsummer Night's Dream*, in love with Lysander.

Hermione.—The heroine of the first three acts of Shakespeare's *Winter's Tale*.

Hernani, or **Ernani**.—The hero of Victor Hugo's tragedy of the same name, and of Verdi's opera, founded on the play. He was a Spanish noble in revolt against the Emperor Charles V. and killed himself from a high sense of honor.

Hiawatha (*hi-a-wā' tā*, or *hi-a-wā' thā*). **The Song of**.—A poem by Henry Wadsworth Longfellow, written in the following peculiar measure:

Should you ask me, "Whence these stories?"

.....

I should answer, I should tell you,

.....

"I repeat them as I heard them

From the lips of Nawadaha,

The musician, the sweet singer."

The poem is entirely devoted to a description of life among the aboriginal tribes of America. It was published in 1855. Hiawatha is a mythical person believed by some of the North American Indians to have been sent among them to clear their rivers, forests, and fishing-grounds, and to teach them the arts of peace. When the white man came, then Hiawatha knew that the time of his departure was at hand, when he must go

To the kingdom of Ponemah,

The land of the Hereafter.

Highland Mary.—A song by Robert Burns, which Burns himself thought was in his happiest manner, and which refers, he says, to one of the most interesting passages of his youthful days. By this he means his attachment to Mary, a servant in the family of Mr. Hamilton, "who will be remembered," says Alexander Smith, "with Dante's Beatrice and Petrarch's Laura." It was arranged that the lovers should become man and wife, and that Mary should go to her friends to prepare for the wedding. But before her departure came the farewell scene so touchingly described in the poem:

Our parting was fu' tender;
And, pledging aft to meet again,
We tore oursel's asunder:
But oh! fell death's untimely frost
That nipt my flower sae early!
Now green's the sod, and cauld's the clay,
That wraps my Highland Mary!

Hilda.—A New England girl of the most sensitive delicacy and purity of mind, in Hawthorne's romance, *The Marble Faun*. She is an artist, living in Rome, and typifies, perhaps, the conscience.

Hildebrand (*hil' de-brand*).—The Nestor of German romance, a magician and champion.

Hildesheim (*hil' des-hīm*).—In an old German legend, the monk of Hildesheim, doubting how a thousand years with God could be "only one day," listened to the melody of a bird, as he supposed, for only three minutes, but found that he had been listening to it for a hundred years.

Hobbitdancer.—The name of one of the fiends mentioned by Shakespeare in *Lea*, and taken from the history of the Jesuits' impostures.

Hohenlinden (*hō' en-lin' den*).—A poem by Thomas Campbell, published in 1802, celebrating the battle of Hohenlinden, gained by Mareau and the French over the Austrians. The poet visited the battle field on December 3, 1800.

Holofernes (*hol-ō-fer' nēz*).—(1) A pedant living in Paris, under whose care Gargantua is placed for instruction. (2) A pedantic schoolmaster in Shakespeare's *Love's Labor's Lost*.

Holt, Felix.—The hero of George Eliot's novel by the same name.

Home, Sweet Home.—A popular lyric contained in the drama of *Clari, the Maid of Milan*, by John Howard Payne. The beautiful melody to which it has been wedded is said to be of Italian or Sicilian origin, though by some it is attributed to Sir Henry Rowley Bishop. Perhaps the latter merely arranged and harmonized it.

Homilies.—The latter entries in the Peterborough *Chronicle* and a few homilies are almost all that we have left of the literature of the twelfth century. Some of these homilies are copied or imitated from those of Ælfric.

Honeycomb (*hun' t-kōm*). **Will**.—One of the members of the imaginary club by whom the *Spectator* was professedly edited. He is distinguished for his graceful affectation, courtly pretension, and knowledge of the gay world.

Honeyman, Charles.—A fashionable preacher in Thackeray's novel, *The Newcomes*.

Hopeful.—A pilgrim in Bunyan's *Pilgrim's Progress*, who accompanies Christian to the end of his journey.

Hop-o'-my-Thumb.—A character in the tales of the nursery. Tom Thumb and Hop-o'-my-Thumb are not the same, although they are often confounded. Tom Thumb was the son of peasants, knighted by King Arthur, and was killed by a spider. Hop-o'-my-Thumb was a nix, the same as the German "*daumling*," the French "*le petit pouce*," and the Scotch "Tom-a-lin" or "Tamlane." He was not a human dwarf, but a fay.

Horatio (*hō-rā' shi-ō*).—*Hamlet*, Shakespeare. An intimate friend of Hamlet, a prince, a scholar, and a gentleman.

Horatius Cocles.—Captain of the bridge gate over the Tiber. He and two men to help him held the bridge against vast approaching armies. Subject and title of a poem by Lord Macaulay.

Horner, Jack.—The name of a celebrated personage in the literature of the nursery. A Somersetshire tradition says that the plums which Jack Horner pulled out of the Christmas pie alluded to the title deeds of the abbey estates at Wells, which were sent to Henry VIII., in a pasty, and were abstracted on the way by the messenger, a certain Jack Horner.

Hortense (*hōr-ten' s*, or *or-ton's*).—*Bleak House*, Dickens. The vindictive French maid-servant of Lady Dedlock. In revenge for the partiality shown by Lady Dedlock to Rosa, Hortense murdered Mr. Tulkinghorn, and tried to throw the suspicion of the crime on Lady Dedlock.

House of the Seven Gables, The.—A romance by Nathaniel Hawthorne, published in 1851. "In *The House of the Seven Gables*," says R. H. Hutton, "we have a picture studied to impress on us that both personal character and the malign influences of evil action are transmitted, sometimes with accumulating force, even through centuries, blighting every generation through which they pass. The subject would apparently involve a series of sketches, but only two are introduced from the past, and the family characteristics are so anxiously preserved as to make even these seem like slight modifications of some of the living group. The only incident in the tale is the light thrown upon a crime—which had been committed thirty years before the story opens—by the sudden death of the principal representative of a family from the same disease, in the same chair, and under the same circumstances, as those of the old ancestor and founder of the family, whose picture hangs above the chair."

Hubbard, Old Mother.—A well-known nursery rhyme. *Mother Hubbard's Tale*, by Edmund Spenser, is a satirical fable in the style of Chaucer.

Hubert de Burgh (*bōrg*, or *berg*).—Justice of England, created Earl of Kent, introduced by Shakespeare into *King John*. He is the one to whom the young prince addresses his piteous plea for life. The lad was found dead soon afterward, either by accident or foul play.

Hubert, Saint.—The legend of Saint Hubert makes him a patron saint of huntsmen.

Hudibras (*hū' di-bras*).—The title and hero of a celebrated satirical poem by Samuel Butler. Hudibras is a Presbyterian justice of the time of the commonwealth.

Hugh of Lincoln.—A legendary personage who forms the subject of Chaucer's *Prioress' Tale*, and also of an ancient English ballad. Wordsworth has given a modernized version of this tale.

Hugo Hugonet.—*Castle Dangerous*, Scott. Minstrel of the earl of Douglas.

Humphrey.—The imaginary collector of the tales in *Master Humphrey's Clock*, by Charles Dickens.

Humpty Dumpty.—The hero of a well-known nursery rhyme. The name signifies humped and dumpy, and is the riddle for an egg.

Huon de Bordeaux (*ū-ōn' de bor-dō'*).—A hero of one of the romances of chivalry bearing his name.

Hural Oyun.—In the fairy tales found in the Koran, these are the black-eyed daughters of paradise. They are created from muck, and are free from all physical weakness and are always young. It is held out to every male believer that he will have seventy-two of these girls as his household companions in paradise.

Hylas (*hī'las*).—A beautiful boy, beloved by Hercules, who was drawn into a spring by the enamored nymphs. The story has been treated by Bayard Taylor, and by William Morris in his *Life and Death of Jason*.

Hypatia (*hī-ā' shiā*).—A novel by the Rev. Charles Kingsley, the scene of which is laid in Alexandria, at a time when Christianity was gaining ground against Paganism and the neo-Platonism of the schools. Hypatia herself was born about the year 370, and, after attracting to her lectures on philosophy a large and brilliant auditory, was torn to pieces by the rabble of her native city in 415. *Hypatia* appeared in 1853.

Hyperion (*hī-pē'ri-on, or hī-per-i'on*).—A romance in four books, by Henry Wadsworth Longfellow. This work, which was the result of an extensive tour in Germany, was published in 1839, and with much that is purely fanciful and imaginative, contains much that came within the actual experience of the author who is represented, idealized, in the character of Paul Fleming. The episode with Mary Ashburton is supposed to have reference to a real occurrence. The book is full of description and of eloquent discussion, besides being interspersed with snatches of legend and of song.

Hypocrites' Isle.—An island described by Rabelais in one of his satires. He pictures this island of *Hypocrites* as wholly inhabited by people of low and defiled natures, as, by sham saints, spiritual comedians, seducers, and "such-like sorry rogues who live on the alms of passengers like the hermit of Lamont."

I

Iago (*ē-ā' gō*).—*Othello*, Shakespeare. Othello's ensign and the villain of the play. Iago is said to be a character next to a devil, yet not quite a devil, which Shakespeare alone could execute without scandal.

Idleness, The Lake of.—*Faërie Queene*, Spenser. Whoever drank thereof grew instantly "faint and weary." The Red Cross Knight drank of it, and was readily made captive by Orgoglio.

Idylls of the King.—A series of poems by Tennyson. Taken together they form a parable of the life of man. Each idyll taken as a separate picture represents the war between sense and soul. In *Lancelot and Guinevere* the lower nature leads them astray and there is intense struggle before the higher nature prevails. In *Vivien, Tristram*, and *Modred*, the base and sensual triumph. In *Arthur, Sir Galahad* and *Percivale*, it is the victory of the spiritual.

Ignaro.—*Faërie Queene*, Spenser. Fosterfather of Orgoglio. Spenser says this old man walks one way and looks another, because ignorance is always "wrong-headed."

Iliad (*ī'ē-ad*).—A famous Greek epic poem by Homer. It is the tale of the siege of Troy, in twenty-four books. It is written in Greek hexameters, and commemorates the deeds of Achilles and other Greek heroes at the siege of Troy. Books one, two and three are introductory to the war. Paris proposes to decide the contest by a single combat, and Menelaus accepts the challenge. Paris, being overthrown, is carried off by Venus, and Agamemnon demands that the Trojans shall give up Troy in fulfillment of the compact, and the siege follows. The gods take part, and frightful slaughter ensues. At length Achilles slays Hector, and the battle is at an end. Old Priam, going to the tent of Achilles, craves the body of his son Hector; Achilles gives it up, and the poem concludes with the funeral rites of the Trojan hero. Vergil continues the tale from this point, shows how the city was taken and burnt, and then continues with the adventures of Æneas, who escapes from the burning city, and makes his way to Italy.

Imogen (*im'ō-jen*).—The wife of Posthumus, and the daughter of Cymbeline in the play of Shakespeare's under title *Cymbeline*. "Of all Shakespeare's women," says Hazlitt, "she is, perhaps, the most tender and the most artless."

Incantation.—Is derived from a Latin root meaning simply "to sing." It is the term in use to denote one of the most powerful and awe-inspiring modes of magic, resting on a belief in the mysterious power of words solemnly conceived and passionately uttered.

Inchcape Rock.—It is dangerous for navigators, and therefore the abbot of Aberbrothock fixed a bell on a float, which gave notice to sailors. Southey says that Ralph the Rover, in a mischievous joke, cut the bell from the buoy, and it fell into the sea; but on his return voyage his boat ran on the rock, and Ralph was drowned. Precisely the same tale is told of St. Goven's bell.

Inferno, The.—*Divine Comedy*, Dante. Epic poem in thirty-four cantos. Inferno is the place of the souls who are wholly given up to sin. The ascent is through Purgatory to Paradise.

Ingoldsby Legends (*ing'gōldz-bi lej'endz, or lē'jendz*).—A collection of legends in prose and verse, supposed to have been found in the family chest of the Ingoldsby family, and related by Thomas Ingoldsby. Of the poetical pieces it is not too much to say that, for originality of design and diction, for quaint illustration and musical verse, they are not surpassed in the English language. From the days of Hudibras to our time, the drollery invested in rhyme has never been so amply or so felicitously exemplified; and if derision has been unsparingly applied, it has been to lash knavery and imposture.

In Memoriam.—A poem by Alfred Tennyson, published in 1850, and consisting of one hundred and thirty "short swallow flights of song," in a measure which Tennyson has made his own. It is well known that these "brief lays, of sorrow born," were written in memory of the author's friend, Arthur Henry Hallam, who died in 1833. They are characterized by George MacDonald as forming "the poem of the hoping doubters, the poem of our age—the grand minor organ fugue of *In Memoriam*. It is the cry of the bereaved Psyche into the dark infinite after the vanished love. His friend is nowhere in his sight, and God is silent. Death, God's final compulsion to prayer, in its dread, its gloom, its utter stillness, its apparent nothingness, urges the cry. Moanings over the dead are mingled with the profoundest questionings of philosophy, the signs of nature, and the story of Jesus, while now and then the star of the morning, bright Phosphor, flashes a few rays through the shifting cloudy dark. And if the sun has not arisen on the close of the book, yet the aurora of the coming dawn gives light enough to make the onward journey possible and hopeful."

Innocents Abroad.—By Mark Twain. Travelers seeing Europe without any illusions. The fun consists in an irrelevant application of modern common sense to historic associations, ridiculing sentimental humbug. An air of innocence and surprise adds to the drolleries of their adventures.

Instauratio Magna (*in-stā-rā'shi-ō mag'nā*).—The title (*The Great Restoration*) which Bacon gave to his *Magnum Opus*, the design of which was for six divisions:—(1) *The Advancement of Learning*; (2) *The Novum Organum*; (3) *The Experimental History of Nature*; (4) *The Scala Intellectus*, which leads from experience to science; (5) the *Bodronic*, or anticipations of the second philosophy; and (6) *Active Science*, or experiment. Of these, only the first two, and a portion of the third (*Sylva Sylvarum*), were published. The idea that was to run through the *Instauratio* was that invention must be based upon experience, and experience upon experiment.

Interludes, The.—Springing from the moralities and bearing some resemblance to them, though nearer the regular drama, are the interludes, a class of compositions in dialogue, much shorter and more merry and farcical. They were generally played in the intervals of a festival.

Invocation.—An address at the commencement of a poem, in which the author calls for the aid of some divinity, particularly of his muse.

Iphigenia (*ī'ī-jē-nī'ā*).—The heroine of Euripides' tragedy *Iphigenia in Aulis*, and of Goethe's tragedy *Iphigenia auf Tauris*. She was placed on the altar in a rash vow by her father. Artemis at the last moment snatched her from the altar and carried her to heaven, substituting a hind in her place. The similarity of this legend to the scripture stories of Jephthah's vow and Abraham's offering of his son Isaac is noticeable.

Iras.—A strongly delineated character in *Ben Hur, a Tale of The Christ*, by Lew Wallace.

Iras.—A female attendant on Cleopatra in Shakespeare's play, *Antony and Cleopatra*.

Isaac of York.—A wealthy Jew, the father of Rebecca, in Sir Walter Scott's novel, *Ivanhoe*.

Isabella.—The heroine in Shakespeare's comedy, *Measure for Measure*.

Island of Lanterns.—In the celebrated satire of Rabelais, an imaginary country inhabited by false pretenders to knowledge. The name was probably suggested by the *City of Lanterns*, in the Greek romance of Lucian. Swift has copied this same idea in his *Island of Laputa*.

Island of St. Brandan.—A marvelous flying island, the subject of an old and widely spread legend of the middle ages. Though the island of St. Brandan has been a disappointment to voyagers, it has been a favorite theme with poets.

Island of the Blest.—Imaginary island in the west. Hither the favorites of the gods were conveyed without dying, and dwelt in never-ending joy. The name first occurs in Hesiod's *Works and Days*. This phrase is often used in modern literature.

Ithuriel (*i-thū'ri-el*).—In Milton's *Paradise Lost*, an angel commissioned by Gabriel to search through paradise, in company with Zephon, to find Satan, who had eluded the vigilance of the angelic guard, and effected an entrance into the garden. It is related that Ithuriel found Satan "squat like a toad, crouch at the ear of Eve," and transformed him by a touch of his spear into his proper shape.

Ivanhoe.—A novel by Sir Walter Scott. The hero, also Ivanhoe, figures as Cedric of Rotherwood's disinherited son, the favorite of King Richard I., and the lover of the Lady Rowena, whom, in the end, he marries. The scene is laid in England in the reign of Richard I., and we are introduced to Robin Hood in Sherwood forest, banquets in Saxon halls, tournaments, and all the pomp of ancient chivalry. Rowena, the heroine, is quite thrown into the shade by the gentle, meek, yet high-souled Rebecca.

Ivory Gate of Dreams.—Dreams which delude pass through the ivory gate, but those which come true through the horn gate.

J

Jack and the Bean-Stalk.—A nursery legend said to be an allegory of the Teutonic *Al-fader*, the "red hen" representing the all-producing sun, the "money-bags" the fertilizing rain, and the "harp" the winds.

Jack-in-the-Green.—A prominent character in Maypole dances.

Jack Robinson.—A famous comic song by Hudson.

Jack Sprat.—The hero of a nursery rhyme. Jack and his wife form a fine combination in domestic economy.

Jack the Giant-killer.—The name of a famous hero in the literature of the nursery, the subject of one of the Teutonic or Indo-European legends, which have become nationalized in England and America.

Jaquenetta (*jak-e-net'ā*).—*Love's Labor's Lost*, Shakespeare. A country wench courted by Don Adriano de Armado.

Jaques (*zhā'kes*).—A lord attending upon the exiled duke, in Shakespeare's *As You Like It*. A contemplative character who thinks and does—nothing. He is called the "melancholy Jaques," and affects a cynical philosophy. He could "suck melancholy out of a song, as a weasel sucks eggs."

Jarley, Mrs.—The proprietor of a waxwork show in Dickens' *Old Curiosity Shop*. She has lent her name to a popular game of parlor tableaux.

Jarndyce (*jārn'dis*), **John.**—A prominent figure in Dickens' *Bleak House*, distinguished for his philanthropy, easy good-nature and good sense, and for always saying, "The wind is in the east," when anything went wrong with him. The famous suit of Jarndyce vs. Jarndyce, in this novel, is a satire upon the court of chancery.

Jarvie, Nicol.—A prominent character in Sir Walter Scott's novel *Rob Roy*. He is a bailie of Glasgow.

Javert (*zhā-var'*).—An officer of the police force in *Les Misérables*, by Victor Hugo. He is the incarnation of inexorable law.

Jarvis.—A faithful old servant, in Moore's *The Gamester*, who tries to save his master, Beverley, from his fatal passion of gambling.

Jaup.—An old woman at Middlemas village, in Scott's *The Surgeon's Daughter*.

Jekyll, Doctor, and Mr. Hyde.—A singular romance by Robert Louis Stevenson. The hero is a duplex character—Dr. Jekyll and Mr. Hyde. Doctor Jekyll is a benevolent and upright physician, who by means of a potion is able to transform himself for a time into a second personality, Mr. Hyde, of a brutal and animal nature.

Jellyby (*jel'ī-bi*), **Mrs.**—A character in Dickens' novel, *Bleak House*, a type of sham philanthropy. She spends her time and energy on foreign missions to the neglect of her family. Mrs. Jellyby is quite overwhelmed with business correspondence relative to the affairs of Borrioboola Gha.

Jenkins, Winifred.—The name of Miss Tabitha Bramble's maid in Smollett's *Expedition of Humphrey Clinker*. She makes ridiculous blunders in speaking and writing.

Jenkinson, Ephraim.—A green old swindler, whom Dr. Primrose met in a public tavern. Dr. Primrose sold the swindler his horse, Old Blackberry, for a draft upon Farmer Flamborough.

Jeroboam (*jēr-ō-bō'am*) **Sermon.**—One of Dr. Emmons' sermons, which made a great noise at the time. It was known as his Jeroboam Sermon. It was written on the occasion of Jefferson's inauguration as president, and, although Jefferson is not named, the delineation of the character of Jeroboam is such that no one can doubt the personal application intended.

Jerusalem Delivered.—An epic in twenty books, by Torquato Tasso. The crusaders, encamped on the plains of Tortosa, chose Godfrey for their chief, and Aalandine, king of Jerusalem, made preparations for defense. The Christian army having reached Jerusalem, the king of Damascus sent Armida to beguile the Christians. It was found that Jerusalem could never be taken without the aid of Rinaldo. Godfrey, being informed that the hero was dallying with Armida in the enchanted island, sent to invite him back to the army; he returned, and Jerusalem was taken. Armida fled into Egypt, and offered to marry any knight who slew Rinaldo. The love of Rinaldo returned, he pursued her and she relented. The poem concludes with the triumphant entry of the Christian army into the Holy City, and their devotions at the tomb of the Redeemer. The two chief episodes are the loves of Olindo and Sofronia, and of Tancred and Clorinda.

Jessica (*jēs'ī-kā*).—The beautiful daughter of Shylock, in Shakespeare's *Merchant of Venice*.

Jones, Tom.—The hero of Fielding's novel entitled *The History of a Foundling*, represented as a model of generosity, openness, and manly spirit, though thoughtless and dissipated.

Joyeuse (*zhwā-yez'*).—The sword of Charlemagne as mentioned in romances of chivalry.

Joyeuse Garde (*zhwā-yez' gārd*).—The residence of the famous Lancelot du Lac.

Judith.—The heroine in the book by the same name in the Apocrypha. She was a beautiful Jewess of Bethulia, who, when her town was besieged by Holofernes, the general of Nebuchadnezzar, attended him in his tent, and, when he was drunk, killed him, whereupon her townsmen fell upon the Assyrians and defeated them with great slaughter. The tale is not mentioned by Josephus, and has, from an early period, been held to be an allegory. It has frequently furnished poets and painters with subjects.

Julius Cæsar.—An historical tragedy by William Shakespeare. The poet was in this, as in other plays, materially assisted by North's translation of Plutarch. "Shakespeare's *Julius Cæsar*," says Hazlitt, "is not equal, as a whole, to either of his other plays taken from the Roman history. It is inferior in interest to *Coriolanus*, and both in interest and power to *Antony and Cleopatra*. It, however, abounds in admirable and affecting passages, and is remarkable for the profound knowledge of character, in which Shakespeare could hardly fail."

K

- Kadir, Al.**—The night on which the *Koran* was sent down to Mohammed. Al Kadir is supposed to be the seventh of the last ten nights of Ramadan, or the night between the twenty-third and twenty-fourth days of the month.
- Kay.**—A foster brother of King Arthur, and a rude and boastful knight of the Round Table. He was the butt of King Arthur's court. Called also Sir Queux. He appears in the *Boy and the Mantle*, in Percy's *Reliques*. Sir Kay is represented as the type of rude boastfulness, Sir Gawain of courtesy, Sir Lancelot of chivalry, Sir Mordred of treachery, Sir Galahad of chastity, Sir Mark of cowardice.
- Kehama** (*kê-hâ 'mâ*).—A Hindu rajah who obtains and sports with supernatural power. His adventures are related in Southey's poem entitled *The Curse of Kehama*.
- Kenilworth.**—A novel by Sir Walter Scott. This is very superior to *The Abbot* and *The Monastery*. For interest it comes next to *Ivanhoe*, and the portrait of Queen Elizabeth is lifelike and correct. That of Queen Mary is given in *The Abbot*. Full of courtly gayeties and splendor, the novel contains the unhappy tale of the beautiful Amy Robsart, which cannot fail to excite our sympathy and pity.
- Kent, Earl of.**—A rough, plain-spoken, but faithful nobleman in Shakespeare's *King Lear*, who follows the fallen fortunes of the king, disguised as a servant, under the assumed name of Caius.
- Kenwigs** (*ken 'wizg*).—A family in Dickens' novel *Nicholas Nickleby*, including a number of little girls who differed from one another only in the length of their frilled pantalets and of their flaxen pigtailed tied with bows of blue ribbon.
- Kilkenny Cats.**—Two cats, in an Irish story, which fought till nothing was left but their tails. It is probably a parable of a local contest between Kilkenny and Irishtown, which impoverished both boroughs.
- Kilmansegg, Miss.**—An heiress with great expectations and an artificial leg of solid gold, in Hood's poem, *A Golden Legend*.
- King Horn.**—A metrical romance which was very popular in the thirteenth century. King Horn is a beautiful young prince who is carried away by pirates; but his life is spared, and after many wonderful adventures he weds a princess, and regains his father's kingdom.
- King Lear.**—A tragedy by Shakespeare whose hero is a fabulous or legendary king of Britain. He had three daughters, and when four score years old, wishing to retire from the active duties of sovereignty, resolved to divide his kingdom between them, but was persuaded to disinherit Cordelia. The beauty of the play is the exquisite character of Cordelia, who is a "perfect woman."
- King Log and King Stork.**—Characters in a celebrated fable of Æsop, which relates that the frogs, grown weary of living without a government, petitioned Jupiter for a king. Jupiter accordingly threw down a log among them, which made a satisfactory ruler till the frogs recovered from their fright and discovered his real nature. They, therefore, entreated Jupiter for another king, whereupon he sent them a stork, who immediately began to devour them.
- Klaus, Peter.**—The hero of an old popular tradition of Germany—the prototype of Rip Van Winkle—represented as a goatherd.
- Knickerbocker, Diedrich.**—The imaginary author of a humorous fictitious *History of New York*, written by Washington Irving.
- Knight of the Swan.**—Lohengrin, son of Parsival, because his boat was drawn by a swan.
- Knights of the Round Table.**—King Arthur's knights were so called because they sat with him at a round table made by Merlin for King Leodogran. This king gave it to Arthur on his marriage with Guinevere, his daughter.
- Koppenberg.**—The mountain of Westphalia to which the pied piper (Bunting) led the children, when the people of Hamelin refused to pay him for killing their rats. Browning's poem, *The Pied Piper*, tells the tale.

L

- Lady of Lyons, The.**—A drama, by Lord Lytton, in which Pauline Deschappelles, daughter of a Lyonesse merchant, rejects the suits of Beauseant, Glavis, and Claude Melnotte, who therefore combined. Claude, who was a gardener's son, aided by the other two, passed himself off as Prince Como, married Pauline, and brought her home to his mother's cottage. The proud beauty was very indignant, and Claude left her to join the French army. He became a colonel, and returned to Lyons. He found his father-in-law on the eve of bankruptcy, and that Beauseant had promised to satisfy the creditors if Pauline would consent to marry him. Pauline was heartbroken; Claude revealed himself, paid the money required, and carried home the bride.
- Lady of Shalott, The.**—A poem by Alfred Tennyson, founded on an incident in *King Arthur*. It is descriptive of "a being whose existence passes without emotion, without changes, without intelligible motive for living on, without hope or fear, here or hereafter."
- Lady of the Lake, The.**—A poem in six cantos by Sir Walter Scott, published in 1810. "Measured even by the standard of the *Minstrel* and *Marmion*, the *Lady of the Lake* possessed," says Palgrave, "merits of its own, which raised his reputation still higher. Jeffrey's prediction has been perfectly fulfilled, that the *Lady of the Lake* would be 'oftener read than either of the former,' and it is generally acknowledged to be, in Lockhart's words, 'the most interesting, romantic, picturesque, and graceful of his great poems.'" The descriptions of scenery, which form one of the chief charms of the poem, render it, even now, one of the most minute and faithful handbooks to the region in which the drama of Ellen and the Knight of Snowdon is laid.
- Lake Poets, The.**—Wordsworth, Southey, and Coleridge, who lived about the lakes of Cumberland.
- Lalla Rookh** (*lal 'â rôk*).—An oriental romance by Thomas Moore, consisting of four tales in verse, entitled *The Veiled Prophet of Khorassan*, *Paradise and the Peri*, *The Fire-Worshippers*, and *The Light of the Harem*, and connected by a short prose narrative, in which it is described how Lalla Rookh, daughter of the Emperor Aurungzebe, journeys toward Bucharia to meet her engaged husband, and how the prince gains her love on the way, in the guise of a Cashmerian minstrel. *Lalla Rookh* was published in 1817. [803]
- L'Allegro** (*lâl-lâ 'grô*).—A descriptive poem by John Milton, probably written during his college life.
- L'Amour Médecin** (*la-môôr 'mâd-san'*) (or, *The Love Doctor*).—A comedy by Molière, written about the year 1665. Lucinde, the daughter of Sganarelle, is in love, and the father calls in four doctors to consult upon the nature of her malady. They see the patient, and retire to consult together, but talk about Paris, about their visits, about the topics of the day; and when the father enters to know what opinion they have formed, they all prescribe different remedies, and pronounce different opinions. Lisette then calls in a "quack" doctor (Clitandre, the lover), who says he must act on the imagination, and proposes a seeming marriage, to which Sganarelle assents. The assistant being a notary, Clitandre and Lucinde are married.
- Lampoon.**—A personal satire, often bitter and malignant. These libels, carried to excess in the reign of Charles II., acquired the name of lampoons from the burden sung to them: "*Lampone, lampone, camerada lampone.*"
- Land of Beulah.**—The paradise in which souls wait before the resurrection. In *Pilgrim's Progress* the land from which the pilgrims enter the Celestial City. The name is found in Isaiah lxii., 4.
- Land of Bondage.**—Name given to Egypt in the Bible.
- Land of Cakes.**—A name sometimes given to Scotland, because oatmeal cakes are a common national article of food, particularly among the poorer classes.
- Land of Nod.**—In common speech sleepy-land or land of dreams.
- Land of Promise.**—The land promised to Abraham—Canaan.
- Land of Shadows.**—A place of unreality, sometimes meaning land of ghosts.
- Land o' the Leal.**—An unknown land of happiness, loyalty, and virtue. Caroline Oliphant, baroness Nairne, meant heaven in her song and this is now its accepted meaning.
- Land of Wisdom.**—A name given to Normandy, in France, because of the wise customs which have prevailed there, and also because of the skill and judgment of the people in making laws.
- Land of Veda** (*vs' 'dâ*).—Name often given to India.
- Landlady's Daughter.**—She rowed Flemming "over the Rhine-stream, rapid and roaring wide," and told to him the story of the *Liebenstein*.
- Last Days of Pompeii** (*pom-pâ 'yê*), **The.**—A novel by Bulwer Lytton, Edward George, Baron Lytton, which was published in 1834. The interest of the book is one of situation and of action rather than of character. The scenes which linger on our memories longest are the noonday excursion on the Campanian seas, the temple of Isis, with its hidden machinery; the funeral pomp and dirge of the murdered Apæcides, Lydon perishing in the unequal struggle; the price which was to have been paid for a father's liberty; and lastly, the grand catastrophe, a subject which called forth all Lord Lytton's brilliant powers.
- Last of the Mohicans.**—The Indian chief Uncas is so called by Cooper in his novel of that title.
- Launfal** (*lân 'fal*), **Sir.**—Steward of King Arthur. James Russell Lowell has a poem entitled *The Vision of Sir Launfal*.
- Lavaine.**—Son of the lord of Astolat, who accompanied Sir Lancelot when he went to tilt for the ninth diamond. Lavaine is described as young, brave, and a true knight. He was brother to Elaine.
- Lavinia** (*la-vîn 'i-â*) and **Palemon.**—Lavinia was the daughter of Acasto, patron of Palemon. Through Acasto Palemon gained a fortune and wandered away from his friend. Acasto lost his property, and dying, left a widow and daughter in poverty. Palemon often sought them, but could never find them. One day, a lovely modest maiden came to glean in Palemon's fields. The young squire was greatly struck with her exceeding beauty and modesty, but she was known as a pauper and he dared not give her more than a passing glance. Upon inquiry he found that the beautiful gleaner was the daughter of Acasto; he proposed marriage, and Lavinia was restored to her rightful place.
- Leonato** (*lê-ô-nâ 'tô*).—Governor of Missina in Shakespeare's *Much Ado About Nothing*. He prematurely accredited the accusations against his daughter, Hero.
- Leontine** (*lê-ô-nîn*).—In Shakespeare's *Pericles*. Servant to Dionyza. The latter conspired with him to murder Marina, and was saved from the crime only by the intervention of pirates.
- Léonore** (*lâ-ô-nôôr*).—In Molière's *L'ecole des Maris*, sister of Isabelle, an orphan; brought up by Ariste according to his notions of training a girl to make him a good wife. He put her on her honor, tried to win her confidence and love, gave her all the liberty consistent with propriety and social etiquette, and found that she loved him, and made a fond and faithful wife.
- Leviathan** (*lê-vi 'a-than*) (or, the *Matter, Form, and Power of a Commonwealth, Ecclesiastical and Civil*).—A work by Thomas Hobbes, published in 1651. In *Leviathan*, Hobbes' peculiar theories in politics received their fullest and ablest expression. They found an illustrious opponent in Lord Clarendon, who, in 1676, published *A Brief View and Survey of the Dangerous and Pernicious Errors to Church and State in Mr. Hobbes' book Entitled Leviathan*.
- Little Dorrit.**—The heroine and title of a novel by Charles Dickens. Little Dorrit was born and brought up in the Marshalsea prison, Bermondsey, where her father was confined for debt; and when about fourteen years of age she used to do needlework, to earn a subsistence for herself and her father. The child had a pale, transparent face; was quick in expression, though not beautiful in feature. Her eyes were a soft hazel, and her figure slight. The little dove of the prison was idolized by the prisoners, and when she walked out, every man in Bermondsey who passed her, touched or took off his hat out of respect to her good works and active benevolence. Her father, coming into a property, was set free at length, and Little Dorrit married Arthur Clennam, the marriage service being celebrated in the Marshalsea, by the prison chaplain.
- Little John.**—A big, stalwart fellow, named John Little, who encountered Robin Hood, and gave him a sound thrashing, after which he was rechristened, and Robin stood godfather. Little John is introduced by Sir Walter Scott in *The Talisman*.
- Little Nell.**—*Old Curiosity Shop*, Dickens. The prominent character of the story, pure and true, though living in the midst of selfishness and crime. She was brought up by her grandfather, who was in his dotage, and who tried to eke out a narrow living by selling curiosities. At length, through terror of Quilp, the old man and his grandchild stole away, and led a vagrant life.
- Lochinvar** (*lock'in-var*).—A young highlander, in the poem of *Marmion*, was much in love with a lady whose fate was decreed that she should marry a "laggard." Young Lochinvar persuaded the too-willing lassie to be his partner in a dance; and, while the guests were intent on their amusements, swung her into his saddle and made off with her before the bridegroom could recover from his amazement.
- Locksley.**—So Robin Hood is sometimes called, from the village in which he was born.
- Locksley Hall.**—A poem by Tennyson, in which the hero, the lord of Locksley Hall, having been jilted by his cousin Amy for a rich boor, pours forth his feelings in a flood of scorn and indignation. The poem is understood to have been occasioned by a similar incident in the poet's own life, but this has been questioned.
- Lohengrin** (*lô 'hen-grîn*).—The Knight of the Swan; the hero of a romance by Wolfram von Eschenbach, a German minnesinger of the thirteenth century, and also of a modern musical drama by Richard Wagner. He was the son of Parsival, and came to Brabant in a ship drawn by a white swan, which took him away again when his bride, disobeying his injunction, pressed him to discover his name and parentage.
- Lorelei, or Loreley** (*lô 're-lî*).—In German poetry and romance, a siren supposed to haunt the Lurlenber rock on the Rhine, and lure sailors and fisherman to destruction. She is the subject of a beautiful ballad by Heine.
- Lorna Doone.**—A novel by R. D. Blackmore, published in 1869, the scene of which is laid in Exmoor. The Doones are a family of robbers and freebooters from which Lorna, otherwise Lady Lorna Dugal, is rescued by John Ridd, a young man. Ridd finally broke up the band, drove them from Doone valley, and married Lorna.
- Love's Labor's Lost.**—A comedy by Shakespeare. Ferdinand, king of Navarre, with three lords named Biron, Dumain, and Longaville, agree to spend three years in study, during which time no woman was to approach the court. The compact signed, all went well until the princess of France, attended by Rosaline, Maria, and Katharine, besought an interview respecting certain debts said to be due from the king of France to the king of Navarre. The four gentlemen fell in love with the four ladies. The love of the king sought the princess, by right, Biron loved Rosaline, Longaville admired Maria, and Dumain adored Katharine. In order to carry their suits, the four gentlemen, disguised as Muscovites, presented themselves before the ladies; but the ladies, being warned of the masquerade, disguised themselves also, so that the gentlemen in every case addressed the wrong lady. A mutual arrangement was made that the suits should be deferred for twelve months and a day; and if, at the expiration of that time, they remained of the same mind, the matter should be taken into serious consideration.
- Lusiad** (*lû 'sî-ad*), **The.**—A Portuguese poem by Luiz Camoëns, in 1572. *The Lusiad* celebrates the chief events in the history of Portugal, and is remarkable as the only modern epic poem which is pervaded by anything approaching the national and popular spirit of ancient epic poems. Bacchus was the guardian power of the Mohammedans, and Venus, or Divine Love, of the Lusians. The fleet first sailed to Mozambique, then to Melinda (in Africa), where the adventurers were hospitably received and provided with a pilot to conduct them to India. In the Indian Ocean, Bacchus tried to destroy the fleet; Venus, however, calmed the sea, and Gama arrived in India in safety. Having accomplished his object, he returned to Lisbon. Among the most famous passages are the tragical story of Inez de Castro, and the apparition of the giant Adamastor, who appears as the spirit of the storm to Vasco da Gama, when crossing the cape. The versification of *The Lusiad* is extremely charming. [804]

Mab.—The queen of the fairies, famous in English literature if only on account of the exquisite description of her put into the mouth of Mercutio, in *Romeo and Juliet*, beginning “O, then, I see Queen Mab hath been with you.”

Macbeth.—One of Shakespeare’s most celebrated tragedies, whose chief characters are Macbeth, king of Scotland, and Lady Macbeth, his murderously ambitious wife. Urged by the latter he kills Duncan, the rightful king, and in turn is himself slain by Macduff. The tale of Macbeth and Banquo was borrowed from the legendary history of Scotland, but the interest of the play is not historical. It is a tragedy of human life, intensely real, the soul, with all its powers for good or evil, deliberately choosing evil. The three witches in the desert place, in thunder, lightning, storm, strike the keynote of evil suggestion. The awfulness of soul destruction is felt in Macbeth and Lady Macbeth as in no other of Shakespeare’s dramas.

Macheath, Captain.—A highwayman who is the hero of Gay’s *Beggar’s Opera*.

Mac-Ivor (*mak-ē ’vor*), **Fergus.**—*Waverley*, Scott, Fergus Mac-Ivor is a prominent character in the novel, and his sister, Flora Mac-Ivor, the heroine. They are of the family of a Scottish chieftain.

Macreons, The Island of.—*Pantagruel*, Rabelais. The title is given to Great Britain, derived from a Greek word meaning long-lived, “because no one is put to death there for his religious opinions.” Rabelais says the island “is full of antique ruins and relics of popery and ancient superstitions.”

Madamina, Queen.—An important character in the old romance called *Amadis de Gaul*; her constant attendant was Elisabat, a famous surgeon with whom she roamed in solitary retreats.

Madoc (*mad ’ok*).—A poem by Southey, founded on one of the legends connected with the early history of America. Madoc, a Welsh prince of the twelfth century, is represented as making the discovery of the western world. His contests with the Mexicans form the subject.

Maidens’ Castle.—An allegorical castle mentioned in Malory’s *History of Prince Arthur*. It was taken from a duke by seven knights, and held by them till Sir Galahad expelled them. It was called The Maidens’ Castle because these knights made a vow that every maiden who passed it should be made a captive.

Maid Marian.—A half mythical character, but the name is said to have been assumed by Matilda, daughter of Robert, Lord Fitzwalter, while Robin Hood remained in a state of outlawry. The name is considered the foundation of the word marionettes, from Maid Marian’s connection with the morris dance, or May-day dance, at which she was said to appear.

Maid of Athens.—Made famous by Lord Byron’s song of this title. Twenty-four years after this song was written an Englishman sought out “the Athenian maid,” and found a beggar without a vestige of beauty.

Maid of Saragossa.—*Childe Harold*, Byron. A young Spanish woman distinguished for her heroism during the defense of Saragossa in 1808-1809. She first attracted notice by mounting a battery where her lover had fallen, and working a gun in his place.

Malade Imaginaire, Le (or, *The Imaginary Invalid*).—A comedy by Molière. Mons. Argan, who took seven mixtures and twelve lavements in one month instead of twelve mixtures with twenty lavements, as he had hitherto done. “No wonder,” he says, “I am not so well.” He fancies his wife loves him dearly, and that his daughter is undutiful, because she declines to marry a young medical prig instead of Cleante, whom she loves. His brother persuades “the malade” to counterfeit death, in order to test the sincerity of his wife and daughter. The wife rejoices greatly at his death, and proceeds to filch his property, when Argan starts up and puts an end to her pillage. Next comes the daughter’s turn. When she hears of her father’s death, she bewails him with great grief, says she has lost her best friend, and that she will devote her whole life in prayer for the repose of his soul. Argan is delighted, starts up in a frenzy of joy, declares she is a darling, and shall marry the man of her choice freely, and receive a father’s blessing.

Malaprop (*mal ’a-prop*), **Mrs.**—A character in Sheridan’s *Rivals*, noted for her blundering use of words.

Malbecco.—*Faerie Queene*, Spenser. The husband of a young wife, Helinore, and himself a crabbed, jealous old fellow.

Malengrin.—A character in Spenser’s *Faerie Queene*, who carried a net on his back “to catch fools with.” The name has grown to mean the personification of guile or flattery.

Malopardus.—The castle of Master Reynard, the Fox, in the beast epic of *Reynard the Fox*.

Malvoisin.—*Ivanhoe*, Scott. One of the challenging knights at the tournament (Sir Philip de Malvoisin). Sir Albert de Malvoisin was a preceptor of the Knights Templar.

Mambrino (*mām-brē ’nō*).—*Poems*, Ariosto, etc. A king of the Moors, who was the possessor of an enchanted golden helmet, which rendered the wearer invulnerable and which was the object of eager quest to the paladins of Charlemagne. This helmet was borne away by the knight Rinaldo. In *Don Quixote* we are told of a barber who was caught in a shower of rain, and who, to protect his hat, clapped his brazen basin on his head. Don Quixote insisted that this basin was the helmet of the Moorish king; and, taking possession of it, wore it as such.

Managarm.—*Prose Edda*. The largest and most formidable of the race of giants. He dwells in the Iron-wood, Jamvid. Managarm will first fill himself with the blood of man, and then he will swallow up the moon. This giant symbolizes war, and the iron wood in which he dwells is the wood of spears.

Manfred.—A poem by Byron. Manfred sold himself to the prince of darkness, and received from him seven spirits to do his bidding. They were the spirits of “earth, ocean, air, night, mountains, winds, and the star of his own destiny.” Wholly without human sympathies, the count dwelt in splendid solitude among the Alpine mountains. He loved Astarte, and was visited by her spirit after her death. In spirit form she told Manfred that he would die the following day; and, when asked if she loved him, she signed “Manfred,” and vanished.

Manon l’Escaut (*mā-non ’ les-kō*).—A French novel by A. F. Prévost. Manon is the “fair mischief” of the story. Her charms seduce and ruin the chevalier des Grieux, who marries her. After marriage, the selfish mistress becomes converted into the faithful wife, who follows her husband into disgrace and banishment, and dies by his side in the wilds of America. The object of this novel, like that of *La Dame aux Camélias*, by Dumas fils, is to show how true hearted, how self-sacrificing, how attractive, a *fille de joie* may be.

Mantolini (*man-ta-lē ’nē*).—*Nicholas Nickleby*, Dickens. The husband of madame; he is a man doll, noted for his white teeth, his oaths, and his gorgeous morning gown. This “exquisite” lives on his wife’s earnings, and thinks he confers a favor on her by spending. Madame Mantolini is represented as a fashionable dressmaker near Cavendish Square, London.

Marble Faun, The.—A romance by Hawthorne, published in 1860. The English edition, published in the same year, is called *Transformation, or the Romance of Monte Beni*. See *Donatello*. The sole idea of the *Marble Faun* is to illustrate the intellectually and morally awakening power of a sudden impulsive sin, committed by a simple, joyous, instinctive, “natural” man. The whole group of characters is imagined solely with a view to the development of this idea.

Marcellus (*mār-sel ’us*).—*Hamlet*, Shakespeare. An officer of Denmark, to whom the ghost of the murdered king appeared before it presented itself to Prince Hamlet.

Marchioness, The.—*Old Curiosity Shop*, Dickens. A half-starved maid-of-all-work, in the service of Sampson Brass and his sister Sally. She was so lonesome and dull that it afforded her relief to peep at Mr. Swiveller even through the keyhole of his door. Mr. Swiveller called her the “marchioness,” when she played cards with him, “because it seemed more real and pleasant” to play with a marchioness than with a domestic. While enjoying these games they made the well known “orange pearl wine.”

[805]

Mariana (*mā-rē-ā ’nā*).—In Tennyson’s poem *The Moated Grange*, a young damsel, who sits in the moated grange, looking out for her lover, who never comes. (2) In Shakespeare’s *Measure for Measure* Mariana is a lovely and lovable lady, betrothed to Angelo, who, during the absence of Vincentio, the duke of Vienna, acted as his lord deputy. Her pleadings to the duke for Angelo are wholly unavailed.

Martin’s Summer, St.—Halcyon days; a time of prosperity; fine weather. Mentioned by Shakespeare in *Henry VI.*, etc.

Masora.—A critical work or canon, whereby is fixed and ascertained the reading of the text of the Hebrew version of the Bible.

Mauth Dog.—*Lay of the Last Minstrel*, Scott. A black specter spaniel that haunted the guard room of Peeltown in the Isle of Man. A drunken trooper entered the guard room while the dog was there, but lost his speech, and died within three days.

Mazeppa (*mā-zep ’ā*).—A poem by Byron. Mazeppa was a Cossack of noble family who became a page in the court of the king of Poland, and while in this capacity intrigued with Theresia, the young wife of a count, who discovered the amour, and had the young page lashed to a wild horse, and turned afraid.

McFingal.—The hero of Trumbull’s political poem of the same name; represented as a burly New England squire, enlisted on the side of the Tory part of the American revolution, and constantly engaged in controversy with Honorius, the champion of the Whigs.

Measure for Measure.—A comedy by Shakespeare. There was a law in Vienna that made it death for a man to live with a woman not his wife; but the law was so little enforced that the mothers of Vienna complained to the duke of its neglect. So the duke deputed Angelo to enforce it; and, assuming the dress of a friar, absented himself awhile, to watch the result. Scarcely was the duke gone, when Claudio was sentenced to death for violating the law. His sister Isabel went to intercede on his behalf, and Angelo told her he would spare her brother if she would become his Phryne. Isabel told her brother he must prepare to die, as the conditions proposed by Angelo were out of the question. The duke, disguised as a friar, heard the whole story, and persuaded Isabel to “assent in words,” but to send Mariana (the divorced wife of Angelo) to take her place. This was done; but Angelo sent the provost to behead Claudio, a crime which “the friar” contrived to avert. Next day the duke returned to the city, and Isabel told her tale. Finally the duke married Isabel, Angelo took back his wife, and Claudio married Juliet.

Medea (*mē-dē ’ā*).—A play by Euripides. The *Medea* came out in 431 B. C. along with the poet’s *Philoctetes*, *Dictys*, and the satiric *Reapers* (the last was early lost). It was based upon a play of Neophon’s, and only obtained the third prize, Euphorion being first, and Sophocles second. It may accordingly be regarded as a failure in its day—an opinion apparently confirmed by the faults (*viz.*, *Egeus* and the winged chariot) selected from it as specimens in Aristotle’s *Poetica*. There is considerable evidence of there being a second edition of the play, and many of the variants, or so-called interpolations, seem to arise from both versions being preserved and confused. Nevertheless, there was no play of Euripides more praised and imitated.

Médecine Malgré Lui, Le (*mād-san ’ mal-grā ’lwē lu*), (or, *The Doctor in Spite of Himself*).—A comedy by Molière. The “enforced doctor” is Sganarelle, a fagot maker, who is called in by Géronte to cure his daughter of dumbness. Sganarelle soon perceives that the malady is assumed in order to prevent a hateful marriage, and introduces her lover as an apothecary. The dumb spirit is at once exorcized, and the lovers made happy with “pills matrimonial.”

In 1733 Fielding produced a farce called *The Mock Doctor*, which was based on this comedy. The doctor he calls “Gregory,” and Géronte “Sir Jasper.” Lucinde, the dumb girl, he calls “Charlotta;” and Anglicizes her lover’s name, Léandre, into “Leander.”

Meg Merrilies (*mer ’j-lēz*).—A prominent character in Scott’s *Guy Mannering*, a half-crazy gypsy or sibyl.

Meistersingers (*mīs ’ter-sing-ers*).—In Germany an association of master tradesmen, to revive the national minstrelsy, which had fallen into decay with the decline of the minnesingers or love minstrels (1350-1523). Their subjects were chiefly moral or religious, and constructed according to rigid rules.

Melissa (*me-lis ’ā*).—*Orlando Furioso*, Ariosto. The prophetess who lived in Merlin’s cave. Bradamante gave her the enchanted ring to take to Rogero; so, assuming the form of Atlantes, she not only delivered Rogero but disenchanting all the forms metamorphosed in the island where he was captive.

Melnotte, Claude.—*Lady of Lyons*, Bulwer. The son of a gardener in love with Pauline, “the Beauty of Lyons,” but treated by her with contempt. Beauseant and Glavis, two other rejected suitors, conspired with him to humble her.

Merchant of Venice.—A comedy by Shakespeare. Antonio the merchant, signs a bond in order to borrow money from Shylock, a Jew, for Bassanio, the lover of Portia. If the loan was repaid within three months, only the principal would be required; if not, the Jew should be at liberty to claim a pound of flesh from Antonio’s body. The ships of Antonio being delayed by contrary winds, the merchant was unable to meet his bill, and the Jew claimed the forfeiture. Portia, in the dress of a law doctor, conducted the defense, and saved Antonio by reminding the Jew that a pound of flesh gave him no drop of blood.

Merlin.—The name of an ancient Welsh prophet and enchanter. He is often alluded to by the older poets, especially Spenser, in his *Faerie Queene*, and also figures in Tennyson’s *Idylls of the King*. In the *History of Prince Arthur* by Malory, Merlin is the prince of enchanters and of a supernatural origin. He is said to have built the Round Table and to have brought from Ireland the stones of Stonehenge.

Merlin’s Cave.—In Dynevor, near Carmarthen, noted for its ghastly noises of rattling iron chains, groans, and strokes of hammers. The cause is said to be this: Merlin set his spirits to fabricate a brazen wall to encompass the city of Carmarthen, and, as he had to call on the Lady of the Lake, bade them not slacken their labor till he returned; but he never did return, for Vivian held him prisoner by her wiles.

Merry Wives of Windsor, The.—A comedy by Shakespeare. It is said that Queen Elizabeth was so pleased with the Falstaff of Henry IV. that she commanded Shakespeare to show how he conducted himself when in love. For the plot he was probably too little indebted to other writers. *The Two Lovers of Pisa* from Straparola, in Tarleton’s *News Out of Purgatory*, and a story from *Il Pecorone* which suggests the hiding of Falstaff in the soiled linen, may possibly have suggested some of the incidents. John Dennis wrote a play, *The Comical Gallant*, or *the Amours of Sir John Falstaff*, in 1702, in which *The Merry Wives* may be recognized.

Messiah (*me-sī ’ā*), **The.**—An epic poem in fifteen books, by F. G. Klopstock. The subject is the last days of Jesus, his crucifixion and resurrection.

Middlemarch. *A Study of Provincial Life.*—A novel, by George Eliot, published in 1872, and characterized by *The Quarterly Review* “as the most remarkable work of the ablest of living novelists, and, considered as a study of character, unique.” The heroine is Dorothea Brooke, first married to Mr. Casaubon, afterward to Will Ladislaw. Among the other characters are Mr. Lydgate, Rosamond Vincy, Mary Garth, and Mrs. Cadwallader.

Midlothian, or Mid-Lothian (*mid-lō ’thi-an*), **The Heart of.**—A tale by Scott, of the Porteous riot, in which the incidents of Effie and Jeanie Deans are of absorbing interest. Effie was seduced by Geordie Robertson (*alias* George Staunton), while in the service of Mrs. Saddletree. She murdered her infant, and was condemned to death; but her half sister Jeanie went to London, pleaded her cause before the queen, and obtained her pardon. Jeanie, on her return to Scotland, married Reuben Butler; and Geordie Robertson (then Sir George Staunton) married Effie. Sir George being shot by a gypsy boy, Effie (*i. e.*, Lady Staunton) retired to a convent on the continent.

Midsummer Night’s Dream.—A comedy by Shakespeare. The author says there was a law in Athens that if a daughter refused to marry the husband selected for her by her father, she might be put to death. *Egeus*, an Athenian, promised to give his daughter Hermia in marriage to Demetrius; but, as the lady loved Lysander, she refused to marry the man selected by her father, and fled from Athens with her lover. Demetrius went in pursuit of her, followed by Helena, who doted on him. All four came to a forest, and fell asleep. In their dreams a vision of fairies passed before them, and, on awaking, Demetrius resolved to forego Hermia, who disliked him, and to take to wife Helena, who sincerely loved him. When *Egeus* was informed thereof, he readily agreed to give his daughter to Lysander, and the force of the law was not called into action (1592).

Milddendo.—*Gulliver’s Travels*, Swift. The metropolis of Lilliput, the wall of which was two feet and a half in height, and at least eleven inches thick. The emperor’s palace, called Belfaborac, was in the center of the city.

Miles Standish (or, *Courtship of Miles Standish*).—A poem by H. W. Longfellow. From this poem the robust figures of the Puritan captain in his haps and mishaps, and of John Alden and Priscilla, are now part of our national treasures.

[806]

Miller, Daisy.—Title and heroine of a story by Henry James. An American girl traveling in Europe, where her innocence, ignorance, and disregard of European customs and standards of propriety put her in compromising situations, and frequently expose her conduct to misconstruction.

Mill on the Floss.—A novel by George Eliot, published in 1860. There is a simplicity about *The Mill on the Floss* which reminds us of the classic tragedy. The vast power of nature over the career and fate of a family is figured forth in the river, beside which the child Maggie played, filling her mother's heart with gloomy and not ungenerous presentiments, and down which she passed with Stephen in her hour of temptation, with Tom in her last moments; the whole strength of association and of the ties and instinct of blood breaking in at every critical point in the story, like the voice of a Greek chorus, full of traditionary warning and stern common sense, but speaking in the dialect of English rusticity, and by the mouths of Mr. Tulliver and his wife's relations.

Minna von Barnhelm (*min 'ä fon bärn 'helm*).—A comedy by Lessing, published in 1767. It is the first German national drama which deals with contemporary events.

Minnehaha (*min-e-hä 'hä*).—*Hiawatha*, Henry W. Longfellow. The daughter of the arrow maker of Dacotah, and wife of Hiawatha. She was called Minnehaha from the waterfall of that name.

Minnesingers (*min 'e-sing-erz*).—A name given to the German lyric poets of the middle ages, on account of love being the principal theme of their lays, the German word "minne" being used to denote a pure and faithful love.

Miranda.—*The Tempest*, Shakespeare. The daughter of Prospero, the exiled duke of Milan, and niece of Antonio, the usurping duke. She is brought up on a desert island, with Ariel, the fairy spirit, and Caliban, the monster, as her only companions.

Miriam.—A beautiful and mysterious woman in Hawthorne's romance *The Marble Faun*, for love of whom Donatello commits murder, thus becoming her partner in crime.

Misanthrope, Le (*mi-zän-trop ' lu*).—A comedy by Molière, produced in 1666. This play is an almost inexhaustible source of allusions, quotations, proverbial sayings, etc. Its principal interest lies in the development of various pairs of opposing characters in even their lightest shades. It is the ideal of classic comedy. Alceste, the impatient, but not cynical, hero. Célimène the coquette, Oronte the fop, Éliante the reasonable woman, Arsinoë the mischief maker, are all immortal types.

Misérables, Les [*mi-zä-räb' l*]; or, *The Unfortunates*.]—A novel by Victor Hugo, in five parts: *Fantine, Cosette, Marius, L'Idylle Rue Plumet*, and *Jean Valjean*. It was published in 1862.

Morte d'Arthur (*mört där 'ther*).—(1) Compilation of Arthurian tales, called on the title page *The History of Prince Arthur*, compiled from the French by Sir Thomas Malory, and printed by William Caxton in 1470. It is divided into three parts. The first part contains the birth of King Arthur, the establishment of the Round Table, the romance of Balin and Balan, and the beautiful allegory of Gareth and Linet. The second part is mainly the romance of Sir Tristram. The third part is the romance of Sir Launcelot, the quest of the holy grail, and the death of Arthur, Guinevere, Tristram, Lamorake, and Launcelot.

(2) An idyll by Tennyson, called *The Passing of Arthur*, in the *Idylls of the King*. The poet supposes Arthur (wounded in the great battle of the west) to be borne off the field by Sir Bedivere. The wounded monarch directed Sir Bedivere to cast Excalibur into the mere. Sir Bedivere then carried the dying king to a barge, in which were three queens, who conveyed him to the island valley of Avilion.

Mualox.—The Fair God, Lew Wallace. The old paba or prophet who assured Nenetzin that she was to be the future queen in her father's palace.

Much Ado About Nothing.—A comedy by Shakespeare. It was first printed in 1600. The play was known as *Benedict and Bettris* in 1613, and is probably the same as *Love's Labor's Won*. The story of Hero is taken with some variations from one of Bandello's tales, which probably was borrowed from the story of Geneura and Ariodantes in the *Orlando Furioso* of Ariosto. This part of the play, however, is subordinated by Shakespeare to the loves of Benedict and Beatrice.

Mucklebasket.—*The Antiquary*, Scott. Name of a conspicuous family, consisting of Saunders Mucklebasket, the old fisherman of Musselcrag; Old Elspeth, mother of Saunders; Maggie, wife of Saunders; Steenie, the eldest son, who was drowned; Little Jennie, Saunders' child.

Mumblecrust, Madge.—A character in Edall's *Ralph Roister Doister*, whose name was subsequently employed in Dekker's *Satiro-Mastix*, and the comedy of *Patient Grissel*. Madge is mentioned in the MS. comedy of *Misogonus*.

Münchhausen (*münch 'hou-zen*). **The Baron.**—A hero of most marvelous adventures, and the fictitious author of a book of travels filled with most extravagant tales. The name is said to refer to Hieronymus Karl Friedrich von Münchhausen, a German officer in the Russian army, noted for his marvelous stories.

Mutual Friend, Our.—A novel by Charles Dickens. The "mutual friend" is Mr. Boffin, the golden dustman, who was the mutual friend of John Harmon and of Bella Wilfer. The tale is this: John Harmon was supposed to have been murdered by Julius Handford; but it was Ratford, who was murdered by Rogue Riderhood, and the mistake arose from a resemblance between the two persons. By his father's will, John Harmon was to marry Bella Wilfer; but John Harmon knew not the person destined by his father for his wife, and made up his mind to dislike her. After his supposed murder, he assumed the name of John Rokesmith, and became the secretary of Mr. Boffin, "the golden dustman," residuary legatee of old John Harmon, by which he became possessor of one hundred thousand dollars. Boffin knew Rokesmith, but concealed his knowledge for a time. At Boffin's house John Harmon (as Rokesmith) met Bella Wilfer, and fell in love with her. Mr. Boffin, in order to test Bella's love, pretended to be angry with Rokesmith for presuming to love Bella; and, as Bella married him, he cast them both off "for a time," to live on John's earnings. A babe was born, and then the husband took the young mother to a beautiful house, and told her he was John Harmon, that the house was their house, that he was the possessor of five hundred thousand dollars through the disinterested conduct of their "mutual friend," Mr. Boffin, and the young couple live happily with Mr. and Mrs. Boffin, in wealth and luxury.

My Novel.—A work of fiction by Edward, Lord Lytton, published in 1853. It is described as the "great work which marks the culminating point in Lord Lytton's genius, the work to which, with a rare estimate of his own powers, he has given the singularly appropriate title of *My Novel*.... If we except one or two melodramatic scenes, it is throughout an admirable work.... The plot is complex, but it is unfolded with marvelous directness and ingenuity, and, notwithstanding the digressions, the interest never for a moment flags." Among the characters are Squire Hazeldean, Mr. Dale, Dick Avenel, Leonard Fairfield, and Harley L'Estrange.

N

Nathan the Wise [*Nathan der Wise* (*nä 'tän der vī 'ze*)].—A drama by G. E. Lessing, so called from the name of its principal character. Its tendency is toward religious tolerance, especially in the episode of the three rings, which was taken from Boccaccio. Nathan is a persecuted but noble Jew, an ideal character resembling Moses Mendelssohn.

Natty Bumppo.—Called "Leather-Stocking." He appears in five of Cooper's novels: (1) *The Deerslayer*, (2) *The Pathfinder*, (3) As "Hawk-eye" in *The Last of the Mohicans*, (4) "Natty Bumppo" in *The Pioneers*; and (5) as the "Trapper" in *The Prairie*, in which he dies.

Neæra (*nē-é 'rā*).—The name of a girl mentioned by the Latin poets Horace, Vergil, and Tibullus; sometimes also introduced into modern pastoral poetry as the name of a mistress or sweetheart.

Nepenthe.—A care-dispelling drug, which Polydamna, wife of Thonis, king of Egypt, gave to Helen. A drink containing this drug "changed grief to mirth, melancholy to joyfulness, and hatred to love." The water of Ardenne had the opposite effects. Homer mentions this drug nepenthe in his *Odyssey*. It is also mentioned in Poe's *Raven*.

New Atlantis, The.—An imaginary island in the middle of the Atlantic. Bacon, in his allegorical fiction, so called, supposes himself wrecked on this island, where he finds an association for the cultivation of natural science and the promotion of arts. Called the "New" Atlantis to distinguish it from Plato's Atlantis, an imaginary island of fabulous charms.

Newcomes, The.—*Memoirs of a Most Respectable Family*, by William Makepeace Thackeray. The hero is Clive Newcome, a young artist, son of Colonel Newcome, and cousin of Ethel Newcome, who he marries after the death of his first wife, Rosa Mackenzie. Among the other characters are Comte de Florac, Charles Honeyman, "J. J.," Fred Bayham, Lady Kew, Jack Belsize, Dr. Goodenough, and others.

Colonel Newcome, is "the finest portrait," says Hannay, "that has been added to the gallery of English fiction since Sir Walter's time. The pathos, at once manly and delicate, with which his ruin and death are treated, places Thackeray in a high rank in poetic sentiment."

Nibelungenlied (*nē 'be-loong-en-léd*).—An historic poem, generally called the German *Iliad*. It is the only great national epic that European writers have produced since antiquity, and belongs to every country that has been peopled by Germanic tribes, as it includes the hero traditions of the Franks, the Burgundians and the Goths, with memorials of the ancient myths carried with them from Asia. The poem is divided into two parts, and thirty-two lieds, or cantos. The first part ends with the death of Siegfried, and the second part with the death of Kriemhild. The death of Siegfried and the revenge of Kriemhild have been celebrated in popular songs dating back to the lyric chants now a thousand years old. These are the foundation of the great poem.

Nicholas Nickleby.—A novel by Dickens. The mother of the hero, Nicholas, is a widow fond of talking and of telling long stories with no connection. She imagined her neighbor, a mildly insane man, was in love with her because he tossed cabbages and other articles over the garden wall. She had a habit of introducing in conversation topics wholly irrelevant to the subject under consideration, and of always declaring, when anything unanticipated occurred, that she had expected it all along, and had prophesied to that precise effect on divers (unknown) occasions. Nicholas Nickleby has to make his own way in the world. He first goes as usher to Mr. Squeers, schoolmaster at Dotheboys Hall, but leaves in disgust with the tyranny of Squeers and his wife, especially to a poor boy named Smike. Smike runs away from the school to follow Nicholas, and remains his humble follower till death. At Portsmouth, Nicholas joins the theatrical company of Mr. Crummles, but leaves the profession for other adventures. He falls in with the Brothers Cheeryble, who make him their clerk; and in this post he rises to become a merchant, and finally marries Madeline Bray.

Nightingale, Ode to a.—Poem by John Keats, which "was written," says Leigh Hunt, "in a house at the foot of Highgate Hill, on the border of the fields looking toward Hampstead. The poet had then his mortal illness upon him, and knew it; never was the voice of death sweeter."

Thou wast not born for death, immortal Bird!
No hungry generations tread thee down;
The voice I hear this passing night was heard
In ancient days by emperor and clown;
Perhaps the selfsame song that found a path
Through the sad heart of Ruth, when, sick for home,
She stood in tears amid the alien corn;
The same that ofttimes hath
Charm'd magic casements, opening on the foam
Of perilous seas, in faëry lands forlorn.

Notre Dame de Paris.—A prose romance by Victor Hugo, published in 1831. The scene is laid in Paris at the end of the reign of Louis XI. It is a vigorous but somber picture of mediæval manners.

Nourmahal (*nör-ma-häl '*).—*Lalla Rookh*, Moore. "Light of the Harem." She was for a season estranged from the sultan, till he gave a grand banquet, at which she appeared in disguise as a lute-player and singer. The sultan was so enchanted with her performance that he exclaimed, "If Nourmahal had so played and sung, I could forgive her all;" whereupon the sultana threw off her mask.

Nucta.—*Paradise and the Peri*, Moore. The name given to the miraculous drop which falls from heaven, in Egypt, on St. John's day, and is supposed to stop the plague.

Nun of Nidaros.—*Tales of a Wayside Inn*, Longfellow. The abbess of the Drontheim convent, who heard the voice of St. John while she was kneeling at her midnight devotions.

Nut-Brown Maid.—*Reliques*, Percy. The maid who was wooed by the "banished man." The "banished man" described to her the hardships she would have to undergo if she married him; but finding that she accounted these hardships as nothing compared with his love, he revealed himself to be an earl's son, with large hereditary estates in Westmoreland, and married her.

O

Obermann (*ö-ber-män '*).—The impersonation of high moral worth without talent, and the tortures endured by the consciousness of this defect. This name was given to the hero and imaginary author of a work of the same name by Etienne Pivert de Senancourt, a French writer.

Oberon (*ö 'be-ron*).—King of the fairies, whose wife was Titania. Shakespeare introduces both Oberon and Titania in his *Midsummer Night's Dream*. He and Titania, his queen, are fabled to have lived in India, and to have crossed the seas to northern Europe to dance by the light of the moon.

Oberon the Fay.—A humpty dwarf only three feet high, but of angelic face, lord and king of Mommur.

Odyssey (*od 'i-si*).—Homer's epic poem recording the adventures of Odysseus (Ulysses) in his voyage home from Troy. The poem opens in the island of Calypso, with a complaint against Neptune and Calypso for preventing the return of Odysseus to Ithaca. Telemachos, the son of Odysseus, starts in search of his father, accompanied by Pallas in the guise of Mentor. He goes to Pylos to consult old Nestor, and is sent by him to Sparta, where he is told by Menelaus that Odysseus is detained in the island of Calypso. In the meantime, Odysseus leaves the island, and, being shipwrecked, is cast on the shore of Phæacia. After twenty years' absence Odysseus returns to his home. Penelope is tormented by suitors. To excuse herself, Penelope tells her suitors he only shall be her husband who can bend Odysseus' bow. None can do so but the stranger, who bends it with ease. Odysseus is recognized by his wife, and the false suitors are all slain, and peace is restored to Ithaca.

Œdipus (*ed 'i-pus*) **Colonus** [*kô-lô-né 'us*]; or, *Œdipus at Colonus* (*kô-lô 'nus*)].—A tragedy of Sophocles, which was not exhibited till four years after his death, and was said to be the last he wrote. In it Œdipus, driven from Thebes by Creon, with his daughters, Antigone and Ismene, seeks asylum with Theseus at Athens, and there obtains pardon from the gods, and peace.

Œdipus Tyrannus (*ti-rän 'us*).—A tragedy by Sophocles, of uncertain date. "placed by the scholiasts, and by most modern critics, at the very summit of Greek tragic art."

Ogier (*ö-zhivä '*) the Dane.—One of the paladins of the Charlemagne epoch. Also made the hero of an ancient French romance, and the subject of a ballad whose story is probably a contribution from the stores of Norman tradition, Holger, or Olger, Danske, being the national hero of Denmark. He figures in Ariosto's *Orlando Furioso*.

O'Groat.—A name often alluded to in early English parables or sayings coming from the legend of *John O'Groat's House*. This ancient building was supposed to stand on the most northerly point in Great Britain. John of Groat and his brothers were originally from Holland. According to tradition, the house was of an octagonal shape, being one room with eight windows and eight doors, to admit eight members of the family, the heads of eight different branches of it, to prevent their quarrels for precedence at table, which, on a previous occasion, had well-nigh proved fatal.

Oldbuck, Jonathan.—*Antiquary*, Scott. The character whose whimsies gave name to the novel. He is represented as devoted to the study and accumulation of old coins, medals, and relics. He is irritable, sarcastic, and cynical from an early disappointment in love, but full of humor and a faithful friend.

Old Curiosity Shop, The.—A tale by Charles Dickens. An old man, having run through his fortune, opened a curiosity shop in order to earn a living and brought up a granddaughter, named Nell (Trent), fourteen years of age. The child was the darling of the old man, but, deluding himself with the hope of making a fortune by gaming, he lost everything, and went forth, with the child, a beggar. Their wanderings and adventures are recounted till they reach a quiet country village, where the old clergyman gives them a cottage to live in. Here Nell soon dies, and the grandfather is found dead upon her grave. The main character, next to Nell, is that of a lad named Kit (Nubbles), employed in the curiosity shop, who adored Nell as “an angel.” This boy gets in the service of Mr. Garland, a genial, benevolent, well-to-do man, in the suburbs of London; but Quilp hates the lad, and induces Brass, a solicitor of Bevis Marks, to put a five pound banknote in the boy’s hat, and then accuse him of theft. Kit is tried, and condemned to transportation; but, the villainy being exposed by a girl-of-all-work nicknamed “The Marchioness,” Kit is liberated and restored to his place, and Quilp drowns himself.

Old Man of the Sea.—In the *Arabian Nights*, a monster encountered by Sindbad the sailor in his fifth voyage. After carrying him upon his shoulders a long time, Sindbad at last succeeds in intoxicating him, and effects his escape. The *Old Man of the Sea* was also made the title of a humorous and well-known poem by O. W. Holmes.

Old Mortality, the best of Scott’s historical novels. Morton is the best of his young heroes, and serves as an excellent foil to the fanatical and gloomy Burley. The two classes of actors, viz., the brave and dissolute cavaliers, and the resolute oppressed covenanters, are drawn in bold relief. The most striking incidents are the terrible encounter with Burley in his rocky fastness; the dejection and anxiety of Morton on his return from Holland; and the rural comfort of Cuddie Heddrigg’s cottage on the banks of the Clyde, with its thin blue smoke among the trees, “showing that the evening meal was being made ready.” Old Mortality is an itinerant antiquary, whose craze is to clean the moss from gravestones, and keep their letters and effigies in good condition.

Old Red Sandstone.—One of the most noted of Hugh Miller’s famous writings on geological subjects. It revealed his discovery of fossils in a formation which, up to that time, had been deemed almost destitute of them.

Oliver.—As *You Like It*, Shakespeare. Son and heir of Sir Rowland de Bois, who hated his youngest brother, Orlando, and whom he planned to murder by indirect methods. Orlando, finding it impossible to live in his brother’s house, fled to the forest of Arden, where he joined the society of the banished duke. Oliver pursued him, and as he slept in the forest a snake and a lioness lurked near to make him their prey. Orlando chanced to be passing, slew the two monsters, and then found that the sleeper was his brother Oliver. Oliver’s feelings underwent a change, and he loved his brother as much as he had before hated him. In the forest the two brothers met Rosalind and Celia. The former, who was the daughter of the banished duke, married Orlando; and the latter, who was the daughter of Frederick, the usurping duke, married Oliver.

Oliver Twist.—A novel by Charles Dickens. Thackeray, writing of this novel, in the character of “Ikey Solomons,” says: “The power of the writer is so amazing that the reader at once becomes his captive, and must follow him whithersoever he leads; and to what are we led? Breathless to watch all the crimes of Fagin, tenderly to deplore the errors of Nancy, to have for Bill Sikes a kind of pity and admiration, and an absolute love for the society of the Dodger. All these heroes stepped from the novel on to the stage; and the whole London public, from peers to chimney sweeps, were interested about a set of ruffians whose occupations are thievery, murder, and prostitution.” A remarkable feature of the work, and one which, on its publication, brought considerable odium on the writer, was its unsparing exposure of the poor-law and the workhouse system, which led to its representation on the stage being forbidden for a time.

Olivia.—*Twelfth Night*, Shakespeare. A rich countess, whose love was sought by Orsino, duke of Illyria; but, having lost her brother, Olivia lived for a time in entire seclusion, and in no wise reciprocated the duke’s love. Olivia fell in love with Viola, who was dressed as the duke’s page, and sent her a ring. Mistaking Sebastian (Viola’s brother) for Viola, she married him out of hand.

Ophelia (*ô-fê liä*).—*Hamlet*, Shakespeare. Daughter of Polonius, the chamberlain. Hamlet fell in love with her, but, after his interview with the Ghost, finds that his plans must lead away from her. During his real or assumed madness, he treats her with undeserved and angry rudeness, and afterward, in a fit of inconsiderate rashness, kills her father, the old Polonius. The terrible shock given to her mind by these events completely shatters her intellect, and leads to her accidental death by drowning.

Organon (*ôr ga-non*).—The name given to the first work on logic by Aristotle. He is said to have created the science of logic. The *Organon* has been enlarged and recast by some modern authors, especially by Mr. John Stuart Mill in his *System of Logic*, into a structure commensurate with the vast increase of knowledge and extension of positive method belonging to the present day.

Origin of Species, The.—A work by Charles Robert Darwin, in which he put forward his theory of “natural selection.” It was published in 1859, and by many is regarded as the most important scientific work of the nineteenth century.

Orlando Furioso (*or-län dö fö-rê-ô sö*).—An epic poem in forty-six cantos, by Ariosto, which occupied his leisure for eleven years, and was published in 1516. This poem, which celebrates the semi-mythical achievements of the paladins of Charlemagne in the wars between the Christians and the Moors, became immediately popular, and has since been translated into all European languages, and passed through innumerable editions.

Ormulum (*ôr mü-lum*).—The *Ormulum* is a collection of metrical homilies, one for each day of the year; but the single existing copy gives the homilies for thirty-two days only. There are very few French words in the poem, but Scandinavian words and constructions abound. The writer, Orm, or Ormin, belonged to the east of England, and he and his brother Walter were Augustinian monks. He makes no use of rhyme, but his verses are smooth and regular.

Osbaldistone (*os-bäl dis-ton*).—*Rob Roy*, Scott. A family name in the story which tells of nine of the members: (1) the London merchant and Sir Hildebrand, the heads of two families; (2) the son of the merchant is Francis; (3) the offspring of the brother are Percival, the sot; Thorncliffe, the bully; John, the gamekeeper; Richard, the horse-jockey; Wilfred, the fool; and Rashleigh, the scholar, by far the worst of all. This last worthy is slain by Rob Roy, and dies cursing his cousin Frank, whom he had injured.

O’Shanter.—See *Tam O’Shanter*.

Osman (*os-män*),—Sultan of the East, conqueror of the Christians, a magnanimous man. He loved Yara, a young Christian captive. This forms the subject of a once famous ballad.

Osrick (*oz rik*).—A court fop in Shakespeare’s *Hamlet*. He is made umpire by Claudius in the combat between Hamlet and Laertes.

Osseo.—*Hiawatha*, Longfellow. Son of the Evening Star. When broken with age, he married Oweenee, one of ten daughters of a northland hunter. She loved him in spite of his ugliness and decrepitude, because “all was beautiful within him.” As he was walking with his nine sisters-in-law and their husbands, he leaped into the hollow of an oak tree and came out strong and handsome; but Oweenee at the same moment was changed into a weak old woman. But the love of Osseo was not weakened. The nine brothers and sisters-in-law were transformed into birds. Oweenee, recovering her beauty, had a son, whose delight was to shoot the birds that mocked his father and mother. An Algonquin legend gave the foundation of the story.

Othello (*ô-thel ô*).—A tragedy by Shakespeare. The chief character is a Moor of Venice, who marries Desdemona, the daughter of a Venetian senator, and is led by his ensign, Iago, a consummate villain, to distrust her fidelity and virtue. Iago hated the Moor both because Cassio, a Florentine, was preferred to the lieutenantancy instead of himself, and also from a suspicion that the Moor had tampered with his wife; but he concealed his hatred so well that Othello wholly trusted him. Iago persuaded Othello that Desdemona intrigued with Cassio, and urged him on till he murdered his bride.

Outre-Mer (*ôotr-mêr*).—*A Pilgrimage Beyond the Sea.*—A series of prose tales and sketches by Henry Wadsworth Longfellow, published in 1835. “The Pays d’Outre-Mer,” says the writer, “is a name by which the pilgrims and crusaders of old designated the Holy Land. I, too, in a certain sense, have been a pilgrim of Outre-Mer; for to my youthful imagination the Old World was a kind of Holy Land, lying afar off beyond the blue horizon of the ocean. In this, my pilgrimage, I have traversed France from Normandy to Navarre; smoked my pipe in a Flemish inn; floated through Holland in a Trekschuit; trimmed my midnight lamp in a German university; wandered and mused amid the classic scenes of Italy; and listened to the gay guitar and merry castanet on the borders of the blue Guadalquivir.”

P

Pacolet (*pak ô-let*).—In *Valentine and Orson*, an old romance, a character who owned an enchanted steed, often alluded to by early writers. The name of Pacolet was borrowed by Steele for his familiar spirit in the *Tatler*. The French have a proverb, “It is the horse of Pacolet;” that is, it is one that goes very fast.

Page.—*Merry Wives of Windsor*, Shakespeare. Name of a family of Windsor, conspicuous in the play. When Sir John Falstaff made love to Mrs. Page, Page himself assumed the name of Brook. Sir John told the supposed Brook his whole “course of wooing.”

Page, Anne.—Daughter of the above, in love with Fenton. Slender calls her “the sweet Anne Page.”

Page, Mrs.—Wife of Mr. Page, of Windsor. When Sir John Falstaff made love to her, she joined with Mrs. Ford to dupe him and punish him.

Palamon.—(1) A character in *The Knight’s Tale* in Chaucer’s *Canterbury Tales*, in love with Emilia, who is also beloved by Palamon’s friend, Arcite. (2) In Falconer’s poem of *The Shipwreck*, is in love with the daughter of Albert, the commander of the vessel in which he sails. (3) In Thomson’s poem of *Autumn in The Seasons*, is a young man, “the pride of swains,” in love with Lavinia. He is a poetical representation of Boaz, while Lavinia is intended for Ruth.

Pangloss (*pan glos*), **Doctor.**—(1) A poor pedant, in Colman the Younger’s comedy of the *Heir at Law*, who has been created an *Artium Societatis Socius* (A. S. S.). He is remarkable for the aptness, if triteness, of his quotations. (2) An optimist philosopher in Voltaire’s *Candide*.

Pantagruelian (*pan-tag rô-el-an*) **Law Case.**—*Pantagruel*, Rabelais. This case, having nonplused all the judges in Paris, was referred to Lord Pantagruel for decision. After much “statement” the bench declared, “We have not understood one single circumstance of the defense.” Then Pantagruel gave sentence, but his judgment was as unintelligible as the case itself. So, as no one understood a single sentence of the whole affair, all were perfectly satisfied.

Paracelsus (*par-a-sel sus*).—A dramatic poem by Robert Browning, published in 1835. It is a work of singular beauty, and is replete with lofty and solemn thoughts on the fate of genius and the chance and change of life. The Paracelsus of the poem is a very different person from the Paracelsus of history—the brilliant and daring quack who professed to have discovered the philosopher’s stone, but who, by the introduction of opium among the remedies of the *Pharmacopœia*, in some wise made amends for his absurd extravagance.

Paradise and the Peri.—The second tale in Moore’s poetical romance of *Lalla Rookh*. The Peri laments her expulsion from heaven, and is told that she will be readmitted if she will bring to the gate of heaven the “gift most dear to the Almighty.” After several failures the Peri offered the “Repentant Tear,” and the gates flew open to receive the gift.

Paradise Lost.—An epic poem by Milton. The poem opens with the awaking of the rebel angels in hell after their fall from heaven, the consultation of their chiefs how best to carry on the war with God, and the resolve of Satan to go forth and tempt newly created man to fall. Satan reaches Eden, and finds Adam and Eve in their innocence. This is told in the first four books. The next four books contain the Archangel Raphael’s story of the war in heaven, the fall of Satan, and the creation of the world. The last four books describe the temptation and the fall of man, and tell of the redemption of man by Christ, and the expulsion from Paradise.

Paradise Regained.—An epic by Milton on the redemption of man. In this poem the author tells of the journey of Christ into the wilderness after his baptism, and its four books describe the temptation of Christ by Satan.

Parallel Lives of Greeks and Romans.—A celebrated biographical work by Plutarch, consisting of forty-six comparisons. In spite of all exceptions on the score of inaccuracy, want of information, or prejudice, *Plutarch’s Lives* must remain one of the most valuable relics of Greek literature, not only because they stand in the place of many volumes of lost history, but also because they are written with a graphic and dramatic vivacity such as we find in few biographies, ancient or modern; because they are replete with reflections which, if not profound, are always moderate and sensible; and because the author’s aim throughout is to enforce the highest standard of morality of which a heathen was capable. As one of his most enthusiastic admirers has said, “He stands before us as the legate, the ambassador, and the orator on behalf of those institutions whereby the old-time men were rendered wise and virtuous.”

Partington (*pär ting-ton*), **Mrs.**—An imaginary old lady whose laughable sayings have been recorded by an American humorist, B. P. Shillaber.

Paul and Virginia.—A popular romance by Bernardin de St. Pierre. According to a tradition, or version, Paul and Virginia are brought up in the belief that they are brother and sister. Don Antonio is sent to bring her to Spain, and make her his bride. She is taken by force on board ship, but scarcely has the ship started, when a hurricane dashes it on the rocks and it is wrecked. Alhambra, a runaway slave, whom Paul and Virginia had befriended, rescues Virginia, who is brought to shore and married to Paul. Antonio is drowned.

Pauline.—The Lady of Lyons in Bulwer-Lytton’s play of this name. She was married to Claude Melnotte, a gardener’s son, who pretended to be a count.

Paul Pry.—*Paul Pry*, John Poole. An idle, inquisitive, meddling fellow, who has no occupation of his own, and is forever poking his nose into other people’s affairs. He always comes in with the apology “I hope I don’t intrude.”

Peau de Chagrin (*pô du shâ-grin*), “*The Ass’s Skin*.”—A story by Balzac. The hero becomes possessed of a magical wild ass’ skin, which yields him the means of gratifying every wish; but for every wish thus gratified the skin shrank somewhat, and at last vanished, having been wished entirely away. Life is a *peau d’âne*, for every vital act diminishes its force, and when all its force is gone, life is spent.

Peeping Tom of Coventry.—A tailor of Coventry, the only soul in the town mean enough to peep at the Lady Godiva as she rode naked through the streets to relieve the people from oppression.

Peggotty (*peg ô-ti*), **Clara.**—The nurse of David Copperfield in Dickens’ novel of this name. Being very plump, whenever she makes any exertion some of the buttons on the back of her dress fly off.

Peggotty, Dan’l.—Brother of David Copperfield’s nurse. Dan’l was a Yarmouth fisherman. His nephew, Ham Peggotty, and his brother-in-law’s child, “little Em’ly,” lived with him.

Peggotty, Em’ly.—She was engaged to Ham Peggotty; but being fascinated with Steerforth she eloped. She was afterward reclaimed, and emigrated to Australia.

Peggotty, Ham.—Represented as the very beau ideal of an uneducated, simple-minded, honest, and warm-hearted fisherman. He was drowned in his attempt to rescue Steerforth from the sea.

Pendennis (*pen-den is*), **The History of.**—By William Makepeace Thackeray. The hero, Arthur Pendennis, reappears in the author’s *Adventures of Philip*, and is represented as telling the story of *The Newcomes*.

Pendennis.—Name of the hero of a novel by Thackeray, published in 1849 and 1850, the immediate successor of *Vanity Fair*. Literary life is described in the history of Pen, a hero of no very great worth.

Pendennis, Laura.—Sister of Arthur, considered one of the best of Thackeray’s characters.

Pendennis, Major.—A tuft-hunter, who fawns on his patrons for the sake of wedding himself into their society.

Penseroso (*pen-se-rô sö*), **Il.**—A poem by John Milton, written as a companion to *L’Allegro*. The latter is composed in the character of a cheerful, the former in that of a melancholy man, and the whole tone of each poem is regulated accordingly. The one begins with the dawn, the other with evening. The one opens with the lark, the other

with the nightingale, and so on.

Pepys' (*pěps*, or *pips*, or *pep is*) **Diary**.—A book by Samuel Pepys, written in shorthand, and deciphered and published in 1825. It extends over the nine years from 1660 to 1669, and is the gossipy chronicle of that gay and profligate time. We have no other book which gives so lifelike a picture of that extraordinary state of society.

Peregrine Pickle (*per e-grin pik 7*).—The title of a novel by Smollett. Peregrine Pickle is a savage, ungrateful spendthrift, fond of practical jokes, and suffering with evil temper the misfortunes brought on himself by his own willfulness.

Peter Bell.—A tale in verse, by Wordsworth. A wandering tinker, subject of Wordsworth's poem, whose hard heart was touched by the fidelity of an ass to its dead master. Shelley wrote a burlesque of this poem, entitled *Peter Bell the Third*, intended to ridicule the ludicrous puerility of language and sentiment which Wordsworth often affected. This burlesque was given the name of the *Third* because it followed a parody already published as *Peter the Second*.

Petruchio (*pe-trō chō*, or *ki-ō*).—A gentleman of Verona, in Shakespeare's *Taming of the Shrew*. A very honest fellow, who hardly speaks a word of truth, and succeeds in all his tricks. He acts his assumed character to the life, with untired animal spirits, and without a particle of ill-humor.

Phædo (*fē dō*), or **Phædon** (*fē dōn*).—An ancient and well known work by Plato, in which the doctrine of the immortality of the soul is most fully set forth. It is in the form of a dialogue, which combines, with the abstract philosophical discussion, a graphic narrative of the last hours of Socrates, which, for pathos and dignity, is unsurpassed.

Phédre (*fā dr*).—A tragedy by Racine, produced January 1, 1677. It was founded on the story of Phædra, daughter of Minos, king of Crete, and wife of Theseus. She conceived a criminal love for Hippolytus, her stepson, and, being repulsed by him, accused him to her husband of attempting to dishonor her. Hippolytus was put to death, and Phædra, wrung with remorse, strangled herself. *Phédre* was the great part of Mdlle. Rachel; she first appeared in this character in 1838. It is unquestionably the most remarkable of Racine's regular tragedies. By it the style must stand or fall, and a reader need hardly go farther to appreciate it. For excellence of construction, artful beauty of verse, skillful use of the limited means of appeal at the command of the dramatist, no play can surpass *Phédre*.

Philip.—*The Madness of Philip*, Josephine Daskam. A representation of the unregenerate child—"the child of strong native impulses who has not yet yielded to the shaping force of education; the child, therefore, of originality, of vivacity, of humor, and of fascinating power of invention in the field of mischief."

Philippics (*fī-lip icks*), **The**.—A group of nine orations of Demosthenes, directed against Philip of Macedon. The real adversary in all these famous speeches is not so much the king of Macedon as the sloth and supineness of the Athenians, and the influence of the peace party, whether honest or bribed by Philip. They are the first Philippic, urging the sending of a military force to Thrace, delivered 351 B. C; three orations in behalf of the city of Olynthus (destroyed by Philip), delivered in 349-348; the oration *On the Peace*, 346; the second Philippic, 344; the oration *On the Embassy*, 344; the speech *On the Chersonese*, 341; and the third Philippic, 341.

The name is also given to a series of fourteen orations of Cicero against Mark Antony, delivered 44-43 B. C.

Philtra.—*Faërie Queene*, Spenser. A lady of large fortune, betrothed to Bracidas; but, seeing the fortune of Amidas daily increasing, and that of Bracidas getting smaller, she attached herself to the more prosperous younger brother.

Phineas (*fīn e-as*).—*Uncle Tom's Cabin*, Mrs. Stowe. The quaker, an "underground railroad" man who helped the slave family of George and Eliza to reach Canada, after Eliza had crossed the river on cakes of floating ice.

Phyllis (*fīl is*).—In Vergil's *Eclogues*, the name of a rustic maiden. This name, also written Phillis, has been in common use as meaning any unsophisticated country girl.

Pickwick (*pik wik*), **Mr. Samuel**.—The hero of the *Pickwick Papers*, by Charles Dickens. He is a simple-minded, benevolent old gentleman, who wears spectacles and short black gaiters. He finds a club, and travels with its members over England, each member being under his guardianship. They meet many laughable adventures.

Pied Piper of Hameln (*hā meln*).—Old German legend. Robert Browning, in his poem entitled *The Pied Piper*, has given a metrical version. The legend recounts how a certain musician came into the town of Hameln, in the country of Brunswick, and offered, for a sum of money, to rid the town of the rats by which it was infested. Having executed his task, and the promised reward having been withheld, he in revenge blew again his pipe, and by its tones drew the children of the town to a cavern in the side of a hill, which, upon their entrance, closed and shut them in forever.

Piers Plowman (*pěrs plou man*).—A satirical poem of the fourteenth century. The hero falls asleep, like John Bunyan, on the Malvern hills, and has different visions, which he describes, and in which he exposes the corruptions of society, the dissoluteness of the clergy, and the allurements to sin. The author is supposed to be Robert or William Langland. No other writings so faithfully reflect the popular feeling during the great social and religious movements of that century as the bitterly satirical poem. *The Vision of Piers Plowman*. In its allegory, the discontent of the commons with the course of affairs in church and state found a voice.

Pietro.—*The Ring and the Book*, Browning. The professed father of Pompilia, criminally assumed as his child to prevent certain property from passing to an heir not his own.

Pilgrim's Progress.—A celebrated allegory by Bunyan. It recounts the adventures of the hero, Christian, from his conversion to his death. He wanders from the way to Doubting Castle, and is held there by Giant Despair. His sins are a pack; his Bible is a chart, his minister Evangelist, his conversion a flight from the City of Destruction, his struggle with besetting sins a fight with Apollyon, his death a toilsome passage over a deep stream which flows between him and heaven.

Pilot, The.—Title of a sea-story by Cooper, which was called the "first sea-novel of the English language." It was published in the year 1823, and soon translated into Italian, German, and French. It is founded on the adventures of John Paul Jones.

Pinch, Tom.—A character in Dickens' *Martin Chuzzlewit*, distinguished by his guilelessness, his oddity, and his exhaustless goodness of heart.

Pippa (*pěp pā*) **Passes**.—A drama, Italian in scene and character, by Robert Browning. "It is," says Stedman, "a cluster of four scenes, with prologue, epilogue, and interludes, half prose, half poetry, varying with the refinement of the dialogue. Pippa is a delicately pure, good, blithesome peasant maid. It is New Year's Day at Ardo. She springs from bed at sunrise, resolved to enjoy to the full her sole holiday. Others may be happy throughout the year; haughty Ottima and Sebald, the lovers on the hill; Jules and Phene, the artist and his bride; Luigi and his mother; Monsignor, the bishop; but Pippa has only this one day to enjoy. Now, it so happens that she passes, this day, each of the groups or persons we have named, at an important crisis in their lives, and they hear her various carols as she trills them forth in the innocent gladness of her heart. *Pippa Passes* is a work of pure art, and has a wealth of original fancy and romance, apart from its wisdom." It appeared in 1842.

Pistol (*pis toh*).—A follower of Falstaff, in Shakespeare's comedy of *The Merry Wives of Windsor*, and in the second part of *King Henry IV*. "A roguing beggar, a cantler, an upright man that liveth by cozenage."

Pocket.—*Great Expectations*, Dickens. Name of a family prominent in the story.

Pocket.—A real scholar, educated at Harrow, and an honor-man at Cambridge, but, having married young, he had to take up the calling of "grinder" and literary fag for a living. Pip was placed in his care.

Pocket, Herbert.—Son of Mr. Matthew Pocket, wonderfully hopeful, but had not the stuff to push his way into wealth.

Pocket, Mrs.—Daughter of a city knight, brought up to be an ornamental nonentity, helpless, shiftless, and useless. She was the mother of eight children, whom she allowed to "tumble up" as best they could, under the charge of her maid, Flopsion.

Pocket, Sarah.—Sister of Matthew Pocket, a little, dry, old woman, with a small face that might have been made of walnut-shell, and a large mouth.

Poor Richard's Almanac.—An almanac published by Benjamin Franklin, 1732-1757, noted for its maxims. He made it the medium for teaching thrift, temperance, order, cleanliness, chastity, forgiveness, and so on. The maxims or precepts of these almanacs generally end with the words, "as poor Richard says."

Portia (*pōr shā*).—In *The Merchant of Venice*, a rich heiress, whose hand and fortune hang upon the right choosing between a gold, a silver, and a leaden casket. She is in love with Bassanio, who, luckily, chooses well. She appears at the trial of Antonio as a "young doctor of Rome," named Balthazar.

Poyser (*poi zer*), **Mrs**.—A character in *Adam Bede*. Some of her wonderfully shrewd and humorous observations have passed into the language. Here are some specimens: "It seems as if them as aren't wanted here are th' only folks as aren't wanted in the other world." "I'm not denyin' the women are foolish; God Almighty made 'em to match the men." "It's hard to tell which is Old Harry when everybody's got boots on." "There's many a good bit o' work done with a sad heart." "It's poor work allays settin' the dead above the livin'." "It 'ud be better if folks 'ud make much on us beforehand, istid o' beginnin' when we're gone." "Some folks' tongues are like the clocks as run on strikin' not to tell you the time of day, but because there's summat wrong in their own inside."

Précieuses Ridicules (*prā-syuz ri-di-kul*), **Les**.—A comedy by Molière, in ridicule of the *Précieuses*, as they were styled, forming the coterie of the Hotel de Rambouillet in the seventeenth century. The *soirées* held in this hotel were a great improvement on the licentious assemblies of the period; but many imitators made the thing ridiculous, because they lacked the same presiding talent and good taste.

The two girls of Molière's comedy are Madelon and Cathos, the daughter and niece of Gargibus, a bourgeois. They change their names to Polixène and Aminte, which they think more genteel, and look on the affectations of two flunkies as far more *distingués* than the simple, gentlemanly manners of their masters. However, they are cured of their folly, and no harm comes of it.

Prelude (*prē lūd*, or *prel ūd*), **The**, or *The Growth of a Poet's Mind*.—An autobiographical poem, in blank verse, by William Wordsworth. It was intended as an introduction to "a philosophical poem, containing views of Man, Nature, and Society; and to be entitled *The Recluse*, as having for its principal subject the sensations and opinions of a poet living in retirement." This poem was to have consisted of three parts, of which the second only, *The Excursion*, was completed and published. *The Prelude* consists of fourteen books: Book one, *Childhood and Schooltime*; book two, *Schooltime*, continued; book three, *Residence at Cambridge*; book four, *Summer Vacation*; book five, *Books*; book six, *Cambridge and the Alps*; book seven, *Residence in London*; book eight, *Retrospect—Love of Nature Leading to Love of Man*; book nine, *Residence in France*; book ten, *Residence in France*, continued; book eleven, *France*, concluded; book twelve, *Imagination and Taste, How Impaired and Restored*; book thirteen, the same subject continued and concluded; and book fourteen, *Conclusion*.

Primrose (*prim rōz*), **Rev. Charles**.—*Vicar of Wakefield*, Goldsmith. A clergyman, rich in heavenly wisdom, but poor indeed in all worldly knowledge.

Primrose, Moses.—Brother of the above, noted for giving in barter a good horse for a gross of worthless green spectacles with copper rims.

Primrose, Olivia.—The eldest daughter of the doctor. Pretty, enthusiastic, a sort of Hèbè in beauty. "She wished for many lovers," and eloped with Squire Thorndill.

Primrose, Sophia.—The second daughter of Dr. Primrose. She was "soft, modest, and alluring."

Princess: a *Medley*.—A poem by Alfred Tennyson. "It is," says Stedman, "as he entitles it, a medley, constructed of ancient and modern materials—a show of mediæval pomp and movement, observed through an atmosphere of latterday thought and emotion. The poet, in his prelude, anticipates every stricture, and to me the anachronisms and impossibilities of the story seem not only lawful, but attractive. Tennyson's special gift of reducing incongruous details to a common structure and tone is fully illustrated in a poem made—

"To suit with time and place,
A Gothic ruin and a Grecian house,
A talk at college and of ladies' rights,
A feudal knight in silken masquerade."

Other works of our poet are greater, but none is so fascinating. Some of the author's most delicately musical lines are herein contained. The tournament scene is the most vehement and rapid passage in the whole range of Tennyson's poetry. The songs reach the high water mark of lyrical compositions. The five melodies—*As Thro' the Land, Sweet and Low, The Splendor Falls, Home They Brought and Ask Me No More*—constitute the finest group of songs produced in our century, and the third seems to many the most perfect English lyric since the time of Shakespeare." The name of the Princess is Ida.

Priscilla (*prī-sil ā*).—*Courtship of Miles Standish*, Longfellow. A Puritan maiden who is wooed by Captain Standish through the mediation of his friend, John Alden, who is in love with Priscilla. She prefers John Alden and marries him after the captain's supposed death. The captain, however, appears at the close of the wedding service, and the friends are reconciled.

Prometheus (*prō-mē thūs*) **Bound**.—A tragedy of Æschylus, of uncertain date. Prometheus is fabled to have made men of clay, and to have imparted life to them by means of fire brought from heaven. It was said that for this he was bound to the rock by order of Zeus, that he resisted all efforts to subdue his will and purpose, bade defiance to the father of the gods, and disappeared in an appalling tempest. Mrs. Browning published a poetical translation in 1833.

Prospero (*pros pe-rō*).—*Tempest*, Shakespeare. Rightful duke of Milan, deposed by his brother. Drifted on a desert island, he practised magic, and raised a tempest in which his brother was shipwrecked. Ultimately Prospero "broke his wand," and his daughter married the son of the King of Naples.

Puff, Mr.—In Sheridan's farce *The Critic*, a hack writer, who, having failed at other occupations, tries criticism for a living, and is a "professor of the art of puffing."

Puss in Boots.—The subject and title of a well-known nursery tale derived from a fairy story in the *Nights* of the Italian author Straparola, and Charles Perrault's *Contes des Fées*. The wonderful cat secures a princess and a fortune for his master, a poor young miller, whom he passes off as the rich marquis of Carabas.

Pygmalion (*pig-mā l'on*) and **Galatea** (*gal-a-tē ā*).—A mythological comedy, by W. S. Gilbert, embodying the fable of the Athenian sculptor who prayed the gods to put life into the statue of Galatea which he had fashioned. In the comedy, Galatea evokes the jealousy of the sculptor's wife Cynisca; and, after causing great misery by her very innocence, voluntarily returns to the original stone.

Pyncheon (*pin chon*).—The name of an ancient but decayed family in Hawthorne's romance *The House of the Seven Gables*. There are: (1) Judge Pyncheon, a selfish, cunning, worldly man. (2) His cousin Clifford, a delicate, sensitive nature, reduced to childishness by long imprisonment and suffering. (3) Hepzibah, the latter's sister, an old maid who devotes herself to the care of Clifford. (4) A second cousin, Phœbe, a fresh, cheerful young girl, who restores the fallen fortunes of the family and removes the curse which rested on it.

Q

Quasimodo (*kwā-si-mō dō*).—*Notre Dame de Paris*, Hugo. A misshapen dwarf, one of the prominent characters in the story. He is brought up in the cathedral of Notre Dame de Paris. One day, he sees Esmeralda, who had been dancing in the cathedral close, set upon by a mob, and he conceals her for a time in the church. When, at length, the beautiful gypsy girl is gibbeted, Quasimodo disappears mysteriously, but a skeleton corresponding to the deformed figure is found after a time in a hole under the gibbet.

Quaver.—*The Virgin Unmasked*, Fielding. A singing-master, who says, "if it were not for singing-masters, men and women might as well have been born dumb." He courts Lucy by promising to give her singing-lessons.

Queen Lab.—*Arabian Nights*. The queen of magic, ruler over the enchanted city, in the story of Beder, prince of Persia. She transforms men into horses, mules, and other animals. Beder marries her, defeats her plots against him, but is himself turned into an owl for a time.

Quentin Durward (*kwen tin der wārd*).—A novel by Sir Walter Scott. A story of French history. The delineations of Louis XI. and Charles the Bold of Burgundy will stand comparison with any in the whole range of fiction or history.

Quickly, Mistress.—*Merry Wives of Windsor*, Shakespeare. A serving woman to Dr. Caius, a French physician. She is the go-between of three suitors for "sweet Anne Page," and with perfect disinterestedness wishes all three to succeed.

Quickly, Mistress Nell.—Hostess of a tavern in Eastcheap, frequented by Harry, Prince of Wales, Sir John Falstaff, and all their disreputable crew.

Quidnunkis.—Title and name of hero in a fable found or written by Gay in 1726. This hero was a monkey which climbed higher than its neighbors, and fell into a river.

Quilp (kwilp).—*Old Curiosity Shop*, Dickens. A hideous dwarf, cunning, malicious, and a perfect master in tormenting. Of hard, forbidding features, with head and face large enough for a giant, he lived on Tower hill, collected rents, advanced money to seamen, and kept a sort of wharf, calling himself a ship-breaker.

Quintus Fixlein.—Title of a romance by Jean Paul Richter and the name of the principal character.

Quirk, Gammon, and Snap.—A firm of rascally, scheming, hypocritical solicitors in Warren's *Ten Thousand a Year*.

R

Raby, Aurora.—In Byron's *Don Juan*. She was a rich, noble English orphan, "a rose with all its sweetest leaves yet folded."

Radigund.—*Faërie Queene*, Spenser. Queen of the fabled Amazons. Having been rejected by Bellodant "the Bold," she revenged herself by degrading all the men who fell into her power by dressing them like women, and giving them women's work.

Ramayana [*rā 'mā yā-nā*]; *Rāma-ayana*, the goings or doings of Rama).—One of the two great epics of India, the other being the Mahabharata. It is ascribed to a poet, Valmiki, and consists at present of about twenty-four thousand stanzas, divided into seven books. It is the production of one man, though many parts are later additions, such as those in which Rama is represented as an incarnation of Vishnu, all the episodes in the first book, and the whole of the seventh. It was at first handed down orally, and variously modified in transmission, and afterward reduced to writing.

Ramona (*rā-mō 'nā*).—Title of a romance by Helen Hunt Jackson. Ramona saw the American Indian followed by "civilization" while retreating slowly but surely toward his own extinction, and had herself a share in the tragedy. Ramona is considered the great romance of Indian life.

Random (*ran 'dom*).—*Roderick Random*, Smollett. A young Scotch scapegrace in quest of fortune. At one time he revels in prosperity, again he is in utter destitution. He roams at random, in keeping with his name.

Rappaccini (*rap-ā-chē 'nē*).—*Mosses from an Old Manse*, Hawthorne. A doctor in whose garden grew strange plants whose juices and fragrance were poison. His daughter, nourished on these odors, became poisonous herself. Her lover found an antidote which she took, but the poison meant life and the antidote meant death to her.

Rasselas (*ras 'e-las*).—An imaginary romance by Dr. Johnson. According to the custom of his country, Abyssinia, Rasselas was confined in paradise, with the rest of the royal family. This paradise was in the valley of Amhara, surrounded by high mountains. It had only one entrance, a cavern concealed by woods, and closed by iron gates. He escaped with his sister Nekayah and Imlac the poet, and wandered about to find what condition or rank of life was the most happy. After investigation, he found no lot without its drawbacks, and resolved to return to the "Happy Valley."

Raud the Strong.—*Tales of a Wayside Inn*, Henry W. Longfellow. The viking who worshipped the old gods and lived by fire and sword. King Olaf went against him, sailing from Drontheim to Salten Fjord.

Raven, The.—A poem by Edgar Allan Poe, published in 1845, which has attained a world-wide popularity. For the author's account of the mode of its construction, see *The Philosophy of Composition*, an essay, in the collected edition of his works. The last verse runs:

And the Raven, never fitting, still is sitting,
On the pallid bust of Pallas, just above my chamber door;
And his eyes have all the seeming of a demon's that is dreaming,
And the lamplight o'er him streaming throws his shadow on the floor;
And my soul from out that shadow that lies floating on the floor
Shall be lifted—Nevermore!

Ravenswood.—*Bride of Lammermoor*, Scott. The lord of Ravenswood, an old Scotch nobleman and a decayed royalist. His son Edgar falls in love with Lucy Ashton, daughter of Sir William Ashton, Lord-Keeper of Scotland. The lovers plight their troth, but Lucy is compelled to marry Frank Hayston, laird of Bucklaw. The bride, in a fit of insanity, attempts to murder the bridegroom and dies. Bucklaw goes abroad. Colonel Ashton, seeing Edgar at the funeral of Lucy, appoints a hostile meeting; and Edgar, on his way to the place appointed, is lost in the quicksands. A prophecy, noted as a curse, hung over the family and was thus fulfilled.

Raymond.—In *Jerusalem Delivered*, by Tasso. Raymond was known as the Nestor of the crusaders, slew Aladine, the king of Jerusalem, and planted the Christian standard upon the tower of David.

Rebecca.—*Ivanhoe*, Scott. Daughter of Isaac the Jew, in love with Ivanhoe.

Red-cross Knight.—The Red-cross Knight is St. George, the patron saint of England, and, in the obvious and general interpretation, typifies holiness, or the perfection of the spiritual man in religion. In Spenser's *Faërie Queene* the task of slaying a dragon was assigned to him as the champion of Una.

Redgauntlet (*red-gānt 'tē*).—One of the principal characters in Sir Walter Scott's novel of the same name, a political enthusiast and Jacobite, who scruples at no means of upholding the cause of the Pretender and finally accompanies him into exile. His race bore a fatal mark resembling a horseshoe which appeared on the face of Red-gauntlet as he frowned when angry.

Red-Riding-Hood.—This nursery tale is, with slight variations, common to Sweden, Germany, and France. In Charles Perrault's *Contes des Fées* it is called *Le Petit Chaperon Rouge*.

Religio Medici (*rē-'lij 'ī-ō med 'ī-s*).—A prose work by Sir Thomas Browne. "*The Religio Medici*," says the elder Lytton, "is one of the most beautiful prose poems in the language; its power of diction, its subtlety and largeness of thought, its exquisite conceits and images, have no parallel out of the writers of that brilliant age when Poetry and Prose had not yet divided their domain, and the Lyceum of Philosophy was watered by the mixing of the wine!"

Representative Men.—A work by Emerson which more nearly than any of his other works, gives expression to his system as a whole. The topics are: (1) Plato, the Philosopher; (2) Swedenborg, the Mystic; (3) Montaigne, the Sceptic; (4) Shakespeare, the Poet; (5) Napoleon, the Man of the World; (6) Goethe, the Writer. The mental portraits sketched under these six heads give us Emerson himself, so far as he is capable of being formulated at all.

Republic, The.—A work composed by Plato four hundred years before Christ. *The Republic* is not, as the title would suggest, a political work, like the *Politics* of Aristotle. The principles and government of an ideal moral organism, of which the rulers shall be types of fully developed and perfectly educated men, are the real subject. In the *Republic* we find the necessity of virtue to the very idea of social life proved in the first book; then the whole process of a complete moral and scientific education is set forth. It has been said that the most complete record of the beliefs or opinions of Plato are found in this work.

Reveries of a Bachelor.—By D. G. Mitchell. *The Reveries* is a collection of sketches of life and character, painted in such a dreamlike, delicate manner as to make the reader lose for the time being the full consciousness of his surroundings. It has called forth a number of imitators more or less successful, no one of whom, however, is comparable to the original.

Reynard (*rā 'nārd*, or *ren 'ārđ*) **the Fox.**—A beast-epic, so called. This prose poem is a satire on the state of Germany in the middle ages. Reynard represents the Church; Isengrin the wolf (his uncle) typifies the baronial element; and Nodel the lion stands for the regal power. The plot turns on the struggle for supremacy between Reynard and Isengrin. Reynard uses all his endeavors to victimize everyone, especially his uncle Isengrin, and generally succeeds.

Richelieu (*rēsh-'y-lōō*), or *The Conspiracy.*—A drama in five acts, by Edward, Lord Lytton; produced in 1839, the part of the hero being played by Macready. For some of the incidents the author confesses himself indebted to the authors of *Cinq Mars* and *Picciola*. Among the characters are Baradas, the favorite; De Mauprat, in love with Julie; Julie de Mortemar herself; Marion de Lorme, mistress of Orleans; Orleans himself; Louis XIII., and others.

Rights of Man, The.—"Being an answer to Mr. Burke's Attack on the French Revolution," by Thomas Paine. This work, which was published in 1791-1792, procured for the writer the distinction of a trial for sedition, which he escaped by flying to France.

Rinaldo (*ri-'nal 'dō*).—A Christian hero in Tasso's *Jerusalem Delivered*. He was the son of Bertoldo and Sophia, and nephew of Guelpho, but was brought up by Matilda. He was one of Charlemagne's paladins, and cousin to Orlando. Having killed Charlemagne's nephew Berthelot, he was banished and outlawed. After various adventures and disasters, he went to the Holy Land, and, on his return, succeeded in making peace with the emperor.

Ring and the Book, The.—A poem by Robert Browning, published in 1869. It is the story of a tragedy which took place at Rome in 1698. The versified narrative of the child Pompilia's sale to Count Guido, of his cruelty and violence, of her rescue by a young priest, the pursuit, the lawful separation, the murder by Guido of the girl and her putative parents, the trial and condemnation of the murderer, and the affirmation of his sentence by the pope—all this is made to fill out a poem of twenty-one thousand lines; but these include ten different versions of the tale, besides the poet's prelude, in which latter he gives a general outline of it. The chapters which contain the statements of the priest lover and Pompilia are full of tragic beauty and emotion. The pope's soliloquy, though too prolonged, is a wonderful piece of literary metempsychosis.

Rip Van Winkle.—A tale by Washington Irving, adapted from the old German legend of Peter Klaus, a goatherd, who drank a miraculous draught of wine in a dell of the Harz mountains, which brought on sleep from which he did not wake until twenty years after, when he returned to his native village to find everything changed, and no one who knew him. In Irving's tale the hero is a Dutchman living in America, and the scene is the Catskill mountains. The story is most picturesquely told, and has been effectively dramatized, the leading personage being illustrated by the genius of Jefferson.

Rivals, The.—A comedy by Richard Brinsley Sheridan, produced at Covent Garden, London, in 1775, and described by Hazlitt as "a play of even more action and incident, but of less wit and satire, than *The School for Scandal*. It is as good as a novel in the reading, and has the broadest and most palpable effect upon the stage."

Roaring Camp, The Luck of.—A prose sketch by Francis Bret Harte, an American poet, in which the softening effects of the presence of a little child in a camp of ruffians are very touchingly described. It has been dramatized.

Rob Roy.—A romance by Sir Walter Scott which is founded on some passages in the career of the famous Highlander, Robert MacGregor, who was popularly called Rob Roy. The nominal hero of *Rob Roy* is Francis Osbaldistone; the heroine, Diana Vernon. Among the other characters are Baillie Nicol Jarvie, "The Dougal Cratur" Andrew Fairservice, Helen MacGregor, Sir Frederick Vernon, and Rashiell Osbaldistone. The novel has been dramatized in a version which still holds the stage in Scotland. Scott speaks of Rob as "the Robin Hood of Scotland—the dread of the wealthy, but the friend of the poor, and possessed of many qualities, both of head and heart, which would have graced a less equivocal profession than that to which his fate condemned him."

Roderick, or Roderick (*rod-'er-ik*) **Dhu.**—*Lady of the Lake*, Scott. An outlaw and chief of a band of Scots who resolved to win back what had been lost to the Saxons. In connection with Red Murdoch he sought the life of the Saxon Fitz-James.

Roderigo (*rod-e-rē 'gō*).—In Shakespeare's *Othello*, a Venetian in love with Desdemona, who, when the lady eloped with Othello, hated the "noble Moor."

Roland (*rō 'land*).—The hero of one of the most ancient and popular epics of early French or Frankish literature, and, according to tradition, the favorite nephew and captain of the Emperor Charlemagne. Roland is the hero of Théroulde's *Chanson de Roland*; of Turpin's *Chronique*; of Bojardo's *Orlando Innamorato*; of Ariosto's *Orlando Furioso*.

Romance of the Rose.—A poetical allegory, begun by Guillaume de Lorris in the latter part of the thirteenth century, and continued by Jean Meung in the first half of the fourteenth century. The poet dreams that Dame Idleness conducts him to the Palace of Pleasure, where he meets many adventures among the attendant maidens, Youth, Joy, Courtesy, and others, by whom he is conducted to a bed of roses. He singles out one, when an arrow from Love's bow stretches him fainting on the ground. Fear, Slander, and Jealousy are afterward introduced.

Romeo.—In Shakespeare's tragedy of *Romeo and Juliet*, a son of Montague, in love with Juliet, the daughter of Capulet, who was the head of a noble house of Verona, in feudal enmity with the house of Montague.

Romeo and Juliet.—A tragedy by William Shakespeare. Romeo, a son of Montague, in love with Juliet, the daughter of Capulet; but between the houses of Montague and Capulet there existed a deadly feud. As the families were irreconcilable, Juliet took a sleeping draught, that she might get away from her parents and elope with Romeo. Romeo, thinking her to be dead, killed himself; and when Juliet awoke and found her lover dead, she also killed herself.

Romola (*rom 'ō-lā*).—A novel of Italian life and character by George Eliot. *Romola* is a marvelously able story of the revival of the taste and beauty and freedom of Hellenic manners and letters, under Lorenzo de' Medici and the scholars of his court, side by side with the revival of Roman virtue, and more than the ancient austerity and piety, under the great Dominican Savonarola. This period of history is one which of all others may well have engrossing interest for George Eliot. Treasures of learning and discipline, amassed for mankind ages before, for ages stored and hidden away, see again the sun, are recognized and put to use. What use they will be put to, with what new and fruitful effects on the state and the citizen, with what momentary and with what lasting consequences, this she strives to discover; this she follows through the public history of Italy during the modern invasion of Charles VIII., and the events which succeed his invasion, and through the private fortunes of her admirably chosen group of characters, some of them drawn from life, all of them true to nature.

Rosetta (*rō-zet 'tā*) **Stone.**—Found at Rosetta in the delta of the Nile, contains equivalent inscriptions in hieroglyphics in demotic and in Greek letters. The meaning of the Greek text being known, the hieroglyphics could be translated.

Rowena (*rō-'ē 'nā*).—A Saxon princess, ward of Cedric of Rotherwood, in Sir Walter Scott's romance of *Ivanhoe*.

Rumpelstilzchen.—*Old German Tales*. According to Grimm, this name is a compound, but the spirit represented is one familiar to all German children. The original story tells of him as a dwarf who spun straw into gold for a certain miller's daughter.

S

Sacripant (*sak 'ri-pant*), **King.**—(1) King of Circassia, and a lover of Angelica, in Bojardo and Ariosto. (2) A personage in Tassoni's mock heroic poem, *Rape of the Bucket*, represented as false, brave, noisy and hectoring.

Sagas (*sā 'gas*).—Title of the ancient traditions which form the substance of the history and mythology of the Scandinavian races. The language in which they are written is supposed to be the old Icelandic. In the *Edda* there are numerous sagas. As our Bible contains the history of the Jews, religious songs, moral proverbs, and religious stories, so the *Edda* contains the history of Norway, religious songs, a book of proverbs, and numerous stories. The original *Edda* was compiled and edited by Sæmund Sigfusson, an Icelandic priest and scald, in the eleventh century. It contains twenty-eight parts or books, all of which are in verse. Two hundred years later Snorri Sturleson, of Iceland,

[812]

[813]

abridged, rearranged, and reduced to prose the *Edda*, and his work was called *The Younger Edda*. In this we find the famous story called by the Germans the *Nibelungenlied*. Besides the sagas contained in the *Eddas*, there are numerous others, and the whole saga literature makes over two hundred volumes. Among them are the *Völsunga Saga*, which is a collection of lays about the early Teutonic heroes. The *Saga of St. Olaf* is the history of this Norwegian king. *Frithjof's Saga* contains the life and adventures of Frithjof of Iceland. Snorri Sturleson, at the close of the twelfth century, made the second great collection of chronicles in verse, called the *Heimskringla Saga*. This is a most valuable record of the laws, customs and manners of the ancient Scandinavians.

Sakuntala.—A famous drama by Kālidāsa. The daughter of Viswamita and a water nymph, abandoned by her parents, and brought up by a hermit. One day, King Dushyanta came to the hermitage, and persuaded Sakuntala to marry him. In due time a son was born, but Dushyanta left his bride at the hermitage. When the boy was six years old, his mother took him to the king, and Dushyanta recognized his wife by a ring which he had given her. Sakuntala was now publicly proclaimed queen, and the boy (whose name was Bhārata) became the founder of the glorious race of the Bhāratas.

Samson Agonistes (*sam'son ag-o-nis'tēz*).—A sacred drama by Milton. Samson, blind and bound, triumphs over his enemies. As in the Bible story, he grasps two of the supporting pillars, and perishes in the general ruin.

Sancho Panza (*sang'kō pan zā*).—The esquire and counterpart of Don Quixote in Cervantes' famous novel. He has much shrewdness in practical matters, and a store of proverbial wisdom. He rode upon an ass and was noted for his proverbs.

Sartor Resartus (*sār'tor rē-sār'tus*). (*i. e.*, *The Tailor Patched*).—The title of an old Scottish ballad, being *The Life and Opinions of Herr Teufelsdröckh, in Three Books*, by Thomas Carlyle. It may be described as a kind of philosophical romance, in which the author gives us, in the form of a review of a supposed German work on dress, and a notice of the writer, his opinions on things in general. The hero, it has been said, seems to be intended for a portrait of human nature as affected by the moral influence to which a cultivated mind would be exposed by acquaintance with the transcendental philosophy of Fichte.

Satyrane (*sat'ī-rān*), **Sir**.—*Faërie Queene*, Spenser. A noble knight who delivered Una from the fauns and satyrs. The meaning seems to be that Truth, driven from the towns and cities, took refuge in caves and dens where for a time it lay concealed. At length Sir Satyrane (Luther) rescues Una from bondage; but no sooner is this the case than she falls in with Archimago, to show how very difficult it was at the time of the Reformation to separate Truth from Error.

Sawyer, Bob.—*Pickwick Papers*, Dickens. A drinking young doctor who tries to establish a practice at Bristol, but without success. Sam Weller calls him "Mr. Sawbones."

Scalds, or Skalds.—Court poets and chroniclers of the ancient Scandinavians. They resided at court, were attached to the royal suite, and attended the king in all his wars. These bards celebrated in song the gods, the kings of Norway, and national heroes. Few complete Skaldic poems have survived, but a multitude of fragments exist.

Scarlet Letter, **The**.—A romance by Nathaniel Hawthorne, published in 1850. The heroine, Hester Prynne, was condemned to wear conspicuously the letter "A" in scarlet, token of her sin as mother of her child, Pearl, whose father was not known. She was first exposed in disgrace on a raised scaffold, then served a term in prison, and afterward gained a moderate support for herself and child by embroidering. She refused to reveal the name of the father, although she might then be allowed to lay aside the letter. He was always near, held an important position, and lived a life of wearing remorse. After his death Hester Prynne took her child to another country, but returned to spend her old age in seclusion and comfort in the same place that had witnessed her punishment. She always bore herself proudly, but not defiantly, and brought to herself such love and respect that the scarlet letter became a badge of honor. Roger Chillingworth, Hester's husband, appeared as a learned foreign physician, visited her in prison, but promised not to reveal his relation to her, and devoted his life to learning her secret. The characters in the story are intense, and the analysis of motives subtle.

[814]

Scheherazade, or Sheherazade (*she-hé'rā-zād*).—*Arabian Nights*. The fabled relater of the stories in these "Entertainments."

Scaramouche (*skar'a-mouch*).—An Italian character whose traits are cowardice and boastfulness. He is of Spanish creation, copied into Italian comedy.

Schlemihl (*shlem'el*), **Peter**.—The name of the hero of a little work by Chamisso, a man who sells his shadow to the devil. The name has become a byword for any poor, silly, and unfortunate fellow.

Schneider (*shnī'der*).—Rip Van Winkle's dog, in Boucicault's dramatization of Irving's *Rip Van Winkle*. The name of the dog in the story is "Wolf."

School for Scandal, **The**.—A comedy by Richard Brinsley Sheridan, produced at Covent Garden, London, in 1777, and characterized by Hazlitt as, "if not the most original, perhaps the most finished and faultless comedy which we have. The scene in which Charles Surface sells all the old family pictures but his uncle's, who is the purchaser in disguise, and that of the discovery of Lady Teazle when the screen falls, are among the happiest and most highly wrought that comedy, in its wide and brilliant range, can boast. Besides the art and ingenuity of this play, there is a genial spirit of frankness and generosity that relieves the heart as well as clears the lungs. While it strips off the mask of hypocrisy, it inspires a confidence between man and man."

School for Wives [*L'Ecole des Femmes* (*lā-kol' dā fām*)].—A comedy by Molière. Arnolph has a crotchet about the proper training of girls to make good wives, and tries his scheme upon Agnes, whom he adopts from a peasant's cottage, and designs in due time to make his wife. He sends her from early childhood to a convent, where difference of sex and the conventions of society are wholly ignored. When removed from the convent, she treats men as if they were schoolgirls, kisses them, plays with them, and treats them with girlish familiarity. The consequence is, a young man name Horace falls in love with her, and makes her his wife, and Arnolph loses his painstaking.

School of Husbands [*L'Ecole des Maris* (*lā-kol' dā mā-re*)] A comedy by Molière. Ariste and Sganarelle, two brothers, bring up Léonor and Isabelle, two orphan sisters, according to their systems for making them in time their model wives. Sganarelle's system was to make the woman dress plainly, live retired, attend to domestic duties, and have few indulgences. Ariste's system was to give the woman great liberty, and trust to her honor. Isabelle, brought up by Sganarelle, deceived him and married another; but Léonor, brought up by Ariste, made him a fond and faithful wife.

Scottish Chiefs, The.—A romantic story by Jane Porter, published in 1810, and counting among its heroes Robert Bruce and Sir William Wallace.

Scourge of God.—Attila, king of the Huns. A. P. Stanley says the term was first applied to Attila in the Hungarian *Chronicles*. It is found in a legend belonging to the eighth or ninth century.

Scrooge (*skrōj*), **Ebenezer**.—*Christmas Carol*, Dickens. The prominent character, made partner, executor, and heir of old Jacob Marley, stockbroker.

Seasons, The.—A series of poems by James Thomson, which appeared in the following order: *Winter; Summer; Spring; and Autumn*; the whole being republished, with the famous *Hymn*. Horace Walpole said that he would rather have written the most absurd lines by Lee than *The Seasons*; but Wordsworth, on the other hand, speaks of it as "a work of inspiration. Much of it," he says, "is written from himself, and nobly from himself."

Sebastian (*se-bas'tian*).—(1) Brother of Viola, in *Twelfth Night*. They were twins, and so much alike that they could not be distinguished except by their dress. Sebastian and his sister being shipwrecked, escaped to Illyria. Here Sebastian was mistaken for his sister (who had assumed man's apparel), and was invited by the Countess Olivia to take shelter in her house from a street broil. Olivia was in love with Viola, and thinking Sebastian to be the object of her love, married him. (2) Brother of Alfonso, king of Naples, in *The Tempest*. (3) Father of Valentine and Alice, in Beaumont and Fletcher's *Mons. Thomas*.

Sedley, Mr.—*Vanity Fair*, Thackeray. A wealthy London stockbroker, brought to ruin in the money market just prior to the battle of Waterloo.

Selith.—One of the two guardian angels of the Virgin Mary and St. John the divine, in Klopstock's *Messiah*.

Sempronius (*sem-prō'ni-us*).—In Shakespeare's *Timon of Athens*, a flatterer of Timon, who excuses himself from lending Timon money on the ground that others had been asked first.

Senena.—*Madoc*, Southey. A Welsh maiden in love with Caradoc. Under the assumed name of Mervyn she became the page of the Princess Goeryll, that she might follow her lover to America, where Madoc colonized Caer-Madoc. Senena was promised in marriage to another; but when the wedding day arrived the bride was nowhere to be found.

Sentimental Journey Through France and Italy.—By Laurence Sterne, published in 1768. Sterne describes this work as follows: "It is a subject which works well, and suits the frame of mind in which I have been for some time past. I told you my design in it was to teach us to love the world and our fellow creatures better than we do—so it runs most upon these gentler passions and affections which add so much to it."

Serena (*sā-rā'nā*).—*Faërie Queene*, Spenser. Allured into the fields by the mildness of the weather, to gather wild flowers for a garland, she was attacked by the Blatant Beast, which carried her off in its mouth. Her cries attracted to the spot Sir Calidore, who compelled the beast to drop its prey.

Sesame.—In Arabian tales given as the talismanic word which would open or shut the door leading into the cave of the forty thieves. In order to open it, the words to be uttered were, "Open, Sesame!" and in order to close it, "Shut, Sesame!" Sesame is a plant yielding grain which is sometimes used for food, and from which an oil is expressed. When Cassim forgot the word, he substituted "Barley," but without effect. Sesame has come into general use in connection with any word or act which will open the way for accomplishment of the thing desired.

Seven Lamps of Architecture, The.—A treatise on architecture by Ruskin, published in 1849. The "seven lamps" are those of Sacrifice, Truth, Power, Beauty, Life, Memory, and Obedience. They are symbolic rules for the guidance of the student.

Sganarelle (*sgā-nā-rel'*).—The hero of Molière's comedy *La Mariage Forcé*. He is represented as a humorist of about fifty-three, who, having a mind to marry a fashionable young woman, but feeling a doubt, consults his friends upon this momentous question. Receiving no satisfactory counsel, and not much pleased with the proceedings of his bride elect, he at last determines to give up his engagement, but is cudgeled into compliance by the brother of his intended.

Shallow.—A braggart and absurd country justice in Shakespeare's *Merry Wives of Windsor*, and in the second part of *King Henry IV*.

Shandy, Mrs..—The mother of Tristram Shandy in Sterne's novel of this name. She is the ideal of nonentity, a character individual from its very absence of individuality.

Shandy, Tristram.—The nominal hero of Sterne's *The Life and Opinions of Tristram Shandy, Gent*.

Shandy, Walter.—The name of Tristram Shandy's father in Sterne's novel of this name, a man of an active and metaphysical, but at the same time a whimsical, cast of mind, whom too much and too miscellaneous learning had brought within a step or two of madness.

Sharp, Becky.—A leading character in Thackeray's *Vanity Fair*, the daughter of a poor painter, dashing, selfish, unprincipled, and very clever.

Shepherd of Salisbury Plain, The.—The hero and title of a religious tract by Hannah More. The shepherd is noted for his homely wisdom and simple piety.

Shepherd's Calendar, **The**.—Twelve eclogues in various meters, by Spenser, one for each month. January: Colin Clout (Spenser) bewails that Rosalind does not return his love. February: Cuddy, a lad, complains of the cold, and Thenot laments the degeneracy of pastoral life. March: Willie and Thomalin discourse of love. April: Hobbinol sings a song on Eliza. May: Palinode exhorts Piers to join the festivities of May, but Piers replies that good shepherds who seek their own indulgence expose their flocks to the wolves. June: Hobbinol exhorts Colin to greater cheerfulness. July: Morrel, a goatherd, invites Thomalin to come with him to the uplands. August: Perigot and Willie contend in song, and Cuddy is appointed arbiter. September: Diggon Davie complains to Hobbinol of clerical abuses. October: On poetry. November: Colin being asked by Thenot to sing, excuses himself because of his grief for Dido, but finally sings her elegy. December: Colin again complains that his heart is desolate. Thenot is an old shepherd bent with age, who tells Cuddy, the herdsman's boy, the fable of the oak and the brier, one of the best-known fables included in the calendar.

[815]

Shepherd's Pipe.—Pan, in Greek mythology, was the god of forests, pastures, and flocks, and the reputed inventor of the shepherd's flute or pipe.

Sherdan's Ride.—A lyric by T. B. Read, one of the few things written during the heat of the Civil war that is likely to survive.

She Stoops to Conquer.—A comedy by Oliver Goldsmith, said to have been founded on an incident which actually occurred to its author. When Goldsmith was sixteen years of age, a wag residing at Ardagh directed him, when passing through that village, to Squire Fetherstone's house as the village inn. The mistake was not discovered for some time, but all concerned enjoyed the joke. *She Stoops to Conquer* is one of the gayest, pleasantest, and most amusing pieces of English comedy.

Shingebis.—In Longfellow's *Hiawatha*, the diver who challenged the North Wind and put him to flight in combat.

Shocky.—*The Hoosier Schoolmaster*, Edw. Eggleston. The little lad from the poorhouse who adores the schoolmaster and early warns him of plans for upsetting his authority. He is also a small poet, not in rhyming, but in comprehension of things about him and in his way of looking at life, and he grows to be a helper in the *Church of the Best Licks*, founded by the schoolmaster.

Shylock.—A sordid, avaricious, revengeful Jew, in Shakespeare's *Merchant of Venice*.

Siege Perilous, The.—The Round Table contained sieges, or seats, in the names of different knights. One was reserved for him who was destined to attainment in the quest of the Holy Grail. This seat was called "perilous" because if anyone sat therein except he for whom it was reserved, he would "lose himself." It finally bore the name of Sir Galahad.

Siegfried (*sēg'frēd*).—The hero of various Scandinavian and Teutonic legends, particularly of the old German epic poem, the *Nibelungenlied*. He is represented as a young warrior of physical strength and beauty, and in valor superior to all men of his time. He cannot easily be identified with any historical personage.

Sikes, Bill.—A brutal thief and housebreaker in Dickens' novel *Oliver Twist*. He murders his mistress, Nancy, and, in trying to lower himself by a rope from the roof of a building where he had taken refuge from the crowd, he falls, and is choked in a noose of his own making. Sikes had an ill-conditioned, savage dog, the beast-image of his master, which he kicked and loved, ill-treated and fondled.

Silas Marner (*mār'ner*).—A novel by George Eliot, published in 1861. This novel is one of the authoress' most beautiful stories, the most poetical of them all—the tale of Silas Marner, who deems himself deserted and rejected utterly of God and man, and to whom, in his deepest misery, in place of lost gold, a little founding girl is sent. This tale is the most hopeful of all her books. The contemplation of the renewal of enterprise and energy, which comes with little children, and of the promise with which each new generation gilds the crown of honor for its sires, is pleasant and grateful to her. She writes upon her title page the lines of Wordsworth:

A child, more than all other gifts
That earth can offer to declining man,
Brings hope with it and forward-looking thoughts.

The weaver of Raveloe and Eppie are creations after Wordsworth's own heart.

Silken Thread.—*Gulliver's Travels*. In the kingdom of Lilliput, the three great prizes of honor are "fine silk threads six inches long, one blue, another red, and a third green." The thread is girt about the loins, and no ribbon of the Legion of Honor, or of the Knight of the Garter, is worn more worthily or more proudly.

Sindbad (*sind'bad*) **the Sailor**.—A character in the *Arabian Nights*, in which is related the story of his strange voyages and wonderful adventures.

Sinon.—In Vergil's *Aeneid* the cunning Greek who, by a false tale, induced the Trojans to drag the wooden horse into Troy.

Sir Roger de Coverley (*kuv'er-li*).—In Addison's *The Spectator*. The prototype of this famous character was Sir John Pakington, a hypothetical baronet of Coverley or Cowley, near Oxford.

Skeleton in Armor, The.—A lyric by Henry Wadsworth Longfellow, suggested to him while riding on the seashore at Newport. A year or two previous a skeleton had been dug up at Fall River, clad in broken and corroded armor; and the idea occurred to him of connecting it with the Round Tower at Newport, generally known hitherto as the Old Windmill, though now claimed by the Danes as a work of their early ancestors.

Sketch-Book, The.—A series of short tales, sketches, and essays, published by Washington Irving in 1820. They are chiefly descriptive of English manners and scenery, and have often been reprinted.

Skylark, Ode to the.—By Percy Bysshe Shelley, written in 1820. "In sweetness," says Leigh Hunt, "and not even there in passages, the *Ode to the Skylark* is inferior only to Coleridge—in rapturous passion to no man. It is like the bird it sings—enchancing, profuse, continuous, and alone; small, but filling the heavens."

Hail to thee, blithe spirit!
Bird thou never wert,
That, from heaven, or near it,
Pourest thy full heart
In profuse strains of unpremeditated art.

Slick, Sam.—The hero of various humorous narratives, by Haliburton, illustrating and exaggerating the peculiarities of the Yankee character and dialect.

Slop, Dr.—The name of a choleric and uncharitable physician in Sterne's *Tristram Shandy*; *Gent*.

Slough of Despond.—*Pilgrim's Progress*, Bunyan. A deep bog, which Christian had to pass on his way to the Wicket Gate.

Sly, Christopher.—*Taming of the Shrew*, Shakespeare. A keeper of bears and a tinker and a sad drinker, son of a peddler.

Sofronia (sof-rō'ni-ā).—A young Christian of Jerusalem, the heroine of an episode in Tasso's *Jerusalem Delivered*. She and her lover, Olinda, are condemned to death by Aladine, king of Jerusalem. The king finally, at the solicitation of Clorinda, spares them and they are married.

Sohrab (sō-hrāb') and Rustum.—An episode, or narrative in verse, by Matthew Arnold. The story is told in prose in Sir John Malcolm's *History of Persia*. "The powerful conception of the relation between the two chieftains, and the slaying of the son by the father, are," says Stedman, "tragical and heroic. The descriptive passage at the close beginning—

But the majestic river floated on,
for diction and breadth of tone would do honor to any living poet."

Song of Roland.—An ancient song recounting the deeds of Roland, the renowned nephew of Charlemagne, slain in the pass of Roncesvalles. At the battle of Hastings, Taillefer advanced on horseback before the invading army, and gave the signal for onset by singing this famous song.

Spanker, Lady Gay.—In *London Assurance*, by Boucicault, is a woman of great spirit, devoted to the chase.

Speed.—An inveterate punster and the clownish servant of Valentine, one of the two "gentlemen" in Shakespeare's *The Two Gentlemen of Verona*.

Spenlow (spen' lō).—*Lavinia and Clarissa*, in Dickens' *David Copperfield*, two spinster aunts of Dora Spenlow, with whom she lived at the death of her father.

Squeers.—Name of a family prominent in Dickens' *Nicholas Nickleby*. Wackford Squeers, master of Dotheboys Hall, in Yorkshire, is a vulgar, conceited, ignorant schoolmaster, overbearing and mean. He steals the boys' pocket money, clothes his son in their best suits, half starves them, and teaches them next to nothing. Ultimately he is transported for theft. Mrs. Squeers, a raw-boned, harsh, heartless virago, with no womanly feeling for the boys put under her charge. Miss Fanny Squeers, daughter of the schoolmaster. Miss Fanny falls in love with Nicholas Nickleby, but later hates him because he is insensible to the soft impeachment. Master Wackford Squeers, over-bearing, self-willed and passionate.

Squire of Dames.—A personage introduced by Spenser in the *Faërie Queene*, and whose curious adventures are there recorded. The expression is sometimes applied to a person devoted to the fair sex.

Steerforth (stēr fārth), James.—*David Copperfield*, Dickens. The young man who led little Em'ly astray. When tired of his toy, he proposed to her to marry his valet. Steerforth, being shipwrecked off the coast of Yarmouth, Ham Peggotty tried to rescue him, but both were drowned.

Stentor (sten' tor).—A Grecian herald in the Trojan war whom Homer describes as great-hearted, brazen-voiced Stentor, accustomed to shout as loud as fifty other men.

Stephano (stef' ā-nō).—(1) In Tasso's *Jerusalem Delivered*, earl of Carnuti, the leader of four hundred men in the allied Christian army. He was noted for his military prowess and wise counsel; (2) a drunken butler in Shakespeare's *The Tempest*; (3) servant to Portia in Shakespeare's *Merchant of Venice*.

Stiggins, Rev. Mr.—A red-nosed, hypocritical "shepherd," or Methodist parson, in Dickens' *Pickwick Papers*, with a great appetite for pineapple rum. He is the spiritual adviser of Mrs. Weller, and lectures on temperance.

Strephon (stref'on).—The shepherd in Sir Philip Sidney's *Arcadia*, who makes love to the beautiful Urania. It is a stock name for a lover, Chloe being usually the corresponding lady.

Strongback.—One of the seven attendants of Fortunio, in D'Aulnoy's *Fairy Tales*. He could never be overweighted, and could fell a forest in a few hours without fatigue.

Summer, St. Martin's.—The fine weather which generally occurs in October and November; referred to in *Henry VI*.

T

Tabard (tab' ārd), The.—Is the inn, in High Street, Southwark, London, from which Chaucer makes his pilgrims start on their journey to Canterbury. It took its name from its sign—a tabard.

Tale of Two Cities, A.—A novel, by Charles Dickens, originally produced in *All the Year Round* for 1859, and afterward republished in complete form. The author says he first conceived the main idea of the story when acting, with his children and friends, in Wilkie Collins' drama of *The Frozen Deep*. His narrative is drawn from the scenes of the French revolution of 1789; and it was one of Dickens' hopes, he says, to add something to the popular and picturesque means of understanding that terrible time; "though no one," he continues, "can hope to add anything to the philosophy of Carlyle's wonderful book."

Tales of a Wayside Inn.—Name given by Longfellow to a collection of short poems arranged by himself and collected together much in the same form as Chaucer's *Canterbury Tales*. These "tales" were mostly gathered from old literature and translated into Longfellow's own verses—only one, *The Birds of Killingworth*, being said to be entirely original. Seven narratives are represented: the Landlord, the Student, the Spanish Cavalier, the Jew, the Sicilian, the Musician, and the Theologian. Four colonial tales are included in the work: *Paul Revere's Ride*, *Elizabeth, Lady Wentworth*, and *The Rhyme of Sir Christopher*.

Taming of the Shrew, The.—A comedy by Shakespeare. The incident of Vincentio's personation by the pedant was borrowed by Shakespeare from George Gascoigne's *Supposes*. The chief characters are Petruchio and his wife Katharine, the shrew.

Tam O'Shanter.—The title of a poem by Burns, and the name of its hero, a farmer, who, riding home very late and very drunk from Ayr, in a stormy night, had to pass by the kirk of Alloway, a place reputed to be a favorite haunt of the devil and his friends and emissaries. On approaching the kirk, he perceived a light gleaming through the windows; but, having got courageously drunk, he ventured on till he could look into the edifice, when he saw a dance of witches. His presence became known, and in an instant all was dark; and Tam, recollecting himself, turned and spurred his horse to the top of her speed, chased by the whole fiendish crew. It is a current belief that witches, or any evil spirits, have no power to follow a poor wight any farther than the middle of the next running stream. Fortunately for Tam, the River Doon was near, and he escaped, while the witches held only the tail of his mare Maggie. It has been said of *Tam O'Shanter* that in no other poem of the same length can there be found so much brilliant description, pathos, and quaint humor, nor such a combination of the terrific and the ludicrous.

Tancred (tang' kred).—In Tasso's *Jerusalem Delivered*, was the greatest of all the Christian warriors, except Rinaldo.

Tartuffe, or Tartuffe (tār-tūf').—One of Molière's best known comedies. Tartuffe is a religious hypocrite and impostor, who uses "religion" as the means of gaining money, covering deceit, and promoting self-indulgence. He is taken up by one Orgon, a man of property, who promises him his daughter in marriage; but, his true character being exposed, he is not only turned out of the house, but is lodged in jail for felony.

Isaac Bickerstaff adapted Molière's comedy to the English stage, under the title of *The Hypocrite*. Tartuffe he calls "Dr. Cantwell," and Orgon "Sir John Lambert." It is thought that "Tartuffe" is a caricature of Père la Chaise, the confessor of Louis XIV., who was very fond of truffles (French, *truffes*), and that this suggested the name to the dramatist.

Task, The.—A poem by William Cowper. "The *Task*," says Southey, "was at once descriptive, moral, and satirical. The descriptive parts everywhere bore evidence of a thoughtful mind and a gentle spirit, as well as of an observant eye; and the moral sentiment which pervaded them gave a charm in which descriptive poetry is often found wanting. The best didactic poems, when compared with *The Task*, are like formal gardens in comparison with woodland scenery." "The *Task*," says Hazlitt, "has fewer blemishes than *The Seasons*; but it has not the same capital excellence, the 'unsought grace' of poetry, the power of moving and infusing the warmth of the author's mind into that of the reader."

Teazle (tē' zĭ), Lady.—The heroine of Sheridan's comedy *The School for Scandal*, and the wife of Sir Peter Teazle, an old gentleman who marries late in life. She is represented as being "a lively and innocent, though imprudent, country girl, transplanted into the midst of all that can bewilder and endanger her, but with enough of purity about her to keep the blight of the world from settling upon her."

Teazle, Sir Peter.—A character in Sheridan's play *The School for Scandal*, husband of Lady Teazle.

Télémaque (tā-lā-māk'), Les Aventures de: "Adventures of Telemachus"—A romance by Fenelon, published in 1699. It is founded on the legendary history of Telemachus, and is one of the classics of French literature. Though the beautiful fiction of *Telemachus*, which has much in common with, and was doubtless suggested to Fenelon by the *Argenis*, be rather an epic poem in prose than a romance, it seems to have led the way to several political romances, or, at least, to have nourished a state for this species of composition.

Tell, William.—Title of a drama by Schiller. The hero is chief of the confederates of the forest cantons of Switzerland, and son-in-law of Walter Fürst. Having refused to salute the Austrian cap which Gessler, the Austrian governor, had set up in the market-place of Altdorf, he was condemned to shoot an apple from the head of his own son. He succeeded in this perilous task, but, letting fall a concealed arrow, was asked by Gessler with what object he had secreted it. "To kill thee, tyrant," he replied, "if I had failed." The governor now ordered him to be carried in chains across the Lake Lucerne to Küsnacht Castle, "there to be devoured alive by reptiles"; but, a violent storm having arisen on the lake, he was unchained, that he might take the helm. Gessler was on board; and, when the vessel neared the castle, Tell leaped ashore, gave the boat a push into the lake, and shot the governor. After this he liberated his country from the Austrian yoke.

Tempest, The.—One of Shakespeare's fairy plays. The story runs: Prospero, duke of Milan, was dethroned by his brother Antonio, and left on the open sea with his three-year-old daughter Miranda, in "a rotten carcass of a boat." In this they were carried to an enchanted island, uninhabited except by a hideous creature, Caliban, the son of a witch. Prospero was a powerful enchanter, and soon had not only Caliban, but all the spirits of the region under his control, including Ariel, chief of the spirits of the air. Years afterward Antonio, Alfonso, Sebastian and other friends of the usurper came near the island. Prospero, by his magic, raises a storm which casts their ship on the shore and the whole party are spellbound and brought to Prospero. Plots and counterplots follow, bringing in Caliban and clowns; but all are made ridiculous and are defeated by Prospero and Ariel.

Tessa (tes' ā).—In George Eliot's novel of *Romola* is the peasant girl who is deceived into marriage with Tito Melema.

Thangbrand.—*Tales of a Wayside Inn*, Henry W. Longfellow. King Olaf's drunken priest, "short of stature, large of limb," who was sent to Iceland, found the people poring over their books, and sailed backed to Norway to say to Olaf "little hope is there of these Iceland men."

Theagenes (thē-aj' ē-nēz) and Chariclea (kar-i-klē' ā).—The chief characters in a Greek love story, by Heliodorus, bishop of Trikka, fourth century. A charming fiction, largely borrowed from by subsequent novelists, and especially by Mlle. de Scudéri, Tasso, Guarini, and D'Urfé.

Thekla.—The daughter of Wallenstein in Schiller's drama of this name. She is an invention of the poet.

Theodorus.—The name of a physician, in Rabelais' romance of *Gargantua*. At the request of Pnocrates, Gargantua's tutor, he undertook to cure the latter of his vicious manner of living, and accordingly "purged him canonically with Anticyrian hellebore," by which medicine he cleared out all the perverse habits of his brain, so that he became a man of honor, sense, courage, and piety.

Theresa, or Teresa (te-rē' sā, or tā-rā' sā).—Daughter of the count palatine of Padolia, beloved by Mazeppa, in Byron's *Mazeppa*.

Thersites (ther-sī' tēz).—A scurrilous Grecian chief, loquacious, loud and coarse, in the *Iliad*. His chief delight was to inveigh against the kings of Greece. He squinted, halted, and on his tapering head grew a few white patches of starveling down.

Thopas, Sir.—In the *Canterbury Tales*, a capital sportsman, archer, wrestler, and runner, who resolved to marry no one but an "elf queen," and accordingly started for Faëryland. Story left unfinished.

Thorberg Skafting.—*Tales of a Wayside Inn*, Henry W. Longfellow. The master-builder ordered by King Olaf to build a ship twice as long and twice as large as the *Dragon*, built by Raud the Strong, which was stranded.

Three Musketeers (Trois Mousquetaires (trwā' mōs-ke-tar'), Les.—A novel by Alexander Dumas père, published in 1844. The scene is laid in the time of Richelieu. The three musketeers are Athos, Porthos, and Aramis, but D'Artagnan is the principal character. He is a young Gascon of an adventurous yet practical nature, with a genius for intrigue, who goes up to Paris to seek his fortune with an old horse, a box of miraculous salve given to him by his mother, and his father's counsels. His career is one of hairbreadth escapes (with death, in the end, on the field of battle) in the society of the three musketeers.

Thyestean Banquet.—Referred to in Milton's *Paradise Lost*. A cannibal feast. Thyestes was given his own two sons to eat at a banquet served up to him by his brother Atreus.

Thyrsis (ther' sis).—A herdsman introduced in the *Idylls of Theocritus*, and in Vergil's *Eclogues*.

Hard by, a cottage chimney smokes
From betwixt two aged oaks,
Where Corydon and Thyrsis, met,
Are at their savory dinner set.

Milton, *L'Allegro*.

Timias.—King Arthur's squire in Spenser's *Faërie Queene*. He went after the "wicked foster," from whom Florimel fled, and the "foster" with his two brothers, falling on him, were all slain.

Tobey, Uncle.—A character in Sterne's *Tristram Shandy*: A captain who was wounded at the siege of Namur, and was obliged to retire from the service. He is the impersonation of kindness, benevolence, and simple-heartedness; his courage is undoubted, and his gallantry delightful for its innocence and modesty.

Tommy Atkins.—*Barrack-Room Ballads*, Kipling. The name is here used in its general meaning, a British soldier. The name came from the little pocket ledgers served out, at one time, to all British soldiers. In these manuals were to be entered the name, the age, the date of enlistment, etc. The war office sent with each little book a form for filling it in, and the hypothetical name selected was *Tommy Atkins*. The books were instantly so called, and it did not require many days to transfer the name from the book to the soldier.

Tom Sawyer, Adventures of.—By Mark Twain. An “elastic” youth whose performances delight both old and young readers. Queer enterprises, influenced by the old superstitions among and children in the Western states gives reliable pictures of boy-life in the middle of the nineteenth century.

Topsy.—*Uncle Tom’s Cabin*, Mrs. Stowe. A young slave-girl, who never knew whether she had either father or mother, and being asked by Miss Ophelia St. Clare how she supposed she came into the world, replied, “I ’spects I growed.”

Touchstone (*tuch’stōn*).—A clown in Shakespeare’s *As You Like It*. His seven degrees of the lie are: (1) The retort courteous, (2) the quip modest, (3) the reply churlish, (4) the reproof valiant, (5) the countercheck quarrelsome, (6) the lie circumstantial, (7) the lie direct.

Townley Mysteries.—Certain religious dramas; so called because the MS. containing them belonged to P. Townley. These dramas are supposed to have been acted at Widkirk abbey, in Yorkshire.

Tranio (*trā’ni-ō*).—In Shakespeare’s *Taming of the Shrew*, one of the servants of Lucentio, the gentleman who marries Bianca, sister of Katharina “the Paduan shrew.”

Triads.—Three subjects, more or less connected, formed into one continuous poem or subject; thus the “Creation, Redemption, and Resurrection” would form a triad.

Trim, Corporal.—Uncle Toby’s attendant, in Sterne’s novel, *The Life and Opinions of Tristram Shandy, Gent.*, distinguished for his fidelity and affection, his respectfulness, and his volubility.

Tristram (*tris’tram*), **Sir.**—One of the most celebrated heroes of mediæval romance. His adventures form an episode in the history of Arthur’s court, and are related by Thomas the Rhymer, as well as by many romancists.

Tubal (*tū’bal*).—A wealthy Jew, the friend of Shylock, in Shakespeare’s *The Merchant of Venice*.

Tuck, Friar.—*Ivanhoe*, Scott. The father-confessor of Robin Hood and connected with Fountain’s Abbey. He is represented as a clerical Falstaff, very fat and self-indulgent, very humorous, and somewhat coarse. His dress was a russet habit of the Franciscan order. He was sometimes girt with a rope of rushes. Friar Tuck also appears in the “morris dance” on Mayday.

Turneydrop.—*Bleak House*, Dickens. A conceited dancing-master, who imposes on the world by his majestic appearance and elaborate toilette. He is represented as living upon the earnings of his son, who has a most slavish reverence for him as a perfect “master of deportment.”

Tutivillus (*tū-ti-vil’us*).—In Langland’s *Visions of Piers Plowman*, the demon who collects all the fragments of words omitted, mutilated, or mispronounced by priests in the performance of religious services, and stores them up in that “bottomless” pit which is “paved with good intentions.”

Tweedledum and Tweedledee.—The prince of Wales was the leader of the Handel party, supported by Pope and Dr. Arbuthnot; and the duke of Marlborough led the Bononciniists, and was supported by most of the nobility.

Twelfth Night.—A drama by Shakespeare. The story is said to have come from a novelette written early in the sixteenth century. A brother and sister, twins, are shipwrecked. Viola, dressed like her brother, becomes page to the duke Orsino. The duke was in love with Olivia, and, as the lady looked coldly on his suit, he sent Viola to advance it; but the willful Olivia, instead of melting toward the duke, fell in love with his beautiful page. Sebastian, the twin-brother of Viola, was attacked in a street brawl before Olivia, and, thinking him to be the page, she invited him in. The result was the marriage of Sebastian to Olivia, and of the duke to Viola.

Twice-Told Tales.—A collection of tales by Nathaniel Hawthorne, some of which had been already published in the *Token*, and other periodicals. They are mystical and, though in prose form, are the work of a poet. The tales are nearly all American in subject, but are treated from the spiritual rather than the practical side.

Two Gentlemen of Verona (*vā-rō’nā*).—A drama by Shakespeare, the story of which is taken from the Diana of Montemayor (sixteenth century). The plot resembles that of *Twelfth Night*, as Julia, disguised as a page, is a prominent figure.

U

Uarda (*ō-ār’dā*).—A novel by Ebers, published in 1877. The scene is laid chiefly in Egypt at the time of the reign of Rameses II.

Ubaldo.—*Jerusalem Delivered*, Tasso. One of the older crusaders, who had visited many regions. He and Charles the Dane went to bring back Rinaldo from the enchanted castle.

Ubeda.—*Don Quixote*, Cervantes. A noted artist who one day painted a picture, but was obliged to write under it, “This is a cock,” in order that the spectator might know what was intended to be represented.

Thule (*thū’lō*).—“*Ultima Thule*.” The extremity of the world; the most northern point known to the ancient Romans. Pliny and others say it is Iceland.

Una (*ū’nā*).—*Faerie Queene*, Spenser. The personification of truth. She goes, leading a lamb and riding on a white ass, to the court of Gloriana, to crave that one of her knights might undertake to slay the dragon which kept her father and mother prisoners. The adventure is accorded to the Red Cross Knight. Being driven by a storm into Wandering Wood, a vision is sent to the knight which causes him to leave Una, and she goes in search of him. In her wanderings a lion becomes her attendant. After many adventures, she finds St. George, “the Red Cross Knight,” but he is severely wounded. Una takes him to the House of Holiness, where he is carefully nursed, and then leads him to Eden.

Uncle Tom’s Cabin.—A work of fiction by Mrs. Harriet Beecher Stowe. It had an enormous sale, and at once made the author famous. As a picture of slave life as it once obtained in the Southern states of America it is certainly unsurpassed. The scenes described in it are so terrible that Mrs. Stowe deemed it advisable to publish in 1853 a *Key* to the work, showing the large extent to which it is founded upon fact. The hero is, of course, Uncle Tom.

Uncle Tom was an old negro slave of unaffected piety, and most faithful in the discharge of all his duties. His master, a humane man, becomes embarrassed in his affairs, and sells him to a slave-dealer. After passing through various hands, and suffering intolerable cruelties, he dies. The figure next in interest is Legree, the brutal slave-owner. Everyone, also, will remember Eva and Topsy.

Urganda (*ōr-gān’dā*).—In the romance of *Amadis de Gaul*, a powerful fairy sometimes appearing in all the terrors of an evil enchantress.

Uriel (*ū’ri-el*), or **Israfil.**—In the *Koran*, the angel who is to sound the resurrection trumpet. Longfellow, in *The Golden Legend*, calls him “the minister of Mars,” and says that he inspires man with “fortitude to bear the brunt and suffering of life.”

Uther (*ū’thēr*).—Son of Constans, one of the fabulous or legendary kings of Britain, and the father of Arthur.

Utopia (*ū-tō’pi-ā*).—The name of an imaginary island described in the celebrated work of Sir Thomas More, in which was found the utmost perfection in laws, politics, and social arrangements. More’s romance obtained a wide popularity, and the epithet *Utopian* has since been applied to schemes for the improvement of society which are deemed not practicable.

Uzziel.—In *Paradise Lost*, the next in command to Gabriel. The word means “God’s strength.”

V

Valentine (*val’en-tīn*).—(1) One of the heroes in the old romance of *Valentine and Orson*. (2) One of the *Two Gentlemen of Verona*, by Shakespeare. (3) A gentleman attending on the duke in Shakespeare’s *Twelfth Night*. (4) One of the characters in Goethe’s *Faust*. He is a brother of Margaret.

Valerian (*va-lē’ri-an*).—*Canterbury Tales*, Chaucer. The husband of St. Cecilia. Cecilia told him she was beloved by an angel, who constantly visited her; and Valerian requested to see this visitant. Cecilia replied that he could do so if he went to Pope Urban to be baptized. This he did, and on returning home the angel gave him a crown of lilies, and to Cecilia a crown of roses, both from the garden of paradise.

Valley of Humiliation.—*Pilgrim’s Progress*, Bunyan. The place where Christian encountered Apollyon, just before he came to the “Valley of the Shadow of Death.”

Vanity Fair.—A novel without a hero, by Thackeray. “There are scenes of all sorts,” says the author in his preface to the work, “some dreadful combats, some grand and lofty horse-riding, some scenes of high life and some of very middling indeed, some love making for the sentimental, and some light comic business; the whole accompanied by appropriate scenery, and brilliantly illuminated by the author’s own candle.”

Vathek (*vath’ek*).—By Beckford. Originally written in French. “It was composed,” says the author, “at twenty-two years of age. It took me three days and two nights of hard labor. I never took off my clothes the whole time.” The description of the Hall of Eblis, which is often quoted, was taken, it appears, from the old hall at Fonthill, Beckford’s residence, probably the largest in any private house in England. “It was from that hall I worked, magnifying and coloring it with Eastern character. All the female characters were portraits drawn from the domestic establishment of old Fonthill, their good or evil qualities ideally exaggerated to suit my purpose.” *Vathek* was translated into English, it is not known by whom, immediately on its appearance. “It was one of the tales,” says Byron, “I had a very early admiration of. For correctness of costume, beauty of description, and power of imagination, it far surpasses all European imitations, and bears such marks of originality that those who have visited the East will find some difficulty in believing it to be more than a translation.”

Veck, Toby.—*The Chimes*, Dickens. A ticket-porter who went on errands and bore the nickname Trotty. One New Year’s eve he had a nightmare and fancied he had mounted to the steeple of a neighboring church, and that goblins issued out of the bells. He was roused from his sleep by the sound of the bells ringing in the new year.

Veiled Prophet.—*Lalla Rookh*, Moore. He assumed to be a god, and maintained that he had been Adam, Noah, and other representative men. Having lost an eye, and being otherwise disfigured in battle, he wore a veil to conceal his face, but his followers said it was done to screen his dazzling brightness.

Vernon, Di, or Diana.—*Rob Roy*, Scott. The heroine of the story, a high-born girl of great beauty and talents. She is an enthusiastic adherent to a persecuted religion and an exiled king.

Vicar of Wakefield.—A novel by Goldsmith. The hero is Dr. Primrose, a simple-minded, pious clergyman, with six children. He begins life with a good fortune, a handsome house, and wealthy friends, but is reduced to poverty without any fault of his own, and, being relieved like Job, like Job he is restored.

Vincenzio (*vin-sen’shiō*).—The duke of Vienna in Shakespeare’s *Measure for Measure*. He commits his scepter to Angelo, under the pretext of being called to take an urgent and distant journey, and by exchanging the royal purple for a monk’s hood, observes incognito the condition of his people.

Vincy (*vin’si*), **Rosamond.**—One of the principal female characters in George Eliot’s novel *Middlemarch*.

Viola (*vi’ō-lā*)—*Twelfth Night*, Shakespeare. A sister of Sebastian. They were twins, and so much alike that they could be distinguished only by their dress. When they were shipwrecked Viola was brought to shore by the captain, but her brother was left to shift for himself. Being in a strange land, Viola dressed as a page, and, under the name of Cesario, entered the service of Orsino, duke of Illyria. The duke greatly liked his beautiful page, and, when he discovered her true sex, married her.

Violenta.—*All’s Well That Ends Well*, Shakespeare. A character in the play who enters upon the scene only once, and then she neither speaks nor is spoken to. The name has been used to designate any young lady nonentity; one who contributes nothing to the amusement or conversation of a party.

Virgilia (*ver-jil’i-ā*).—In Shakespeare’s *Coriolanus*, was the wife of Coriolanus, and Volumnia his mother; but historically Volumnia was his wife and Veturia his mother.

Virginia (*ver-jin’i-ā*).—A young Roman plebeian of great beauty, decoyed by Appius Claudius, one of the decemvirs, and claimed as his slave. Her father, Virginius, being told of it, hastened to the forum, and arrived at the moment when Virginia was about to be delivered up to Appius. He seized a butcher’s knife, stabbed his daughter to the heart, rushed from the forum, and raised a revolt. This has been the subject of a host of tragedies. It is one of Lord Macaulay’s lays (1842), supposed to be sung in the forum on the day when Sextus and Licinius were elected tribunes for the fifth time.

Vivian (*viv’i-an*), or **Viviane**, or **Vivien.**—In the Arthurian cycle of romance, an enchantress, the mistress of Merlin. She brought up Lancelot in her palace, which was situated in the midst of a magical lake; hence her name “the Lady of the Lake.”

Volpone (*vol-pō’ne*), or the **Fox.**—A comedy by Ben Jonson, written in 1605. Hazlitt calls it his best play; prolix and improbable, but intense and powerful. It seems formed on the model of Plautus in unity of plot and interest. The principal character is represented as a wealthy sensualist, who tests the character of his friends and kinsmen by a variety of stratagems, obtains from them a large addition to his riches by the success of his impostures, and finally falls under the vengeance of the law. “*Volpone*,” says Campbell, “is not, like the common misers of comedy, a mere money-loving dotard, a hard, shriveled old mummy, with no other spice than his avarice to preserve him—he is a happy villain, a jolly misanthrope, a little god in his own selfishness; and Mosca is his priest and prophet. Vigorous and healthy, though past the prime of life, he hugs himself in his harsh humor, his successful knavery and imposture, his sensuality and his wealth, with an unhallowed relish of selfish existence.”

W

Wallenstein (*vāl’len-stīn*).—A trilogy by Schiller, comprising *Wallenstein’s Lager*, *Die Piccolomini*, and *Wallenstein’s Tod*. Schiller conceives his hero in these dramas as the type of the practical realist, serious, solitary, and reserved.

Wandering Jew, The.—(*F. Le Juif Errant*).—A novel by Eugene Sue. The chief character is an imaginary person in a legend connected with the history of Christ’s passion. As the Savior was on the way to the place of execution, overcome with the weight of the cross, he wished to rest on a stone before the house of a Jew, who drove him away with curses. Driven by fear and remorse, he has since wandered, according to the command of the Lord, from place to place, and has never yet been able to find a grave.

War and Peace.—An historical novel by Tolstoi, published 1865-1868. The scene is laid in the time of the Czar Alexander I., and the novel is a picture of Russian society during the Russo-French wars.

Waverley (*wā’ver-lī*) **Novels.**—General name given to Scott’s historical novels.

Wayside Inn, Tales of a.—Poems in various meters by Henry Wadsworth Longfellow. The first series includes a Prelude (*The Wayside Inn*), the Landlord’s Tale (*Paul Revere’s Ride*), the Student’s Tale (*The Falcon of Ser Federigo*), the Spanish Jew’s Tale (*The Legend of Rabbi Ben Levi*), the Sicilian’s Tale (*King Robert of Sicily*), the Musician’s Tale (*The Saga of King Olaf*), the Theologian’s Tale (*Torquemada*), the Poet’s Tale (*The Birds of Killingworth*), several Interludes, and Finale.

Weller (*wel’er*), **Sam.**—In Dickens’s celebrated *Pickwick Papers*. A servant to Mr. Pickwick, to whom he becomes devotedly attached. Rather than leave his master when he is sent to the Fleet, Sam Weller gets his father to arrest him for debt. He is an inimitable compound of wit, simplicity, quaint humor, and fidelity. Tony Weller, father of Sam; a coachman of the old school, who drives between London and Dorking. On the coachbox he is a king, elsewhere a mere London “cabby.” He marries a widow, and his constant advice to his son is, “Sam, beware of the vidders.”

Westward Ho!—A novel by Charles Kingsley, the scene of which is laid in “the spacious times of great Elizabeth,” when the safety of England was threatened by the Spanish

[818]

[819]

armada. Several historical personages figure in the story, such as Sir Walter Raleigh, Sir Richard Grenville, Admiral Hawkins, and Sir Francis Drake; and the narrative carries the reader from Bideford to London, and from thence to Ireland, to the Spanish main, and the South American continent, back again to Bideford and Plymouth, whence the hero, Amyas Leigh, sails to take part in the famous sea-fight.

Wild (wild), Jonathan.—A cool, calculating, heartless villain, with the voice of a Stentor, hero of Defoe's romance of the same name.

Wilford.—(1) In Knowles' *The Hunchback*, supposed to be earl of Rochdale. (2) In Knowles' *The Beggar of Bethnal Green*, the truant son of Lord Woodville, who fell in love with Bess, the daughter of the "blind beggar of Bethnal Green."

Wilhelm Meister (vil' helm mis' ter).—Title of a philosophic novel by Goethe. The object is to show that man, despite his errors and shortcomings, is led by a guiding hand, and reaches some higher aim at last. This is considered to be the first true German novel.

Wimble (wim' bl), Will.—A member of the fictitious *Spectator Club*, said to be intended as a portrait of a Mr. Thomas Morecroft, a gentleman of simple habits and good nature.

Winter's Tale, The.—A play by Shakespeare. Leontés, King of Sicily, invites his friend Polixenés to visit him, becomes jealous, and commands Camillo to poison him. Camillo warns Polixenés, and flees with him to Bohemia. Leontés casts his queen, Hermione, into prison, where she gives birth to a daughter. Herminé is reported dead and the child is brought up by a shepherd, who calls it Perdita. Florizel sees Perdita and falls in love with her; but Polixenés, his father, tells her that she and the shepherd shall be put to death if she encourages the suit. Florizel and Perdita flee to Sicily, and being introduced to Leontés, it is soon discovered that Perdita is his lost daughter. Polixenés tracks his son to Sicily, and consents to the union. The party are invited to inspect a statue of Herminé, and the statue turns out to be the living queen.

Worldly-Wiseman, Mr.—One of the characters in Bunyan's *Pilgrim's Progress*, who converses with Christian by the way, and endeavors to deter him from proceeding on his journey.

Wrayburn (rā' bern) Eugene.—Our *Mutual Friend*, Dickens. Barrister-at-law; an indolent, moody, whimsical young man, who loves Lizzie Hexam. After he is nearly killed by Bradley Headstone, he reforms and marries Lizzie, who saved his life.

Y

Yahoo (yā-hō).—A name given by Swift, in his satirical romance of *Gulliver's Travels*, to one of a race of brutes having the form and all the vices of man. The Yahoos are represented as being subject to the Houyhnhms, or horses endowed with reason.

Yorick (yor' ik).—(1) The King of Denmark's jester, mentioned in Shakespeare's *Hamlet*. Hamlet picks up his skull in the churchyard and apostrophizes it. (2) A humorous and careless parson in Sterne's *Tristram Shandy*.

Z

Zadig.—The title of a novel by Voltaire. Zadig is a wealthy young Babylonian, and the object of the novel is to show that the events of life are beyond human control.

Zanoni (za-nō' nō).—Hero of a novel, so-called, by Lord Lytton. Zanoni is supposed to possess the power of communicating with spirits, prolonging life, and producing gold, silver, and precious stones.

Zara (zā' rā; French, zaire), a tragedy by Voltaire. Zara is the daughter of Lusignan d'Outremer, king of Jerusalem and brother of Nerestan. For twenty years Lusignan and his two children were captives at the court of the sultan Osman. The latter loves Zara, and was jealous of Nerestan, of whose relationship he was ignorant, and stabbed her to the heart. Nerestan being brought before the sultan, told him he had slain his sister. Osman then stabbed himself out of remorse.

Zenobia (ze-nō' bi-ā).—*Blithedale Romance*, Hawthorne. A strong-minded woman, beautiful and intelligent, who was interested in playing out the pastoral of the life at Brook Farm. She is represented as disappointed in love, and at last she drowned herself.

Zephon.—A "strong and subtle spirit" in Milton's *Paradise Lost*, whom Gabriel dispatched with Ithuriel to find Satan.

Zillah.—One of Southey's characters, beloved by Hamuel, a brutish sot. Zillah rejected his suit, and Hamuel vowed vengeance. Accordingly, he gave out that Zillah had intercourse with the devil, and she was condemned to be burnt alive. God averted the flames, which consumed Hamuel; but Zillah stood unharmed, and the stake to which she was bound threw forth white roses, "the first ever seen on earth since paradise was lost."

Zimri (zim' ri).—In Dryden's *Absalom and Achitophel*, is intended for George Villiers, duke of Buckingham, who had satirized Dryden in *The Rehearsal* as Bayes.

Zophiel (zō' fi-el).—In Milton's *Paradise Lost*, an angelic scout.

Zuleika (zū-jē' kā).—The heroine in Byron's poem of *The Bride of Abydos*, in love with Selim:

"Fair, as the first that fell of womankind...
Soft, as the memory of buried love;
Pure, as the prayer which childhood wafts above:
Such was Zuleika—such around her shone
The nameless charms unmark'd by her alone:
The light of love, the purity of grace,
The mind, the music breathing from her face,
The heart whose softness harmonized the whole—
And, oh! that eye was in itself a soul!"

This beautiful Roman temple, said to have been erected by Agrippa in 27 B. C., was dedicated to all the gods of Greece and Rome. It is lighted by a single aperture in the center of its magnificent dome. (See [illustration](#) on next page.)

GODS, HEROES AND MYTHICAL WONDER TALES

A myth is a story told about gods or heroes. Mythology is a term applied to the collected myths of a nation or people, sometimes to the scientific study of myths. The first to busy itself in a large sense with mythology was the Greeks, whose myths had the most luxuriant and fanciful development. When the Romans received the arts and sciences from the Greeks, they adopted also their gods and their entire religious system. Thus it was that the Greek and Roman mythologies were to a great extent the same.

THE IMPORTANCE OF MYTHOLOGY IN EDUCATION

On account of their great beauty and universal interest, myths were made the themes of poets, priests, artists and commentators alike. Not only were the myths the inspiration of classical literature, art and religion, but they kept their place in later civilizations, and mythological allusions are so frequent in our own literature that an acquaintance with classic fable is a necessary part of modern education.

HOW THE MYTHS ORIGINATED

A large proportion of these myths are due to men's observations of Nature, and her various active and creative forces, which appeared to their lively Southern fancy as manifestations of single supernatural beings. These were regarded now as friendly, now as hostile, to man; and men therefore strove as eagerly to gain their favor as to appease their wrath. Of the appearance of the deities who thus manifested themselves in the workings of nature, men necessarily formed at first very crude and fantastic ideas. But later, when men emerged from the simple conditions of the early patriarchal epoch, and began to dwell in regular political communities, they gradually ceased to regard the gods as mere personifications of natural forces. They began to regard them as beings acting in accordance with unchangeable moral laws, and endowed with forms similar to those of men. They brought the gods into connection with each other by means of genealogies in a great measure artificial, and built up a vast political system, which has its center in Zeus, or Jupiter, the "father of gods and men." (See [Chart](#) on following pages.)

HOW THE GODS RESEMBLE MORTALS

The ancient Greeks believed their gods to be of the same shape and form as themselves, but of far greater beauty, strength, and dignity. They also regarded them as being of much larger size than men; for in those times great size was esteemed a perfection, supposed to be an attribute of divinities, to whom they ascribed all perfections. A fluid named ichor supplied the place of blood in the veins of the gods. They were immortal, but they might be wounded or otherwise injured. They could make themselves visible or invisible to men, and assume the forms of men or of animals. Like men they stood in daily need of food and sleep. The meat of the gods was called ambrosia, their drink nectar. The gods, when they came among men, often partook of their food and hospitality.

Glimpse into the interior of the Pantheon at Rome showing statues of the gods and the marvelous effects of lighting.

Like mankind, the gods were divided into two sexes; namely, gods and goddesses. They married and had children. Often a god became enamored of a mortal woman, or a goddess was smitten with the charms of a handsome youth, and these love tales form a large portion of Grecian mythology.

To make the resemblance between gods and men more complete, the Greeks ascribed to their deities all human passions, both good and evil. They were capable of love, friendship, gratitude, and all affections; on the other hand, they were frequently envious, jealous, and revengeful. They were particularly careful to exact all due respect and attention from mankind, whom they required to honor them with temples, prayers, costly sacrifices, splendid processions, and rich gifts; and they severely punished insult or neglect.

HOW AND WHERE THE GODS LIVED

If we look to the employment of the gods, we find that it consists chiefly in pleasant idleness; though they endeavor, like the rich among mankind, to make time fly by indulging in their favorite pastimes. They take their meals in common, and assemble for this purpose in the palace of Zeus, on the windy heights of Olympus. There they refresh themselves, while Hebe ministers to their wants, listening to the strains of Apollo's lute, and to the songs of the sweet-voiced Muses, and entertaining themselves with pleasant conversation. Not always, indeed, is the company so peaceful and pleasant. At times these great gods quarrel finely; nay, even small conspiracies arise to interrupt the uniformity of their existence, such as that of Hera, Poseidon, and Athene against Zeus during the Trojan war, which is related in the fifteenth book of the "Iliad."

RELATIONSHIP AND DOMINION OF THE GODS

Lastly, that no point in their resemblance to mankind may be omitted, all the different deities are united in one great family, of which Zeus, or Jupiter, the father of men and the ruler of the gods, is the head and center. Zeus has, however, a special dominion over the celestial deities only, those of the sea and waters being subjected to Neptune or Poseidon, and those of the lower world to Hades, or Pluto.

A PRONOUNCING DICTIONARY OF MYTHOLOGY

KEY TO PRONUNCIATION

The long (marked) vowels are pronounced as in the following words; *fāte, fāre, fār, mē, mīne, mōte, mūte*. The short vowels, which include all not marked as above, are pronounced as in the following words: *pat; pet; pit; pot; put*. The accented syllable in each word is indicated by a mark placed immediately after it. (*q.v.*), *quod vide* (L)—which see.

A

- Abaris** (*ab 'a-ris*).—A mythical personage who is said to have taken no earthly food, and to have ridden on an arrow—the gift of Apollo, whose priest he was—through the air.
- Absyrtus** (*ab-sir 'tus*).—A son of Æetes, king of Colchis, sister of Medea. (See "**Medea**.")
- Acamas** (*ak 'a-mās*).—(1) Son of Theseus and Phædra; went with Diomedes to Troy to recover Helen.
- Acantha** (*ak-an 'tha*).—A nymph beloved by Apollo and changed into the acanthus.
- Acca Laurentia** (*ak 'ka law-ren 'shi-a*).—The nurse of Romulus and Remus, after they had been taken from the she-wolf. (See "**Romulus**.")
- Achates** (*a-ka 'tēz*).—A friend of Æneas—"fidus Achates" famous for his fidelity.
- Acheloïades** (*a-ke-lō 'i-a-dēz*).—The Sirens, so called because they were the daughters of Achelous.
- Achelous** (*ak-el 'ō-us*).—The river-god was the son of Oceanus and Tethys, and the eldest of three thousand brothers. He and Hercules both loved Deianira, and fought for the possession of her. Hercules conquered him, when he took the form of a bull, but was defeated again and deprived by Hercules of one of his horns. Achelous, who was looked upon as the representative of all fresh water, was considered a great divinity throughout Greece.
- Acheron** (*ak 'er-ōn*).—Generally signifies the whole of the lower world. Properly, it is the river of the lower world, around which the shades of the departed hover, and into which the Cocytus and Pyriphlegethon flow. There are other rivers also named Acheron.
- Achilles** (*a-kill 'ēz*).—The great hero of the Iliad. He was the son of Peleus, king of the Myrmidones, and the Nereid Thetis. His mother, wishing to make him immortal, plunged him, when an infant, into the river Styx, and succeeded with the exception of the ankles, by which she held him. He was educated by Phoenix and Chiron, the centaur—the former teaching him eloquence and the arts of war, the latter the healing art. When he was but nine years old, Calchas declared that Troy could not be taken without his aid. His mother, knowing that this war would be fatal to him, disguised him as a girl and sent him to dwell with the daughters of Lycomedes, at whose court he was called Pyrrha (*pir 'ra*), *i.e.*, red or tawny, on account of his auburn hair. Seeing, however, that Troy could not be taken without his aid, the crafty Ulysses, disguised as a merchant, sought him out, offering for sale jewels and articles of feminine attire, among which he had placed some arms. The ruse succeeded, as Achilles, by eagerly seizing the arms, at once betrayed his sex, and accompanied Ulysses to the Greek army before Troy. While at Lycomedes' court he became by Deidamia the father of Pyrrhus, or Neoptolemus. Before Troy he performed great feats of valor. After killing numbers of Trojans, he at length met Hector, whom he chased thrice round the walls of the city, and, having slain him, tied his body to his chariot and dragged it to the ships of the Greeks. He had an invulnerable suit of armor made, at his mother's request, by Vulcan. Finally, he was slain by Paris, son of Priam, who shot him in the heel, his only vulnerable part. He is the principal hero of the *Iliad*, and is represented as the handsomest and bravest of all the Greeks. After his death Achilles became one of the judges in the lower world, and dwelt in the islands of the blessed, where he was united to Medea, or Iphigenia.
- Acis** (*ā 'sis*).—A Sicilian shepherd, beloved by the nymph Galatea. He was crushed, through jealousy, under a huge rock by Polyphemus, the Cyclop, and his blood gushing forth from under was changed by the nymph into the river Acis, at the foot of Mount Etna.
- Actæon** (*ak-tē 'ōn*).—A mighty huntsman, son of Aristæus and Autonoe. One day while hunting he saw Diana and her nymphs bathing, and was immediately changed by the goddess into a stag, in which form he was torn to pieces by his fifty dogs.
- Admetus** (*ad-mē 'tus*).—King of Phœræ, in Thessaly. On the death of his first wife he sued for the hand of Alcestis, whom he obtained, by Apollo's aid, only on coming in a chariot drawn by a lion and a wild boar. The god (Apollo) denied the flocks of Admetus for nine years, when he was compelled to serve a mortal for having slain the Cyclops. Apollo prevailed on the Fates to grant that Admetus should never die if another would lay down his life for him. This Alcestis did, but was brought back from the lower world by Hercules.
- Adonis** (*a-dō 'nis*).—A beautiful youth beloved by Venus. While hunting he was killed by a wild boar, and was changed by Venus into the anemone. The grief of Venus was so great that the gods of the nether regions allowed him to spend six months of every year with Venus upon the earth. (This myth seems to refer to the apparent death of nature in winter and its revival in spring; hence Adonis spends six months in the lower and a like period in the upper world.)
- Æacus** (*ē 'ak-us*).—Son of Jupiter and Ægina. It is related that at his birth in the island of Ægina, which was named after his mother, there were no inhabitants on the island, and that Jupiter changed the ants there into men; hence the latter were called Myrmidones (Gr. ants), and Æacus ruled over them. Æacus was renowned throughout Greece for his justice and piety, and after his death became one of the three judges in Hades (the other two being Rhadamanthus and Minos).
- Ædon** (*a-ē 'dōn*).—Daughter of Pandareus and wife of Zethus, king of Thebes. Jealous of Niobe, her brother Amphion's wife, having six sons and six daughters, while she had but one son, she determined to kill the eldest of Niobe's sons, but by mistake slew her own son Itylus. Jupiter changed her into a nightingale, whose melancholy notes are represented as Ædon's lamentations for her son.
- Æetes** (*ē-ē 'tēz*) or **Æeta**, (*ē-ē 'ta*).—Son of Helios (the sun) and Persëis, and king of Colchis at the time Phrixus had fled to his court on a ram with golden fleece, the gift of Mercury. (See "**Phrixus**.") After having sacrificed to Jupiter the ram that had carried him, Phrixus gave its golden fleece to Æetes, who suspended it to an oak tree in the grove of Mars, where it was guarded day and night by an ever-watchful dragon. It was, however, greatly coveted, and an expedition was fitted out, consisting of all the great heroes of the age, with the special object, which proved successful, of obtaining it. (See "**Argonautæ**.")
- Ægæon** (*ē-jē 'ōn*).—Son of Uranus (heaven) and Gæa (earth). Ægæon and his brothers, Gyas and Cottus, were huge monsters with a hundred arms and fifty heads. Ægæon and his brothers, who are often called the Uranids, conquered the Titans when they made war upon the gods, and secured the victory to Jupiter, who thrust the Titans into Tartarus, and placed Ægæon and his brothers to guard them. Ægæon is often referred to under the name Briareus.
- Æneas** (*ē-nē 'as*), the hero of Virgil's great epic poem the *Æneid* (*ē-ne 'id*), was the son of Anchises and Venus, and was born on Mount Ida. Having been attacked on Mount Ida by Achilles, who also drove away his flocks, he led the Dardanians against the Greeks, and at once took part in the Trojan war. Æneas and Hector were the great Trojan heroes, and the former, being beloved by gods and men, was on more than one occasion saved in battle by the gods. Venus saved him from Diomedes, and Neptune from Achilles, when the latter was on the point of killing him. From the flames of Troy he carried on his back his father, Anchises, and the household gods, and led Ascanius, his son, leaving his wife, Creusa, daughter of Priam, to follow. Æneas then set out on those wanderings that form the subject of the *Æneid*. After visiting Epirus and Sicily he was driven by a storm on the coast of Africa, where he met with Dido, queen of Carthage, who hospitably entertained him and became enamored of him. Æneas, however, left suddenly, and **Dido** (*q.v.*) killed herself. He then sailed to Latium, where he married Lavinia, the daughter of King Latinus, and founded the town of Lavinium, so named in honor of his wife. Turnus, to whom Lavinia had been betrothed, made war against Latinus and Æneas, but was slain by the latter, who now became ruler of the Aborigines and Trojans. Soon afterwards, however, he was slain in battle by the Rutulians.
- Æolus** (*ē 'ō-lus*).—The happy ruler of the Æolian Islands. He had been given, by Jupiter, dominion over the winds, which he kept enclosed in a mountain. When Ulysses was on his journey from Troy to Ithaca, Æolus gave him all the adverse winds in bags, but his companions, born of curiosity, opened them.
- Æsculapius** (*ēs-kū-lā 'pi-us*).—The god of healing. He was the son of Apollo and Coronis, and was brought up by Chiron, the centaur, who instructed him in the art of healing and in hunting. When he was grown up, he not only healed the sick, but recalled the dead to life. He was killed by a thunderbolt by Jupiter, who feared lest men should, by his aid, escape death altogether. Serpents were sacred to him, and the cock was sacrificed to him.

Hercules (*q.v.*).

Aulis (*aw 'lis*).—A harbor in Bœotia, where the Greek fleet assembled before sailing for Troy.

Aurora (*aw-ror 'a*).—The goddess of the dawn, called Eos (*ē 'ōz*) by the Greeks; daughter of Hyperion and Thia, wife of Tithonus. She is represented as rising, at the close of every night, from the river Oceanus, in her rose-colored chariot drawn by swift horses, and opening with her rosy fingers the gates of the East. She bore Memnon to Tithonus.

Auster (*aws 'ter*); the Greek *Notus*, the southwest wind. In the winter it brought fogs and rain; but in the summer it was a harmful dry and parching wind.

Autolyco (*aw-toi 'ik-us*).—A very dexterous robber, who could transform himself into various shapes. He was the son of Mercury (the god of cunning and theft) and Chione (*kī 'on-ē*), and the father of Anticlea, the mother of Ulysses, who was celebrated for his cunning.

Avatar.—The incarnation or descent of the deity Vishnu, of which nine are believed to be past, and the tenth is yet to come, when Vishnu will descend from heaven on a white-winged horse, and introduce on earth a golden age of virtue and peace.

Avernus lacus (*a-ver 'nus lā 'kus*).—Lake Avernus. A lake near Cumæ, enclosed by steep and wooded hills, whose deadly exhalations were said to kill the birds flying over it. Near it was the cave of the Sibyl, through which Æneas (see *Æneid*, Book VI.) descended to the lower world. Sometimes Avernus is used to mean the lower world itself. In the latter sense it is used in the well-known quotation, *Facilis descensus Averno*, "The descent to hell is easy."

Azazel.—Ewald considers Azazel to have been a demon belonging to the pre-Mosaic religion. Another opinion identifies him with Satan, or the devil. Milton makes him Satan's standard bearer.

Azrael.—Meaning in Hebrew "help of God." In the Jewish and the Mohammedan mythology, the name of an angel who watches over the dying, and separates the soul from the body.

B

Baal.—A sun god, the center of whose worship was Phœnicia, whence it spread to neighboring countries.

Bacchantes (*bak-an 'tez*), or **Bacchæ** (*bak 'ē*).—Priestesses of Bacchus.

Bacchus (*bak 'us*); called Dionysus (*dī-on-i 'sus*) by the Greeks. The god of wine; was the son of Jupiter and Semele, the daughter of Cadmus. Bacchus went on a traveling expedition through Syria and Asia, returning to Europe through Thrace, during which he taught men the cultivation of the vine and the elements of civilization. He married **Aradne** (*q.v.*). Feasts in honor of Bacchus were called Bacchanalia, and were of a very noisy and riotous character. The vine, ivy and laurel were sacred to him, as were also the tiger, lynx, panther, ass, serpent and dolphin. Rams were usually sacrificed to his honor.

Banshee.—The domestic spirit of certain Irish or Scottish families, supposed to wail shortly before the death of one of the family. The banshee is allowed only to families of pure stock.

Baldur (*bāl 'dör*), or **Balder** (*bāl 'der*).—In old Norse mythology, a son of Odin, and one of the principal gods. Baldur's characteristics are those of a sun-god. He is the "whitest" of the gods, and so beautiful and bright that a light emanates from him. He is the wisest, most eloquent and mildest of the Ases, His dwelling is Breidablik. His wife is Nanna. He is finally slain, at the instigation of Loki, by a twig of mistletoe in the hands of the blind god Hodur. Baldur is specifically a Northern god; among the other Germanic races there is no existing record of him whatsoever.

Bellerophon (*bel-ler 'o-fon*).—Son of Glaucus and grandson of Sisyphus. He incurred the hatred of Antea, wife of Proetus, king of Argos, who sent him to his father-in-law (Iobates) with a letter requesting the latter to put the young man to death. Iobates selected what seemed to be a sure method of compassing his death, by asking him to go and kill the **Chimæra** (*kī-mē 'ra*) (*q.v.*). Bellerophon, however, obtained possession of the winged horse **Pegasus** (*q.v.*), which enabled him to rise in the air. He then slew the monster with his arrows. Iobates then sent him against the Solymi, a warlike race in Lycia, and afterwards against the Amazons; but in these expeditions also he was successful. Finally, he attempted to fly to heaven on Pegasus; but Jupiter sent a gad-fly to sting the horse, which threw its rider on to the earth.

Bellona (*bel-lō 'na*).—The Roman goddess of war, sister of Mars.

Belphegor.—A god of evil, worshiped by the Moabites. An archfiend who had been an archangel.

Belus.—The name of the Chaldean sun-god.

Berg Folk.—Pagan spirits doomed to live on the Scandinavian hills till the day of redemption.

Bertha.—The white lady who guards good German children, but is the terror of the bad, who fear her iron nose and big feet. Corresponds to the Italian La Befana.

Bheem.—One of the five brotherhoods of Indian demigods, famous for strength.

Bifrost.—In Norse mythology, a bridge between earth and heaven, over which none but the gods could travel. It leads to the palace of the Fates.

Bilskirnir.—A wonderful palace built by Thor for the use of peasants after death.

Bona Dea (*bon 'a de 'a*), or **Fauna**, or **Fatua**.—A Roman goddess, sister, wife or daughter of Faunus. She was the goddess of chastity and prophecy, and revealed her oracles to females only. During her annual festival on the first of May, in the house of the consul or prætor, no male person was allowed to be present.

Boreas (*bor 'e-as*).—The north wind; was the son of Astræus and Aurora, and brother of the other three winds, Notus, Zephyrus and Hesperus. He was worshiped at Athens, where a festival was celebrated in his honor.

Bosphorus, or **Bosporus**.—The Straits of Constantinople, so called from Io, who, in the form of a heifer, swam across it (Bosphorus = Ox-ford). See "**Io**."

Brahma.—The supreme god of the Hindus, represented with four heads and four arms. He is regarded as the creator of the universe, and forms, with Vishnu the preserver, and Siva the destroyer, the divine triad.

Briareus (*brī-âr 'e-us*).—A hundred-armed giant, also called **Ægæon** (*q.v.*). Pope thus expresses his admiration for Handel:—

"Strong in new arms the giant Handel stands,
Like bold Briareus with a hundred hands."

Briseis (*brī-sē 'is*).—Daughter of Brises and beloved by Achilles. She was the occasion of a feud between Achilles and Agamemnon.

Bucephalus (*bū-sef 'a-lus*)—*i. e.* bull-headed. The favorite charger of Alexander the Great, so named because he was branded with a bull's head. No one but Alexander was able to mount this celebrated horse, which always knelt down to receive his master. He died in India after carrying Alexander through all his campaigns. Alexander built a city near the place where he died, and named it Bucephala in memory of him.

Busiris (*bū-sī 'ris*).—A king of Egypt who cruelly sacrificed strangers to Jupiter. He attempted to sacrifice Hercules, but the latter slew him and all his ministers.

Buto (*bū 'tō*).—An Egyptian goddess identified with Latona.

C

Cacus (*kā 'kus*).—Son of Vulcan; a huge giant and notorious robber; lived in a cave on Mount Aventine. He stole the oxen of Hercules, which the latter had taken from Geryon, in Spain, whereupon Hercules slew him.

Cadmus (*kad 'mus*).—Son of the Phœnician king Agenor, and brother of Europa. His father sent him to search for his sister, who had been carried off by Jupiter, and he was directed to follow a certain cow, and to build a city on the spot where the cow fell down with fatigue. In this way he became the founder of Thebes, in Bœotia. Near this place was a well guarded by a dragon, which Cadmus slew, and sowed the teeth of the monster. From these arose armed men, who killed each other, with the exception of five, who were the ancestors of the Thebans. All this he did on the direction of Minerva, and Jupiter gave him Harmonia for his wife. The marriage was celebrated in the citadel of Thebes, and all the Olympian gods were present at the ceremony. Cadmus gave Harmonia a famous robe of state (peplus) and a necklace (see "**Harmonia**") which he had received from Vulcan. Their children were Autonœ, Ino, Semele, Agave, Polydorus and Ilyrius. Cadmus introduced among the Greeks an alphabet of sixteen letters.

Cænæus (*sē 'nūs*).—Originally a maiden, named Cænïs, who was beloved by Neptune and changed by him into a boy, and at the same time made invulnerable. In the lower worlds she recovered her female form.

Calchas (*kal 'kas*).—The most eminent of the Greek soothsayers at the siege of Troy. He died of grief on meeting Mopsus, who was a wiser soothsayer, and predicted things which Calchas could not.

Calliope (*kal-i 'op-ē*).—The Muse of epic poetry. See "**Musæ**."

Callirhoe (*kal-lir 'ro-ē*).—Second wife of Alcmaeon. She induced her husband to get the peplus and necklace of Harmonia, whereupon he was slain. See "**Alcmaeon**."

Callisto (*kal-lis 'tō*).—An Arcadian nymph beloved by Jupiter, by whom she became the mother of Arcas. Jupiter changed her into a she-bear, and afterwards placed her among the stars as *Ursa major*.

Calpe (*kal 'pē*).—One of the Pillars of Hercules; now Gibraltar.

Calydon (*kal 'i-dōn*).—A very ancient town in Ætolia. In the mountains around it the celebrated *Calydonian Boar Hunt* took place. The story is as follows: During the reign of Æneus, king of Calydon, Diana sent a huge boar to devastate the country, because the king had neglected her divinity. All the heroes of the age joined together for the purpose of killing this boar. Meleager, son of Æneus, slew the boar, and gave its hide to Atalanta, with whom he was in love. See "**Atalanta**."

Calypto (*kal-ip 'sō*).—A nymph who ruled in the island of Ogygia, on which Ulysses was shipwrecked on his journey home from Troy. She desired Ulysses to marry her, and detained him on the island for seven years.

Camenæ (*kam-ē 'nē*).—Originally prophetic nymphs belonging to the religion of ancient Italy, afterwards identified with the Muses.

Campus Martius (*kam 'pus mar 'shi-us*)—*i. e.* the plain of Mars; so named because it was consecrated to the god Mars. An open plain outside the walls of Rome, where the Roman youths performed their gymnastic and warlike exercises, and where the Roman people met for the purpose of electing magistrates.

Capitolium (*kap-it-ō 'li-um*).—The temple of Jupiter and the citadel of Rome.

Cassandra (*kas-san 'dra*).—Daughter of Priam, king of Troy, and Hecuba. She possessed great beauty, and was beloved by Apollo, who bestowed on her the gift of prophecy. She disappointed him, however, whereupon the god ordained that no one should believe her predictions. On the fall of Troy she fell to the share of Agamemnon, who took her to Mycenæ, where she was murdered by Clytæmnestra.

Castor and Pollux (*kas 'tor, pol 'uks*).—Twin brothers, often called the Dioscuri (*dī-os 'ku-rī*), *i. e.* sons of Zeus (Jupiter), because they were the sons of Jupiter and Leda, the wife of Tyndareus, king of Sparta. Castor was famous for his skill in managing horses, and Pollux for his ability as a boxer. Castor was supposed to be mortal, while Pollux was immortal. They took part in the celebrated expedition of the Argonauts, and assisted the Romans against the Latins in the great battle of Lake Regillus. They were greatly attached to each other, and were placed by Jupiter among the stars as Gemini (*jem 'in-i*), *i. e.* twins, where they served as a guide to mariners. They were worshiped more especially as the protectors of sailors.

Cauther.—In Mohammedan mythology the lake of paradise, whose waters are as sweet as honey, as cold as snow, and as clear as crystal; and any believer who tastes thereof is said to thirst no more.

Cecrops (*sē 'krops*).—The most ancient king of Attica, founder of Athens. He decided in favor of Athena (Minerva) when she and Neptune contended for the possession of Attica. The citadel of Athens was called Cecropia after him.

Celeus (*sel 'e-us*).—King of Eleusis, husband of Metanira, and father of Triptolemus and Demophon. He entertained the goddess Ceres, who in return taught his son **Triptolemus** (*q.v.*) agriculture.

Centauri (*sen-taw 'rī*), or **Centauræ**—*i. e.* the bull-killers—were a fabulous race living in Thessaly, half men and half horses. They were defeated in a famous fight with the **Lapithæ** (*q.v.*), and expelled from their country. **Chiron** (*kī 'ron*) was the most celebrated of them (*q.v.*).

Cephalus (*sef 'al-us*).—Was beloved by Aurora, whose advances he rejected from love of his wife Procris. Aurora asked him to try the fidelity of Procris. Having metamorphosed him into a stranger, he appeared, laden with rich presents, before her. The presents caused her to yield, whereupon her husband discovered himself. She fled in shame to Crete, but afterwards returned, disguised as a youth, with a dog and spear (the gifts of Diana) that never missed their object. To obtain these, Cephalus promised to love the youth, who then made herself known to him as his wife Procris. In this way a reconciliation was effected. Afterwards Cephalus, while out hunting, accidentally killed her with the never-erring spear.

Cepheus (*sē 'fūs*).—King of Ethiopia and father of Andromeda.

Cerberus (*ser 'ber-us*).—The three-headed dog that guarded the entrance to the lower world.

Ceres (*sē 'rēz*).—The goddess of agriculture, especially of the cultivation of corn; called Demeter (*dē-mē-tēr*) by the Greeks. She was the daughter of Saturn and Rhea, and sister of Jupiter and Pluto. She became by Jupiter the mother of Proserpine. The latter was carried off by Pluto. When Ceres found this out, she did not allow the earth to bring forth any fruits, and Jupiter was compelled to send Mercury into the lower world to fetch back Proserpine. Pluto consented, but gave Proserpine part of a pomegranate to eat. In consequence of this she was obliged to spend one-third of the year with Pluto. The earth then brought forth fruit again. This legend evidently refers to the concealment of seed-corn in the earth and its subsequent reappearance above the surface. The Romans sacrificed pigs to Ceres. The decrees of the senate were deposited in her temple.

Ceyx (*sē 'ix*).—Son of Lucifer and husband of Alcyone.

Charites (*char 'it-ēz*)—Gr., the **Graces**—were the goddesses who confer all grace. They were the daughters of Jupiter and were three in number, their names being Aglaia (*ag-lā 'i-a*), *i. e.* the bright one; Euphrosyne (*ū-fros 'i-nē*), *i. e.* the cheerful or mirthful one; and **Thalia** (*thal-i 'a*), *i. e.* the blooming one. They were the personifications of grace and beauty, and enhanced by refinement and gentleness the enjoyments of life. They were the friends of the Muses and specially favored poetry.

Charon (*kār 'on*).—Son of Erebus; was the ferryman of Hades who conveyed the souls of the departed across the rivers Acheron and Styx, receiving in return the obolus placed in the mouth of every corpse before burial.

Charybdis (*ka-rib 'dis*).—A dangerous whirlpool between Italy and Sicily, opposite **Scylla** (*q.v.*).

Chibiabos.—A musician, ruler in the land of spirits, and friend of Hiawatha. Personification of harmony in nature.

Chimæra (*kī-mē 'rā-i*).—*i. e.* a she-goat.—A fabulous, fire-breathing monster with a lion's head, a serpent's tail, and a *goat's* body. She was killed by Bellerophon, mounted on

[825]

[826]

creatures that dance on the grass or sit in the leaves of trees and delight in the full moon.

Elivagar.—In Norse mythology the name of a great stream in Chaos, flowing from a fountain in the land of mist. This stream was much frequented by the elves at their creation.

Erato (*er' a-tō*).—The Muse of amatory poetry. See “**Musa**.”

Erebus (*er' e-bus*).—The god of darkness, son of Chaos and brother of Nox (night). The name signifies darkness, and is frequently used to designate the lower world.

Erechtheus (*e-rek' thūs*).—An ancient and mythical king of Athens. See “**Athenæ**.”

Eridanus (*ē-rid' an-us*).—The Greek name of the river Padus (Po), into which Phaethon fell when struck by the lightning of Jupiter. See “**Phaethon**.”

Erinyes (*er-in' i-es*).—The **Furiæ** (*q. v.*).

Erl-king.—Name given to the king of the elves, or a spirit of the air. According to tradition, its home is in the Black Forest of Germany, and it appears as a goblin, working harm and ruin, especially among children.

Eryx (*er' ix*).—A high mountain in the northwest of Sicily, on the summit of which stood an ancient and celebrated temple of Venus.

Eumenides (*ū-men' i-déz*).—See “**Furiæ**.”

Euphrosyne.—See “**Charites**.”

Europa (*ū-rō' pā*).—The beautiful daughter of the Phœnician king Agenor. Jupiter was so charmed with her that he obtained possession of her by the following stratagem: He assumed the form of a bull among the herds of Agenor, and Europa and her maidens were delighted with the tameness of the noble animal, so much so that at length Europa ventured to mount his back, whereupon the god plunged into the sea and carried her over to Crete. Here Jupiter assumed his proper shape, and Europa bore him Minos, Rhadamanthus and Sarpedon.

Eurydice (*ū-rid' i-sē*).—Wife of **Orpheus** (*q. v.*).

Eurystheus (*ū-ris' thūs*).—Son of Stenelus and grandson of Perseus, a king of Mycenæ. Jealous of the fame of Hercules, and wishing to destroy him, Eurystheus, at the command of Juno, imposed upon Hercules his famous twelve labors.

Euterpe (*ū-ter' pē*).—One of the **Muses** (*q. v.*).

F

Fada.—A féé or kobold of the south of France, sometimes called “**Hada**.” These house-spirits, of which, strictly speaking, there are but three, bring good luck in their right hand and ill luck in their left.

Fafnir.—In northern mythology the eldest son of the dwarf king Hreidmar. The slaying of Fafnir is the destruction of the demon of cold or darkness who had stolen the golden light of the sun.

Fates.—See “**Parcæ**.”

Faunus (*faw' nus*).—Son of Picus, grandson of Saturn, institutor of tillage and grazing, and after his death the protecting deity of agriculture and of shepherds, and also a giver of oracles. He is identical with the Greek god Pan, and is represented with horns and goat's feet.

Faustulus (*faws' tu-lus*).—A shepherd who brought up Romulus and Remus.

Flora (*flō' ra*).—The Roman goddess of flowers and spring.

Fortuna (*for-tū' na*); called Tyche (*tik' ē*) by the Greeks. The goddess of fortune. She is variously represented: with the horn of plenty, indicative of the plentiful gifts of fortune; with a rudder, to signify that she guides the affairs of men; with a ball, emblematic of the shifting and changing character of the fickle goddess.

Freki and Geri.—The two wolves of Odin. When Odin, seated on his throne, overlooks heaven and earth, his two wolves lie at his feet.

Frey.—Scandinavian god of the sun and of rain, and hence of fertility and peace. He was one of the most popular of the northern divinities. No weapons were ever allowed in Frey's temple, although oxen and horses were sacrificed to him. His name was connected with the taking of any solemn oath, a heavy gold ring being dipped in the blood of the sacrifice and the oath sworn upon the ring. One of the most celebrated of the temples built to Frey was at Therva, and was changed into a statue by Odin, as a punishment. She is known as the northern goddess of beauty and love; plants were called Freyja's hair, and the butterfly, Freyja's hen.

Freyja.—She was the sister of Frey, and the wife of Odur, who abandoned her on her loss of youth and beauty, and was changed into a statue by Odin, as a punishment. She is known as the northern goddess of beauty and love; plants were called Freyja's hair, and the butterfly, Freyja's hen.

Frigga.—In Scandinavian mythology the wife of Odin, the queen of the gods, and the mother of Baldur, Thor, etc. She sometimes typifies the earth, as Odin does the heavens. The Anglo-Saxons worshipped her as Frea. The name survives in Friday.

Frodi.—The son of Frey, a god of peace. Under his direction two giantesses turned a pair of magic millstones which ground out gold according to his wish and filled his coffers. Excited by greed he forced them to labor, allowing rest only long enough for the singing of one verse. When Frodi himself slept, the giantesses changed their song and proceeded to grind out an army of troops to invade the land. These troops represent the vikings.

Furiæ (*fū' ri-ē*).—The Furies; called Eumenides (*ū-men' i-déz*), *i. e.* the gracious or well-meaning ones, by the Greeks; three goddesses of vengeance, whom the Greeks so much dreaded that they dared not to call them by their real names, hence referred to them by the euphemism Eumenides. The Romans also called them Diræ (*dī' rē*). Their names were Aleto (*a-lek' tō*), Megæra (*me-gē' ra*) and Tisiphone (*tī-sif' onē*). They were the daughters of Earth or of Night, and were terrible winged maidens with serpents twined in their hair and with blood dripping from their eyes. They were stern and inexorable, punishing the guilty both in this world and after death. They dwelt in Tartarus—*i. e.* Hades. The sacrifices offered to them were black sheep and a drink of honey mixed with water, the latter, called a *libation* (*li-bā' shun*), being poured forth out of a cup in their honor.

G

Galatea (*gal-a-tē' a*).—A sea nymph. See “**Acis**.”

Ganesa.—Goddess of wisdom, in Hindu mythology.

Gangler.—The gate-keeper in Odin's palace who gave the explanation of the northern mythology that it might be recorded.

Ganymedes (*gan-i-mē' dēz*), or **Ganymede** (*gan' i-mēd*).—Son of Tros and Callirrhoe, a beautiful youth who was carried off by Jupiter's eagle from Mount Ida to heaven, that he might be cup-bearer to the gods in place of Hebe. Jupiter compensated his father by presenting him with a pair of divine horses.

Garm.—A fierce dog that kept guard at the entrance of Hel's kingdom, the realm of the dead. He could be appeased by the offering of a Hel-cake which always appeared in the hand of one who, on earth, had given bread to the needy.

Genius (*jē' ni-us*).—The protecting spirit or genius of a person, place, etc.; called by the Greeks Dæmon. They were represented as the guardians of men and of justice, and the Greek philosophers held that every human being at his birth had a dæmon assigned to him, which accompanied him throughout life. Every place, also, had its genius, which appeared in the form of a serpent eating fruit before him. In works of art genii are commonly represented as winged beings.

Gerda.—Wife of Frey, and daughter of the frost giant Gymer. She is so beautiful that the brightness of her naked arms illuminates both air and sea.

Giallar Bridge.—The bridge of death, over which all must pass.

Giallar Horn, The.—Heimdall's horn, which went out into all worlds whenever he chose to blow it. According to northern mythology, he blew a long-expected blast as a rallying call to the battle which ended the reign of the gods Odin, Frey, and Tyr.

Gian ben Gian.—In Arabia, king of the Ginns or Genii, and founder of the Pyramids. He was overthrown by Azazel or Lucifer.

Gigantes (*gi-gan' tēz*).—A fabulous race of huge beings, with terrible countenances and the tails of dragons. They endeavored to storm the heavens, being armed with huge rocks and trunks of trees; but the gods, with the assistance of Hercules, destroyed them all, and buried them under Ætna and other volcanoes. This story probably had its origin in volcanic convulsions.

Glaucus (*glaw' kus*).—(i) A fisherman who became a sea-god by eating a part of the divine herb sown by Saturn, (ii) Son of Sisyphus. Was torn to pieces by his own mares, because he had despised the power of Venus. (iii) The commander of the Lycians in the Trojan war. He was slain by Ajax.

Golden Fleece.—See “**Argonautæ**.”

Gill.—The infernal river of Scandinavian mythology.

Gunungagap.—In Norse mythology the vast chaotic gulf of perpetual twilight which existed before the present world, and separated the region of fog from the region of heat. Giants were the first beings who came to life among the icebergs that filled this vast abyss.

Gorgons (*gor' gonz*).—Three frightful female monsters who turned all they looked upon into stone. Their names were Medusa (*me-dū' sa*), Euryale (*ū-rī' al-e*) and Stheno (*sthē' nō*), and they were daughters of Phorcys and Ceto. Their heads were covered with serpents in place of hair, and they had wings, frightful teeth and brazen claws. Of the three, Medusa alone was mortal. She was killed by **Perseus** (*q. v.*).

Gladshiem.—The palace of Odin, in which were the great hall Valhalla (the hall of the slain) and the twelve seats occupied by the gods when holding council.

Glasir.—A marvelous grove in Asgard, in which the leaves were all of shimmering red gold.

Glendoveer.—In Hindu mythology is a kind of sylph, the most lovely of the good spirits.

Gnome.—One of a class of spirits or imaginary beings which were supposed to tenant the interior parts of the earth, and in whose charge mines, quarries, etc., were left. Rubezahl, of the German legends, is often cited as a representative of the class.

Goblins and Bogies.—Familiar demons of popular superstition, a spirit which lurks about houses. It is also called hobgoblin. Goblin is used in a serious sense by Shakespeare in *Hamlet*, where the ghost is supposed to be a “spirit of health or goblin damned.”

Graces, The Three.—See “**Charites**.”

Gradius (*grad-i' vus*).—*i. e.* the marching one. A surname of Mars.

Grææ (*grē' ē*), lit., “the old women” (Gr.).—So called because they had gray hair from their birth. They were the sisters of the Gorgons, and were three in number. They had but one eye and one tooth to use between them.

Gyas (*jī' as*), **Gyes** (*jī' ēz*), or **Gyges** (*jī' jēz*).—One of the giants with a hundred hands who made war upon the gods.

H

Hades (*hā' dez*).—See “**Pluto**.”

Hæmon (*hē' mon*).—Son of Creon, king of Thebes. He loved Antigone, and killed himself on hearing that she was condemned by Creon to be shut up in a subterranean cave.

Harmonia (*har-mō' ni-a*).—Daughter of Mars and Venus, and wife of Cadmus. On the wedding-day Cadmus received a necklace, which afterwards became famous, inasmuch as it became fatal to all who possessed it.

Harprocrates (*har-pok' ra-tēz*).—The god of mystery and silence, and, on that account, represented as having been born with his finger in his mouth. He was the son of Osiris. His statue stood at the entrance of most of the Egyptian temples.

Harpylæ (*har' pi-ē*).—The Harpies—*i. e.* the Robbers or Spoilers, hideous rapacious monsters, half bird and half woman. They were three in number. Homer described them as carrying off people who had disappeared.

Hebe (*hē-bē*).—The goddess of youth, daughter of Jupiter and Juno. She was the cup-bearer to the gods, in which office she was afterwards supplanted by Ganymede. She became the wife of Hercules after he was deified.

Hecate (*hek' a-tē*).—Daughter of Perses and Asteria, the presider over enchantments, etc. She was looked upon as a kind of threefold goddess—viz., Luna (the moon) in heaven, Diana on earth, and Proserpine in the lower world—and is accordingly represented with three bodies or three heads. Dogs, honey and black female lambs were sacrificed to her.

Hector (*hek' tor*).—Eldest son of Priam, king of Troy, and Hecuba, and husband of Andromache. He was the chief hero of the Trojans in their war with the Greeks. He was slain in single combat by Achilles, who chased him thrice round the walls of the city, and, after having slain him, tied his body to his chariot and dragged it thrice round the walls. The character of Hector as a warrior, husband, father and son is very finely drawn by Homer in the *Iliad*.

Hecuba (*hek' ū-ba*).—Wife of Priam, king of Troy. After the fall of Troy she was carried away as a slave by the Greeks and suffered great misfortunes.

Heimdall.—In northern tales a god who lived in the celestial fort Himinsbjorg, under the farther extremity of the bridge Bifrost, and kept the keys of heaven. He is the watchman or sentinel of Asgard, sees even in sleep, can hear the grass grow, and even the wool on a lamb's back. Heimdall, at the end of the world, will wake the gods with his trumpet.

Helena (*hel' en-a*), or **Helene** (*hel' en-ē*); commonly called Helen of Troy. Daughter of Jupiter and Leda, and sister of Castor and Pollux. She was the greatest beauty of her age, and her hand was sought by the noblest chiefs of Greece. She chose Menelaus (*men-e-lā' ūs*), and became by him the mother of Hermione. She eloped with **Paris** (*q. v.*) to Troy, and hence arose the Trojan war, as all the Greek chiefs, who had been former suitors of Helen, resolved to avenge her abduction, and sailed with Menelaus against Troy. After the death of Paris she married his brother Deiphobus (*de-i' ōb-us*). On the capture of Troy, after a ten years' siege, she became reconciled to Menelaus, and returned with him to Sparta, where they lived for a number of years in peace and happiness.

Helenus (*hel' e-nus*).—A celebrated soothsayer, son of Priam, king of Troy, and Hecuba. He deserted his countrymen and joined the Greeks—some say voluntarily, others that he was taken prisoner by the Greeks.

Heliades (*hē' li-a-dēz*).—Daughters of the Sun (Helios). They lamented the death of their brother Phaethon so bitterly that the gods, in compassion, metamorphosed them into poplar trees and their tears into amber.

Helicon (*hel' i-kon*).—A mountain in Bœotia, sacred to Apollo and the Muses. The famous fountains of the Muses, Aganippe and Hippocrene, sprang here.

Helios (*hē' li-os*).—The god of the sun. See “**Phœbus**” and “**Apollo**.”

Helle (*hel' lē*).—Sister of **Phrixus** (*q. v.*). When she and her brother were riding through the air upon the ram with the golden fleece she fell into the sea, which was thence

Jason (*ĵā´son*).—The famous leader of the Argonauts; was the son of Æson, king of Thessaly, who reigned at Iolcus. The principal part of his history is given under "**Argonautæ**." During his absence, while on the Argonautic expedition, his uncle Pelias had slain his father. In order to avenge this deed Medea, the wife of Jason, persuaded the daughters of Pelias to cut their father to pieces and boil him, in the belief that he would thus be restored to youth and vigor. Medea, who was well versed in magic arts, had previously changed a ram into a lamb by similar treatment. In this way, then, Pelias perished miserably, and his son Acastus expelled Jason and Medea from Iolcus. They then went to Corinth, where they lived happily for several years, until Jason deserted her in favor of Creusa, the daughter of Creon, king of Corinth. Medea took fearful vengeance. She sent Creusa a poisoned garment, which burned her to death when she put it on; the palace also took fire, and her father, Creon, perished in the flames. Medea then killed her children, and fled to Athens in a chariot drawn by winged dragons.

Jinn.—A sort of fairies in Arabian mythology, the offspring of fire. They are governed by a race of kings named Suleyman, one of whom "built the pyramids." Their chief abode is the mountain Kaf, and they appear to men under the forms of serpents, dogs, cats, monsters, or even human beings, and become invisible at pleasure. The evil jinn are ugly, but the good are beautiful. According to fable, they were created from fire two thousand years before Adam was made of earth.

Jord.—Daughter of Night and mother of Thor. In Scandinavian mythology the name given to primitive earth.

Juggernaut, or **Jaggeraut**.—A Hindu god. The temple of this god is in a town of the same name in Orissa.

Juno (*ĵū´no*); called *Herā* (*hē´ra*) by the Greeks.—The sister and wife of Jupiter, and queen of heaven; daughter of Saturn and Rhea. She was the guardian deity of women, and presided over marriage. She specially watched over the birth of children, and was then invoked under the name of Lucina (*lū-si´na*). Homer described her as being of a jealous, obstinate and quarrelsome disposition. In consequence of the judgment of **Paris** (*q.v.*), she was hostile to the Trojans, and accordingly sided with the Greeks in the Trojan war. The peacock was sacred to Juno. Juno was also regarded as the guardian of the finances, and had a temple on the Capitoline hill, which contained the mint. Mars, Vulcan and Hebe were her children.

Jupiter (*ĵū´pit-er*); called *Zeus* (*zūs*) by the Greeks.—King of heaven, and greatest of the Olympian gods; was a son of Saturn and Rhea. He dwelt on Mount Olympus, in Thessaly. He was the father and supreme ruler of gods and men. His first wife was *Metis* (*q.v.*). By Juno, his second wife, he had two sons, Mars and Vulcan, and one daughter, Hebe. The eagle, the oak, and doves were sacred to Jupiter. He was armed with thunderbolts, and surrounded with thick clouds, the former being provided for him by the Cyclops who worked under the direction of Vulcan. Jupiter was regarded as the special protector of Rome, and had a temple on the Capitol. He was looked upon as the guardian of law and the protector of justice and virtue. He was also the ruler of the lower air, hence rain and storms were supposed to come from him. In this connection the Romans applied the surname *Pluvius* (*i. e.* the rain-bringer) to him, and special sacrifices were offered to him during long-protracted droughts.

Juventas (*ĵū-ven´tas*).—The Roman name for **Hebe** (*q.v.*), the goddess of youth.

K

Kama.—The Hindu god of love. His wife is Rati (voluptuousness), and he is represented as riding on a sparrow, holding in his hand a bow of flowers and five arrows, each tipped with the bloom of a flower supposed to conquer one of the senses. His power is so much exalted that even the god Brahma is said to succumb to it.

Kami.—The gods of ancient Japan. The name, in modern times, designates any spiritual saint, and may also be applied to a prince.

Kaswa.—The camel admitted into Moslem paradise, the favorite camel of Mohammed which fell on its knees in adoration when "the prophet" delivered the last clause of the Koran to the assembled multitude at Mecca.

Kederli.—In Mohammedan mythology is a god corresponding to the English St. George, and is still invoked by the Turks when they go to war.

Kelpie.—In mythology of Scotland a spirit of the water seen in the form of a horse. Each lake has its kelpie.

Kobold.—A house-spirit in German superstition. In northern lands the name is sometimes used in place of elf or dwarf, representing an underground spirit. Probably the same as the Scotch brownie.

Koppelberg.—The hill which miraculously opened to receive the children who followed the Pied Piper. This belongs to mythology, as people in the middle ages considered Odin as the leader of disembodied spirits, and from this came the Pied Piper. The rats were the restless souls of the dead, which the Pied Piper released by drowning.

Krishna.—In Hindu mythology the eighth incarnation of Vishnu. According to some authorities, he is considered distinct from all the Avatars, as these had only a portion of the divinity, and Krishna was Vishnu himself in the form of "the Black One."

L

Ladon (*lā´don*).—The dragon that guarded the apples of the Hesperides. It was slain by Hercules.

Laertes (*lā-er´tez*).—King of the island of Ithaca and father of Ulysses. He took part in the Calydonian boar hunt, and in the Argonautic expedition. He lived to see the return of his son to Ithaca, after the fall of Troy.

Laius (*lā´i-us*).—King of Thebes and father of Œdipus.

Laocoon (*lā-ok´o-on*).—A Trojan, priest of Apollo, who strenuously opposed the admission of the wooden horse into **Troy** (*q.v.*). As he was preparing to sacrifice a bull to Neptune, two fearful serpents swam out of the sea and strangled both him and his two sons.

Laodamia (*lā-od-a-mi´a*).—Daughter of Acastus and wife of Protesilaus.

Laodice (*lā-od´i-sē*).—(i) Daughter of Priam and Hecuba. (ii) The name given by Homer to Electra, daughter of Agamemnon and Clytæmnestra.

Laomedon (*lā-om´e-don*).—King of Troy, father of Priam.

Lapithæ (*lap´i-thē*).—A mythical people inhabiting the mountains of Thessaly. They were ruled by Pirithous, who, as Ixion's son, was half-brother of the Centaurs. When Pirithous married Hippodamia, and invited the Centaurs to the marriage feast, the latter, fired by wine, attempted to carry off the bride and the other women. Hence arose the celebrated fight between the Centaurs and the Lapithæ, in which the former were defeated. The Lapithæ are said to have invented bits and bridles for horses.

Lares (*lār´ēz*).—Household divinities—the divinities presiding over the hearth, and the whole house. In great houses the images of the Lares were placed in a separate compartment. At meal times some portion was offered to the Lares, and on festive occasions they were adorned with wreaths.

Latinus (*la-ti´nus*).—King of Latium, who gave Æneas his daughter Lavinia in marriage.

Latmus (*lat´mus*).—A mountain in Caria, on which **Endymion** (*q.v.*) lay in perpetual sleep.

Latona (*la-tō´na*); called *Leto* (*lē´tō*) by the Greeks. The mother of Apollo and Diana, by Jupiter. She was persecuted by Juno, and wandered from place to place till she came to Delos, which was then a floating island, but which Jupiter fastened by adamantine chains to the bottom of the sea. Here Apollo and Diana were born.

Lavinia (*la-vin´i-a*).—Daughter of Latinus and wife of Æneas.

Leander (*lē-an´der*).—A young man of Abydos (*a-bi´dos*), who swam across the Hellespont every night to visit Hero, the priestess of Venus, in Sestos. One night, however, during a storm, he perished; and when his corpse was washed on the coast, on the following morning, Hero threw herself into the sea.

Leda (*lē´da*).—Wife of Tyndarus, king of Sparta. Jupiter visited her in the form of a swan, and she became the mother of Castor and Pollux, the celebrated Helen of Troy, and Clytæmnestra.

Lemnos (*lem´nos*).—One of the largest islands in the Ægean Sea; the abode of Vulcan, who was said to have fallen here when he was hurled down from Olympus. It is now called Stalimene.

Lemures.—The specters or spirits of the dead. They were said to wander about at night, as specters, and to torment and frighten the living. In order to propitiate them the Romans celebrated the festival of the *Lemuralia* or *Lemuria*.

Lerna (*ler´na*).—A forest and marsh near Argos, through which flowed a stream of the same name. Here Hercules killed the famous Lernean hydra. See "**Hercules**."

Lesbos (*les´bos*).—A celebrated island in the Ægean Sea, off the coast of Mysia. Its principal city was Mytilene. It was the birthplace of Sappho, Arion, Alcæus and Theophrastus.

Lethe (*lē´thē*)—*lit.* "forgetfulness" (Gr.).—A river in the lower world, the water of which was drunk by the shades, who thus obtained forgetfulness of the past.

Leto.—See "**Latona**."

Liber (*lī´ber*).—An old Italian deity who presided over planting and fructification. Subsequently the name was applied to Bacchus.

Libera (*lī´ber-a*).—Another name for Proserpine, daughter of Ceres, and sister of Liber.

Libitina (*lib-i-ti´na*).—The goddess of the dead, in whose temple at Rome everything pertaining to burials was sold or hired out.

Lidskialf.—The throne of Alfadir, whence he can view the whole universe.

Lif.—In Norse mythology the name given to a man who is to occupy the purified earth when goodness resumes its sway.

Lilinau.—In American Indian folk-lore Lilinau was wooed by a phantom. She followed his green waving plume through the forest, and was never seen again.

Liilith.—In Hebrew mythology a female specter who lies in wait for children in order to destroy them. The older traditions tell of Liilith as a former wife of Adam and the mother of demons. Amulets were worn as protection from her powers.

Lobhaircin.—In Irish mythical tales a fairy shoemaker resembling an old man, who resorts to out-of-way places where he is discovered by the noise of his hammer. He is rich, and, while anyone keeps his eye fixed upon him, cannot escape, but the moment the eye is withdrawn he vanishes.

Lofu.—The Scandinavian god who guards friendship.

Lofua.—The Scandinavian goddess who reconciles lovers.

Loki.—The great god of fire in Norse mythology.

Lorelei.—In German legend a siren who haunted a rock of the same name on the right bank of the Rhine. She combed her hair with a golden comb, and sang a wild song which enticed fishermen and sailors to destruction on the rocks and rapids at the foot of the precipice. In northern mythology Lorelei is represented as immortal, a daughter of the Rhine, and dwelling in the river bed.

Lotis (*lō´tis*).—A nymph who, to escape from Priapus, son of Bacchus, was changed into the lotus tree.

Lotophagi (*lō-tof´a-ĵi*)—*i. e.* lotus-eaters.—A people visited by Ulysses during his voyage homewards from Troy. The lotus was a fruit the taste of which was so delicious that all who ate it lost all desire to return to their native land.

Lua (*lu´a*).—A goddess to whom were devoted the arms taken in battle.

Lucifer (Lat.), or **Phosphorus** (Gr.)—*i. e.* the light-bringer. The planet Venus when it appears as the morning-star.

Lucina (*lū-si´na*).—The goddess that presides over the birth of children. It was used as a surname for Juno.

Lud.—In ancient British mythology the king of the Britons.

Luna (*lū´na*).—Goddess of the moon, called by the Greeks Selene (*sel-ē´nē*), and identified with Diana.

Lupercus (*lu-per´kus*).—A deity who protected the flocks from wolves.

Lycæus (*li-sē´us*).—A lofty mountain in Arcadia, where Jupiter and Pan were worshiped.

Lycæon (*li-kā´ōn*).—King of Arcadia, who impiously placed a dish of human flesh before Jupiter when the god visited him. He and all his sons were metamorphosed into wolves.

Lyceum (*li-sē´um*).—A gymnasium at Athens, outside of the city; celebrated as the place where Aristotle and the Peripatetics taught. It derived its name from the temple of Apollo Lyceus (*li-sē´us*) in the neighborhood.

Lycomedes (*li-ko-mē´dēz*).—King of Scyros, to whose court Achilles was sent, disguised as a maiden, by his mother Thetis, in order to prevent him going to the Trojan war.

Lycurgus (*li-sur´gus*).—Son of Dryas, and king of the Edones in Thrace. He prohibited the worship of Bacchus, and was hence driven mad by the gods, and subsequently killed.

Lyncæus (*lin´sūs*).—One of the Argonauts, famous for the keenness of his sight.

Lyncus (*lin´sus*).—A Scythian king, who was changed by Ceres into a lynx.

M

Machaon (*ma-kā´on*).—Son of Æsculapius, a famous surgeon of the Greeks before Troy.

Maia (*mā´i-a*).—Daughter of Atlas and Pleione, and the eldest and most beautiful of the several Pleiades. She became, by Jupiter, the mother of Mercury.

Manes (*mā´nēz*)—*lit.* "the good, benevolent."—The name given by the Romans to the souls of the dead, who were worshiped as gods.

Mani.—Name given in ancient Norse mythology to the moon. Later known as the son of Mundifdair; taken to heaven by the gods to drive the moon-car. He is followed by a wolf, which, when time shall be no more, will devour both Mani and his sister Sol.

Manitou.—The great spirit of American Indians.

Marica (*ma-ri´ka*).—A Latin nymph, the mother of Latinus.

Mars (*mārz*); called by the Greeks *Ares* (*ā´rē*).—The god of war, of husbandry, of shepherds, and seers, who, as father of Romulus, was the progenitor of the Roman people. He was the son of Jupiter and Juno. He loved, and was beloved by Venus. The wolf and the woodpecker were sacred to Mars.

Marsyas (*mar-si´as*).—A satyr who, having found the flute which Minerva had thrown away because it distorted her features whilst playing it, rashly challenged Apollo to a musical contest. Apollo played upon the cithara and Marsyas upon the flute, and the Muses were the umpires. They decided in favor of Apollo, who then bound Marsyas to a tree and flayed him alive in accordance with the conditions of the contest—namely, that the victor should do what he pleased with the vanquished.

Medea (*mē-dē´a*).—Daughter of Æetes, king of Colchis; celebrated for her skill in magic. She assisted Jason in obtaining the Golden Fleece (see "**Argonautæ**"), and accompanied him to Greece. She effectually stopped her father's pursuit by killing her brother **Absyrtus** (*q.v.*), and strewing his body cut in pieces on the seashore. See "**Jason**."

Medusa (*me-dū´sa*).—See "**Gorgons**."

Megæra (*me-gē´ra*).—See "**Furiæ**."

Megin-gjörd.—A magic belt worn by the god Thor. He once proposed to show his strength by lifting great weights, but when challenged to pick up the giant's cat, he tugged and strained, only to succumb in raising one paw from the floor, although he had taken the precaution to enhance his strength as much as possible by tightening his belt Megin-gjörd.

Meleager (*mel-e-ä'ger*).—Son of Ceneus, king of Calydon; and also the leader of the heroes who took part in the celebrated Calydonian boar hunt. See "[Calydon](#)."

Melicerta (*mel-i-ser'ta*), or **Melicertes**.—Son of Ino and Athamas. When Athamas was seized with madness he pursued Ino and Melicertes, who in order to escape had to throw themselves into the sea, whereupon both were changed into marine deities. Ino becoming Leucothea, and Melicertes a sea-god, called by the Greeks Palaemon, and by the Romans Portunus.

Melos (*mē'los*).—An island in the Ægean Sea, and the most westerly of the Cyclades. It is now called Milo, and here was found the celebrated statue known as the "Venus of Milo." See "[Venus](#)."

Melpomene (*mel-pom'en-ä*).—The muse of tragedy. See "[Musa](#)."

Memnon (*mem'nōn*).—The handsome son of Tithonus and Aurora; was king of the Ethiopians. He went to the aid of Priam, king of Troy, towards the end of the Trojan war, but was slain by Achilles. His colossal marble statue at Thebes (which, however, in reality represented the Egyptian king Amenophis) when struck by the first rays of the rising sun was said to emit a sound resembling that of a plucked string.

Menelaus (*men-e-lä'us*).—Son of Atreus, the husband of the beautiful Helen and father of Hermione; king of Lacedæmon (or Sparta), younger brother of Agamemnon. [Paris](#) (*q.v.*), having been promised the most beautiful woman in the world for his wife, sailed to Greece under the protection of Venus, and was hospitably received in the palace of Menelaus at Sparta. Here he succeeded in carrying off Helen, and thus arose the Trojan war, the object of which was to recover Helen. In the Trojan war Menelaus met Paris in single combat, and would have killed him had he not been carried off in a cloud by Venus. After the death of Paris, Helen married his brother Deiphobus, who was barbarously put to death by Menelaus at the taking of Troy. Helen secretly introduced Menelaus into the chamber of Deiphobus, and thus became reconciled to him. Menelaus and Helen then sailed away from Troy, and after eight years' wandering about the shores of the Mediterranean finally reached Sparta, where they passed the rest of their lives in peace and wealth.

Mentor (*men'tor*).—The faithful friend of Ulysses.

Mephistopheles.—One of the seven chief devils in the old demonology, the second of the fallen archangels, and the most powerful of the infernal legionaries after Satan. He figures in the old legend of *Dr. Faustus* as the familiar spirit of that magician. To modern readers he is chiefly known as the cold, scoffing, relentless fiend of Goethe's *Faust*, and the attendant demon in Marlowe's *Faustus*.

Mercurius (*mer-kū'ri-us*), or **Mercury** (*mer'kü-rī*), called **Hermes** (*her'mēz*) by the Greeks.—Son of Jupiter and Maia; the messenger of the gods, and the god of commerce and gain. As the herald of the gods, he was the god of eloquence. He was the god of prudence and cunning, also of fraud and theft. Being the messenger of the gods, he was likewise looked upon as the god of roads who protected travelers; and was the god of music and of chemistry, hence the words *hermetic*, *hermetically* (sealed). He was employed by the gods to conduct departed souls to the lower world. He invented the lyre, which he first made by stretching strings across the shell of a tortoise. The palm tree, the tortoise, the number 4, and several kinds of fish were sacred to him. He is generally represented with a hat having two wings; a pair of winged sandals, which carried him with the speed of wind across land and sea; and, as messenger of the gods, he carries in his hand a wand or *caduceus* (*ka-dū'se-us*), having two serpents intertwined at one end of it.

Meriones (*mē'ri-o-nēz*).—The charioteer of Idomeneus, and one of the bravest heroes in the Trojan war.

Mermaids.—Wave maidens of northern mythology and classed with nymphs in Grecian and Roman. They were generally represented as young and beautiful virgins, partially covered with a veil or thin cloth, bearing in their hands vases of water, or shells, leaves, or grass, or having something as a symbol of their appropriate offices. They were attendants of the gods.

Meru.—In Hindu mythology a sacred mountain, eighty thousand leagues high, situated in the center of the world. It is the abode of Indra, and abounds with every charm that can be imagined. The Olympus of the Indians.

Merope (*mer'o-pē*).—Daughter of Atlas, one of the Pleiades.

Metis (*mē'tis*)—*lit.* wisdom, prudence (Gr.).—Daughter of Oceanus and Tethys, and the first wife of Jupiter. Fearing that she might give birth to a child who should become more powerful than himself, Jupiter swallowed her. Afterwards Minerva sprang from his head.

Midgard.—In Scandinavian mythology the name given to the earth. Out of the giant's flesh they fashioned Midgard (middle garden), as the earth was called, which was placed in the exact center of the vast space, and hedged all around with Ymir's eyebrows, which formed its bulwarks or ramparts. The solid portion of Midgard was surrounded by the giant's blood or sweat, which now formed the ocean, while his bones made the hills, his flat teeth the cliffs, and his curly hair the trees and all vegetation.

Midgard Sormen (earth's monster).—The great serpent that lay in the abyss at the root of the celestial ash. Child of Loki.

Milo.—The modern name for the island of [Melos](#) (*q.v.*).

Mimir.—In Scandinavian mythology the god of wisdom. Also god of the ocean, which is called "Mimir's well," in which wit and wisdom lay hidden, and of which he drank every morning from the horn Gjallar.

Minerva (*min-er'vā*); called **Athena** (*a-thē'na*), **Pallas Athene** (*pal'lās*), or simply **Pallas**, by the Greeks.—The goddess of wisdom, of the arts and sciences, of poetry and of spinning and weaving, and the protectress of agriculture. She was also a goddess of war. She was the daughter of Jupiter and [Metis](#) (*q.v.*). She was the protective deity of Athens, which was so named in honor of her (Athena); see "Athenæ." The owl, serpent, cock and olive tree were sacred to her.

Minos (*mī'nos*).—(i) Son of Jupiter and Europa, brother of Rhadamanthus, king and lawgiver in Crete, and after death one of the three judges of the shades in the infernal regions (the other two being Rhadamanthus and Æacus). (ii) Grandson of the former, likewise king of Crete, the husband of Pasiphaë and the father of Ariadne and other children. His son [Androgeos](#) (*q.v.*) having been shamefully treated by the Athenians, he made war against the latter and compelled them to send every year to Crete, as tribute, seven young men and seven maidens to be devoured by the Minotaur. This Minotaur was a terrible monster, with the head of a bull and the body of a man, the offspring of Pasiphaë and a bull. It was kept in a labyrinth constructed by [Dædalus](#), but was slain by [Theseus](#) (*q.v.*), with the help of Ariadne, the daughter of Minos.

Minotaur (*mī'no-tawr*)—*i.e.* the bull of Minos (Lat.).—See "[Minos](#)."

Minyæ (*min'i-ē*).—The Minyans, an ancient Greek race dwelling in Thessaly. The Argonauts, being mainly Minyans, are called Minyæ.

Mithras (*mīth'ras*).—The sun-god of the Persians.

Mjólnir.—From mythology of northern lands. The name of Thor's celebrated hammer—a type of the thunderbolt—which, however far it might be cast, was never lost, as it always returned to his hand; and which, whenever he wished, became so small that he could put it in his pocket.

Mnemosyne (*nē-mos'i-nē*)—*i. e.* memory (Gr.).—The mother of the Muses.

Moakkibat.—A class of angels, according to the Mohammedan mythology. Two angels of this class attend every child of Adam from the cradle to the grave. At sunset they fly up with the record of the deeds done since sunrise. Every good deed is entered ten times by the recording angel on the credit or right side of his ledger, but when an evil deed is reported the angel waits seven hours, "if happily in that time the evil-doer may repent."

Moloch.—A god of the Phœnicians to whom human victims, principally children, were sacrificed. Moloch is figurative of the influence which impels us to sacrifice that which we ought to cherish most dearly.

Momus (*mō'mus*).—The god of mockery and censure.

Mona (*mon'a*).—The isle of Anglesey; sometimes supposed to be the isle of Man. It was one of the chief seats of the Druids.

Moneta (*mon-ē'ta*).—A Roman surname of Juno as the protectress of money.

Mopsus (*mop'sus*).—The name of two soothsayers, one being the prophet of the Argonauts, and the other the son of Apollo and Manto. He contended in prophecy with [Calchas](#) (*q.v.*), whose superior he proved himself to be.

Morpheus (*mor'fē-us*).—The son of sleep and the god of dreams. The name signifies (Gr.) the fashioner, moulder, so called from the shapes he calls up before the sleeper.

Mowis.—The bridegroom of Snow, who (according to American Indian tradition) wooed and won a beautiful bride; but when morning dawned, Mowis left the wigwam, and melted into the sunshine. The bride hunted for him night and day in the forests, but never saw him more.

Musæ (*mū'zē*).—The Muses, daughters of Jupiter and Mnemosyne, were nine in number, and presided over the different kinds of poetry, the arts and sciences. Their names and special attributes were as follows: (i) Calliope (*kal-i'i'o-pē*), the muse of epic poetry; (ii) Clio (*klī'ō*), of history; (iii) Erato (*er'a-tō*), of erotic poetry and mimic imitation; (iv) Euterpe (*ū-ter'pē*), of lyric poetry; (v) Melpomene (*mel-pom'en-ē*), of tragedy; (vi) Polyhymnia (*pol-i-him'ni-a*), of the sublime hymn; (vii) Terpsichore (*terp-sik'o-rē*), of choral song and dancing; (viii) Thalia (*tha-li'a*), of comedy; and (ix) Urania (*ū-rā'ni-a*), of astronomy. The favorite haunt of the Muses was Mount Helicon in Bœotia, where were the sacred fountains of Aganippe and Hippocrene. Mount Parnassus was also sacred to them.

Myrmidones (*mer-mīd'on-ēz*), or **Myrmidons** (*mer'mīd-ons*).—A people of Thessaly, under the rule of Achilles, whom they accompanied to Troy.

Myrtillus (*mer'til-us*).—Son of Mercury, and charioteer of Enomaus. See "[Pelops](#)."

Mysterious Three, The.—In Scandinavian mythology were Har "the Mighty," the "Like-Mighty," and the "Third Person," who sat on three thrones above the rainbow. Then came the Æsir, of which Odin was chief, who lived in Asgard (between the rainbow and earth); next came the Vanir, or gods of the ocean, air, and clouds, of which deities Niörd was chief.

N

Naiades (*nā'i-a-dēz*), or **Naiads** (*nā'yadz*).—The nymphs of freshwater. See "[Nymphæ](#)."

Naraka.—The hell of the Hindus. It has twenty-eight divisions, in some of which the victims are mangled by ravens and owls; in others they are doomed to swallow cakes boiling hot, or walk over burning sands.

Narcissus (*nar-sis'us*).—A beautiful youth, inaccessible to the feeling of love. The nymph Echo fell in love with him, but, her love not being returned, she pined away in grief (see "[Echo](#)"). In order to punish him, Nemesis made him see his own reflected image in a fountain, whereupon he became so enamored of it that he gradually pined away until changed into the flower that bears his name.

Nausicaa (*naw-sik'a-a*).—Daughter of Alcinoüs, who conducted Ulysses, when shipwrecked on the coast of Scheria (an island), to her father's court.

Nelus (*nē'lūs*).—Son of Neptune and the nymph Tyro; king of Pylos, in Peloponnesus, and father of [Nestor](#) (*q.v.*).

Nemea (*nē-mē'a*).—A city in Argolis, near which Hercules slew the Nemean lion.

Nemesis (*nem'e-sis*)—*i. e.* vengeance (Gr.).—The goddess of retribution, who brings down all immoderate good fortune. She was also regarded as the goddess who punished crimes. She was the daughter of Night, and was represented as a crowned virgin, of great beauty and grace, with a whip in one hand and a pair of scales in the other.

Neoptolemus (*nē-op-tol'em-us*).—Son of Achilles and Deidamia. He was also called Pyrrhus (*pir'us*), on account of his reddish hair (Gr.); his other name, Neoptolemus, which signifies *New-to-war* (Gr.), having been given to him because he *came late to Troy*. He displayed great valor at Troy, and was one of the heroes concealed in the wooden horse (see "[Troy](#)"). He slew Priam and his daughter Polyxena. At the distribution of captives Andromache, the widow of Hector, fell to his lot, and he took her to Epirus. He married Hermione, the beautiful daughter of Menelaus and Helen, but was slain by Orestes, to whom she had been previously promised.

Neptunus (*nep-tū'nus*), or **Neptune**; called **Poseidon** (*po-sī'don*) by the Greeks.—The god of the sea and other waters, the brother of Jupiter, and husband of Amphitrite. His palace was in the depth of the sea, near Ægæ, in Eubœa, where he kept his horses with brazen hoofs and golden manes, which drew his chariot over the waves of the sea. His celebrated contest with Minerva for the possession of Athens is narrated under "Athenæ." In the Trojan war he sided with the Greeks. He not only created the horse, but also taught men the art of managing horses by the bit and bridle. The symbol of his power was a trident, or spear with three prongs, with which he called forth or hushed storms, shook the earth, etc. Besides the trident, his attributes are the dolphin and the horse.

Nereides (*nē're-dēz* or *nē-rē'id-ēz*); the **Nereids** (*nē're-ids*).—The fifty daughters of Nereus and Doris. They were the marine nymphs of the Mediterranean (see "[Nymphæ](#)"). Thetis, the mother of Achilles, was a Nereid.

Nereus (*nē'rūs*).—Son of Pontus and Gæa, and husband of Doris, father of the fifty Nereids. He dwelt at the bottom of the sea, and was regarded as the wise old man of the sea. Like other marine divinities, he was supposed to have the power of prophesying the future, and of appearing to mortals in various shapes. The Ægean Sea was his empire—possibly the whole of the Mediterranean.

Nessus (*ness'us*).—A Centaur who was slain with a poisoned arrow by [Hercules](#) (*q.v.*).

Nestor (*nes'tor*).—Son of Nelus and king of Pylos. He was famous among the heroes before Troy for his wisdom, justice and eloquence. In early life he was a distinguished warrior, and took part in the fight between the Centaurs and the Lapithæ, and was one of the Calydonian hunters and one of the Argonauts. He is said to have lived through three generations of men. He safely reached Pylos again after the fall of Troy.

Niceven.—A gigantic and malignant female spirit of the old popular Scottish mythology. The hag is represented as riding at the head of witches and fairies at Hallowe'en.

Nidhogg.—The dragon that gnaws at the root of Yggdrasil, the tree of the universe in Scandinavian mythology.

Niflheim.—Mist-home of old Norse mythology. The region of endless cold and everlasting night, ruled over by Hela. It consists of nine worlds, to which are consigned those who die of disease or old age. This region existed "from the beginning" in the north, and in the middle thereof was the well Hvergelmir, from which flowed twelve rivers.

Niobe (*nī'o-pē*).—Daughter of Tantalus and wife of Amphion, king of Thebes. Having seven sons and seven daughters, she imprudently boasted of her superiority to Latona, who had but two children—Apollo and Diana. The latter, indignant at her presumption, slew all her children with their arrows. Niobe herself was changed into a stone.

Niörd.—The Scandinavian sea-god. He was not one of the Æsir. Niörd's son was Frey (the fairy of the clouds), and his daughter was Freyja. His home was Noatun. Niörd was not a sea-god like Neptune, but the spirit of water and air. The Scandinavian Neptune was [Ægir](#), whose wife was Skadi. His temples were near the seashore and all aquatic plants belonged to him.

Nisus (*nī'sus*).—A friend of Euryalus (*ū-rī'a-lus*).—The two accompanied Æneas to Italy, and perished in a night attack on the Rutulian camp.

Nix.—Little creatures not unlike the Scotch brownie and German kobold. They wear a red cap, and are ever ready to lend a helping hand to the industrious and thrifty.

off their legs if they were too long, or by stretching them out if they were too short. He was slain by Theseus.

Prometheus (*pro-mē thūs*)—lit. "Forethought" (Gr.).—Son of the Titan Iapetus, brother of Epimetheus (*ep-i-mē thūs*), or "After-thought." The great benefactor of mankind, in spite of Jupiter. He stole fire from Olympus (heaven), and was the inventor of many arts, especially of working in metal and clay, whence he is said to have made man from clay. As a set-off against these advantages, Jupiter gave Pandora (*q.v.*) to Epimetheus. He also chained Prometheus to a rock, where in the daytime an eagle consumed his liver, which grew again during each succeeding night. From this perpetual torture he was delivered by Hercules, who killed the eagle.

Proserpina (*pro-ser pin-a*); usually called **Proserpine** (*pros er-pin*); called by the Greeks Persephone (*per-sef on-ē*).—Daughter of Jupiter and Ceres, and queen of the lower world. Her father, unknown to her mother, promised her to Pluto, who carried her off by causing the earth to open beneath her as she was gathering flowers. In consequence of this, Ceres did not allow the earth to bring forth any fruits, and Jupiter was obliged to send Mercury into the lower world to fetch Proserpine back. Pluto allowed her to go, but first gave her a pomegranate to eat. Having thus eaten in the lower world, she was obliged to spend one-third of the year with Pluto, remaining during the other two-thirds with her mother (see "Ceres"). Pluto and Proserpine ruled over the souls of the dead in the lower world.

Proteus (*prō tūs*).—A sea-god who had the power of assuming any form he pleased. He tended the flocks (seals) of Neptune, and at midday rose from the sea and slept in the shade of the rocks. At such times he was much sought after, his prophetic powers being highly valued. When seized by the person wishing to consult him, he, in order to escape, assumed several different shapes in succession; but, if firmly held, he speedily returned to his original form, and prophesied.

Psyche (*si kē*)—lit. "the soul" (Gr.).—The following beautiful story shows in an allegorical manner how the human soul is purified by misfortunes and prepared for the enjoyment of true and lasting happiness hereafter: Psyche was the youngest and most beautiful of the three daughters of a king, and by her beauty excited the jealousy of Venus. The goddess consequently ordered Cupid to inspire her with love for some utterly unworthy object; but instead of doing this Cupid himself fell in love with her. He accordingly visited her every night, leaving her always at daybreak. Her jealous sisters, however, made her believe that her midnight lover was a monster, and accordingly she one night brought a lamp while Cupid was asleep, and was astonished to behold the lovely god. In her excitement she let fall a drop of hot oil on the shoulder of Cupid, and so awoke him. He blamed her for her mistrust, and fled. In misery Psyche now wandered from temple to temple, inquiring after her lover, and at length came to the palace of Venus. Here she was treated with great severity and compelled to perform hard and menial tasks, which would have overcome her had not Cupid secretly and invisibly sustained her. At length she overcame the jealousy of Venus, and, becoming immortal, was united to Cupid forever. In works of art Psyche is represented as a maiden with the wings of a butterfly.

Pukwana.—The smoke from the calumet or peace pipe among American Indians. The pipe was made from stone found near the headwaters of the Mississippi. A quarry, located near the mountains, was famous among the Indians, who had made the adjacent territory neutral ground. Here they came and provided themselves with pipes. To apply the stone to any other use than that of pipe-making would have been sacrilege in their mind. From the color, they even fancied it to have been made, at the great deluge, out of the flesh of the perishing Indian.

Puk-Wudjies.—The pygmies of American Indian folklore; little wild men of the woods.

Pygmalion (*pig-mā T-on*).—King of Cyprus, who became enamored of an ivory statue which he had made. Venus having answered his prayer to her to breathe life into it, he married the maiden.

Pyhlades (*pi lā-dēz*).—Nephew of Agamemnon, and celebrated as the friend of Orestes (*q.v.*). He married Electra, the sister of Orestes.

Pyramus (*pi ra-mus*).—The lover of Thisbe (*q.v.*).

Pyrrhus (*pir us*).—See "Neoptolemus."

Python (*pi thon*).—The famous serpent produced from the mud left after the subsidence of the deluge of Deucalion. It was slain near Delphi by Apollo, who founded the Pythian games to commemorate the victory.

Q

Quirinus (*kwi-rī nus*).—The name of Romulus after his deification.

R

Rachadars.—In Indian mythology the second tribe of giants or evil genii, who had frequently made the earth subject to their kings, but were ultimately punished by Siva and Vishnu.

Radegaste.—In Slavonic mythology a tutelary god of the Slavi. The head was that of a cow, the breast was covered with an ægis, the left hand held a spear, and a cock surmounted its helmet.

Ragnarök (twilight of the gods).—The day of doom, when the present world and all its inhabitants will be annihilated. Vidar and Vali will survive the conflagration, and reconstruct the universe. In Scandinavian mythology the belief is taught that after this time the earth or realm will become imperishable and happiness sure.

Rahu.—In Hindu mythology the demon that causes eclipses. One day Rahu stole into Valhalla to quaff some of the nectar of immortality. He was discovered by the Sun and Moon, who informed against him, and Vishnu cut off his head. As he had already taken some of the nectar into his mouth, the head was immortal; and he ever afterward hunted the Sun and Moon, which he caught occasionally, causing eclipses.

Rakshas.—Evil spirits in Hindu myths, who guard the treasure of Kuvera, the god of riches. They haunt cemeteries and devour human beings; assume any shape at will, and their strength increases as the day declines. Some are hideously ugly, but others, especially the female spirits, allure by their beauty.

Ravana.—According to Indian mythology, was fastened down between heaven and earth for ten thousand years by Siva's leg, for attempting to move the hill of heaven to Ceylon. He is described as a demon giant with ten faces.

Ravens.—According to an oracle from the gods, delivered at ancient Athens, ravens prognosticate famine and death because they bear the characteristics of Saturn, the author of these calamities, and have a very early perception of the malign influence of that planet.

Remus (*rē mus*).—The brother of Romulus (*q.v.*).

Rhadamanthus (*rad-a-man thus*).—Son of Jupiter and Europa, and brother of Minos. He was one of the three judges in the lower world, the other two being Æacus and Minos.

Rhea (*rē ā*).—See "Cybele."

Rhea Silvia (*rē ā sil vi-a*).—Daughter of Numitor, and mother of Romulus and Remus.

Rhesus (*rē sus*).—A Thracian prince, who went to the assistance of Troy. As an oracle had declared that Troy would never be taken if the snow-white horses of Rhesus once drank of the Xanthus and fed on the grass of the Trojan plain. Diomedes and Ulysses slew Rhesus on the night of his arrival on Trojan territory, and carried off his horses.

Rhodope (*rod o-pē*).—A lofty mountain range in Thrace, which, like the rest of Thrace, was sacred to Bacchus.

Romulus (*rom u-lus*).—The founder and first king of Rome; twin-brother of Remus, son of Silvia by Mars. Silvia was the daughter of Numitor and a vestal virgin, hence the twins were condemned to be thrown into the Tiber. This was done; but the cradle stranded, and they were suckled by a she-wolf. They were afterwards found by Faustulus, the shepherd of king Amulius, who handed them over to the care of his wife Acca Larentia. When grown up, they decided to found a city on the Tiber; but in a dispute as to the site, Romulus killed Remus. When the city was built, it was found that women were very scarce. Romulus accordingly proclaimed that games were to be celebrated, and invited his neighbors, the Latins and Sabines, to the festival, during which the Roman youths carried off the maidens—this being generally referred to as "The Rape of the Sabine Women." Hence arose a war between the two peoples, which was brought to a termination by the Sabine women rushing in between the armies and praying them to be reconciled. After a reign of thirty-seven years, Romulus was taken up to heaven by his father Mars in a fiery chariot. He was then worshiped by the Romans as Quirinus (*kwi-rī nus*).

S

Saga.—Goddess of history in Scandinavian mythology.

Salamander.—A fabulous animal supposed by the ancients to live in and have the quality of eating fire.

Salmonius (*sal-mō nūs*).—Son of Æolus and brother of Sisypus. He presumed to imitate the thunder and lightning of Jupiter, and was consequently hurled down to Tartarus with a thunderbolt by the father of the gods.

Sarpedon (*sar-pē don*).—(i) Son of Jupiter and Europa, king of the Lycians. Jupiter granted him the privilege of living three generations. (ii) Grandson of the preceding; assisted the Trojans in the Trojan war, but was slain by Patroclus.

Saturnus (*sā-tur nus*); usually called **Saturn** (*sat urn*); called by the Greeks Cronos.—A mythical king of Italy, whose reign was the "golden age." He was the son of Uranus (Heaven) and Gæa (Earth), the husband of Rhea, and the father of Jupiter, Juno, Pluto, Neptune, etc. He was the god of agriculture and of civilization in general. He was dethroned from the government of the world by his son Jupiter. His temple in Rome was used as the state treasury.

Satyri (*sat er-i*), or **Satyr**s (*sat erz*).—A kind of wood-deities, resembling apes, with two goats-feet, and very lascivious. The older Satyr were generally called Sileni (*sī-lē nī*), and the younger ones Satyrisci. They were described as fond of wine, sleep, and music.

Scamander (*ska-man der*).—A celebrated river near Troy.

Scamandrius (*ska-man dri-us*), or **Scamander**.—Son of Hector and Andromache (*an-drom a-kē*), whom the Trojans called **Astyanax** (*q.v.*).

Sciron (*sī ron*).—A famous robber of Attica, slain by Theseus. He compelled those he robbed to wash his feet on the Scironian rock (which was named after him), and at the completion of the process kicked them over the rock into the sea. At the base of the rock was a tortoise, which devoured them.

Scylla (*sill ā*), and **Charybdis** (*ka-rib dis*).—The names of two rocks, opposite to one another, between Italy and Sicily. In the one nearest to Italy was a cave in which dwelt Scylla, who was a terrible creature (female) with six long necks and heads, each of which contained three rows of sharp teeth, twelve feet, and barking like a dog. On the opposite rock, Charybdis, dwelt a being of the same name under an immense fig tree. Thrice a day she swallowed the waters of the sea and thrice threw them up again. Between these rocks, Scylla and Charybdis, the sea was very narrow and very dangerous. Hence mariners had to exercise great vigilance lest while avoiding Scylla they did not fall on Charybdis. This last expression is often used in speaking of cases where a middle course has to be carefully steered between two threatening difficulties.

Scyros (*sī rōs*).—An island in the Ægean Sea, near Eubœa. Here Achilles—at the court of King Lycomedes—was concealed, dressed as a woman, by his mother Thetis, in order to prevent his going to the Trojan war.

Sedrat.—The lotus tree which stands on the right hand side of the invisible throne of Allah. Its branches extend wider than the distance between heaven and earth. Its leaves resemble the ears of an elephant. Each seed of its fruit incloses an houri; and two rivers issue from its roots. Numberless birds sing among its branches, and numberless angels rest beneath its shade.

SCENES FROM THE STORY OF PSYCHE AND VENUS

BURNING OIL FELL ON CUPID'S SHOULDER A FISHERMAN SHELTERS PSYCHE SHE OPENED THE BOX

[841]

PSYCHE'S SISTERS ASKED WHAT SORT OF A PERSON HER HUSBAND WAS

VENUS AND PSYCHE BECOME RECONCILED "DRINK THIS, PSYCHE, AND BE IMMORTAL"

[842]

THE MARRIAGE OF CUPID AND PSYCHE

This symbolical picture represents the conscious union of the Soul of Man, figured as a young girl (Psyche), with the divine Spirit of Love (Cupid). Their starry or celestial environment signifies the emergence of the soul from matter into a permanent, uninterrupted or eternal life. The beautiful Greek story as a whole is simply an allegory describing the fall of the soul of man into earthly conditions; the labors and pains there undergone in order that, refined and redeemed, it may once more be raised into the heavenly world.

Semele (*sem 'el-ē*).—Daughter of Cadmus and Harmonia, and mother, by Jupiter, of Bacchus. Juno, actuated by jealousy, persuaded her to ask Jupiter to appear before her in his terrible majesty as king of heaven. Having promised to grant whatever she desired, Jupiter did so; but warned her of the danger she would incur. The result was that she was consumed by the lightning; but Jupiter saved her child Bacchus.

Serapis (*se-rā 'pis*).—An Egyptian divinity (male), whose worship was introduced into Rome, together with that of Isis, toward the end of the republic.

Seven Sages.—Same as *Seven Wise Men of Greece* (*q. v.*).

Seven Wise Men of Greece.—The title applied to seven Greeks of the sixth century B. C., who were distinguished for their practical wisdom and their terse maxims or principles of life. Their names are as follows: Bias, Chilo, Cleobulus, Periander (in place of whom some give Epimenides), Pittacus, Solon and Thales. They were the authors of the following famous mottoes, inscribed in later times in the temple of Apollo at Delphi: "Most men are bad," *Bias*; "Consider the end," *Chilo*; "Avoid excess," *Cleobulus*; "Nothing is impossible to industry," *Periander*; "Know thy opportunity," *Pittacus*; "Know thyself," *Solon*; "Suretyship is the precursor of ruin," *Thales*.

Seven Wonders of the World.—A name applied to seven very remarkable objects of the ancient world. They are usually given as follows:

(i) The Pyramids of Egypt.

Tyr.—In Norse mythology, a warrior deity, and the protector of champions and brave men; he was also noted for his sagacity. When the gods wished to bind the wolf Fenrir, Tyr put his hand into the demon's mouth as a pledge that the bonds should be removed again. But Fenrir found that the gods had no intention of keeping their word, and revenge himself in some degree by biting the hand off. Tyr was the son of Odin and brother of Thor.

U

Ulin.—An enchantress, who had no power over those who remained faithful to Allah and their duty; but if any fell into error or sin, she had full power to do as she liked. Thus, when Misnar (sultan of India) mistrusted the protection of Allah, she transformed him into a toad. When the Vizier Horam believed a false report, obviously untrue, she transformed him also into a toad. And when the Princess Hemjunah, to avoid a marriage projected by her father, ran away with a stranger, her indiscretion placed her in the power of the enchantress, who transformed her likewise into a toad. Ulin was ultimately killed by Misnar, sultan of Delhi, who felled her to the ground with a blow.

Ulysses (*ū-lis ēz*), or **Ulixes** (*u-lix ēz*); called **Odysseus** (*od-is sūs*) by the Greeks.—A king of Ithaca, famed among the Grecian heroes of the Trojan war for his craft and eloquence; the son of Laertes, husband of Penelope, and father of Telemachus and Telegonus (by Circe). In order to escape from going with the other Greek heroes against Troy, he feigned madness, ploughing the sea-shore with a horse and bull yoked together and sowing salt. The imposture, however, was laid bare by **Palamedes** (*q.v.*), who placed Telemachus, the infant son of Ulysses, in the furrow, when the latter at once turned aside the plough; but the wily Ulysses had his revenge on Palamedes. Ulysses, in his turn, sought out and obtained the indispensable assistance of **Achilles** (*q.v.*). At the siege of Troy his cunning and valor were of the greatest service to the Greeks. In company with Diomedes he slew the horses of Rhesus, and also carried off the Palladium (*q.v.*). Perhaps the crowning effort of his ingenuity was the invention of the famous wooden horse, by means of which the city of **Troy** (*q.v.*) was ultimately taken by the Greeks. After the taking of Troy Ulysses set out for Ithaca, which, however, he did not reach for twenty years. During this time he passed through the adventures which form the subject of Homer's glorious poem, the *Odyssey*, which takes its name from Odysseus, the Greek name for Ulysses. He thus visited **Circe** (*q.v.*), **Polyphemus** (*q.v.*), the Lotophagi, and other persons and places. In order to get safely past the island of the Sirens, he, with his usual sagacity, devised special means, which proved entirely successful (see "Sirens"). He lost six of his companions while sailing between **Scylla** (*q.v.*) and Charybdis. He then suffered shipwreck, he alone escaping by means of the mast and planks. In ten days he was drifted on to the island of Ogygia, inhabited by **Calypso** (*q.v.*), with whom he stayed for eight years. He then constructed a raft, and made his way to the island of Scheria (*q.v.*), whence he obtained a ship that carried him to Ithaca. He did not, however, make himself known at once to his wife and son. In order to see how the land lay, he disguised himself as a beggar, but was kindly received by the old swineherd. Meanwhile his son Telemachus, now grown up to manhood, returned from a journey to Pylos and Sparta, undertaken with a view to glean what information he could as to the probable whereabouts of his father. Ulysses then made himself known to Telemachus, and the two resolved on a plan of revenge on the numerous unfortunate suitors for the hand of the virtuous and constant **Penelope** (*q.v.*). With great difficulty she was induced (being, as yet, unaware of the safe arrival of her husband) to promise her hand to that suitor who could shoot with the bow of Ulysses. Not one of them, however, was able to draw this bow, whereupon Ulysses himself took it up and slew them all. He then made himself known to Penelope, and went to see his father Laertes, bowed down with grief and years. Now Circe, who had had a son, Telegonus, by Ulysses, sent him in search of his father. Telegonus encountered a storm which cast his ship on the coast of Ithaca, and being pressed by hunger, he began to plunder the fields. Ulysses and Telemachus hearing of this, went out against the spoliator; but Telegonus, not knowing Ulysses, ran him through the body with a spear given to him by his mother. Thus the famous hero died at the hands of his own son. Telegonus afterwards married Penelope, and became by her the father of Italus.

[845]

Urania (*ū-rā 'ni-a*).—The muse of astronomy. See "Musæ."

Uranus (*ū ra-nus*), or **Heaven**.—Husband of Gæa (Earth), and father of Oceanus, Hyperion, Rhea, Themis, Cronos, and other children. At the instigation of Gæa he was dethroned by Cronos.

Utgard-Loki.—The chief of the giants, in Norse mythology.

V

Varuna, or **Vrauna**.—In Hindu mythology, the deity who presides over the waters of the ocean, corresponding with *Neptune* of classic mythology.

Valhalla.—In Scandinavian mythology the palace of immortality wherein are received the souls of heroes slain in battle.

Valkyrs.—The battle-maidens of Scandinavian mythology. They were mounted on swift horses and held drawn swords. They rushed into battle and selected those destined to death and conducted them to Valhalla. The number of Valkyrs differs greatly according to the various mythologists and ranges from three to sixteen, the greater part of them, however, naming only nine.

Venus (*vē nus*); called by the Greeks **Aphrodite** (*af-ro-dī tē*)—i. e. "sea-foam."—The goddess of love and beauty. She was supposed to have sprung from the foam of the sea: hence her Greek name. She was the wife of Vulcan, but was very unfaithful to him. She loved the gods Mars, Bacchus, Neptune and Mercury, and the mortals Adonis and Anchises. She was considered by **Paris** (*q.v.*) the most beautiful of the goddesses and had awarded to her the celebrated Golden Apple. Anyone who wore her magic girdle immediately became beautiful and the object of love and desire. She is generally accompanied by her son Cupid. The month of April, as the commencement of spring, was considered peculiarly sacred to the goddess of love. The myrtle, rose, apple and poppy, and the sparrow, dove, swan and swallow, were all sacred to her. She was probably originally identical with Astarte, a Syrian goddess, called by the Hebrews Ashtoreth. As might have been anticipated, the representation of the Queen of Beauty on canvas and in marble has resulted in some of the finest works of the most celebrated painters and sculptors of antiquity. Among the former, Apelles' masterpiece of Venus rising from the sea deserves special mention; and among the latter the "Cnidian Venus" (so called because it stood in her temple at Cnidus), by Praxiteles, is unquestionably the most famous. Phryne (*q.v.*) sat as model for both of these noble works of art. The fame of the "Cnidian Venus" was so great that travelers from all parts of the civilized world resorted to Cnidus in order to see it. In fact, Pliny and others declared it to be the finest statue in the world. The "Venus of Milo" is, however, the noblest extant representation of Venus. It was found, in 1820, in the island of Melos, the modern Milo (hence the epithet), which is one of the group of islands named the Cyclades, in the Ægean Sea. It now forms one of the treasures of the Louvre, Paris.

Vertumnus (*ver-tum nus*).—The god of the changing year—that is, of the seasons and their productions. His festival was celebrated by the whole Roman people on the 23rd of August.

Vesta (*ves 'ta*); called by the Greeks **Hestia** (*hes 'ti-a*)—i. e. "the hearth."—One of the twelve great Roman deities, the goddess and guardian of the hearth and home. She was the daughter of Saturn and Rhea. In her temple in the Forum at Rome stood no statue, the goddess being represented by the eternal fire burning on her altar as her abiding symbol. This fire was kept up and attended to by a number of virgin priestesses, called Vestals, who were chaste and pure like the goddess herself. On March 1 in every year the sacred fire was renewed, and on June 15 her temple was cleaned and purified.

Vidar.—The Scandinavian god of wisdom, noted for his thick shoes, and not infrequently called "The god with the thick shoes."

Vishnu.—In Hindu mythology one of the great deities of the Hindu triad, ranking as the *Preserver*, after Brahma, the *Creator*, and before Siva, the *Destroyer*. It is believed that he has appeared on earth nine times, his tenth *avatar*, or incarnation, having yet to come.

Volumnia (*vol-um 'ni-a*).—Wife of **Coriolanus** (*q.v.*).

Vulcanus (*vul-kā nus*), or **Vulcan**; called **Hephestus** (*hē-fēs 'tus*) by the Greeks. The god of fire. He was the son of Jupiter and Juno, and was lame from his birth. Besides being the god of fire, he was master of the arts which need the aid of fire, especially of working in metal. He made all the palaces of the gods on Olympus, the armor of Achilles, the fatal necklace of Harmonia, the fire-breathing and brazen-hoofed bulls of Æetes (see "**Argonautæ**"), etc. The Cyclops were his workmen, and his workshops were situated under Mount Ætna in Sicily. Vulcan's wife was Venus. His favorite abode on the earth was the island of Lemnos. His great festival was celebrated on the 23rd of August.

W

White Lady.—In German folk-lore, the ancient Teutonic goddess Holda or Berchta, who was the receiver of the souls of maidens and children, and who still exists as the White Lady, not infrequently, in German legends, transforming herself, or those whom she decoys into her home, into a white mouse.

Wild Huntsman, The.—A spectral hunter in folk-lore, especially in German folk-lore; the subject of a ballad by Bürger.

Woden (*wō 'den*), or **Wotan.**—The Anglo-Saxon form of the Scandinavian god Odin; Wednesday is called after him.

Y

Yama.—In the *Rigveda*, the name of the god who rules in heaven over the blessed—the Manes, Fathers, or Pitris—and is therefore called king.

Yggdrasil.—In Scandinavian mythology the great ash tree which binds together heaven, earth, and hell. Its branches extend over the whole earth, its top reaches heaven, and its roots hell. The three noras, or fates, sit under the tree, spinning the events of man's life.

Z

Zem.—The sacred well of Mecca. According to Arab tradition, this is the very well that was shown to Hagar when with Ishmael in the desert. It is supposed to be in the heart of the city of Mecca.

Zephyrus (*zef 'i-rus*).—The west wind, or properly, the northwest.

Zeus (*zūs*).—See "**Jupiter.**"

Zohak.—The giant of Persian mythology who keeps the "mouth of hell." He was the fifth of the Pischadian dynasty, and was a lineal descendant of Shedâd, king of Ad. He murdered his predecessor, and invented both flaying men alive and killing them by crucifixion. The devil kissed him on the shoulders, and immediately two serpents grew out of his back and fed constantly upon him. He was dethroned by the famous blacksmith of Ispahan, and appointed by the devil to keep hell-gate.

Zohara.—An oriental queen of love, and mother of mischief. When Harût and Marût were selected by the host of heaven to be judges on earth, they judged righteous judgment till Zohara, in the shape of a lovely woman, appeared before them with her complaint. They then both fell in love with her and tried to corrupt her, but she flew from them to heaven; and the two angel-judges were forever shut out.

Zulzul.—According to Chinese mythology the sage whose life was saved in the form of a rat by Gedy, the youngest of the four sons of Corcud. Zulzul gave him, in gratitude, two poniards, by the help of which he could climb the highest tree or most inaccessible castle.

[846-847]

EXPLANATORY CHART OF GREEK AND ROMAN MYTHOLOGY: SHOWING THE ORIGIN, RELATIONSHIP AND DESCENT OF CHIEF MYTHS

The relationship of these mythical personages are quite unlike those of mortals and are full of inconsistencies. To reconcile all the contradictions of the poets and mythologists is impossible. Perhaps this chart is as consistent with their fabulous tales as can well be made.

CHAOS Produced EREBUS, god of darkness, NOX, goddess of night, and TERRA, Earth.	TITAN Oldest of the twelve Titans. THE CYCLOPS Giants, at first three in number: Arges, Brontes, Steropes. BRIAREUS A famous giant called by men Ægeon, and by the gods Braireus.	JUNO , wife and sister of Jupiter, queen of the gods, and of Heaven and Earth.	<i>By Them 'is.</i> Astræa , the goddess of <i>justice</i> ; Nemesis , of <i>vengeance</i> . <i>By Juno.</i> Mars , the god of <i>war</i> ; by Venus , Anteros, Harmonia; the goddess of <i>youth</i> ; once cupbearer to Jupiter. Hebe , by her husband Hercules , Alexiars and Anicetus. Typhon , by the monster Echidna , Chimæra and Sphinx. Vulcan , the god of <i>fire</i> and of <i>blacksmiths</i> , and husband of Venus ; by his wife Venus , Cupid; by Medusa , Cacus, by Juno , Cæculus. <i>By Lato 'na.</i> Apollo , the god of <i>poetry, music, eloquence, medicine, the fine arts, augury, and archery.</i> Diana , the goddess of <i>hunting</i> , the patroness of chastity, presided also over childbirth. <i>By Ma 'ia.</i> Mercury , the <i>messenger</i> of the gods, the god of <i>eloquence and commerce</i> , the patron of <i>travellers, thieves</i> , and <i>knaves</i> , and the conductor of the souls of the dead to the infernal regions. By Penelope , Pan. By the Greeks he was called Hermes . <i>By Mnemos 'y-ne.</i> The Nine Muses. <i>Cl' o</i> presided over History.
---	---	---	---

TERRA or TITÆA produced CÆLUS or URANUS, *Heaven*.

CÆLUS or URANUS, i.e. *Heaven*, and TERRA or TITÆA, i.e. *Earth*.

had

TETHYS

Wife of *Oceanus*; for offspring, see **Oceanus**

THEA

Wife of *Hyperion*; the mother of rivers, and of about three thousand daughters, called *Ocean 'i-des*.

SATURN

or **Cronos**, god of Time, had by *Rhea* same as *Ops*, same as *Cybele*.

MNEMOSYNE

Mother of the nine *Muses*.

THEMIS

Mother of *Astræa*, goddess of Justice.

CYBELE

OPS or RHEA, wife of *Saturn*; the goddess of *all things*; styled *Magna Mater* or *Great Mother*, *Bona Mater* or *Good Mother*; for off-spring, see **Saturn**.

OCEANUS

The god of water, to whom the ancients recommended themselves when going on a voyage, had by *Tethys*.

HYPERION, god of the Sun, had by *Thea*, **AURORA**, the goddess of the *morning*; represented riding in a rose-colored chariot drawn by white horses, usually covered with a veil, the morning star appearing overhead. She was called *rosy-fingered*, because she scattered roses; by *Tithon 'us*, a mortal, she had *Memnon* and *Emathion*.

JAPETUS, father of mankind, had by *Clymene*, **ATLAS**, also Prometheus, Epimetheus, Menœtius, and others, called *Japitonides*.

Nox or *Night*, *Mors* or *Death*, *Somnus* or *Sleep*, and *Morpheus* (the minister of *Somnus*, who brought dreams to men) were infernal divinities. *Momus*, god of laughter and satire, son of *Somnus* and *Nox*.

EREBUS and NOX

had

Light, or Day, Somnus, Mors, and Charon, the Ferryman

Ancient Roman Sun-god—**Janus**, the god of the *year*; presided over the gates of heaven, and over peace and war; represented with two faces. His temple in Rome was open in time of war and shut in time of peace.

CHAOS

Produced **EREBUS**, god of *darkness*, **NOX**, goddess of *night*, and **TERRA**, *Earth*.

TERRA or TITÆA produced

CÆLUS or URANUS, *Heaven*.

CÆLUS or URANUS,

i.e. *Heaven*, and

TERRA or TITÆA, i.e. *Earth*. had

TITAN

Oldest of the twelve Titans.

THE CYCLOPS

Giants, at first three in number:

- Arges,
- Brontes,
- Steropes.

BRIAREUS

A famous giant called by men *Ægæon*, and by the gods *Braireus*.

TETHYS

Wife of *Oceanus*; for offspring, see **Oceanus**.

THEA

Wife of *Hyperion*; the mother of rivers, and of about three thousand daughters, called *Ocean 'i-des*.

SATURN

or **Cronos**,

god of Time, had by *Rhea* same as *Ops*, same as *Cybele*.

JUNO, wife and sister of Jupiter, queen of the gods, and of Heaven and Earth.

JUPITER

or **Zeus**, the most powerful of all the gods; king of gods and men, had

By *Them 'is*.

Astræa, the goddess of *justice*; **Nemesis**, of *vengeance*.

By *Juno*.

Mars, the god of *war*; by *Venus*, *Anteros*, *Harmonia*; the goddess of *youth*; once cupbearer to Jupiter.

Hebe, by her husband *Hercules*, *Alexiares* and *Anicetus*.

Typhon, by the monster *Echidna*, *Chimæra* and *Sphinx*.

Vulcan, the god of *fire* and of *blacksmiths*, and husband of *Venus*; by his wife *Venus*, *Cupid*; by *Medusa*, *Cacus*, by *Juno*, *Cæculus*.

By *Lato 'na*.

Apollo, the god of *poetry*, *music*, *eloquence*, *medicine*, *the fine arts*, *augury*, and *archery*.

Diana, the goddess of *hunting*, the patroness of chastity, presided also over childbirth.

By *Ma 'ia*.

Mercury, the *messenger* of the gods, the god of *eloquence* and *commerce*, the patron of *travellers*, *thieves*, and *knaves*, and the conductor of the souls of the dead to the infernal regions. By *Penelope*, *Pan*. By the Greeks he was called *Hermes*.

By *Mnemos 'y-ne*.

JUPITER

or **Zeus**, the most powerful of all the gods; king of gods and men, had

Calli 'o-pe presided over eloquence and epic poetry.

Er 'ato presided over lyric and amorous poetry.

Thali 'a presided over pastoral and comic poetry and festivals.

Melpom 'e-ne presided over tragedy.

Terpsich 'o-re presided over dancing.

Euter 'pe presided over music.

Polyhym 'nia presided over singing and rhetoric.

Ura 'nia presided over astronomy.

By *Eury'n 'o-me*.

Graces.

Agla 'ia

Thali 'a

Euphros 'y-ne

Three beautiful virgins, attendants on **Venus**; presided over kindness and good offices, and were supposed to give to beauty its charms; represented dancing in a circle with their hands joined.

By *Sem 'e-Ie*.

Bacchus, god of *wine*; by his wife *Ariadne*, *Thoas*, *Ænophon*, *Ceranus*, *Tauropolis*, and others.

By *Metis*.

Minerva, the goddess of *wisdom*, *war*, and the *liberal and useful arts*.

By *Dione*.

Venus, said to have been borne in the foam of the sea; the goddess of *love* and *beauty*, and mistress of the graces; wife of *Vulcan*; for offspring, see **Vulcan**.

By *Ceres*.

Pros' erpine, wife of Pluto, *queen* of hell, presided over death. She was stolen away by Pluto while gathering flowers in Sicily, and became the mother of the **Fates** and **Furies**, which see under **Dictionary**.

By *Euro 'pa*.

Minos, **Rhadamanthus**, and **Æ' acus**, three inflexible judges of Hades.

By *Leda*.

Castor and **Pollux**.

By *Dan 'a-e*.

Per' seus.

By *Anti 'o-pe*.

Amphi 'on and **Zethus**.

See **Dictionary of Mythology**.

By *Segesta*.

Æolus, whose offspring were the various Winds.

By *Alcmena*.

Hercules, whose descendants were the Heraclidæ.

VESTA, the goddess of *fire*, and patroness of *Vestal Virgins*, who had the care of the sacred fire in the temple of *Vesta* at Rome, which was kept continually burning.

CERES, the goddess of *corn* and *harvest*. The famous *Eleusinian mysteries* were celebrated in honor of *Ceres*, during the representation of which it was death to speak; as it was also to reveal afterwards what took place.

LATONIA, celebrated for her beauty, and for being greatly beloved by Jupiter and persecuted by *Juno*.

NEPTUNE, the god of the *sea*, the father of rivers and fountains, and, next to Jupiter, the most powerful deity; had by *Amphitrite*, **TRITON**, his father's companion and herald.

PLUTO, the god of the *infernal regions*, of *death* and *funerals*; the dog *Cerberus*, a frightful mastiff with three heads, and a tail like a serpent, watches at his feet, and three *Har' pies*, winged monsters, hover about him.

AMPHITRITE had by *Neptune* **TRITON**, who had no offspring.

CYLMENE had by *Japetus* **ATLAS**, also Menœtius, Prometheus, Epimetheus, and others.

PHORCYS had by *Ceto* The Gorgons, viz., *Medusa*, *Stheno*, and *Euryale*; three sisters whose heads were covered with vipers.

The Graiæ, viz., *Pephredo*, *Enyo*, and *Dinon*.

ACHELOUS had by *Calliope*. The *Sirens* were three sea nymphs, named *Parthen 'ope*, *Lige 'ia*, and *Leuco 'sia*, having the form of a woman above the waist, and the rest of the body like a flying fish.

The Harpies, viz., *Aello*, *Ocypete*, and *Celæus*.

The Nine Muses.

Clio presided over History.

Calliope presided over eloquence and epic poetry. (See [Dictionary of Mythology](#).)

Erato presided over lyric and amorous poetry. (See [Dictionary of Mythology](#).)

Thalia presided over pastoral and comic poetry and festivals. (See [Dictionary of Mythology](#).)

Melpomene presided over tragedy. (See [Dictionary of Mythology](#).)

Terpsichore presided over dancing. (See [Dictionary of Mythology](#).)

Euterpe presided over music. (See [Dictionary of Mythology](#).)

Polyhymnia presided over singing and rhetoric. (See [Dictionary of Mythology](#).)

Urania presided over astronomy. (See [Dictionary of Mythology](#).)

By *Eurydice*.

Graces. (Three beautiful virgins, attendants on Venus; presided over kindness and good offices, and were supposed to give to beauty its charms; represented dancing in a circle with their hands joined.)

Aglaia

Thalia

Euphrosyne

By *Semiole*.

Bacchus, god of *wine*; by his wife *Ariadne*, *Thoas*, *Cenopion*, *Ceranus*, *Tauropolis*, and others.

By *Metis*.

Minerva, the goddess of *wisdom*, *war*; and the *liberal and useful arts*.

By *Dione*.

Venus, said to have been borne in the foam of the sea; the goddess of *love* and *beauty*, and mistress of the graces; wife of *Vulcan*; for offspring, see **Vulcan**.

By *Ceres*.

Proserpine, wife of Pluto, *queen* of hell, presided over death. She was stolen away by Pluto while gathering flowers in Sicily, and became the mother of the *Fates* and *Furies*, which see under [Dictionary](#).

By *Europe*.

Minos, **Rhadamanthus**, and **Aeacus**, three inflexible judges of Hades.

By *Leda*.

Castor and **Pollux**. (See [Dictionary of Mythology](#).)

By *Danae*.

Perseus. (See [Dictionary of Mythology](#).)

By *Antiope*.

Amphion and **Zethus**. (See [Dictionary of Mythology](#).)

By *Segesta*.

Aeolus, whose offspring were the various Winds.

By *Alcmena*.

Hercules, whose descendants were the *Heraclidae*.

VESTA, the goddess of *fire*, and patroness of *Vestal Virgins*, who had the care of the sacred fire in the temple of Vesta at Rome, which was kept continually burning.

CERES, the goddess of *corn* and *harvest*. The famous *Eleusinian mysteries* were celebrated in honor of Ceres, during the representation of which it was death to speak; as it was also to reveal afterwards what took place.

LATONIA, celebrated for her beauty, and for being greatly beloved by Jupiter and persecuted by Juno.

NEPTUNE, the god of the *sea*, the father of rivers and fountains, and, next to Jupiter, the most powerful deity; had by *Amphitrite*, *TRITON*, his father's companion and herald.

PLUTO, the god of the *infernal regions*, of *death* and *funerals*; the dog *Cerberus*, a frightful mastiff with three heads, and a tail like a serpent, watches at his feet, and three *Harpies*, winged monsters, hover about him.

MNEMOSYNE

Mother of the nine *Muses*.

THEMIS

Mother of *Astraea*, goddess of Justice.

CYBELE

OPS or RHEA, wife of *Saturn*; the goddess of *all things*; styled *Magna Mater* or *Great Mother*, *Bona Mater* or *Good Mother*; for off-spring, see **Saturn**.

OCEANUS

The god of water, to whom the ancients recommended themselves when going on a voyage, had by *Tethys*.

AMPHITRITE had by *Neptune* TRITON, who had no offspring.

CYLMENE had by *Japetus* ATLAS, also *Menætius*, *Prometheus*, *Epimetheus*, and others.

PHORCYUS had by *Ceto* (The Gorgons, viz., *Medusa*, *Stheno*, and *Euryale*; and *Euryale*; three sisters whose heads were covered with vipers. (The *Graiae*, viz., *Pepredo*, *Enyo*, and *Dinon*.)

ACHELOUS had by *Calliope*. The *Sirens* were three sea nymphs, named *Parthenope*, *Ligeia*, and *Leucosia*, having the form of a woman above the waist, and the rest of the body like a flying fish.

The *Harpies*, viz., *Aello*, *Ocypeete*, and *Celæus*.

HYPERION, god of the Sun, had by *Thea*, *AURORA*, the goddess of the *morning*; represented riding in a rose-colored chariot drawn by white horses, usually covered with a veil, the morning star appearing overhead. She was called *rosy-fingered*, because she scattered roses; by *Tithonus*, a mortal, she had *Memnon* and *Æmation*.

JAPETUS, father of mankind, had by *Clymene*, *ATLAS*, also *Prometheus*, *Epimetheus*, *Menætius*, and others, called *Japitonides*.

EREBUS and NOX had *Light*, or *Day*, *Somnus*, *Mors*, and *Charon*, the Ferryman

Nox or *Night*, *Mors* or *Death*, *Somnus* or *Sleep*, and *Morpheus* (the minister of *Somnus*, who brought dreams to men) were infernal divinities.

Momus, god of laughter and satire, son of *Somnus* and *Nox*.

Ancient Roman Sun-god—**Janus**, the god of the *year*; presided over the gates of heaven, and over peace and war; represented with two faces. His temple in Rome was open in time of war and shut in time of peace.

SCREENS OF LIGHT CAST BY INVISIBLE ATOMS

[848]

IMMENSELY ENLARGED REPRESENTATIONS OF ATOMS
(1) of Ordinary Matter; (2) of Radium

Here is seen an invisible speck of radium throwing out invisible atoms that sparkle into sight on a film. This stream of atoms will pour forth for 2500 years before the radium ceases to exist, thus showing the marvelous energy stored up in the smallest particle. These flying particles fall on the screen or film like hailstones splashing on the surface of water, and the splash is visible, while the radium itself and flying atoms are not. This is the nearest men have yet come to seeing an actual atom.

RELATION OF THE GOVERNMENT TO SCIENCE

[850]

BOOK OF SCIENCE AND INVENTION

Science in its widest significance is sometimes defined as the correlation of all knowledge. In this sense it would include *philosophy*. In a more restricted and generally accepted sense, the term is applied to the *systematized* divisions of knowledge.

Science and philosophy *resemble* each other in so far as they both have to do with knowledge; but while the latter deals with the whole sum of knowledge and goes back to generalized first principles, the former takes up special branches of it. That is, a science is such in fact when a sufficient number of interrelated facts are so arranged and classified by referring them to the general truths and principles on which they are founded that they constitute a well-certified and more or less complete branch of knowledge.

From the present development of knowledge the separate entities of the universe are five—namely, ether, matter, energy, life, and mind. The first three are inseparable agents in the simplest phenomena that occur in nature. They may ultimately be reduced to two, or, conceivably, to one. It is with these that the various branches of science have to deal—to observe, to experiment, to classify, to define.

CLASSIFICATION OF THE SCIENCES.—The sciences may be grouped in two ways. *First*, from what has been said above, they may be divided into:

- (a) the *physical* sciences, which have to do with inorganic nature—that is with the laws and properties of matter, energy, and ether;
- (b) the *biological* sciences, which consider the laws of life; and
- (c) the *psychical* sciences, which deal with the phenomena of mind.

Second.—Another, and probably more practical, division is that of (a) *pure* or *theoretic* sciences, and (b) *applied* or *practical* sciences. The latter consist of those branches which deal with facts, events, or phenomena as explained, accounted for, or produced by means of powers, causes, or laws; the former as the knowledge of these powers, causes, or laws, considered apart or as pure from all applications. To the class of pure or fundamental sciences belong mathematics, physics, chemistry, psychology, and sociology; to the applied or concrete belong geology, mineralogy, botany, zoology, meteorology, geography, ethics, politics, law, jurisprudence, logic, grammar, rhetoric, philology, and political economy; navigation, engineering, and practical mechanics; surgery, medicine, materia medica, etc.

METHODS OF SCIENCE.—The great method of scientific inquiry is experiment—the laboratory. Contrasted with *experiment* is *observation*. But even in astronomy, emphatically an observational science, experiment plays an important part. The dynamical knowledge which Newton developed into the cosmic law of gravitation was founded on experiment. Meteorology, again, has made great strides in these days by appealing to laboratory experiments for elucidation of its phenomena. Likewise in biology, botany, and zoology experiment has led to striking discoveries; while such branches as embryology and bacteriology are as truly experimental as chemistry itself.

In the psychical group of sciences the method of experimenting still awaits development. The complexity of the problems presented, and the manner in which they affect the welfare and happiness of humanity, render social and political experimenting excessively hazardous. Such sciences as those studied by the economist, the ethnologist, the moralist, or the theologian are of necessity essentially observational.

APPLIED ARITHMETIC, WEIGHTS AND MEASUREMENTS

It would be difficult to overestimate the extent to which mathematics enters into the conditions of everyday life. In its elementary stages, as the science of number, it teaches us the relations of magnitude, and enables us to build up a system of calculation and measurement which, applied to the relations observed to exist in nature, gives results of far-reaching importance.

The properties of number are investigated in arithmetic, and methods examined by which those engaged in practical science are able to work out their results to any degree of approximation.

With the help of algebra, we arrive at a system of logarithms by which many of these results may be reached with the minimum of labor.

The measurement of lines and angles, by methods investigated in geometry and trigonometry, enables us to calculate areas, and work out various problems met with in surveying, and is of the first importance in astronomy.

Arithmetic, which deals with the properties of numbers, forms the basis of all mathematical calculation. (For the *primary* treatment of numbers, see under [The Child World](#).)

[851]

COMMON FRACTIONS

A Fraction is one or more of the equal parts into which a unit has been divided. A *Common Fraction* is expressed by two numbers; the one written above the line is called the Numerator, the one below, the Denominator; both, called the Terms, denote the value of the fraction.

Thus, in the fraction $\frac{3}{4}$, the denominator 4, denotes that a unit or whole thing has been divided into four equal parts; and the numerator 3, shows that three of those parts are taken or expressed in the fraction.

A *Proper Fraction* is one whose numerator is less than its denominator; as $\frac{1}{2}$, $\frac{3}{4}$, $\frac{7}{8}$, etc. Its value is always less than 1.

An *Improper Fraction* is one whose numerator is equal to, or greater than its denominator, as $\frac{5}{5}$, $\frac{9}{7}$, $\frac{30}{12}$, etc. Its value is never less than 1.

A *Mixed Number* is a whole number and a fraction; as $3\frac{2}{5}$, $10\frac{1}{2}$, $6\frac{2}{3}$.

The mixed number means that there are whole things taken together with a fraction of another.

A *Complex Fraction* is one in which the numerator or denominator, or both, are fractions.

Thus $\frac{3\frac{1}{2}}{2\frac{3}{8}}$, $\frac{1}{\frac{5}{6} \times \frac{3}{4}}$, $\frac{1\frac{5}{17}}{8}$, are complex fractions.

SIMPLE FRACTIONS

A very good method of learning the combinations in small fractions is by the use of paper or cardboard disks.

Cut out a large number of them, and, in order to avoid trouble later on, it might be better to have the disks all of one size—about 4 inches in diameter.

LEARNING THE FRACTION $\frac{1}{2}$ WITH DISKS

EXPLANATION:—Take a circular disk and cut it into two equal parts. Then proceed in this manner: What is this part called? What is other part called? How many halves in the whole circle? One-half and one-half are what? One-half taken away from one leaves what? If I take a half two times, what do I get? How many halves in a whole?

Now I will write these—

$$\frac{1}{2} + \frac{1}{2} =$$

$$1 \div 2 =$$

$$1 \text{ less } \frac{1}{2} =$$

$$1 \cdot \frac{1}{2} =$$

$$2 \times \frac{1}{2} =$$

$$1 \text{ divided by } \frac{1}{2} =$$

Give me the answers and I will write them.

Drawings showing the "placing" of disks for number combinations can then be made; as,

$$\left(\frac{1}{2}\right) + \left(\frac{1}{2}\right) = 1$$

$$\left(\frac{1}{2}\right)\left(\frac{1}{2}\right) \div 2 = \left(\frac{1}{2}\right)$$

Make similar drawings to tell about halves.
 Proceed like this—How many halves in a pie? If a pie cost 10 cents, what will half a pie cost? Who can tell other stories about halves? etc.
 Learn fourths along with halves.

LEARNING THE FRACTION $\frac{1}{3}$ AND OTHERS WITH DISKS

Cut several disks into thirds and have children practice on cutting, so that they will be able to make the three parts of each disk equal. Frequently children will find pleasure in "teaching" one another.

Then proceed like this: What do you call each of these parts? Why are they called thirds? How many thirds in a circle? I am going to take a circle and cut it any way, so as to make three parts; do I call these unequal parts thirds? Why not? Let me write one-third on a piece of paper for you. (Write, $\frac{1}{3}$.) Draw a circle for me. Instead of cutting it, draw lines where you would cut it to make thirds. Write one-third ($\frac{1}{3}$) on each third of a circle. I write this ($\frac{1}{3} + \frac{1}{3}$). Who can tell me what the answer is? Are two-thirds and two-thirds more than one? How much more? I have two-thirds of an apple and give Mary one-third, how much have I left? Who can give other story problems about thirds? Everybody try, etc.
 Learn sixths along with thirds. Use disks, dots, marks, sticks, and inches to illustrate.
 Remember that no advance should be made until each little part is understood. Then have fifths compared with fourths, thirds, and halves.
 Teach tenths along with fifths.
 When twelfths are taught, show the relations between twelfths and sixths, fourths, thirds, and halves.

EQUAL FRACTIONS IN DIFFERENT FORMS

Have the children see how fractions may differ in form but still remain the same in value.
 Begin with his knowledge of smaller fractions as
 $\frac{1}{2}$, $\frac{2}{4}$, $\frac{3}{6}$, $\frac{4}{8}$, and $\frac{5}{10}$ of an apple.
 Let them show by the use of drawings that fractions may have large or small terms but be equal in value.
 Write a number of proper fractions, improper fractions, and mixed numbers, and have the children pick out those of each kind; as,
 $\frac{3}{8}$, $27\frac{1}{2}$, $\frac{5}{11}$, $\frac{19}{20}$, $\frac{20}{20}$, $\frac{18}{16}$, $\frac{11}{5}$, $3\frac{1}{2}$, $16\frac{2}{3}$

[852]

PRINCIPLES OF FRACTIONS

1. A fraction's value is the quotient obtained by dividing the numerator by the denominator.
 $\frac{6}{2} = 3$ 3 is the value of $\frac{6}{2}$
 $\frac{2}{3} = \frac{2}{3}$ $\frac{2}{3}$ is the value of $\frac{2}{3}$
2. Multiplying the denominator of a fraction divides the fraction by that number.
 $\frac{1}{2} \times 4 = \frac{1}{8}$ $\frac{3}{7} \times 3 = \frac{3}{21}$ $\frac{2}{3} \times 9 = \frac{2}{27}$
3. Dividing the denominator of a fraction multiplies the fraction by that number.
 $\frac{3}{8} \div 4 = \frac{3}{2}$ $\frac{10}{9} \div 3 = \frac{10}{3}$ $\frac{3}{10} \div 5 = \frac{3}{2}$
4. Multiplying the numerator of a fraction multiplies the fraction by that number.
 $\frac{2}{3} \times 2 = \frac{4}{3}$ $\frac{1}{9} \times 8 = \frac{8}{9}$ $\frac{5}{8} \times 3 = \frac{15}{8}$
5. Dividing the numerator of a fraction divides the fraction by that number.
 $\frac{4}{7} \div 2 = \frac{2}{7}$ $\frac{12}{16} \div 12 = \frac{1}{16}$ $\frac{3}{7} \div 3 = \frac{1}{7}$
6. Multiplying both numerator and denominator of a fraction by the same number does not change the value of the fraction.
 $\frac{1}{3} \times 3 = \frac{3}{9} = \frac{1}{3}$ $\frac{6}{7} \times 2 = \frac{12}{14} = \frac{6}{7}$
7. Dividing both numerator and denominator of a fraction by the same number does not change the value of the fraction.
 $\frac{12}{15} \div 3 = \frac{4}{5} = \frac{12}{15}$ $\frac{18}{27} \div 9 = \frac{2}{3} = \frac{18}{27}$

REDUCTION OF FRACTIONS

is the process of changing their forms without altering their values.
 To reduce a fraction to its lowest terms:
 RULE.—Divide both terms by their greatest common divisor.
 Reduce $\frac{9}{12}$ to its lowest terms.
 WORK: $4) \frac{9}{12} (\frac{3}{4}$ Ans. $\frac{3}{4}$
 Four is the G. C. D. of 8 and 12; hence $\frac{9}{12} \div 4 = \frac{3}{4}$.
 Reduce $\frac{35}{56}$ to its lowest terms.
 WORK: $7) \frac{35}{56} (\frac{5}{8}$ Ans. $\frac{5}{8}$
 Seven is the G. C. D. of 35 and 56; hence $\frac{35}{56} \div 7 = \frac{5}{8}$.
 A fraction whose terms have no common divisor is in its lowest terms, as $\frac{9}{16}$.
 To reduce an improper fraction to a whole or mixed number:
 RULE.—Divide the numerator by the denominator; the quotient will be the whole or mixed number.
 How many units in $\frac{30}{6}$?
 WORK: $30 \div 6 = 5$ Ans. 5.
 There are as many units in 30 sixths as 6 is contained times in 30.
 Reduce $\frac{75}{4}$ to a mixed number.
 WORK: $75 \div 4 = 18 + 3$ Ans. $18\frac{3}{4}$.
 In 75 fourths there are 18 units, and 3 fourths over, which equals $18\frac{3}{4}$.
 To reduce a mixed number to an improper fraction:
 RULE.—Multiply the whole number by the denominator of the fraction; add the numerator to the product, and write the sum over the denominator.
 Reduce $18\frac{3}{4}$ to an improper fraction.
 WORK: $18 \times 4 = 72$ $\frac{72}{4} + \frac{3}{4} = \frac{75}{4}$ Ans. $\frac{75}{4}$.
 In 18 are 72 fourths, plus the 3 fourths, equals 75 fourths.
 To reduce two or more fractions to their least common denominator:
 RULE.—Find the least common multiple of the given denominators for a common denominator. Then for each new numerator take such a part of this common denominator as the fraction is part of 1.
 Reduce $\frac{1}{2}$, $\frac{2}{3}$ and $\frac{3}{4}$ to their L. C. D.
 WORK: $\frac{1}{2} = \frac{6}{12}$ $\frac{2}{3} = \frac{8}{12}$ $\frac{3}{4} = \frac{9}{12}$
 Ans. $\frac{6}{12}$, $\frac{8}{12}$ and $\frac{9}{12}$.
 The L. C. M. of the denominators 2, 3 and 4 is 12. Hence, 12 is the L. C. D. to which the given fractions can be reduced. Then to change $\frac{1}{2}$ to 12ths, say, $\frac{1}{2}$ of 12 is 6, and write it over 12; to change $\frac{2}{3}$ to 12ths, say $\frac{2}{3}$ of 12 is 8, and write it over 12; to change $\frac{3}{4}$ to 12ths, say, $\frac{3}{4}$ of 12 is 9, and write it over 12.
 Fractions must be reduced to a common denominator to be added or subtracted.

ADDITION OF FRACTIONS

If two or more fractions have the same denominator, their sum is obtained by adding the numerators.
 WORK: $\frac{1}{7} + \frac{4}{7} + \frac{5}{7} = \frac{1+4+5}{7} = \frac{10}{7} = 1\frac{3}{7}$
 If the fractions have different denominators, we must first express them as equivalent fractions with the same denominator.
 EXAMPLE 1: Find the value of $\frac{1}{9} + \frac{3}{7} + \frac{5}{21} + \frac{2}{3}$
 The lowest common multiple is 63. The several denominators, when divided into 63, give 7, 9, 3, 21 respectively, for quotients. Therefore, we multiply the numerators and denominators of the fractions by 7, 9, 3, 21, and add the numerators to obtain the required sum. The result must be reduced to a mixed number or to lower terms, if necessary.
 WORK: $\frac{1}{9} + \frac{3}{7} + \frac{5}{21} + \frac{2}{3} = \frac{7+27+15+42}{63} = \frac{91}{63} = 1\frac{28}{63} = 1\frac{4}{9}$ Ans.
 In adding mixed numbers, first add the whole numbers, then the fractions, finally adding the two results.
 EXAMPLE 2: Add together $3\frac{3}{8} + 7\frac{2}{24} + 7\frac{1}{15} + 4\frac{3}{20}$. Given expression:

$$= 3 + 7 + 4 + \frac{1}{8} + \frac{7}{24} + \frac{11}{15} + \frac{3}{20}$$

$$= 14 + \frac{15+35+88+18}{120}$$

$$= 14 + \frac{156}{120} = 14 + 1\frac{36}{120} = 15\frac{3}{10}$$
 Ans.

[853]

SUBTRACTION OF FRACTIONS

The principle is the same as in addition. Reduce the fractions, if they have different denominators, to a common denominator, and then take the difference of the numerators.
 In the case of mixed numbers, subtract the whole numbers and the fractions separately.
 EXAMPLE 1: Take $4\frac{5}{21}$ from $6\frac{3}{7}$.

$$6\frac{3}{7} - 4\frac{5}{21} = 6 - 4 + \frac{3}{7} - \frac{5}{21}$$

$$= 2 + \frac{9-5}{21}$$

$$= 2 + \frac{4}{21} = 2\frac{4}{21} \text{ Ans.}$$

If the fractional part of the number to be subtracted be greater than the fractional part of the other number, we proceed as follows:

EXAMPLE 2: From $7\frac{4}{15}$ take $4\frac{11}{25}$.

$$\begin{aligned} 7\frac{4}{15} - 4\frac{11}{25} &= 7 - 4 + \frac{4}{15} - \frac{11}{25} \\ &= 3 + \frac{20-33}{75} \\ &= 2 + \frac{75+20-33}{75} \\ &= 2 + \frac{62}{75} = 2\frac{62}{75} \text{ Ans.} \end{aligned}$$

EXAMPLE 3: Simplify $3\frac{2}{9} + 4\frac{5}{7} - 5\frac{13}{21} + 2\frac{2}{35} - 1\frac{14}{15}$. Given expression:

$$\begin{aligned} &= 3 + 4 - 5 - 1 + \frac{2}{9} + \frac{5}{7} - \frac{13}{21} + \frac{2}{35} - \frac{14}{15} \\ &= 1 + \frac{70+225-195+18-294}{315} \\ &= 1 + \frac{313-489}{315} \\ &= \frac{628-489}{315} = \frac{139}{315} \text{ Ans.} \end{aligned}$$

[15] Obtained by adding all the numerators with + before them, and then all those with - before them.

MULTIPLICATION OF FRACTIONS

(i) When the multiplier is a whole number. This, as in the case of whole numbers, means that we have to find the sum of a given number of repetitions of the fraction.

EXAMPLE 1:

$$\frac{7}{9} \times 4 \text{ means } \frac{7}{9} + \frac{7}{9} + \frac{7}{9} + \frac{7}{9}, \text{ i.e., } \frac{28}{9} \text{ or } \frac{7 \times 4}{9}$$

Hence, to multiply a fraction by a whole number, simply multiply the numerator by that number.

Since the multiplier thus becomes a factor of the numerator, we cancel any common factors contained in the multiplier and the denominator; and this may be done before we perform the actual multiplication:

EXAMPLE 2: Multiply $1\frac{19}{46}$ by 69.

$$\frac{19}{46} \times 69 = \frac{19 \times 69}{46} = \frac{19 \times 3}{2} \text{ (cancelling 23), } = 28\frac{1}{2} \text{ Ans.}$$

It follows that if the multiplier be itself a factor of the denominator, we may, to multiply a fraction by a whole number, divide the denominator by that number.

(ii) When the multiplier is a fraction.

EXAMPLE: In performing the operation 7×9 , it is plain that we do to 7 what we do to a unit to obtain 9. Similarly, $\frac{3}{5} \times \frac{4}{11}$ may be looked upon as doing to $\frac{3}{5}$ what we do to the unit to obtain $\frac{4}{11}$.

Now, to obtain $\frac{4}{11}$ from the unit, we must divide the unit into 11 equal parts and take 4 of them.

Therefore, to find the value of $\frac{3}{5} \times \frac{4}{11}$ we must divide $\frac{3}{5}$ into 11 equal parts and take 4 of them.

But $\frac{3}{5} = \frac{3 \times 55}{5 \times 55} = \frac{3}{55} \times 11$, so that, the eleventh part of $\frac{3}{5}$ is $\frac{3}{55}$; and, if we take 4 of these parts, we get $\frac{3}{55} \times 4$ or $\frac{12}{55}$.

Thus, $\frac{3}{5} \times \frac{4}{11} = \frac{12}{55}$. Now $12 = 3 \times 4$, and $55 = 5 \times 11$.

Hence we have the following rule: To multiply two fractions together, multiply the numerators for a new numerator and the denominators for a new denominator.

As in Example 2 the work is shortened if we cancel common factors from the numerators and denominators.

EXAMPLE: Multiply $2\frac{22}{91}$ by $1\frac{13}{77}$.

$$\text{The product} = \frac{22}{91} \times \frac{13}{77} = \frac{2}{49} \text{ Ans.}$$

Here, the 22 of the numerator and the 77 of the denominator contain a common factor, 11. Therefore, we cross out the 22 and write 2 above it, and cross out the 77 and write 7 under it. Similarly, we cancel the factor 13 from 13 and 91. There is now 2 left for numerator and 7×7 for denominator.

To multiply more than two fractions together, we proceed in the same way.

In multiplication of fractions, mixed numbers must first be expressed as improper fractions.

EXAMPLE: Simplify $5\frac{1}{7} \times 1\frac{1}{27} \times 1\frac{1}{24}$.

$$\text{Given expression} = \frac{36}{7} \times \frac{11}{27} \times \frac{35}{24} = \frac{55}{18} = 3\frac{1}{18}$$

DIVISION OF FRACTIONS

(i) When the divisor is a whole number. Suppose we have to divide $\frac{7}{9}$ by 4.

We know $\frac{7}{9} = \frac{28}{36}$. This fraction means that the unit is divided into 36 equal parts, and 28 of the parts taken. If we divide the 28 parts by 4, we get 7 of them—i.e. $\frac{7}{36}$. Hence $\frac{7}{9} \div 4 = \frac{7}{36}$.

Therefore, to divide a fraction by a whole number, we multiply the denominator by that number.

In the same way as already explained for multiplication, we cancel any common factors contained in the divisor and the numerator. Hence, if the numerator be exactly divisible by the divisor, we may divide a fraction by a whole number by dividing the numerator by that number.

EXAMPLE 1:

$$\frac{27}{31} \div 18 = \frac{3}{31} \times \frac{27}{18} = \frac{3}{62} \text{ Ans.}$$

EXAMPLE 2:

$$\frac{36}{41} \div 9 = \frac{4}{41} \text{ Ans.}$$

(ii) When the divisor is a fraction.

In the operation $24 \div 3$, we have to find the number which, when multiplied by 3, will give 24. Similarly, to find the value of $3\frac{3}{7} \div 5\frac{2}{9}$ we have to find the fraction which, when multiplied by $5\frac{2}{9}$, will give $3\frac{3}{7}$.

But $\frac{3}{7} \times \frac{9}{5}$ is the fraction which gives $3\frac{3}{7}$ when multiplied by $5\frac{2}{9}$. Therefore, $\frac{3}{7} \div 5\frac{2}{9} = \frac{3 \times 9}{7 \times 5}$.

Hence, to divide by a fraction, invert the divisor and multiply.

As in multiplication, mixed numbers must first be reduced to improper fractions.

EXAMPLE 3: Divide $3\frac{1}{14}$ by $5\frac{3}{42}$.

$$3\frac{1}{14} \div 5\frac{3}{42} = \frac{43}{14} \div \frac{215}{42} = \frac{43}{14} \times \frac{42}{215} = \frac{3}{5} \text{ Ans.}$$

DECIMAL FRACTIONS

Differ in form from common fractions, in not having a written denominator; and from whole numbers, by having the decimal point (.) prefixed; which also separates the integral part from the decimal. The word decimal is derived from the Latin word *decem*, which signifies ten. The denominator of a decimal is always 10, or some power of 10, as 100, 1000, etc.

A Complex Decimal is a decimal with a common fraction at the right, as, $.12\frac{1}{2}$.

A Mixed Decimal is a whole number with a decimal fraction to its right, as, 34.5 .

The denominations of United States money are based on the decimal system—the dollar occupying the unit's place, the dime the tenth's place, the cent the hundredth's place, and the mill the thousandth's place.

The rules given for addition, subtraction, and so on, also apply to decimals.

ADDITION IN DECIMALS

EXAMPLE: $27.295 + .0287 + 591.68 + 9.1846$.

$$\begin{array}{r} 27.295 \\ .0287 \\ 591.68 \\ 9.1846 \\ \hline 628.1883 \text{ Ans.} \end{array}$$

Write the numbers so that the same powers of 10 come under one another, or, what is the same thing, write the numbers so that the decimal points come under one another. Then, adding the ten-thousandths first, 6, 13, carry 1, etc.

SUBTRACTION IN DECIMALS

EXAMPLE: Subtract .07295 from 21.651.

$$\begin{array}{r} 21.651 \\ .07295 \\ \hline 21.57805 \text{ Ans.} \end{array}$$

Write the first number under the second, so that the point comes under the point. Remember that we may consider there are 0's above the 9 and 5, since in 21.651 there are no ten-thousandths and no hundred-thousandths.

Say, mentally 5 and 5 make 10, carry 1.
10 and 0 make 10, carry 1.
3 and 8 make 11, carry 1, etc.

MULTIPLICATION IN DECIMALS

RULE.—Multiply as in whole numbers, and point off from the right of the product as many places as there are decimal places in both multiplier and multiplicand—prefixing ciphers if necessary.

EXAMPLE 1: Multiply 87.432 by 564.

$$\begin{array}{r} 87.432 \\ \underline{564} \\ 43716.0 \\ \underline{5245.92} \\ 349.728 \\ \underline{49311.648} \text{ Ans.} \end{array}$$

EXAMPLE 2: Multiply 31.56 by 5.49.

$$\begin{array}{r} 31.56 \\ \underline{5.49} \\ 157.80 \\ 12.624 \\ \underline{2.8404} \\ 173.2644 \text{ Ans.} \end{array}$$

Place the multiplier so that its unit's digit comes under the right-hand digit of the multiplicand. Then place the first figure of each product underneath the multiplying digit. The decimal point of the answer will then be directly under the decimal point of the multiplicand.

As before, place the unit's figure of the multiplier—that is, the 5—under the right-hand digit of 31.56, and proceed as above.

Note.—The number of decimal places in the product will always be equal to the sum of the number of decimal places in the multiplier and the multiplicand. Thus, in Example 2, there are two places of decimals (*i.e.* two figures to the right of the point) in 31.56, and two places of decimals in 5.49; and we found $2 + 2 = 4$ places in the product 173.2644.

To multiply a decimal by 10, 100, etc.

Rule.—Remove the (.) as many places to the right as there are ciphers in the multiplier.

Work:

$$\begin{array}{l} 8.75 \times 10 = 87.5 \\ 8.75 \times 100 = 875. \\ 8.75 \times 1000 = 8750. \end{array}$$

DIVISION OF DECIMALS

RULE.—Divide as in whole numbers, annexing ciphers to the dividend, if necessary; then point off from the right of the quotient as many places as the decimal places in the dividend exceed those in the divisor—prefixing ciphers if necessary.

(a) Division of a decimal by a whole number.

EXAMPLE 1: Divide 18.2754 by 4.

4) 18.2758
 $\underline{4.5685}$

We divide 4 into 18 (units) and have 4 (units) quotient and 3 units remainder. Since the 4 is the unit's figure of the quotient, we write the decimal point immediately after it. Then, the 2 units remainder and the 2 tenths of the dividend make 22 tenths to be divided by 4, and so on. Having reached the 4 (ten-thousandths) of the dividend, we find 8 (ten-thousandths) quotient and 2 remainder. This remainder is 20 hundred-thousandths, which when divided by 4 gives 5 (hundred-thousandths) and no further remainder.

EXAMPLE 2: Divide 18.2758 by 11.

11) 18.2758
 $\underline{1.66143636}$

Here we find the digits 3, 6 repeated indefinitely in the quotient. Decimals of this sort will be fully considered later.

EXAMPLE 3: Divide 354.43 by 184.

184) 354.43 (1.92625 Here we find the first figure of the quotient is obtained by dividing 184 into 354 units. Having now reached the decimal point in the dividend we also put the decimal point in the answer, and go on as before.

$$\begin{array}{r} 184 \overline{) 354.43} \\ \underline{1704} \\ 483 \\ \underline{1150}^{[16]} \\ 460 \\ \underline{920} \end{array}$$

[16] At this stage there is a remainder 115 hundredths. We bring down 0 from the dividend, and obtain 1150 thousandths, etc.

(b) Division of a decimal.

EXAMPLE 4: Divide 10.6603 by 7.85.

Thus:

785) 1066.03 (1.358 Here 7.85 is 785 hundredths, and 10.6603 is 1066.03 hundredths; so that the required quotient is obtained by dividing 1066.03 by 785. Therefore, to divide by a decimal, move the point as many places to the right as will make the divisor a whole number; move the point in the dividend the same number of places to the right. Then proceed as in Example 3.

$$\begin{array}{r} 785 \overline{) 1066.03} \\ \underline{2810} \\ 4553 \\ \underline{6280} \end{array}$$

EXAMPLE 5: Divide 176.4 by .00012.

12) 17640000 Here, to make the divisor a whole number, we have to move the point 5 places. Therefore we also move the point 5 places to the right in the dividend, first writing enough 0's after the 176.4 to enable us to do so.

ANS. 1470000

To divide a decimal by 10, 100, etc.

Rule.—Remove the (.) as many places to the left as there are ciphers in the divisor.

WORK:

$$\begin{array}{l} 62.5 \div 10 = 6.25 \\ 62.5 \div 100 = .625 \\ 62.5 \div 1000 = .0625 \end{array}$$

Expression of decimal fractions as common fractions.

EXAMPLE: Express 5.375 as a common fraction.

$$.375 = 375 \text{ thousandths.}$$

Therefore $5.375 = 5\frac{375}{1000} = 5\frac{3}{8}$ Ans.

RULE.—Take the digits of the decimal for numerator; for the denominator put down 1 followed by as many ciphers as there are digits in the decimal. Reduce this fraction to its lowest terms.

Expression of common fractions as decimals.

We have seen that a common fraction represents the quotient of the numerator divided by the denominator. Therefore, to convert a common fraction to a decimal fraction, we divide the numerator by the denominator.

EXAMPLE: Express $\frac{3}{32}$ as a decimal.

$$\begin{array}{r} 4 \overline{) 3.0} \\ 8 \overline{) .75} \\ \underline{.09375} \text{ Ans.} \end{array}$$

It will be found in many cases that there is always a remainder, so that the quotient can be continued indefinitely.

CIRCULATING DECIMALS

The learner has already discovered that some common fractions cannot be changed to exact decimal fractions, as—

$$\frac{1}{3} = .33333 \text{ on to infinity.}$$

$$\frac{2}{3} = .66666 \text{ on to infinity.}$$

$$\frac{7}{13} = .212121, \text{ etc.}$$

These decimals are known as *Circulates, Recurring or Circulating* decimals.

The part which recurs is called the *Repetend*.

This is marked by putting a dot over the first and last figures of it. For instance, if we write the 21 in the last case above, this way: $\dot{2}1$, it indicates that, if written out, the result would be 21212121, etc., on to infinity.

Where a circulating decimal occurs in work, it is best to reduce it to a common fraction. If need be, it may be expressed in the result as a circulate to any number of decimal places.

To change a pure circulate to a common fraction.

RULE.—Omit the (.) and write the figures of the repetend for the numerator, and as many 9's for the denominator as there are places in the repetend.

EXAMPLES: Change the pure circulates $\dot{3}$, $\dot{27}$, $\dot{142857}$, to common fractions.

$$\begin{array}{l} \dot{3}, \left(\frac{3}{9} = \frac{1}{3}\right) \text{ Ans. } \frac{1}{3}. \\ \dot{27}, \left(\frac{27}{99} = \frac{3}{11}\right) \text{ Ans. } \frac{3}{11}. \\ \dot{142857}, \left(\frac{142857}{999999} = \frac{1}{7}\right) \text{ Ans. } \frac{1}{7}. \end{array}$$

To change a mixed circulate to a common fraction.

RULE.—From the whole decimal subtract the finite part, and make the remainder the numerator. For the denominator, write as many 9's as there are figures in the repetend, and annex as many 0's as there are finite places.

EXAMPLE: Change the mixed circulates $\dot{16}$ and $\dot{416}$ to common fractions.

$$\begin{array}{l} 16 - 1 = 15, \frac{15}{90} = \frac{1}{6}. \text{ Ans. } \frac{1}{6}. \\ 416 - 41 = 375, \frac{375}{900} = \frac{5}{12}. \text{ Ans. } \frac{5}{12}. \end{array}$$

To add, subtract, multiply and divide circulates, reduce them to common fractions, then apply the respective rules.

SHORT METHODS IN MERCHANDISING

When one of the numbers is an *aliquot part* of 100, the process of multiplication and division can often be very much shortened, as shown below.

Find cost of 27 yards of goods at $16\frac{2}{3}\%$ ($\frac{1}{6}$) per yard. At \$1 per yard, 27 yards cost \$27; at $\frac{1}{6}$, $(27 \div 6)$, \$4 $\frac{1}{2}$. Ans. \$4 $\frac{1}{2}$.

Find cost of a bale of cotton, 528 pounds at $8\frac{1}{2}\%$ ($\frac{1}{12}$) per pound. At \$1 per pound, 528 pounds cost \$528; at $\frac{1}{12}$, $(528 \div 12)$ \$44. Ans. \$44.

Find cost of 1845 pounds of iron, at $3\frac{1}{2}\%$ ($\frac{1}{30}$) per pound. Take $\frac{1}{30}$ of 1845, since $3\frac{1}{2}\%$ is $\frac{1}{30}$ of \$1. $(1845 \div 30 = 61\frac{1}{2})$. Ans. \$61 $\frac{1}{2}$.

Find cost of 16 pounds of butter at $37\frac{1}{2}\%$ ($\frac{3}{8}$) per pound. Here we take $\frac{3}{8}$ of 16. Say $\frac{1}{8}$ of 16 is 2, and $\frac{3}{8}$ is (2×3) 6. Or say 3 times 16 is 48, and $\frac{1}{8}$ of 48 is 6. Ans. \$6.

Find cost of $17\frac{1}{2}$ bushels of apples at 75% ($\frac{3}{4}$) per bushel. The shortest way to find $\frac{3}{4}$ of \$17.50 is to diminish it by $\frac{1}{4}$ of itself.

$$\begin{array}{r} 4 \overline{) 17.50} \text{ at } \$1 \\ \underline{3.375} \text{ at } \$\frac{1}{4} \\ 13.125 \text{ at } \$\frac{3}{4} \end{array}$$

Ans. \$13.12 $\frac{1}{2}$.

At $6\frac{1}{4}\%$ per pound how much sugar will \$5 buy? As $6\frac{1}{4}\%$ is $\frac{1}{16}$ of \$1, evidently each dollar will buy 16 pounds. Ans. 80 pounds.

In multiplying by a fraction, write the quantity in a line with the numerator and cancel common factors.

Find cost of 72 yards of carpet, at $87\frac{1}{2}$ c ($\frac{7}{8}$) a yard. Cancel 8, also 72 and write 9 instead. *Ans.* \$63.

$$\frac{7}{8} \times 72 = 63$$

Of 28 pounds of coffee, at $18\frac{3}{4}$ c ($\frac{3}{4}$) per pound. Cancel 28 and 16, write 7 and 4. *Ans.* $5\frac{1}{4}$.

$$\frac{3}{16} \times 28 = \frac{21}{4} \text{ or } 5\frac{1}{4}$$

At $66\frac{2}{3}$ c ($\frac{2}{3}$) per bushel, how many bushel of wheat will \$34 buy? *Ans.* 51 bushel.

$$\frac{3}{2} \times 34 = 51$$

In division, invert terms of fraction.

How much syrup, at $41\frac{1}{2}$ c ($\frac{1}{2}$) per gallon can be bought for \$15? *Ans.* 36 gallons.

$$\frac{12}{5} \times 15 = 36$$

TABLE OF ALIQUOT PARTS OF 100

$3\frac{1}{2}$	is	$\frac{1}{30}$
$6\frac{1}{4}$	is	$\frac{1}{16}$
$8\frac{1}{3}$	is	$\frac{1}{12}$
$12\frac{1}{2}$	is	$\frac{1}{8}$
$16\frac{2}{3}$	is	$\frac{1}{6}$
$18\frac{3}{4}$	is	$\frac{3}{16}$
20	is	$\frac{1}{5}$
25	is	$\frac{1}{4}$
$31\frac{1}{4}$	is	$\frac{3}{16}$
$33\frac{1}{3}$	is	$\frac{1}{3}$
$37\frac{1}{2}$	is	$\frac{3}{8}$
40	is	$\frac{2}{5}$
$41\frac{1}{3}$	is	$\frac{3}{12}$
$43\frac{3}{4}$	is	$\frac{7}{16}$
50	is	$\frac{1}{2}$
$56\frac{1}{4}$	is	$\frac{9}{16}$
$58\frac{1}{3}$	is	$\frac{7}{12}$
60	is	$\frac{2}{3}$
$62\frac{1}{2}$	is	$\frac{5}{8}$
$66\frac{2}{3}$	is	$\frac{2}{3}$

80	is	$\frac{4}{5}$
$81\frac{1}{4}$	is	$1\frac{3}{16}$
$83\frac{1}{2}$	is	$\frac{5}{6}$
$87\frac{1}{2}$	is	$\frac{7}{8}$
$91\frac{2}{3}$	is	$1\frac{1}{12}$
$93\frac{3}{4}$	is	$1\frac{3}{16}$

This table embodies all the aliquot parts of 100 and their equivalent fractions which are generally used in practical calculations.

PROBLEMS IN GRAIN, STOCK, COTTON, COAL, HAY, LUMBER, ETC.

To find the value of articles sold by the unit, hundred or thousand.

RULE.—Multiply the quantity by the price, or vice versa, and point off the proper number of decimal places in the result.

Find the cost of a bale (518 pounds) of cotton at $7\frac{3}{8}$ c per pound.

$518 \times .07 = 36.26$ At 7c (.07) per pound, 518 pounds cost \$36.26; at $\frac{3}{8}$ c, $\$1.94\frac{1}{4}$. For $\frac{3}{8}$ of 518, multiply by 3, and divide product by 8.

$$.00\frac{3}{8} = \frac{1.94\frac{1}{4}}{8}$$

Ans. $\$38.20\frac{1}{4}$

Find cost of a lot of hogs, weighing 8740 pounds, at \$4.35 per hundredweight.

87.40 The price being \$4.35 per 100 pounds and as in 8740 pounds there are 87.40 hundredweight, four decimal places are pointed off. *Ans.* \$380.19.

4.35

380.1900

Find the cost of 2864 feet of lumber, at $\$17\frac{1}{4}$ per 1000 feet.

Price being dollars per 1000, point off three places. ($2.864 \times 17\frac{1}{4} = 49.404$.) *Ans.* \$49.40.

To find the value of articles sold by the ton (2000 pounds).

RULE.—Multiply the weight by the price and take half of the product.

Find the cost of 2680 pounds of hay, at $\$11\frac{1}{2}$ per ton.

Point off three places, when price is dollars; five if dollars and cents. ($2680 \times 11\frac{1}{2} = 30820$; $30820 \div 2 = 15.410$.) *Ans.* \$15.41.

When the long ton of 2240 pounds is used.

RULE.—Multiply the weight by the price and divide the product by 2,240.

Find the cost of 4800 pounds coal, at $\$6\frac{3}{4}$ per long ton. ($4800 \times 6\frac{3}{4} \div 2.24 = \14.46 . *Ans.*

To find the cost of grain, when the price per bushel and weight is given.

RULE.—Reduce the weight to bushels, and multiply by the price.

Find the cost of 3570 pounds of shelled corn, at 36c per bushel.

$56 \overline{) 3570}$ (63.75 bu. To reduce pounds of shelled corn to bushels, divide by 56. At 36c per bushel, 63.75 bushels come to \$22.95.

$$\frac{36}{56} = \frac{9}{14}$$

Ans. \$22.9500

Find cost of 2900 pounds of wheat, at 57c per bushel.

To reduce pounds of wheat to bushels divide by 60. $2900 \div 60 = 48\frac{1}{3}$ bushels; $48\frac{1}{3} \times .57 = \27.55 . *Ans.*

In computing the value of grain, the operation can often be abbreviated by cancellation.

RULE.—Write the weight and price per bushel, on the right of a vertical line, and the number of pounds to the bushel on the left. Then cancel common factors, as explained above.

Find the cost of 3230 bushels of wheat, at 72c per bushel.

$60 \overline{) 3230}$ Here we cancel the 0's on both sides; then, 6 and 72, which leaves 323 and 12. Their product being the answer.

$$323 \times 12 = 38.76$$

At 28c per bushel, what will 4080 pounds of oats cost?

$32 \overline{) 4080}$ 510 Oats, 32 pounds to the bushel. See table, page 861. Cancel 32 and 4080, then, 4 and 28, leaving the factors 510 and 7.

$$4 \overline{) 28} = 7$$

Ans. \$35.70

Other short cuts for computing cost of merchandise, produce, etc.

Find cost of $26\frac{1}{2}$ dozen eggs, at $18\frac{1}{2}$ c a dozen.

$26 \times 18 = 4.68$ When both fractions are $\frac{1}{2}$. To product of the whole numbers, add $\frac{1}{2}$ of their sum, and annex $\frac{1}{4}$ to answer.

$$\frac{1}{2} \text{ of } 44 = .22$$

$$\frac{1}{2} \times \frac{1}{2} = \frac{1}{4} = 4.90\frac{1}{4}$$

Ans. \$4.90.

Of $53\frac{3}{4}$ pounds of butter, at $28\frac{3}{4}$ c per pound.

$53 \times .28 = 14.84$ To the product of the whole numbers, add $\frac{3}{4}$ of their sum, plus the square of $\frac{3}{4}$.

$$\frac{3}{4} \text{ of } 81 = \frac{.60\frac{3}{4}}{4}$$

$$\frac{3}{4} \times \frac{3}{4} = \frac{9}{16} = 15.45$$

Ans. \$15.45 $\frac{3}{16}$.

Of $13\frac{1}{4}$ yards of flannel, at $31\frac{1}{4}$ c per yard.

$13 \times .31 = 4.03 + .11 = 4.14$. *Ans.*

To 4.03 add .11, $\frac{1}{4}$ of 44 ($13 + 31$). The $\frac{1}{16}$ ($\frac{1}{4} \times \frac{1}{4}$) is disregarded.

DENOMINATE NUMBERS

Simple denominate numbers.—When we speak of measures, whether they are of money, extension, time, or weight, we use terms like 5 dollars, 4 yards, 3 hours, or 10 pounds to express the quantity we are talking about.

Sometimes we use two or more terms or names to express the measure, as 3 hours, 15 minutes, 10 seconds; 4 gallons, 3 quarts, 1 pint. *These are compound denominate numbers.*

The chief differences between compound numbers and simple numbers is, that with the exceptions of United States money, and the metric system of weights and measures, the denominations of compound numbers do not increase or decrease by the scale of ten.

Reduction.—Reduction of Compound Numbers is the process of changing them from one denomination to another without altering their value.

Reduction Descending is changing the denomination of a number to another that is lower, as: 2 hours = 120 minutes; 2 feet = 24 inches.

Reduction Ascending is changing the denomination of a number to another that is higher, as: 120 minutes = 2 hours; 24 inches = 2 feet.

RULES FOR ADDITION OF DENOMINATE NUMBERS

First.—Write the names of the different units to be used in addition, placing them in a horizontal row, the largest to the left.

Next.—Write the numbers of each unit to be added, below the names of the units, each in its proper place.

Then.—Add and place each sum below the column added.

EXAMPLE: Add 7 hours 15 minutes 30 seconds, 9 hours 30 minutes 40 seconds, and 11 hours 40 minutes 32 seconds.

WORK:

hours	minutes	seconds
7	15	30
9	30	40

11	40	32
28	26	42

EXPLANATION: 32 seconds + 40 seconds + 30 seconds = 102 seconds. But, 102 seconds = 1 minute 42 seconds. Write the 42 below and carry the 1 minute. 1 minute (carried) + 15 minutes + 30 minutes + 40 minutes = 86 minutes. But, 86 minutes = 1 hour 26 minutes. Write the 26 and carry the 1 hour. 1 hour + 11 hours + 9 hours + 7 hours = 28 hours. Result = 28 hours 26 minutes 42 seconds.

SUBTRACTION OF DENOMINATE QUANTITIES

EXAMPLE: Subtract 6 tons 12 cwt. 9 pounds 10 ounces from 15 tons 7 cwt. 13 pounds 9 ounces.

WORK:

Tons	Cwt.	Pounds	Ounces
15	7	13	9
6	12	9	10
8	15	3	15

EXPLANATION: (1) Place as in addition of denominate quantities. 10 ounces cannot be taken from 9 ounces, so we must take 1 pound from the 13 pounds and add it to the nine ounces. 16 ounces + 9 ounces = 25 ounces. 25 - 10 = 15. Write the 15 below.

(2) Now there are only 12 pounds left to take the 9 from. 12 - 9 = 3. Write the 3 below.

(3) 12 is larger than 7. 1 ton + 7 cwt. = 27 cwt. 27 - 12 = 15. Write the 15 below.

(4) 14 - 6 = 8. Write the 8 below.

(5) Result = 8 tons 15 cwt. 3 pounds 15 ounces.

MULTIPLICATION OF DENOMINATE QUANTITIES

EXAMPLE: Multiply 21 yards 2 feet 11 inches by 6.

WORK:

Yards	Feet	Inches
21	2	11
		6
131	2	6

EXPLANATION: (1) 6 × 11 inches = 66 inches = 5 feet 6 inches. Write the 6 below and carry the 5.

(2) 6 × 2 feet = 12 feet. 12 feet + 5 feet (carried) = 17 feet, or 5 yards 2 feet. Write the 2 below and carry the 5.

(3) 6 × 21 yards = 126 yards. 126 yards + 5 yards = 131 yards.

(4) Result = 131 yards 2 feet 6 inches.

DIVISION OF DENOMINATE QUANTITIES

PROBLEM: Divide 3 years 9 months 4 days by 12.

WORK:

Years	Months	Days	Hours
12) 3	9	4	0
	0	3	22
			20

EXPLANATION: (1) We cannot divide 3 by 12, so we reduce 3 years to months. 3 years = 36 months. 36 months + 9 months = 45 months. 45 ÷ 12 = 3, and a remainder 9. Write the 3 and carry the remainder 9.

(2) 9 months (carried) = 270 days. 270 days + 4 days = 274 days. 274 ÷ 12 = 22, and a remainder 10. Write the 22 and carry the 10.

(3) 10 days = 240 hours. 240 ÷ 12 = 20. Write the 20.

(4) Result = 3 months 22 days 20 hours.

REDUCTION ASCENDING

RULES: 1. Divide the given denomination by the number which will reduce it to the next higher denomination. Divide the quotient in the same manner, and continue the operation until the entire quantity is reduced.

2. To the last quotient annex the several remainders in their proper order. The result will be the answer.

EXAMPLE: Reduce 201458 inches to higher denominations.

WORK:		SOLUTION:
12	201458 inches	201458 inches = 16788 feet 2 inches.
3	16788 feet 2 inches	16788 feet 2 inches = 5596 yards 2 inches.
5½	5596 yards	5596 yards 2 inches = 1017 rods 2 yards 1 foot 8 inches.
2	2	
11	11192 half yards	
320	1017 rods 5 half yards	1017 rods 2 yards 1 foot 8 inches = 3 miles 57 rods 2 yards 1 foot 8 inches.
	3 miles 57 rods	
	2 yds. 1 ft. 6 in.	

201458 inches = 3 miles 57 rods 2 yards 1 foot 8 inches.

REDUCTION DESCENDING

RULES: 1. Write the given quantity in the order of its denominations, beginning with the highest, and supply vacant denominations with ciphers.

2. Multiply the highest denomination by the number which will reduce it to the next lower denomination, and add to the product the units of the lower denomination, if there be any.

3. Proceed in the same manner until the entire quantity is reduced to the required denomination.

EXAMPLE: Reduce 10 yards 8 feet 10 inches to inches.

WORK: SOLUTION: 10 yards = 10 × 3 feet = 30 feet. 30 feet and 8 feet are 38 feet. 38 feet = 38 × 12 inches, or 456 inches. 456 inches + 10 inches = 466 inches.

3
38
12
456
10
466

Note.—To prove the above work, use reduction ascending, beginning with the result.

LONG OR LINEAR MEASURE

Long or linear measure is used in measuring lines and distances.

There are two systems in use in the United States, the *English System* and the *French System*. The English system is the one commonly used, while the French system is used in making scientific measurements. (See under Metric System.)

TABLE OF LONG MEASURE

12 inches (in.)	=	1 foot (ft.)						
3 feet	=	1 yard (yd.)						
5½ yards, or 16½ feet	=	1 rod (rd.)						
320 rods, or 5280 feet	=	1 mile (mi.)						
1760 yards	=	1 mile						
mi.	rd.	yd.	ft.	in.				
1	=	320	=	1760	=	5280	=	63360

Architects, carpenters, and mechanics frequently write ' for foot, and " for inch. Thus 8' 7" means 8 feet 7 inches.

Other measures of length are:

1 hand	=	4 in.	Used in measuring the height of horses.
1 fathom	=	6 ft.	Used in measuring depths at sea.
1 knot, nautical or geographical mile	=	1.1526½ miles or 6086 feet.	

The knot is used in measuring distances at sea. It is equivalent to 1 minute of longitude at the equator.

SURVEYORS' LINEAR MEASURE

7.92 inches	=	1 link (l.)						
25 links	=	1 rod (rd.)						
4 rods or 100 links	=	1 chain (ch.)						
80 chains	=	1 mile (mi.)						
mi.	ch.	rd.	l.	in.				
1	=	80	=	320	=	8000	=	63360

The linear unit commonly employed by surveyors is Gunter's chain, which is 4 rods or 66 feet.

An engineers' Chain, used by civil engineers, is 100 feet long, and consists of 100 links.

The following measures of length are also used:

3 barleycorns	= 1 inch. Used by shoemakers.
4 inches	= 1 hand. Used to measure the height of horses.
6 feet	= 1 fathom. Used to measure depths at sea.
3 feet	= 1 pace.
5 paces	= 1 rod. } Used in pacing distances.
8 furlongs	= 1 mile.
1.15 statute miles	= 1 geographical, or nautical mile.
3 geographical miles	= 1 league.
60 geographical miles] = 1 degree [of Latitude on a Meridian, or of Longitude on the Equator.
69.16 statute miles	

The length of a degree of latitude varies. 69.16 miles is the average length, and is that adopted by the United States Coast Survey.

The standard unit of length is identical with the imperial yard of Great Britain.

The standard yard, under William IV., was declared to be fixed by dividing a pendulum which vibrates seconds in a vacuum, at the level of the sea, at 62 degrees Fahrenheit, in the latitude of London, into 391,393 equal parts, and taking 360,000 of these parts for the yard.

The following denominations also occur: The span = 9 inches; 1 common cubit (the distance from the elbow to the end of the middle finger) = 18 inches; 1 sacred cubit = 21.888 inches.

SURFACE MEASURES

Square Measure, used in measuring surfaces, such as cloth, ceilings, floors, etc.; paving, glazing, and stone-cutting, by the square foot; roofing, flooring, and slating by the square of 100 feet.

A surface has two dimensions, length and breadth.

A square is a figure that has four equal sides and four right angles.

The unit of measure for surfaces is a square, each of whose sides is a linear unit. Thus, a square inch is a square, each of whose sides is one inch long; a square foot is a square, each of whose sides is one foot long, etc.

The area of a square is the product of two of its sides. Thus, the area of a surface 3 feet square is $3 \times 3 = 9$ square feet.

Hence, to find the area of a rectangle:

RULE.—Multiply the length by the breadth expressed in units of the same denomination.

As the area of a rectangle is found by taking the product of the numbers representing its length and breadth, it is evident that if the area be divided by either of those numbers, the quotient will be the other number. Hence, to find either side of a rectangle when its area and the other side are given:

RULE.—Divide the area by the given side. The quotient will be the required side.

[858]

Table of Square Measure

144 square inches (sq. in.)	= 1 square foot (sq. ft.)
9 square feet	= 1 square yard (sq. yd.)
$30\frac{1}{4}$ square yards	= 1 square rod (sq. rd.)
160 square rods	= 1 acre (A.)
640 acres	= 1 square mile (sq. mi.)

Sq. ' and sq. " are frequently used for square foot and square inch. Thus, 15 sq. ' 6 sq. " means 15 square feet 6 square inches.

A square is 100 square feet. It is used in measuring roofing.

PRACTICAL APPLICATION OF SQUARE MEASURE

PAPERING

Facts about Wall Paper:

- (1) Wall paper in this country is $\frac{1}{2}$ yard wide, and comes in rolls 8 yards long, or in double rolls, 16 yards long.
- (2) It is sold by the roll only.
- (3) Bordering is sold by the linear yard.
- (4) Make liberal allowances for waste in matching figures.
- (5) If the border is wide, the strips need not extend to the ceiling.

Rules for Measuring:

- (1) Measure the distance around the room in feet.
- (2) Deduct the width of doors and windows.
- (3) Divide the difference by $1\frac{1}{2}$, and the quotient will be the number of strips needed.
- (4) Multiply the number of strips by the number of yards in a strip, and the product is the *number of yards needed*, approximately.
- (5) Divide the number of yards by 8, and the result is the *number of single rolls needed*.

EXAMPLE: A room of ordinary height, 16 feet by 24 feet, has three windows and 2 doors, each 4 feet wide. How many rolls of paper are needed to paper the sides?

SOLUTION:

Distance around the room	= 80 feet
Width of doors and windows	= 20 feet
After deducting for doors and windows	60 feet
$60 \div 7 = 8\frac{4}{7}$, or 9 double rolls.	

CARPETING

Facts about Carpets:

- (1) Carpets are usually $\frac{1}{4}$ yard wide and are sold by the linear yard.
- (2) Always draw a diagram of the floor or stairs to be covered.
- (3) The number of yards required depends on which way the strips run—whether lengthwise or across the room. Sometimes by running the strips lengthwise, there is less waste in matching the pattern.
- (4) The part cut off in matching patterns is charged to the purchaser.

Rules for Estimating:

The number of yards required will be the number of yards in a strip (including the waste for matching), multiplied by the number of strips.

EXAMPLE: What is the cost of carpeting a room 16 feet by 24 feet at 85c per yard? The carpet is $2\frac{1}{4}$ feet wide and the strips run lengthwise.

SOLUTION:

$16 \div 2\frac{1}{4} = 7\frac{1}{9}$. Hence, I must buy 8 strips.
 $24 \div 3 = 8$, which is the number of yards in a strip.
 8×8 yards = 64 yards.
 64 yards will cost $64 \times 85c$, or \$54.40.

To this must be added the cost of sewing, the laying of the carpet, and the waste in matching the pattern.

LAND MEASURE

RULE.—To find the number of acres in a tract of land, divide the number of square rods by 160, or number of square chains by 10.

EXAMPLE: (1) How many square rods, also acres, in a field 80 rods long and $62\frac{1}{2}$ rods wide?

$80 \times 62\frac{1}{2} = 5000$ square rods; $5000 \div 160 = 31\frac{1}{4}$ acres.

Ans. $31\frac{1}{4}$ acres.

(2) In tract, 79 chains 84 links (79.84 chains) by 41 chains 25 links (41.25 chains)?

$79.84 \times 41.25 = 3293.4$ square chains; $3293.4 \div 10 = 329.34$ acres. Ans. 329.34 acres.

Table showing one side of a Square Tract or Lot containing

1 acre	= 208.7 feet = 43,560 square feet
$1\frac{1}{2}$ acres	= 255.6 feet = 65,340 square feet
2 acres	= 295.2 feet = 87,120 square feet
$2\frac{1}{2}$ acres	= 330 feet = 108,900 square feet
3 acres	= 361.5 feet = 130,680 square feet
5 acres	= 466.7 feet = 217,800 square feet
10 acres	= 660 feet = 435,600 square feet
$\frac{1}{10}$ acre	= 66 feet = 4,356 square feet
$\frac{1}{6}$ acre	= 73.8 feet = 5,445 square feet
$\frac{1}{6}$ acre	= 85.2 feet = 7,260 square feet
$\frac{1}{4}$ acre	= 104.4 feet = 10,890 square feet
$\frac{1}{3}$ acre	= 120.5 feet = 14,520 square feet
$\frac{1}{2}$ acre	= 147.6 feet = 21,780 square feet
$\frac{3}{4}$ acre	= 180.8 feet = 32,670 square feet

TABLE OF SURVEYORS' SQUARE MEASURE

$272\frac{1}{2}$ square feet	= 1 square rod
16 square rods	= 1 square chain
160 square rods, or 10 square chains	= 1 acre
640 acres	= 1 square mile, or section
36 square miles, or 36 sections	= 1 township

TEXAS LAND MEASURE

(Also used in Mexico, New Mexico, Arizona, and California)

26,000,000	square varas (square of 5,099	varas) = 1 league and 1 labor	= 4,605.5 acres
1,000,000	square varas (square of 1,000	varas) = 1 labor	= 177.136 acres
25,000,000	square varas (square of 5,000	varas) = 1 league	= 4,428.4 acres
12,500,000	square varas (square of 3,535.5	varas) = $\frac{1}{2}$ league	= 2,214.2 acres

8,333,333	square varas (square of 2,886.7	varas) = $\frac{1}{2}$ league	= 1,476.13	acres
6,250,000	square varas (square of 2,500	varas) = $\frac{1}{4}$ league	= 1,107.1	acres
7,225,600	square varas (square of 2,688	varas) =	1,280	acres
3,612,800	square varas (square of 1,900.8	varas) = 1 section	= 640	acres
1,806,400	square varas (square of 1,344	varas) = $\frac{1}{2}$ section	= 320	acres
903,200	square varas (square of 950.44	varas) = $\frac{1}{4}$ section	= 160	acres
451,600	square varas (square of 672	varas) = $\frac{1}{8}$ section	= 80	acres
225,800	square varas (square of 475	varas) = $\frac{1}{16}$ section	= 40	acres
5,645.376	square varas (square of 75.137	varas) = 4,840 square yards	= 1	acre

To find the number of acres in any number of square varas, multiply the latter by 177 (or to be more exact, by $177\frac{1}{6}$), and cut off six decimals.
 1 vara = $33\frac{1}{3}$ inches
 1,900.8 varas = 1 mile.

THE MEASURE OF SOLIDS, OR CUBIC MEASURE

Just as the rectangle is the chief surface considered in arithmetic, so the rectangular solid is the chief solid body. A rectangular solid is bounded by six rectangular surfaces, each opposite pair of rectangles being equal and parallel to each other. A rectangular solid thus has three dimensions—length, breadth, and thickness. If the length, breadth, and thickness are all equal to one another, the solid is called a cube. Hence, a cubic foot, the unit of volume, is a solid body whose length, breadth, and thickness are each a linear foot. Similarly, a cubic inch measures one linear inch in length, breadth, and thickness; and a cubic yard measures one linear yard in length, breadth, and thickness.

One cubic foot

The number of cubic feet (or inches, or yards) in the volume of a rectangular solid is equal to the number of linear feet (or inches, or yards) in the length, multiplied by the number of linear feet (or inches, or yards) in the breadth, multiplied by the number of linear feet (or inches, or yards) in the thickness.

This is usually abbreviated into
 Length \times breadth \times thickness = volume, or cubic content.

For example, suppose the solid in the diagram is 10 feet in length, 8 feet in breadth, and 5 feet in thickness. It is clear that the solid can be cut into five slices, each 1 foot thick, by planes parallel to the bottom. But, the bottom contains 10×8 square feet and above each square foot there is a cubic foot. Thus, each slice contains 10×8 cubic feet. Therefore, since there are five slices, the whole solid contains $10 \times 8 \times 5$, or 400 cubic feet.

Since length \times breadth \times thickness = cubic content, it follows that, if we know any three of these four quantities, we can find the fourth.

- The student should remember that
 (a) A cubic foot of water weighs 1000 ounces (avoirdupois) approximately.
 (b) A gallon of pure water weighs 10 pounds (avoirdupois).
 We have thus a relation between weight, capacity, and cubic content.

TABLE OF CUBIC MEASURE

1728 cubic inches (cu. in.)	= 1 cubic foot (cu. ft.)	
27 cubic feet	= 1 cubic yard (cu. yd.)	
128 cubic feet	= 1 cord (C.)	
Cubic Yard	Cubic Feet	Cubic Inches
1	= 27	= 46656

A cord of wood or stone is a pile 8 feet long, 4 feet wide, and 4 feet high. A pile of wood 4 feet high, 4 feet wide and 1 foot long makes a cord foot. 8 cord feet = 1 cord. A perch of stone or masonry is $16\frac{1}{2}$ feet long, $1\frac{1}{2}$ feet thick, and 1 foot high, and contains $24\frac{3}{4}$ cubic feet. A cubic yard of earth is considered a load.

Brick work is commonly estimated by the thousand bricks. Bricklayers, masons, and joiners commonly make a deduction of one half the space occupied by windows and doors in the walls of buildings. In computing the contents of walls, masons and bricklayers multiply the entire distance around on the outside of the wall by the height and thickness. The corners are thus measured twice.

A cubic foot of distilled water at the maximum density, at the level of the sea, and the barometer at 30 inches, weighs $62\frac{1}{2}$ pounds or 1000 ounces avoirdupois. By actual measurements, it has been found that a bushel, dry measure, contains about $1\frac{1}{4}$ cubic feet. This makes it easy to estimate about how many bushels any bin will hold.

PRACTICAL APPLICATIONS OF CUBIC MEASURE

EXAMPLE: An open tank made of iron $\frac{1}{4}$ inch thick, is 4 feet long, 2 feet 6 inches broad, and 2 feet deep, outside measurement. Assuming that iron weighs 7.8 times as much as water, find the weight of the tank.

The external volume of the tank = $2 \times 2\frac{1}{2} \times 4$ cubic feet = 20 cubic feet.
 Since the iron is $\frac{1}{4}$ inch thick, the inside length is $\frac{1}{2}$ inch less than the outside, the inside breadth is $\frac{1}{2}$ inch less than the outside, and the inside depth is $\frac{1}{4}$ inch less than the outside. Therefore the interior volume

$$= 29\frac{1}{2} \times 47\frac{1}{2} \times 23\frac{3}{4} \text{ cubic inches}$$

$$= \frac{59 \times 95 \times 95}{16} \text{ cubic inches}$$

$$= 33279\frac{11}{16} \text{ cubic inches}$$

Therefore, volume of iron in the tank
 = 20 cubic feet - $33279\frac{11}{16}$ cubic inches
 = $1280\frac{5}{16}$ cubic inches.

But 1 cubic foot of iron weighs as much as 7.8 cubic feet of water, i. e., 7.8×1000 ounces, or 7800 ounces.

$$\therefore \text{Weight of tank} = \frac{1280\frac{5}{16} \times 7800}{1728 \times 16} \text{ pounds.}$$

$$= 361.199 \text{ pounds, Ans.}$$

EXAMPLE: A wood pile is 8 feet high and 40 feet long. The sticks are 4 feet long. How many cords in it?
 SOLUTION: Being 8 feet high, it is 2 cords high. 40 feet in length equal 5 cords in length. Hence, the pile contains 2×5 cords, or 10 cords.

- To estimate a bin:
 (1) Find the number of cubic feet in the bin.
 (2) Divide the number of cubic feet by $1\frac{1}{4}$.
 (3) The result is the number of bushels.

EXAMPLE: How many bushels will a bin hold, if its inside measurements are, length 20 feet, width 12 feet, depth 8 feet?
 SOLUTION: The number of cubic feet in a bin is $8 \times 12 \times 20$, or 1920.
 If 1 bushel contains $1\frac{1}{4}$ cubic feet, in 1920 cubic feet there are as many bushels as $1\frac{1}{4}$ is contained times in 1920, or 1536.

WORK:
 $8 \times 12 \times 20 = 1920$
 $1920 \div 1\frac{1}{4} = 1536.$

The work may be indicated in this way as well—
 $8 \times 12 \times 20 \times \frac{4}{5} = 1536.$

- To get the number of heaped bushels of corn in the ear in a crib:
 (1) Multiply the length of the crib in inches by the width in inches.
 (2) Multiply the product obtained, by the height of the corn in the crib in inches.
 (3) Divide the result by 2748.

EXAMPLE: How much corn in the ear can I put into a crib 12 feet wide, 20 feet long, and 10 feet deep?
 SOLUTION: The number of cubic inches in the crib is $144 \times 240 \times 120$, or 4,147,200.
 Since 2748 cubic inches hold 1 bushel, 4,147,200 cubic inches hold as many bushels as 2748 is contained times in 4,147,200, or 1509+ bushels.

WORK:
 $\frac{144 \times 240 \times 120}{2748} = 1509+.$

MEASURES OF CAPACITY

Measures used in telling the extent of room in vessels are called *measures of capacity*. There are two kinds of capacity measures, dry measures and liquid measures. Dry measures are used to measure grain, seeds, and the like. Liquid measures are used to measure water, milk, oils, etc.

Liquid measures

COMMON LIQUID MEASURE TABLE

4 gills (gi.) = 1 pint (pt.)
 2 pints = 1 quart (qt.)
 4 quarts = 1 gallon (gal.)
 31½ gallons = 1 barrel (bbl.)
 2 barrels = 1 hogshead (hhd.)

Gallon	Quarts	Pints	Gills
1	= 4	= 8	= 32

A pint, quart, or gallon, dry measure, is more than the same quantity, liquid measure; for a quart, dry measure, is 1/32 of a bushel, or 1/32 of 2150.4 cubic inches, which is about 67½ cubic inches, while a quart liquid measure is 1/4 of 231 cubic inches, or 57¾ cubic inches.

	Cu. In. in 1 Gal.	Cu. In. in 1 Qt.	Cu. In. in 1 Pt.	Cu. In. in 1 Gi.
Liquid measure	231	57¾	28⅞	7⅞
Dry measure	268⅘	67¼	33⅘	8⅞

In determining the capacity of cisterns, reservoirs, etc., 31½ gallons are considered a barrel (bbl.), and 2 barrels, or 63 gallons, a hogshead (hhd.). In commerce, however, the barrel and hogshead are not fixed measures.

Casks of large size, called tierces, pipes, butts, tuns, etc., do not hold any fixed quantity. Their capacity is usually marked upon them.

The standard gallon of the United States contains 231 cubic inches, and will hold a little over 8½ pounds of distilled water. The imperial gallon, now adopted by Great Britain, contains 277.274 cubic inches, or 10 pounds of distilled water, temperature 62 degrees Fahrenheit, the barometer standing at 30 inches.

TABLE OF APOTHECARIES' LIQUID MEASURE

These measures are used in mixing medicines.

60 minims (m) = 1 fluid dram (ʒ)
 8 fluid drams = 1 fluid ounce (ʒ)
 16 fluid ounces = 1 pint (O)
 8 pints = 1 gallon (Cong.)

A minim is about 1 drop.

TABLE OF DRY MEASURE

2 pints (pt.) = 1 quart (qt.)
 8 quarts = 1 peck (pk.)
 4 pecks = 1 bushel (bu.)

Bushel	Pecks	Quarts	Pints
1	= 4	= 32	= 64

A common Winchester bushel (the standard of the United States) contains 2150.42 cubic inches.

A dry quart contains 67.2 cubic inches.

A liquid quart contains 57.75 cubic inches.

EXAMPLE 1: Reduce 5 bushels 2 pecks 4 quarts 1 pint to pints.

OPERATION: EXPLANATION: As there are 4 pecks in 1 bushel, any number of bushels is equal to 4 times that number of pecks. Then, 5 bushels = 20 pecks, and 2 pecks added make 22 pecks. As there are 8 quarts in 1 peck, any number of pecks is equal to 8 times that number of quarts. Then 22 pecks = 176 quarts, and 4 quarts added make 180 quarts. As there are 2 pints in 1 quart, any number of quarts is equal to 2 times that number of pints. Then, 180 quarts = 360 pints, and 1 pint added make 361 pints. Hence, 5 bushels 2 pecks 4 quarts 1 pint = 361 pints.

bu.	pk.	qt.	pts.
5	2	4	1
<hr style="border: 0; border-top: 1px solid black;"/>			
4			
<hr style="border: 0; border-top: 1px solid black;"/>			
22 pk.			
<hr style="border: 0; border-top: 1px solid black;"/>			
8			
<hr style="border: 0; border-top: 1px solid black;"/>			
180 qt.			
<hr style="border: 0; border-top: 1px solid black;"/>			
2			
<hr style="border: 0; border-top: 1px solid black;"/>			
361 pt.			

EXAMPLE 2: Reduce 361 pints to bushels.

OPERATION: EXPLANATION: As there are 2 pints in 1 quart, 361 pints are equal to one-half that number of quarts = 180 quarts, with a remainder of 1 pint. Also, 180 quarts are equal to one-eighth of that number of pecks = 22 pecks, with a remainder of 4 quarts. Finally, 22 pecks are equal to one-fourth of that number of bushels = 5 bushels, with a remainder of 2 pecks. Hence, 361 pints are equal to 5 bushels 2 pecks 4 quarts 1 pint.

qt.	pk.	bu.
1	4	5
<hr style="border: 0; border-top: 1px solid black;"/>		
22 pk. + 4 qt.		
<hr style="border: 0; border-top: 1px solid black;"/>		
5 bu. + 2 pk.		

MEASURES OF WEIGHT

AVOIRDUPOIS WEIGHT

Avoirdupois Weight is used for weighing heavy articles as grain, groceries, coarse metals, etc.

16 ounces (oz.) = 1 pound (lb.)
 100 pounds = 1 hundredweight (cwt.)
 20 hundredweight = 1 ton (T.)

	Hundred-		
Ton	weight	Pounds	Ounces
1	= 20	= 2000	= 32000
Scale.—20, 100, 16.			

In weighing coal at the mines and in levying duties at the United States Custom House, the long ton of 2240 pounds is sometimes used.

The ounce is considered as 16 drams.

The unit is the pound. It contains 7000 grains.

The following denominations are also used:

14 pounds = 1 stone
 100 pounds butter = 1 firkin
 100 pound grain or flour = 1 cental
 100 pounds dried fish = 1 quintal
 100 pounds nails = 1 keg
 196 pounds flour = 1 barrel
 200 pounds pork or beef = 1 barrel
 280 pounds salt at N. Y. works = 1 barrel

TROY WEIGHT

Troy Weight is used in weighing gold, silver, and jewels.

TABLE

24 grains (gr.) = 1 pennyweight (pwt.)
 20 pennyweights = 1 ounce (oz.)

12 ounces = 1 pound (lb.)

Pounds Ounces Penny-weights Grains
1 = 12 = 240 = 5760

In weighing diamonds, pearls, and other jewels, the unit commonly employed is the carat, which is equal to 4 carat grains, or 3.168 Troy grains. The term carat is also used to express the fineness of gold, and means 24 parts. Thus, gold that is 18 carats fine is 19/24 gold, and 9/24 alloy. The standard unit of weight is the Troy pound. It is equal to the weight of 22.7944 cubic inches of distilled water at its maximum density, the barometer being at 30 inches. It is identical with the Troy pound of Great Britain.

The following are approximate avoirdupois weights of certain articles of produce according to the laws of the United States, and in the majority of States:

Table I. UNITED STATES LEGAL WEIGHTS (in pounds) PER BUSHEL
Prepared by the United States Bureau of Standards

Table with 19 columns: STATE OR TERRITORY, APPLIES (Apple, Dried Apples), BARLEY, BEANS (Beans, Castor Beans), BEETS, BLUE-GRASS SEED, BRAN, BROOM-CORN SEED, BUCKWHEAT, CAR-ROTS, CLOVER SEED, COAL, COKE, CORN (Corn in Ear, Shelled Corn), CORN MEAL. Rows list various US states and territories with their respective weights.

Condensed version of Table I, showing only the columns: STATE OR TERRITORY, APPLIES, BARLEY, BEANS, BEETS, BLUE-GRASS SEED, BRAN, BROOM-CORN SEED.

- * Not defined.
- a Small white beans, 60 pounds.
- b Green apples.
- c Sugar beets and mango-wurzels.
- d Shelled beans, 60 pounds; velvet beans, 78 pounds.
- e White beans.
- f Wheat bran.
- g Corn in ear, 70 pounds until December 1st next after growth; 68 pounds thereafter.
- h English blue-grass seed, 22 pounds; native blue-grass seed, 14 pounds.
- i Rice corn.
- j Corn in ear from November 1st to May 1st following, 70 pounds; 68 pounds from May 1st to November 1st.
- k Soy beans, 58 pounds.
- l Cracked corn, 50 pounds.
- m Green unshelled beans, 30 pounds.
- n Cannel coal, 70 pounds.
- o Standard weight in borough of Greensburg, 75 pounds.
- p Dried beans; green unshelled beans, 30 pounds.
- q Red and white.
- r Unwashed plastering hair, 8 pounds; washed plastering hair, 4 pounds.

Table II. LEGAL WEIGHTS PER BUSHEL FIXED IN BUT ONE OR TWO STATES

ARTICLE	WEIGHT	STATES
	Pounds	
Blackberries	30	Iowa, Tennessee, 48 pounds; dried 28 pounds.
Blueberries	42	Minnesota.
Canary seed	60	Tennessee.
Cantaloupe melon	50	Tennessee.
Cement	80	Tennessee.
Cherries	40	Iowa, Tennessee, with stems 56 pounds; without stems, 64 pounds.
Chestnuts	50	Tennessee, Virginia, 57 pounds.
Cotton seed, staple	42	South Carolina.
Cucumbers	48	Iowa, Tennessee, Missouri, Wisconsin, 50 pounds.
Currants	40	Iowa and Minnesota.
Grapes	40	Iowa, Tennessee, with stems, 48 pounds; without stems, 60 pounds.
Hickory nuts	50	Tennessee.
Hominy	60	Ohio, Tennessee, 62 pounds.
Horse-radish	50	Tennessee.
Kaffir corn	56	Kansas.
Kale	30	Tennessee.
Land plaster	100	Tennessee.
Mustard	30	Tennessee.
Plums	40	Florida, Tennessee, 64 pounds.
Plums, dried	28	Michigan.
Popcorn	70	Iowa, Indiana, Tennessee, Ohio, in the ear, 42 pounds; Iowa, shelled, 56 pounds.
Prunes, dried	28	Idaho; green, 45 pounds.
Quinces	48	Florida, Iowa and Tennessee.
Rape seed	50	Wisconsin.
Raspberries	32	Iowa, Kansas, Tennessee, 48 pounds.
Rhubarb	50	Tennessee.
Salads	30	Tennessee.
Sand	130	Iowa.
Spinach	30	Tennessee.
Strawberries	32	Iowa, Tennessee, 48 pounds.
Sugar-cane seed	57	New Jersey.
Velvet-grass seed	7	Tennessee.
Walnuts	50	Tennessee, Iowa.

APOTHECARIES' WEIGHT

Apothecaries' Weight is used by apothecaries and physicians weighing medicines for prescriptions.

TABLE

20 grains (gr.) = 1 scruple (sc., or ℥)
 2 scruples = 1 dram (dr., or ℥)
 8 drams = 1 ounce (oz., or ℥)
 12 ounces = 1 pound (lb., or ℔)

Pound	Ounces	Drams	Scruples	Grains
1	= 12	= 96	= 288	= 5760

[864]

1. In writing prescriptions, physicians express the number in Roman characters, using j instead of i final. They also write the symbol first; thus: ℥v, ℥vj, ℥ij.

MEDICAL SIGNS AND ABBREVIATIONS

℞ (Lat. Recipe), take; āā, of each; ℔, pound; ℥, ounce; ℥, drachm; ℥, scruple; ℥, minim, or drop; O or o, pint; ℥, fluid ounce; ℥, fluid drachm; as, ℥ss, half an ounce; ℥i, one ounce; ℥iiss, one ounce and a half; ℥ij, two ounces; gr. grain; Q. S., as much as sufficient; Ft. Mist., let a mixture be made; Ft. Haust., let a draught be made; Ad., add to; Ad lib., at pleasure; Aq., water; M., mix; Mac., macerate; Pulv., powder; Pil., pill; Solv., dissolve; St., let it stand; Sum., to be taken; D., dose; Dil., dilute; Filt., filter; Lot., a wash; Garg., a gargle; Hor. Decub., at bed time; Inject., injection; Gtt., drops; ss, one-half; Ess., essence.

COMPARISON OF WEIGHTS

TABLE

1 pound avoirdupois = 7000 grains
 1 ounce avoirdupois = 437½ grains
 1 pound Troy, or apothecary = 5760 grains
 1 ounce Troy, or apothecary = 480 grains

CIRCULAR MEASURES

Circular or Angular Measures are used in surveying, navigation, astronomy, geography, reckoning latitude and longitude, and computing differences in time.

A *Circle* is a plane figure bounded by a curved line, every point of which is equally distant from a point within, called the center.

The *Circumference* is the bounding line of a circle.

The *Radius* of a circle is a straight line drawn from the circumference to the center.

The *Diameter* is a straight line drawn through the center, with the ends terminating in the circumference.

An *Arc* of a circle is any portion of the circumference.

An *Angle* is the difference in direction between two straight lines which meet.

If two diameters divide a circle into four equal parts, these diameters make *right angles* with each other.

An angle less than a right angle is an *acute angle*.

The circumference of a circle may be divided into 360 equal parts, called *degrees*. If the circle is large, the degree is large, and if the circle is small, the degree is small, but the degree is always $\frac{1}{360}$ part of the circumference, whatever the size of the circle.

An angle at the center of a circle is measured by the arc which bounds it.

If the angle is a right angle, it is measured by $\frac{1}{4}$ of 360 degrees, or 90 degrees; hence, any angle of 90 degrees is a right angle.

An acute angle is always less than 90 degrees.

An obtuse angle is always more than 90 degrees.

TABLE OF CIRCULAR MEASURE

60 seconds (")	=	1 minute (')
60 minutes	=	1 degree (°)
360 degrees	=	1 circumference (cir.)

Circumference	Degrees	Minutes	Seconds			
1	=	360	=	21,600	=	1,296,000

A *quadrant* is $\frac{1}{4}$ of a circumference, or 90°; a *sextant* is $\frac{1}{6}$ of a circumference, or 60°.

The length of a degree of longitude on the earth's surface at the Equator is 69.16 miles.

In astronomical calculation 30° are called a *sign*, and there are therefore 12 signs in a circle.

LONGITUDE AND TIME

The earth's circumference (which has the form of a circle) at the equator is (3.1416×7926) , 24900 miles; which divided by 360, gives 69.17 miles for 1 degree of longitude at the equator. Leaving the equator, degrees of longitude gradually diminish, since all meridians converge at the poles. Thus, 1 degree of longitude, at 10 degrees of latitude, is 68.1 miles; at 20 degrees 65 miles; at 30 degrees 59.9 miles; at 40 degrees 53 miles; at 50 degrees 44.5 miles; at 60 degrees 34.6 miles; at 70 degrees 23.7 miles; at 80 degrees 12 miles; at 90 degrees 0.

Imaginary lines running north and south, through these degrees, from pole to pole, are called *meridians*. Those east and west, *parallels*.

One meridian which runs through Greenwich, near London, England, is called the *prime meridian*, and all the other meridians are reckoned as east or west of it.

Longitude is distance east or west of the prime meridian. When we say that the longitude of Paris is 2° 20' East, we mean that the meridian running through Paris is 2° 20' east of the prime meridian that runs through Greenwich, England. The longitude of Washington, D. C., is 77° 7' West. That means that the meridian which passes through Washington is 77° 7' west of the prime meridian.

The longitude of a place tells in degrees, minutes, and seconds, the distance it is east or west of the prime meridian.

RULE.—To find the difference of time between two places, when the difference of longitude is known, or vice versa, multiply the given longitude, expressed in degrees, by 4. This gives the equivalent time in minutes. Dividing the given time, expressed in minutes, by 4, gives the equivalent longitude in degrees.

EXAMPLE: The difference of longitude between Boston and San Francisco is nearly $51\frac{1}{4}^\circ$, what is the difference of time?

$51\frac{1}{4} \times 4 = 205$. 205 minutes equal 3 hours and 25 minutes. *Ans.* 3 hours and 25 minutes.

The difference of time between London and New York is about 4 hours and 55½ minutes, what is the difference of longitude?

4 hours and 55½ minutes equals 295½ minutes. $295\frac{1}{2} \div 4 = 73\frac{3}{8}$. *Ans.* $73\frac{3}{8}^\circ$.

MEASURES OF TIME

The unit of time measurement is the same among all nations. Practically it is $\frac{1}{86400}$ of the mean solar day, but really it is a perfectly arbitrary unit, as the length of the mean solar day is not constant for any two periods of time. There is no constant natural unit of time.

Time measures are used in telling the time of day, in problems in longitude and time, in figuring interest on notes and bills, and in numerous other ways.

TABLE OF THE DIVISIONS OF TIME

60 seconds (sec.)	=	1 minute (min.)
60 minutes	=	1 hour (hr.)
24 hours	=	1 day (da.)
7 days	=	1 week (wk.)
30 days	=	1 commercial month (mo.)
52 weeks	=	1 year (yr.)
12 months	=	1 year
360 days	=	1 commercial year
365 days	=	1 common year
366 days	=	1 leap year
100 years	=	1 century

Century	Years	Months	Days	Hours	Minutes					
1	=	100	=	1,200	=	36,500	=	876,000	=	52,560,000

Centennial years exactly divisible by 400, and other years exactly divisible by 4, are *Leap Years*.

WHY WE HAVE LEAP YEAR

The average time it takes the earth to revolve once around the sun (*one year*) is 365 days, 5 hours, 48 minutes, 47.8 seconds, or about $365\frac{1}{4}$ days.

The change in the length of the mean sidereal day, *i.e.*, of the time of the earth's rotation upon its axis, amounts to 0.01252 seconds in 2400 mean solar years.

Instead of reckoning this part of a day each year, it is disregarded, and an addition is made when this amounts to one day, which is very nearly every fourth year. This addition of one day is made to the month of February. Since the part of a day that is disregarded when 365 days are considered as a year, is a little less than one quarter of a day, the addition of one day every fourth year is a little too much, and, to correct this excess, addition is made to only every fourth centennial year.

STANDARD TIME

By this is meant time which differs from Greenwich mean time by whole hours.

The earth revolves on its axis from west to east, nearly 17.3 miles in 1 minute at the equator; at the latitude of New Orleans, nearly 15 miles in 1 minute; at Memphis, 14 miles; at Chicago, 13 miles; at London, 10.8 miles; at St. Petersburg, 8.6 miles. That is, a watch would gain one minute going west, or lose one minute going east that distance, in the latitudes of the respective cities.

The globe is divided into zones of 15 degrees or one hour breadth, the Greenwich meridian being in the center of the zero zone. Thus Belgium and Holland (since 1892) keep Greenwich time; Denmark, Sweden, Switzerland (1894), Austrian railroads, Germany, and Italy (1893) keep the time of longitude 15 degrees East—i.e. one hour earlier than Greenwich. In North America again five zones are distinguished. The corresponding times are distinguished as Eastern (67½ to 82½ degrees), Central (82½ to 97½ degrees), Mountain (97½ to 112½ degrees), and Pacific (112½ to 127½ degrees) times.

New York people are in the Eastern Time Belt. If they rise at six o'clock in the morning, they will be up a whole hour before Chicago people, who get up at the same hour.

The clock at Greenwich, near London, England, from which the standard time of the world is reckoned.

Thus, each day begins an hour sooner in New York than in Chicago, two hours before Denver, and three hours before San Francisco. Standard time in Japan is nine hours earlier than Greenwich time.

In the western parts of Canada the twenty-four hour system has been adopted, under which four P. M. becomes sixteen o'clock and so on. Steps are being taken to introduce it generally in India, Belgium, and the United States. It is of special convenience in the construction of railroad time tables; and it has long been used by the Italians and by astronomers.

SIMULTANEOUS TIME IN LONDON, NEW YORK, AND BOMBAY

This diagram illustrates the curious fact that a telegram despatched from London may be delivered in New York apparently before the time it was sent off, and why a telegram apparently takes so long to reach Bombay.

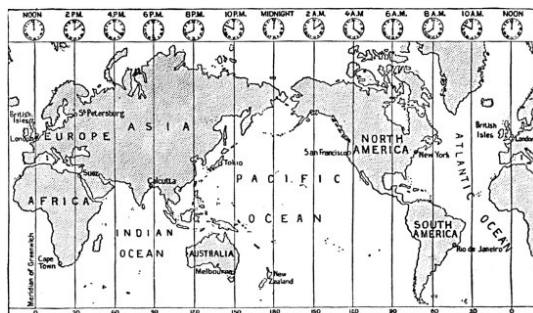

COMPARATIVE TIME ALL OVER THE WORLD WHEN NOON AT GREENWICH

THE CALENDAR

The reckoning of time among the ancients was very inaccurate. This was owing to their ignorance of astronomy, and also to changes that were made from time to time for political reasons. The calendar was reformed by Julius Cæsar, 46 B. C., who made the year consist of 365¼ days, adding one day every fourth year. In 1582, the error in the calendar established by him had increased to 10 days; that is, too much time had been reckoned as a year, until the civil year was 10 days behind the solar year. To correct this error, Pope Gregory XIII. decreed that 10 days should be stricken from the calendar, that the day following the 3d day of October, 1582, should be made the 14th, and that henceforth only those centennial years should be leap years which are divisible by 400.

Most Catholic countries adopted the Gregorian Calendar soon after it was established. Great Britain did not adopt it until 1752, when the error amounted to 11 days. By Act of Parliament, the 3d of September was called the 14th. The civil year by the same act was made to commence on the 1st of January, instead of the 25th of March, as was previously the case.

THE COMPARATIVE TIME ZONES OF THE WORLD

Dates reckoned by the Julian calendar are called Old Style (O.S.), and those reckoned by the Gregorian calendar are called New Style (N.S.). The difference now amounts to 12 days.

PERPETUAL CALENDAR

To find the day of the week for any given date.

1. Take the last two figures of the year, add one-fourth of them (neglecting remainder). Thus: 1949 = 49 + 12 = 61.
2. Add for the month, if for January or October, 1; May, 2; August, 3; February, March, or November, 4; June, 5; September or December, 6; April or July, 0; if leap year (that is, if it be divisible by 4 without remainder) January 0; February 3.
3. Add day of month.

Divide the sum of these three by 7, and remainder gives the number of the day of the week.

Thus:—What day of the week is 15th July, 1908?

$$\begin{array}{r}
 1. 8 + 2 = 10 \\
 2. \text{ July } = 0 \\
 3. 15\text{th} = 15 \\
 \hline
 25 = 7 \times 3 + 4
 \end{array}$$

4th day of the week = Wednesday.

What day of the week was December 25th, 1905?

$$\begin{array}{r}
 1. 5 + 1 = 6 \\
 2. \text{Dec.} = 6 \\
 3. 25\text{th} = 25 \\
 \hline
 37 = 7 \times 5 + 2
 \end{array}$$

2nd day of the week = Monday.

The above only applies to 20th Century. For 19th Century, add 2; for 21st Century, add 6; 18th Century, 4; but before 1752 the "old style" was used.

WHERE THE DAY BEGINS

The day begins earlier as you go east until you meet the 180th meridian. This is where the day begins. Starting here, it travels westward, giving the whole world a new day. The 180th meridian is called the *International Date Line (I. D. L.)* but in reality, the date line is a crooked line which zigzags across the 180th meridian.

From the time the day starts at the International Date Line, until the sun again reaches that line, the same day is in progress the world over.

As marked now, the International Date Line passes southward through Behring Sea, then westerly, then returns to the 180th meridian at about 40 degrees north. It then follows the 180th meridian to 10 degrees south, where it swerves east but returns again to the 180th meridian at about 50 degrees south. It then follows that meridian.

TIME ON SHIPBOARD.—The twenty-four hours are divided on board ship into seven parts, and the crew is divided into two parts or watches, designated port and starboard watches. Each watch is on duty four hours, except from four to eight p. m., which time is divided into two watches of two hours each, called dog watches, by means of which the watches are changed every day, and each watch gets a term of eight hours' rest at night. First watch, eight p. m. to midnight; middle watch, midnight to four a. m.; morning watch, four to eight a. m.; forenoon watch, eight a. m. to noon; afternoon watch, noon to four p. m.; first dog watch, four to six p. m.; second dog watch, six to eight p. m. The bell is struck every half-hour to indicate the time, as follows:

[868]

1 bell	12:30 A.M.	1 bell	12:30 P.M.
2 bells	1:00 A.M.	2 bells	1:00 P.M.
3 bells	1:30 A.M.	3 bells	1:30 P.M.
4 bells	2:00 A.M.	4 bells	2:00 P.M.
5 bells	2:30 A.M.	5 bells	2:30 P.M.
6 bells	3:00 A.M.	6 bells	3:00 P.M.
7 bells	3:30 A.M.	7 bells	3:30 P.M.
8 bells	4:00 A.M.	8 bells	4:00 P.M.
1 bell	4:30 A.M.	1 bell	4:30 P.M.
2 bells	5:00 A.M.	2 bells	5:00 P.M.
3 bells	5:30 A.M.	3 bells	5:30 P.M.
4 bells	6:00 A.M.	4 bells	6:00 P.M.
5 bells	6:30 A.M.	1 bell	6:30 P.M.
6 bells	7:00 A.M.	2 bells	7:00 P.M.
7 bells	7:30 A.M.	3 bells	7:30 P.M.
8 bells	8:00 A.M.	4 bells	8:00 P.M.
1 bell	8:30 A.M.	1 bell	8:30 P.M.
2 bells	9:00 A.M.	2 bells	9:00 P.M.
3 bells	9:30 A.M.	3 bells	9:30 P.M.
4 bells	10:00 A.M.	4 bells	10:00 P.M.
5 bells	10:30 A.M.	5 bells	10:30 P.M.
6 bells	11:00 A.M.	6 bells	11:00 P.M.
7 bells	11:30 A.M.	7 bells	11:30 P.M.
8 bells	12:00 noon	8 bells	12:00 night

HOW THE MONTHS GOT THEIR NAMES

January, from Janus, was the sacred month of the year to the Romans. To them, Janus was the god of the year. During the 18th century, the Europeans started to recognize it as the first month, but previous to this, March was considered the first.

February comes from februa, the name of a Roman festival celebrated on the 15th of the second month.

March is from Mars, the god of war. March was the first month of the year to the Romans.

April, from the Latin *aperire*, "to open," was probably so called because during this month buds begin to open.

May is from Maia, the mother of Mercury. The Romans offered sacrifices to this goddess on the first day of May.

The sixth month in our calendar, June, got its name from Juno, the wife of Jupiter.

July was so named in honor of Julius Cæsar, who was born in this month.

Emperor Augustus Cæsar commanded that the eighth month be named August after him.

September is from the Latin *septem*, meaning seven. At the time when March was the first month of the year, September was the seventh.

October, November, and December were originally the eighth, ninth and tenth months. *Octo*, *novem*, and *decem* are Latin numerals for eighth, ninth, and tenth.

HOW THE DAYS GOT THEIR NAMES

Sunday (that is, day of the sun, like Monday day of the moon), the first day of the week, the Lord's day, was sacred to Sol or the Sun.

Monday (that is, moon-day; Anglo-Saxon, *Monandæg*, German, *Montag*), the second day of our week, was formerly sacred to the moon.

Tuesday, the third day of the week, is so called from *Tiwesdæg*, the day of Tiw or Tiu, the old Saxon name for the god of war. The day bears a corresponding name in the other Germanic dialects.

Wednesday, the fourth day of the week, the *Dies Mercurii* of the Romans, the *Mittwoch* of the modern Germans. The name Wednesday is derived from the Northern mythology, and signifies Woden's or Odin's day. The Anglo-Saxon form was *Wōdanesday*, the Old German *Woutanestac*. The Swedish and Danish is *Onsdag*.

Thursday, (Swedish *Thorsdag*, German *Donnerstag*), the fifth day of the week, is so called from Donar, or Thor (see [Dictionary of Myths](#)), who, as god of the air, had much in common with the Roman Jupiter, to whom the same day was dedicated. (Latin *Jovis dies*, French *Jeudi*).

Friday, the sixth day of the week, from the Anglo-Saxon *Frige-dæg*, is the day sacred to *Frigga* or to *Freya*, the Saxon Venus.

Saturday (Anglo-Saxon *Sæterdæg*, *Sæterndæg*—*Sæter*, *Sætern*, for Saturn, and *dæg*, a day—the day presided over by the planet Saturn), is the seventh or last day of the week; the day of the Jewish Sabbath.

MEASURES OF VALUE

The common measure of value is *Money*.

It is also called Currency, and is of two kinds, viz.: coin and paper money.

Stamped pieces of metal having a value fixed by law are *Coin* or *Specie*.

Notes and bills issued by the government and banks, and authorized to be used as money, are *Paper Money*.

All moneys which, if offered, legally satisfy a debt are a *Legal Tender*.

UNITED STATES MONEY

The unit of United States or Federal money is the Dollar.

The dollar mark is probably a combination of U. S., the initials of the words "United States."

The standard of United States money is the gold dollar. Gold is used because in itself it has great worth and little bulk, and because it varies very little in value.

NAMES OF UNITED STATES COINS

<i>Bronze:</i>		<i>Nickel:</i>	
One-cent piece		Five-cent piece	
<i>Silver:</i>		<i>Gold:</i>	
Dollar	= \$1.00	Double eagle	= \$20.00
Half-dollar	= 0.50	Eagle	= 10.00
Quarter-dollar	= 0.25	Half eagle	= 5.00
Dime	= 0.10	Quarter eagle	= 2.50

It may be interesting to know that the word *dollar* is supposed to have come from *Dale*, the name of a small town where dollars were first coined.
Dime is from the French word *disme*, which means tenth.
Cent comes from the Latin word *centum*, meaning hundred.
Mill is also from the Latin, coming from *mille*, a thousand.
Eagles were named after our national bird.

WEIGHTS OF THE UNITED STATES COINS
 And the Amounts for Which They are Legal Tender

GOLD		
DENOMINATIONS	WEIGHT GRAINS	AMOUNT FOR WHICH A LEGAL TENDER
Double eagle, \$20	516.	Gold coins of denomination are legal tenders for any amount.
Eagle, \$10	258.	
Half eagle, \$5	129.	
Three dollars	77.4	
Quarter eagle, \$2.50	64.5	
Dollars	25.8	
SILVER		
DENOMINATIONS	WEIGHT GRAINS	AMOUNT FOR WHICH A LEGAL TENDER
Standard dollar	412.5	Unlimited.
Trade Dollar	420.	Demonetized—Not a legal tender.
Half dollars	192.9	Ten dollars.
Quarter dollars	96.45	Ten dollars.
Twenty-cent pieces	77.16	Five dollars.
Dimes	38.58	Ten dollars.
Half-dimes	19.29	Five dollars.
Three-cent pieces	11.52	Five dollars.
MINOR COINS		
DENOMINATIONS	WEIGHT GRAINS	AMOUNT FOR WHICH A LEGAL TENDER
Five cents	77.6	Twenty-five cents.
Three cents	30.	Twenty-five cents.
Two cents	96.	Twenty-five cents.
Cents	48.	Twenty-five cents.

Besides the coins there is paper money, founded on credit. It represents value, but in itself has no value. This paper money is made up of paper promises to pay the amounts named, in gold or silver, on demand. It includes bank bills, United States treasury notes, government bonds, etc. They represent the values \$1, \$2, \$5, \$10, \$20, \$50, \$100, \$500, \$1,000 and \$10,000.

NOTATION OF UNITED STATES MONEY

Dollars and cents are written together. Thus, two dollars and sixteen cents is written, \$2.16. The dollars are separated from the cents by a period. If the number of cents is less than ten, the tens' place is filled by a 0. Thus, we write twenty dollars and two cents, \$20.02.

Mills, or tenths of a cent, are written to the right of the cents. Five dollars, six cents, four mills is written, \$5.064.
 NOTE.—The rules and processes of decimals apply to the addition, subtraction, multiplication, and division of United States money.

ENGLISH OR STERLING MONEY

Sterling Money is currency of Great Britain and Ireland.

Table of Sterling Money

4 farthings (far.)	= 1 penny (d.)
12 pence (not pennies)	= 1 shilling (s.)
20 shillings	= 1 pound (£), or sovereign
5 shillings	= 1 crown
21 shillings	= 1 guinea

The standard unit of Sterling Money is 1 pound or sovereign, whose value in our money is \$4.8665.
 The coins of Great Britain in general use are:—
Gold: Sovereign, half-sovereign, and guinea, which is equal to 21 shillings.
Silver: The crown (equal to 5 shillings), half-crown, florin (equal to 2 shillings), shilling, six-penny and three-penny pieces.
Copper: Penny and half-penny.

EXAMPLE: I have £5 sterling. What is the value in United States money?

SOLUTION:
 The value is $5 \times \$4.8665$, or \$24.33

FRENCH MONEY

In France the currency is decimal. The unit is the *Franc*.

TABLE

10 centimes (ct.) [pronounced <i>son-teems</i>]	= 1 decime (de.)
10 decimes [pronounced <i>des-seems</i>]	= 1 franc (fr.)

Scale.—Decimal

The value of the franc, as determined by the Secretary of the Treasury, is \$.193 in United States money.
 The coins of France are of gold, silver, bronze, and copper. The gold coins are the *hundred, forty, twenty, ten, and five franc pieces*; the silver coins are the *five, two, and one franc pieces*; also the *fifty and twenty-five centime pieces*. The bronze coins are the *ten, five, two, and one centime pieces*. There are also copper coins in *ten and five centime pieces*.

EXAMPLE: When in France, I bought goods as follows:—

- 3 books at 2 francs,
- ½ dozen pipes at 1 franc,
- 2 pictures at 4 francs.

What was the cost in United States money?

WORK:

3 books at 2 francs cost	6 francs
½ dozen pipes at 1 franc cost	6 francs
2 pictures at 4 francs cost	8 francs
Cost of all	20 francs
20 francs = 20×19.3 cents,	or \$3.86

GERMAN MONEY

German money is legal currency of the German Empire.

TABLE

100 pfennigs = 1 mark

Scale.—Decimal

1. The unit is the *mark*. Its value is \$.2385 in United States money.
 2. The coins of the German Empire are of gold, silver, nickel, and copper. The gold coins are the *20-mark piece, the 10-mark piece, and the 5-mark piece*. The silver coins are the *two and one mark pieces*; the nickel coins are the *ten and five pfennig pieces*; and the copper coins are the *two and one pfennig pieces*.

1 pulgada (12 linea) =	.927	inch
1 pie =	11.125	inches
1 vara =	33.375	inches
1 gantah =	.8796	gallon
1 caban =	21.991	gallons
1 libra (16 onzo) =	1.0144	pounds average
1 arroba =	25.360	pounds average
1 catty (16 tael) =	1.394	pounds average
1 pecul (100 catty) =	139.482	pounds average

PAPER MEASURE

24 sheets =	1 quire (qr.)
20 quires =	1 ream (rm.)
2 reams =	1 bundle
5 bundles =	1 bale

Although a ream contains 480 sheets, 500 sheets are usually sold as a ream.

NUMBER TABLE

12 units =	1 dozen
12 dozen =	1 gross
12 gross =	1 great gross
20 units =	1 score

PERCENTAGE AND ITS BUSINESS APPLICATIONS

The expression "per cent," which is an abbreviation of the Latin words "per centum," means "for each hundred."

The symbol % is often used to denote "per cent." Thus, 7 per cent, or 7%, means 7 parts out of every 100 parts, *i.e.*, $\frac{7}{100}$ of the whole.

Since per cent means hundredths, we may write any fraction whose denominator is 100 as so many per cent. In some cases the corresponding common fractions are so simple that it is advisable to remember them. For example:

$$\begin{aligned}
 25\% &= \frac{25}{100} = \frac{1}{4}, & 50\% &= \frac{50}{100} = \frac{1}{2}, \\
 75\% &= \frac{75}{100} = \frac{3}{4}, & 33\frac{1}{3}\% &= \frac{33\frac{1}{3}}{100} = \frac{1}{3}, \\
 66\frac{2}{3}\% &= \frac{66\frac{2}{3}}{100} = \frac{2}{3}, & 5\% &= \frac{5}{100} = \frac{1}{20}, \\
 2\frac{1}{2}\% &= \frac{2\frac{1}{2}}{100} = \frac{1}{40}, & 12\frac{1}{2}\% &= \frac{12\frac{1}{2}}{100} = \frac{1}{8},
 \end{aligned}$$

and so on.

The *number* per cent is called the *rate* per cent.

TABLE OF ADDITIONAL VALUES

SYMBOL	DECIMAL	COMMON FRACTION
1%	.01	$\frac{1}{100}$
2%	.02	$\frac{2}{100} = \frac{1}{50}$
3%	.03	$\frac{3}{100}$
4%	.04	$\frac{4}{100} = \frac{1}{25}$
5%	.05	$\frac{5}{100} = \frac{1}{20}$
6%	.06	$\frac{6}{100} = \frac{3}{50}$
7%	.07	$\frac{7}{100}$
8%	.08	$\frac{8}{100} = \frac{2}{25}$
9%	.09	$\frac{9}{100}$
10%	.10	$\frac{10}{100} = \frac{1}{10}$
20%	.20	$\frac{20}{100} = \frac{1}{5}$
25%	.25	$\frac{25}{100} = \frac{1}{4}$
50%	.50	$\frac{50}{100} = \frac{1}{2}$
100%	1.00	$\frac{100}{100} = 1$

Here are a few others that should be learned:—

$$\begin{aligned}
 6\frac{1}{4}\% &= \frac{1}{16} \text{ of } 100\% & 16\frac{2}{3}\% &= \frac{1}{6} \text{ of } 100\% \\
 8\frac{1}{2}\% &= \frac{1}{12} \text{ of } 100\% & 33\frac{1}{3}\% &= \frac{1}{3} \text{ of } 100\% \\
 12\frac{1}{2}\% &= \frac{1}{8} \text{ of } 100\% & 66\frac{2}{3}\% &= \frac{2}{3} \text{ of } 100\%
 \end{aligned}$$

A DECIMAL AS PER CENT

Write the decimal as hundredths, and the number expressing the number of hundredths is the per cent.

EXAMPLES:

$$\begin{aligned}
 .4 &= .40 = \frac{40}{100} = 40\% \\
 .8 &= .80 = \frac{80}{100} = 80\% \\
 .25 &= \frac{25}{100} = 25\% \\
 .33\frac{1}{3} &= \frac{33\frac{1}{3}}{100} = 33\frac{1}{3}\% \\
 .50 &= \frac{50}{100} = 50\% \\
 .87\frac{1}{2} &= \frac{87\frac{1}{2}}{100} = 87\frac{1}{2}\%
 \end{aligned}$$

If the decimal has more than two decimal places, the figures after the second one are written as a fraction of a per cent, as,—

$$\begin{aligned}
 .255 &= \frac{25\frac{1}{2}}{100} = 25\frac{1}{2}\%. \\
 .163 &= \frac{16\frac{3}{10}}{100} = 16\frac{3}{10}\%.
 \end{aligned}$$

To change a common fraction to per cent:

1. Change the fraction to a decimal.
2. Express the decimal as hundredths.
3. The result is the per cent desired.

EXAMPLES:

$$\begin{aligned}
 \frac{1}{2} &= .5 = .50 = 50\% \\
 \frac{3}{4} &= .75 = 75\% \\
 \frac{2}{3} &= .66\frac{2}{3} = 66\frac{2}{3}\% \\
 \frac{9}{10} &= .90 = 90\% \\
 \frac{8}{9} &= .88\frac{8}{9} = 88\frac{8}{9}\% \\
 \frac{7}{8} &= .87\frac{1}{2} = 87\frac{1}{2}\% \\
 \frac{25}{26} &= .96\frac{13}{26} = 96\frac{13}{26}\%
 \end{aligned}$$

Or, they may be written this way:

$$\begin{aligned}
 \frac{3}{4} &= \frac{3}{4} \text{ of } \frac{100}{100} = \frac{75}{100} = 75\% \\
 \frac{2}{3} &= \frac{2}{3} \text{ of } \frac{100}{100} = \frac{66\frac{2}{3}}{100} = 66\frac{2}{3}\% \\
 \frac{1}{2} &= \frac{1}{2} \text{ of } \frac{100}{100} = \frac{50}{100} = 50\%
 \end{aligned}$$

TERMS USED IN PERCENTAGE

In *Percentage*, there are five terms or quantities considered; namely, the *Base*, *Rate per cent*, *Percentage*, *Amount* and *Proceeds* or *Difference*; any two being given, a third one may be found.

The base and rate given, to find the percentage.
 RULE.—Multiply the base by the rate per cent expressed decimally.

EXAMPLE: How many dollars is 6% of \$50?

\$50, the *Base*, or number on which percentage is computed.

.06, the *Rate*, or term denoting number of hundredths taken.

\$3.00, the *Percentage*, or the product of the base and rate per cent.

\$53.00, the *Amount*, or the base increased by the percentage.

\$47.00, the *Proceeds*, or *Difference*, the base less the percentage.

Ans. \$3.00.

When the rate per cent is an aliquot part of 100, the percentage is readily found by taking such a part of the base as the rate per cent is part of 100. Thus, at 10%, take $\frac{1}{10}$ of base; at $12\frac{1}{2}\%$, $\frac{1}{8}$; at $16\frac{2}{3}\%$, $\frac{1}{6}$, etc.

The base and percentage given, to find the rate.

RULE.—Divide the percentage by 1% of the base

EXAMPLE: Bought a watch for \$15 and sold it for \$18; what per cent did I make?

$\frac{15}{20} \) \ 3.00$ Here, \$15.00 is the base, and (\$18 - \$15) \$3.00, the gain or percentage. Now, as 1% of 15.00 is .15, it is evident that 3.00 is as many per cent of 15.00, as .15 is contained times is 3.00, which is 20.

Ans. 20%

Proof: 20% or $\frac{1}{5}$ of \$15 = \$3.

The percentage and rate given, to find the base.

RULE.—Divide the percentage by the rate per cent expressed decimally.

EXAMPLE: Received \$6.40, percentage or interest, for money loaned at 4%, what was the base or principal?

$\frac{.04}{160} \) \ 6.40$ If \$1 produces .04 (4 cents) in a certain time, \$6.40 must be the percentage of as many dollars as .04 is contained times in \$6.40, which is 160.

Ans. \$160

Proof: 4% of \$160 ($160 \times .04$) = \$6.40.

The amount and rate given, to find the base.

RULE.—Divide the given amount by 1.00 plus the rate per cent.

EXAMPLE: Bought a horse at a certain price, and sold him for \$84, making 12% on cost; what did he cost?

$1.12 \) \ 84.00$ If I made 12% on cost, every dollar invested gained 12 cents; hence, the horse cost as many dollars as 1.12 is contained times in 84.00, which is 75.

Ans. \$75

Proof: 12% of \$75 ($75 \times .12$) = \$9; \$75 + \$9 = \$84.

The proceeds and the rate given, to find the base.

RULE.—Divide the given proceeds by 1.00 minus the rate per cent.

EXAMPLE: Sold a wagon for \$51, which is 40% less than it cost; what did it cost?

$\frac{.60}{85} \) \ 51.00$ If I lost 40%, or 40 cents on the dollar, I received only 60 cents for every dollar the wagon cost; hence, it cost as many dollars as .60 is contained times in 51.00, which is 85.

Ans. \$85

Proof: 40% of \$85 ($85 \times .40$) = \$34; \$85 - \$34 = \$51.

NOTE.—The principles of percentage, in one form or another, enter into nearly all commercial calculations, besides many others. It is therefore of the utmost importance to business men, clerks, accountants, bookkeepers, and others, to become expert in percentage, and to adopt the easiest, simplest and shortest methods in computing interest, partial payments, trade discount, profit and loss, commission, insurance, stocks, bonds, taxes, exchange, etc.

PROFIT AND LOSS

When a thing is sold for more than it cost the seller, it is said to be sold at a profit. If it is sold for less than the cost, it is sold at a loss. Hence,

$$\begin{aligned} \text{Profit} &= \text{Selling Price} - \text{Cost Price.} \\ \text{Loss} &= \text{Cost Price} - \text{Selling Price.} \end{aligned}$$

A profit or loss is generally reckoned as a percentage.

It is always understood that the percentage is reckoned on the cost price.

EXAMPLE: I buy wheat at 60 cents and sell it for 75 cents. What per cent do I gain?

SOLUTION: I gain the difference between 75 cents and 60 cents, or 15 cents. 15 cents is 25% of the cost. Hence, I gain 25%.

WORK:

$$\begin{aligned} 75 \text{ cents} - 60 \text{ cents} &= 15 \text{ cents.} \\ 15 \text{ cents} \div 60 \text{ cents} &= .25, \text{ or } 25\%. \end{aligned}$$

EXAMPLE: I bought flour at \$3.50 per barrel. For what must I sell it to gain 20%?

SOLUTION: I must sell it for 100% of the cost plus 20% of the cost, or 120% of the cost.

120% of \$3.50 = \$4.20.

\therefore I must sell it at \$4.20.

EXAMPLE: I sold my carriage for 80% of its cost and received \$90 for it. What was the cost?

SOLUTION:

1% of the cost is $\frac{1}{80}$ of \$90, or \$1.125.

100% of the cost = $100 \times \$1.125$, or \$112.50.

COMMISSION

is a percentage paid for buying or selling real estate, goods, etc. A consignment is a quantity of goods, sent to an agent, broker or commission merchant, for sale. The consignor is the one who sends the goods, the consignee the one to whom they are sent.

PRINCIPLES:

1. The commission is some number or per cent of the price of what is bought or sold.
2. The proceeds equal the selling price minus the commission.
3. The amount equals the selling price plus the commission.

Commission presents two classes of problems. One of these classes may be called "buying problems." The other may be called "selling problems."

BUYING PROBLEM: I sent my agent \$1977.60 to buy wild farm lands in northern Wisconsin, at \$3 per acre. He was to receive 3% for his work. How many acres did he buy?

WORK AND EXPLANATION:

$$\begin{aligned} 3\% \text{ of } \$3 &= \$0.09. \\ \text{Cost to me of 1 acre is } & \$3 + .09 = \$3.09 \end{aligned}$$

For \$1977.60 he buys as many acres as \$3.09 is contained times in \$1977.60, or 640. Hence, he buys 640 acres.

SELLING PROBLEM: My agent sells 360 pounds of butter for me at 20 cents. He pays \$4.20 freight charges and \$9.60 for storage. His commission is 5%. What does he send me?

WORK AND EXPLANATION:

$$\begin{aligned} 360 \text{ pounds at } 20 \text{ cents} &= \$72.00 \\ \text{Freight is} & \$4.20 \\ \text{Storage is} & 9.60 \\ \text{Commission is } 5\% \text{ of } \$72, \text{ or} & 3.60 \\ \text{Total charges} &= 17.40 \\ \text{He sends me the difference, or} & \$54.60 \end{aligned}$$

TRADE DISCOUNT

is an allowance made by manufacturers and jobbers from their list or marking prices. When the market varies, they change the discount accordingly, or make several discounts instead of changing the list.

Trade discount is a certain per cent off, or from list or marking price; while profit and loss is computed on the cost or purchase price.

The amount of the discount allowed depends sometimes upon the amount of order, and sometimes upon the terms of settlement. Very often two or more discounts are deducted in succession. Thus, 10% and 5% off; or, as it is generally expressed in business, 10 and 5 off, means a discount of 10%, and then 5% from what is left; 20, 10, and 5 off, means three successive discounts. A retailer's profit is smaller when he is allowed 10 and 5 off, than if he were allowed 15 off. The result is not affected by the order in which the discounts are taken.

EXAMPLE: I receive a bill of goods amounting to \$100, 20% off. What is the net cost?

FIRST WAY:

20% of \$100 = \$20

\$100 - \$20 = \$80

SECOND WAY:

100% - 20% = 80%

80% of \$100 = \$80

EXAMPLE: A merchant receives two bills of \$200 each. On one there is a discount of 25%; on the other, 15% and 10%. What must he pay on each, net?

FIRST BILL:

100% - 25% = 75%, or $\frac{3}{4}$

$\frac{3}{4}$ of \$200 = \$150.

SECOND BILL:

100% - 15% = 85%

100% - 10% = 90%

90% of 85% = 76.5%

.765 \times \$200 = \$153.

PROMISSORY NOTES

A *note* is a written promise to pay a specified sum at a certain time.

The person who promises is called the *maker*, and the person to whom he promises is called the *payee*.

The *face* of a note is the sum of money promised.

A *negotiable note* is one which is made payable to the bearer, or to the order of the payee. A negotiable note can be sold or transferred.

A note is *non-negotiable* when it is payable only to the person or persons named in the note.

An *indorser* of a note is a person who writes his name on the back of it. The person who indorses, by so doing guarantees its payment. An *indorsement in blank* is simply the signature of the indorser written across the back of the note or draft. When indorsed in this way the note or draft is made payable without further indorsement to any person holding.

A note or draft is *indorsed in full* when the indorser states, over his signature, the person to whose order the note or draft is to be paid. If an indorser does not wish to

guarantee the payment of a note or draft, he writes "Without recourse" over his name when indorsing it.
 A *protest* of a negotiable note or draft is a formal statement by a notary public that said note or draft was presented for payment or acceptance and refused.
 A note, when due, must be presented at the place at which it is made payable. The *day of maturity* is the day on which a note becomes due.
 The *days of grace* are the three days beyond the specified time for payment. Days of grace are now practically abolished throughout the United States.
 KINDS OF NOTES.—There are three principal kinds of notes—*Time Notes*, *Joint Notes*, and *Joint and Several Notes*.
 A *Time Note* must be paid in a specified time.
 A *Joint Note* is one signed by two or more persons who are jointly liable for its payment.
 A *Joint and Several Note* is a note signed by two or more persons who are both jointly and individually liable for its payment. Each man who signs the note is as much responsible for the payment of the whole sum as if he had signed alone.

LEGAL RULES THAT APPLY TO NOTES

A note made out on *Sunday* is void.
 If a note does not state that *interest* is to be paid, it does not bear interest until after it is due.
 If anyone obtains a note *by fraud* or from an *intoxicated person*, he cannot collect.
 To be *negotiable* an instrument must be in writing and signed by the maker (of a note) or drawer (of a bill or check).
 It must contain an unconditional promise or order to pay a certain sum in money.
 Must be payable on demand, or at a fixed future time.
 Must be payable to order or to bearer.
 In a bill of exchange (check), the party directed to pay must be reasonably certain.
 Every negotiable instrument is presumed to have been issued for a valuable consideration, and want of consideration in the creation of the instrument is not a defense against a bona-fide holder.
 An instrument is *negotiated*, that is completely transferred, so as to vest title in the purchaser, if payable to bearer, or indorsed simply with the name of the last holder, by mere delivery; if payable to order, by the indorsement of the party to whom it is payable and delivery.
 One who transfers an instrument by indorsement warrants to every subsequent holder that the instrument is genuine, that he has title to it, and that if not paid by the party primarily liable at maturity, he will pay it upon receiving due notice of non-payment.
 To hold an *indorser liable* the holder upon its non-payment at maturity must give prompt notice of such non-payment to the indorser and that the holder looks to the indorser for payment. Such notice should be sent within twenty-four hours.
 When an *indorser is thus compelled to pay* he may hold prior parties, through whom he received the instrument, liable to him by sending them prompt notice of non-payment upon receiving such notice from the holder.
 One who transfers a negotiable instrument by delivery, without indorsing it, simply warrants that the instrument is genuine, that he has title to it, and knows of no defense to it, but does not agree to pay it if unpaid at maturity.
 The *maker of a note is liable* to pay it, if unpaid at maturity, without any notice from the holder or indorser.
 Notice to one of several partners is sufficient notice to all.
 When a *check is certified* by a bank the bank becomes primarily liable to pay it without notice of its non-payment, and when the holder of a check thus obtains its certification by the bank, the drawer of the check and previous indorsers are released from liability, and the holder looks to the bank for payment.
 A *bona-fide holder* of a negotiable instrument, that is, a party who takes an instrument regular on its face, before its maturity, pays value for it and has no knowledge of any defenses to it, is entitled to hold the party primarily liable responsible for its payment, despite any defenses he may have against the party to whom he gave it, except such as rendered the instrument void in its inception. Thus, if the maker of a note received no value for it, or was induced to issue it through fraud or imposition, that does not defeat the right of a bona-fide holder to compel its payment from him.
 The dates and amounts of *partial payments* on a note, before it is finally paid in full, are placed on the back.
 The *place of payment*, if not mentioned, is at the maker's place of business or residence, during reasonable business hours.
 If a *note* or a *check* received in payment of a debt is *dishonored*, the debt revives.
 Ignorance of the law does not excuse anyone. No *contract* is good unless there be a *consideration*. No consideration is good that is *illegal*.
 The *maker of an accommodation note* is not bound to the person accommodated; but he is bound to any other person receiving the note for value.

[873]

BANK DISCOUNT

The sum charged by a *bank* for cashing a note or time draft is called *bank discount*. This discount is the simple interest, paid in advance, for the number of days the note has to run. Wholesale business houses usually sell goods on *time* and take notes from the retailers in payment. These notes are not often for a longer period than *three months*. Some are placed in the banks for collection, others are *discounted*. When a note is discounted at a bank the payee *indorses* it, making it payable to the bank. Both maker and payee are then responsible to the bank for its payment. If the note is drawing interest the discount is reckoned on and deducted from the amount due at maturity. Most notes discounted at banks do not draw interest. The *time* in bank discount is always the number of days from the date of discounting to the date of maturity.
 EXAMPLE: A note of \$250, dated July 7, payable in 60 days, is discounted July 7 at 6%; find the proceeds.
 EXPLANATION: This note is due in 63 days, or September 8. The accurate interest of \$250 for 63 days at 6% is \$2.59. The proceeds, then, will be \$250-\$2.59, or \$247.41.
 The *Present Worth* of a note or debt is a sum, which, if put at interest, will amount to that debt in the given time.
 The *True Discount* is the difference between the debt at maturity and its present worth.

REMEMBER:

1. To allow three days of grace, if the debt discounted is a note.
2. To add the interest due at maturity to the principal, before discounting, if the note bears interest.

EXAMPLES: Case I.—Note not bearing interest.

What is the present worth and true discount on a note of \$200, if paid 6 months before due, the discount being 6%.
 SOLUTION: Amount of \$1 for 6 months at 6% = \$1.03. If \$1.03 = amount of \$1, \$200 is the amount of as many dollars as $200 \div 1.03$, or \$194.17+.
 \$194.17 is the present worth. \$200 - \$194.17 = \$5.83 true discount.

The following rule can be deduced from the foregoing solution:—

RULE: 1. To find the present worth, divide the debt by the amount of \$1 for the given time.

2. To find the true discount, subtract the present worth from the debt.

Case II.—Note bearing interest.

What is the present worth of a note of \$300, bearing 6% interest, due in 2 years 4 months, if money is worth 10%.

SOLUTION: Interest on \$300 for 2 years 4 months at 6% = \$42.

\$300 + \$42 = \$342. Amount due at maturity.

Amount of \$1 for 2 years 4 months at 10% = \$1.23 $\frac{1}{3}$.

If \$1.23 $\frac{1}{3}$ = amount of \$1, then \$342 is the amount of $\frac{342}{1.23\frac{1}{3}}$, or \$277.29.

\$277.29 = present worth.

INTEREST

If a person borrows money, he usually pays something for the loan.
 The sum of money he borrows is called the *Principal*; the money he pays for the use of the principal is called *Interest*. Interest is generally reckoned at so much for the use of each \$100 for one year. This amount is called the *Rate per cent per Annum*.
 Thus, if we say that \$200 is borrowed for three years at 4 per cent per annum, we mean that the borrower, at the end of each year, pays the lender \$4 for each \$100 borrowed—*i.e.*, \$8 interest for each year.
 In the above example the interest is supposed to be paid to the lender at the end of each year. Interest thus reckoned is called *Simple Interest*.
 The sum obtained by adding the interest for any given time to the principal is called the *Amount* in that time.

COMMON INTEREST METHODS

If we were to find the interest on a sum of money for 3 years 4 months 5 days, we would find the interest for 1 year, then for 1 month ($\frac{1}{12}$ of a year), then for 1 day ($\frac{1}{360}$ of a year). Having the interest for 1 year 1 month 1 day, it is a simple matter of multiplication to get it for 3 years 4 months 5 days.

EXAMPLE:

What is the interest on \$520 for 1 year 3 months at 6%?

WORK:

1 year 3 months =	1 $\frac{1}{4}$ year
	\$520 principal
	.06
4)	\$31.20 interest 1 year
	\$7.80 interest $\frac{1}{4}$ year
	\$39.00 interest 1 $\frac{1}{4}$ year

THE 60-DAY INTEREST METHOD

In what is called the 60-Day Method, 360 days are considered one year, and 30 days one month. Upon this basis the interest for 60 days, or two months, at any rate, will be $\frac{1}{2}$ of the interest for one year; and when the rate is 6% the interest for 60 days is one per cent or $\frac{1}{100}$ of the principal. Thus, the interest of \$247 for 60 days at 6% is \$2.47.

EXAMPLE: Find the interest of \$1728 for 80 days at 6%.

WORK:

\$1728	= interest for	60 days.	The interest of \$1728 for 60 days at 6% is 1% of \$1728, or \$17.28; and the interest for 20 days ($\frac{1}{3}$ of 60) is $\frac{1}{3}$ of \$17.28, or \$5.76. Hence for 80 days it will be
576	= interest for	20 days.	
\$2304	= interest for	80 days.	

METHODS OF RECKONING TIME

The *Common Method*.—When the time is long, generally 30 days are considered a month.
 The *Exact Method*.—When the time is short, the exact number of days is generally counted but we sometimes find the exact number of days also when the time is long.
 The *Bankers' Method*.—Bankers get the exact number of days between two dates, but each day is reckoned as $\frac{1}{360}$ of a year.

PROBLEM, when the time is long;

Find the time between April 12, 1895, and September 22, 1899.

BEST METHOD

From April 12, 1895, to April 12, 1899, is 4 *years*.

From April 12, 1899, to Sept. 12, 1899, is 5 *months*.

From Sept. 12, 1899, to Sept. 22, 1899, is 10 *days*.

[874]

Time between dates = 4 years 5 months 10 days.

ANOTHER METHOD

1899	9	22
1895	4	12
<hr/>		
4	5	10

PROBLEM, when the time is short. Find the difference in time between April 12 and July 15, 1902.

WORK:

Number of days left	in April = 18
	in May = 31
	in June = 30
	in July = 15
Total number of days	= 94

NOTE.—If the rate and principal are given, it is a simple matter to find the interest, now that we have the time.

Example of the use of Table: What is the time from February 10 to October 18, in the same year. February 10 is numbered 41, and October 18 is numbered 291; $291 - 41 = 250$, Ans. This includes the last day, but not the first. If both days are taken, subtract 40 from 291 = 251, Ans. When February 29 occurs in a term, count an additional day. The day of the date of a note is not included in its term; thus, required the last day of grace of a note dated March 24, at 90 days. $March\ 24 = 83; 83 + 93 = 176 = June\ 25$, Ans.

TABLE OF TIME, IN DAYS
The following table gives the exact time, in days, between two dates.

Jan.	Feb.	March	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
1	32	60	91	121	152	182	213	244	274	305	335
2	33	61	92	122	153	183	214	245	275	306	336
3	34	62	93	123	154	184	215	246	276	307	337
4	35	63	94	124	155	185	216	247	277	308	338
5	36	64	95	125	156	186	217	248	278	309	339
6	37	65	96	126	157	187	218	249	279	310	340
7	38	66	97	127	158	188	219	250	280	311	341
8	39	67	98	128	159	189	220	251	281	312	342
9	40	68	99	129	160	190	221	252	282	313	343
10	41	69	100	130	161	191	222	253	283	314	344
11	42	70	101	131	162	192	223	254	284	315	345
12	43	71	102	132	163	193	224	255	285	316	346
13	44	72	103	133	164	194	225	256	286	317	347
14	45	73	104	134	165	195	226	257	287	318	348
15	46	74	105	135	166	196	227	258	288	319	349
16	47	75	106	136	167	197	228	259	289	320	350
17	48	76	107	137	168	198	229	260	290	321	351
18	49	77	108	138	169	199	230	261	291	322	352
19	50	78	109	139	170	200	231	262	292	323	353
20	51	79	110	140	171	201	232	263	293	324	354
21	52	80	111	141	172	202	233	264	294	325	355
22	53	81	112	142	173	203	234	265	295	326	356
23	54	82	113	143	174	204	235	266	296	327	357
24	55	83	114	144	175	205	236	267	297	328	358
25	56	84	115	145	176	206	237	268	298	329	359
26	57	85	116	146	177	207	238	269	299	330	360
27	58	86	117	147	178	208	239	270	300	331	361
28	59	87	118	148	179	209	240	271	301	332	362
29	—	88	119	149	180	210	241	272	302	333	363
30	—	89	120	150	181	211	242	273	303	334	364
31	—	90	—	151	—	212	243	—	304	—	365

COMPOUND INTEREST

Interest computed, at regular intervals, on the sum of the principal and any unpaid interest, is called *compound interest*. In other words, as soon as interest becomes due and is unpaid, it begins to draw interest at the same rate as the principal. Compound interest is generally paid on the deposits in savings banks and is used in calculating amortization and sinking funds.

Interest may be compounded quarterly, semi-annually, annually, or at the end of any other period agreed upon. In some States the collection of compound interest is not permitted.

EXAMPLE: Find the amount and the compound interest of \$1200 at 6% for two years, interest compounded semi-annually.

SOLUTION:

\$1200.00	First principal
36.	Interest for 6 months
1236.	Principal at beginning of second 6 months
37.08	Interest for second 6 months
1273.08	Principal at beginning of third period
38.19	Interest for third period
1311.27	Principal at beginning of fourth period
39.34	Interest for fourth period
<u>\$1350.61</u>	Amount at end of two years
\$1350.61	Amount at end of two years
1200.00	Principal
150.61	Compound interest.

EXCHANGE

in commerce is a method of making payments in distant places, without the actual transmission of money, but by a Bill of Exchange called *Draft*, which is a written request upon one person to pay a certain sum to another or to his order. The person who orders the money to be paid, is called the *Drawer*; the one who is directed to pay it, the *Drawee*, and the one to whom it is directed to be paid, the *Payee*.

Domestic or Inland Exchange is exchange between places in the same country: *Foreign Exchange*, between different countries.

If, for every little business transaction, money had to be sent from one business center to another, much needless inconvenience and expense would be incurred.

A man in Chicago owes a man in New York City a sum of money. He can send it to him in one of five ways:—

1. By Check.
2. By Post-office Order
3. By Express Order
4. By Bill of Exchange
5. By Telegraph

Suppose Mr. White of Chicago owes Mr. Brown of Boston \$200 for groceries and Mr. Allen of Boston owes Mr. Warner of Chicago \$200 for rent. Wouldn't it save expense and trouble if Mr. White should go to Mr. Warner and Mr. Allen to Mr. Brown? Thereby two debts are cancelled by two city transactions and no money need be sent from one city to another.

This is all there is to Exchange, only in business life banks instead of individuals transact the business.

Only a small percentage of the money really passes from one city to another.

Exchange in the United States is carried on mostly by banks located in the large cities, which charge a small fee for transacting the business.

TABLE OF COMMERCIAL LAW IN THE STATES

LEGAL RATE PER CENT	INTEREST LAWS		STATUTES OF LIMITATION			EXEMPTION LAWS	
	PER CENT ALLOWED BY CONTRACT AND PENALTY FOR USURY		JUDGMENTS	NOTES	OPEN ACCOUNTS	PERSONAL PROPERTY, EXEMPT	HOMESTEAD, EXEMPT
Alabama	8	8; Forfeit interest	20 yrs.	6 yrs.	3 yrs.	\$1,000	\$2,000
Arizona	6	12; No provision	4 yrs.	4 yrs.	3 yrs.	500	2,500
Arkansas	6	10; Forfeit principal and interest	10 yrs.	5 yrs.	3 yrs.	500	2,500
California	7	Any; No provision	5 yrs.	4 yrs.	4 yrs.	...	5,000
Colorado	8	Any; No provision	6 yrs.	6 yrs.	6 yrs.	...	2,000

Massachusetts	6	Any; No provision	20 yrs.	6 yrs.	6 yrs.	...	800
Michigan	5	7; Forfeit interest	6 and 10	6 yrs.	6 yrs.	500	1,500
Minnesota	6	10; Forfeit interest	10 yrs.	6 yrs.	6 yrs.	500	80 acres
Mississippi	6	10; Forfeit interest	7 yrs.	6 yrs.	3 yrs.	...	2,000
Missouri	6	8; Forfeiture or misdemeanor	10 yrs.	10 yrs.	5 yrs.	300	1,500 (min.)
Montana	8	Any; No provision	10 yrs.	8 yrs.	5 yrs.	...	2,500
Nebraska	7	10; Forfeit interest	5 yrs.	5 yrs.	4 yrs.	500	or 2,000
Nevada	7	Any; No provision	6 yrs.	6 yrs.	4 yrs.	...	5,000
New Hampshire	6	6; Forfeit three times excess	20 yrs.	6 yrs.	6 yrs.	...	500
New Jersey	6	6; Forfeit interest and costs	20 yrs.	6 yrs.	6 yrs.	200	1,000
New Mexico	6	12; Forfeit of twice the amount of interest	7 yrs.	6 yrs.	4 yrs.	500	1,000
New York	6	6; Forfeit of principal and interest; misdemeanor	20 yrs.	6 yrs.	6 yrs.	250	1,000
North Carolina	6	6; Forfeit interest	10 yrs.	3 yrs.	3 yrs.	500	1,000
North Dakota	7	12; Forfeit interest	10 yrs.	6 yrs.	6 yrs.	1,000	5,000
Ohio	6	8; Forfeit interest over 6%	5 yrs.	15 yrs.	6 yrs.	100	1,000
Oklahoma	6	10; Forfeit interest	5 yrs.	5 yrs.	3 yrs.	...	5,000
Oregon	6	10; Forfeit principal and interest	10 yrs.	6 yrs.	6 yrs.	...	1,500
Pennsylvania	6	6; Forfeit excess of interest	20 yrs.	6 yrs.	6 yrs.	300	...
Rhode Island	6	Any; No provision	20 yrs.	6 yrs.	6 yrs.	800	...
South Carolina	7	8; Forfeit interest	20 yrs.	6 yrs.	6 yrs.	500	1,000
South Dakota	7	12; Misdemeanor	20 yrs.	6 yrs.	6 yrs.	750	5,000
Tennessee	6	6; Forfeit of excess interest	10 yrs.	6 yrs.	6 yrs.	...	1,000
Texas	6	10; Forfeit interest	10 yrs.	4 yrs.	2 yrs.	500	5,000
Utah	8	12; Forfeit excess interest	8 yrs.	6 yrs.	4 yrs.	...	2,000
Vermont	6	6; Forfeit of excess interest	8 yrs.	6 yrs.	6 yrs.	200	500
Virginia	6	6; Forfeit interest	20 yrs.	5 yrs.	2 yrs.	...	2,000
Washington	6	12; Forfeit of double accrued interest and costs	6 yrs.	6 yrs.	3 yrs.	1,000	2,000
West Virginia	6	6; Forfeit excess interest	10 yrs.	10 yrs.	5 yrs.	200	1,000
Wisconsin	6	10; Forfeit treble amount of usurious interest paid	20 yrs.	6 yrs.	6 yrs.	200	5,000
Wyoming	8	12; Forfeit interest	5 yrs.	5 yrs.	8 yrs.	500	1,500

NOTE.—In many of the States it is impossible to place a fixed amount on personal property exempt. In the table above these states have no amount given in the personal property column. Days of grace have been abolished in all states except the following: Arkansas, Mississippi, South Carolina and Texas.

If the drawee accepts the draft, he writes across the face of it "Accepted" with the date and his signature. This is called an *Acceptance*.

Once accepted, the draft becomes a note, with the same laws regulating it. If the draft is not accepted, it is not binding and we say that it has been "*dishonored*."

A bill of exchange is entitled to days of grace, if it is payable in a State where grace is allowed, unless a particular day is named in the draft. In most States, no grace is allowed on sight drafts.

[876]

PRINCIPLES OF EXCHANGE

To find the cost of a draft, the face and rate per cent of exchange being given.

RULE.—Find the percentage of the given rate per cent of exchange and add it to, or subtract it from the amount of draft.

EXAMPLE: What is the cost, in Chicago, of a sight draft on Denver for \$400, if exchange is $\frac{3}{4}\%$ premium; and how much if $\frac{1}{2}\%$ discount?

$\$400 \times .00\frac{3}{4} = \3 ; $\$400 + \$3 = \$403$, at $\frac{3}{4}\%$ premium.

$\$400 \times .00\frac{1}{2} = \2 ; $\$400 - \$2 = \$398$, at $\frac{1}{2}\%$ discount.

To find the face of a draft, cost and rate per cent of exchange given.

RULE.—Divide by the cost of a draft for \$1, at given rate per cent of exchange.

EXAMPLE: Find face of draft that can be bought for \$1000 at 1% premium; at 1% discount.

$\$1000 + 1.01 = \990.10 , at 1% premium.

$\$1000 + .99 = \1010.10 , at 1% discount.

Time Drafts, when negotiated before maturity, are subject to discount which is computed on the face of the draft, the same as interest.

EXAMPLE: What is the proceeds of a 60-day draft for \$800, at $\frac{3}{8}\%$ premium, and discounted at 7%?

\$805.00, face + $\frac{3}{8}\%$ premium
9.33, interest (7%, 60 days)
\$795.67, proceeds. Ans.

Foreign Drafts are usually made payable in the money of the country on which they are drawn.

To find the equivalent of foreign money in United States money and vice versa.

RULE.—Multiply, or divide (as the case may require) the given sum, by the equivalent of a unit in United States money.

EXAMPLE: What is the cost of a draft on London for £125, reckoning exchange at 4.8665?

$125 \times 4.8665 = 608.31$. Ans. \$608.31.

Wishing to remit \$182.50 to Ireland, for what amount must I buy a draft on London?

$182.50 \div 4.8665 = 37.5$. Ans. £37½.

How many francs in \$100?

$100.000 \div .193 = 518.13$. Ans. 518.13 francs.

How many dollars in 7500 German marks?

$7500 \times .238 = \$1785$. Ans.

How many Swedish crowns in \$750?

$750 \div .268 = 2798\frac{1}{2}$ crowns. Ans.

How many dollars in 4635 rubles?

$4635 \times .772 = \$3578.32$. Ans.

A simple method to reduce pounds sterling to United States money, and vice versa; exchange being at 4.8665.

RULE.—Multiply pounds sterling by 73, and divide the product by 15. Or multiply dollars by 15 and divide the product by 73.

EXAMPLES: How many dollars in £85?

$85 \times \frac{73}{15} = 413.67$. Ans. \$413.67.

How many £'s in \$748.25?

$748.25 \times \frac{15}{73} = 153\frac{3}{4}$. Ans. £153¾.

Another method to change pounds sterling, shillings and pence, to dollars and cents.

RULE.—Reduce pounds sterling to shillings, add the shillings, and multiply the sum by .24½—the product will be cents. Add 2 cents for each pence, if any.

EXAMPLE: Change £46, 13s. 9d. to United States money.

$46 \times 20 = 920$	$933 \times .24\frac{1}{2} = 227.03$
13	9d. = .18
933	Ans. \$227.21

Tourists of today patronize express companies for *Foreign Money Orders*. These are made out similar to regular express money orders and may be cashed in any of the larger cities of all foreign countries. They take the place, to a large extent, of *Letters of Credit*, which are letters from banking houses in one country to those in another, allowing sums to be drawn not to exceed a total named in the letter.

STOCKS AND BONDS

Stocks is a general name given to the capital of incorporated companies. They are divided into equal parts, usually of \$100 each, called *Shares*, the owners of which are called *Stockholders*. A *Dividend* is a part of the net income of the company, divided among the stockholders.

A *certificate of stock* is a written paper signed by the proper officers of the corporation, naming the number of shares to which the person named therein is entitled, and the original value of the same.

Preferred stock is stock which is given a preference over the common stock. Ordinarily, a dividend is paid on the preferred stock before any is paid on the common shares.

Common stock is the ordinary stock of a corporation, which has no preference, in the payment of dividends, over any other.

The *par value* of a share of stock is the value named in the certificate of stock.

When a corporation is prosperous, its shares of stock often sell for more than the value named in the certificate of stock. They are then said to be *above par*, or *at a premium*. In times of business depression, often these shares of stock sell below their face value. They are then said to be *below par*, or *at a discount*.

The *market value* of a share of stock is the value for which it sells in the open market.

A *stock broker* is one who makes a business of buying and selling stocks and bonds. He charges a commission for this which is called *brokerage*.

A *surplus* is a part of the earnings of a corporation.

The *gross earnings* of a corporation are its total receipts from all sources.

The *net earnings* are the profits remaining when all expenses, losses, interest and debts due are paid.

An *assessment* is a sum levied proportionate to stock held by stockholders, to help out the business when it is not prospering, or when more money is needed to carry it on. It is levied as so many dollars on each share at its par value.

The *directors* are those shareholders elected by all to manage the affairs of the corporation.

A *bond* is, in form, a carefully drawn interest-bearing promissory note. Ordinarily, it runs for a period of years with interest often payable semi-annually. It is more formal than the ordinary promissory note. Bonds are usually issued by national, state, county, or local governments, or by corporations, when they wish to raise large sums of money for immediate use.

[877]

DIFFERENCE BETWEEN STOCKS AND BONDS

A bond runs for a specified time. It bears a specified interest, and is an absolute promise to pay the face of it at maturity. It matures at a definite time, and at that time the holder is paid its *face value* and no more, by the organization that issued it, unless such organization is insolvent, or has repudiated its debts.

Stocks.—A certificate of stock is no promise to pay. It simply shows that the holder owns as much stock in the corporation as is shown by the face of the certificate. It bears no interest and has no date of maturity.

The interest returns of the bondholder are certain and definite. The returns of the stockholder, dividends, are uncertain and depend on the profits of the business.

Consequently, no table can be arranged to show at what rate stocks can be bought to yield a definite return; but with bonds, tables may be made which show at a glance what the return will be from a purchase made at any rate.

APPLICATION OF PERCENTAGE TO STOCKS

1. To find the value of stocks, when above or below par.

RULE.—Multiply the price per share, by the number of shares.

EXAMPLE: Find cost of 65 shares of bank stock, at \$107 per share, or 7% premium. Also of 48 shares of railroad stock, at \$87½ per share, or 12½% discount.

(1) $65 \times 107 = 6955$. Ans. \$6955.

(2) $48 \times 87\frac{1}{2} = 4200$. Ans. \$4200.

2. To find what rate per cent is realized by investing in stocks or bonds when above or below par.

RULE.—Annex two ciphers to the fixed rate per cent, and divide by the cost per share. Or by proportion: As the cost per share is to the fixed rate, so is 100 to the required rate.

EXAMPLE: Mr. Warren bought ten shares of Illinois Central Railroad stock at 96. What does he get when a dividend of 6% is declared? What per cent is that on his investment?

WORK AND EXPLANATION:

(1) 1 share at 6% yields \$6

10 shares yield $10 \times \$6 = \60 .

(2) Each share at 96 costs \$96.

Each share yields \$6.

Query? \$6 is what per cent of \$96?

\$6 is % of 100%, or 6¼%.

∴ the investment yields 6¼%.

3. To find which is the more profitable investment.

RULE.—Find the rate per cent that each investment yields, by rule, under item 2; then compare rates.

EXAMPLE: Which is the better investment; 6% mortgages at 10% premium, or 5% bonds at 10% discount?

(1) $110 \times 600 \times 5\frac{1}{2}\%$

(2) $90 \times 500 \times 5\frac{1}{2}\%$. $\frac{3}{8} - \frac{1}{10} = 19\%$, practically 1¼%.

Ans. The latter, by ¼ of 1%, nearly.

TAXES AND TAXATION

A tax is a contribution levied on persons, property, incomes, or business, for public purposes.

SOME USES FOR TAXES.—The National Government requires money to support the army and navy, to pay the salaries of government employes, to pay pensions, and to finance other activities carried on by the nation.

The State Governments require money for the expense of their officers, and to support their various institutions, schools, universities, asylums, and penitentiaries.

The counties require money for the building of bridges, the trial of criminal cases, the salaries of officers, the relief of the poor, etc.

Cities must pay for police and fire protection, care of streets, etc.

School districts contribute to the support of the public schools.

The money required for all these expenses is raised by taxes, licenses, fees, assessments, and fines.

STATE AND LOCAL TAXES.—The amount of tax paid by any individual to state and local governments depends upon the value of the property which he owns and the tax rate. In many places the adult male citizen pays a poll tax.

The tax levied on property is called a *property tax*.

The tax levied on persons is called a *poll tax*. This is sometimes called a *capitation* (by the head) *tax*.

Sometimes a man's income is taxed. This is an *income tax*.

After the amount of money to be raised by tax is decided upon, a man, called the *assessor*, examines each piece of taxable personal property and real estate, and places a value upon it. This is taken as a basis for proportioning the tax among the property owners.

A *tax collector* is one who collects the taxes. He is sometimes paid a salary. Sometimes he gets only a percentage of the money he collects.

The *treasurer* receives and takes care of the money collected by the tax collector. He is paid a salary.

THE TAX RATE.—Sometimes the rate is fixed by law or by vote of the citizens. More often the lump sum to be raised is named, and the assessor determines the rate.

When the assessor is to determine the rate, he proceeds in this way: First, he assesses each piece of property, usually not at its full market value. Then he determines the total value of all the property in his district. Next, he divides the total tax to be raised by the total value of the property in his district. The result is the *rate of tax* on the dollar.

USE OF THE MILL IN TAXES.—When a tax is apportioned, it is usually found that if a few mills are paid on each dollar's worth of property in the district, the aggregate amount is equal to the whole sum of tax needed. Consequently, we often hear of tax levies of so many *mills* on the dollar, as, 2 mills on the dollar, 5 mills on the dollar, etc.

The denomination of our money system called the *mill* has practically its only use in the levy of taxes.

Assessors make use of a *table* like the one given on the following page. This table is based on a tax levy of 9 mills on the dollar.

The following tax rates are equivalent:

16 mills (on the dollar);

1.6%;

\$1.60 (on each hundred dollars).

EXPLANATION OF TABLE. The second column shows the tax at nine mills on the dollar, for values of \$1 to \$30. The fourth column shows the tax for values of \$40 and multiples of ten, to \$600. The sixth column shows the tax for values of \$700 and multiples of one hundred, to \$10,000.

[878]

TAX TABLE

PROP- ERTY VALUE	TAX	PROP- ERTY VALUE	TAX	PROP- ERTY VALUE	TAX
\$ 1	\$0.009	\$ 40	\$0.36	\$ 700	\$ 6.30
2	0.018	50	0.45	800	7.20
3	0.027	60	0.54	900	8.10
4	0.036	70	0.63	1,000	9.00
5	0.045	80	0.72	2,000	18.00
6	0.054	90	0.81	3,000	27.00
7	0.063	100	0.90	4,000	36.00
8	0.072	200	1.80	5,000	45.00
9	0.081	300	2.70	6,000	54.00
10	0.09	400	3.60	7,000	63.00
20	0.18	500	4.50	8,000	72.00
30	0.27	600	5.40	9,000	81.00

THE AMOUNT OF TAX.—To find the amount of tax to be paid by any property owner.

RULE.—Multiply the assessed value of the property by the tax rate.

EXAMPLE: Taylor's property is assessed at \$3800. The rate is 24 mills.

SOLUTION: \$3800 assessed valuation

.024 tax rate in mills

\$91.20 tax.

EXAMPLE: The town of Grant is to raise \$4725 in tax. The property in the town has an assessed valuation of \$395,140. What is the rate?

If on \$395,140 a tax of \$4725 is to be raised, on \$1 as much tax must be raised as \$395,140 is contained times in \$4725, which is .0119+, or about \$.0119. This would be called \$0.012, or 12 mills on the dollar.

EXAMPLE: Finch's property is assessed at \$5470. The tax rate is \$1.95.

SOLUTION:

\$1.95 the rate per hundred dollars

54.70 the number of hundreds of dollars assessed value

\$106.67 the tax.

INDIRECT TAXES are taxes placed upon goods by the national government, and collected before the goods are sold to the consumer.

The national government needs this money to pay:—

1. Interest on the public debt.

2. To support an army and navy, to build vessels, and keep up arsenals and forts.

3. To pay pensions.

4. To improve the rivers and harbors.

5. To pay the salaries of its officers; as, the president, cabinet officers, judges, ministers to foreign countries, congressmen, etc.

Indirect taxes are of two kinds, *customs* or *duties*, and *excises* or *internal revenue*.

Excises or *internal revenue* are taxes levied on certain domestic goods, as, manufactured tobacco, liquors, and the like.

Indirect taxes levied by the government on imported goods or merchandise are called *duties* or *customs*.

A *custom house* is a government office where duties are collected and where vessels are entered and cleared. Nearly every seaport of consequence has a custom house. So also have important towns near the Canadian and Mexican boundaries.

Duties are of two kinds, *specific* and *ad valorem*.

A *specific* duty is one levied at a specified sum per yard, gallon, ton, etc.

An *ad valorem* duty is one levied at a certain percentage of the value of the goods, at the port of export.

Tare is an allowance made for the weight of bags, barrels, or cases, in which merchandise is shipped.

Leakage is an allowance made for loss of liquids from casks, barrels, etc., in shipping.

Breakage is an allowance made for the loss of liquids from bottles in shipping.

EXAMPLE: Find the duty on 4 dozen bottles of cologne, allowing 4% for leakage and 3% for tare. The invoice value is 90 cents a bottle and the duty is 25% ad valorem and 20 cents specific. Find the total cost per bottle.

WORK AND EXPLANATION:

Leakage and tare are $4\% + 3\% = 7\%$.

4 dozen bottles = 48 bottles.

The invoice value of 48 bottles is 48×90 cents = \$43.20

Tare and leakage are 7% of \$43.20 = 3.024

Value on which duty is paid = \$40.176

Ad valorem duty is 25% of \$40.176 = \$10.044

Specific duty is 48×20 cents = 9.60

Total duty = \$19.644

The total cost is

Invoice value \$ 43.20

Ad valorem duty 10.04

Specific duty 9.60

\$ 62.84

The total cost per bottle is ¼ of \$62.84, or \$1.31-.

SQUARE ROOT AND CUBE ROOT

POWERS AND ROOTS.—When a product consists of the same factor repeated any number of times it is called a *power* of that factor.

7×7 is the *second power*, or the *square* of 7.

$7 \times 7 \times 7$ is the *third power*, or the *cube* of 7.

A power of a number is generally expressed by writing the number only once, and placing after it, above the line, a small figure to show how many factors are to be taken. The small figure is called an *index*.

Thus, $7^2 = 49$; $7^3 = 343$; $7^4 = 2401$.

A number is called the *square root* of its square.

Since $7^2 = 49$, the square root of 49 is 7.

The "square root of 49" is written $\sqrt{49}$.

Again, a number is called the *cube root* of its cube. $7^3 = 343$. Therefore, the cube root of 343 is 7.

The "cube root of 343" is written $\sqrt[3]{343}$.

A *perfect square* is a number whose square root is a whole number. A *perfect cube* is a number whose cube root is a whole number.

SQUARE ROOT.—If a number can be put into prime factors, its square root can be written down by inspection.

EXAMPLE: Find the square root of 27225.

$$\text{Since } 27225 = 3^2 \times 5^2 \times 11^2,$$

$$\therefore \sqrt{27225} = 3 \times 5 \times 11 = 165 \text{ Ans.}$$

RULE FOR DIGITS.—We know that $\sqrt{1} = 1$, and $\sqrt{100} = 10$. Therefore, the square root of any number which lies between 1 and 100 lies between 1 and 10; *i. e.*, if a number contains one or two digits, its square root consists of one digit.

Similarly, since $\sqrt{100} = 10$ and $\sqrt{10000} = 100$, the square root of a number between 100 and 10000 lies between 10 and 100. That is, if a number contains three or four digits, its square root consists of two digits.

Proceeding in this way, we obtain a general result—*viz.*, the square of a number has either twice as many digits as the number, or one less than twice as many.

Hence, to ascertain the number of digits in the square root of a perfect square, mark off the digits in pairs, beginning from the right. Each pair marked off gives a digit in the square root; and, if there is an odd digit remaining, that digit also gives a digit in the square root. [879]

EXAMPLES: There are three digits in the square root of 546121, and four in the square root of 5774409.

For, marking off the digits from the right, we get in the first case 54,61,21, giving three digits in the square root, and in the second case 5,77,44,09, the odd digit giving the fourth in the square root.

The method of finding the square root of a given number depends on the *form* of the square of the sum of two numbers.

EXPLANATION: The square root of 144 is 12. Let us see how we found it.

$$12 = 1 \text{ ten} + 2 \text{ units.}$$

$$12^2 \text{ is the same as } (10 + 2)^2.$$

Let us square $(10 + 2)$, that is, multiply $10 + 2$ by $10 + 2$.

$$\begin{array}{r} 10 + 2 \\ 10 + 2 \\ \hline 10^2 + (10 \times 2) \\ + (10 \times 2) + 2^2 \\ \hline 10^2 + 2(10 \times 2) + 2^2 \end{array}$$

$$\text{Then, } 12^2 = 10^2 + 2(10 \times 2) + 2^2$$

RULE.—The square of any number made up of tens and units is equal to the square of the tens, plus twice the product of the tens by the units, plus the square of the units.

ANOTHER EXPLANATION: Find the square root of 45369.

SOLUTION:

$$\begin{array}{r} 4\text{--}53\text{--}69 \quad) \quad 213 \\ \underline{4} \\ 41 \\ \underline{41} \\ 423 \\ \underline{423} \\ 1269 \\ \underline{1269} \end{array}$$

(1) Point off the number into periods of two figures each, as before.

(2) The square root of the first period is 2. $2 \times 2 = 4$. Write the 2 in the root and subtract the 4 from 4. Bring down the next period, 53.

(3) $2 \times 2 = 4$. (Remember the 4 is to be used as a trial divisor, being $2 \times$ the *tens*.)

4 is contained in 53 about 1 time. Place 1 in the root, also on the right of the 4 in the divisor. Multiply 41 by 1. Subtract and bring down the next period.

(4) $2 \times 21 = 42$. 42 is the *trial divisor*. $126 \div 42 = \text{about } 3$ times. Place the 3 in the root also at the right of the 42 in the divisor. Multiply out. Square root = 213.

CUBE ROOT.—The *cube root* of a number is one of the three equal factors of that number.

Thus, 5 is the cube root of 125, because $5 \times 5 \times 5 = 125$.

The *radical sign* with a figure 3 over it ($\sqrt[3]{}$) means that the cube root of the number following it is to be taken.

$\sqrt[3]{125}$ reads, "The cube root of 125."

If we can find the prime factors of any perfect cube, we can write down its cube root by inspection.

EXAMPLE: Find the cube root of 74088.

$$\begin{array}{r} 8 \quad | \quad 74088 \\ 9 \quad | \quad 9261 \\ 3 \quad | \quad 1029 \\ 7 \quad | \quad 343 \\ 7 \quad | \quad 49 \\ \hline 7 \end{array} \quad \begin{array}{l} \therefore 74088 = 8 \times 9 \times 3 \times 7 \times 7 \times 7 \\ = 2^3 \times 3^3 \times 7^3 \\ \therefore \sqrt[3]{74088} = 2 \times 3 \times 7 \\ = 42 \text{ Ans.} \end{array}$$

RULE FOR DIGITS.—Since $1^3 = 1$ and $10^3 = 1000$, therefore the cube of a number which lies between 1 and 10 lies between 1 and 1000, *i. e.*, the cube of a number of one digit contains either one, two or three digits.

Again, since $10^3 = 1000$ and $100^3 = 1000000$, the cube of a number of two digits contains either four, five, or six digits.

Proceeding in this way, we see that the cube of a number contains three times, or one less or two less than three times, as many digits as the number.

Hence, to find the number of digits in the cube root of a given number, we mark off the digits in sets of three, beginning at the decimal point, and marking both to the right and to the left.

FIGURES REPRESENTING THE PROCESSES OF FINDING CUBE ROOT

Thus, 289383 will be pointed off into two periods—289-383—and we readily see there will be only 2 figures in the root.

The simplest method of finding the cube root of numbers whose prime factors are not known is analogous to the method of finding square root, being based upon the form of the cube of the sum of two numbers. [880]

EXPLANATION: The cube root of 1728 is 12. Let us see how we found it.

$$12 = 1 \text{ ten} + 2 \text{ units}$$

$$12^3 = (10 + 2)^3$$

$$(10 + 2)^3 \text{ means } 10 + 2 \times 10 + 2 \times 10 + 2$$

$$\begin{array}{r} 10 + 2 \\ 10 + 2 \\ \hline 10^2 + (10 \times 2) \\ + (10 \times 2) + 2^2 \\ \hline 10^2 + 2(10 \times 2) + 2^2 \\ 10 + 2 \end{array}$$

$$\begin{array}{r} (10 \\ 10^3 + 2(10^2 \times 2) + \\ + (10^2 \times 2) + + 2^3 \\ \hline 3(10 \\ 10^3 + 3(10^2 \times 2) + + 2^3 \\ + + 2^3 \end{array}$$

That is, the cube of any number made up of tens and units equals—

The cube of the tens + three times the product of the square of the tens by the units + three times the product of the tens by the square of the units + the cube of the units,

or

$$\text{tens}^3 + 3(\text{tens}^2 \times \text{units}) + 3(\text{tens} \times \text{units}^2) + \text{units}^3.$$

For graphic illustration the geometrical representation of the cube of units and tens in the drawings is helpful.

After the process is understood, this short method of writing the work may be used by the pupil:

EXAMPLE: Find the cube root of .0163956, carrying the root to 3 decimal places.

WORK:

$$\begin{array}{r} .016\text{--}395\text{--}600 \quad) \quad .254+ \\ \underline{8} \\ 1200 \quad | \quad 8395 \\ \quad | \quad 300 \\ \quad | \quad 25 \end{array}$$

CHEMISTRY

ITS USE AND IMPORTANCE—WHAT IT IS—HOW IT DIFFERS FROM PHYSICS—ITS DIVISIONS—DISTINCTION BETWEEN THEORETICAL AND PRACTICAL CHEMISTRY—OUTLINE OF THEORETICAL CHEMISTRY—LAWS OF CHEMISTRY—ATOMIC THEORY—CHEMICAL NOTATION—MOLECULAR WEIGHTS—REACTIONS—CHEMICAL ARITHMETIC—BASES—QUANTVALENCE—TESTS—TABLE OF CHEMICAL ELEMENTS—CHEMISTRY OF FAMILIAR THINGS—COMMON NAMES OF CHEMICALS—RADIO-ACTIVITY AND RADIO-ACTIVE SUBSTANCES—RADIUM AND ITS USES—THE SPINTHARISCOPE

IMPORTANCE OF CHEMISTRY

A certain amount of knowledge of chemistry is eminently useful in almost every walk of life. An intelligent knowledge of the chemistry involved in the processes of the kitchen, the dairy, the dye-house, the farm, or the manufactory, places the possessor engaged in any of these processes on a different level from the rule-of-thumb worker, who is as ignorant of the reason for adopting a particular method as he is of the properties of the materials he employs.

Technical chemistry deals especially with the application of the principles and processes of chemistry to the arts and manufactures, and it is to those who are engaged in manufactures of almost every kind that a knowledge of chemistry is a particular advantage.

It is not a question of expediency alone, but one of absolute necessity that a technical education, including chemistry as one of its principal subjects, should form not the least important part of the equipment for his work of any artisan who is to excel in his employment in intelligence and skill.

What is chemistry?

Chemistry is that branch of science which treats of the *intimate composition of matter*, and the changes produced in it when subjected to particular conditions—such as *temperature, pressure, mass, light, catalysis, etc.*

How does chemistry differ from physics?

The two branches, physics and chemistry, overlap a great deal, it being very difficult to draw the line of demarcation between them, particularly in the higher stages of the *physical and chemical changes of matter*.

For example, a steel needle rubbed on a magnet in a definite way undergoes *physical* change by means of which it acquires the power of the magnet. On the other hand, a match rubbed on a match-box undergoes a *chemical* change by means of which flame is produced. Thus it is possible to make a distinction between the sciences of physics and chemistry. A chemical change involves some alteration in the essential nature of the substance. The match having been ignited has undergone a permanent change, whereby it is no longer combustible. The physical change quoted above involves no alteration in the substance itself, and the acquired property is further only temporary and can be continually lost and reacquired.

The difficulty occurs in this fact, however, that every chemical change is accompanied by physical change, and the physical change may often be the only sign that chemical change has taken place.

What are the chief divisions of chemistry?

ORGANIC AND INORGANIC CHEMISTRY.—There are two great divisions in the science of chemistry, organic and inorganic. The branch which is best known is that of inorganic chemistry, which covers the chemistry of all the purely mineral substances. Organic chemistry has to do primarily with that of substances obtained from animal or vegetable sources. Now, however, it has resolved itself into the study of the compounds of carbon, always bearing in mind the fact that many carbon compounds have no organic origin, and therefore really fall outside the scope of organic chemistry.

The fundamentals of both branches are the same, and the real reason for the division is the number of the carbon compounds and their highly complex character. It is in this realm that the graphic formula is of most service, and in its organic branch chemistry most nearly approaches biology.

The branch of inorganic chemistry which treats of the composition, etc., of naturally occurring minerals, receives the title of *mineralogical chemistry*.

PHYSICAL CHEMISTRY explains processes, formulates laws for these processes, and is divided within itself again into electro-chemistry and thermo-chemistry, etc. One branch of physical chemistry in which great strides have been made, is the study of the general properties of gases. But it is really as much in the realm of physics as it is in the realm of chemistry.

The study of the chemical nature of substances entering into the constitution of the animal organism, and the chemical changes taking place during the life processes of animals, forms the domain of *physiological chemistry*.

The investigation of the influence of soils, and manures, etc., of different compositions, upon vegetable life, and the chemical principles underlying the art of agriculture, are included in the province of *agricultural chemistry*.

Pharmaceutical chemistry deals with the nature and mode of preparation of the various drugs, ointments, etc., employed for medicinal purposes.

The science in its relations to the arts, manufactures, and industrial processes is embraced in the wide titles of *technical* and *applied chemistry*.

What is the difference between theoretical and practical chemistry?

There are in every science two great divisions. These are known as the "theory" and the "practice" (or, as they are sometimes called, the science and the art). The theory of any science is that part of it which forms the answer in any case to the question "Why?" The practice in the same way answers to the question "How?"

If we find, for example, that by putting a fire under a vessel of water, the water gradually begins to boil, as we say, "boils away," we have learned something that relates to *practice*. We have learned how to change water into vapor. It is not necessary that we should know why the result is brought about, so long as we are satisfied with the result alone.

But as soon as we begin to wish to bring about any result in the best possible way, we must inquire why a certain course of action causes the result; and in the case of the water, we ask why heat should make water boil and then disappear. The answer to the question "How?" is usually a simple one. It can be found out by experiment. Once having found out, we may usually repeat the work as often as we choose.

But the question "Why?" lies deeper, and sometimes cannot be answered at all. The answer to it is in all cases merely a guess—an attempt to explain more or less fully and satisfactorily. If we find that our explanation or theory makes it possible to foretell what will happen in new cases, then we may safely trust it and believe in it.

Give a clear, succinct outline of the essentials of theoretical chemistry.

The whole matter of molecules and atoms is one of *theory*. None of our senses can enable us to know directly either molecules or atoms. We can only imagine that they exist, and then give reasons why their existence makes clear to us the action of elements or of compounds one upon the other.

But in a course of descriptive chemistry, a good knowledge of theoretical chemistry is necessary in order to fully understand all that will be taken up.

THEORETICAL CHEMISTRY

(1) DEFINITIONS.—An element is a substance that *cannot* be decomposed.

A compound is a substance that *can* be decomposed into other different substances; and if the decomposition goes far enough, these substances will be elements.

A mixture is made up of two or more components (elements and compounds or both), *physically* put together. It differs from a compound whose compounds are *chemically* united.

(2) LAWS.—*Law of Definite Proportions*: All specimens of a compound contain the same elements in the same proportions.

Law of Multiple Proportions: When two compounds consist of the same elements, the proportion of one is a simple multiple of the proportion of the other.

Law of Combining Proportions: Each element enters into all its compounds by a fixed proportional weight.

The fundamental laws of chemistry are proved by experiment.

(3) THE ATOMIC THEORY.—The atomic theory teaches that matter is composed of minute particles which themselves cannot be divided, but which unite to form molecules which can be divided.

A *molecule*, then, is the smallest amount of a substance that can exist in a free state.

The diameters of molecules have been ascertained by Jeans to be—

Hydrogen	20.3
Nitrogen	29.1
Oxygen	27.3

These figures express number of billionths of a meter.

An *atom* is an indivisible particle of an element, and goes to make up the molecule.

(4) CHEMICAL NOTATION.—The symbols used to represent the different elements (*e.g.* H for hydrogen, O for oxygen, etc.), when used in chemical compounds, refer to the number of atoms which go to make up the molecule of that particular compound. For example, the expression H_2SO_4 means that in one molecule of that acid there are 2 atoms of hydrogen, 1 of sulphur, and 4 of oxygen.

(5) MOLECULAR WEIGHTS.—To determine the molecular weight of a compound it is necessary to know *Avogadro's Law*: Equal volumes of all gases under the same conditions contain the same number of molecules; and Molecular Weight = Vapor Density $\times 2$.

(6) REACTIONS.—A reaction or chemical equation is a method of representing a chemical change.

In chemistry we have three kinds of reactions, namely:

(1) *Analytical* reaction, which is the breaking up of compound bodies into simple, *e.g.*, H_2CO_3 can be broken up into its components, H_2O and CO_2 , *e.g.*, $\text{H}_2\text{CO}_3 = \text{H}_2\text{O} + \text{CO}_2$.

(2) *Synthetic* reaction is the building up of a compound body by the union of two or more simple bodies, *e.g.*, $\text{H}_2 + \text{O} = \text{H}_2\text{O}$ and $\text{H} + \text{Cl} = \text{HCl}$.

(3) *Metathetical* reaction consists in the interchange of two radicals in two substances, *e.g.*,

$2\text{HCl} + \text{Zn} = \text{ZnCl}_2 + \text{H}_2$. Here the H of the acid is replaced by the Zn.

$\text{KCl} + \text{AgNO}_3 = \text{AgCl} + \text{KNO}_3$. Here the Ag and the K change places.

(7) THE CHEMICAL ARITHMETIC by which from the molecular weights of two substances, and the weight of one substance we are enabled to get the weight of the required substance is called *Stoichiometry*.

EXAMPLE: Required the amount of zinc necessary to generate 10 grams of hydrogen.

Atomic weights of H, Cl, and Zn are respectively 1, 35.5, and 65.3.

The reaction is as follows:—

$\text{Zn} + 2\text{HCl} = \text{ZnCl}_2 + \text{H}_2$, and shows that 2 atoms of H are used for every 1 of Zn.

$$\begin{array}{ccccccc} \text{(Mol. Wt. Zn.)} & & \text{(Mol. Wt. H}_2\text{)} & & \text{(Wt. Zn.)} & & \text{(Wt. H}_2\text{.)} \\ 65.3 & : & 2 & = & x & : & 10 \end{array}$$

$$\frac{65.3 \times 10}{2} = x = 326.5 \text{ grams of Zn.}$$

(8) BERTHOLLET'S LAW.—Berthollet established the following law, which is of great importance. When two substances can form a substance insoluble or volatile, under the condition of the reaction, that substance will be formed till one of the factors is exhausted.

(9) RADICALS.—A radical is an atom or group of atoms which changes places in a reaction. A compound radical is made up of different sorts of radicals, as NH_4 .

A basic radical is a metal, or a compound radical which behaves like a metal, *e.g.*, Zn and NH_4 .

(10) HYDRATES.—A hydrate is a substance formed from water by replacing half of its hydrogen by a radical, *e.g.*, $\text{H}_2\text{O} + 2\text{Na} = 2\text{NaOH} + \text{H}_2$, where the sodium has taken the place of one atom of hydrogen.

(11) BASE.—If a hydrate is formed by a basic radical, the hydrate is called a base, *e.g.*, $\text{ZnO} \cdot \text{H}_2\text{O}$.

(12) ALKALI.—An alkali is a soluble base, *e.g.*, NaOH, KOH, NH_4OH , LiOH.

(13) ACID.—An acid is a substance containing hydrogen which may be replaced by a basic radical, *e.g.*, $2\text{HCl} + \text{Zn} = \text{ZnCl}_2 + \text{H}_2$.

(14) SALTS.—A salt is a substance formed from an acid replacing its hydrogen by a basic radical, *e.g.*, $2\text{HCl} + \text{Zn} = \text{ZnCl}_2 + \text{H}_2$.

An acid salt is a compound derived from an acid which has not all of its hydrogen replaced, *e.g.*, $2\text{NaCl} + \text{H}_2\text{SO}_4 = \text{NaHSO}_4 + \text{HCl} + \text{NaCl}$.

(15) CHEMICAL NOMENCLATURE.—*Termination* "—UM" is now applied to all *Metals*, though the older-known metals retain the former names, *e.g.*—Aluminium, Tellurium, etc.

Termination "—IDE" denotes a *Binary Compound*, that is, a substance composed of only two elements, *e.g.*, Sodium Chloride (NaCl).

Termination "—OUS" is applied to the first of two elements when it exists in a greater proportion than in another combination with the same element, *e.g.*, one atom of

phosphorus and three atoms of chlorine form *Phosphorous Chloride*.

Termination "—IC," when the first exists in a lesser proportion, e.g., one atom of phosphorus with five atoms of chlorine form *Phosphoric Chloride*.

Prefixes "MONO—," "BI—," "TRI—," etc., indicate the proportion of the latter of two elements, and are sometimes used instead of the above termination. Thus phosphorous chloride may also be called *Phosphorous Tri-Chloride*; so one atom of carbon with one atom of oxygen is *Carbon Monoxide*.

Prefix "HYPO—" (under) and "PER—" (over), specify compounds formed by the same two elements containing less (or more) of an element than is in the usual compound.

Nomenclature of Salts.—From the common acids we get the following salts:—

HCl	forms chlorides.
HNO ₃	forms nitrates.
H ₂ SO ₄	forms sulphates.
H ₂ S	forms sulphides.
H ₂ CO ₃	forms carbonates.
H ₂ O	forms no salts.
H ₂ SiO ₄	forms silicates.
H ₃ PO ₄	forms phosphates.

A rough rule for the nomenclature of acids may be made from the above. Acids with the prefix *hydro* and the suffix *ic* form salts in *ide*; with suffix *ate*, salts in *ate*; with suffix *ous*, salts in *ite*.

(16) **BASICITY**.—The basicity of a substance is measured by the amount of hydrogen which it contains that can be replaced by a basic radical, e.g., H₂SO₄ is di-basic, i.e., the two atoms of hydrogen can be replaced by a basic radical. H₂SO₄ + CaCl₂ = CaSO₄ + 2HCl.

(17) **QUANTVALENCY**.—The quantivalence of an element is measured by the number of atoms of hydrogen it combines with or replaces. E.g., Na is univalent, for when added to HCl it replaces one atom of hydrogen; Ca is bivalent, for, as seen in the above reaction, it replaces two atoms of hydrogen.

(18) **TEST FOR A CHLORIDE**.—To test for HCl or any chloride, add to the solution to be tested a little AgNO₃, and if a chloride is present, a milky-white precipitate will be formed. The reaction is as follows: HCl + AgNO₃ = AgCl (white precipitate) + HNO₃. A metal almost invariably changes places with hydrogen.

Caution.—In diluting H₂SO₄, add the acid to the water; for the evolution of heat from the process will cause the water to boil, and reversing this process will cause the liquid to boil over and possibly result disastrously.

(19) **IMPURITY IN H₂SO₄**.—Commercial sulphuric acid contains PbSO₄ as an impurity. This gives it the colored appearance, plumbic sulphate being soluble in strong sulphuric acid.

(20) **H₂S**.—Sulphuretted hydrogen is somewhat soluble in water, slightly poisonous, and is a reducing agent.

(21) **CARBONIC ACID**.—H₂CO₃ does not exist as an acid. We infer its existence from the presence of its salts. Na₂CO₃ + 2HCl = 2NaCl + H₂CO₃, but the H₂CO₃ is so unstable that it breaks up at once into H₂O and CO₂.

(22) **TEST FOR A CARBONATE**.—To test for a carbonate, treat the substance with an acid; CO₂ is formed; pour the gas into a solution of lime-water, and a white insoluble precipitate is formed, CaCO₃.

TABLE OF ALL THE KNOWN CHEMICAL ELEMENTS

The *Chemical Elements* are the simplest known constituents of all compound substances. Chemists regard them as elements or elementary substances only when they have been proved to be *not* compound. The elements are somewhat arbitrarily divided into metals and non-metals, the former constituting by far the larger class. Several elements occupy positions on the border line. Below is a list of the elements at present known with certainty, and of their atomic weights as fixed by the various kinds of evidence obtained by very numerous, and in many cases varied, experiments. The values are all referred to oxygen as standard with atomic weight 16, and are those adopted, for 1910, by the International Commission on Atomic Weights. The standard O = 16 has been pretty generally adopted by chemists as, upon the whole, more satisfactory than H = 1.

Abbreviations.—At. wt., atomic weight; S. G., specific gravity; M. P., melting point; B. P., boiling point; C. T., critical temperature.

NAME AND IMPORTANT DATA	OCCURRENCE, PREPARATION AND PROPERTIES	COMPOUNDS AND CHIEF USES
Aluminum. Symbol Al. At. wt. 27.1. Valence III. S. G. 2.7. M. P. 658°. B. P. 1800°.	Occ.—cryolite AlF ₃ , 3NaF; bauxite, impure Al(OH) ₃ ; in feldspars, micas and clay; emery, ruby, sapphire (Al ₂ O ₃). PREP.—com ¹ , by electrolysis of Al ₂ O ₃ , from bauxite, dissolved in cryolite, water-power usually furnishing the electrical energy. PROP.—silver-white, ductile, malleable at 120°, tensile strength (wrought) 16 tons per sq. in. A better conductor of electricity, weight for weight, than copper. Molten metal not mobile enough to make castings. It turns badly in the lathe. Acted upon by dil. hydrochloric acid, slowly by sulphuric, but not by nitric or the acids occurring in foods. Soluble in alkaline hydroxides. The tarnishing action of moist air soon comes to an end as the tarnish acts as an adherent protective coating.	Used for cooking utensils, boat-building, military accouterments and small articles requiring lightness and strength; for electric leads. The powdered metal is used as a body for paint; and its mixture with ferric oxide, called thermite, is used for producing very high temperatures (up to 3700°C.) for welding rails, etc. Many metals are reduced from their oxides by means of Al, hence its use in casting steel. Aluminum bronze (10% Al), rolled, has tensile strength of 40 tons per sq. in. Its sulphate forms alums, e.g., KAl(SO ₄) ₂ · 12H ₂ O, common alum.
Antimony. Symbol Sb. At. wt. 120.2. Valence III. and V. S. G. 6.6. M. P. 630.7°. B. P. 1440°.	Occ.—free, and as stibnite (Sb ₂ S ₃). PREP.—roasting stibnite gives Sb ₂ O ₄ , which is then reduced by heating with carbon. PROP.—white, brittle, crystalline metal. Its alloys expand on solidification, and therefore give very sharp castings, e.g., for type. It does not tarnish, but may be burned in air, and unites directly with the halogens.	The metal is a constituent of the alloy type metal, Britannia metal and Babbitt metal (used for bearings). Its oxide (Sb ₂ O ₃) is both basic and acidic. The trichloride, butler of antimony (SbCl ₃), is easily hydrolyzed. Tartar emetic (SBOCK ₄ H ₄ O ₆) is used in medicine and in dyeing.
Argon. Symbol A. At. wt. 39.86. Valence nil. Density 39.9 (oxygen = 32). B. P. -186°. M. P. -190°.	Present in the air 0.94% by volume. To isolate, air is freed from CO ₂ by soda-lime, water by P ₂ O ₅ , oxygen by red-hot copper, nitrogen by magnesium and calcium. From the residual mixture argon is obtained by fractional distillation.	Forms no compounds, hence its name—does no work. Is a monatomic gas and is identified by its characteristic spectrum seen by examining the light emitted when the gas is placed in a vacuum tube at low pressure and sparked. More soluble in water than nitrogen, 100 vols. water dissolving 4 vols. argon under ordinary conditions.
Arsenic. Symbol As. At. wt. 74.96 Valence III. and V. S. G. 5.7. B. P. 616° (sublimes). M. P. about 800° (under pressure).	Occ.—free, as arsenical pyrites (FeSAs), as orpiment (As ₂ S ₃) and as realgar (As ₂ S ₂). PREP.—by heating arsenical pyrites, FeSAs—FeS + As. PROP.—a steel-gray, dully-metallic and crystalline element classed as a metalloid because intermediate between metals and non-metals. Its vapor has a density corresponding to As ₄ at 644°, and to As ₂ at 1700°. It burns in air and unites directly with the halogens, sulphur and with many metals.	Used for hardening lead for shot. All its compounds are poisonous. White arsenic (As ₂ O ₃) is partly basic, forming a chloride and partly acidic, forming arsenites. Scheele's green (CuHAsO ₃) is a pigment dangerous in wallpapers. Traces of arsenic are detected by Marsh's test in which the intensely poisonous arsine (AsH ₃) is formed.
Barium. Symbol Ba. At. wt. 137.37. Valence II. S. G. 3.8. M. P. 850°.	Occ.—as barytes or heavy-spar (BaSO ₄), and as witherite (BaCO ₃). PREP.—by electrolysis of the fused chloride. PROP.—a silver-white, lustrous, malleable metal harder than lead. Like calcium, it acts slowly on water to give barium hydroxide and hydrogen. The vapors of its compounds impart a green color to the Bunsen flame.	The peroxide (BaO ₂) is used in the manufacture of oxygen and of hydrogen peroxide. The nitrate and chlorate in pyrotechny to give green fires. The sulphate as the body for a permanent white paint and for filling glazed paper. All soluble compounds are poisonous.
Bismuth. Symbol Bi. At. wt. 208.0 Valence III. (and V.). S. G. 9.8. M. P. 270.9°. B. P. 1420°.	Occ.—free and as trioxide (Bi ₂ O ₃) and trisulphide (Bi ₂ S ₃). PREP.—the ore is roasted and then heated with charcoal and metallic iron (to remove traces of sulphur). PROP.—an exceedingly brittle, crystalline shining metal, white with a tinge of pink. Bismuth expands on solidification. It does not tarnish, but can be burnt in air. Dissolves in oxygen acids.	Used for making fusible alloys, e.g. Wood's metal, M. P. 60.5°, which are used in plugs of fire sprinklers and boiler safety valves, and for taking casts. The oxynitrate is used in medicine and as a cosmetic.
Boron. Symbol B. At. wt. 11.0. Valence III. S. G. (amorph.) 2.4; (cryst.) 2.5. B. P. 3500° (sublimes).	Occ.—as boric acid (H ₃ BO ₃), borax (Na ₂ B ₄ O ₇ · 10H ₂ O), colemanite (Ca ₂ B ₆ O ₁₁ · 5H ₂ O). PREP.—amorphous boron by reducing B ₂ O ₃ with Mg. Impure cryst. boron by reducing B ₂ O ₃ with excess of Al. PROP.—amorphous boron is a greenish-black powder that burns in air at 700°, forming B ₂ O ₃ and also BN. It is oxidized, by hot conc. sulphuric or nitric acids, to boric acid.	The compounds are analogous to those of silicon. Borax is used as a flux, and, in solution, as a mild alkali on account of its hydrolysis. Boric acid is used as a weak antiseptic and preservative.
Bromine. Symbol Br. At. wt. 79.22 Valence I. S. G. 3.1 B. P. 59°. M. P. -7.3°.	Occ.—in seawater as alkali bromide, and in the upper layers of salt deposits as sodium and magnesium bromide. PREP.—by treatment of the brines with sulphuric acid and manganese dioxide, or else with chlorine. PROP.—a dark red liquid, smelling like chlorine, whose vapor irritates eyes, throat and nose. Dissolves in thirty parts of water (bromine water). Combines directly with most other elements, but less vigorously than chlorine.	Potassium bromide is used in medicine, silver bromide in photography. Bromine is used in course of the preparation of organic dyes.
Cadmium. Symbol Cd. At. wt. 112.40. Valence II. S. G. 8.6. M. P. 320.9°. B. P. 766°.	Occ.—in association with the zinc ores, as carbonate and sulphide. PREP.—in the distillation of impure zinc, the cadmium comes over in the first portions. PROP.—a silver-white metal, more ductile and malleable than zinc. It burns in air, and is attacked by dilute acids.	All the compounds are poisonous, and little ionized. The sulphide (CdS) is the basis of "cadmium yellow." The iodide is used in medicine.
Caesium. Symbol Cs. At. wt. 132.81. Valence I. S. G. 1.9. M. P. 26.3°. B. P. 670°.	Occ.—in certain micas, and in the ashes of certain plants. PREP.—by heating the hydroxide (CsOH) with magnesium. PROP.—a white, silvery metal resembling potassium. It is one of the most active of metals, and decomposes water violently.	The compounds are characterized by giving, especially, two bright lines in the blue of the spectrum (caesium sky-blue).
Calcium. Symbol Ca. At. wt. 40.08.	Occ.—as carbonate (Iceland spar, calcite, aragonite, marble, chalk, limestone), sulphate (gypsum), phosphate (apatite), fluoride (fluor spar), and as complex	Calcium oxide (quicklime) is used for mortar and to remove hair from hides. The hydroxide [Ca(OH) ₂] mixed with sand forms mortar; its solution is limewater.

At. wt. 40.07. Valence II. S. G. 1.55. M. P. 803°.	silicates in great variety (feldspars, pyroxenes, amphiboles, etc.). PREP.—by electrolysis of the fused chloride. PROP.—a white crystalline metal, harder than lead, that can be cut, drawn, rolled and turned. It attacks water, and burns in the air at a red heat forming the oxide (CaO) and the nitride (Ca ₃ N ₂). It unites with hydrogen to CaH ₂ , whose action on water is a source of hydrogen for balloons.	Plaster of paris, a less hydrated sulphate, takes up water on setting to form CaSO ₄ ·2H ₂ O. The phosphates are fertilizers. Bleaching powder is CaClOCl and calcium carbide is CaC ₂ . Common glass contains silicates of calcium and sodium.
Carbon. Symbol C. At. wt. 12.005. Valence IV. S. G. diamond 3.5; graphite 2.3; amorphous 1.9 M. P.—not realized; estimated at 4400°.	Occ.—as diamond and graphite, in the free state; in combination with hydrogen as petroleum, with oxygen as carbon dioxide in the air, with these and other elements as coal, and in plant and animal tissues; and as many carbonates. PREP.—by dry distillation of wood or coal, yielding charcoal and coke respectively. PROP.—diamond is crystalline and the hardest of minerals, the dark-colored "bort" being used for cutting and grinding. Graphite has a black metallic luster, is crystalline and may be scratched by the finger-nail. Charcoal is amorphous, and possesses the power of absorbing gases and also coloring matters. All three forms burn in oxygen to produce carbon dioxide.	The carbon compounds form the subject of "Organic Chemistry." Carbon dioxide results from the burning of coal, coke, wood, oil or illuminating gas; from fermentation and decay, which are slow burnings, and is exhaled in the breath. Carbon monoxide, arising from recently-stoked fires, is an exceedingly poisonous gas.
Cerium. Symbol Ce. At. wt. 140.25. Valence III., IV. (and VI.). S. G. 6.8; M. P. 623°.	Occ.—as silicate in cerite, along with Nd, Pr and La; also in monazite sand. PREP.—by electrolysis of the fused chloride. PROP.—a metal with the color and luster of iron, like tin in hardness, and very ductile and malleable. Burns in air more easily and brightly than magnesium.	Welsbach incandescent gas mantles contain one per cent of cerium dioxide, CeO ₂ .
Chlorine. Symbol Cl. At. wt. 35.46. Valence I. (and VII.). S. G. (liquid) 1.3. M. P. -101°. B. P. -33.6° C. T. +146°.	Occ.—in seawater as chlorides of the alkalis and alkaline earths, and as like compounds in salt deposits. PREP.—by electrolysis of alkali chloride, fused or in solution; or by the action of manganese dioxide on hydrochloric acid. PROP.—a greenish-yellow gas of characteristic odor, with a violent action on the respiratory tract. Unites directly with all elements save oxygen, nitrogen and the argon family. Displaces bromine and iodine from bromides and iodides, and substitutes hydrogen in organic compounds.	The gas is used in extracting gold and in preparing bleaching and disinfecting agents. In presence of water it bleaches many coloring matters. Forms chlorides (as NaCl, HCl, CaCl ₂), hypochlorides (as solution of Ca(OCl) ₂), chlorates (as KClO ₃ , used for matches and in pyrotechny), and perchlorates (as KClO ₄).
Chromium. Symbol Cr. At. wt. 52.0. Valence II., III. and VI. S. G. 6.6. M. P. 1515°. B. P. 2200°.	Occ.—as chromite [Fe(CrO ₂) ₂]. PREP.—by reducing Cr ₂ O ₃ with aluminum filings. PROP.—a steel-gray, lustrous, brittle and very hard metal. At high temperatures it burns in air to green Cr ₂ O ₃ . It is attacked by dilute sulphuric or hydrochloric acid, but not by nitric acid.	The alloy ferrochromium is used in steel-making. Chrome green, the pigment, is Cr ₂ O ₃ . Chrome yellow is PbCrO ₄ . Bichromates (as K ₂ Cr ₂ O ₇) are used in photo-processes, tanning and dyeing and as oxidizing agents, e.g., in batteries.
Cobalt. Symbol Co. At. wt. 58.97. Valence II. and III. S. G. 8.6. M. P. 1490°.	Occ.—as smaltite (CoAs ₂) and cobaltite (CoAsS). PREP.—by igniting the oxide in hydrogen. PROP.—a white, magnetic, malleable metal, less tenacious than iron. By exposure it turns pinkish. It is less active chemically than iron.	Its intensely blue silicates are used in coloring porcelain and constitute the pigment smalt.
Columbium (Niobium) Symbol Nb. At. wt. 93.5. Valence I., II., IV. and V. S. G. 12.7. M. P. 1950°.	Occ.—in the mineral columbite. PREP.—by reduction of CbO ₂ by paraffin. PROP.—a light-gray, malleable and ductile metal, as hard as wrought iron, which is not affected by acids, even by aqua regia.	The hydride (CbH) burns in air. The compounds occur with those of tantalum, which they closely resemble.
Copper. Symbol Cu. At. wt. 63.57. Valence I. and II. S. G. 8.9. M. P. 1083°. B. P. 2310°.	Occ.—free, as cuprite (Cu ₂ O), copper glance (Cu ₂ S), chalcopyrite (Cu ₂ S, Fe ₂ S ₃), malachite [CuCO ₃ , Cu(OH) ₃]. PREP.—after removal of iron and sulphur, the oxide is reduced by heating with carbon. It is refined electrolytically. PROP.—a red, lustrous, very ductile and malleable metal of tensile strength fourteen tons per square inch, second only to silver in electrical conductivity. In ordinary air it gradually becomes coated with basic carbonate. In absence of air, nitric acid alone among the dilute acids attacks it, but in presence of air even the acids found in foodstuffs can dissolve it.	The metal is used for coins, electroplating, electric leads, roofing, cooking vessels and for making alloys, such as brass, bell and gun metals, German silver and the bronzes. The soluble compounds are poisonous, and are therefore used as germicides in agriculture. Blue vitriol is CuSO ₄ ·5H ₂ O; the basic acetate is verdigris.
Dysprosium. Symbol Dy. At. wt. 162.5. Valence III.	Occ.—in monazite, gadolinite, etc. PREP.—not yet isolated. PROP.—the oxide dysprosia, along with three other rare earths, constitutes erbia.	The salts are green or yellow in color and show characteristic absorption bands.
Erbium. Symbol Er. At. wt. 167.7. Valence III. S. G. 4.8.	Occ.—same as for dysprosium. PREP.—not yet isolated pure. PROP.—crude erbia has been separated into erbia, holmia, thulia, and dysprosia.	The salts are rose-colored, and show characteristic absorption spectra.
Europium. Symbol Eu. At. wt. 152.0. Valence III.	Occ.—in monazite and other rare minerals. PREP.—not yet isolated. PROP.—this element so closely resembles samarium that the analytical separation of the two is difficult.	The salts are pinkish and show a faint absorption spectrum.
Fluorine. Symbol F. At. wt. 19.0. Valence I. S. G. (liquid) 1.11 at -187°. M. P. -223°. B. P. -187°.	Occ.—as cryolite (AlF ₃ , 3NaF), fluor spar (CaF ₂) and very widely elsewhere in small quantities. PREP.—by electrolysis of dry hydrogen fluoride at -23°. PROP.—a pale yellowish-green gas that unites with every element excepting oxygen and the argon family. It rapidly displaces oxygen from water or chlorine from hydrogen chloride.	Hydrogen fluoride is used for etching glass and in silicate analysis. Silver fluoride is soluble and calcium fluoride insoluble, in contrast with the other halides of these metals.
Gadolinium. Symbol Gd. At. wt. 157.3. Valence III.	Occ.—in gadolinite and samarskite. PREP.—not yet isolated. PROP.—This element closely resembles terbium in its compounds.	The salts are colorless and show no absorption bands.
Gallium. Symbol Ga. At. wt. 69.9. Valence III. S. G. 5.9. M. P. 30.1°.	Occ.—in zinc blende and in bauxite. PREP.—by electrolysis of a suitable solution of its salts. PROP.—a bluish-white, tough metal that may be cut with a knife. Like aluminum, it is soluble in hydrochloric acid and in caustic alkali, but not in nitric acid.	It forms two chlorides (GaCl ₃ and GaCl ₂) which yield spark spectra very characteristic of gallium.
Germanium. Symbol Ge. At. wt. 72.5. Valence II. and IV. S. G. 5.5. M. P. 958°.	Occ.—in the rare mineral argyrodite. PREP.—by the reduction of the dioxide (GeO ₂) by carbon. PROP.—a grayish-white, brittle, lustrous metal, insoluble in hydrochloric acid. It combines directly with the halogens.	The close relation of this element to carbon and silicon is shown in the compound germanium chloroform (GeHCl ₃).
Glucium (or Beryllium). Symbol Gl. At. wt. 9.1. Valence II. S. G. 1.7. M. P. below 960°.	Occ.—in beryl [Al ₂ G ₂ (SiO ₃) ₆]. PREP.—by electrolysis of the fused double fluoride, GlF ₂ , 2KF. PROP.—a hard, white metal that tarnishes when heated in air, and is soluble in dilute acids when powdered.	Its hydroxide [Gl(OH) ₂] is feebly acidic as well as basic, thus resembling the hydroxide of zinc. Emerald is beryl colored green by chromium.
Gold. Symbol Au. At. wt. 197.2. Valence I. and III. S. G. 19.32. M. P. 1062.4°.	Occ.—chiefly free, but also as telluride; many specimens of iron are auriferous. PREP.—from gold-bearing sands by washing away the lighter material, and dissolving the gold from the residue by mercury, which is subsequently separated from the gold by distillation. Quartz ores are pulverized in stamping mills, and the powder is then carried by water over amalgamated copper plates on which the gold collects. PROP.—a soft, bright-yellow metal, easily scratched by the knife, an excellent conductor of heat and of electricity. The most ductile and the most malleable of all the metals. Chemically, gold is rather inert, and is not attacked by the oxygen of the air, by hydrogen sulphide, nor, indeed, by any single one of the common acids. It is attacked by fused alkalis, yielding aurates, and by aqua regia, yielding chlorauric acid (HAuCl ₄).	Pure gold is called 24-carat gold. American, French and German gold coins are 21.6 carat, while British sovereigns are 22 carat, the balance in all these cases being copper. Jewelry is made in 18, 14, 9, etc., carat gold, the addition of copper increasing the hardness and rigidity. Sodium chloraurate (NaAuCl ₄) is used for "toning" in photography, while potassium auricyanide [K ₃ Au(CN) ₄] is used in electro-gilding.
Helium. Symbol He. At. wt. 4.00.	Occ.—in air to the extent of one to two volumes per million; also occluded in certain minerals. PREP.—neon and helium are boiled off crude argon, and the neon solidified by	It is one of the decomposition products of certain other (radio-active) elements.

Valence 0. S. G. (liquid at B.P.) 0.122. M. P. -272°. B. P. -268.7°.	cooling. PROP.—the lightest gas after hydrogen, transparent, odorless and colorless, very inert, forming no compounds with other elements.	
Holmium. Symbol Ho. At. wt. 163.5. Valence III.
Hydrogen. Symbol H. At. wt. 1.008. Valence I. S. G. (liquid at B.P.) 0.07. M. P. -259°. B. P. -252.5°.	Occ.—in air to the extent of one volume per 20,000 volumes air; combined, in water (11.19% by weight) natural gas, petroleum and all animal and vegetable bodies. PREP.—by treating zinc with hydrochloric or sulphuric acid; by electrolysis of water. PROP.—the lightest gas, transparent, odorless and colorless, soluble in water (2 volumes in 100 volumes water under everyday conditions), in platinum, in palladium (502 volumes in 1 of Pd). Burns in air and in chlorine, and unites with many of the other elements.	Its two oxides are water (H ₂ O) and hydrogen peroxide (H ₂ O ₂), the latter of which is used in solution as a bleaching agent. Every acid contains hydrogen as an essential constituent. Its compounds with carbon and other elements number over 100,000. Hydrogen gas is used for the oxyhydrogen flame and for filling balloons.
Indium. Symbol In. At. wt. 114.8. Valence III. and I. S. G. 7.3. M. P. 155°.	Occ.—in zinc blende (ZnS). PREP.—electrolytically from solutions of its salts. PROP.—a white metal, malleable and softer than lead.	Its compounds color the nonluminous gas flame blue and show a characteristic blue line in the spectrum.
Iodine. Symbol I. At. wt. 126.92. Valence I., V. and VII. S. G. 4.94. M. P. 114°. B. P. 184°.	Occ.—in the ocean, in certain seaweeds, and in Chili saltpeter, always in the combined state. PREP.—from iodides by displacement of their iodine by chlorine. PROP.—a dark gray, brittle solid with a metallic luster. Its vapor is violet, as are its solutions in chloroform and in carbon bisulphide. It requires over 5,000 parts of water for its solution. Combines directly with many elements, but is much less active than chlorine and bromine.	Its tincture is used in medicine as a counterirritant. Potassium iodide (KI) and iodoform (CHI ₃) likewise find application in medicine. The alkyl iodides (e.g., C ₂ H ₅ I) are much used in synthetic organic chemistry.
Iridium. Symbol Ir. At. wt. 193.1. Valence III. and IV. S. G. 22.4. M. P. 2300°.	Occ.—along with platinum. PREP.—by a complex series of operations from platinum ores. PROP.—a white metal, brittle when cold, and very hard. It is attacked by fused alkalies, but not by aqua regia.	It is used for pointing gold pens. Its alloy with nine parts of platinum is used for standard meter bars on account of its inalterability.
Iron. Symbol Fe. At. wt. 55.85. Valence II. and III. S. G. 7.86; pig 7.03 to 7.73. M. P. 1515°. B. P. 2450°. wrought 1100°-1500°. steel 1375°. gray pig 1275°. white pig 1075°.	Occ.—as magnetic oxide (Fe ₂ O ₄), hematite (Fe ₂ O ₃), limonite (2Fe ₂ O ₃ , 3H ₂ O), siderite (Fe ₂ CO ₃), which are important ores; iron pyrites (FeS ₂); in rocks as complex silicates, and in plants and animals. PREP.—pig iron is prepared in the blast furnace by reduction of the ore by means of carbon monoxide in presence of a suitable flux. From pig iron, wrought iron is obtained by puddling, and steel by the Bessemer, Siemens-Martin or other process. PROP.—a white, malleable, ductile, magnetic metal, unchanged in dry air or air-free water, but rusting in moist air. Easily attacked by dilute acids, but not by fused alkalies. Cast iron contains 2 to 5% of carbon and other impurities, and is hard and brittle. Wrought iron contains less than 0.2% of carbon, and is softer and tougher, with a tensile strength of 22 to 25 tons per square inch. Steel contains from 0.2 to 1.5% of carbon, is permanently magnetic, may be tempered, and possesses tensile strength up to 100 tons per square inch.	The metal is used as a structural material, for rails, machinery, tools, etc. Jeweler's rouge and Venetian red consist of the oxide (Fe ₂ O ₃). Rust is chiefly the hydrated oxide (FeO, OH). Hammer scale and loadstone have the composition Fe ₃ O ₄ . Ferric chloride (FeCl ₃), ferrous iodide (FeI ₂) and other iron compounds are used in medicine. Green vitriol (FeSO ₄ , 7H ₂ O) is used in making ink, and in dyeing. Potassium ferrocyanide [K ₄ Fe(CN) ₆] is used for making Prussian blue, potassium cyanide, etc.
Krypton. Symbol Kr. At. wt. 82.92. Valence 0. S. G. (Liquid at B. P.) 2.2. M. P. -169°. B. P. -152°.	Occ.—in minute quantity in the air. PREP.—from crude argon by fractional distillation. PROP.—an inert, colorless, odorless gas, resembling, but denser than, argon.	It forms no compounds, and is identified by its characteristic spectrum.
Lanthanum. Symbol La. At. wt. 139.0. Valence III. and V. S. G. 6.15. M. P. 810°.	Occ.—as lanthanite [La ₂ (CO ₃) ₃ , 8H ₂ O]. PREP.—by electrolysis of fused LaCl ₃ . PROP.—an iron-gray metal tarnishing in air to steel-blue; malleable and ductile. Attacked slowly even by cold water.	When heated in air it forms oxide (La ₂ O ₃) and nitride (LaN).
Lead. Symbol Pb. At. wt. 207.20. Valence II., IV. S. G. 11.4. M. P. 327.2°. B. P. 1525°.	Occ.—as galena (PbS), and in silver ores. PREP.—by calcination of partially roasted galena. Purification is effected by Parkes process. PROP.—a soft, gray metal, malleable, but of low tensile strength. In presence of air, water acts on lead to produce the hydroxide, which being slightly soluble, may cause lead poisoning, if present in water supplies. When heated in air it is oxidized to litharge (PbO), and, under suitable conditions, to minimum (Pb ₃ O ₄)	The metal is used for water pipes, roofs and gutters and storage batteries. For shot it is alloyed with 0.4% of arsenic. Typemetal contains 20% of antimony. Babbitt metal, for bearings, contains over 70% of lead. Solder and pewter are alloys of lead and tin. The basic carbonate [Pb(OH) ₂ , 2PbCO ₃], "white lead," is the basis of most oil paints.
Lithium. Symbol Li. At. wt. 6.94. Valence I. S. G. 0.53. M. P. 186°. B. P. above 1400°.	Occ.—as a mixed fluoride with aluminium in amblygonite. PREP.—by electrolysis of the fused chloride. PROP.—a silver-white metal, softer than lead, that tarnishes quickly in air, and is easily acted upon by water. When heated, it unites vigorously with nitrogen.	The carbonate [Li ₂ (CO ₃)] is used in medicine as a solvent for uric acid, lithium urate being soluble. The lithium salts give a carmine flame coloration.
Lutecium. Symbol Lu. At. wt. 175.0.	Occ.—in euxenite. PREP.—it has not been isolated.	Its compounds resemble those of ytterbium.
Magnesium. Symbol Mg. At. wt. 24.32. Valence II. S. G. 1.75. M. P. 650°. B. P. 1120°.	Occ.—as magnesite (MgCO ₂), dolomite (MgCO ₃ , CaCO ₃), carnallite (MgCl ₂ , KCl, 6H ₂ O) and in very many complex silicates. PREP.—by electrolysis of dried, fused carnallite. PROP.—a silver-white metal, ductile when hot. It tarnishes in air, and acts slowly upon water, rapidly on steam. Burns in air to the oxide MgO, emitting a very bright light used in photography. It unites directly with nitrogen.	The sulphate (MgSO ₄ , 7H ₂ O) is known as epsom salts and is used in medicine, as are the oxide (magnesia), the carbonates and citrate. Magnalium is a light, hard alloy with aluminium.
Manganese. Symbol Mn. At. wt. 54.93. Valence II., III., IV., V. and VII. S. G. 7.3. M. P. 1120°. B. P. 1900°.	Occ.—as pyrolusite (MnO ₂), beanuite (Mn ₂ O ₃), hausmannite (Mn ₃ O ₄) and manganese spar (MnCO ₃). PREP.—by heating Mn ₃ O ₄ with aluminum filings. PROP.—a steel-gray, hard, brittle metal with a pinkish tinge. It rusts in moist air and is attacked by dilute acids.	Ferromanganese and spiegeleisen are alloys with iron, used in steel making. With copper it forms the hard, tough manganese bronzes, with tensile strength up to 30 tons per square inch. Impure sodium permanganate (NaMnO ₄) is used in disinfecting as Condy's fluid.
Mercury. Symbol Hg. At. wt. 200.6. Valence I. and II. S. G. 13.6. M. P. -39.5°. B. P. 356.95°.	Occ.—free and as cinnabar (HgS). PREP.—by roasting cinnabar HgS + O ₂ —Hg + SO ₂ . PROP.—a silver-white, mobile liquid with a vapor pressure at 0° of 0.0002 mm. It tarnishes but slowly in air and is attacked only by dilute nitric among the dilute acids. The vapor is monatomic.	It is used for filling thermometers and barometers. Its alloys are called amalgams, some of which are used in dentistry. Calomel (HgCl) is administered internally in medicine; corrosive sublimate (HgCl ₂) forms a solution with very powerful germicidal properties.
Molybdenum. Symbol Mo. At. wt. 96.0. Valence III., IV., V. and VI. S. G. 10.0. M. P. 2450°.	Occ.—as molybdenite (MoS ₂) and wulfenite (PbMoO ₄). PREP.—by reducing the oxides with aluminum powder. PROP.—a white metal, as malleable as iron, that will not scratch glass. Insoluble in hydrochloric or dilute sulphuric acid.	The ferromolybdenum alloys are used in the manufacture of special steels.
Neodymium. Symbol Nd. At. wt. 144.3. Valence III. and IV. S. G. 7.0. M. P. 840°.	Occ.—with cerium and lanthanum. PREP.—by electrolysis of the fused chloride. PROP.—a yellowish metal, tarnishing in air.	The salts are rose-violet in color, and their solutions show characteristic absorption spectra.
Neon. Symbol Ne. At. wt. 20.2. Valence 0.	Occ.—in minute quantity in the atmosphere. PREP.—neon and helium are boiled out of crude argon, and the neon separated from helium by cooling with liquid hydrogen. PROP.—a colorless, transparent, odorless, inert gas, resembling argon.	It forms no compounds, and is recognized by its characteristic spectrum.

<p>B. P. ca. -243°.</p> <p>Nickel. Symbol Ni. At. wt. 58.68. Valence II. and III. S. G. 8.8. M. P. ca. 1452°. B. P. ca. 2600°.</p>	<p>Occ.—as nicollite (NiAs) and nickel glance (NiAsS). PREP.—by igniting the oxalate in hydrogen. PROP.—a white, very hard, lustrous metal, malleable, ductile and tenacious. It rusts but slowly in air, and is attacked easily by only nitric acid.</p>	<p>The metal furnishes a protective coating when plated on iron. German silver is an alloy of nickel, copper and zinc. Nickel steel is used for armor plates. Manganin, containing nickel, copper and manganese, is used for electrical resistances.</p>
<p>Nitrogen. Symbol N. At. wt. 14.01. Valence III. and V. S. G. (liquid at B. P.) 0.81. M. P. -214°. B. P. -194°.</p>	<p>Occ.—free nitrogen forms about four-fifths of air by volume. As Bengal saltpeter (KNO₃), Chili saltpeter (NaNO₃); and as an essential constituent of vegetable and animal protoplasm. PREP.—by heating ammonium nitrite, by oxidation of ammonia, etc. PROP.—a colorless, odorless, transparent gas, rather inactive chemically. At ordinary temperature and pressure, 100 volumes of water dissolve 1.5 volumes of nitrogen. It unites directly with strongly heated boron, lithium, calcium and magnesium.</p>	<p>Nitrous oxide (N₂O), or laughing gas, is used by dentists. Nitric acid (HNO₃) has many applications in technical chemistry. Ammonia (NH₃) is a very soluble gas. Ammonium sulphate [(NH₄)₂SO₄] and Chili saltpeter are used as nitrogenous manures. Nitrogen is a constituent of the aniline dyes, the proteins and many other important classes of organic substances.</p>
<p>Osmium. Symbol Os. At. wt. 190.9. Valence II., III., IV., VI. and VIII. S. G. 22.477. M. P. 2500°.</p>	<p>Occ.—along with platinum. PREP.—by reducing OsO₄. PROP.—a gray metal, harder than glass, the heaviest of known bodies.</p>	<p>Its alloy with iridium is used in tipping gold pens. Osmium tetroxide (OsO₄) is used as a microscopic stain for fat.</p>
<p>Oxygen. Symbol O. At. wt. 16.00. Valence II. S. G. (liquid at B. P.) 1.13. M. P. -218.4°. B. P. -182.5°.</p>	<p>Occ.—free oxygen forms about one-fifth of air by volume. Water contains 88.88% of oxygen. The rocks of the earth's crust contain about 45% in combination, chiefly as silicates. PREP.—in the laboratory by heating potassium chlorate (KClO₃). Commercially, from the air. PROP.—a colorless, odorless, tasteless, transparent gas, slightly heavier than air. At ordinary temperature and pressure, 100 volumes of water dissolve 3 volumes of oxygen. It is very active chemically, combining directly with all but a few of the other elements to form oxides. Sulphur, phosphorus, etc., burn much more vigorously in oxygen than in air. Liquid oxygen is magnetic.</p>	<p>The gas is sold compressed in mild steel cylinders, and is used for the oxyhydrogen blowpipe and in medicine, besides for chemical purposes. It is necessary to support animal respiration and to sustain ordinary combustion. It enters as a constituent into all oxides, most salts and many organic compounds.</p>
<p>Palladium. Symbol Pd. At. wt. 106.7. Valence II. and IV. S. G. 11.9. M. P. 1549°.</p>	<p>Occ.—along with platinum, and with gold in Brazil. PREP.—by a complex series of processes from platinum ores. PROP.—a silvery, malleable and ductile metal, related to platinum, unlike which, however, it is attacked by nitric acid. Under suitable conditions it can take up over 900 volumes of hydrogen.</p>	<p>Since it does not tarnish, it is used for coating silver goods, and by dentists as a substitute for gold.</p>
<p>Phosphorus. Symbol P. At. wt. 31.04. Valence III. and V. S. G. white, 1.82, red, 2.25. M. P. white, 44°. B. P. 289°.</p>	<p>Occ.—as phosphates, such as apatite [CaF(PO₄)₃]; in bones, teeth, brain and seeds of plants. PREP.—by reduction of calcium phosphate by carbon in the electric furnace in presence of a suitable flux. PROP.—phosphorus exists in two allotropic modifications: white phosphorus is waxy in consistency, soluble in carbon bisulphide, evil smelling and poisonous; red phosphorus is a solid, insoluble in carbon bisulphide, odorless and not poisonous. White phosphorus has a low ignition temperature, hence its former use in matches.</p>	<p>Red phosphorus is used in the manufacture of matches, as also is the compound P₄S₃. In the form of superphosphate of lime [CaH₂(PO₄)₂] phosphorus is an important artificial manure. The chlorides (PCl₃ and PCl₅) are much used in organic chemistry.</p>
<p>Platinum. Symbol Pt. At. wt. 195.2. Valence II. and IV. S. G. 21.48. M. P. 1753°.</p>	<p>Occ.—free, alloyed with the platinum metals, as nuggets in alluvial sands in the Urals, California, etc. PREP.—it is freed from the metals with which it is alloyed by a complex series of processes. PROP.—a silvery, tenacious, ductile and malleable metal, unaltered in moist air and unattacked by any single common acid. Aqua regia, fused alkalis, alkali nitrates and cyanides attack it, however. Platinum "sponge" and "black" are finely divided forms.</p>	<p>On account of its resistance to acids, platinum is much used for chemical vessels. Since platinum has a coefficient of expansion very close to that of glass, platinum wires can be fused through glass without danger of breakage on cooling. The salts are used in photography.</p>
<p>Potassium. Symbol K. At. wt. 39.10. Valence I. S. G. 0.86. M. P. 62.5°. B. P. 762°.</p>	<p>Occ.—as sylvite (KCl), carnallite (KCl, MgCl₂, 6H₂O); in plant and animal ashes, and in many complex silicates. PREP.—by reduction or by electrolysis of fused potassium hydroxide (KOH). PROP.—a silver-white, lustrous metal, as soft as wax, tarnishing instantly in moist air. Chemically it is a very active metal, decomposing water in the cold and uniting violently with the halogens, sulphur and oxygen.</p>	<p>An alloy with sodium is used in filling high-temperature thermometers. Bengal saltpeter is the nitrate and is used in pyrotechny, for gunpowder and as a preservative. The iodide (KI) is used in medicine. The chlorate, like the nitrate, is used as a source of oxygen in pyrotechny and for match heads. Caustic potash (KOH) has many chemical applications. The cyanide (KCN) is used in gold extraction.</p>
<p>Praseodymium. Symbol Pr. At. wt. 140.9. Valence III. and IV. S. G. 6.47. M. P. 940°.</p>	<p>Occ.—with cerium and lanthanum. PREP.—by electrolysis of the fused chloride. PROP.—a yellowish metal, remaining untarnished in air.</p>	<p>The salts are leek-green in color, and their solutions have characteristic absorption spectra.</p>
<p>Radium. Symbol Ra. At. wt. 226.0. Valence II. M. P. 700°.</p>	<p>Occ.—in minute quantity in pitchblende and other uranium minerals. PREP.—the metal has recently been isolated; the bromide is separated from the barium bromide prepared from pitchblende by fractional crystallization. PROP.—in all of its compounds, the metal has the power of emitting certain radiations. These can pass through matter that is opaque to light, render air a conductor, affect a photographic plate and cause a zinc-sulphide screen to fluoresce visibly.</p>	<p>The rays from radium compounds (such as RaBr₂, RaCl₂, RaCO₃) act destructively on living tissues and on bacteria. One gram of radium in any of its compounds gives off about 100 calories of heat per hour.</p>
<p>Rhodium. Symbol Rh. At. wt. 102.9. Valence II., III. and IV. S. G. 12.1. M. P. 1970°.</p>	<p>Occ.—in the ores of platinum. PREP.—by a complex series of processes from platinum ores. PROP.—a silvery, malleable and ductile metal, not tarnishing in air and not attacked by aqua regia.</p>	<p>The red chloride (RhCl₃) is formed by the action of chlorine upon the metal.</p>
<p>Rubidium. Symbol Rb. At. wt. 85.45. Valence I., III. and V. S. G. 1.53. M. P. 38.5°. B. P. 69.8°.</p>	<p>Occ.—the salts are associated with salts of potassium. PREP.—similar to that of potassium. PROP.—a silver-white metal resembling potassium, like which it attacks water vigorously.</p>	<p>The compounds show characteristic flame-spectra, and were recognized as those of a new element spectroscopically by Bunsen.</p>
<p>Ruthenium. Symbol Ru. At. wt. 101.7. Valence III., IV., VI., VII. and VIII. S. G. 12.1. M. P. above 1950°.</p>	<p>Occ.—in the ores of platinum. PREP.—by a complex series of processes from platinum ores. PROP.—a hard, white, brittle metal, oxidized when heated in air, scarcely attacked by aqua regia.</p>	<p>The following oxides are known: Ru₂O₃, RuO₂, RuO₄, as well as salts corresponding to RuO₃ and Ru₂O₇.</p>
<p>Samarium. Symbol Sa. At. wt. 150.4. Valence II. and III. S. G. ca. 7.7. M. P. 1300 to 1400°.</p>	<p>Occ.—in the mineral samarskite. PREP.—by electrolysis of the chloride. PROP.—a whitish-gray metal, tarnishing in air.</p>	<p>The salts are topaz-yellow in color, and are similar to those of lanthanum.</p>
<p>Scandium. Symbol Sc. At. wt. 44.1. Valence III.</p>	<p>Occ.—in the minerals euxenite and gadolinite. PREP.—the metal has not been isolated. PROP.—the existence of this element, whose oxide was discovered in 1879, was predicted by Mendeléeff in 1869.</p>	<p>The chloride (ScCl₃) shows a characteristic spark spectrum.</p>
<p>Selenium. Symbol Se. At. wt. 79.2. Valence II., IV. and VI. S. G. amorphous 4.26, monoclinic 4.47, hexagonal 4.8.</p>	<p>Occ.—free in some specimens of sulphur, and in combination with lead, iron and other metals, as in pyrites. PREP.—(amorphous) by reducing selenious acid (H₂SiO₃) by sulphur dioxide. PROP.—three varieties are known: (1) red amorphous, soluble in carbon bisulphide, from which it is deposited as (2) red translucent monoclinic crystals, soluble in carbon bisulphide, (3) blue-gray metallic selenium, insoluble in carbon bisulphide. This last form conducts electricity many times better when exposed to light, and the better the brighter the light.</p>	<p>Selenium cells are used as indicators of intensity of illumination. The compounds strongly resemble those of sulphur. Hydrogen selenide is an evil-smelling inflammable gas. Selenic acid (H₂SeO₄) is a more powerful oxidizer than sulphuric acid and dissolves gold.</p>

[888]

[889]

M. P. amorphous 50°. monoclinic 170 to 180°. hexagonal 217°. B. P. 688°.		
Silicon. Symbol Si. At. wt. 28.3. Valence IV. S. G. amorphous 2.3. crystalline 2.34. M. P. 1458°. B. P. ca. 3500°.	Occ.—silicon dioxide (SiO ₂) occurs as flint, quartz, quartz sand, etc. The igneous rocks are composed largely of silicates, and this element constitutes over 25% of the earth's crust. PREP.—by reducing sand with coke in the electric furnace. PROP.—amorphous silicon is a brown powder that burns when heated in air. Crystalline silicon forms black needles. It is less active than the amorphous variety and is attacked only slowly by a mixture of hydrofluoric and nitric acids. It unites with fluorine, however, at ordinary temperatures.	The "pigs" of silicon made at Niagara are used in steel-making. The ornamental varieties of quartz find uses as gemstones, as do several natural silicates. Silicon carbide, "carborundum" (SiC), is used as an abrasive. Sodium silicate solution is "water glass," used to protect sandstone and to preserve eggs. Common glass is a mixture of sodium and calcium silicates.
Silver. Symbol Ag. At. wt. 107.88. Valence I. S. G. 10.53. M. P. 960°. B. P. 1955°.	Occ.—native, as sulphide (Ag ₂ S) often associated with galena; chloride (AgCl), etc. PREP.—from lead by the Pattinson or Parkes process; from the ores by the Mexican and other processes. PROP.—a white, highly lustrous, tough, very ductile and malleable metal, the best conductor of heat and electricity known. Liquid silver dissolves oxygen. It is unaffected by the oxygen of moist air, and its tarnishing is due to the action of hydrogen sulphide. It dissolves in dilute nitric and in concentrated hot sulphuric acid.	It is employed for articles of use and of ornament and for coinage. U. S. sterling silver contains 90% silver and 10% copper. Lunar caustic is silver nitrate. This salt and the halides of silver are extensively used in photography. For electroplating, a bath of potassium argenticyanide [KAg(CN) ₂] is used.
Sodium. Symbol Na. At. wt. 23.00. Valence I. S. G. 0.97. M. P. 965°. B. P. 883°.	Occ.—in the sea as chloride (NaCl); in salt deposits as chloride, borate, nitrate; in many complex silicates in rocks. PREP.—by electrolysis of fused sodium hydroxide (NaOH). PROP.—a silver-white metal, as soft as wax, that may be welded at ordinary temperature. Like potassium it is very active, uniting directly with many other elements, and attacking water vigorously in the cold.	The metal is used in the manufacture of several chemicals. Sodium chloride (NaCl) is a necessity of life to most animals; and is used in the manufacture of hydrochloric acid, chlorine and sodium compounds. Sodium carbonate (Na ₂ CO ₃ , 10H ₂ O) or washing soda, and sodium hydroxide (NaOH) are used for cleaning, and in the manufacture of soap and chemicals. Baking soda is sodium bicarbonate (NaHCO ₃). The sulphate (Na ₂ SO ₄ , 10H ₂ O) is known as Glauber's salt; the thiosulphate, by photographers, as "hypo."
Strontium. Symbol Sr. At. wt. 87.63. Valence II. S. G. 2.55. M. P. ca. 800°.	Occ.—as strontianite (SrCO ₃) and celestine (SrSO ₄). PREP.—by electrolysis of the fused chloride. PROP.—a white metal, softer than calcium and harder than sodium, tarnishing to a yellow tint. Like calcium it is active enough to attack water vigorously in the cold.	The nitrate and chlorate are used in pyrotechny for red fire. All volatile compounds color the Bunsen flame red.
Sulphur. Symbol S. At. wt. 32.06. Valence II, IV, and VI. S. G. rhombic 2.06. monoclinic 1.96. M. P. rhombic 112.4°. monoclinic 119°. B. P. 444.9°.	Occ.—native, in combination with most metals as sulphides, and with some metals as sulphates. PREP.—by melting the free sulphur away from the rocky matrix, and subsequent purification by distillation. PROP.—natural sulphur is rhombic in crystalline form, yellow, brittle, of vitreous luster, and a poor conductor of heat and electricity. This and the monoclinic variety are soluble in carbon bisulphide, while amorphous sulphur is not. When heated, sulphur unites directly with most of the other elements.	Sulphur is used to prepare sulphur dioxide (SO ₂), which is used in making sulphuric acid and sulphites, and for bleaching; also for vulcanizing rubber and in the manufacture of black gunpowder, fireworks and matches. Sulphuric acid (H ₂ SO ₄) is to chemical industry what iron is to engineering.
Tantalum. Symbol Ta. At. wt. 181.5. Valence II, IV, and V. S. G. 16.6. M. P. bet. 2250° and 2300°.	Occ.—in tantalite and many other rare minerals. PREP.—by the action of sodium on sodium tantalofluoride (Na ₂ TaF ₇). PROP.—a hard, silver-white metal, ductile and malleable when hot, of very high tensile strength. The hot metal can absorb 740 volumes of hydrogen. It is not attacked by aqua regia.	The metal is used for filaments for electric lamps, which possess twice the efficiency of the carbon filament lamp.
Tellurium. Symbol Te. At. wt. 127.5. Valence II, IV, and VI. S. G. cryst. 6.2. M. P. cryst. 455°. B. P. 1400°.	Occ.—free and as tellurides. PREP.—by reducing tellurous acid (H ₂ TeO ₃) by means of sulphur dioxide. PROP.—the crystalline variety is white, has metallic luster, and conducts heat and electricity. The precipitated variety is black and of lower density. The element is related to sulphur but is more metallic in character.	The compounds find few applications. Telluric acid (H ₆ TeO ₆) has basic as well as acid characters, in keeping with the position of the element between metals and nonmetals.
Terbium. Symbol Tb. At. wt. 159.2. Valence III.	Occ.—in gadolinite, samarskite, and other rare minerals. PREP.—the metal has not been prepared.	The salts show no absorption spectrum.
Thallium. Symbol Tl. At. wt. 204.0. Valence I, and II. S. G. 11.8. M. P. 303. B. P. 1515°.	Occ.—in crookesite, and in small quantities in many samples of iron pyrites. PREP.—it is precipitated by zinc from a solution obtained by suitable treatment of the flue dust from sulphuric acid works. PROP.—a bluish-white, lead-like metal, rather soft, malleable, but of low tensile strength. It decomposes water rapidly at red heat, and dissolves in dilute acids.	It forms two sets of salts, the thalious (e.g., TlCl) and the thallic (e.g., TlCl ₃). All the compounds show a characteristic green line in the spectrum.
Thorium. Symbol Th. At. wt. 232.4. Valence IV. S. G. 11.0. M. P. above 1700°.	Occ.—in monazite sand. PREP.—by reducing potassium thorium chloride with sodium, or by electrolysis of the chloride in a mixture of fused potassium and sodium chlorides.	The nitrate [Th(NO ₃) ₄ , 6H ₂ O] is used in making Welsbach incandescent mantles, which consist of 99% of ThO ₂ . All the compounds are radio-active.
Thulium. Symbol Tm. At. wt. 168.5. Valence III. M. P. 1700°.	Occ.—in gadolinite and other yttrium minerals. PROP.—a metal with the color of nickel, that can be burnt in air. Hydrochloric acid attacks it but slowly.	The salts are of a pale bluish color which is destroyed very easily by minute quantities of erbium.
Tin. Symbol Sn. At. wt. 118.7. Valence II, and IV. S. G. white 7.3. gray 5.7. M. P. 231.8°. B. P. 2275°.	Occ.—as cassiterite (SnO ₂). PREP.—after roasting, the ore is reduced by heating with carbon. PROP.—a silver-white, rather soft, very malleable and ductile metal, practically unchanged in air. When heated, it may be burned in air. Dilute nitric acid is the only dilute acid that attacks it rapidly. When kept long at temperatures below zero Centigrade, ordinary tin changes to a brittle, gray, powdery modification. This form is the stable one below 20°.	Large quantities of tin are used in the tinning of iron for tinsplate. It is a constituent of the alloys Britannia metal, pewter, solder, bronze, etc. Tin forms two sets of salts, stannous (e.g., SnCl ₂) and stannic (e.g., SnCl ₄). "Pink salt" [(NH ₄) ₂ SnCl ₆] is used in dye. "Mosaic gold" is SnS ₂ .
Titanium. Symbol Ti. At. wt. 48.1. Valence II, III, and IV. S. G. 4.5. M. P. below 1850°.	Occ.—as rutile (TiO ₂) and in titanite iron ore (FeTiO ₃). PREP.—by reducing the chloride (TiCl ₄) by means of sodium. PROP.—a hard, brittle metal, resembling polished steel in appearance, that may be forged at a low red heat. It dissolves in dilute sulphuric acid, and decomposes steam at 800°. It unites easily with nitrogen.	The element is very widely disseminated, though in small quantity. It is contained in the ashes of all plants.
Tungsten. Symbol W. At. wt. 184.0. Valence II, IV, V, and VI. S. G. 19.3. M. P. 3177°. B. P. ca. 3700°.	Occ.—as wolfram (FeWO ₄) and as scheelite (CaWO ₄). PREP.—by reducing tungstic acid (H ₂ WO ₄) by carbon at a high temperature. PROP.—a hard, brittle, gray metal, attacked by chlorine only at 250°, although it can be caused to burn in air. It is slowly acted upon by dilute acids and even by water.	The metal is used for the filaments of incandescent electric lamps, giving an efficiency of 1.3 watts per candle power. Tungsten steel has 5% W. Sodium tungstates are used as mordants in dyeing.
Uranium. Symbol U. At. wt. 238.2. Valence III, IV, V, and VIII. S. G. 18.7. M. P. ca. 1500°.	Occ.—as pitchblende, which contains U ₃ O ₈ . PREP.—by reducing the oxides with aluminum. PROP.—a white, lustrous metal, tarnishing in air and attacking water slowly in the cold. It combines directly with many of the other elements.	All the compounds of uranium are radioactive in proportion to their uranium content. Glass to which uranium compounds have been added shows a greenish-yellow fluorescence.
Vanadium.	Occ.—in a few rather rare minerals.	Vanadium added to steel in even small quantity (0.2%) increases the tenacity and

Symbol V. At. wt. 51.0. Valence II, III, IV. and V. S. G. 5.7. M. P. ca. 1715°.	PREP.—by reduction of the dichloride (VCl ₂) in hydrogen. PROP.—a silver-white, lustrous metal, harder than quartz. It does not tarnish nor attack water at ordinary temperatures, but can be burnt in oxygen.	elastic limit without reducing the ductility.
Xenon. Symbol Xe. At. wt. 130.2. Valence 0. B. P. -109°. S. G. (liquid at B. P.) 3.82.	Occ.—in minute quantity in the air, less than one volume in 100 million. PREP.—by fractionation of liquid argon. PROP.—a transparent, colorless and odorless gas, very inert like its congener argon. It is the densest of the argon family.	It forms no compounds.
Ytterbium (Neoytterbium). Symbol Yb. At. wt. 173.5. Valence III.	Occ.—in gadolinite, euxenite and other rare minerals. PREP.—the metal has not been isolated.	The compounds show a characteristic spark spectrum.
Yttrium. Symbol Y. At. wt. 88.9. Valence III. S. G. 3.8.	Occ.—in gadolinite, euxenite and other rare minerals. PREP.—by electrolysis of sodium yttrium chloride. PROP.—a gray, lustrous metal.	The chloride yields a characteristic, though complex, spectrum.
Zinc. Symbol Zn. At. wt. 65.37. Valence II. S. G. 6.9 to 7.2. M. P. 419.3°. B. P. 906°.	Occ.—as zinc blende (ZnS), calamine (ZnCO ₂), zincite (ZnO), etc. PREP.—after roasting, the ore is reduced by coal, the metal distilling off. PROP.—a bluish-white, lustrous, brittle metal, that is malleable and ductile at 120°. It tarnishes in moist air, attacking water slowly in the cold and rapidly when heated in steam. It dissolves in dilute acids and in sodium hydroxide solution.	Sheet zinc is used for roofs and gutters. Iron is galvanized by dipping it in molten zinc, and so protected from rusting. Zinc is used for galvanic batteries and, alloyed with copper, to make brass. The salts are used in medicine; the chloride and sulphate antiseptic solutions.
Zirconium. Symbol Zr. At. wt. 90.6. Valence IV. S. G. 6.4.	Occ.—as zircon (ZrSiO ₄). PREP.—by reducing the oxide (ZrO ₂) with carbon in the electric furnace. PROP.—a hard, gray metal, remaining bright in air and only slowly oxidized at a white heat. It is dissolved by aqua regia and by caustic potash solution.	The oxide is contained in some incandescent gas mantles.

[891]

CHEMISTRY OF THINGS FAMILIAR

WHAT IS STARCH?—HOW MANUFACTURED?—COMPOSITION OF WHEAT FLOUR—ACIDS—ALKALIES—SULPHURIC, NITRIC, AND MURIATIC ACIDS—SULPHURETTED HYDROGEN—TANNING OF HIDES TO FORM LEATHER—VINEGAR—ALCOHOL—YEAST—FRUIT, HOW PRESERVED—DECAY IN WOOD—WHAT IS ETHER?—DISINFECTING AGENTS—HOW SMOKING PRESERVES MEAT—WHAT IS ALBUMEN?—WHAT IS A POISON?—ARSENIC—CERTAINTY OF ITS DETECTION—LEAD PIPES, HOW POISON WATER—VERDIGRIS—CALOMEL—PRESERVATION OF WOOD—COMMON NAMES OF CHEMICALS

What is starch?

The name starch is given to a *mealy substance* which is deposited in *most vegetables* at the time of ripening, from the juices with which the cells of the plants are filled.

What common vegetable especially abounds in starch?

The *potato*, which consists entirely of cells filled with starch and water.

A cell is a little membranous bladder filled with a solid or fluid substance.

Why does a laundress find it necessary to boil starch before using it for stiffening linen, etc.?

The starch, consisting of little granules, is *insoluble in cold water*; but when acted upon by hot water, the granules burst and allow their contents, which are soluble, to become mingled with the water.

Starch is manufactured as follows:—

Potatoes, for example, from which most of the starch of commerce is manufactured, after being pared, are grated to a pulp. This pulp is put upon a sieve and stirred about, while at the same time a little stream of water is made to flow upon it. A milky liquid runs through the sieve, but the fibrous portion of the potato, the vegetable tissue, remains behind. This liquid, after a short interval, deposits a white powder, which is the starch. By the simple process of tearing up the vegetable tissue, and removing the inclosed starch by washing, this substance may be procured from a great variety of plants.

Why do potatoes, beans, rice, and most of the common vegetables, swell up when boiled with water?

Because the *starch absorbs water* at the boiling temperature, which causes the *cells to swell*, thereby giving to the vegetable a rounded appearance.

What is the composition of wheat flour?

Starch is one of the principal constituents of wheat flour, as well as of all other kinds of meal. The other principal constituent is a gray, tough, viscous substance, called *gluten*.

To what does paste, made of wheat or rye flour, owe its adhesiveness?

In some measure to the *starch*, but principally to the *gluten* contained in it.

Can starch be converted into gum and sugar?

It can; *fruits and plants effect this change naturally*: we can also produce the change artificially by chemical processes.

Why are potatoes frozen and thawed sweet?

Because by the *freezing action* the starch of the potato is in part converted into sugar.

Why are apples, pears, grapes, etc., in their unripe state sour, and in their ripe condition sweet?

In the unripe fruits mentioned *starch is present*; in the ripe fruits it is *absent*; in the process of ripening the starch is *converted into sugar*, and the fruit becomes sweet.

What are acids?

Acids are substances which excite the *taste of sourness* when applied to the tongue; they change the *blue juices* of vegetables to *red*, and combine with alkalies to form neutral compounds.

What is an alkali?

An *alkali* is a body that possesses properties the *converse of those of an acid*. It has a *highly bitter, acrid taste*, changes the *blue juices* of vegetables to *green*, or the juices of vegetables which have been changed red by an acid, back again to blue. Potash and soda are the representatives of the alkalies.

[892]

When sulphur is burned in the air what is the product formed?

Sulphurous acid.

What causes the suffocating odor of a lighted brimstone match?

The *sulphurous acid* generated by the combustion of the sulphur.

What is sulphuric acid or oil of vitriol?

It is a compound of *sulphur and oxygen*, containing one-third more oxygen than sulphurous acid.

What is sulphuretted hydrogen?

A gas formed by the union of *sulphur and hydrogen*. It possesses an offensive odor, and is very poisonous.

How is sulphuretted hydrogen formed in nature?

Principally from the *decomposition of animal substances*, as blood, flesh, hair, etc.

Why does the yolk of an egg tarnish a silver spoon?

Because it contains a *little sulphur*, which, at the temperature of an egg just boiled, will decompose the water or moisture upon the spoon, and produce *sulphuretted hydrogen gas*, which will tarnish silver.

Both the white and the yolk contain sulphur, but the latter the most abundantly.

What is it that makes an open or foul sewer so destructive of health to any district in which it may be situated?

The evolution of *sulphuretted hydrogen*. When inhaled, it acts directly upon the blood, thickening it, and turning it black.

Why do surfaces painted with lead paints, in the vicinity of sewers, soon turn black, or become discolored?

Through the action of *sulphuretted hydrogen*.

What is nitric acid?

Nitric acid, or aqua-fortis, is a compound of five parts of oxygen and one of nitrogen.

It is *liquid*; when pure, *colorless*, and highly *corrosive*; it attacks almost all dead, unorganized substances, and destroys living tissues.

What is muriatic, or, more properly, hydrochloric acid?

A compound of *hydrogen and chlorine* usually prepared from salt. It is an acid much used in the arts.

What is "lunar caustic"?

A compound of *nitric acid and oxide of silver*.

Why, when lunar caustic is applied to the flesh, does it burn and destroy it?

Through the agency of the *nitric acid* contained in it.

Do plants produce acids?

Acids are formed in the *vegetable kingdom* in *great abundance*; they especially exist in unripe fruits, imparting to them a sour taste.

Acids formed from mineral substances are called "mineral acids"; acids formed by or from vegetable substances are called "organic acids."

Why does tanning hides convert them into leather?

Hides are steeped in water, with ground bark of the oak, hemlock, or other trees; these barks contain large quantities of *tannic acid*, which combine with the skin of animals, and form a combination which is insoluble in water and not subject to putrefaction—viz., leather.

What is ordinary vinegar?

An acid, called *acetic acid*, and water.

If wine or beer be imperfectly corked, why does it rapidly turn sour?

Because air gets into the liquor, and the oxygen of the air combining with the alcohol of the liquor produces acetic acid, or *vinegar*.

What is alcohol?

Alcohol is the *spirit* existing in wine, beer, cider, etc., *obtained in the process of fermentation*.

What is a ferment?

A ferment is a substance containing *nitrogen* in a state of *decomposition*, which is able to excite fermentation in solutions of sugar; old cheese, putrefying flesh, blood, etc., all of them are ferments.

What is yeast?

We apply the term yeast to a particular species of ferment; the *foam of beer* (or of some similar liquor), produced by *fermentation*.

Can you explain why it is that a body in a state of fermentation or putrefaction should cause unlimited quantities of similar matter to pass into the same state?

We only *know the fact*: the reason we are *ignorant of*. The most minute portion of milk, paste, juice of grapes, flesh, or blood, in a state of fermentation or putrefaction, causes fresh milk, paste, grape juice, flesh, or blood, to pass into the same condition, when in contact with them.

In storing or packing fruit for future use why is it necessary to carefully remove every decayed specimen?

Because the decayed portions of one specimen will quickly *communicate decay to the fresh fruit* in contact with it, and soon the whole mass of fruit will become putrescent.

If in a vessel, or any other structure, one timber becomes decayed what course ought to be adopted?

It should be removed *immediately*, or the decomposition once commenced will in time affect the whole structure.

It sometimes happens that physicians, in dissection, are seriously poisoned by the slightest cut of a knife which has been used upon the dead body. The knife introduces to the healthy blood, through the wound, a *minute portion of matter in the state of decomposition or putrefaction*. This acts as a *ferment*, and causes the healthy matter in contact with it to pass into the same decomposed state. The action once commenced rapidly extends, until the whole body becomes affected, and death ensues. It is almost impossible to heal wounds of this character.

Why is it especially dangerous to eat fruit or meats partially decayed?

Because the *decayed portions* of the substance eaten are liable to induce the *same condition* in the healthy organs of the stomach with which they may come in contact.

Why do fruit preserves frequently turn sour?

Because, owing to the action of some fermenting substance present either in the fruits themselves or in the air, the sugar used in preserving is *converted into alcohol*, and the alcohol into vinegar.

Why does the housewife scald her preserved fruits to prevent their turning sour?

Because fermenting substances and fermenting action are *destroyed* by a boiling temperature.

Why do we keep preserves, beer, cider, or other substances liable to turn sour, in a cool place?

Because a depression of temperature *arrests fermentation*, though it does not prevent its renewal when the temperature is increased.

What is ether?

Ether is a product obtained by *distilling strong alcohol* and *sulphuric acid*. The product is called sulphuric ether, but it does not contain sulphuric acid, nor has it any sulphur in its composition.

What are the properties of ether?

It is an *exceedingly volatile, inflammable* body, producing insensibility when inhaled, and readily dissolving all fatty and oily bodies.

Why will ether remove spots of oil, paint, or grease from garments?

Because it is a *solvent* for all greasy, oily matters.

What are the best agents for depriving putrid and decaying animal and vegetable substances of their offensive odors?

Chloride of lime is the most effectual agent; and *chloride of zinc* and *sulphate of iron* (green vitriol) are also exceedingly efficient. On a large scale, as in the sanatory cleansing of towns, pulverized charcoal, burnt clay, and quicklime are to be recommended.

What effect does the use of perfumes or the burning of pastiles have upon offensive odors?

They merely *disguise* the odor, but do not *remove or destroy* it.

By adopting what precautions may a person safely enter sick rooms, or visit, without risk, the most dangerous receptacles of filth?

By moistening a linen cloth with vinegar, and sprinkling over it finely-powdered chloride of lime.

Air breathed through this, applied to the mouth and nostrils, will enter the lungs charged with a minute quantity of chlorine, which will effectually destroy any noxious vapors or miasms that escape from diseased bodies, or from decaying animal and vegetable substances.

What three conditions are requisite to produce putrefaction in animal and vegetable substances?

It is necessary that they should be exposed to the combined influence of *air, heat, and moisture*.

Why is a substance preserved from decay by drying, or by the exclusion of air from it?

Because by so doing we *remove the moisture and air* essential to the process of decay.

Why does the smoking of fish or flesh contribute to their preservation?

Because the volatile matters of the smoke, such as creosote, pyroligneous acid, and the like, effect a species of *chemical combination* with the fiber of the meat, and with the substances contained in the natural juices of the flesh, which combinations are *less liable* to decay than the substances themselves.

What is albumen?

Albumen is an *animal substance* as well as *vegetable*. It exists most abundantly, and in its purest natural state, in the *white of an egg*, from whence it derives its name (*album ovii*), which is the Latin for the white of an egg.

The serum or fluid portion of the blood (which, after exposure to the air, is separated from the more solid part), the vitreous and crystalline humors of the eye, the brain, the spinal marrow, and nerves, all contain albumen.

What is the yolk of an egg?

This also consists of *albumen*, but contains in addition a *yellow oil*, which imparts to it its color.

Why is meat tough which has been boiled too long?

Because the *albumen* becomes hard, like the white of a hard-boiled egg.

The best way of boiling meat to make it tender is this: Put your joint in very brisk boiling water; after a few minutes add a little cold water. The boiling water will *fix* the albumen, which will prevent the water from soaking into the meat, keep all its juices in, and prevent the muscular fiber from contracting. The addition of cold water will secure the cooking of the *inside* of the meat, as well as of the surface.

Why is meat always tough if it be put into the boiler before the water boils?

Because the water is not hot enough to *coagulate* the albumen between the muscular fibers of the meat, which therefore runs into the water, and rises to the surface as scum.

Why is the flesh of old animals tough?

Because it contains *very little* albumen, and much muscular fiber.

What is a poison?

A poison is any agent capable of producing a dangerous effect upon anything endowed with life.

In cases of poisoning by substances taken into the stomach, what course should be pursued, in the absence of medical attendance?

The first step is to evacuate the stomach by means of powerful emetics, and when vomiting has taken place, warm water and the white of eggs may almost always be given with advantage.

Can poisons administered for criminal purposes be almost certainly detected?

They can; chemical science within the last few years has made such advances that the most minute quantities of all the best known poisons can be detected with certainty long after death.

There is no poison *so liable and certain* to be found as *arsenic*, and in almost every case of poisoning with mineral poisons, science is enabled to detect the substance, even when life has been extinct for years, and the body nearly decomposed.

What is arsenic?

Metallic arsenic is an *exceedingly brittle metal*, of a *steel-gray color*. It vaporizes, when heated, with a strong odor of garlic, a property not possessed by any other metal.

The substance used as poison, and sometimes known as ratsbane, is arsenious acid, a compound of arsenic and oxygen. Arsenious acid has the form and appearance of a fine white powder.

What is the best remedy in cases of poisoning with arsenic?

The *hydrated peroxide of iron* (iron rust) is considered the best remedy.

The following is the best method for preparing this substance: Take common copperas (sulphate of iron) four ounces; dissolve in warm water in a glass, or porcelain dish, and add a small quantity of sulphuric acid, and afterwards ammonia solution, so long as a dense red precipitate is formed. This precipitate carefully strained off, and thoroughly washed in a filter with water, is hydrated peroxide of iron. So long as kept moist, it may be preserved for a great length of time.

Is lead a poison?

Lead and nearly all its compounds are *dangerous and secret poisons*; when received into the system, it frequently remains dormant for years, and then suddenly manifests itself in various forms of disease.

What is the disease called "painter's colic"?

A disease to which painters and others *working in lead* are *liable*, in consequence of receiving into their system, imperceptibly, portions of lead.

Is it dangerous to sleep in, or breathe the air of, a room newly painted with paints containing lead?

It is *highly dangerous*, since the air is filled with a vapor of the lead compound used as paint.

Why are some waters, when conveyed through lead pipe, poisonous?

Waters which are *very pure* and contain *much oxygen* dissolved in them; waters which contain *nitric acid* compounds, such as those flowing from the vicinity of barn-yards, manure heaps, and those which contain *common salt* or *organic matter*, as water flowing from swamps and fields; waters containing soluble *carbonates*—all dissolve lead from the pipes through which they may be made to pass. Constant use of such waters, in the process of time, will introduce sufficient lead into the system to produce disease, which is often attributed to other causes.

What is verdigris?

Verdigris is a compound of copper, oxygen, and acetic acid. This, and all the compounds of copper, are *very poisonous*. The most efficacious antidotes for poisoning with copper are white of eggs and milk.

What is calomel?

It is a compound of *two parts of mercury* united to one of *chlorine*, forming the sub-chloride of mercury. The preparation, commonly known in medicine as "blue pill," is a preparation of calomel.

What is corrosive sublimate?

A compound of *mercury and chlorine* united in equal proportions, forming the perchloride of mercury.

Are both these compounds, calomel and corrosive sublimate, poisons?

They are; corrosive sublimate, especially, is a most *deadly poison*. In case of poisoning by it, the most effectual antidote is white of eggs.

What is the process of preserving wood from decay, commonly termed "kyanizing"?

It consists in *saturating* the fibers of the wood with a *solution of corrosive sublimate*.

Poisonous substances, and corrosive sublimate especially, have the property of protecting animal and vegetable substances from decay. The skins of stuffed birds and animals, and the plants of a herbarium, may be protected from insects and decay, by washing them with a solution of corrosive sublimate. It should not, however, be forgotten that these substances by such treatment become themselves poisonous.

Give a list of the chief antidotes for poisons.

(See [Book of the Human Body](#).)

What are the common names of familiar chemical substances?

COMMON NAMES OF CHEMICALS

Common Names	Chemical Names and Formulæ
Alum	Sulphate of Aluminum and Potassium
Aqua Fortis	Nitric Acid, HNO ₃
Aqua Regia	Nitro-Hydrochloric Acid
Calomel	Mercurous Chloride, Hg ₂ Cl ₂
Carbolic Acid	Phenol, C ₆ H ₅ OH
Caustic Potash	Potassium Hydrate, KOH
Caustic Soda	Sodium Hydrate, NaOH
Chalk	Calcium Carbonate, CaCO ₃
Copperas	Sulphate of Iron
Corrosive Sublimate	Mercuric Chloride, HgCl ₂
Cream of Tartar	Potassium Bitartrate
Epsom Salts	Magnesium Sulphate
Ether	Diethyl Oxide, (C ₂ H ₅) ₂ O
Fire Damp	Light Carburetted Hydrogen
Galena	Lead Sulphide, PbS
Glauber's Salt	Sodium Sulphate
Glucose of Grape Sugar	Dextrose, C ₆ H ₁₂ O ₆
Goulard Water	Basic Acetate of Lead
Iron Pyrites	Iron Di-Sulphide, FeS ₂
Jewelers' Putty	Oxide of Tin
Laughing Gas	Nitrous Oxide, N ₂ O
Lime	Calcium Oxide, CaO
Lunar Caustic	Silver Nitrate, AgNO ₃
Mosaic Gold	Bi-Sulphide of Tin
Muriatic Acid	Hydrochloric Acid, HCl
Olefiant Gas	Ethylene, C ₂ H ₄
Plaster of Paris	Calcium Sulphate
Quartz	Silicon Dioxide, SiO ₂
Realgar	Arsenic Di-Sulphide, As ₂ S ₂

Red Lead	Oxide of Lead, Pb ₃ O ₄
Rochelle Salt	Sodium Potassium Tartrate
Salammoniac	Ammonium Chloride
Salt, Common	Sodium Chloride, NaCl
Salt of Tartar	Potassium Carbonate
Saltpeter	Potassium Nitrate, KNO ₃
Salts of Lemon	Oxalic Acid
Slaked Lime	Calcium Hydrate
Soda	Sodium Carbonate
Spelter	Zinc
Spirits of Hartshorn	Amm. Hydroxide, NH ₄ OH
Spirits of Salt	Hydrochloric Acid, HCl
Sugar of Lead	Lead Acetate
Tartar Emetic	Potass. Antimony Tartrate
Verdigris	Basic Copper Acetate
Vermilion	Sulphide of Mercury
Vinegar	Dilute Acetic Acid
Vitriol, Blue	Copper Sulphate
Vitriol, Green	Ferrous Sulphate
Vitriol, Oil of	Sulphuric Acid, H ₂ SO ₄
Vitriol, White	Zinc Sulphate
Volatile Alkali	Ammonia

What is meant by radio-activity and radio-active substances?

Radio-activity is the phenomenon associated with substances which spontaneously emit rays of unique penetrating power through the escape of electrons and their striking against other substances. Chief of the radio-active substances are radium, polonium, actinium, thorium, etc.

What is the history of these substances?

Henri Becquerel in 1896 first observed this in the case of potassium uranyl sulphate, the rays from which he found affected a photographic plate through black paper, thin plates of metal, etc.; the property was further traced in other uranium salts and in uranium itself. These rays are known as *Becquerel rays*, and have the further power to render air a conductor of electricity, and thus to discharge any electrified substance placed near them.

A charged electroscope forms a test of radioactivity, and the rate at which the leaves fall measures the degree. Different uranium salts have different degrees of radio-activity; some varieties of pitchblende, as also chalcocite, show the property in excess of uranium contained.

Madame Curie, by using the activity test for every precipitate obtained from pitchblende, succeeded in discovering the elements *polonium* and *radium* in 1898. The next year Debierne discovered *actinium*, another radio-active element in the same substance. Meanwhile Schmidt and Madame Curie independently found that the same properties were associated with *thorium*, its compounds and the minerals containing it. In 1903 Ramsay and Soddy discovered that radium continuously produces helium, the lightest of the inactive gases discovered by Ramsay in 1896.

Twenty-eight elements are now classed in three divisions with the three parents, uranium, thorium, and actinium. Potassium and rubidium have been shown to be radio-active, but otherwise the alkaline metals do not enter the classes.

Describe radium and its special properties.

WHAT IT IS LIKE.—To the eye a tiny sample of radium—or, to speak more correctly, of one of the radium salts, for radium in a pure state (*i.e.* the metal) has not been obtained as yet—presents no very striking appearance. All one sees is a few tiny crystals, or perhaps a few specks of whitish-looking powder, glowing in the dark with a faint phosphorescent light similar to that sometimes emitted by a piece of decaying fish.

THE RADIATIONS are of three kinds, comparable with those of the vacuum tube: *Alpha-rays* are heavy particles, positively charged, similar to the canal rays; *Beta-rays* are negatively like cathode rays; *Gamma-rays* resemble Röntgen rays. They penetrate matter to different degrees, behave differently under the action of a magnetic field, but under ordinary circumstances travel in straight lines.

But rays from different elements vary in penetration, and also with the absorbing substance, varying roughly with the density.

The *Alpha-rays* have a velocity of from 1.56×10^9 centimeters per second (radium) to 2.25×10^9 centimeters per second (thorium); they are particles of helium carrying a double charge of electricity. *Beta-rays* have a greater range of velocity and approach that of light. Both *Alpha-* and *Beta-rays* are absorbed by a thickness of one centimeter of lead, but *Gamma-rays* pass through an inch of lead; they carry no charge of electricity, yet ionize the air and discharge the electrometer.

All the rays on impinging on solid particles give rise to *secondary rays*, sometimes called *Delta-rays*, electrons moving with comparatively low velocity. The *Alpha-rays* possess ninety-five per cent of the energy evolved and produce brilliant fluorescence in zinc sulphide, diamond, etc., the other rays producing this best in willemite and the platino-cyanides; all become absorbed and transmuted into heat.

Radium every hour generates sufficient heat to raise its own weight of water from freezing to boiling point.

THE SPINTHARISCOPE.—This is a simple piece of apparatus invented by Sir William Crookes, by means of which some of the effects of the *Alpha-ray* particles can be observed in a very striking manner. It consists of a little screen covered with powdered zinc sulphide. A small fragment of radium is placed directly in front of the middle of the screen and in close proximity to it. On observing this screen in the dark through a suitable lens, scintillating little points of light are seen to be continually flashing into view and dying away. Each tiny spark is thought to be produced by the impact of a single *Alpha-ray* particle. That these particles or emanations must be matter in a state of extreme attenuation is proved by an experiment of Professor Curie's in which a box constructed of platinum was pierced with two holes so minute as to be capable of retaining a vacuum, and yet these radium emanations passed through quite freely.

What are the medical uses of radium?

Ulcerous growths, birth-marks, and scars are beneficially treated, but so far the selective action of radium on tissue has not been determined, nor its bactericidal effect. Its results in the treatment of cancer have not yet reached a definite stage, though it has been widely heralded as a specific for that dreadful malady.

The application of the rays is by various methods: inhalation of the emanation; external application or injection of the emanation condensed on glycerine, vaseline, oil, water, etc.; or the taking of quinine, arsenic, bismuth, etc., on which the emanation has been condensed. Injections of very dilute solutions of radium salts, or insoluble salts suspended in water, are made. But external applications of the rays are considered most important; copper plates or linen are coated with varnish containing the salts, or glass tubes contain them, and the radiations are directly applied, the surrounding parts being protected with lead foil.

GAS METER INDICATOR DIALS.

HOW TO READ A GAS METER

The dial marked "1 thousand" in the accompanying illustration is divided into hundreds; the dial marked "10 thousand" is divided into thousands; that marked "100 thousand" into ten-thousands, and that marked "1 million" into hundred-thousands. When 1,000 cubic feet of gas have been consumed, the pointer on the dial marked "1 thousand" will have made a complete rotation and the fact will be indicated by the pointer of the next dial at the left, which will point to the figure 1. When 10,000 cubic feet of gas have been consumed, the pointer on the "10 thousand" dial will point to 1, and so on. In reading a gas meter, put down the hundreds first, then the thousands, and so on, always counting the figure just under, or which has just been passed by, the pointer. In the illustration about half a hundred is indicated on the "1 thousand" dial, three thousands is indicated on the next dial, two ten-thousands on the next dial, and one one-hundred-thousand on the "1 million" dial. The reading will be 123,050. The dial marked "ten feet" is called the units dial. It is used for testing the meter to discover whether it is in working order or not. Each mark represents a cubic foot and the complete circle 10 cubic feet. If the pointer moves when no gas is burning, it indicates a leak. If it does not move when the gas is burning, or if its motion is unsteady, it indicates a derangement in the mechanism and shows that the meter requires attention.

OUTLINE COURSE OF ELEMENTARY SCIENCE FOR THE GRADES

GRADES	LIFE			STRUCTURE			GRADES
	ZOOLOGY	BOTANY	MINERALOGY	GEOLOGY	PHYSICS AND CHEMISTRY	ASTRONOMY, METEOROLOGY	
I. II. III.	Observe— 1. Birds; migration, nesting, feeding. 2. Insects; butterflies, moths, earth-worms. 3. Uses of birds and insects.	Observe— 1. Flowers; color, form, parts. 2. Fruits; color, form, etc. 3. Leaves; shape, color, veining. 4. Stems; form, position, bark, structure. 5. Conditions of growth, habits, etc.	Observe 1. Pebbles and rocks; color, shape, hardness. 2. Kinds of rock; quartzose, calcites. 3. Uses; for soil making and building.	Rain; its effects— 1. On the surface; slopes, ponds, in valleys, streams. 2. Below the surface; springs, caverns, etc. River Basins— 1. Boundary, uses, etc. 2. Alluvial deposits.	Observe qualities; elastic, porous, etc. 1. Forms of water; their uses. 2. Atmosphere; weight, composition. 3. Magnetism; electricity. 4. Solutions. 5. Gases; hydrogen, oxygen, nitrogen, carbonic acid gas.	Observe— 1. Sun, moon, constellations. 2. SOME GREAT MECHANICAL INVENTIONS

STEAM ENGINES

What are steam engines?

Steam engines are machines in which the elastic force of steam is used as a motive power. In the ordinary engines the alternate expansion and condensation of steam imparts to a piston an alternating rectilinear motion, which is changed into a circular motion by means of various mechanical arrangements.

The engine is unquestionably the grandest and most influential for good of all the great inventions in the realm of physics. No other contrivance of man can be compared with this gigantic, yet tractable motor, in relieving both man and beast of ceaseless toil and irksome drudgery; in preventing suffering and starvation, and promoting intercourse, progress and civilization among the nations of the earth.

Give a description of the steam engine.

Every steam engine consists essentially of two distinct parts: the apparatus in which the steam is produced, and the engine proper. We shall first describe the former.

STEAM BOILER.—The boiler is the apparatus in which steam is generated. Usually a cylindrical boiler is used for fixed engines; those of locomotives and of steam vessels are very different.

The steam is produced from water at a pressure considerably above that of the atmosphere, and is delivered to the engine with as little loss of pressure and heat as possible. The higher the pressure of the steam, the greater will be the amount of heat available, in a given weight of steam, for conversion into mechanical energy. Only a fraction of the total heat energy given to the steam in the boiler is converted into the mechanical work in the engine. By far the greater portion still remains in the steam after it has passed through the engine. The proportion of heat utilized depends on the thermal efficiency of the engine, amounting from twelve to fifteen per cent in good condensing engines; in the very best engines of large size it may be as high as twenty per cent.

The terms axis, axle, arbor, and shaft, in mechanics, are generally understood to mean the bar, or rod, which passes through the center of a wheel. A gudgeon is the pin, or support, on which a horizontal shaft turns; the pins upon which an upright shaft turns are called pivots.

The engine proper consists of a hollow *cylinder* closed at both ends; inside it is the *piston*, a sliding partition which fits the bore of the cylinder sufficiently close to prevent the steam leaking past it, but having sufficient freedom to allow it to move from end to end of the cylinder with as little friction as possible.

In modern engines the pressure of the atmosphere is not employed to drive the piston down. The steam is admitted into the cylinder above the piston at the same time that it is condensed or withdrawn from below, and thus exerts its expansive force in the returning as well as in the ascending stroke. This results in a great increase of power.

The practical construction of the piston and cylinder, and the arrangement of connecting pipes by which steam is admitted alternately above and below the piston, is fully shown in **Figure A**. This gives a sectional view of the cylinder, of the piston, and of the distribution of steam. The entire engine is of iron. To the piston, T, is fixed a rod, A, which slides with gentle friction in a tubulure, U, placed at the center of the plate which closes the cylinder. As it is very important that no steam shall escape between the

piston-rod and this tubulure, the latter is formed of two pieces, one attached to the plate, while the other, which fits in the first, can be pressed as tightly as is desired, so as to compress the material soaked with fat which is between the two tubulures. This arrangement is called a *stuffing-box*; it prevents the escape of steam without interfering with the motion of the piston.

FIGURE A

VALVE-CHEST.—This is the arrangement by which steam passes alternately above and below the piston.

Figure A presents a vertical section of this valve-chest and shows its relation to the cylinder. The steam enters the valve-chest from the boiler by the brass tube *x*. From the valve-chest two conduits, *a* and *b*, are connected with the cylinder, one above and the other below. If they were both open at once, the steam, acting equally on the two faces of the piston, would keep it at rest. But one of these is always closed by a *slide-valve*, *y*, fixed to a rod, *i*. This moves alternately up and down, by means of an eccentric, *e*, placed on the horizontal shaft. The slide-valve closes the conduit *a*, and allowing the steam to enter at *b*, below the piston, the latter rises. But when it reaches the top of the stroke the rod *i* sinks, and with it the slide-valve, which then closes the conduit *b*, and allows the steam to enter at *a*. The piston then sinks, and so forth at each displacement of the slide-valve. [899]

It now remains to explain what happens when the steam presses below the piston. It must not remain above, otherwise the piston could not move. But while the steam enters below by the conduit *b*, the top of the cylinder, by means of the conduit *a*, is connected with a cavity, *O*, from which passes the tube *L*. Through this tube the steam which has already acted upon the piston passes into the atmosphere, or else is condensed in a vessel filled with cold water, which is called the *condenser*. If, on the other hand, the piston sinks, the vapor below the piston passes, by the conduit *b*, to the cavity *O*, and to the tube *L*.

TRANSMISSION OF MOTION.—The alternating rectilinear motion thus generated within the cylinder is transmitted, by means of a rod attached to the piston, to a strong beam *ff*, movable upon a central axis, a system of jointed rods *ee*, called the *parallel motion*, being interposed for the purpose of neutralizing the disturbing action which the circular path of the beam would otherwise exert upon the piston. The reciprocating motion of the beam is now, through the intervention of the connecting-rod *g* and crank *h*, converted into a circular or rotatory motion, which is rendered continuous and uniform by the fly-wheel *i*, to the axis of which the machinery to be impelled is connected.

The air-pump, *p*, for withdrawing the vapor and water from the condenser, the feed-pump, *s*, for supplying the boilers, and cold-water pump, *t*, for supplying the condenser cistern, are all worked by rods from the beam; and the governor, *u*, for maintaining uniformity of motion, is driven by a band from the crankshaft. The above description refers more immediately to that class of steam engines called *low-pressure* engines.

TYPES OF ENGINES.—The various forms of the steam engine have received a varied form of classification. There are the general divisions into *condensing* and *non-condensing* engines, *compound* and *non-compound*, and *single*, *double*, or *direct acting*. Again there is the classification connected with the position of the cylinder, as in the *horizontal*, *vertical*, and *inclined* cylinder engines. Another classification divides steam engines into the uses to which they are applied, such as stationary engines, portable engines, marine, locomotive, electric generating, pumping, mill driving, winding, etc.

STEAM TURBINE.—The steam turbine, though the most modern form of the steam engine in practice, is the most ancient in actual history, the germ of the invention dating from Hero of Alexandria, in the second century B. C.

FIG. B.—BEAM CONDENSING STEAM ENGINE

a, the steam-cylinder; *b*, the piston; *c*, the upper steam-port or passage; *d*, the lower steam-port; *ee*, the parallel motion; *ff*, the beam; *g*, the connecting-rod; *h*, the crank; *ii*, the fly-wheel; *kk*, the eccentric and its rod for working the steam-valve; *l*, the steam-valve and valve-casing; *m*, the throttle-valve; *n*, the condenser; *o*, the injection-cock; *p*, the air-pump; *q*, the hot-well; *r*, the shifting-valve for creating a vacuum in the condenser previous to starting the engine; *s*, the feed-pump for supplying the boilers; *t*, the cold-water pump for supplying condenser cistern; *u*, the governor.

One kind of steam turbine is really worked on the same principle as a windmill, only steam is used instead of the wind. Instead, however, of the sails making one revolution in seven or eight seconds, it sometimes makes three thousand revolutions a minute, or fifty revolutions a second. In another kind the blades of the turbine are something like the pockets on a water-wheel, and the steam shoves the wheel round by its great velocity.

Turbine engines are now fitted to vessels of large dimensions, up to ocean liners and battleships, with extremely satisfactory results. Turbine engines have also been applied in various other ways, *e.g.*, to the driving of fans and blowers.

The principle of internal combustion, as used in gas and oil engines, has also been applied to the turbine with marked success, and has done much to solve the all-important problem of efficiency. It is extremely improbable that the long-range activities of the submarine would be nearly so effective were it not for the application of the same principle to their engines.

LOCOMOTIVES

[901]

Locomotive engines, or simply *locomotives*, are steam engines which, mounted on a carriage, propel themselves by transmitting their motion to wheels.

The parallel motion, the beam, and the fly wheel of the ordinary stationary engine form no part of a locomotive. The principal parts are the *framework*, the *fire box*, the *casing* of the boiler, the *smoke box*, the *steam cylinders*, with their valves, the *driving wheels*, and the *feed pump*.

The framework rests on the axles of the wheels. The illustration on another page shows clearly the arrangement and parts of a typical locomotive. It will be observed that in the lower part of the *steam dome* is the *fire box*, from whence the flame and the products of combustion pass into the smoke box, and then into the chimney after having previously traversed the numerous brass *fire tubes* which pass through the boiler. The *boiler*, which connects the fire box with the smoke box, is made of iron, and is cylindrical.

The steam passes from the boiler into two *cylinders*, placed on either side of the smoke box. There, by means of a steam chest similar to that already described, it acts alternately on the two faces of the piston, the motion of which is transmitted to the axle of the large driving wheels. After having acted on the pistons, the steam is forced through the blast pipe into the chimney, thus increasing the draft.

The motion of the pistons is transmitted to the large driving wheels by two connecting rods, which, by means of cranks, connect the piston rods with the axles of the wheels. The alternating motion of the slide valve is effected by means of eccentrics placed on the axles of the large wheels.

WHEELS OF THE LOCOMOTIVE.—The wheels range ordinarily from forty-five to eighty-five inches in diameter for drivers, thirty to forty-two inches for truck wheels. They are made of cast iron or steel body and steel rim shrunk on. Spoked wheels are usual for drivers, solid wheels for trucks. The tread is four to five inches wide, the flange (one to one and one-quarter inch high) increasing this to five and one-half to seven inches. A counterbalance weight is cast between the spokes opposite the crank-pin seat. The axles, forged steel, are six to eight inches in diameter (for drivers); the wheels are forced on their ends by a powerful press. Cranked axles (for inside cylinders) are forged to shape, rarely built up.

CONTROL.—The locomotive is controlled by the throttle-valve and the reverse lever. Both are located in the cab, which is built at the rear around the fire box, and serves also as firing platform.

AUXILIARIES.—The necessary auxiliaries of the locomotive are those required for its operation as a power generator, and those necessary to its service as a railroad vehicle or as a tractor. The *tender* is the most important in the first group. It is a separate vehicle attached behind the locomotive, carrying a water tank of three to eight or nine thousand gallons capacity, and a coal bin of two to ten tons capacity. Eight-wheel (two-truck) tenders are usual. The coal space is at the front of the tender, and the water tank occupies the rear half and extends forward along the sides of the coal bin. The coal thus is reached directly from the rear of the engine cab.

Water is supplied to the engine by pipes leading from the tank to injectors on the engine. Feed pumps are rarely used for pumping the water into the boiler, injectors in duplicate being depended on. The safety valve, mounted on the top of the boiler, is of the spring poppet type. A steam whistle is placed alongside, for use as warning and train-movement signal; a bell operated from the cab by a cord is also mounted on the boiler.

The air-brake equipment of the locomotive comprises the brake mechanism for the engine itself, and an air pump with its governor, a main reservoir, and the engineer's valve, for supplying and manipulating the brakes of the entire train. The air pump is a direct-coupled compressor whose steam and air cylinders have a common piston-rod, attached in vertical position to the side of the boiler in front of the cab. The cylinder diameter is eight to ten inches. It pumps air into the main reservoir, a cylindrical tank hung under the boiler. An automatic pressure governor starts the compressor when the pressure falls and stops it when the full reservoir pressure is restored.

The locomotive brake equipment consist of brake cylinder and lever system connected to the wheel brake-shoes, but its valve control differs somewhat from that of a car, so as to permit braking the engine alone if desired. The engineer's valve is a flat-seat rotary valve with positions for supplying brakes, recharging the train-pipe, and closing all connections. A separate valve is usually supplied to operate the engine brake alone, working this as "straight-air" or non-automatic brake. Reservoir and train-pipe gauges are mounted in the engine cab near the brake handles. Steam brakes are no longer fitted on American locomotives. The driving-wheels only of the locomotive are braked, but the tender is fully braked.

The sand-box for increasing the driving-wheel friction on wet or greasy rail is commonly set on top of the boiler with discharge pipes ending in front of the drivers just above the rail. A compressed-air ejector is now often used (pneumatic sander), in which case the sand-box may be placed on the front sill or in other convenient position with equal effectiveness.

THE CAB, with windows in front and sides, is built around the fire box, providing a seat on either side which commands a view ahead over the track. The reverse lever is placed on the right-hand, or engineer's side, from where also the throttle lever and brake-valve handles are reached. Injector, whistle, sander, bell, drain cocks, traction-increaser, and other appliances are controlled from here. The headlight, set on top of the boiler in front of the stack, is usually an oil lamp, with parabolic reflector. Acetylene and electric headlights are extensively used in recent years, the latter supplied by a small steam-turbine and dynamo combination.

CLASSES AND TYPES OF LOCOMOTIVES.—The wheel-arrangement of a locomotive is, in conjunction with its total weight, the chief characteristic. Freight locomotives, running at slow speeds, utilize a large adhesion, and therefore have a large proportion of their weight carried on drivers; they have less need for good guiding quality and steadiness at great speeds. Passenger locomotives, working at high speeds, develop a much lower tractive force, and therefore require less weight on drivers, but need leading wheels for guiding quality and steadiness.

[902]

The number and arrangement of cylinders is another characteristic of classification. Most locomotives have two cylinders, both simple. Compounds are built with two, three or four cylinders.

RECENT DEVELOPMENTS.—The chief factor in the modern modification of locomotive types and details is increase of size. The only limiting factors are boiler capacity and weight on drivers.

Economy of operation has brought compounding into much favor even for single-frame engines, and more recently has led to the wide adoption of super-heating; these improvements also allow increased power to be obtained from a boiler of given size.

WEIGHT AND POWER.—Locomotives weighing seventy-five to one hundred and twenty-five tons (without tender) are common. In power, road locomotives range from three hundred to one thousand five hundred horse power and occasionally to two thousand horse power, the more modern ranging from seven hundred to one thousand five hundred. High-speed passenger locomotives are usually more powerful than heavier freights.

BOILER PERFORMANCE.—The distinguishing feature of the locomotive boiler is its high evaporative capacity, and the very high rates of fuel-burning. At full power one hundred pounds coal are burned per square foot of grate surface per hour, by virtue of the strong draft produced by the exhaust-steam blast. At moderate speeds twenty-five to forty pounds are burned.

ELECTRIC LOCOMOTIVES.—The operation of heavy railroad service (*i.e.* trains of freight cars and long passenger trains) by electric power requires the use of electric locomotives in place of the car-motor arrangement of street railroads. Such locomotives have been built since the middle of the nineties, and in considerable number since 1905. The earlier ones had the motors geared to the axles, or directly mounted thereon, but recent constructions have the motors mounted on the frame or platform, above the wheels, so that their weight is carried by the frame springs, and the motors drive the wheels through coupling-rods either direct or by way of an intermediate jack-shaft. This form is found to give smoother running and exert less destructive effect on the track than the prior forms. In wheel arrangement these locomotives vary greatly, but recent machines exhibit combinations of coupled drivers with leading and trailing trucks not unlike the arrangement of steam locomotives. Electric locomotives of two thousand to three thousand horse power have been built, and are in regular use hauling trunk-line trains.

AÉROPLANES

Flying-machines are distinguished from balloons and dirigibles in being "heavier than air," and consequently raised and supported by dynamic means alone, by the reaction

of the air on surfaces driven through it.

Essentially, the aeroplane may be compared to a kite in which the pull of the string is replaced by the thrust of the propeller.

On December 17, 1903, the Brothers Wright, in America, made their first power-flight; while the very first public flight was made in France by Santos-Dumont on September 14, 1906.

Before it was possible to produce a power-driven aeroplane, experiments over a long course of years were made with aeroplanes not provided with propelling apparatus.

In its earliest form the aeroplane consisted of a flat surface moved through the air in a position slightly inclined from the horizontal; in its forward movement the plane experiences resistance from the air. As this resistance is directed partly on the under side, it will be partly converted into a lifting force. Of these two forces—head resistance or drift, and the lifting or sustaining force or lift—the first, being unproductive, must be reduced as far as possible; the second, lift, must, on the other hand, be raised to the highest possible degree.

This end is achieved by employing, instead of flat surfaces or planes, surfaces curved in the direction of flight.

The Two Types.—A *monoplane* is a machine with a single spread of surface supporting it. The best known example of a monoplane is the Bleriot. *Biplanes* have two supporting surfaces, the one above the other; the Wright and Farman machines are machines of this type. There are other machines which have been invented which have more supporting surfaces than this, the most successful of them all being the Roe triplane. But at present, at any rate, the advantage lies between the monoplane and the biplane, the other machines not yet having reached a sufficiently high standard to be able to compete with them.

The monoplane and the biplane have both their own special uses. The monoplane is obviously the lighter machine, and its head resistance is much less, hence it follows logically that its speed will be greater than that of a biplane. But the biplane is a much more stable machine than the monoplane; it will therefore probably be safer and will certainly be able to carry a greater weight.

In the making of aeroplanes wood is usually used for the framework. Specially selected wood is taken, usually from the spruce, hickory, ash, or birch, since wood combines in itself the strength and tenacity of metal without its weight. The fabric with which this frame is covered is more difficult to obtain, since it must contain in itself all the qualities of strength, lightness, smoothness, etc., without any tendencies to shrink, or rot, or burn.

The biplane carries a load of from two and one-half to three and one-half pounds per square foot of surface; the monoplane from three and one-half to six pounds per square foot. The load per horse power in each case is from thirty to forty pounds. In speed the biplane ranges from thirty-five to forty-five miles per hour, as against forty to sixty miles per hour attained by the monoplane.

PRACTICAL USES.—From the very first days the value of the aeroplanes, from a military point of view, has been realized, not as a weapon of offense so much as of intelligence. It would, in fact, be difficult to imagine a better means of scouting and reconnoitering than is afforded by the flying-machine. Its gradually increasing radius of action renders it available for strategic no less than for tactical reconnaissance; its easy mode of progress and absence of vibration allow the most accurate observations to be made and sketch-maps to be drawn. For dispatch-carrying over difficult country its usefulness is also considerable. Its employment for purposes of offense is much more hazardous. On the other hand, it is practically immune from artillery or rifle fire from the land, especially when flying at a fair altitude.

As a commercial vehicle, and for transport, the aeroplane, owing to its relatively low carrying power, is restricted in its usefulness. With increasing reliability, however, it may well assume a portion of the functions of the motor car.

THE MODERN AIRSHIP

The development of the balloon began in 1783, and was the work of two brothers, Joseph and Etienne Montgolfier, who were the sons of a paper manufacturer of Annonay, France.

The latest and most successful experimenter is Count Zeppelin, a German inventor, whose name has been given to the huge dirigible airships known as Zeppelins. Between these there has been a long list of inventors and experimenters who met with varying degrees of success; but the Zeppelins stand paramount.

From the year 1897 the development of the airship was the special work of the Count Zeppelin. In 1900 he made his first flight with a dirigible balloon which carried five men. It was made of aluminum, supported by gas bags and driven by two motors, each about sixteen horse power. His first experiment met with some success, but the first Zeppelin airship was succeeded by another in 1905 with greater motor power; this was wrecked and was succeeded by a third, which met with great success. This airship carried eleven passengers and attained a speed of about thirty-six miles an hour. The fourth Zeppelin airship succeeded in traveling about two hundred and fifty miles in eleven hours, but was wrecked by a storm in 1908, the wreckage catching fire and completely destroying the ship.

Zeppelin VII. had a total length of no less than four hundred and eighty-five feet, a diameter of forty-six feet, and a volume of 690,000 cubic feet. The vessel was fitted with three engines totaling some four hundred and twenty horse power and capable of driving the vessel at thirty-five miles an hour. On one occasion she carried thirty-two people and made a journey of three hundred miles in nine hours.

In the meantime many other experiments had been carried out, notably by Santos Dumont, who circled the Eiffel Tower in the face of a fresh wind.

Dirigibles are divided into three types—(a) *rigid*, in which there is a framework or skeleton, over which a skin is stretched and within which a number of balloons are placed; (b) *semi-rigid*, in which the lower part only of the balloon is distended on a flat framework; and (c) *non-rigid*, when a gas-bag of elongated form has a long girder suspended below it. The propellers are most usually mounted in pairs on each side of the car, but Zeppelin attached them to the balloon itself. To prevent pitching, an "empennage" of flat surfaces is usually arranged near the after-end.

SOME FACTS ABOUT ZEPPELINS.—In shape an ordinary Zeppelin airship is a long cylinder with hemisphere-like ends and a keel running the whole length of the bottom thereof. In appearance from a distance the cylinder and pointed ends appear circular in shape, *i.e.* in cross-section, but in reality this is not so, both being sixteen sided. About one-third the distance from either end of the keel are small boat-like structures suspended from the hull, so close to it that at these places there is a gap in the hull to make room for them. They are rigidly connected with the metallic hull of the airship and help to support it either when the vessel rests on the ground or is towed or driven along the water.

Within these structures are the crew and engines, while above, but outward on each side of the rigid hull and connected with it by means of outriggers, are two pairs of aerial propellers. These are placed at an equal distance out on either side and in the same horizontal plane, so that their united propulsive action shall act centrally along the line of head resistance. The crew can walk through the keel (originally V-shaped) from end to end, or from one boat to the other, the passage being illuminated by means of suitable windows. An observer can also climb through the hull to take observation from the top. Telephones, electric bells, and speaking-tubes are all employed to transmit orders.

CONSTRUCTION OF THE FRAME.—The frame of the rigid hull is built of sixteen longitudinals or girders of trellised or latticed metal; it runs the whole length of the airship and is riveted at regular intervals to cross-sections of latticed girders. Each of these cross-sections is in the form of a sixteen-sided figure or wheel, with latticed rims strengthened by radial rods running from a center flange or boss to the outer rims. The main hull is thus divided into a number of compartments, each separated from one another by means of these latticed radial discs or wheel-like structures and otherwise enclosed by the sixteen latticed girder longitudinals or beams. Each of these compartments contains a gas-bag or balloonette filled with hydrogen; the balloonette fairly fills the compartment, and each bag exerts its proportionate lift. A netting of ramie cords is stretched from wheel to wheel diagonally, between the beams at their inner corners, while the outward corners of the beams are joined by strong wires arranged diagonally for the purpose of imparting rigidity.

The whole frame is covered externally with a strong fabric, which forms the outer skin or wall of the hull. Air-spaces naturally exist between this covering, the inflated balloonettes, and the wheel-like divisions. The entire airship owes its buoyancy to the balloonettes filled with hydrogen, while the outer framework and covering act as a protection against the sun, foul weather, and external shocks.

WAR ZEPPELINS.—Monstrous as the above ships are, they are quite dwarfed by the recent type of military Zeppelins. The latter carry motors aggregating no less than nine hundred horse power. The length varies from five hundred to eight hundred feet, and the diameter is proportional. The gas capacity exceeds a million cubic feet.

AEROPLANE VERSUS AIRSHIP.—On the airship's side the following strong points are claimed: (1) Greater manœuvring power than the aeroplane, more especially with respect to rapidity of ascent; (2) greater offensive power, *i.e.* ability to carry heavier guns owing to its far greater lifting capacity; (3) ability to stand still or hover in the air over one spot (for bomb-dropping), or remain stationary in the air, end on to the enemy, for the purpose of obtaining a steady gun platform; (4) greater flying durability, *i.e.* ability to remain longer in the air at a stretch; (5) ability to fly at night.

MANNING THE AIRSHIP.—The crew of a military airship includes the following: the pilot, the engineer, the steersman, the wireless operator, and last but by no means least the observer. The total number of the crew varies with the size of the airship, and the particular mission in view. The pilot is the captain of the airship, and is responsible for (1) the route, (2) the altitude or elevation at which the airship travels, and (3) the maintenance of the correct pressure on the envelope. The steersman maintains the course ordered him, by means of a compass or by special instructions which may be given him, and also controls the altitude or elevation as ordered. The engineer naturally looks after the engines and the mechanical part of the apparatus with which the airship is fitted.

MARVELOUS MECHANISM OF THE MODERN SUBMARINE

Its interior is a steel maze of intricate machinery that fills it from end to end, and makes it easily the most remarkable of modern marine craft.

THE SUBMARINE

Though the submarine boat has only recently been brought to a high degree of practical efficiency, its history extends back to the seventeenth century, and even beyond. The modern submarine, however, whether of the American, English, or German type, has followed the model of J. P. Holland, an American inventor who submitted designs to the United States government in 1895.

SUBMARINE WITH WIRELESS EQUIPMENT

In 1901 the English Admiralty gave orders to the firm of Vickers, Maxim & Sons, of Barrow, to construct five of the *Holland* type and subsequently several were constructed for the United States government.

To France belongs the credit of making submarine boats a real factor in naval warfare. In 1881 M. Goubet designed a small submarine boat, and in 1885 an improved *Goubet*, which was sixteen feet five inches in length, the motive power being electricity. Successful experiments led the French Admiralty to have the *Gymnote* constructed at Toulon in 1888; she was fifty-six feet five inches long, with a displacement of thirty tons, her motive power being electricity stored in accumulators, which gave her a radius of thirty-two miles at eight knots. Her trials decided the French authorities to have more vessels built, and by 1901 there were some eleven completed.

THE PERISCOPE OF THE SUBMARINE

is its ever watchful eye. Ordinarily the top of the periscope extends about eighteen inches above the waves. Continually revolved at a high rate of speed by an electric motor, the mirrors bring into focus the whole panorama of the upper seas so that the commander can follow in the smallest detail what is passing above him, locate vessels to be attacked, and submerge at will in the presence of danger.

In America, the *Hollands* have been similarly improved, but other types are also in use. The *Lake* type, named after the inventor, Simon Lake, contains an air-lock through which divers may emerge. These vessels have been adopted by Russia.

Germany started with *Hollands*, which they have developed along their own lines. The submarine boat is found in all navies now, and has proved an enormously efficient craft; displacements of one thousand tons are not unusual and speeds as well as radius of action have shown great improvement. The Diesel engine has been largely responsible for this. In maneuvers the craft have come up to expectation completely, the experience in actual war has shown them to be among the most formidable of war craft.

There are two distinct types of submarine vessel—the submarine proper, and the submersible. The submarine sinks through the exhaustion of all its buoyancy, and she sinks at once; the submersibles are forced under.

The latter, though equipped to travel on the surface of the water, are specially equipped for sinking quickly out of sight as the occasion arises. The most improved types, such as the recent German U-boats, have lofty armor plated conning towers, torpedo tubes, mounted guns, periscopes, and wireless equipments.

While in the present European war the submarines have shown themselves to be formidable weapons in skillful hands, they are not so formidable as to ring the death-knell of the large battleship, still less perhaps of the swift battle cruiser. Victory has usually rested with the more powerful ship and the heavier guns.

The present-day submarine suffers from two serious drawbacks: (1) inability to see under the water; (2) inefficient speed—the latter being much slower compared with the speed of fast surface boats. The chief chance of a submarine attacking an enemy with success is to come upon him unawares.

The periscopes and other optical tubes with which submarines are fitted, suffer also from many disabilities; and the fact that many collisions have occurred while using them, shows that they are not yet perfect. Obviously one showing not only what is forward of the submarine but what is on the surface of the water on every side is best. One of the drawbacks from which they suffer is the encrustation of salt on their reflecting surfaces; and small though the exposed surface of the periscope may be, there is always the chance of a vigilant enemy detecting it.

THE SUBMARINE IN PEACE.—It is pleasant to record that this invention, like many others of its kind, has not been devoted solely to war, but that peace also can claim its services. The recent remarkable trans-Atlantic voyages of the German submarine *Deutschland* to American ports is an illustration of their importance to commercial transportation under critical conditions. Since, too, the submarine can sink or dive down to moderate depths, it is obvious it can be used for purposes of underwater salvage, construction, and exploration.

As an aid in the construction of breakwaters, the blowing-up of submerged wrecks in comparatively speaking shallow waters, in searching for sunken treasures, and as an aid to marine explorations in suitable waters, the peace or working submarine is likely to be of untold value.

ELECTRICITY

How may electricity be called into activity?

By *mechanical power*, by *chemical action*, by *heat*, and by *magnetic influence*.

What is the most ordinary way of exciting electricity?

By *friction*.

Do we know any reason why the means above enumerated should develop electricity from its latent condition?

We are *entirely ignorant* upon this subject.

When you rub a piece of paper with India-rubber, why does it adhere to the table?

Because the *friction* of the India-rubber against the surface of the paper develops *electricity*, to which this adhesiveness is mainly to be attributed.

Does electricity present any appearance by which it can be known?

No; electricity, like heat, is in itself *invisible*, though often accompanied by both *light* and *heat*.

When a substance, by friction or by any other means, acquires the property of attracting other bodies, in what state is it said to be?

It is said to be *electrified*, or *electrically excited*; and its motion towards other bodies, or of other bodies towards it, is ascribed to a force called electric attraction.

Does an electrified body exercise any other influence than an attractive one?

It does; for it will be found that light substances, after *touching* the electrified body, will *recede from it* just as actively as they approached it before contact. This is termed *electric repulsion*.

Thus, if we take a dry glass rod, rub it well with silk, and present it to a light pith ball, or feather, suspended from a support by a silk thread, the ball or feather will be attracted towards the glass. After it has adhered to it a moment, it will fly off, or be repelled. The same will happen if sealing-wax be rubbed with dry flannel, and a like experiment made; but with this remarkable difference, that when the glass repels the ball, the sealing-wax attracts it, and when the wax repels, the glass will attract. These phenomena are examples of *electrical attraction* and *repulsion*.

What is a non-electrified body?

One that holds its own natural quantity of electricity *undisturbed*.

What happens when an electrified body touches one that is non-electrified?

The electricity contained in the former is *transferred* in part to the latter.

Thus, on touching the end of a suspended silk-thread with a piece of excited wax, the silk will be excited, as will be shown by its moving towards a book, piece of metal, or any other object placed near it.

Do all bodies conduct or allow electricity to pass through them equally well?

Although there is no substance that can *entirely prevent* the passage of electricity, nor any that does not oppose *some resistance* to its passage, yet it moves with a much greater facility through a certain class of substances than through others. Those substances which facilitate its passage are called *conductors*; those that retard or almost prevent it, are called *non-conductors*.

What substances are good conductors of electricity?

The *metals*, *charcoal*, the *earth*, *water*, and *most fluids*, except oils, the *human body*, etc., are good conductors.

What substances obstruct the passage of electricity, or are "non-conductors"?

Glass, *resin*, *oil*, *silk*, *sulphur*, *dry air*, etc., etc., are non-conductors.

What is an electrical machine?

An electrical machine is an arrangement by which quantities of electricity can be collected and discharged.

One type of the electrical machine most usually employed consists of a large circular plate of glass, mounted upon a metallic axis, and supported upon pillars fixed to a secure base, so that the plate can, by means of a handle, be turned with ease. Upon the supports of the glass, and fixed so as to press easily but uniformly on the plate, are four rubbers; and flaps of silk, oiled on one side, are attached to these, and secured to fixed supports by several silk cords. When the machine is put in motion, these flaps of silk are drawn tightly against the glass, and thus the friction is increased, and electricity excited.

Do we know what electricity is?

No; a complete and final answer to this question is no more possible than the answer to the question—what is *life*? The *theory* of electricity, however, opens up possibilities of the most fascinating nature; it gives us a wonderful clear conception of which might be called the inner mechanism of electricity; and it even introduces us to the very atoms of electricity.

Give a short outline of the theory of electricity.

EARLY THEORIES.—Early writers on the nature of electricity supposed it to be either a fluid of peculiar properties or else two fluids whose properties were complementary to each other or of opposite kinds; Franklin held the *one fluid* theory. Later physicists arrived at the conclusion that whatever electricity might be, it was not a material substance. As an alternative it was suggested that electricity was a form of energy, but this proved untenable.

Diagram of the Atoms composing the thinnest possible thread of SILK; each Atom charged with innumerable NEGATIVE ELECTRONS whirling around within or on the Atoms.

ELECTRON THEORY.—This, with certain reservations, is held by the scientific world of today. All matter is believed to be constituted of minute particles called "atoms," whose diameter has been estimated at about one millionth of a millimeter. Up to a few years ago the atom was believed to be quite indivisible, but it has been proved beyond doubt that this is not the case. An atom may be said to consist of two parts, one much larger than the other. The smaller part is negatively electrified, and is the same in all atoms; while the larger part is positively electrified, and varies according to the nature of the atom. The small negatively electrified portion of the atom consists of particles called "electrons," and these electrons are believed to be indivisible units or atoms of negative electricity.

The electrons in an atom are not fixed, but move with great velocity, in definite orbits. They repel one another, and are constantly endeavoring to fly away from the atom, but they are held in by the attraction of the positive core. So long as nothing occurs to upset the constitution of the atom, a state of equilibrium is maintained and the atom is electrically neutral; but immediately the atom is broken up by the action of an external force of some kind, one or more electrons break their bonds and fly away to join some other atom. An atom which has lost some of its electrons is no longer neutral, but is electro-positive; and similarly, an atom which has gained additional electrons is electro-negative.

THE ELECTRIC CURRENT.—A current of electricity is believed to be nothing more or less than a stream of electrons, set in motion by the application of an electro-motive force. Some substances are good conductors of electricity, while others are bad conductors or non-conductors. In order to produce an electric current, that is a current of electrons, it is evidently necessary that the electrons should be free to move. In good conductors, which are mostly metals, it is believed that the electrons are able to move from atom to atom without much hindrance, while in a non-conductor their movements are hampered to such an extent that interatomic exchange of electrons is almost impossible.

Does electricity seem to exist in two different states or conditions?

It does; and to designate these two conditions, the terms positive and negative have been employed. Thus a body which has an overplus of electricity is called positive, and one that has less than its natural quantity is called negative.

Do light, heat, and electricity appear to have some properties in common?

They do; each may be made, under certain circumstances, to *produce* or *excite* the other. All are so light, subtle, and diffusive, that it has been found impossible to recognize in them the ordinary characteristics of matter. Some suppose that light, heat, and electricity are all *modifications* of some common principle.

Why does the fur of a cat sparkle and crackle when rubbed with the hand in cold weather?

Because the friction between the hand and fur produces an excitation of *positive electricity* in the *hand* and *negative* in the *fur*, and an interchange of the two causes a spark, with a slight noise.

Why does this experiment work best in very cold weather?

Because the air is then *very dry*, and does not *convey away* the electricity as fast as it is excited; if the air, on the contrary, were *moist*, the electricity would be *conducted off* nearly as fast as it was excited by friction, and its effects would not therefore be so manifest.

With what velocity is electricity transmitted through good conductors?

With a velocity so great that the most rapid motion produced by art appears to be actual rest when compared to it. Some authorities have estimated that electricity will pass

through copper wire at the rate of *two hundred and eighty-eight thousand miles in a second*—a velocity greater than that of light.
What agents are undoubtedly the most active in producing and exciting electricity in the operations of nature?

The *light* and the *sun's rays*.

Do some animals have the power of exciting electricity within themselves?

There are certain animals which are *gifted* with the extraordinary power of *producing electrical phenomena* by an effort of muscular or nervous energy. Among these the electrical eel and the torpedo are most remarkable.

How powerful a charge of electricity can the electrical eel send forth when in full vigor?

Sufficient to *knock down a man or stun a horse*.

Is the electricity generated by these animals the same as that occasioned by the ordinary electrical machine?

It is the same, and produces the same effects.

Do vital action and muscular movements in man and animals give rise to electricity?

They *do*; and it can be shown by direct experiment that a person cannot even *contract the muscles of the arm* without exciting an electrical action.

Does change of form or state in bodies generally produce electrical excitation?

Change of form or state is one of the *most powerful methods* of exciting electricity.

Water, in passing into steam by artificial heat, or in evaporating by the action of the sun or wind, generates large quantities of electricity. The crystallization of solids from liquids, all changes of temperature, the growth and decay of vegetables, are also instrumental in producing electrical phenomena.

What is lightning?

Lightning is *accumulated electricity*, generally discharged *from the clouds* to the earth, but sometimes from the earth to the clouds.

What causes the discharge of an electric cloud?

When a cloud *overcharged* with electric fluid approaches another which is *undercharged*, the fluid rushes from the former *into the latter*, till both contain the *same quantity*.

Is there any other cause of lightning besides the one just mentioned?

Yes; sometimes mountains, trees, and steeples will discharge the lightning from a cloud floating near, and sometimes the electricity passes from the earth into the clouds.

How high are the lightning clouds from the earth?

Sometimes they are elevated *four or five miles high*, and sometimes actually touch the earth with one of their edges; but they are rarely discharged in a thunder storm when they are more than seven hundred yards above the surface of the earth.

What is a thunder storm?

The *disturbance* caused in the *air* when successive discharges of accumulated electricity take place.

Into how many kinds has lightning been divided?

Three.

What are they?

The *zig-zag lightning*, *sheet lightning*, and *ball lightning*.

Why is lightning sometimes forked?

Because the lightning cloud is at a *great distance*; and the *resistance of the air* is so great that the electrical current is diverted into a zig-zag course.

How does the resistance of the air make the lightning zig-zag?

As the lightning condenses the air in the immediate advance of its path, it flies from side to side, in order to pass where there is the *least resistance*.

Why is the flash sometimes quite straight?

Because the lightning cloud is near the earth, and as the flash meets with very little resistance, it is not diverted; in other words, the flash is straight.

What is sheet lightning?

Either the reflection of distant flashes not distinctly visible or beneath the horizon, or else *several flashes intermingled*.

[910]

FRANKLIN AND HIS KITE

What other form does lightning occasionally assume?

Sometimes the flash is *globular*, which is the most dangerous form of lightning.

Does a discharge produce a flash when it passes through good conductors?

It *does not*, but passes quietly and invisibly.

What is heat lightning?

Sometimes it is the *reflection* in the atmosphere of the lightnings of storms *very remote*, the storms themselves being so far distant that their thunders cannot be heard. This phenomenon is also occasioned by the play of silent flashes of electricity between the earth and the clouds, the amount of electricity developed not being sufficient to produce any other effects than the mere flash of light.

Why is lightning more common in summer and in autumn than in spring and winter?

Because the heat of summer and autumn produces *great evaporation*, and the conversion of *water into vapor* always develops *electricity*.

How long is the duration of a flash of lightning?

Arago has demonstrated that it does not exceed the *millionth part of a second*.

With what velocity is lightning, or the electric fluid which gives rise to its appearance, supposed to move?

Not less than *two hundred and fifty thousand miles per second*.

By whom was the identity of lightning and electricity first established?

By *Dr. Franklin*, at Philadelphia, in 1752.

The manner in which this fact was demonstrated, was as follows:

Having made a kite of a large silk handkerchief stretched upon a frame, and placed upon it a pointed iron wire connected with the string, he raised it upon the approach of a thunder storm. A key was attached to the lower end of the hempen string holding the kite, and to this one end of a silk ribbon was tied, the other end being fastened to a post. The kite was now insulated, and the experimenter for a considerable time awaited the result with great solicitude. Finally, indications of electricity began to appear on the string; and on Franklin presenting his knuckles to the key, he raised an electric spark. The rain beginning to descend, wet the string, increased its conducting power, and vivid sparks in great abundance flashed from the key.

Why was the kite insulated when Franklin fastened the key to the post with a silk ribbon?

Because the silk was a *non-conductor*; and would not allow the electricity received upon the kite to pass off by means of the string to the ground.

Was this experiment one of great danger and risk?

It was; because the whole amount of electricity contained in the thunder cloud was *liable to pass from it*, by means of the string, to the earth, notwithstanding the use of the silk insulator.

Have we any proof of the utility of lightning rods?

The experience of a hundred years has shown that when all the *necessary rules* have been *observed*, the protection is perfect, as far as human effort can avail.

Is a building more or less liable to be struck when furnished with a good lightning conductor?

Lightning conductors do *not*, as many suppose, *attract the lightning toward the building* on which they are situated; they simply *direct its course*, and *facilitate the passage* of the *fluid* in the most direct way to the earth, only when a discharge must inevitably occur. There is no attraction, but the lightning takes the road which offers the least resistance.

What is thunder?

It is a certain *noise* proceeding apparently from the clouds, which usually follows, after a greater or less interval, the appearance of a flash of lightning.

How is it supposed to be occasioned?

The usual explanation offered is a *sudden displacement of the air* produced by the electrical discharges in which the lightning is evolved.

Others have supposed that the passage of the electric current creates a vacuum, and that the air rushing in to fill it produces the sound. Any explanation that has yet been offered is not altogether satisfactory.

What occasions the rolling of the thunder?

It has been ascribed to the *effect of echo*; but the true cause probably is, that the sound is developed by the lightning in passing through the air, and consequently separate sounds are produced at every point through which the lightning passes.

Why is thunder sometimes one vast crash?

Because the lightning cloud is *near the earth*; and as all the vibrations of the air (on which sound depends) reach the ear at *the same moment*, they seem like one vast sound.

Why is the thunder generally heard several moments after the flash?

Because it has a *long distance* to travel. Lightning travels nearly a *million* times faster than thunder; if, therefore, the thunder has a *great distance to come*, it will not reach the earth till a considerable time *after the flash*.

Can we not tell the distance of a thunder cloud by observing the interval which elapses between the flash and the peal?

Yes; the flash is instantaneous, but the thunder will take a whole *second of time* to travel three hundred and eighty yards; hence, if the flash be five seconds before thunder, the cloud is nineteen hundred yards off.

i.e. $380 \times 5 = 1900$ yards.

What is the aurora borealis or northern lights?

Luminous appearances seen in the *sky* at night-time. Sometimes streaks of blue, purple, green, red, etc., and sometimes flashes of light, are seen.

What is the cause of the aurora borealis or northern lights?

Electricity in the higher regions of the atmosphere is undoubtedly an active agent in producing this phenomenon.

Is the aurora ever seen in other parts of the heavens than towards the north?

In the northern hemisphere it always appears in the *north*, but in the southern hemisphere it appears in the *south*: it seems to originate at or near the *poles of the earth*, and

[911]

is consequently seen in its greatest perfection within the arctic and antarctic circles.

What is known concerning the extent of the aurora?

It is not *local*, but it is seen simultaneously at places widely remote from each other, as in Europe and America.

What calculations have been made respecting the height of the aurora?

The height of the appearances varies from *one to two hundred miles*; they sometimes appear within the region of the clouds, and very near to the earth.

Do the auroras appear at any particular seasons and times?

They appear more frequently in the *winter* than in the summer, and are only seen at *night*.

Do they also occur in the day-time?

The aurora is known to *affect the magnetic needle* and the telegraph; and as the effects upon these instruments are noticed by day as well as by night, there can be no doubt of the occurrence of the aurora at all hours. The intense light of the sun renders the auroral light invisible during the day.

Of what utility are the auroral appearances in the polar regions?

During the long polar night, when the sun is absent, the aurora appears with a magnificence unknown in other regions, and affords *light sufficient* for many of the *ordinary outdoor employments*.

MAGNETISM

Is there any connection between magnetism and electricity?

There is every reason to believe that magnetism and electricity are but *modifications of one force*.

What is a loadstone or a natural magnet?

It is an *ore of iron*, known as the "*protoxide of iron*," or "*magnetic oxide of iron*," which is capable of attracting other pieces of iron to itself; and if suspended freely by a thread, and left to take its own position, it will arrange itself so that its extremities will point towards the north and south poles of the earth.

Are natural magnets rare?

They are *not*; they are found in many places in the *United States*. In *Arkansas*, especially, an ore of iron possessing remarkably strong attractive powers is very abundant.

The magnetic ore is usually of a dark gray hue, and possesses but little metallic luster. If a piece of this ore be dipped in iron filings, or a number of small needles, they will generally be found collected and clinging together in great quantities at two opposite extremities, whilst the middle portion is nearly destitute. The magnetic property, whatever it may be, seems therefore to be collected and act with the greatest energy at two opposite extremes; these have been termed *poles*.

What is the origin of the terms "magnet" and "magnetism"?

The loadstone or natural magnet was first found at *Magnesia*, in *Lydia*, *Asia*, whence were derived the names.

Can a natural magnet communicate its attractive properties to other bodies by contact?

It can, and that too without any *apparent loss* of attractive strength.

What bodies are capable of being magnetized by contact with natural magnets?

Iron and *steel* are the substances most susceptible of this influence, but brass, nickel, and cobalt can also become magnets.

Does the magnetism imparted to a piece of soft iron, or steel, by contact with a natural magnet, remain permanent in their substances?

In the *steel* it does, but the soft iron *loses its power* as soon as it is removed from the magnet.

Is it necessary that absolute contact should take place between a magnet and a piece of soft iron to render the latter a magnet?

No, every piece of soft iron brought *near* a magnet becomes by induction itself a magnet.

What do you mean by induction?

It is the production of *like effects in contiguous bodies*. In electricity or magnetism, it is the influence exerted by an electrified or magnetized body through a non-conducting medium without any apparent communication of a current.

What is meant by the directive power of the magnet?

It is that power which will cause a magnet, when suspended freely, to constantly *turn the same part* towards the north pole and the opposite part towards the south pole of the earth.

What are the poles of a magnet?

They are the *ends* of the magnet, and are denominated north and south, according as they point to the north or south poles of the earth.

What are the poles of the earth?

The *extremities of the earth's axis*, or the points on the surface of the globe through which the axis passes.

What is a magnetic needle?

Simply a *bar of steel* which is a *magnet*, suspended in such a way that it can *freely turn* to the north or south.

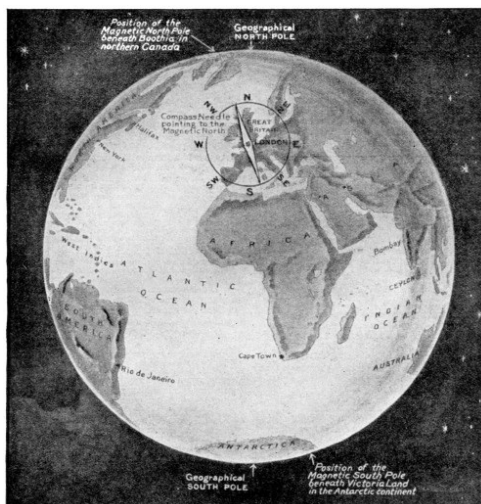

DIAGRAM SHOWING THE VARIATION OF THE MAGNETIC AND GEOGRAPHICAL POLES

What is a mariner's compass?

It is a *delicate steel bar or needle* balanced upon a pivot placed beneath its center of gravity in such a way that it can turn horizontally without obstruction. This needle is usually inclosed in a box, upon the bottom of which is a card, with the various points—north, south, east, west, etc., etc., marked upon it.

Such a needle, if the box containing it be placed on a level surface, will generally be observed to vibrate more or less, till it settles in such a direction that one of its extremities or poles will point towards the north, and the other consequently towards the south. If the position of the box be altered or reversed, the needle will always turn and vibrate again, till its poles have attained the same direction as before.

Does the compass needle always point exactly north and south?

It does *not*; its natural direction is towards the north and south poles, but it seldom points due north or south.

Who first discovered the fact that a magnet would invariably point to the north and the south, and made use of this knowledge in constructing a compass?

It is claimed to have been discovered by the *Chinese*: it was known in Europe, and used in the Mediterranean, in the thirteenth century.

How were the compasses of that time constructed?

They were merely *pieces of loadstone* fixed to a *cork*, which floated on the surface of water.

Is the earth itself supposed to be a magnet?

It is undoubtedly a *great magnet*.

Is iron under certain circumstances rendered magnetic by the inductive action of the earth's magnetism?

Most *iron bars* and *rails*, as the vertical bars of windows, that have stood for a considerable time in a perpendicular position, will be found to be *magnetic*.

If we suspend a bar of soft iron sufficiently long in the air, will it assume magnetic properties?

It will gradually become magnetic; and although when it is first suspended it points indifferently in any direction, it will at last point *north and south*.

How may a bar of iron, such as a kitchen poker, be made immediately magnetic, without resorting to the use of other magnets?

If the bar devoid of magnetism is placed with *one end on the ground*, slightly inclined towards the north, and then struck one *smart blow* with a *hammer* upon the upper end, it will immediately acquire *polarity*, and exhibit the attractive and repellant properties of a magnet.

What is a horseshoe magnet?

It is a *magnetic bar* bent into the *form of a horseshoe*.

When a piece of iron not magnetic is brought in contact with a common magnet, it will be attracted by either pole; but the most powerful attraction takes place when both poles can be applied to the surface of the piece of iron at once. The magnetic bars are for this purpose bent into the shape of the letter U, and are termed *horseshoe magnets*. Several of these are frequently joined together with their similar poles in contact; they then constitute a *magnetic battery*, and are very powerful, either for lifting weights, or charging other magnets.

If we break a magnet across the middle, what happens?

Each fragment becomes converted into a *perfect magnet*; the part which originally had a north pole acquires a south pole at the fractured end, and the part which originally had a south pole, gets a north pole.

If we divide a magnet to the extreme degree of mechanical fineness possible, will the pieces possess magnetic powers?

Each fragment, however small, will be a *perfect magnet*.

GALVANISM

What is galvanism?

It is the production of *electrical disturbance* by chemical action.

What is the most simple manner of illustrating the production of this electricity?

If we place a piece of silver on the tongue, and a piece of zinc underneath it, no effect will be produced as long as the two metals are kept asunder; but when their ends are brought together, a *distinct thrill* will pass through the tongue, a metallic taste will diffuse itself, and, if the eyes are closed, a sensation of *light* will be evident at the same moment.

To what is this result owing?

To a *chemical action* developed the moment the two metals touched each other.

The *saliva* of the tongue *oxidizes* a portion of the *zinc*, which excites *electricity*, for no chemical action ever takes place without producing electricity. Upon bringing the ends of the two metals together, a slight current passes from one to the other.

By whom was the production of galvanic electricity first noticed?

By *Galvani*, professor of anatomy at *Bologna*, *Italy*, in 1790.

Having occasion to dissect several frogs, he hung up their hind legs on some *copper hooks*, until he might find it necessary to use them for illustration. In this manner he happened to

suspend a number of the copper hooks on an iron balcony, when, to his great astonishment, the limbs were thrown into violent convulsions.
On investigating the phenomena what did Galvani discover?

He found that whenever the nerves of a frog's leg were touched by one metal and the muscles by another, convulsions took place on bringing the two different metals in contact.

What is the simplest way of exciting a current of galvanic electricity?

By arranging a series of metal plates in a pile, placing them in pairs, with a wet cloth between them, it being necessary that one of each pair should be more easily oxidized than the other. The simple contact of these plates will produce a feeble and continued galvanic current.

What is such an arrangement of plates for producing electrical currents called?

A galvanic or voltaic battery.

Why are the terms "galvanic" and "voltaic" applied?

They originated in honor of Galvani and Volta, the Italian philosophers who first developed these phenomena of chemical electricity, and the means of producing them.

HIGH-RESISTANCE GALVANOMETER FOR VERY SMALL CURRENTS

Are there many metals or other substances which, when brought together, are capable of producing galvanic action?

The number is quite large; among them we may enumerate the following: zinc, lead, tin, antimony, iron, brass, copper, silver, gold, platinum, black lead or graphite, and charcoal.

Will any two of these brought together produce a galvanic current?

They will; but they possess the power in different degrees; and the more remote they stand from each other in the order above given, the more decidedly will the chemical electricity be developed.

Thus zinc and lead will produce a voltaic battery, but it will be much less active than zinc and iron, or the same metal and copper, and this last less active than zinc and platinum, or zinc and charcoal.

Does galvanic or voltaic electricity appear to consist of two kinds, positive and negative, as in ordinary electricity?

It does; positive electricity always flows from the metal which is acted upon most powerfully, and negative electricity from the other.

What do we mean when we speak of a galvanic circuit?

The connection of the two metals in the battery, so that the positive and negative electricities can meet, and flow in opposite directions.

At what point in the circuit will the manifestations of electricity be most apparent?

At the point where the two currents meet.

What is meant by the poles of the battery?

The two metals forming the elements of the battery are generally connected by copper wires; the ends of these wires, or the terminal points of any other connecting medium used, are called the poles of the battery.

Thus, when zinc and copper poles are used, the end of the wire conveying positive electricity from the zinc would be the positive pole, and the end of the wire conveying negative electricity from the copper plate would be the negative pole. Faraday describes the poles of the battery as the doors by which electricity enters into or passes out of the substance suffering decomposition.

A very simple, and at the same time an active, galvanic circuit may be formed by an arrangement as represented in the accompanying illustration. The current of positive electricity, when the circuit is closed, passes from the zinc, through the liquid, to the copper, and from the copper, along the conductors to the zinc. A current of negative electricity traverses the circuit also, from the copper to the zinc, in a direction precisely reversed.

By what chemical action can the greatest abundance of galvanic electricity be developed?

By the oxidation of metallic zinc by weak sulphuric acid.

TYPES OF ELECTRIC CELLS OR "BATTERIES"

- (1) Grove's Cell.—Z. Zinc plate in dilute sulphuric acid; P. platinum plate in strong nitric acid.
- (2) Daniell's Cell.—Z. Zinc rod in porous pot P containing dilute sulphuric acid; C. copper plate in outer vessel containing copper sulphate solution.
- (3) Leclanche Cell.—Zinc in sal-ammoniac solution; carbon slab in charcoal and manganese dioxide.

The electricity developed by the action of a single pair of plates immersed in acid water is very feeble: how can it be increased?

By increasing the number of the plates and the quantity of the liquid, we increase the intensity of the electricity developed.

ACTION WITHIN A VOLTAIC CELL.—Let us try to see now how an electric current is set up in a simple voltaic cell, consisting of a zinc plate and a copper plate immersed in dilute acid. First we must understand the meaning of the word *ion*.

If we place a small quantity of salt in a vessel containing water, the salt dissolves, and the water becomes salt, not only at the bottom where the salt was placed, but throughout the whole vessel. This means that the particles of salt must be able to move through the water. Salt is a chemical compound of sodium and chlorine, and its molecules consist of atoms of both these substances. It is supposed that each salt molecule breaks up into two parts, one part being a sodium atom, and the other a chlorine atom, and further, that the sodium atom loses an electron, while the chlorine atom gains one. These atoms have the power of traveling about through the solution, and they are called ions, which means "wanderers."

An ordinary atom is unable to wander about in this way, but it gains traveling power as soon as it is converted into an ion, by losing electrons if it be an atom of a metal, and by gaining electrons if it be an atom of a non-metal.

Returning to the voltaic cell, we may imagine that the atoms of the zinc which are immersed in the acid are trying to turn themselves into ions, so that they can travel through the solution. In order to do this each atom parts with two electrons, and these electrons try to attach themselves to the next atom. This atom, however, already has two electrons, and so in order to accept the newcomers it must pass on its own two. In this way electrons are passed on from atom to atom of the zinc, then along the connecting wire, and so to the copper plate. The atoms of zinc which have lost their electrons thus become ions, with power of movement. They leave the zinc plate immediately, and so the plate wastes away or dissolves. So we get a constant stream of electrons traveling along the wire connecting the two plates, and this constitutes an electric current.

What are the most ordinary effects produced by the developed electricity of a large galvanic battery?

The production of sparks and brilliant flashes of light, the heating and fusing of metals, the deflagration of gunpowder and other inflammable substances, and the decomposition of water, saline compounds, and metallic oxides.

How may the most splendid artificial light known be produced?

By fixing pieces of pointed charcoal or carbon to the wires connected with opposite poles of a powerful galvanic battery, and bringing them into contact.

What does this produce?

Electric light.

Can intense heat be developed by the action of the galvanic battery as well as intense light?

The greatest artificial heat man has yet succeeded in producing has been through the agency of the galvanic battery.

What refractory substances can be fused by the aid of the galvanic battery?

All the metals, including platinum, can be readily melted; quartz, sulphur, magnesia, slate and lime are liquefied; and the diamond fuses, boils, and becomes converted into coal.

HOW AN ELECTRIC BATTERY GENERATES ELECTRICITY

The above simple voltaic battery, or cell, consists of a plate of copper and one of zinc dipping into a vessel containing dilute sulphuric acid to twenty of water by volume. When these plates are joined externally by a wire or other conductor a current flows from the copper plates, called the positive pole of the battery, to the zinc plate, called the negative pole of the battery. This is due to the fact that a difference of *potential* is set up between the plates on immersion in the acid, in consequence of which an electro-motive force is generated that drives the current round the circuit. The potential between the plates is maintained by the chemical action now going on in the cell. This action results in the gradual consumption of the zinc plate with formation of zinc sulphate and evolution of hydrogen at the copper plate. In a short time the current in the circuit falls off in consequence of *local action* and *polarization*.

[Large illustration \(433 kB\)](#)

What is electrotyping, or electro-metallurgy?

It is the art or process of *depositing*, from a *metallic solution*, through the agency of galvanic electricity, a *coating* or *film* of metal upon some other substance.

Upon what principles is it accomplished?

The process is based on the fact, that when a galvanic current is passed through a solution of some metal, as a solution of sulphate of copper (sulphuric acid and copper), *decomposition takes place*; the metal is separated in a metallic state, and attaches itself to the negative pole, or to any substance that may be attached to the negative pole; while the acid or other substance before in combination with the metal, goes to, and is deposited on the positive pole.

In this way a medal, a wood-engraving, or a plaster cast, if attached to the negative pole, may be covered with a coating of copper; if the solution had been one containing silver or gold, the substance would have been covered with a coating of silver or gold instead of copper.

How can the thickness of the deposits be regulated?

The thickness of the deposit, providing the supply of the metallic solution be kept constant, will depend on the *length of time the object is exposed to the influence of the battery*.

ELECTRO-MAGNETISM

What is electro-magnetism?

It is the magnetism developed through the agency of *electrical* or *galvanic action*.

What were the earliest phenomena observed which indicated a relation between magnetism and electricity?

It was noticed that *ships' compasses* when their directive power impaired by lightning, and that sewing needles could be rendered magnetic by electric discharges passed through them.

What discovery, made by Prof. Oersted of Copenhagen, established beyond a doubt the connection of electricity and magnetism?

He ascertained that a magnetic needle placed near a metallic wire connecting the poles of a galvanic battery was compelled to change its direction, and that the new direction it assumed was determined by its position in *relation to the wire* and to the direction of the current *transmitted along the wire*.

Thus, if a needle be inclosed in a wire not touching it at any point, and a current of electricity pass through the wire, the needle will be made to move in accordance with the direction of the current.

What other important discovery was made about the same time?

It was found that if a piece of soft iron, not possessing magnetic power sufficient to elevate a grain weight, be placed within a coil of copper wire through which a galvanic current is passing, it will become, through the influence of the current, a *powerful magnet*; and will, so long as the current flows, sustain weights amounting to many hundreds of pounds.

Is the magnetic power of the bar found to be wholly dependent on the existence of the current?

It is; the moment the current stops, the weights *fall away* from the bar in obedience to the law of gravity.

How great weights have been lifted by magnets formed in this manner?

An electro-magnet constructed by Prof. Henry was capable of elevating and sustaining about a *ton weight*.

Upon what principle does the construction of the Morse magnetic telegraph depend?

Upon the principle that a current of *electricity* circulating about a bar of soft iron is capable of *rendering it a magnet*.

Why is it necessary, in conveying the telegraph wires, to support them upon glass or earthen cylinders?

These are used for the purpose of insuring the perfect *insulation* of the wires, since but for this the electricity would pass down a damp pole to the earth, and be lost.

Is there any truth in the idea that many persons have, that some principle passes along the telegraphic wires when intelligence is transmitted?

This supposition is *wholly erroneous*; the word current, as something flowing, conveys a false idea, but we have no other term to express electrical progression.

How can we gain an idea of what really takes place, and of the nature of the influence transmitted?

The earth and all matter are *reservoirs of electricity*; if we disturb this electricity at Boston by voltaic influence, its pulsations may be felt in Chicago. Suppose the telegraphic wire were a tube, extending from Boston to Chicago, filled with water. Now, if one drop more is forced into it at Boston, a drop must fall out at Chicago, but no drop was caused to pass from Boston to Chicago. Something similar to this occurs in the transmission of electricity.

What was the earliest important industrial application of electricity?

One of the earliest industrial applications of electricity was to the driving of street cars. The first electric railway was installed by Siemens, of Berlin, in 1882; and the system was quickly taken up and brought to a high state of development by American engineers. It is remarkable that the system of traction early adopted is the one generally used in America and Europe until the present date. It consists essentially of (a) a supply of *continuous current* at five hundred to five hundred and fifty volts, generated in (b) a *central powerhouse*, and transmitted to the car by means (c) of *overhead conductors*, whence by contact with a trolley wheel on a pole on the car it is led down to (d) *two series-excited motors*, which are placed electrically first *in series* with one another at *starting*, and then *in parallel* with one another when a sufficient speed has been attained.

To what well-known electrical machines did this give impetus?

Electric *dynamos* and motors. All such machines will convert the energy of mechanical motion into that of electricity in motion, or the reverse. The former conversion is done by *dynamos*, to which power is given by steam-engines or other such prime-movers, and made to generate in conducting circuits alternate or direct currents of electricity. *Motors*, on the other hand, receive the energy of electrical currents, either alternate or direct, and this produces motion of certain parts of the structure.

The theory of the action of a dynamo was first discovered by Faraday in 1831; it is intimately associated with that of a motor, for the principle of conservation of energy points out that either machine is reversible—that is to say, a dynamo may be used as a motor or a motor as a dynamo, though perhaps not so efficiently as when each fulfills the special function for which it was designed.

THE CURRENT IN A DYNAMO OR MOTOR.—This brings us to the production of an electric current by the dynamo. In the dynamo we have a coil of wire moving across a magnetic field, alternately passing into this field and out of it. A magnetic field is produced, as we have just seen, by the steady movement of electrons, and we may picture it as being a region of the ether disturbed or strained by the effect of the moving electrons. When the coil of wire passes into the magnetic field, the electrons of its atoms are influenced powerfully and set in motion in one direction, so producing a current in the coil. As the coil passes away from the field, its electrons receive a second impetus, which checks their movement and starts them traveling in the opposite direction, and another current is produced. The coil moves continuously and regularly, passing into and out of the magnetic field without interruption; and so we get a current which reverses its direction at regular intervals, that is, an *alternating current*.

THE MORSE TELEGRAPH CODE FOR LETTERS AND FIGURES

MODERN TELEGRAPHIC TYPEWRITING ATTACHMENT

A GOOD TYPE OF DYNAMO

[918]

What are some of the chief modern applications of electricity?

The field of applied electricity is one of the most extensive in modern science, invention and industry. Electricity in some form is now utilized in connection with lighting, telegraphy, the telephone, heating, motor boats, railways, aeroplanes, in metallurgy and the arts, clocks, bells and alarms, wireless telegraphy and telephony, submarine telegraphy, automobiles, cooking and domestic science, in medicine and in military science.

Give a brief account of wireless telegraphy.

In the case of ordinary telegraphy we always make use of extended metallic wires or conductors from the place from which the message is sent to the neighborhood to which it is desired to send it. In the case of *wireless* telegraphy no such conductors exist.

Among the most interesting of the many systems of wireless telegraphy now in vogue the modern Marconi, the De Forrest, the Fessenden, and the Poulsen are noteworthy. It is, however, with the name of Marconi that the introduction of wireless telegraphy will always be directly associated.

In 1888 Hertz had demonstrated in a remarkable series of experiments the existence of electro-magnetic waves, and had even shown how these might be produced, detected, and made to exhibit all the chief phenomena of wave-motion. Marconi's great achievement lay in so controlling and regulating the dispatch and receipt of such waves as to make them record signals on a specially designed apparatus in accordance with the well-known Morse telegraphic system. His method, as first patented in 1896, was briefly as follows:

THE TRANSMITTER, by which the electromagnetic waves were generated and sent off into space in all directions, consisted of a battery connected through a key to the primary of an induction coil whose secondary terminals were joined to two brass balls between which there was a short air-gap. From one of these balls a wire was taken to earth, and from the other an aerial wire was led some distance up in the air. The closing of the primary circuit led to sparks passing across the air-gap, which produced electro-magnetic waves in the ether in exactly the same way as the dropping of a stone into a pool produces a series of concentric ripples.

THE COHERER.—To receive and interpret these waves Marconi employed a "coherer" in circuit with a battery and having connection with an aerial wire on the one side and an earth wire on the other. The coherer consisted of a small glass tube not more than, say, two inches long by one-quarter inch in diameter, into the ends of which were fused two platinum wires leading to small metallic electrodes. These electrodes were brought quite near each other, and in the narrow gap between them was placed powdered metallic silver, antimony, etc. The resistance offered by this powder was so high, on account of small air-gaps between the particles, that no current could pass through.

Electro-magnetic waves, however, possess the peculiar property of breaking down the resistance of this powder whenever they impinge upon it. Hence as soon as a wave reached the coherer, the resistance practically vanished and a current passed round the circuit. It was a mere detail to arrange that this current should actuate a relay connected with a telegraphic instrument which would record the signal, and that a hammer would at the same time tap the coherer so as to agitate the powder and "decohere" it, setting up the resistance again for a fresh signal.

IMPROVEMENTS.—Since this system was devised many most important improvements have taken place. One of the most noticeable of these was Sir Oliver Lodge's invention of tuning and syntonizing apparatus by which a transmitter and receiver are tuned to the same periodic oscillation, and thus a number of messages might be operated in the same field without interference. Lodge accomplished this to some extent by adding inductance coils and condensers to the circuits. Various other methods have been adopted to secure syntonization; but the resonance effects obtained are not great enough to make selective signaling certain.

THE GENERATOR.—In the modern Marconi system the energy for the transmitter is obtained from a generator working at one hundred and ten volts. The current is led through a key and an improved form of interruptor to the primary of the induction coil, whose secondary terminals communicate with the spark-gap. The spark-gap is in series with a condenser and the primary of a high tension transformer, of which latter one secondary terminal leads to the aerial and the other to the earth wire.

THE WIRELESS MESSAGE OVER LAND AND SEA

[919]

THE DETECTOR.—In the receptor the metallic coherer has been discarded for a magnetic detector. This instrument consists of a small glass tube through which travels an endless band of iron wires, moving round two grooved pulleys. Close to the tube are two permanent magnets, and round it is wound a primary coil consisting of one layer of wire. One end of this coil is led straight to earth; the other passes through a condenser to a tuning inductance coil leading in one direction to earth and in the other to the aerial. Above the primary coil on the glass tube a secondary coil is wound and connects with a telephone receiver. The action is simple. The electro-magnetic waves, reaching the aerial, set up oscillatory currents in the primary which act upon the magnetic field. Currents are thus generated in the secondary, which record the message in the

[920]

telephone receiver by a series of taps corresponding to the Morse dashes and dots.

TELEPHONING FROM NEW YORK TO SAN FRANCISCO BY WIRELESS

The *De Forrest system* is very largely used in the United States, Japan, and elsewhere, and in its more recent modifications secures a high efficiency by means of a number of ingenious improvements.

Describe the wireless telephony.

As in wireless telegraphy, all modern systems of wireless telephony are based upon the action of electro-magnetic waves. It is impossible here to discuss all the various methods that have been devised, but the leading principles employed may be indicated, with special reference to some of the best-known systems. They may be classified according to the methods in which the waves are produced.

SPARK DISCHARGE SYSTEMS.—These rely for the generation of the Hertzian waves upon a spark discharge across an air-gap. The *De Forrest system* is perhaps the most popular of this type. In this system the spark discharge is utilized to produce waves of a frequency not less than one hundred thousand per second, the resulting sound being inaudible at the receiving station.

A microphone transmitter is employed with this apparatus. When the operator speaks into the transmitter, the variations of resistance act upon the waves in such a way as to produce a new series of waves of such frequency as to be audible at the receiver.

The receiving apparatus includes the usual antenna, and closed secondary circuit, comprising an inductance and a variable capacity, across the terminals of which an Audion delicate detector is introduced. This instrument depends upon the motions of the ions in a rarefied gas. It is one of the most sensitive detectors yet invented, and offers the great advantage of a practically total absence of time lag in recovery.

SINGING-ARC SYSTEMS.—Duddell's discovery of the singing arc in 1909 has been quickly followed by its application to radio-telephony and radio-telegraphy, first by Poulsen and subsequently by Fessenden, Stone, De Forrest, and others. Under certain conditions the electric arc can be made to emit a musical note, while at the same time it transforms a portion of the energy of its own direct current into oscillations. These are led into an oscillation circuit containing a condenser and inductance, and associated with an antenna and earth line. The microphone transmitter may be included in a circuit associated with the inductance, in which case the voice acting on the resistance of the transmitter causes variations in the oscillating currents; or it may be associated with some part of the direct-current circuit, in which case it acts by affecting the current passing across the arc.

Any form of receiver may be used with this arc apparatus. The great advantage of this method is that the arc produces continuous oscillations of constant amplitude, and that the wave-length and frequency of the oscillations are subject to better regulation and control.

ADVANTAGES.—The advantages of wireless telephony over wireless telegraphy are many. One is that no skilled operator is required to translate the dot-and-dash signals; for in the latter one hears only long and short buzzes, whereas in the former one hears the actual spoken words. By means of wireless telephony the transmission of intelligence is far more direct and expeditious, and in times of emergency this not unfrequently becomes a very vital question indeed. An important characteristic of wireless telephonic communication is the exceptional clearness of the articulation, owing to the absence of the electrostatic capacity of metallic lines and cables which is always present in wire telephony.

Stronger currents, improved sending and receiving apparatus, and the application of new principles have now greatly extended the speaking range; and only recently distinct communication has been established by wireless telephony between New York and San Francisco. The use of the wireless telephone will be greatly extended, especially in naval, military, and shipping communication.

THE MARVEL OF X-RAYS

Röntgen or X-Rays, the most famous, and up to now by far the most useful, kind of rays associated with high vacuum tubes, were discovered by Professor W. K. Röntgen in 1895. His first observation was that a photographic plate, which was enclosed in an opaque material and which was lying by chance near the apparatus, was affected just as if it had been exposed to ordinary light. This caused him to conclude that the effect must be due to some unknown kind of rays, and the uncertainty as to their character led him to provisionally apply to them the name of X-rays, for x in algebra generally denotes the unknown quantity.

The later sensational part of his discovery was that the property possessed by a highly exhausted bulb of glass, fitted with suitable electrodes, sends out rays or electric discharges capable of passing through many bodies which are quite opaque to ordinary light, and of either affecting a photographic plate or causing a screen coated with certain chemicals to fluoresce or light up under their influence.

How are X-rays produced?

X-rays are thus produced by the discharge of a high-potential current through a special form of vacuum tube, known as a Crookes' tube. The positive terminal of an induction coil or Wimshurst machine is connected to the anode and the negative to the cathode of the tube. The anticathode is connected to the anode and is also positive. The vacuum of a tube is not perfect, and the current is conveyed through the tube by the infinitesimal quantity of air contained therein.

DIAGRAM SHOWING PARTS OF X-RAY TUBE

The "cathodal rays" which pass from the cathode to the anticathode consist of infinitesimal particles traveling at a high rate of speed; when the progress of these minute bodies is arrested, X-rays are produced. The green fluorescence on the sides of the tube opposite the anticathode, though not caused by the X-rays, demonstrate their presence.

WHAT THE X-RAYS ARE.—The X-rays are ethereal vibrations traveling with much the same velocity as light. They travel in a straight line in all directions from the point of origin, and are almost incapable of reflection or refraction.

X-rays are invisible to the eye, but have the property of rendering fluorescent certain substances—for example, calcium tungstate and barium platino-cyanide. When a screen coated with these substances is placed near the X-ray tube in a darkened room, the tungstate or barium surface emits a fairly bright fluorescence. If an object such as the hand or a lead pencil is placed between the screen and the tube, the denser parts (the bones or the graphite) appear as black shadows in a gray background.

X-rays penetrate all substances to a greater or less degree, although heavy metals, such as lead and mercury, are, for photographic or visual purposes, practically opaque to the rays.

The greater part of X-ray examination is conducted by photographic methods, as the image given by the rays on a dry plate or film show far more detail than can be seen by visual examination with the fluorescent screen.

APPARATUS.—The apparatus required consists of a suitable source of electrical energy, such as a battery or dynamo, etc., and a powerful induction or a large electrostatic influence machine, combined of course in either case with an X-ray tube and special X-ray photographic plates. Ordinary photographic plates can be used, but do not give such brilliant results. If we wish to take a radiograph of the hand, we must first of all use a plate slightly larger than the hand, and enclose it in an opaque envelope. Two such are usually employed, one red and the other black. This is placed on the table or stand, film side uppermost, and the hand is placed upon it, and a short distance above the hand is located the X-ray tube. Since what we really take is a shadowgraph picture, to give a good sharp outline, the hand should be placed as flat as possible on the plate, and the tube some six to eight inches from it.

With some of the most powerful apparatus now in use, even the human trunk can be radiographed in a single flash, which is an improvement on the exposure necessary in the early days of its use, when ten, twenty, or even forty minutes' exposure was no uncommon practice.

THE FLUORESCENT SCREEN.—When the X-rays impinge on certain substances they cause them to light up or "fluoresce" under their action. The number of bodies or chemicals which do so is very large, but for practical purposes only one or two are of any use. The best, and the one always employed, is a chemical known as barium platino-cyanide. The screen-holder consists of a box, preferably of pyramidal form, with a flattened apex or top. Inserted in this apex are two tubes, like opera-glass tubes but without lenses; through these we can look into the box in such a manner as to prevent any outside light from entering. The bottom of the box consists of the screen proper, a piece of cardboard or other suitable substance, one side (the inner) of which is coated with the substance mentioned above, because the light rays given off by the barium platino-cyanide under the action of the X-rays cannot of course penetrate an object opaque to light. The box should be absolutely light-tight except for the eye-tubes.

[921]

[922]

If such a screen be held in the neighborhood of an X-ray tube, opposite the most brilliantly phosphorescing half of the tube, it will be found to be lighted up under the action of the X-rays. If now we place between the tube and the screen an object such as the hand, putting it in as close proximity to the tube as possible, we obtain a shadowgram on the screen, varying in intensity according to the relative transparency of the different parts of the hand to the X-rays. Since the bones are far less transparent than the flesh, they cast a much denser shadow and are very distinct. On such a screen it is possible to see the beats of the heart, the rising and falling of the diaphragm, etc.

X-RAYS AT WORK.—In medical X-ray work, the patient is placed upon a couch consisting of a wooden frame covered with canvas. A box containing the tube moves on wheels and rails beneath the couch; it is lined with metal to shield the operator from the X-rays. The time of exposure depends upon the strength of current used, the power of the coil, and the condition of the tube. A "hard" tube—that is, a tube with an extremely high vacuum—requires less exposure than a "soft" or low-vacuum tube.

The condition of the tube is ascertained by finding its "equivalent spark gap." While the coil and tube are working, the terminal points of the induction coil are slowly brought together. If a spark passes between the points while they are six inches or more apart, the vacuum is too high. If no sparking takes place between the terminals till they are within three inches of each other, the tube is low. A good working spark gap distance is four and one-half inches. A soft, or low-vacuum, tube gives better definition than a hard, or high-vacuum, tube, as the rays pass less easily through dense substances and show greater differentiation of tissue. A very high vacuum tube may show but little difference between the bones and flesh, while a soft tube should give the minute structure of the bones.

TIME OF EXPOSURE.—With a current of five amperes at one hundred volts passing through the primary winding of a ten-inch coil, the exposure for a hand or foot would be from three to fifteen seconds. The exposure for the thicker portions of the body would be from twenty seconds to two minutes. If an electrolytic break is used, about half the exposure would be required. Dry plates with extra thick sensitive films are specially prepared for radiography, the development and fixation being the same as in ordinary photography. The image is sometimes barely visible on the surface of the plate during development, but when fixed the negative may give good density and definition owing to the penetration into the film of the X-rays.

KINDS OF X-RAYS.—It is now known that these rays are not all by any means of the same kind or of the same penetrative power. Moreover, these differences can be still augmented by altering what is known as the induction in the circuit, the degree of exhaustion in the tube, and the nature of the emitting surface. The emitting surface is not the glass walls of the tube, as many suppose; and the canary colored light emitted by the tube is not the X-rays, which are themselves invisible. They originate from the anode of the tube owing to the fierce bombardment to which the cathode rays subject it. Where the cathode rays, which travel in straight lines, first strike any material object, from that same object the X-rays originate.

USES OF X-RAYS.—In the early days of radiography the X-rays in medical work were confined almost solely to the detection of fractured or injured bones, and abnormal bone growth. At the present time, however, even a careful examination on the fluorescent screen is sufficient to enable an expert medical radiographer to diagnose with a considerable degree of exactitude the condition of the heart, the lungs, and the stomach. In making such examination a tube must be chosen which has the lowest vacuum, in order to obtain the maximum amount of contrast between fleshy tissue not differing greatly in density.

In some cases even the liver has been outlined and part of the kidneys.

Still more important is the fact that the rays have been applied successfully in the treatment of certain diseases which by other means have been deemed, if not incurable, at any rate extremely difficult to cure. Claims have been made for cancer cures by means of these same rays; whether these have really been complete cures or not is perhaps open to question.

X-RAY DERMATITIS.—A painful and incurable disease, of a cancerous nature, to which radiographers are liable, caused by frequent and prolonged exposure to X-rays. Many of the pioneers of radiography have fallen victims to this complaint, but greater precautions are now taken to protect the operators from the X-rays. There is little danger of contracting this disease in X-ray photography, as the exposures are short and the operator need not stand directly in front of the tube. The chief risk is entailed by visual examination with the fluorescent screen. The disease first makes its appearance in the hands and gradually spreads to the arms and body. The skin at first appears as if it had been burned, hence the term "X-ray burning."

LIQUID AIR AND ITS MARVELS OF LOW TEMPERATURE

[924]

Liquid Air in water. The silvery bubbles are liquid oxygen; the nitrogen boils away.

Filtered Liquid Air in a Dewar bulb, and Liquid Air in an ordinary glass bulb (which has collected a coating of frost).

Driving a nail with a hammer made of mercury frozen by Liquid Air.

Liquid Air boiling on a block of ice, Burning steel in an ice tumbler partly filled with

caused by the difference of
temperature.

Liquid Air.

Liquid Air is simply its gaseous form brought into liquid condition by the combined effect of lowering its temperature and subjecting it to an extreme expansion. When protected from external heat and highly exhausted it becomes a transparent, jelly-like, mass. By means of liquid hydrogen it may be condensed into a white solid with a faint blue tint.

BOOK OF THE HUMAN BODY

WHAT THE HUMAN BODY IS

ITS DIVISIONS AND SYSTEMS

GENERAL STRUCTURE OF THE BODY

FRAMEWORK: BONES, MUSCLES AND CELLS

THE DIGESTIVE SYSTEM AND ORGANS

CIRCULATION OF THE BLOOD AND RESPIRATION: HEART, BLOOD VESSELS, LYMPHATICS, LUNGS AND BRONCHII

THE EXCRETORY SYSTEM: INTESTINAL TRACT, KIDNEYS, SWEAT GLANDS, LUNGS

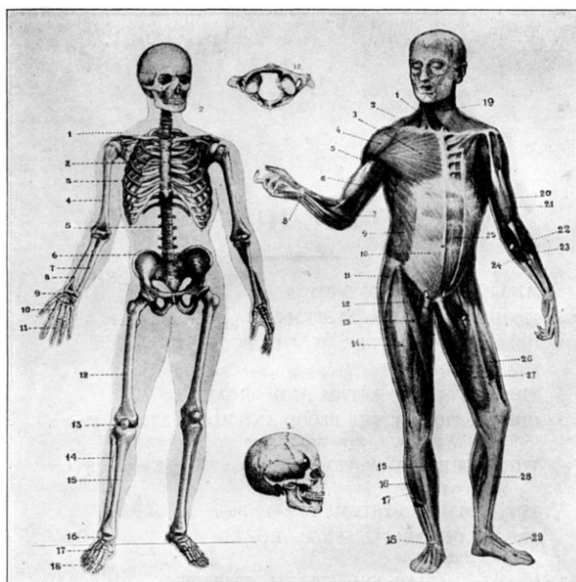

THE NERVOUS SYSTEM: NERVES, BRAIN, SPINAL CORD

ORGANS OF SPECIAL SENSE: EYE, EAR, NOSE, TONGUE, HAND AND SKIN

CHARTS, TABLES AND SPECIAL FEATURES

THE FRAMEWORK AND MUSCLES OF THE HUMAN BODY

[926]

[Large illustration \(385 kB\)](#)

PRINCIPAL BONES OF THE BODY

1. Collar Bone. (Clavicle)
2. Breast Bone. (Sternum)
3. Ribs.
4. Arm Bone. (Humerus)
5. Lumbar Vertebra.
6. Haunch Bone. (Pelvis)
7. Ulna.
8. Radius.
9. Wrist. (Carpus)
10. Metacarpus.
11. Phalanges.
12. Thigh Bone. (Femur)
13. Knee Cap. (Patella)
14. Brooch Bone. (Fibula)
15. Shin Bone. (Tibia)
16. Tarsus.
17. Metatarsus.
18. Phalanges.

PRINCIPAL MUSCLES OF THE BODY

1. Sternocleidomastoid (the muscle that bends the head).
2. Trapezius.
3. Pectoralis (chest muscle).
4. Deltoid (arm lifting muscle).
5. Coraco brachialis (rudimentary arm muscle).
6. Triceps (forearm extension).
7. Pronator radii teres (turns forearm and hand).
8. Annular ligament of wrist.
9. External oblique of abdomen.
10. Muscular sheath of abdominal erectus muscle.
11. Tensor fasciæ latae (fibrous muscle covering thigh muscles).
12. Gluteus (controls thigh and helps to keep body erect).
13. Sartorius, or tailor, muscle (enables legs to be crossed).
14. One of quadriceps extensor cruris muscles.
15. Gastrocnemius (bends the knee).
16. Long extensor of toes.
17. Peroneus longus (helps to keep foot arched).
18. Annular ligament of ankle.
19. Platyama.
20. Brachialis (moves elbow joint).
21. Biceps (flexor of arm).
22. Supinator longus (turns hand).
23. Extensor carpi radialis (extensor of forearm and wrist).
24. Flexor carpi radialis (bends wrist and turns hand).
25. Rectus abdominis (retracts abdominal wall).
- 26 and 27. Vastus externus and internus. These, with 14 and an abductor muscle, together make up the quadriceps extensor, the largest muscle in the body. It extends the leg.
28. Tibialis (extends the ankle).
29. Extensors of the toes.

The bones which make up the framework of the body are held together by joints of different kinds which allow of widely varying ranges of motion. The skull, which contains twenty-two bones in all, includes the cranium which contains the brain, and the bones which form the framework of the face. The vertebral column, which acts as a hinged and pliable tube down the center of which runs the spinal cord, is made up of twenty-four true vertebrae and the sacrum and the coccyx. The thorax, the bony box or cage protecting the heart and lungs, is made up of the twelve dorsal vertebrae with the twelve ribs on each side and the sternum or breast bone in front. The upper extremities consist of the shoulder-blade or scapula, the collar-bone or clavicle, the humerus or upper arm bone, the two fore-arm bones (radius and ulna), and the twenty-seven bones of the hand and wrist. The pelvis is composed of the two hip bones, together with the sacrum and coccyx. The female pelvis is larger in all diameters than the male. The bones of the lower extremity, which is joined to the pelvis by the head of the thigh bone (the femur), making a ball and socket joint at the acetabulum, are the two bones of the leg, the tibia and fibula; the patella or knee-cap; and the twenty-six bones of the ankle and foot.

[927]

BOOK OF THE HUMAN BODY

The study of the Human Body involves numerous other branches of science, and, as a whole, is the most complex and intricate of all the sciences. To explain its structure and workings we apply the principles of Biology, Physiology, Chemistry, Physics, Psychology, and Metaphysics.

The individual man, as a whole, is frequently forgotten both in physiology and in medicine, owing to the extraordinary minuteness and exactness with which each part and organ is examined and described. At the outset, then, it should be remembered that the human body is an organic whole, and what makes it *one* is not the similarity or unity of the machines and processes, for they are unlike and many; but it is the unity of the one governing force, the *mind*, and especially the *unconscious mind*, which presides over

the body.

Nothing in the body is merely mechanical, although there is much mechanism; all is vital, all is united in one great aim—the health and well-being of the individual.

All organs and systems are held together and formed into one body by means of a framework, partly fixed and partly movable, partly rigid and partly flexible, partly hard and partly soft.

The *skeleton* part of the framework is made of *bone*; flexibility is given to certain parts by means of joints, which are simply smoothed and rounded ends of bone covered with gristle to avoid friction, and joined together by fiber and ligament for strength. This forms the rigid and hard parts of the framework.

The flexible and soft part, which everywhere covers organs and muscles, is composed of a layer of fat to preserve the warmth, as fat is a non-conductor, and an outer covering of skin.

This framework is exquisitely adapted to give strong protection to the vital parts so that they cannot readily be injured; and the whole of the organs are so arranged and stowed away that a perfect human body is a beautiful object full of symmetry and graceful curves and lines.

Divisions of the Body.—If we divide the body into six parts—four limbs, trunk, and head and neck—we find each part contains about thirty bones (counting the ribs in pairs) there being about *two hundred* in the entire body.

The height of the body depends mainly on the length of the bones of the lower limbs.

Everything in Pairs.—In the body almost everything is paired, right and left, giving it symmetry. There are but five central bones: two in the head, one in the throat, and the breastbone and backbone (or spine); and there are but five single muscles, all the rest—out of many hundreds—being in pairs. In the interior, where economy rather than symmetry is required, it is not so; there being as many single organs as there are double.

The Body Viewed as a Machine.—A favorite way of looking at the body as a whole is to regard it as an anatomical machine. In this view the body has an internal skeleton, of which the chief feature is the central axis or backbone.

Considering the skull and backbone as one, the body may be said to be built up of two tubes. The smaller posterior or neural tube includes the cavity of the skull and the vertebral canal. Within this tube is lodged the nervous center, or engine, of the body. The anterior, or body, tube is much larger, consisting of the face above, and the neck and trunk below, and it contains the *four nutritive systems* of life, so that the whole body in section is like an eight with the lower circle immensely exaggerated. The limbs, of course, are not tubular, and merely form part of the machinery.

Adopting the simile of the human engine and boiler and machinery, we see that the limbs, etc., are the machinery; the posterior tube the engines and force that move them; and the anterior tube the human boiler that generates the force. This boiler, like one in a steam engine, has an upper and lower part. The upper part is where the steam is generated (in lungs) and sent to the engine (the brain) by the heart. The lower part is where the fuel is burned (the stomach) and the ashes and refuse drop through (the intestines). So that the analogy between the two is close and striking.

Centers of Control.—There are two distinct seats of government in the human body: the one in the *upper brain*, or cortex, the other principally in the very center of the human body. That in the upper brain, or cortex, is the human will and the conscious mind. It has absolute control given to it over the animal part of the human life—that is, over the part that consists in the using of force, which includes the nervous and locomotor systems, and the special senses.

Nutritive Systems.—The other government, situated in the lower part of the brain and spinal cord and in the center of the body—in front of the spine and behind the stomach—is of an entirely different order. To put this more plainly: The four systems that lie in the body—*digestive, circulatory, respiratory, and excretory*—may be termed the nutritive systems, being designed for the maintenance and storage of life-forces. They are almost entirely under the control of the involuntary nerve centers, and have full and undisputed sway over life itself—that is, over the generating and storing of vital force, rather than over its usage.

SYSTEMS AND ORGANS OF THE BODY

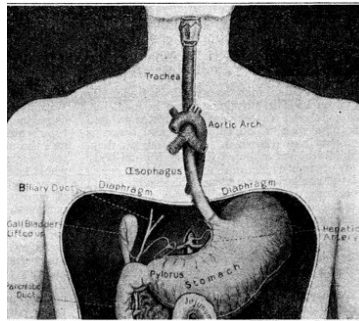

How the Body is Built.—In a building such as the body it is well to begin with the *unit*—the building unit. In a house this is a brick or a stone; in all living structures, animal and vegetable, it is a *cell*.

All living structures, whether animal or vegetable, are built up of cells (which we shall consider in due course), and these cells are grouped together for different purposes to form different tissues. The *tissues* are the different materials of which the body is made. There are eight principal tissues in the body: *bone, gristle, muscle, nerve, skin, fat, fiber, and connecting tissue*.

ORGANS OF CHEST CAVITY IN RELATION TO STOMACH

THE BRONCHIAL TUBES

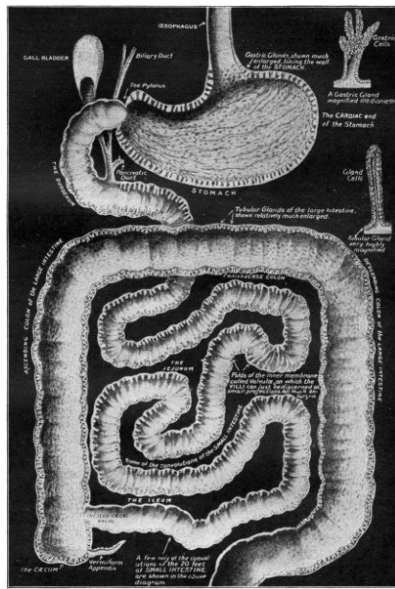

ORGANS INVOLVED IN FIRST STAGES OF DIGESTION

DIAGRAMS DISCLOSING HEART AND CONNECTIONS, RIBS AND LUNGS

- (1) The *Osseous*, or bone tissue, is the framework of the body. This material is found, of course, in every part of the body and forms the skeleton.
- (2) The *Cartilaginous*, or gristle, forms the joints of the body. This tissue covers the ends of the bones to form the joints; it unites the ribs with the breastbone; it forms the rings of the windpipe and the lid of the larynx at the back of the tongue; the lower part of the nose, the upper eyelid, and the ear.
- (3) The *Muscular*, or muscle, forms the machinery of the body. This tissue covers all the bones with flesh, which is muscle, and is the chief part of a number of machines by which every movement is performed. It is also an important tissue in the wall of the abdomen and the floor of the chest.
- (4) The *Nervous*, or nerve tissue, is the moving power of the body. It is the chief constituent of the brain and the spinal cord, inside the backbone or spine. It also forms the nerves, which run like white threads from the brain to all the muscles, and give them power to move.
- (5) The *Epithelial*, or skin, forms the outer covering of the body. This tissue is the skin that covers the body outside, and lines it as mucous membrane inside, and also forms the teeth and nails.
- (6) The *Adipose*, or fat, forms the under covering of the body. This tissue is the inner protective sheathing and padding of the body, beneath the skin, and round the internal organs. It consists of drops of oil, enclosed in separate cells.
- (7) The *Fibrous*, or fiber or sinew, is the tissue that forms the cords and bands of the body. This tissue makes the strong tendons that fasten the muscles to the bones, and forms the covering or sheath of the bone itself, and the various organs.
- (8) The *Connective*, or cementing tissue, joins all the parts and cells of the body together. This substance is found everywhere, all over the body, and is like the mortar in a house, fastening all the bricks together. It is a sort of network of cells and long fibers.

DIAGRAM ILLUSTRATING THE ALIMENTARY CANAL

Large diagram (345 kB)

Special Systems.—These eight tissues are combined together into various groups of *organs* or *systems* for special purposes. These groups are six in number, and include: the *circulatory*, *respiratory*, *digestive*, *excretory* or *secretory*, *locomotor*, and *nervous systems*. There is also the *reproductive system*, which has to do with the propagation of the race, and involves many important and vital questions.

We may divide these six into three groups:
There are two in the chest:

(1) The *Circulatory system* is that by which the blood or liquid food is distributed throughout the body to all the tiny cells. This system includes the *heart* or force-pump, and the *arteries*, *capillaries*, and *veins* or the three kinds of pipes through which the blood travels.

(2) The *Respiratory system* is that by which we breathe, and by which the body is fed with oxygen, which gives the blood its bright red color. This system includes the nostrils and mouth, the windpipe and the lungs.

Then there are two in the abdomen, or stomach:

(3) The *Digestive system*, by which all the food is made into liquid and changed so as to nourish the body and pass into the blood. This system includes the mouth, gullet, stomach, liver, pancreas, intestines, and other organs.

(4) The *Secretory*, or *excretory*, system (for they are best grouped as one) manufactures the various fluids of the body, such as bile, urine, sweat, saliva, gastric juice, etc. It consists of various glands or secretory organs in different parts of the body, such as those in the skin, the kidneys, the lymphatic glands, the spleen, etc. It also gets rid of the refuse of the body.

Lastly, there are two in the head and limbs:

(5) The *Locomotor system*, by which all movement is effected. This includes the bones, joints, and muscles.

(6) The *Nervous system*, by which all the body is controlled, directed, and regulated. This system includes the brain, spinal cord, and the special senses, such as the ear, the eye, and all the nerves.

The Human Chest, or Thorax.—In it, the blood is purified and circulated. The *thorax* is closed above and below: above, by the neck, through which the windpipe enters it in front, conveying air to the lungs; and by the *gullet* behind, conveying food to the stomach. Below, the floor, dividing it from the abdomen beneath, is formed by a very large muscle stretching right across the body, called the *Diaphragm*, or partition wall; also called the *Midriff*. The thorax is walled in at the sides by the ribs, and behind by the backbone in which is the other tube that contains the spinal cord. The thorax contains the two organs of *respiration* and *circulation*.

The *lungs* are the organs of respiration. They are like two sponges filling the right and left halves of the chest. Wherever you can feel a rib there is part of the lung underneath. Each of these lungs is contained in a bag, like a skin, that separates it from the ribs, and is called the *pleura* (from *pleuron* = a *rib*), but the lung is not *inside* the bag.

The *outer* layer of the pleura is fixed to the side of the chest, the *inner* layer to the lung, and the two layers move on each other like a joint when we breathe.

The lungs are full of small air-cells with minute tubes leading from them. These gradually increase in size as they join together, till at last they unite in one large tube, or bronchus, for each lung. These two bronchi join together, and form the *windpipe*, or *trachea*, which conveys the air through the larynx into the mouth.

The windpipe is kept stretched widely open by a series of elastic rings of gristle. Behind the windpipe is the gullet, leading to the stomach.

PERICARDIUM OF THE HEART LEFT AURICLE AND LEFT VENTRICLE

The heart, the main pump of the circulatory system, rests on the diaphragm between the two lungs. The heart is enclosed in a smooth, moist membrane or sac, the pericardium, which allows it to dilate and contract without friction against the adjoining parts. There are four cavities in the heart, the right and left auricle, and the right and left ventricle. The auricles, which are thinner walled, collect blood from the veins, while the thicker and stronger walled ventricles force the blood into the arteries. The left auricle pumps the purified blood into the left ventricle, the valve between the auricle and ventricle opening to allow this passage. When the left ventricle is full the valve between its chamber and that of the auricle closes, the ventricle itself contracts down, and the blood is pumped out through the aorta to supply all the tissues of the body.

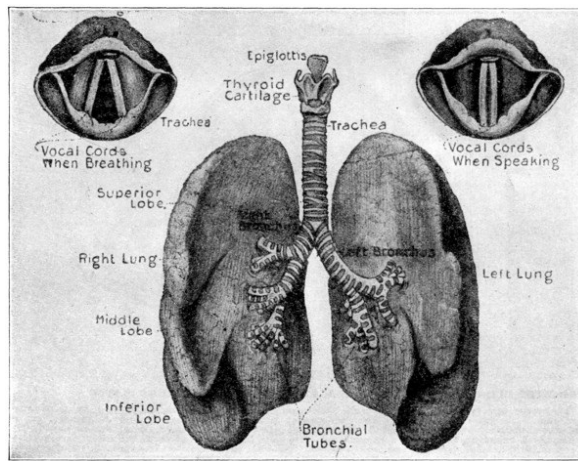

After leaving the left ventricle through the aorta the purified blood is carried to the head, arms, trunk, and lower limbs, etc. Finally, after being deprived of its oxygen as it passes through the tiny end-arteries, or capillaries, of the tissues it has to nourish, it is collected in the veins and is emptied into the right auricle. Passing from the right auricle to the right ventricle, this impure blood, which is of a dull purplish color, is pumped into the lungs, where it is deprived of its waste gases and once more takes up a fresh supply of oxygen. Bright scarlet in color again, it now is collected and carried to the left auricle by the pulmonary veins. From the auricle it passes through the mitral valve to the left ventricle, whence it is once more pumped out through the aorta to supply the tissues.

RESPIRATORY SYSTEM OR AIR PASSAGES OF THE BODY

Left: larynx from behind. Middle: cross-section of the pharynx. Right: section through larynx.

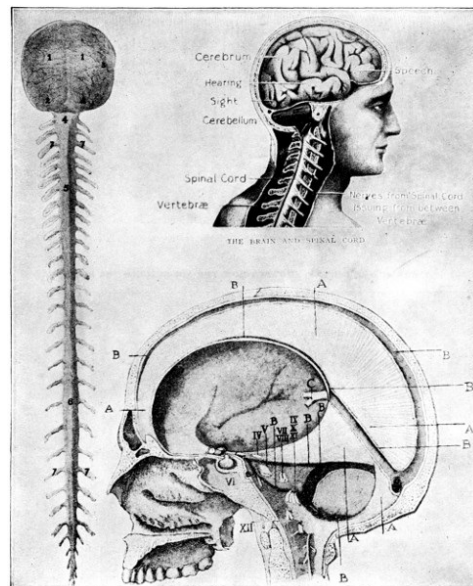

VIEWS OF THE LARYNX, SHOWING HOW THE AIR REACHES THE LUNGS

The organs of respiration are the nose, throat, larynx, windpipe or trachea, and the two lungs. On the outer walls of the nasal cavities are three shelves known as the turbinated bones, the surfaces of which contain blood-vessels to heat the air as it passes through the nose. The mucus which constantly forms on the lining membrane of the nose and the little hairs in the nostrils, act as screens, preventing dust being breathed into the lungs. The pharynx is the cavity behind the nose, mouth and larynx. The larynx forms a prominence in the throat known as the "Adam's Apple." It contains the vocal cords, the vibrations of which, as air from the lungs passes through them, give rise to voice sounds. The epiglottis is a cartilaginous curtain above the larynx which blocks up its entrance when food is being swallowed. The trachea or windpipe is a continuation of the larynx. Shortly after entering the chest it divides into two main branches, the right and left branches, which lead to all parts of the lungs. The lungs, two spongy, air-filled organs, take up most of the space in the chest-box or thorax. The smallest end-branches of the bronchial tubes open into numerous tiny sacs known as the air vesicles, in the walls of which the end-branches of the capillaries ramify. Here the impure gases in the blood escape through the vessel walls into the air vesicles, while the oxygen breathed into the lungs is taken up the same way by the blood in the vessels.

HOW THE HUMAN BODY IS CONTROLLED BY THE BRAIN

[932]

CORD WITH DURA MATER

THE ARRANGEMENT OF THE DURA MATER

Large illustration (375 kB)

The nervous system consists of (1) the brain; (2) the spinal cord; (3) the nerves which run off from these structures; and (4) the sympathetic system. The chief mass of the brain is known as the cerebrum, or fore-brain, the small mass at the lower part being termed the cerebellum, or little brain. From the brain, which is contained within the bony skull, twelve pairs of cranial nerves proceed. The most important of these are the first or nerve of smell, the second (sight), eighth (hearing), and twelfth (taste). The fifth, one of the most important nerves of sensation, has three main branches running to the orbit and forehead, the jaws and teeth, and the skin of the face. Six of the twelve pairs of cranial nerves govern the movements of different parts (motor nerves), others have to do with the special sense organs, taste, smell, hearing, and sight (sensory nerves), and others are a combination of motor and sensory nerves. The spinal cord is a continuation of the brain, and is contained in the hollow canal running through the vertebrae of the spine. From it thirty-one pairs of nerves originate. The nerves which run to the arm are collected in a network called the brachial plexus. In the same way the great nerves to the leg come together in the lumbar plexus. The sympathetic nervous system consists of a main nerve trunk running downward along the spine from the skull to the coccyx. This sympathetic system communicates indirectly with the brain and spinal cord, and also with all the great arteries and other important structures in the abdomen.

The dura mater is the strong external cranial membrane which adheres to the skull and also penetrates into the cavities of the brain, dividing it into partially separate compartments. These dividing portions of the dura mater may be seen at A, A, in the diagram above. B marks the various venous blood sinuses of the brain, which receive blood from veins in the different parts of the brain, and, merging into one large sinus (seen at lower right of diagram), afterwards become the jugular vein. C is the great cerebral vein. The Roman numerals mark the great cranial nerves.

We take air into the lungs to pass thence into the blood, and thus be carried to all the cells of the body to enable them to live and breathe.

The Heart.—The heart is at the lower part of the chest, between the two lungs. It is a fleshy or muscular organ, about the size of the fist—flat above, and pointed below like a sugar-loaf. It lies in a slanting direction behind the breastbone—the broad part, or the base, of the heart being upwards and partly to the right of the breast-bone; the point, or apex of the heart, being downwards and to the left, where it can often be seen beating against the chestwall.

The heart is hollow, and acts like a pump, forcing the blood all over the body through the great vessel that leaves the heart at the upper part. The heart, like the lungs, is enclosed in a double layer of folded bag, called the pericardium, because it is round the heart.

The gullet runs right down the back of the thorax, and passes out through the diaphragm, which forms the floor, into the abdomen.

The abdomen forms the lower half of the trunk, and is often called the stomach. It is full of organs belonging to the digestive system and secretory system, by which the fuel or food is rendered fit for use in the blood and the body.

The walls of the abdomen are not protected by ribs like the thorax, but are all formed of flesh or muscle. The principal organs they contain are the stomach, the liver, the pancreas, or sweetbread, the spleen or milt, the kidneys, the intestines, and the bladder.

The Human Brain.—The head and spine contain the principal nervous systems of the body and four organs of special sense—sight, hearing, smelling, and tasting. The brain, which fills the head, consists of two parts: the Cerebrum, or greater brain, and the Cerebellum, or lesser brain, placed behind and below the larger one. From this brain, nerves run to every muscle of the body, enabling them to move the limbs and body as the mind directs; and another set of nerves run from every part of the body and skin to the brain, enabling the mind to know and feel all that goes on.

The brain is connected with the spinal cord by a flat band of brain matter, that lies on the inside of the occipital bone, called the Medulla Oblongata, or the Oblong Marrow. The spinal cord runs through a large hole in the occipital bone and right down the open tube formed by the spinal vertebrae, to the bottom of the backbone, and, all along its course, nerves leave it and enter it, as in the brain.

The organ of sight consists of the two eyes, which receive every image that we see, and transmit it to the brain. The organ of hearing consists of the two ears, by which we receive all the waves of sound that we hear, and transmit them to the brain. The organ of smell is in the upper part of the nose; the organ of taste at the hinder part of the

[933]

tongue.

The organ of the voice is contained in the *larynx* in the neck, which joins the head to the body. Just under the chin in front of the neck you can feel what is called the *Adam's Apple*, which is the front of the larynx, or voice-box, by which the air coming out of the lungs is formed into sounds.

The sounds are formed into words by the *mouth, tongue, and teeth*.

PERMANENT TEETH AND THEIR NAMES

UPPER JAW: 1, 2, incisors; 3, canine; 4, 5, premolars; 6, 7, 8, molars.

LOWER JAW: 1, 2, incisors; 3, canine; 4, 5, premolars; 6, 7, 8, molars.

THE FIVE GATEWAYS OF KNOWLEDGE

These gateways—which we otherwise name the Organs of the Senses, and call in our mother speech, the Eye, the Ear, the Nose, the Mouth, and the Skin—are instruments by which we see, and hear, and smell, and taste, and touch: at once loopholes through which the soul gazes out upon the world, and the world gazes in upon the soul.

THE EAR: THE MARVELOUS ORGAN OF HEARING

The ear is divided into three parts:

- (1) The external ear, made up of the outer portion and passage-way which leads up to the drum.
- (2) The middle ear or drum, the continuation of the ear passage internal to the drum membrane, and
- (3) The internal ear containing the labyrinth and the nerve of hearing.

DESCRIPTION OF THE EXTERNAL EAR

The outermost part, the skin-covered *auricle*, contains no bone, being simply a mass of cartilage covered by skin. It acts as a sound catcher and improves the hearing by directing sound-waves into the opening or external *meatus*. This meatus or passage-way runs directly inward for an inch and a half. The inner half of the passage-way runs through solid bone, ending abruptly at the membrane or sounding-board of the ear.

THE JOURNEY OF SOUND WAVES TO THE BRAIN

This diagram shows the marvelous structure of the ear, and how sound reaches the brain. There is marked similarity between the ear and a telephone receiver by which we are able to receive messages from the outside world. Hearing is simply the result of sound-waves striking the drum of the ear which set in vibration the bones of the middle ear, and they in turn vibrate the drum of the inner ear. This sets in motion a fluid, and the wave motions are conveyed along the spiral staircase to the wires, or nerves of hearing, and from there to the telephone exchange, or brain.

Large illustration (398 kB)

DESCRIPTION OF THE MIDDLE EAR

This part begins at the inner surface of the membrane, and extends inward for about a quarter of an inch. The outer surface of the membrane can be seen by the observer on pulling the top of the auricle or fleshy part of the ear a little upward, so as to straighten out the somewhat curved passageway or meatus. The membrane which is placed transversely across the meatus is whitish-pink or yellowish color.

WHAT THE MIDDLE EAR CONTAINS

The chief contents of the cavity of the middle ear are three tiny bones called the *malleus* or hammer bone, the *incus* or anvil bone, and the *stapes* or stirrup bone. In addition, an important nerve called the *chorda tympani* passes across the middle ear chamber. The three little bones contained in the middle ear may be looked upon as the connecting link between the outer ear, which gathers the sounds, and the internal ear, which transmits the effect of the sound waves to the brain, where they are translated into what we call hearing.

From without inward the three little bones lie touching each other, end to end, the outer end of the first bone being implanted between the layers of the drum membrane and the inner end of the innermost bone, fitting into a tiny opening which connects the middle ear with the internal ear. As the result of their lying touching each other, any movement of the ear drum caused by a sound wave striking against its outer aspect, moves the malleus bone; this, in turn, moves the middle incus, and this passes the movement on to the innermost part of the stirrup. This, in turn, passes the movement onward to the fluid or *perilymph* in the outermost part of the internal ear, and here the endings of the nerve of hearing receive the stimuli which we recognize as "sounds." (See [Plates](#).)

THE TWO IMPORTANT TUBES OF THE MIDDLE EAR

In addition to these contents of the middle ear there are also two tiny openings which, very necessary for health, are nevertheless sometimes a pathway by which serious disease may attack the ear and destroy the hearing. The first is a small passage-way leading from the upper part of the middle ear cavity through the bone to the *mastoid antrum*, a hollow space in the prominent mass of bone to be felt immediately behind the ear projecting outward and downward from the skull.

The second passage-way opening into the middle ear cavity is that of the Eustachian tube which leads directly to the back of the throat. The importance of this tube is that through it air can find its way directly into the middle ear, so that the air pressure on the two sides of the drum is always kept the same. If it were not for some such arrangement the pressure on the outer side of the drum would become greater than that on its inner surface. This would, of course, push the drum inward, and greatly reduce its mobility.

EXPLANATION OF THE INTERNAL EAR

This is a complicated structure of bony passages curled on themselves, roughly as in a snail shell, and lined with a delicate membrane. This membrane is, so to speak, floating in fluid. The layer of fluid between it and the bone is called the *perilymph*, while the two layers of the membrane enclose a similar fluid termed the *endolymph*. The internal ear or membranous labyrinth may be divided roughly into three chief parts: (1) the cochlea, the true organ of hearing; (2) the semi-circular canals, which control the act of balancing; and (3) the vestibule, or introductory chamber to the semi-circular canals.

The cochlea is a collection of three tubes curled up on themselves in snail-shell fashion.

The central canal of these three is the connecting link by which the sound waves, passed along over the three tiny bones—the malleus, incus, and stapes—finally reach the endings of the main nerve of hearing, the auditory nerve. (See [Plate](#).)

[936]

THE EYE AND ITS WONDERFUL STRUCTURE

The human eye is a hollow globe containing fluids and the crystalline lens. Surrounded by its muscles it lies embedded in a cushion of fat in a conical bony hollow called the orbit. Through an opening in the bones making up the back of the orbit, the optic nerve leads from the back of the eye to the brain.

THE EYELIDS AND EYE-LASHES

The eyelids are made of layers of muscle and cartilage with an outer surface of skin and an inner surface which is a continuation of the conjunctiva that covers the eyeball. In the edge of the eyelid a series of tiny glands are embedded. The mouths of these open on the margin of the lids. The eye-lashes, whose duty it is to act as a screen, preventing foreign bodies such as dust or other air-born objects getting into the eye, are also inserted in the edge of the lid.

WHAT MAKES THE TEARS FLOW

About one-eighth of an inch from the internal angle of the eye, a small projection is to be seen on the margin of the lid. In the center of this is a tiny opening through which the tears as they collect in the eye are led away through two small canals to the lachrymal sac in the upper part of the nose. The lachrymal gland, which secretes the tears, or water, of the eye, is situated above on the outer side of the eyeball, between it and the bones of the orbit. The lachrymal gland is constantly secreting tears, which are carried by narrow ducts to the upper surface of the eyeball, whence they flow down over the eye, finally being collected at the inner corner of the eye and passing into the nose through the lachrymal punctures described above. Under certain circumstances, as from emotion, a blow, or the irritation of a cold wind, the tear fluid is secreted faster than it can escape through the punctures, and so flows over the lids and down the cheeks.

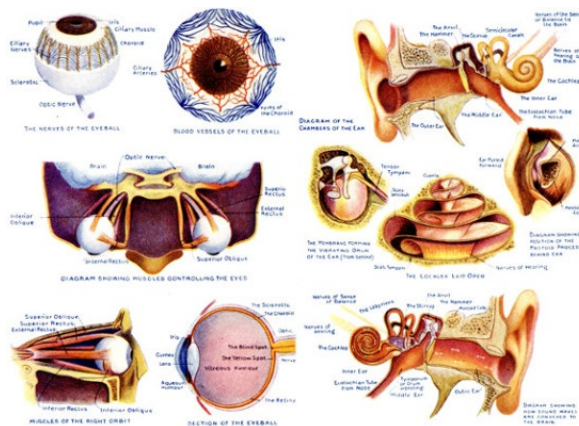

HOW THE EYE IS HELD IN PLACE

The eye is held in its socket or orbit by (1) the optic nerve, (2) by its six muscles attached to various points of its circumference, (3) by the conjunctiva, which is reflected off from its attachments to the outer coat of the eye directly on to the lids, and (4) by the eyelids themselves. (See [Color Plate](#).)

HOW THE EYE IS CONSTRUCTED

The *cornea* is the transparent, bulging, central portion of the eye covering the pupil and the colored iris. Made of tiny transparent cells closely packed together, the cornea is not nourished by blood carried to it by the blood-vessels but by lymph which permeates through it in the tiny channels between the cells. By its curved surface it plays a part in focusing rays of light on to the lens situated just behind the iris.

PICTURE DIAGRAMS SHOWING THE DELICATE STRUCTURE OF THE EYE AND EAR

Large illustration (441 kB)

Directly behind the cornea come the *iris* and *pupil*. The latter is nothing more than a hole in the center of the iris through which light enters the eye.

[937]

HOW THE LIGHT IS REGULATED

The iris is the screen of the eye. Just as the photographer uses a screen with a large opening when he wants more light to enter his camera and a small opening when he requires less, so Nature arranges that the iris automatically contracts or dilates to make a larger or smaller pupil opening, according to the amount of light needed within the eye for purposes of vision. When the light is very bright less is needed in the eye. Thus in brilliant artificial light at night one's pupil is small. On the other hand, when the light is waning, as in the dusk or semi-darkness, the pupil is enlarged by the iris contracting down to a narrow ring under the outer circumference of the cornea.

WHAT DETERMINES THE COLOR OF THE EYE

The color of the eye depends on the position and amount of pigment cells in the iris. In the dark brown eye there is an abundance of pigment scattered through the substance of the iris as well as in the front layers nearest the surface. In the blue eye the pigment cells are buried deep in the iris and are fairly plentiful in amount. The colorless eye of the albino is the result of a deficiency of pigment in the iris.

The iris is fixed at its outer circumference, but its inner rim, which makes the border line of the pupil, is free, so that when the iris contracts the pupil becomes larger, since its inner free margin is drawn outwards toward the fixed outer margin. Close up against the deeper surface of the iris comes the crystalline lens.

WHY AND HOW WE SEE

The lens is a compact body of transparent cells, concave in form, and closely similar to the glass lens of a camera. The lens of the eye, however, differs from the camera's glass lens because it changes its shape in focusing for objects at different distances. This focusing, which takes place automatically, is known as "accommodation."

The object of the change in the shape of the lens is that no matter at what angle the rays of light reflected from the object looked at fall on the outer surface of the lens (through the opening in the iris), they may be accurately focused on the surface of the retina, or lining membrane at the back of the eye. When looking at a distant object the lens is fairly flat, because when in this position the rays of light will be accurately focused on the retina. If the eye is now turned to an object near at hand the rays of light from the object are more divergent than in the previous case, and if the lens retained its previous shape they would fail to be focused accurately on the surface of the retina. Hence Nature has arranged that the lens of the eye is elastic, automatically becoming flatter by the action of the ciliary muscle when distant objects are looked at and rounder or deeper when nearer objects are looked at.

EFFECT OF AGE UPON THE LENS

Up till middle age the eye retains in full this power of automatic accommodation. From middle age onward, however, the lens becomes less and less elastic. As a result the lens constantly remains more or less flattened. Although vision for objects at some distant from the eyes remains perfect, oldish people very frequently have to wear glasses (to correct the too great flatness of the natural lens) to obtain clear vision of objects close at hand.

WHAT HOLDS AND SURROUNDS THE LENS

The lens is slung in a ligament that is a part of the "ciliary body," which is a continuation of the choroid coat of the eyeball. This ciliary body is a ring of tissue lying behind the lens connected with the anterior portion of the choroid coat of the eye.

Between the iris and the underlying lens on the one hand and the inner surface of the bulging cornea on the other is a small space or cavity filled with a clear transparent fluid called the *aqueous humor*.

THE COATS OF THE EYE

Looking at the white of the eye, the first coat is the transparent conjunctiva, which is reflected back on to the eyeball from the eyelids. Next comes the sclerotic coat, formed of dense whitish tissue, which seen through the transparent conjunctiva makes up the "white of the eye." The sclerotic coat covers the whole globe of the eyeball with the exception of the transparent bulging cornea in front (which, however, is practically a continuation of the sclerotic), and the back of the eye where the optic nerve enters. The sclerotic is the thickest and densest coat of the eye.

Within the sclerotic coat, and so to speak lining it, comes the choroid coat. Countless blood vessels run through this coat, supplying both the one above it and that beneath it. As this coat approaches the front of the eye under the circumference of the cornea, it thickens into the ciliary body, forming a dense ring of tissues underneath the junction of the cornea and the sclerotic coat.

THE WORK OF THE RETINA

The innermost coat of the eye is called the retina. This coat contains the nerve endings of the optic nerve which, coming through the opening in the bony orbit, passes through the sclerotic and choroid coats. After entering the eye, the optic nerve divides into myriads of fibers, which, spreading from the point of entrance at the back of the eye, form a fibrous network all over its inner surface. In addition to this network of nerve fibers and highly specialized nerve cells, tiny blood vessels entering with the optic nerve branch out on all sides over the retina.

THE RODS AND CONES

The retina is a comparatively thick membrane composed of eight layers of different kinds of nervous tissue. The essential layer, that of the "rods and cones," is the seventh from within outward. Thus a ray of light on entering the eye must pass through six superficial layers before it reaches the "rods and cones."

The "rods and cones" are lying on a layer of colored or pigment cells whose duty it is to prevent diffusion of light within the eye. The eyeball, therefore, is to all intents a camera obscura, the iris representing the shutter, the crystalline lens the camera lens, and the layer of "rods and cones" the sensitive plate. When a ray of light falls on the layer of the "rods and cones," this layer receives a nervous stimulus which is conveyed by the optic nerve to the brain. *It is these sensations which the brain translates into what we term sight.*

Where the optic nerve enters the back of the eye, there are no "rods and cones," hence rays of light falling on this portion of the retina send no stimulus to the brain; in other words, images falling on the "blind spot" are not visible.

The "yellow spot" is a small area at the center at the back of the eye where the retina is very thin, consisting of little more than a single layer of "cones." Images which fall upon this region are seen with the greatest distinctness.

HOW THE SENSE OF SIGHT IS PRODUCED

Sight is a nervous sensation due to the translation by the brain of the effects caused by rays of light being reflected from some object in front of the eye on to the innermost layer of the eye, the retina.

When an object is looked at, rays of light which reach the object from some source of light (such as the sun, a lamp, etc.) fall on the transparent outer part of the eye, the cornea. On account of its curved surface these rays of light are more or less bent inward so as to fall more or less perpendicularly on the forward anterior convex surface of the lens. If the light is weak or dim, the iris, which lies in front of the lens, will automatically contract down so as to make the opening by which the rays can enter the posterior chamber of the eye (the part behind the lens) as large as possible.

If the light is very bright the muscle fibers in the iris will relax so that the iris itself gets larger, and its central opening smaller, so that too much light may not enter. Passing through the lens the rays are focused by the lens so that they are brought together to a point exactly on the surface of the retina.

Here their presence has a certain effect on the rod and cone layer of the retina, the result of which is conducted along the optic nerve to the brain, where it is transformed into what we know as sight.

HOW WE ARE ABLE TO TASTE, SMELL AND FEEL

HOW THE NERVES RUN INTO THE SPINAL CORD ON THE WAY TO THE BRAIN

The lower drawing shows how the spinal cord rests in the backbone, and how the nerves pass in and out, those of sensation passing into the spinal cord, as shown in the magnified section above.

THE AREAS OF THE TONGUE IN WHICH THE CELLS OF TASTE ARE DISTRIBUTED

The tongue is covered with various types of taste-bulbs, most of the distinct types that appreciate the sweet, the acid, and the bitter being found in the areas marked on the diagram.

THE OUTER SIDE OF THE NOSE, SHOWING THE NERVES OF SMELL AND FEELING

THE INNER PART OF THE NOSE, SHOWING THE FIBRES FROM THE OLFACTORY BULB

THE NOSE: ORGAN OF SMELL

The nose is composed partly of bone and partly of cartilage, the cartilages being firmly attached to the bones and to one another by fibrous tissue. The bridge consists of the two nasal bones which are projections of the frontal bone of the forehead. From these are continued the nasal cartilages which form one-half to two-thirds of the external nose.

The interior is a large and complicated chamber divided into the right and left nares, or nostrils, by the partition called the *septum*. This, like the external part, consists of cartilage in front, attached to bone at the back.

The Nostrils, opening on the face in front, run backward for about two inches and open into the pharynx behind. But the single canal is divided into three separate passages some distance inward. This division is effected by the turbinated bones which jut out into the nostril and thus form the upper, middle, and lower air-channels. In this way the warm surface with which cold inhaled air comes in contact is greatly enlarged.

From the mouth cavity the nose is separated by the hard palate. On the external nose, scattered near the tip, are numerous hairs, sebaceous glands, and sweat glands. These glands are very liable to get blocked, giving rise to inflamed spots, and when hairs are pulled out small abscesses are apt to form.

Membrane.—The whole of the interior surface is lined with mucous membrane, and as this has a large area, and is very well supplied with blood, it raises the temperature of inspired air. The mucous membrane of the nose is continuous with that of the pharynx. Any inflammation, such as that which constitutes a "cold in the head," is therefore extremely liable to extend backward and finally reach the bronchial tubes and lungs.

Over this membrane spread a multitude of small threads or nerves resembling the twigs of a branch; there are many such branches within the nostril, and they join together so as to form larger branches, which may be compared to the boughs of a tree. These finally terminate in a number of stems, or trunks, several for each nostril, which pass upward through apertures provided for them in the roof of the arched cavity, and terminate in the brain.

We have thus, as it were, a leafless nerve-tree whose roots are in the brain, and whose boughs, branches, and twigs spread over the lining membrane of the nostril. This nerve is termed the *Olfactory*.

When we wish to smell anything—for example, a flower—we close our lips and draw in our breath, and the air which is thus made to enter the nose carries with it the odorous matter, and brings it in contact with the ramifications of the nerve of smell. Every inspiration of air, whether the mouth is closed or not, causes any odorous substance present in that air to touch the expanded filaments of the nerve.

In virtue of this contact or touching of the nerve and the volatile scent, the mind becomes conscious of odor, though how it does so we know as little as how the mind sees or hears; we are quite certain, however, that if the olfactory nerve be destroyed, the sense of smell is lost.

Besides its endowment by the olfactory nerve, or nerve proper of smell, the nostril, especially at its lower part, is covered by branches of another nerve (known to anatomists as the fifth), of the same nature as those which are found endowing every part of the body with the susceptibility of heat, cold, smoothness, roughness, pleasure, and pain. It is on this nerve that pungent vapors, such as those of smelling-salts, strong vinegar, mustard, and the like, make the sharp impression with which all are familiar.

Can the Sense of Smell be Educated?—The extent to which the sense of smell may be educated far exceeds what most imagine can be realized from this sense. There are probably as many odors as there are colors or sounds; and the compass of one nostril in reference to the first, likely differs as widely from that of another, as the compass of the eye or the ear does in reference to the last two. The wine merchant, the distiller of perfumes, the manufacturer of drugs, the grower of scented plants, the epicure in things savory, the tobacco dealer, and many others, have by long training educated themselves to distinguish differences of odor which escape an uneducated and unpracticed nostril, however acute by natural endowment.

Perfumes.—Much importance attaches to the use of perfumes by both ancient and modern civilized nations. But all the ancient nations who had attained to civilization, were addicted to the use of perfumes to an extent to which no modern people at the present day affords any parallel. Not merely as contributing to the luxury of the body were perfumes so prized. They were used at every sacred ceremonial; lavishly expended at the public religious services; and largely employed at the solemn rites which were celebrated at the burial of the dead.

THE TONGUE: THE ORGAN OF TASTE

The organ of taste is generally held to be synonymous with the tongue, but, in reality, the throat and the nostril are as much concerned as the tongue in the perception of taste. The power of these portions of the body to distinguish savors mainly depends, as in the case of the eye and the ear, upon their connection with the brain through those fine white nerves which have been already referred to. The tongue and the auxiliary organs of taste are largely supplied with nerves, and through them those sensations are experienced which we connect with the words taste, savor, sapidity; sweet, salt, sour, bitter, and the like.

Membrane of the Tongue.—At certain points the membrane of the tongue forms distinct folds, containing fibrous or muscular tissue, which act to a certain extent as ligaments to the tongue. The most considerable of these folds is termed the *frænum* (or bridle) of the tongue, and connects its anterior free extremity with the lower jaw. Other folds of mucous membrane pass from the base of the tongue to the epiglottis; while from the sides of the base, passing to the soft palate, are seen two folds on either side, the "pillars of the fauces."

The upper surface of the tongue is divided into two parts by a long furrow, commencing at the tip, and extending back about two-thirds of the tongue's length.

Muscles of the Tongue.—The muscles of the tongue are usually divided into two groups—*viz.*: the *extrinsic* muscles, which attach the tongue to certain fixed points external to it, and move it on them; and the *intrinsic* muscles, which pass from one part of the tongue to another, constitute its chief bulk, and move it on itself. These intrinsic muscular fibers run vertically, transversely, and longitudinally, and are so interlaced as mutually to support one another, and to act with the greatest advantage.

The Bulbs of Taste.—The mucous membrane is invested by stratified cells, which, over the surface of the tongue, cover little vascular projections termed, papillæ. At the back of the tongue are some eight or ten papillæ of quite a different nature, called "circumvallate." They are arranged to form a V with its angle pointing backward. In the epithelium lining the trenches between the papillæ, curious little bodies called taste-bulbs are lodged. Each taste-bulb looks like a flask-shaped barrel or box, the walls of which are composed of flat elongated cells fitted side by side like the staves of a cask. The taste-bulbs open each by a little pore into the trench, and into the deeper part a nerve enters. The impressions are carried by the nerve directly to the brain in either the fifth or the ninth cranial nerves.

Before the substance can stimulate the terminals it is necessary for its aromatic principles to be in solution. This is generally effected through the agency of the saliva.

Four distinct gustatory qualities are appreciated by the sense of taste—sweetness, bitterness, acidity, and salinity. The intensity of the sensation of taste varies with (1) the area of the surface stimulated, (2) the concentration of the stimulant, (3) the length of the period of application, and (4) the temperature of the substance tasted. Tractile impressions, such as harshness, coolness, and astringency, are erroneously attributed to taste.

Mis-Educated and Educated Taste.—Of all the organs of the senses, that of taste is probably the one which receives the worst usage at our hands. The eye, the ear, and the nose are not educated at all, or their education is left to chance, but the tongue is deliberately mis-educated, perverted, and led astray. We eat what we should not eat; drink what we should not drink: eat too much of what we may eat, and drink too much of what we may drink. And the result is, that we ruin our health, enfeeble our bodies, dull our intellects, brutalize our feelings, and harden our hearts.

Yet assuredly taste has its legitimate domain, and it is as unworthy of man's true dignity that he should be content to live upon the husks that the swine do eat, as that he should be miserable if he do not fare sumptuously every day. All the other senses have a direct interest in the practical decisions of the sense of taste. Drunkenness and dyspepsia dim the eye, dull the ear, blunt the nostril, and make the hand tremble.

A Victim to the Other Senses.—The sense of taste, in truth, is at the mercy of the other senses; and though it can revenge itself for their neglect or misuse of it, it is a sufferer by its own revenge.

Helpless, selfish, and exacting, the dependent of the other senses, and the servant of the body rather than of the soul, it frequently links us more with the lower animals than with higher existences, and has no element of ethereality about it.

A feast, indeed, may furnish pleasure to every sense, but it is usually not till hunger is appeased that the higher senses are ministered to. But the tongue, as the organ of taste, is the commissary-general, without whose supplies the other senses can achieve no conquests, and it is entitled to its share in the honors assigned to the united five; but its own sword is seldom drawn, and its aspect is not heroic.

THE HAND: CHIEF ORGAN OF TOUCH

The last of the bodily senses is *Touch*. It has the widest gateway, and largest apparatus of them all; for though we are in the habit of speaking of it as localized in the fingers, it reigns throughout the body, and is the token of life in every part. The nearest approach to death which can occur in a living body, is the condition of paralysis or palsy, a death in life, marked in one of its forms by the loss of that sense of touch which is so marked an endowment of every active, healthy creature.

The tactile susceptibilities of the skin depend, as do the peculiar endowment of the other organs of the senses, on its plentiful supply with those wondrous living nerves, which place in vital communication with each other all the organs of the body, on the one hand; and that, mysterious living center, the brain (and its adjuncts), on the other.

Our simplest conception of an organ of sense is supplied by the finger, which whether it touches or is touched, equally realizes that contact has been made with it, and enables the mind to draw conclusions regarding the qualities of the bodies which impress it. Now, after all, every one of the organs of the senses is but a clothed living nerve conscious of touch, and they differ from each other only in reference to the kind of touch which they can exercise or feel. Keeping in view that to touch and to be touched is in reality the same thing, so far as the impression of a foreign body is concerned, we can justly affirm that the tongue is but a kind of finger, which touches and is touched by savors; that the nostril is touched by odors; the ear by sounds; and the eye by light.

The *Hand* is emphatically the organ of touch, not merely because the tips of the fingers, besides being richly endowed with those nerves which confer sensitiveness upon the skin of the whole body, possess in addition an unusual supply of certain minute auxiliary bodies, called "tactile corpuscles," but because the arrangement of the thumb and fingers, and the motions of the wrist, elbow, and arm, give the hand a power of accommodating itself spontaneously to surfaces, which no other part of the body possesses. Moreover, when we speak of the hand as the organ of touch, we do not refer merely to the sensitiveness of the skin of the fingers, but also to that consciousness of pressure upon them in different directions, by means of which we largely judge of form.

When a blind man, for example, plays a musical instrument he is guided in placing his fingers, not merely by the impression made upon the skin of them, but also by impressions conveyed through the skin to these little bundles of flesh called muscles, which move the fingers.

In many respects the organ of touch, as embodied in the hand, is the most wonderful of the senses. The organs of the other senses are passive, the organ of touch alone is active. The eye, the ear, and the nostril stand simply open: light, sound, and fragrance enter, and we are compelled to see, to hear and to smell; but the hand selects what it shall touch, and touches what it pleases. It puts away from it the things which it hates, and beckons toward it the things which it desires; unlike the eye, which must often gaze transfixed at horrible sights from which it cannot turn; and the ear, which cannot escape from the torture of discordant sounds; and the nostril, which cannot protect itself from hateful odors.

Moreover, the hand cares not only for its own wants, but, when the other organs of the senses are rendered useless, takes their duties upon it. The hand of the blind man goes with him as an eye through the streets, and safely threads for him all the devious ways; it looks for him at the faces of his friends, and tells him whose kindly features are gazing on him; it peruses books for him, and quickens the long hours by its silent readings.

It ministers as willingly to the deaf; and when the tongue is dumb and the ear stopped, its fingers speak eloquently to the eye, and enable it to discharge the unwonted office of a listener.

The organs of all the other senses, also, even in their greatest perfection, are beholden to the hand for the enhancement and the exaltation of their powers.

It constructs for the eye a copy of itself, and thus gives it a telescope with which to range among the stars; and by another copy on a slightly different plan, furnishes it with a microscope, and introduces it into a new world of wonders.

It constructs for the ear the instruments by which it is educated, and sounds them in its hearing till its powers are trained to the full.

It plucks for the nostril the flower which it longs to smell, and distills for it the fragrance which it covets.

As for the tongue, if it had not the hand to serve it, it might abdicate its throne as the "Lord of Taste." In short, the organ of touch is the minister of its

[941]

[942]

sister senses, and, without any play of words, is the handmaid of them all.

And if the hand thus munificently serves the body, not less amply does it give expression to the genius and the wit, the courage and the affection, the will and the power of man. Put a sword into it, and it will fight for him; put a plow into it, and it will till for him; put a harp into it, and it will play for him; put a pencil into it, and it will paint for him; put a pen into it, and it will speak for him, plead for him, pray for him.

What will it not do? What has it not done? A steam engine is but a larger hand, made to extend its powers by the little hand of man! An electric telegraph is but a long pen for that little hand to write with! All our huge cannon and other weapons of war, with which we so effectually slay our brethren, are only Cain's hand made bigger, and stronger, and bloodier!

What, moreover, is a ship, a railway, a lighthouse, or a palace—what, indeed, is a whole city, a whole continent of cities, all the cities of the globe, nay, the very globe itself, in so far as man has changed it, but the work of that giant hand, with which the human race, acting as one mighty man, has executed its will!

What an instrument for good it is! What an instrument for evil! and all the day long it never is idle. There is no implement which it cannot wield, and it should never in working hours be without one. It is the one universal craftsman. For the queen's hand there is the scepter, and for the soldier's hand the sword; for the carpenter's hand the saw, and for the smith's hand the hammer; for the farmer's hand the plow; for the miner's hand the pick; for the sailor's hand the oar; for the painter's hand the brush; for the sculptor's hand the chisel; for the poet's hand the pen; and for the woman's hand the needle.

For each willing man and woman there is a tool they may learn to handle; for all there is the command, "Whatsoever thy hand findeth to do, do it with all thy might."

Such are the five entrance-ways of knowledge, which John Bunyan quaintly styles Eye-gate, Ear-gate, Nose-gate, Mouth-gate, and Feel-gate.

BOOK OF BIOGRAPHY

I. CLASSIFIED BIOGRAPHICAL CHART BY CENTURIES:

CHRONOLOGICAL ARRANGEMENT OF THE GREAT MASTERS OF ACHIEVEMENT FROM THE EARLIEST TIMES TO THE PRESENT

THE WORLD'S IMMORTALS: IN RELIGION AND MORAL REFORM, GOVERNMENT, LITERATURE, FINE ARTS, PHILOSOPHY AND EDUCATION, SCIENCE, AND INDUSTRY.
THE WORLD'S LEADERS TO-DAY

II. PRONOUNCING DICTIONARY OF BIOGRAPHY: CHRONOLOGICALLY ARRANGED BY CENTURIES

III. MISCELLANEOUS TABLES AND CHARTS

(Biographical Chart only included in Single Volume Edition.)

THE WORLD'S IMMORTALS AND MASTERS OF ACHIEVEMENT IN RELIGION, GOVERNMENT, LITERATURE, FINE ARTS, PHILOSOPHY, SCIENCE AND INDUSTRY—TABULATED BY CENTURIES AND CLASSIFIED

[944-947]

NOTE—The names of the world's *greatest* masters are set out in CAPITALS in the respective columns. In general the names are placed in the centuries associated with the greatest achievements of each individual.

Centuries	Religion and Moral Reform Founders of Systems, Great Leaders, Heads of Religious Bodies, Moral and Humane Reformers	Government Rulers, Military Leaders, Statesmen, Publicists, Diplomats, Jurists	Literature Poets, Dramatists, Historians, Orators, Essayists, Novelists	Fine Arts Architects, Sculptors, Painters, Musicians	Philosophy and Education Philosophers, Educators, Psychologists, Moralists, Logicians	Science and Industry Inventors, Discoverers, Engineers, Naturalists, Physicists, Mathematicians, Chemists, Physicians, Biologists
4000 B. C. to 1000 B. C.	Abraham, Heb. patriarch. MOSES, Heb. lawgiver and leader. Samuel, Heb. judge and leader. ZOROASTER, Persian religious leader and reformer.	Menes, Egyptian king. Lugalzaggisi, Babylonian ruler. Sargon I., Babylonian king. Hammurabi, Babylonian ruler and lawgiver. Khufu (Cheops), Egyptian king. Thothmes I., Egyptian king. Thothmes III., Egyptian king and reformer. Rameses II. (Sesostris), Egyptian king. Amenhotep IV., Egyptian king.	Literature existed in mere fragments until the time of Homer. HOMER, Greek poet. Ptah-hot-ep, Egypt, moralist.	Early architecture, sculpture and painting made notable advances under Babylonians, Assyrians, Egyptians and Hindus; but no great individual names were connected with it until the time of the Greeks.	Philosophy had its rise among the Egyptians and Hindus, followed by the Greeks.	Astronomy was the first science cultivated in the world. It was known to the Babylonians, Assyrians, Egyptians, Greeks and Chinese.
1000 B. C. to 700 B. C.	Isaiah, Hebrew prophet (8th century B. C.)	David, Hebrew king and poet (10th century B. C.) Solomon, Hebrew king (10th century B. C.)
7th Cent. B. C. to 600 B. C.	Jeremiah, Hebrew prophet. Daniel, Hebrew prophet.	Josiah, king of Judah. Cyaxeres, king of Media. Draco, Greek legislator.	Sappho, Greek poetess.
6th Cent. B. C. to 500 B. C.	Ezekiel, Hebrew prophet. CONFUCIUS, Chinese moralist. BUDDHA, founder of Buddhism.	Nebuchadnezzar, king of Babylonia. Solon, Greek lawgiver. Pisistratus, tyrant of Athens. Croesus, king of Lydia. Cyrus the Great, Persian king. Darius I., king of Persia.	Æsop, Greek fabulist. Anacreon, Greek poet. ÆSCHYLUS, Greek poet.	...	Thales, Greek philosopher. Pythagoras, Greek philosopher.	...
5th Cent. B. C. to 400 B. C.	...	Xerxes, king of Persia. Hiero, tyrant of Syracuse. Artaxerxes I., king of Persia. Artaxerxes II., king of Persia. Miltiades, Greek general. PERICLES, Greek statesman. Cimon, Greek commander. Themistocles, Greek statesman.	Pindar, Greek poet. Xenophon, Greek historian. HERODOTUS, Greek historian. Euripides, Greek poet. SOPHOCLES, Greek poet. Thucydides, Greek historian. Aristophanes, Greek humorist.	Zeuxis, Greek painter. PHIDIAS, Greek sculptor. Ictinus, Greek architect. Polyclethus, Greek sculptor and architect.	SOCRATES, Greek philosopher.	Hippocrates, Greek physician.
4th Cent. B. C. to 300 B. C.	...	Philip, king of Macedon. ALEXANDER THE GREAT, Greek conqueror. Ptolemy Soter, governor of Egypt. Seleucus Nicator, king of Syria. Epinondas, Greek statesman and general. Phocion, Greek general.	DEMOSTHENES, Greek orator. Æschines, Greek orator. Menander, Greek comic poet.	Apelles, Greek painter. Praxiteles.	PLATO, Greek philosopher. ARISTOTLE, Greek philosopher.	EUCLID, Greek geometer.
3rd Cent. B. C. to 200 B. C.	...	Pyrrhus, Greek king of Epirus. Ptolemy (Phil), king of Egypt. Antiochus Soter, king of Syria. Ptolemy (Ever.), king of Egypt. Antiochus the Great, king of Syria. Scipio Africanus, Roman general. Fabius Maximus, Roman general. Philopœmen, Greek general. HANNIBAL, Carthaginian general.	Plautus, Roman comic poet. Ennius, Roman poet. Manetho, Egyptian historian. Bion, Greek poet.	...	Epicurus, Greek philosopher. Zeno, Greek Stoic philosopher.	Archimedes, Greek mechanician.
2nd Cent.	...	Judas Maccabæus.	Cato, Roman

<i>B. C.</i> 200 B. C. to 100 B. C.		Jewish leader. Marius, Roman general. Sulla, Roman general, dictator. Cato, Roman censor. Mummius, Roman general.	historian. Terence, Roman comic writer. Polybius, Greek historian.

Centuries	Fine Arts Architects, Sculptors, Painters, Musicians	Philosophy and Education Philosophers, Educators, Psychologists, Moralists, Logicians	Science and Industry Inventors, Discoverers, Engineers, Naturalists, Physicists, Mathematicians, Chemists, Physicians, Biologists
4000 B. C. to 1000 B. C.	Early architecture, sculpture and painting made notable advances under Babylonians, Assyrians, Egyptians and Hindus; but no great individual names were connected with it until the time of the Greeks.	Philosophy had its rise among the Egyptians and Hindus, followed by the Greeks.	Astronomy was the first science cultivated in the world. It was known to the Babylonians, Assyrians, Egyptians, Greeks and Chinese.

Emile Berliner, German-American inventor (1851- ----). Henry Ford, American automobile manufacturer (1863- ----). William Randolph Hearst, publicist and newspaper publisher (1863- ----). First Baron Alfred Charles William Harmsworth Northcliffe, English newspaper proprietor (1865- ----). Orville Wright, American inventor and aeronaut (1871- ----). Captain Roald Amundsen, Norwegian explorer and navigator (1872- ----). Robert Edwin Peary, American arctic explorer and officer U. S. N. (1856- ----). Phebe Apperson Hearst (née Apperson), American philanthropist (1842- ----).</p>

The above picture shows Florence Nightingale at the ancient town of Scutari, opposite Constantinople, during the Crimean war. It was here and in the Crimea that this gentle Englishwoman laid the foundation for the systematic relief of the intense suffering that is a necessary part of war, and which later led to organized army hospitals and the associated work of the Red Cross. A highly educated and brilliantly accomplished woman, she early equipped herself as a trained nurse, and devoted her life to the alleviation of suffering and distress.

THE MOTHER AS TEACHER—Sculptured by E. Delaplanche

In the above masterpiece we have a vivid and sympathetic portrayal in eternal marble of the universal mother-instinct to instruct and educate her children. This she does in accordance with the measure of her own mental equipment, her previous advantages, and a mother love which frequently means patience, sacrifice and anxiety. But the instinct is always present and must continue while the human race lasts—ever *onward* and upward.

THE CHILD WORLD

[THE GROWING BODY](#)—[WORK AND STUDY](#)—[FOOD](#)—[THE NERVOUS SYSTEM](#)—[PUBERTY](#)—[REST AND SLEEP](#)—[THE EYE](#)—[THE EAR](#)—[OTHER SENSES](#)

THE HEALTH OF CHILDREN DURING SCHOOL LIFE

Children begin school life at an age which is, unfortunately, one of the greatest importance in their physical development. It is a truism that no mechanism, whether animate or inanimate, can do two things at once and get as good results as when all its efforts are being directed toward one object. So it is obvious that any vital energy used in developing a young child's brain must be taken away from the amount that had hitherto been entirely devoted to physical growth. Too often this fact is lost sight of both by energetic teachers and ambitious parents.

Instead of being delighted with the rapid development of the child's mind, parents should receive any evidences of abnormal advancement with some suspicion of its true worth.

WHEN THE CHILD FIRST GOES TO SCHOOL

At the age of six, when the average child first goes to school, practically everything he sees is new and interesting, and worthy of deep consideration. His brain gets no rest from the time he wakes until he goes to sleep at night.

To do its work, the brain needs a full and active blood supply, and this it will take often at the expense of leaving an inadequate amount for the demands of the rest of the body.

Curiously enough, excessive mental activity seems to have no stunting effect on the growth in the way of height. It is in breadth and thickness that the body suffers. Everyone is familiar with the tall, lanky boy or girl in the early teens who is said not to care much for games and exercise, and is, unfortunately, "rather delicate." This youngster is almost certain to be pointed out by the proud parents as being extremely well up in his studies.

Short of encouraging laziness or indolence at school, it really makes very little difference to the ordinary man or woman, so far as their adult mental attainments go, whether they were ranked as fairly good scholars or fairly poor ones when they were young children. On the other hand, the effort necessary to be made by a sensitive, not over-brilliant child to keep a good place among its fellows may have a serious physical effect that will hamper him or her throughout life.

WHAT NATURE'S DOCTORS PRESCRIBE FOR CHILDREN

[962]

The effort should be made when a child is first sent to school to determine just how much work he can do comfortably and happily. If an attempt is made to force him to do more than this, he will become depressed and worried. With children, any mental worry will shortly produce unmistakable signs on the physique. It is a bad plan to attempt to get as much as possible out of a child; there should always be a certain amount of vital energy left for emergencies.

[963]

IMPORTANT CONDITIONS AFFECTING THE CHILD'S LESSONS

With young children, no lesson should last for more than half an hour, and if possible, a short interval between each lesson should be spent in the open air. If the young scholar is notably in advance with his school work, discourage this; or, at any rate, carefully consider whether his health will allow such active development. If backward and seemingly lazy, the cause of the indolence should be sought first in the physical condition before the character is assailed.

Above all, no child under fifteen should have to do any routine night study to keep up in his lessons. Young eyes are easily strained, and young bodies are easily tired. Watch a tired child who has to study at night; he will get his body in the most comfortable position he can manage, and will take no thought of the direction from which the light falls on his page. Nor has he the energy to hold his book so that the plane of the lines is always parallel to that of his eyes.

His mind may accumulate a little extra book knowledge by such work, but only at the risk of strained eyes and possible spinal defects. Lateral curvature

of the spine, in a great majority of cases, may be traced back to habitual faulty postures used by children when at school work. A fair rule to make about night work is to allow a child to study at home only so long as he will comfortably sit upright and hold his book at a correct angle.

In children, the physical state is a very good guide to the mental condition. If the body is tired, the mind is in no fit state to absorb knowledge. The thin, narrow-chested, delicate youth, perhaps with strained eyes and nearly always with a good school record, is nine times out of ten a preventable mistake.

If, when first he showed signs of more than average scholarship, his parents had noted that this superiority was due principally to work done when physically tired, and to neglect of outdoor games and general "play," a little sense of the comparative worth of health and youthful scholarship would have given him a greater chance of developing into a valuable citizen.

THE PROPER TIME FOR WORK

A child's brain, and its body as well, are in the prime of their vigor during the morning hours. From nine till noon, therefore, should be the period of the hardest mental or physical work he undergoes. Evening preparation of lessons is harmful, not only because it tends to bring into a state of high activity the brain, which shortly should be quiet and ready to sink into slumber, but also because it throws hard work on an already fatigued organ. Much of the nervousness, debility, and insomnia so common among school children can be traced to evening preparation.

NCESSITY OF ABUNDANT FOOD

The more actively growing the tissues, the greater the need for abundant nourishment. The growing child, therefore, requires more food in relation to his size and weight than does the grown person who has passed the stage of rapid development.

No fixed rule can be laid down as to how much a child should eat. Generally speaking, the country-bred child, living an outdoor life, may rely on his own appetite as a guide. On the other hand, the city child, living a more indoor artificial life, may have little appetite, and as a result, if not watched, may lapse into a condition of malnutrition simply through underfeeding. The best guide, perhaps, is the child's weight. If he is continually below weight, this fact may in all cases be taken as proof either that the child's food is unsuitable to its age and digestive powers, or else deficient in amount.

EFFECT OF THE SEASONS ON THE NERVOUS SYSTEM

The effect of the change in seasons is much more marked in children than in grown people. In the Spring in particular the watchful mother should keep a careful eye on the health of her little ones. "There come with the Spring in many children," writes a noted physician, "a restlessness and excitability, a perversity and irascibility of temper, or a listlessness, and indisposition for exertion that are not displayed at other times; and there come then, also, more plentifully than at other seasons, physical indications of debility and the scrofulous habit, such as enlarged glands and tonsils, dyspepsia and loss of appetite, strumous ophthalmia, discharges from the ear, and enlargements of joints."

The moral is that since the body is growing fastest (and therefore has the greatest need of husbanding its vitality) in the Spring time, any extra pressure on the nervous system as from prolonged school hours, or any undue exertion, should be strenuously avoided. Unfortunately with the "final" examinations in the early summer, our school systems demand that the hardest and most strenuous work of preparation falls in the Spring time, the season at which the body is least fitted to withstand abnormal stress.

When a child or growing boy or girl becomes more nervous in the Spring time than is his usual habit, or becomes depressed in mind, or constantly complains of being tired, the only common-sense treatment is to put an end at once to all schooling for the time being, and to turn the child out-of-doors every day for all the hours of sunlight.

THE PERIOD OF PUBERTY AND ITS SPECIAL PROBLEMS

Parents should ever be watchful regarding the education of their young children when they approach the age of puberty, that is, the period when the child begins to develop into the man or woman.

Profound and rapid changes take place at this period in mind, brain, the nervous system, the glandular system, and, one may indeed say, in the body generally. The nerve centers temporarily lose some of their normal stability, and such conditions as insanity, hysteria, and epilepsy, rare in childhood, now become common. Even though no actual nervous disease develop, there is quite commonly during this change from childhood to adult life a period of nervous excitability and exhaustion accompanied by physical weakness, which to a great extent unfits the young person for close pursuit of his or her studies. Particularly in young girls is there the greatest necessity for curtailing any tendency to overwork at school during this period.

CONDITIONS OF BONES AND MUSCLES AT THE PERIOD OF PUBERTY

At this time there is also rapid growth and development of the bones which lengthen rapidly, and are still soft and cartilaginous in places. It is all-important at this period, therefore, that the muscles on the two sides of the body receive roughly the same amount of use, otherwise there is grave danger of some deformity, such as lateral curvature of the spine, developing.

While the bones are in this condition of rapid development, all muscle-straining attitudes, such as sitting upright at a desk, practicing at the piano, writing, painting, etc., should be kept within such limits as never to entail real fatigue. Young girls at this period, even more than boys, require all their strength and vitality to support them in their rapid growth. This does not mean, however, that all muscular exercises must be forbidden during the period of puberty, which may be reckoned as from twelve to sixteen in girls, and from thirteen to sixteen in boys. The point is that violent, really fatiguing exercise, such as hockey, hunting, cycling tours, mountain climbing, etc., as well as all occupations which entail the holding of the muscles tense and fixed in one position for a long period, should be indulged in very sparingly, if at all. The young girl can obtain all the exercise necessary for health in less strenuous outdoor pursuits such as golf, croquet, a little not too strenuous tennis, walking, etc.

GENEROUS HOURS OF SLEEP SHOULD BE ALLOWED

While moderate mental work does not in the healthy grown person necessitate an increase in the amount of sleep, the child at school, constantly using his brain in the accumulation of new ideas, needs an even more generous proportion of sleep than if his brain were not so occupied. Again, if the child shows any signs of nervousness, he ought to be allowed to sleep a little longer than the more stolid non-temperamental child. The following is the average duration of sleep required at different ages:

4 years of age	12 hours
7 years of age	11 hours
9 years of age	10½ hours
14 years of age	10 hours
17 years of age	9 hours

Up to the approach of puberty (the change from childhood to adult life) a child may well be allowed to sleep a little later in the morning in the winter than in summer. Again, if as is frequently the case, he should suddenly commence to grow in height very rapidly an extra hour or half-hour in bed may be of the greatest service in weathering the strain of the rapid growth.

PRECAUTIONS TO PREVENT SLEEPLESSNESS

Insomnia is sometimes very troublesome in young children, demanding most painstaking treatment. Most important in encouraging the habit of going to sleep immediately on being put to bed is regularity in the hour of bedtime. Unless the child is put into bed at a certain fixed hour with clock-like regularity, the habit of getting sleepy (which is such an important factor in going to sleep) cannot be normally developed.

Sometimes a subdued, shaded light will soothe a nervous child's excited brain and so induce sleep. A child who wakes in terror in a pitch-dark room may for years be nervous about going to bed in the dark. Any attempt to stamp out this tendency to nervousness by refusing a comforting glimmer of light in the room may bring on a habit of sleeplessness on first going to bed which may be difficult to eradicate. Sometimes a softly-ticking clock, by affording a sense of companionship, encourages the child to drop off to sleep.

MENTAL QUIETUDE AND GOOD VENTILATION

Another factor in encouraging sleep is a quiet mental state, which is best brought about by the strict avoidance of all exciting games or other mental activities for at least an hour before bedtime. School lessons prepared in the evening are a fertile source of insomnia in children. The brain, keyed up to working at full pitch, cannot quiet down at its owner's wish, and its unwonted activity may banish sleep for an hour or more.

While free ventilation is essential in the child's sleeping-room, it should never be forgotten that the young are more susceptible to cold than are grown people, and have not the same power of generating extra body heat to replace any undue loss of warmth from exposure to outside cold. The temperature of the child's bedroom, therefore, should be kept between 55° and 60° F. If below this, a general feeling of chilliness, and in particular of cold feet, may be the cause of sleeplessness.

Apart from the discomfort and misery caused by the feelings of chilliness, cold feet lead to the adoption of postures in bed which are anything but conducive to health.

BENEFICIAL EFFECTS OF THE BATH

In nervous children who sleep badly, a hot bath or a hot mustard foot bath often acts like a charm, the child falling into deep sleep almost as soon as it has been tucked in bed. The warmth, by dilating the blood-vessels, on the surface of the body in the case of the full bath, or of the feet in the case of the mustard foot-bath, draws blood away from the brain and so, reducing its activity, allows it to quiet down into sleep.

[964]

[965]

[966]

Where did you come from, baby dear?
 Out of the Everywhere into here.
 Where did you get those eyes so blue?
 Out of the sky as I came through.
 What makes the light in them sparkle and
 spin?
 Some of the starry twinkle left in.
 Where did you get that little tear?
 I found it waiting when I got here.
 What makes your forehead so smooth and
 high?
 A soft hand stroked it as I went by.
 What makes your cheek like a warm white
 rose?
 I saw something better than anyone
 knows.
 Whence that three-cornered smile of bliss?
 Three angels gave me at once a kiss.
 Where did you get this pearly ear?
 God spoke, and it came out to hear.
 Where did you get those arms and hands?
 Love made itself into bonds and bands.
 Feet, whence did you come, you darling
 things?
 From the same box as the cherubs' wings.
 How did they all just come to be you?
 God thought about me, and so I grew.
 But how did you come to us, you dear?
 God thought about you, and so I am here.

(The above poem was written by George MacDonald, Scottish novelist and poet; born 1824, died 1905. He wrote a long list of novels, stories and poems. His children's poems and stories are deservedly popular, and contain numerous passages of singular beauty, lighted up with fine fancy and descriptive power.)

HOW THE DUTCH DOLLS PLAY THE GAME "ALPHABET"

*Above are the big and little letters of the Alphabet.
 Below is a story with all these letters in words.*

I saw the big ox when I went to the Zoo

last week.
 It was in a den by the cave and stood
 near the bars.
 I thought it looked quite fierce when it
 stared at me.
 It made me jump when it put its nose out
 of the bars.
 A man fed the ox with some hay that he
 got from a box.
 It then lay down on the hard floor and
 had a nap.
 I should not like to be in the den with the
 ox.

[969]

It is not a proper test of a child's advance that he should be able to read very early. Neither do we now make the teaching of reading the chief object in first lessons. Rather does the child learn first to master the difficult art of connecting spoken sounds with written signs somehow, on the happy road from babyhood to schooldays, while his mother still holds him by the hand.

The training of your boy's ear in detecting the sounds that go to make up the words he uses is of the very first importance. You encourage him in the use of language by getting him to talk freely about what you do together, describing in his own pretty way the flowers, birds, toys, pictures that he loves. All the time you are gently insisting on perfect pronunciation, clear, pleasant modulation of his speaking voice, quiet breathing through the nose. Presently, when you see he is quite ready for it, you lay stress on the sounds made at the beginning and end of such words as cat, dog, puss, pig. He will soon copy quite accurately the sounds of the various consonants, and find other words beginning or ending with similar sounds to those in the examples you give.

Later will come the vowel sounds, and patient work will be needed to make him see the difference in the various sounds of a, o, and so on. At this stage it will amuse him to have a looking-glass before him to see how the shape of his mouth alters when speaking. Let him practice working the muscles round his lip and moving his tongue freely. It will also help if he sings the vowels, thus—take deep breath, sing a (as in father) as long as the breath lasts; take breath, sing a (as in fate), in same way; and so on with all the vowel sounds.

You will, of course, make a table of all the sounds you teach him for your own use, with lists of suitable words, and something has really been accomplished in the numberless five-minute sound-lessons when the child can break up the words he uses into the sounds that go to make them—b-u-n, bun; f-i-g, fig.

So much for the first training in recognizing and reproducing the sounds.

And now we come face to face with the much-discussed question—when and how is a child to learn the letters (the printed signs of sounds) and the names given to these letters? Some children settle this question for themselves by "picking up" these letters and their names from picture-books and blocks with little outside help, but they will find it useful later on to know the *names* of the letters and the *order* of the alphabet. See to it that your boy learns to call the letters by their sounds, not their names, and help him to realize that the letters are the *signs of the sounds*, used to tell us what sounds we are to utter.

You have a sand-tray? Let the fat little finger practice making a round *o* in it, while the rosy lips form the long *o*, as in *no* and *lord*, the short sound, as in *not*; or tracing crooked *s* while he hisses like the geese on the common, or says "puss," "sat," and so on.

If you have a box of good, plain letters, let him pick out the *m* in *mouse*, the *t* in *table* and in *rat*. Your small blackboard will come in handy, for he will be most happy to print on it in chalks the letters as he learns them. Let him model their shapes in clay, draw and paint them in colors, make them out of slips and curves of colored cardboard, varying the practice as much as possible; and see to it that he is never bored. He will soon greatly enjoy identifying and cutting out large and small letters as he learns them from advertisements in big type, and pasting them in a "letter" scrapbook, made by fastening together a few sheets of brown paper. Guide him to class together *v* and *f*, *r* and *l*, *s* and *z*, *b* and *p*, *m* and *n*, *t* and *d*, and the vowels in their order, with a whole page to themselves—this with a view to the time when he begins to study seriously.

But that is looking far ahead. We have now brought him to the point of being ready for his first reading lesson. But do not hurry; give his eyes plenty of distance work, plenty of training in reading Nature's wide-open book, before you put printed books into his hands. He is to be a keen lover of books, so make him want to read, and see to it that he is interested and happy every moment of the time given to his reading lesson.

Here is the method:

Buy three copies of some well-printed simple stories; put one copy aside, and cut up the other two, pasting the sheets on drawing-paper, alternate pages face down, so that you get one complete copy out of the two books.

Now cut up, line by line, and then word by word, the first little story, and put the words in a small tray or box. Perhaps it is, "Thank you, pretty cow." So now print on your blackboard two or three of the words—*cow*, *milk*, *pretty*, the child earnestly watching and listening while you say the words very distinctly, giving the component sounds as clearly as you possibly can.

[970]

Then hand him the tray, and let him pick out the words and name them as you have done. Proceed in the same way with a few more words of the story, printing them as you go in a column on the board, and when he knows them up and down, in and out, the great moment has arrived. Your heart will beat as you put the little book—the copy that was not cut up—into his hands. He can read, so much at any rate, quite readily.

Note that there must be no spelling; it is "look and say." Next day you take word-building with the box of letters, and a fine game you have, based on the words learned the day before. Add letters and syllables in every way you can think of, always giving sounds, not names; let the boy read, copy, take from dictation these new words for a happy twenty minutes. He is now learning to spell, that he may be able to write with the sound signs. Go on like this, reading one day, word-building the next, till several sets of little books have been used up.

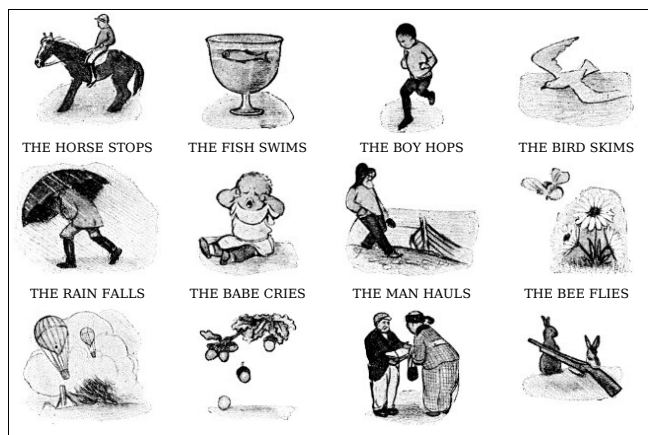

Let him dramatize the little stories and poems whenever you can; take parts with him, thus laying the foundation of real, live reading aloud, without any disfiguring mannerisms or self-consciousness. His stock of words grows apace—ten a day will give over three thousand in a year—and little by little, as opportunity offers, the more complex sounds in our language and its puzzling irregularities are unfolded and made familiar. Thus reading, elocution, spelling, writing, all advance together.

The study of Nature should go hand in hand with the study of books. Children love the outdoors—the trees, the flowers, the grass,—all living things. Nature trains the special senses, awakens the powers of observation, and creates a love of both the beautiful and the useful.

THE CHILD'S PICTURE GRAMMAR—NOUNS AND VERBS
 A NOUN IS THE NAME OF ANY THING—A VERB TELLS WHAT A NOUN DOES OR IS DONE TO

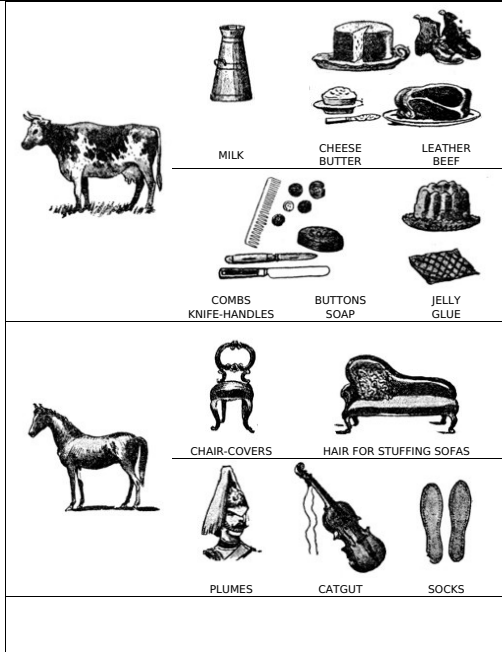

[971]

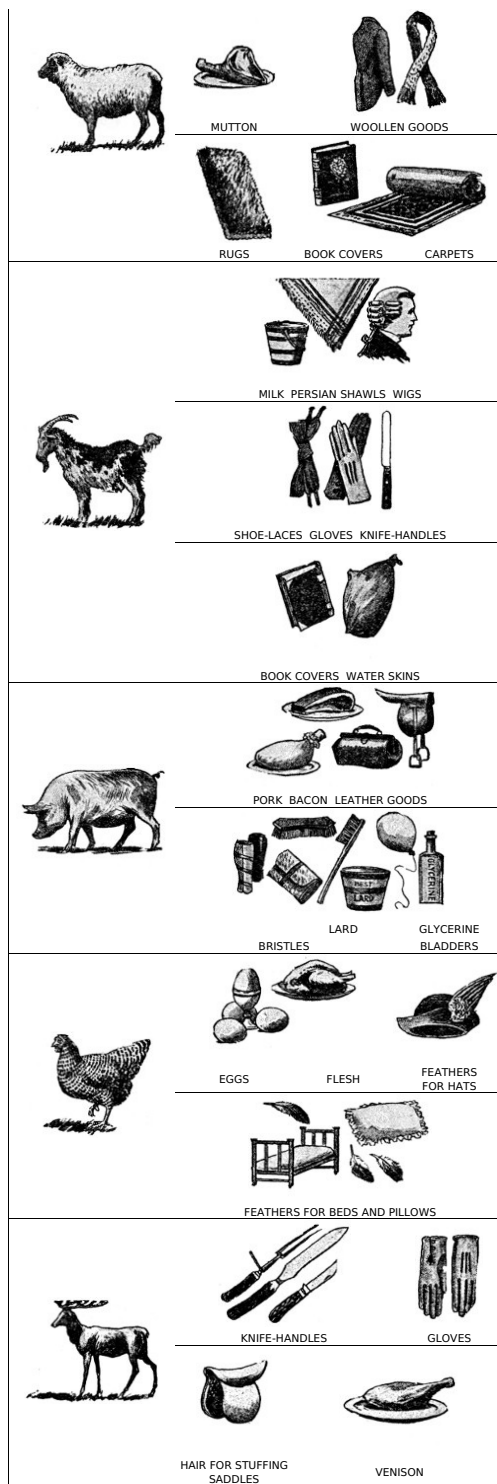

WHAT OUR DOMESTIC ANIMALS GIVE US
THE USEFUL THINGS OBTAINED FROM THE COW, HORSE, SHEEP, GOAT, PIG, FOWL, AND DEER

[972]

THE CHILDREN OF THE ANIMALS

		
A YOUNG DEER IS CALLED A FAWN	A YOUNG HORSE IS CALLED A COLT	A YOUNG COW IS CALLED A CALF
		
A YOUNG SWAN IS A CYGNET	A YOUNG EAGLE IS AN EAGLET	A YOUNG HEN IS A CHICKEN
		
A YOUNG DUCK IS A DUCKLING	A YOUNG HARE IS A LEVERET	A YOUNG FROG IS A TADPOLE
		
A YOUNG GOOSE IS A GOSLING	A YOUNG OWL IS AN OWLET	

The young of some animals have special names, and with many of these we are familiar. But there are other young creatures whose particular names are not so well known. In the pictures on this page we see the young of eighteen different creatures with their mothers, and the special names of these are given.

[974]

THE STORY OF THE SPIDER AND THE BUTTERFLY

On the garden wall a brown spider was spinning her web. Backwards and forwards she went, making hundreds of little threads at once, twisting them into white ropes, arranging them with her feet and the little hooks on her jaws, and gluing them together where they crossed.

The butterfly stood on a leaf and watched.
 "Is that to put your eggs in?" she asked at last. "Or do you put them on a cabbage?"
 "On a cabbage! No, indeed!" said the spider, staring with all her eight eyes at once. "I make a soft nest of silken threads to put them in."
 "That would not do for my babies." And the butterfly nodded her head and looked very wise. "They would get their wings fast in the threads."
 "Their what?" gasped the spider, standing suddenly still in the middle of her web.
 "Their wings," repeated the innocent butterfly. "I don't think I dare let my children come to play with yours if you always hang about."
 "But your children won't have wings!" gasped the spider again. "They won't be baby butterflies!"
 The butterfly laughed gaily.

"What a funny idea!" she said. "Your eggs hatch into baby butterflies, don't they? and they don't have wings. And the hen's eggs hatch into little baby chickens and they do have wings, like the hen. I saw them this morning running after her, with all their wings stretched out. I suppose they are not old enough to fly yet. When my babies can fly, I shall go back to the flower garden."

She flew away, leaving the astonished spider still sitting in the middle of her web trying to understand it all.
 "Well!" she exclaimed to herself at last. "That's what comes of having no mother! I always did say that the family arrangements of the butterflies are the most foolish I ever heard of."

The spider was very busy, gumming her eggs safely underneath a cabbage leaf. Each little jar hung by its narrow end, as close to the next as could be.
 "What a funny old spider!" she thought at last, when she had finished. "I wonder if she has finished that web."

"Have you found a cabbage to please you?" called the spider.
 "Well, I suppose it's all right," answered the butterfly a little doubtfully. "I don't seem to be able to think of a better place to put my eggs, and I suppose the flowers will grow on the cabbage very soon. My baby butterflies will not be able to fly far at first to find honey."

"You mean your creepy, crawly babies!"
 "Don't you mean butterflies?" asked the spider, trying to be sarcastic.
 "Nothing so sensible! If you want to see—"
 "Hush! hush! Don't quarrel!" said the breeze, shaking the spider's web and puffing at the butterfly's wings.
 "She says that my babies will be creepy, crawly—"
 "Come away! come away! Come and find some honey!" said the breeze.

He shook the leaf and the butterfly fell off. Then the breeze so hurried her across the garden that when they reached the flowers she was out of breath with laughing.

"I suppose that old spider is jealous because her children will not be so pretty as my baby butterflies" she said.

[975]

LADY GRAY AND THE NUTS

One summer Robert and his father and mother lived in a little house in the woods.
 They saw a squirrel running about in the trees.

Robert put some nuts on the ground, and hid behind a tree. Soon the squirrel came and carried them away.
 The next day he put the nuts nearer the tree. The squirrel came again and carried them away.
 So it went on for some time. Each day Robert put the nuts nearer the tree.
 They named the squirrel Lady Gray.

One day Robert's mother sat down on a bench in the porch. She put some nuts on the floor and kept very still.
 After a while Lady Gray came up on the porch. She looked at Robert's mother, then she took a nut and ran off as fast as she could.
 By-and-by Lady Gray became so gentle that she would hunt for nuts in their pockets.
 One morning father put a nut on his shoulder. Lady Gray jumped on father's shoulder and ate the nut. How they all laughed!

CUNNING NANCY AND HER KITTENS

Three little kittens were born in a house where there were two lively cats. The kittens were at once named Tom, Dick, and Harry.
 As soon as they were big enough to handle, the cats began to carry them round, indoors and out. Nancy, the mamma cat, did not like her kittens to be handled so much, for she knew it was not good for them. She mewed, but the children did not notice her distress.

Dick, a lovely grey, seemed to be her pet. She took the best care of him, and seemed most worried when the children picked him up.
 One day little Dick could not be found. The cats hunted for him, but in vain. They noticed that Nancy did not seem anxious, nor did she go looking for her lost kitten.

They did not notice, however, that she would often go up the stairs, and stay away awhile from Tom and Harry.
 When washing day came, they found out all about it. In a low, dark cupboard upstairs, where the soiled clothes were kept, Nancy and Dick were found. Dick was snugly wrapped in the clothes, and purred contentedly. Mamma Nancy lay beside him. She had taken her favorite kitten and hidden him, so that the children should not play with him.

THE GOOD LITTLE STARS

Once upon a time a great many little stars lived up in the sky.
 Their father was the sun, and their mother was the moon.
 Usually these stars were good little stars. They liked to help brighten the sky and so make the moon brighter.

But one night when their mother called to them to come and light up the sky, they came very slowly. They looked very cross. They did not shine when she told them to do so.
 Mother moon felt sad. She called up from the sky some good little stars. They were only stars on earth, but Mother moon changed them into stars in the sky.
 The naughty stars felt themselves falling. Faster and faster they fell, until they sank down into the sea.

They cried and cried until they fell asleep for they were very sorry for what they had done.
 In the morning Father sun shone out so brightly that everything, even the baby stars under the grass, awakened. They began to cry again.
 Their father felt sorry for them. He told them they might shine on the earth.
 So now the stars shine in the sky at night, and in the morning, when Father sun shines for them, the stars open their eyes and shine in the grass all day.

THE PANIC IN THE FOREST

A timid hare was resting one day in a grove of palm-trees, and a strange thought came into his head.

"What should I do if an earthquake occurred?"

At that moment a gust of wind shook the palm-trees, and some ripe fruit pattered down.

"An earthquake is beginning!" cried the timorous hare. And, starting up, he fled without daring to look behind him. A deer met him as he was racing along.

"What is the matter?" said the deer, catching up with him and running by his side.

"An earthquake is destroying the forest!" the hare gasped out.

The terrible news quickly spread among the hares, deer and rabbits, and they scampered away in wild terror. As they went on, they were joined by elks, buffaloes, elephants, tigers, and rhinoceroses.

"What is the matter?" said each animal in turn, as he joined the fugitives.

"An earthquake is destroying the forest!" they panted, rushing on, and never stopping to see if it were so. At last the line of frightened animals extended across the country for a full mile. All the smaller beasts standing in the path of the army of fugitives were unable to ask any question; they had to race ahead to avoid being trampled down. But as the maddened host was sweeping blindly down to the bank of a great river, which looked like being choked up with dead bodies, a lion came up, and stopped the frightened beasts with a terrible roar.

"What is the matter?" he said to the tigers.

"The buffaloes told us that an earthquake is coming," said the tigers.

"Who saw it coming?" said the lion.

"We don't know," said the tigers. "The elephants know."

"The rhinoceroses told us," said the elephants.

"And we heard it from the buffaloes," said the rhinoceroses, panting for breath.

The buffaloes heard it from the elks; the elks heard it from the deer; and at last it got down to the timid hare.

"Do you mean to tell me," roared the lion, "that you have all been frightened to death by a timid little hare? Let us go to the grove of palm-trees, and witness this terrible earthquake."

When they arrived there, the fruit was still pattering to the ground.

"Now, you see," said the lion, "what comes of following the lead of the most timorous creature on earth. He has made you all more cowardly than he is himself. You ran away without even hearing the noise that frightened him. Henceforward avoid the gossip of the crowd, and trust to your own judgment."

THE JOURNEY FROM THE CLOUDS TO THE SEA

When the little drop of rain fell, he didn't know in the least what was going to happen. For a minute or two he felt quite frightened. Then he suddenly found himself rolling down a hill. He had just begun to think it great fun, when he noticed a lot of other drops beside him, all laughing together and all rolling down the hill.

One of them came close to him and touched him, and he found himself growing bigger. Then more and more came up, and presently he saw that he was quite a big fellow. He felt very proud of himself. "I'm getting bigger and bigger every minute," he said.

Half-way down the hill he looked back, and saw himself stretched out like a line of silver, glittering and shining between the trees and stones and bushes.

"I'm a stream now," he murmured proudly as he hurried over sand and gravel and clay, "and I'm getting bigger and bigger still."

Suddenly he found himself falling over a big black rock. Down, down he fell, thirty feet or more. But he was so big and strong now that he didn't care a bit.

At the bottom of the hill there were a great many rocks and stones right in front of him. "Get out of my way!" he roared. "I'm a river now! Get out of my way!" And he dashed and splashed and flew right over them.

A little farther on he came to a lovely meadow, with beautiful trees hanging down, and birds singing, and great sleepy red cattle standing knee-deep in the long, sweet grass, and the big blue sky shimmering overhead. It was so very, very pretty that he thought he would stay here a while. So he twisted and wound round and round, just to get another look at the trees, and to watch the birds flying from branch and bush.

He laughed merrily to a little boy who was standing on the bank with a fishing-rod in his hand, and hurried on again.

As he turned a corner quickly he saw a great blue plain stretching for miles and miles, with ships and boats and birds dotted here and there on its broad, heaving, shining surface.

"Hello! There is the sea at last!" he cried joyfully, and rushed forward eagerly to meet it. And as he joined the great ocean he shouted out as if he meant that all the world should hear, "Here I am; I'm a sea now!" (See full page illustration on page 68.)

THE SPIDER AND THE FLY

The spider was in a rare temper as she hurried back to the dark corner where she had her home. "Upon my word," she muttered, "it is too bad! This is the third time that wretched housemaid has swept my web away. The ignorant creature calls me an insect. I am not an insect. My body is in two parts instead of three; my head is part of my chest; and I have eight legs instead of six."

The spider sat in her dark corner thinking very hard. Presently a buzzing sound caught her ears, which happened to be placed at the end of her feet. Her six pairs of eyes glistened with anger.

"There's that old bluebottle again," she murmured. "His noise makes my head ache. If I make haste and spin another web, perhaps I can catch him before the maid comes with her broom."

Having made up her mind, the spider began. On the underpart of her body were four tiny tubes, each with about a thousand still tinier holes. From each tube came a thousand delicate threads made of a gummy fluid. The spider's hind feet combed and twisted them into one fine thread.

The thread gradually increased in length until a draught caught it and carried it to the edge of the window-curtain, to which it clung. Several other threads were then stretched from point to point.

"Now," said the spider, "I can go on building my web."

Line after line appeared as if by magic. The lines crossed and recrossed, and at every point where they touched a tiny drop of sticky fluid held them firmly together.

The spider viewed her work with satisfaction.

Lastly, she ran a more delicate thread round and round in spiral fashion. At the end of an hour the web was complete.

"Now I will test it," said the spider; and she tried her work here and there, and found it quite good.

Only a short time passed before the big fly buzzed into the elastic strands. The more he struggled, the more he became entangled.

The spider was hungry and very impatient. She darted from her lair and seized the fly with her terrible claws.

At the end of the feelers were tubes from which she poured poison into the body of her prisoner, while with her fore feet she entangled still further the fly's legs and wings.

In a few moments the bluebottle was quite still. Securely bound up in the sticky strands, bitten and poisoned, it was clear that he would never again buzz about in the sunshine. Then the spider enjoyed a better meal than she had had for a long time.

An hour later the housemaid came along, and, catching sight of the web, she flicked it with her duster.

"That miserable insect has been at its tricks again," she said.

The spider was just settling down to a quiet nap after her hearty meal. She did not like being disturbed, but it did not matter so much now. She simply smiled to herself. (See articles on [Spiders](#); [Flies](#) and [Insects in general](#) in [Book of the Animal Kingdom](#).)

[979]

THE STORY OF PETER PAN

Every child in the world grows up to be a woman or a man. The only one who doesn't grow up, and won't, is Peter Pan. He always stays a little boy, which is very jolly indeed, and he's friends with all little boys and girls,—as you'll understand if you read.

The Darlings,—Wendy, John, and Michael,—lived with their father and mother. They were rather poor, but it didn't matter, they were all so fond of each other. They'd a little maid called "Liza, and, because they hadn't the money for a proper nurse, they'd a dog instead, named Nana,—wasn't it funny?

Peter Pan came every night; the window blew open wide, and in he hopped, without a sound, and hurried to Wendy's side. And a curious little dancing light came in with Peter as well; this was a fairy lady, and her name was Tinker Bell. Peter was dressed in skeleton leaves; he had pipes on which he played—a delightful person. Wendy was not the least little bit afraid. He talked to her of the Never-Land, where she'd always wanted to go. And he said, "If I only teach you to fly, you can get there now, you know!" So John and Michael were taught to fly, and Wendy too, and they found it's as easy, when you get used to it, as walking on the ground. And at last, when both their father and mother were out, one Friday night, the Darling children and Peter Pan and Tinker Bell took flight. Away in their little nightgowns they flew, as fast as they could go, till they came to the island, the Never-Land, where all the adventures grow.

Now in this island, I must tell you, were wonderful things to find: unknown birds, and curious beasts, and Redskins, fierce but kind. Fairies were there, and Mermaids, and Wolves,—some wild, some tame; and a Crocodile that had swallowed a clock, and ticked wherever it came. But—hush, let us whisper!—the "Jolly Roger," a rascally pirate craft, with raking masts, and swelling sails, and guns both fore and aft, was anchored there, and the hideous crew were lying in wait, each man, and the captain, Hook, in particular, to kill little Peter Pan. Hook was not his real name; Peter, some while ago, in open fight, had cut off his hand, so now he'd a hook, you know. And as, with a stern and gloomy air, he paced, on his quarterdeck, he was thinking all the time, "I'd like to wring that Peter's neck!" And the rest of the horrible band of Pirates were always prowling about, to see if they couldn't capture Peter, and kill him, without a doubt. They crept along, singing "Yeo-ho-ho"—as stealthily as could be, they, and the bo'sum, who, indeed, was the best of them—One Smee. But the Redskins, with the tomahawks, were on the Pirates' track, and followed them quite noiselessly,—not a single rustle or crack. For they thought the world of Peter Pan; in fact, they all were rather inclined to kneel at his little feet. And they called him "Great White Father."

[980]

PETER PAN, WHO COULD NEVER GROW UP TO BE A MAN

Upon the island there were also some boys—well, counting rightly, there were six: Nibs, Tootles, Curly, and the Twins (no names), and Slightly. And Tootles, by a silly mistake, when he saw the Darlings near, hastily aimed his swiftest arrow, and drew his bow to his ear, and shot poor Wendy. Just at first she was thought to be dead, by her friends. But, finding she wasn't, they built her a house, in the hope of making amends. They built it right, round her, with branches, leaves, and moss, and lovely make-believe roses clambering quite across. And when it was completed (and it looked remarkably fine), "Oh, Wendy, do be our mother!" they cried, and they hadn't to ask her twice. "Come in at once, you naughty children!" Wendy delightedly cried; and they all squeezed in, except Peter Pan, who stayed upon guard outside.

There was also a beautiful house under-ground, where elegant mushrooms grew, and a Never-tree also (but every morning they sawed the trunk right through). You entered the house by hollow trees, going up and down quite fast, which was hard at first, but the children did it exceedingly well at last. And here, in the charming underground house, the eight boys slept alone in a great big bed,—for Wendy lived in that dear little house of her own. But every evening she told them stories, and when the stories were done, they'd have a dance in their night-clothes, and a pillow fight,—Oh, such fun! Peter Pan wasn't always there, because, as you understand, he was busy strolling about the island, or watching with sword in hand. But in the day-time he would come, and take them, not very far, to the blue lagoon, where the weedy rocks and the hundreds of Mermaids are.

And here, one day, both Peter and Wendy received a bit of a shock; for Hook pursued them, and so they climbed on a rock—the Marooners' Rock. Wendy fainted, and so did Peter. A Mermaid came to see whoever those two little dripping folks on the slippery rock could be. Then Peter perceived the tide was rising, and he tied up Wendy tight to the tail of a kite which was drifting near, and sent her away with the kite. And there he stayed on the rock alone, and he thought he'd be drowned each minute. But the Never-Bird, in her floating nest, came up, and Peter got in it, while the Never-Bird took to a Pirate's hat, which was luckily close at hand. So Peter went gaily sailing off, and arrived quite safe at land.

Now every night the Redskins were camped above the underground house. And every night the Pirates were creeping, each as still as a mouse (with the terrible Crocodile after them, showing its crunching teeth), while Wendy was cheerfully telling tales to the children down beneath. But, oh dear me! there came a night when that treacherous pirate Hook contrived to surprise the Redskins, and the children; and he took the whole nine children prisoners, exceedingly sad to tell. The only ones who made their escape were Peter and Tinker Bell. And while the unhappy children were roughly carried on board, Peter was off to rescue them, with his trusty dagger and sword. And, just in the nick of time, he arrived. He armed the boys, and they slew, after a most tremendous fight, fifteen of the Pirate crew. And after a thrilling duel, which lasted a very short while, between Hook and Peter, the wicked Hook was thrown to the Crocodile.

So Peter took command of the ship, and they all sailed home, and then, how glad their father and mother were, to have them back again! They all were dressed in the Pirates' clothes (cut short), and exceedingly grand; and oh, what tales they had to tell of the wonderful Never-Land! Peter, who didn't like houses at all,—brick ones, and that sort of thing, returned to the Never-Land by himself. But he comes back every spring, and fetches Wendy to help him do spring-cleaning, and Wendy stops and tidies up the little house, which is now in the high tree-tops. As for the boys, they've all grown up, so the Pirates' clothes won't fit. And as for the great adventures they had, they've forgotten them every bit. Only Wendy and Peter Pan can still do just as they please. How happy they are, as they talk up there in the dear little house in the trees!

[981]

COUNTING AND NUMBERS

In numbers, as in other primary subjects, a child should be *taught* and *permitted* to do things himself. Rousseau said, "What the child *does*, it easily

remember"; and we shall soon find that time spent in this way is far from being wasted.

Children who have been taught numbers gradually, in this easy, interesting fashion, develop an astonishing aptitude for dealing with figures as they grow older.

COUNTING

Learning to count 1, 2, 3, 4, etc., parrotlike, does very little good. Rather let the child count *objects* and point out 5 marbles, 6 blocks, etc., in order that you may determine if he knows exactly what 5 or 6 of anything means.

Take a number of blocks or marbles and ask the child to take 3, 5, 7, or any number of them.

Hold up 3, 5, or 6 of them and ask him to tell how many you have. When you are told the *number* you have, write the *figure* which tells the number on paper, or the blackboard. Have the child copy the figure, making a large character.

Then reverse the work by writing a *figure* on paper and asking the child to take the *number of blocks* the writing asks for.

Spend a few minutes every day in asking him to show you 2 pins, 3 houses, 5 stripes, etc.

Teach the child to count 50 as soon as he has started in his number work at school and later on to 100. *Objects* should be counted at first and then counters substituted, such as pennies, marbles, blocks, beads, etc.

RECOGNITION OF NUMBERS.—The purpose of *counting objects* is to give the children a clear idea of *number*. They should be able to recognize 2, 3, 4 and 5, *i.e.*, be able to tell four objects when they see four, without counting them, also 3, 5, etc. Stories and games with objects should be repeated again and again, until the children can do this easily.

ANALYSIS OF NUMBERS.—When the numbers can be recognized without difficulty, the children should be encouraged to analyze them, *i.e.*, tell what they are made up of, but objects should be put in front of the class to represent the numbers until they can do this readily.

Suppose the number *five* to be the lesson, each child would take five shells out of its box, and lay them on the desk, thus:— \bullet or \bullet or \bullet or \bullet or \bullet ; etc. The child should always be able to *describe* what it has done: thus, the first child would say—*four shells* and *one shell* are *five*; the second, *three shells* and *two shells* are *five*, and so on.

Higher Numbers.—The analysis of six, seven, eight and nine may be taught in the same way, each number being taken separately and thoroughly mastered, before proceeding to the next. The children should learn all the different combinations of numbers that make six—*three* and *three*, *five* and *one*, *four* and *two*, *three twos*, etc.—but always with the objects, and when they have seen the number analyzed by the Teacher, they should do it for themselves with shells, bricks or other objects.

Number Ten.—This is the most important number of all, and it should be thoroughly well taught. The Teacher should show on the table the different analyses that can be made of ten, and the children should lay these with shells or other objects again and again. It is necessary to learn these perfectly, for however well any or all of the numbers may be learned, they are comparatively useless without ten.

FIGURES.—When the figures are introduced they should invariably be shown with the concrete numbers which each figure represents. They say, "Here are four balls" \bullet \bullet \bullet \bullet ; "I will show you a figure that means those four balls, 4, and I will put the four balls beside it, thus:—4 \bullet \bullet \bullet \bullet ."

NUMBER ON PAPER OR SLATES.—If the children have learned how to use a pencil, they may transfer the number-pictures made with shells to their slates, using dots for "shells," thus:— \bullet \bullet \bullet \bullet .

Then another "picture" may be made with the shells \bullet \bullet \bullet \bullet ; and this be copied on the paper at some distance from the other. Then another is made and copied, and so on until the child sees on his paper all the combinations of numbers that go to make six. He should be able to read them all out, and because a child remembers what he has done himself, it will be found that numbers taught in this way are seldom forgotten.

As the children become more proficient, the two signs + and = may be taught, + means *and*, = means *are*. Then they may put on their slates \bullet + \bullet = \bullet \bullet ; and use these signs in the analysis of other numbers.

MONEY TAUGHT AS NUMBERS

When the children know numbers up to ten, they might play little "shopping" games with coins. Show them actual coins in teaching money. Lessons on money should be given frequently after the first year of school life.

Begin by teaching the value of the *cent* and the *nickel*, then the *dime*, then the *quarter*, then the *half-dollar*, and then the *dollar*.

Make little problems involving change. Develop the ability to make change rapidly. The child may have some money of his own and he should be taught the comparative values of the coins.

SIMPLE TABLE OF MONEY

10 cents make 1 dime.

2 five-cent pieces make 1 dime.

100 cents make 1 dollar.

A quarter of a dollar = 25 cents.

A half-dollar = 50 cents.

\$ means dollars and c means cents.

A 5-cent piece is called a nickel, because it is made of nickel.

A cent piece is made of copper.

The other coins named are made of silver.

(See [United States Money](#) for more advanced instruction.)

COMBINATIONS OF NUMBERS

We now come to the method of teaching the combinations in Addition and Subtraction.

We can count books, tables, and houses and say that we have counted so many *things* but we do not *add* books, tables, and houses. We *add* books and books, tables and tables, houses and houses.

We count by *ones*. When we add three beads and two beads we are counting by ones, for it means that we are adding three ones of beads and two ones of beads, making five beads in all.

From 1 to 9 we use only one figure to tell how many we mean. When we wish to say in writing that we have ten of anything we write a 0 after the 1 and have 10, ten.

1. Add 1 to every number up to 10; later to 20.

2. Subtract 1 from every number up to 10; later to 20.

3. Add:

2	3	4	5	6	7	8	9	10
+2	+3	+4	+5	+6	+7	+8	+9	+10

Here the addends are equal and easily added. The figures should be placed as above and not 2 + 2, 3 + 3, etc., because the vertical form is the natural one which the child will use all through life. It does not look so formal and represents better what he really does with the objects.

4. Add:

1	2	3	4	5	6	7	8	9
+2	+3	+4	+5	+6	+7	+8	+9	+10

Here one addend exceeds the other by 1.

5. Subtract:

2	3	4	5	6	7	8	9	10
-1	-2	-3	-4	-5	-6	-7	-8	-9

Here the minuend is one greater in each case.

6. Teach the parts of 10.

5	2	3	4	9
+5	+8	+7	+6	+1

7. In adding 9 to numbers have the child think of 9 as 10,

thus	9	=	10	and	9	=	10
	+6	=	+5		+8	=	+7

8. Teach the corresponding subtractions.

9. Add 8 to each number up to 10.

10. Teach the corresponding subtractions.

11. Add 7, 6, and 5 to each number up to 10.

12. Teach the corresponding subtractions.

13. Review and give combinations not taught above.

Objects should be grouped by tens and units, in showing numbers above *ten*. Ten should be the basis of all our reckoning, and if the children know ten, and the numbers which precede it, they can soon be taught the rest. Little children should not have "sums" given them to do on their slates, for "sums" are made up of *abstract* figures, and children of tender years cannot grasp the abstract.

NUMBER TO ONE HUNDRED.—When the children are conversant with numbers up to ten, it is very easy to teach them one hundred.

PRIMARY IDEAS OF DIVISION

In teaching the two ideas of division—division by *measurement* (division proper) and the *fractional* idea of division (partition)—proceed very slowly and see that each step is thoroughly understood.

The following suggestions may be useful:—

DIVISION BY MEASUREMENT

Use blocks or any other counters in illustrating the process.

EXAMPLE:

4 | 12

The teacher should ask the child, "How would you count this story?"

Facts Given by Child

12 = whole number of blocks.

4 = number in each part.

We want to know the number of parts.

We place the blocks so, 4 in each part:—

There are 3 parts.

DIVISION BY PARTITION

Make use of blocks or substitutes to show the process here.

EXAMPLE: $\frac{1}{4}$ of 12 = 3.

The teacher should ask the child, "How would you count this story?"

Facts Given by Child

12 = whole number of blocks.

4 = number of parts.

We want to know the number in each part.

We place the blocks so, as we know there are 4 parts:—

We have put one in each part.

Now we will put one in each part until the 12 blocks are gone:—

There are 3 in each part.

NUMBERS IN MULTIPLICATION

Example:

$3 \times 4 =$ —

Facts Given by Child

3×4 means 3 4's.

I count my blocks by fours—I take 1 four, another, another.

I find that 3 4's are 12.

$3 \times 4 = 12$.

To the Teacher:

Now the child is ready to give a number story about 3×4 .

PRIMARY MEASURES FOR CHILDREN

The child has been taught to count. Now while he is telling you *how many* objects he is dealing with, teach him to tell *how much* he is dealing with. In other words, have the child *measure and compare* as well as count.

Ideas of larger and smaller, longer and shorter, and the like, should be made important. The need at the outset, is to learn, in a simple way, the basis of all arithmetic—the *comparison of quantity*,—in as many of its forms as possible.

MEASURES OF LENGTH

Teach the child to estimate distances and then to verify every estimate by actual measurement.

Teach half inches as well as inches.

Long measure is used to measure length.

12 inches make 1 foot.

3 feet make 1 yard.

in. means inch or inches.

ft. means foot or feet.

For the Child to Do:

1. Cut a strip of paper 12 inches long and 1 inch wide.
2. Mark the inches on it.
3. How many inches long is it?
4. What do you call a measure 12 inches long?
5. Draw a line 2 inches long, as near as you can, without using a ruler.
6. Measure it with a ruler. Did you guess nearly right? Try again.
7. Measure this page. How long is it? How wide?
8. Draw a line on the ground 1 yard long.
9. $\frac{1}{2}$ of a foot is how many inches?
10. 1 yard is how many inches? What is measured by the yard?
11. Ask your mother how many yards of cloth she needs for a dress.
12. What is measured by the foot?
13. How tall are you?

TELLING THE TIME

First—Teach him to tell the hour hand from the minute hand.

Next—Teach him when he first looks at the dial, to find the hour hand and then notice which Roman Numeral it is nearest. *This will tell about what time it is.*

Then—Find the minute hand. *The minute hand will tell exactly what time it is.*

To ILLUSTRATE: Take this clock. The hour hand is near the Roman Numeral II., which stands for 2. Tell the child it is somewhere near two o'clock. The minute hand will tell how near.

What time is it?

It must always point to the XII. before it is exactly the hour. If it is one numeral away from the XII., toward the left, it is 5 minutes of two. If it is two numerals away to the left it is 10 minutes of two, etc. If it is one numeral away to the right, it is 5 minutes after two, etc. Proceed in this way and keep at it.

A new day begins at midnight and lasts until the next midnight.
Midnight is the middle of the night; that is, 12 o'clock at night.
Noon is the middle of the day, that is, 12 o'clock in day time.

One hour after noon is 1 o'clock, 2 hours after is 2 o'clock, etc.

If a person says he was at a certain place at 2 o'clock, he must say forenoon or afternoon, so we will know which half of the day he means. If it was 2 o'clock in the morning he would write 2 A.M., and if 2 o'clock in the afternoon, 2 P.M.

Things for the Child to Do:

1. Name the days of the week and the months of the year.
2. What day of the week does Christmas fall on this year?
3. Is 22 days longer than 3 weeks?
4. Is 5 weeks longer than a month? How much?
5. How many days in 3 weeks?
6. On what day of the week will your next birthday be, etc.

Remember:

The days of the week in their order.
The months of the year in their order.

Procure a calendar for the child to own.

A good way to make him familiar with the use of the days of the week and month, as found on a calendar, is to ask him to look up and tell on what day of the week the next Fourth of July will fall; Christmas; New Year; his birthday.

Have him distinguish between the day of the week and the day of the month.

- 7 days make 1 week.
- 30 days make 1 month.

<i>1903</i>		<i>July</i>			<i>1903</i>	
<i>Sun.</i>	<i>Mon.</i>	<i>Tues.</i>	<i>Wed.</i>	<i>Thur.</i>	<i>Fri.</i>	<i>Sat.</i>
First Quar. 1st 30th	Full Moon 9th	Last Quar. 17th	1	2	3	4
5	6	7	8	9	10	11
12	13	14	15	16	17	18
19	20	21	22	23	24	25
26	27	28	29	30	31	New Moon 23d

FORM AND COLOR

In many schools a lesson is given on Form and Color at least once a week. The different forms should be kept in a box, in which there should be also squares of cardboard, showing the various colors. This apparatus should, however, be amply extended. Pieces of silk or colored paper should be kept in another box, and colored wools wound on pieces of cardboard show the colors nicely.

THE OBJECT OF THE LESSON.—The object of the lesson is not simply to teach the shape or color of one particular piece of wood, or cardboard, but to enable the child to distinguish the same shape or color whenever it sees an example of it. Thus the child is helped to observe and compare, and its interest in life is strengthened as it learns with joy to find out things for itself.

FORM

The Circle, or round, is the first form to be taught, and it should be illustrated by numerous examples, such as a plate, a round cake, coins, etc.; all these things should be shown to the children.

Then the circle may be compared with the ball, and the children are asked: "What things are round like the ball?" "Orange, apple, etc." "And what things are round like a circle?" "A penny, a shilling, etc." "What has the circle that the ball has not?" "The circle has two flat faces, and the ball has only one round face."

The Square is somewhat familiar to the child, who has noticed the shape of his books, and the table. It has four sides all the same length; this fact may be taught thus:

Take a long stick or ruler. Teacher says: "I will measure the sides of the square. Johnnie shall hold it for me" (measure the top edge, and cut off a piece of stick just the length). Show it to the children, and say: "This stick is just as long as the top edge of the square. I will give it to Mary to hold. Now we will measure the bottom edge" (again cut the length). "This is the length of it" (holding up the stick).

The right and left sides are measured in the same way, and the child now holds four sticks. Let the children count how many sticks there are, and notice also that all four measure exactly the same, and then they will see that the square has four sides all the same length. Then ask for objects of this shape.

The Oblong is measured in the same way as the square, and the sticks are cut the lengths of its sides. The children then see that the sticks cut to represent the sides of the oblong are not all of the same length, but that two are short, and two longer, so the oblong must have two long sides and two short sides. Let a child point to the two long sides, and another to the short ones.

Then the children are asked to name all the things they can see that are oblong in shape, such as the table, door, window. They may also name objects at home—dresser, piano, bed, and many other things.

The Oval is frequently taught after the circle, but as the difference between square and oblong is more marked than the difference between circle and oval, the former comparison if taken first may help the child to understand the latter.

Take a square and draw a circle on it, then take the oblong and draw an oval shape upon it. Ask the children, "How is this shape different from the round shape on the square?" "It is longer." "Why?" "Because the oblong is longer."

Now show the oval with the round or circle. "How is the oval different from the round?" "It is longer." "What things do you know that are shaped like the oval?" "An egg, a basket, a bathtub, a dish, etc."

The Sphere, Cylinder, Cube, Cone and Pyramid are solid figures. The cylinder can be explained from the sphere, the cone from the cylinder and the pyramid from the cube.

The pyramid points upward, so,
But it is square and flat below;
The cone is pointed, too, and round;
A sugar loaf like it is found.

The children soon learn the difference between the Cone and Pyramid, and if they are allowed to make all these solid figures in clay they will remember them more easily.

1. The oval shape is like an egg,
The circle's round as all can tell,
The sphere is round, just like a ball,
The cylinder you know quite well;
2. We roll it gently on the ground,
For it is very smooth and round;
It has two faces flat, you see,
And stands, as well as rolls for me.
3. The cube has six square faces, flat,
And corners eight, just think of that!
And edges twelve, three fours you know,
Which round the faces always go.

The Pentagon, Hexagon, Octagon and other similar forms should be learned by drawing them on checkered slates or paper. These figures introduce the obtuse angle, and before the children learn the shapes, they should understand clearly the difference between the right, acute, and obtuse angles. The hexagon and octagon can be combined so as to make pretty designs which may be used for perforating and embroidery.

The "Forms" may be further impressed on the mind of the child by means of a [Story](#); see the one given after "Color," at end of this chapter.

COLOR

Color should be taught if possible from objects and pictures. The six colors can be illustrated by fruits, as an orange, a rosy apple, a purple plum, a red cherry. The children's dresses, their eyes and hair, can all be brought into a lesson on color. In spring and summer flowers make charming illustrations, *e.g.*, different colors seen in roses, and the autumn-tinted leaves can be used likewise.

Then there are colors in pictures, trees, besides colored wools, beads, tablets, etc.

Ask for flowers and fruits of certain colors, *e.g.*, what flower is yellow? What fruit is red?, etc. Also colors of birds and animals, and let the children say what colors look nice together. In summer this may be shown by arranging a number of flowers in a bouquet.

In the flowers themselves colors always harmonize, *e.g.*, forget-me-not is blue, and has a yellow center, because blue and yellow look pretty together.

Spring flowers are mostly yellow, and have pale green leaves, for green and yellow look pretty together.

The red poppy and blue cornflower look pretty among the yellow corn, and there are yellow flowers among the corn also.

Harmony of color may be further illustrated by the dressing of a doll, or a story of a little girl who was taken to the shop by her mamma. The little girl was to have a new dress, cloak, and hood; what colors would her mamma choose?

Secondary Colors.—Teach that *red, blue and yellow* are the first or *primary* colors, from which other colors may be made. A child's box of paints and six small tumblers are required for the following illustration.

Pour a little water into each tumbler, and mix a little red paint in one, a little blue in the next, and a little yellow in the third. These are the primary colors.

Let us see what can be made by mixing *two* of them together. Take an empty tumbler. Pour in a little blue water and a little yellow. Mix together and the children will see that *green* is produced. Now take another tumbler and mix blue and red in it; this makes *purple*.

In another tumbler show that red and yellow make *orange*. "What beautiful thing have you seen in the sky showing all these colors?" "A Rainbow."

This is a most interesting lesson, and if the tumblers, etc., are not obtainable, the same experiment may be shown on a piece of white cardboard. Paint the colors in stripes on the cardboard, first the three primary, which should be allowed to stand; then the secondary are produced by rubbing one color over another, *e.g.*, paint over the red with blue, and purple is produced. Over the blue stripe paint a little yellow, and we have green. Over the yellow stripe paint red, and orange is seen.

The primary colors are Red, Yellow, Blue,
The Red and Blue mixed will show Purple to you;
Mix Yellow and Blue if you wish to make Green,
Mix Yellow and Red, then bright Orange is seen.

COLOR STORY

After the forms and colors have been learned, they may be woven into an interesting story, thus:

"A man had a large piece of land to make into a garden; he gave a piece to each of his children, and said they might make small beds of any shape that they liked.

"So Johnnie made a *round* bed" (draw shape on board, and let children copy on slate), "and Willie had a *square* bed; Mary said her bed should be *oblong*, and Nellie made hers *oval*" (draw each on board, and let the children copy). "Then Gerty wanted hers to be the shape of a *semicircle*, and Harry said his should be very pretty, for he would make it *crescent* shape, like the moon."

When the blackboard is full of shapes the teacher might say: "Now you would like to know what these children had growing in their beds. Johnnie had a *pink* rose-bush in the middle of his bed.

"Willie sowed red Poppy seeds in rows in his square bed, and Mary had a yellow Iris in the center of hers, with blue Forget-me-nots all round. You remember that blue and yellow look pretty together."

Whenever possible, pin the flower named on the shape representing the flower bed.

The story should be continued until all the "beds" have flowers in them. The children may be allowed to suggest names of flowers and should be encouraged to choose colors that will harmonize.

STORIES

Stories are the "spice" of childhood. The eager delight with which children beg for a story, and listen while it is told, is in itself a plea for stories, and the routine of lessons should be broken up by setting apart five or ten minutes between them for this pleasant exercise.

USE OF STORIES.—In the first place, story-telling may be made the means of helping the children to acquire familiarity with good English. We all know how limited is the child's vocabulary, and how difficult it is for a child to express his thoughts. Sometimes when a fact is perfectly well known, the language is wanting in which he can express it.

Second, the child's sympathy may be cultivated and developed by means of stories. He becomes intensely interested in the subject of the story, and for the time being almost lives the incident over again in his own little life.

A very little child was one day listening to a story about "A lazy boy who missed a school picnic because he was so slow in getting ready. The school children were all on board the steamer, the bell rang, the moorings were loosed, and away went the boat just as the late little boy came running down to the pier."

The little listener followed the story intently up to this point, and then burst out, "Oh! Auntie, couldn't they get a little row-boat and take him out to the steamer? I don't like him to be left behind."

Stories, then, enlist the sympathy of the child.

Third.—Story-telling strengthens the child's power of imagination. But, be careful to develop the imagination in a right direction, and not to feed it with anything coarse or cruel.

Fourth.—The stories offer opportunity for inculcating moral truths and sometimes it is possible to teach by stories truths that would be difficult to teach in any other way.

KINDS OF STORIES.—(a) *Stories of Real Life*—of events which have actually happened, or would be likely to happen. It is in this kind of story that moral truths can be illustrated most frequently.

(b) *Fairy Tales*.—Some people object to fairy tales, but innocent fairy tales feed the imagination, and often point a moral. Stories of horror and cruelty should never be recounted. Children soon learn to take delight in this class of story, and as a consequence, their moral tone deteriorates. Such stories as "Bluebeard" have this effect, but "Cinderella," "Sleeping Beauty," and many others, show that right is victorious in the end, and cannot have any bad effect on the children.

(c) *Stories of Nature*.—Flowers, rocks, trees, and other objects in nature may be made the subject of pleasant stories, interesting as a fairy tale, and many important truths may be taught in this way. A story of the kind is given as an example.

(d) *Stories for Very Little Ones*.—These should be exceedingly simple. A dog, a kitten, a bird, anything that comes into the life of a little child, he is delighted to hear about. Many such stories are given in the chapters on Numbers and Reading, and others will suggest themselves to the teacher. They should all be told in baby language, *i.e.*, in language that the child can comprehend. Pictures often suggest a story, which is all the more interesting for being thus illustrated.

The children should sometimes be encouraged to tell what they can remember of the story. In this way they learn to express themselves.

THE STORY-TELLER. (a) We have said before that the language should be simple and easy to understand.

(b) The voice should be modulated, and the story-telling is much more effective when gesticulations are used. The flying of birds, the rustling of leaves, etc., should be accompanied by hand movements on the part of the Teacher.

(c) The story-teller should be in sympathy with the subject of the story, and also with the listeners, otherwise the interest will be lost.

(d) Just as pictures add interest to a story, so do illustrations on the blackboard and these should be frequently given. Sometimes the children may be allowed to draw for themselves objects which have been mentioned in the story.

THE AFTER-EFFECT OF STORIES.—It is well to remember that the child's taste for reading is largely influenced by the class of stories told to him in early life, and in these days of plentiful, cheap literature, how important it is that the youthful mind should be trained to appreciate that which is good.

If a child has learned to gloat over horrible stories, he will gratify this morbid taste by reading ghastly tales as he grows older, and if, on the other hand, he has learned to love stories that are simple and pure, he will choose reading that is good and elevating.

[987]

[988]

INDEX

The intelligent use of an *index* requires careful thought and practice upon the part of the reader or consultant. Many books are *over-indexed*, and trifling *allusions*, or even *words*, made to swell the index. It is obvious, therefore, that a book of moderate compass should use only sufficient space to reveal the *important general* subjects treated. Besides the general index, the following *self-indexing* dictionaries and departments should be consulted:

Transcriber's Notes

General Notes

The different sections of the book were written by different authors; inconsistent spelling, lay-out, capitalisation, phonetics, use of ligatures and diacritics, spacing of abbreviations, transcription, punctuation, etc. have therefore been retained (incl. canon/canyon/cañon; Spencer/Spenser; i.e./i. e., A.D./A. D., etc.) except as mentioned below. The same applies to textual and factual inconsistencies and contradictions.

The order of entries in alphabetical lists is not always truly alphabetical; this has not been changed.

The various lists and tables of contents have only been linked to the relevant chapters and sections if there is an unambiguous relationship between the two. In some cases the items from the lists of contents are discussed in several places; in these cases, no links have been provided.

The use of section headings in the printed work was not always unambiguous, nor was their hierarchy. Section headings in this text are therefore based on the printed book's typography and on apparent logic, and may not reflect the authors' intentions. Some sections have no section headings as such.

Several subjects mentioned in the various lists of contents are not present in the original work; similarly, several internal references do not exist in the printed work.

In some of the larger tables, the relation between table elements has had to be surmised; the tables as presented here may therefore not fully reflect the authors' intent.

Depending on the hard- and software used to read this text and their settings, some elements may not display as intended. Some tables are best viewed in a wide browser window.

Where details of illustrations are not (easily) visible, links to larger scale illustrations have been provided (not available in all formats). Where texts inside illustrations are difficult to read, texts have been copied outside the illustrations, or hovering the mouse pointer over the illustration will display the relevant texts (not available in all formats).

Specific Notes

Page 72-73: the central part of the illustration was invisible in the available original. Names and numbers are difficult or impossible to read even in the enlarged illustration.

Page 104-107, Table Identification of Minerals, See Plate I: there is no Plate I with figures of minerals in the original work.

Page 158, Flowers of the Wooded Pastures: the referenced Fig. 13 is not present in the original book.

Page 267, Book of Races and Peoples: various district names is probably an error for various distinct names.

Page 293, table Comparative Classification of Races and Peoples: Fellaheen, 5,000,000 (): the reason for the brackets is not clear.

Page 360, Fall of Judah and Babylonian Captivity: The history of the Jews during the Babylonish captivity: this was printed as a regular paragraph in the original book, but could have been intended as a heading for a section that was not included in the book.

Page 413, Table IX.: St. Francis of Assisi should probably have been printed in the columns Italy and Church.

Page 423, Table XI., column Ottoman Empire and Persia, War with Austria 1682-1699: possibly this should read 1593-1669 (the 1682 war is mentioned on page 425, Table XII.).

Page 442, table Principal Languages Spoken: The data for English and French are identical, which is probably an error. The totals and proportions are not in agreement with the tabulated data; since it is not clear which data are wrong, this has not been changed.

Page 448-452, Panoramic View of the River Rhine: texts inside the illustration have been copied outside the illustration.

Page 472-476, Table of the Sovereigns of England: There are some discrepancies between dates of birth and ages; not changed.

Page 474, Table of the Sovereigns of England: Edward VI., "Of a consumption": as printed in original book.

Page 480-481: the central part of the illustration was missing from the available original. Names of buildings and streets are difficult or impossible to read even in the enlarged illustration.

Page 495, GERMANY: ... on a subsequent page: the table is given on the same page.

Page 497, Defense: reference to Armies and Navies of the World: not present in the original book.

Page 546, Under Peter the Great: reference to Peter the Great: unclear to which part of the text this refers, as there is no separate section on Peter the Great apart from this one.

Page 546, Napoleonic Period: reference to Alexander I. and Napoleon: unclear to which part of the text this refers, as there are no separate sections on Alexander I. and Napoleon.

Page 572, Turkey, or Ottoman Empire (table): population numbers do not add up to the total given (possibly the total should read 20,180,000); the meaning of the sentence directly underneath the table is not clear.

Page 573, Physical Features: reference to Asia Minor: there is no section on Asia Minor in the book.

Page 648, Democrats Restored ... Woodrow Wilson: there are two footnote anchors on this page in the printed book (before Farm Loan Banks and before From the very beginning of the European War), but no footnotes. The anchors have been deleted.

Page 714, Accent of Words: In the Book of Language and Literature primary and secondary accents are represented by ' and ', respectively. The print quality of the original work was not always sufficient to distinguish between the two variants.

Page 733, Asterism: the printed book shows two asterisms; possibly one of those was intended to be an inverted asterism.

Page 745, carnichons: error for cornichons; not changed.

Page 753, recherche: possibly error for recherché; not changed.

Page 771, 18th century (Pepys): probably error for 17th century; not changed.

Page 783, Aldine Press: reference to Manutius: there is no other occurrence of Manutius in the book.

Page 788, Chriemhild or Kriemhild: reference to Kriemhild: this entry seems to reference itself.

Page 796, Folk: reference to Fairies: there is no entry Fairies (or Fairy) in the book.

Page 821-845, Pronouncing Dictionary of Myhtology: this section contains several references to entries that are not present in the work.

Page 856, Find the cost of 3230 bushels of wheat, at 72c per bushel: the calculation given is for 3230 pounds (with 60 pounds per bushel).

Page 857, Long or Linear Measure: reference to Metric System: not present in the book.

Page 878, Tax Table, Explanation of Table: the entry for \$10,000 is not present in the table.

Page 894, Describe radium and its special properties: the printed book uses subscripts as exponents; not changed.

Page 763-764, Norman-French Period and Elizabethan and Puritan Period: there is no description of the period between these two (1400-1559) in the original work.

Several tables have had to be split or re-arranged so that the contents could be displayed in the available width and height. Many of the comparison tables have unavoidably lost some comparison information due to this split (e.g. Comparative History of Nations).

Changes and corrections made

Obvious minor punctuation and typographical errors have been corrected silently.

Regularly printed scientific names have been italicised for consistency.

Some diacritical symbols on French and German words have been corrected or added for consistency.

Some phonetics have been corrected or completed where this was important for their pronunciation, not for the sake of consistency.

Illustrations and tables have been moved out of the text when they were printed inside paragraphs; footnotes have been moved to directly underneath the paragraph or table to which they belong.

Various pages: Pharoah has been changed to Pharaoh.

Comparative History of Nations: several entries have been moved to maintain the given chronological order.

Indicator letters have been added to some pronouncing dictionaries for consistency.

*** END OF THE PROJECT GUTENBERG EBOOK THE CIRCLE OF KNOWLEDGE: A CLASSIFIED, SIMPLIFIED, VISUALIZED BOOK OF ANSWERS ***

Updated editions will replace the previous one—the old editions will be renamed.

Creating the works from print editions not protected by U.S. copyright law means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg™ electronic works to protect the PROJECT GUTENBERG™ concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for an eBook, except by following the terms of the trademark license, including paying royalties for use of the Project Gutenberg trademark. If you do not charge anything for copies of this eBook, complying with the trademark license is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. Project Gutenberg eBooks may be modified and printed and given away—you may do practically ANYTHING in the United States with eBooks not protected by U.S. copyright law. Redistribution is subject to the trademark license, especially commercial redistribution.

START: FULL LICENSE
THE FULL PROJECT GUTENBERG LICENSE
PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg™ mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase “Project Gutenberg”), you agree to comply with all the terms of the Full Project Gutenberg™ License available with this file or online at www.gutenberg.org/license.

Section 1. General Terms of Use and Redistributing Project Gutenberg™ electronic works

1.A. By reading or using any part of this Project Gutenberg™ electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg™ electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg™ electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. “Project Gutenberg” is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg™ electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg™ electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg™ electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the collection of Project Gutenberg™ electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg™ mission of promoting free access to electronic works by freely sharing Project Gutenberg™ works in compliance with the terms of this agreement for keeping the Project Gutenberg™ name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg™ License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg™ work. The Foundation makes no representations concerning the copyright status of any work in any country other than the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg™ License must appear prominently whenever any copy of a Project Gutenberg™ work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg License included with this eBook or online at www.gutenberg.org. If you are not located in the United States, you will have to check the laws of the country where you are located before using this eBook.

1.E.2. If an individual Project Gutenberg™ electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg™ trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg™ electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg™ License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg™ License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg™.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg™ License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg™ work in a format other than “Plain Vanilla ASCII” or other format used in the official version posted on the official Project Gutenberg™ website (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original “Plain Vanilla ASCII” or other form. Any alternate format must include the full Project Gutenberg™ License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg™ works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg™ electronic works provided that:

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg™ works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg™ trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, “Information about donations to the Project Gutenberg Literary Archive Foundation.”
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg™ License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg™ works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg™ works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg™ electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from the Project Gutenberg Literary Archive Foundation, the manager of the Project Gutenberg™

trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg™ collection. Despite these efforts, Project Gutenberg™ electronic works, and the medium on which they may be stored, may contain "Defects," such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the "Right of Replacement or Refund" described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg™ trademark, and any other party distributing a Project Gutenberg™ electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS', WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg™ electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg™ electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg™ work, (b) alteration, modification, or additions or deletions to any Project Gutenberg™ work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg™

Project Gutenberg™ is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg™'s goals and ensuring that the Project Gutenberg™ collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg™ and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at www.gutenberg.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non-profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's business office is located at 809 North 1500 West, Salt Lake City, UT 84116, (801) 596-1887. Email contact links and up to date contact information can be found at the Foundation's website and official page at www.gutenberg.org/contact

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg™ depends upon and cannot survive without widespread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine-readable form accessible by the widest array of equipment including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit www.gutenberg.org/donate.

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: www.gutenberg.org/donate

Section 5. General Information About Project Gutenberg™ electronic works

Professor Michael S. Hart was the originator of the Project Gutenberg™ concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg™ eBooks with only a loose network of volunteer support.

Project Gutenberg™ eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our website which has the main PG search facility: www.gutenberg.org.

This website includes information about Project Gutenberg™, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
